

Hi-Intersheet for 2nd processor

The HI version of INTER-SHEET is for use only on the 6502 2nd processor. The normal SHEET ROM, however, still needs to be plugged into one of the sideways sockets in the BBC machine. Please note that the ROM-LINK system and the 105 column display will not operate on the 2nd processor.

Instructions

Side A (drive 0) of the Hi-Intersheet disc is formatted for 40 track drives and side B (drive 2) is formatted for 80 track drives. Place the disc in the drive and select the side required using *DRIVE <number>. Then type:

***HISHEET**

This will load and run the HI version of INTER-SHEET.

Backing up the disc

The supplied disc can be backed up, using either *BACKUP, *COPY, or by saving the image which was loaded as above. To save the image type:

***SAVE "HISHEET" BD00 F800**

Using the HI version of INTER-SHEET will considerably increase the amount of boxes which can be used and also allow sheets to be displayed in any screen mode without sacrificing memory.
