Programs for Amiga Basic

I am glad to hear that you will be using Amiga Basic in your future program listings. Is it possible to make any of the programs that have already been printed in *Let's Compute!* work on Amiga Basic?

In particular, could you please tell me how to get the Database (November 1990 onwards), Snakes Alive! (January) and the Healthy Lifestyle (December 1990) working.

— Elaine Holbon (9),
Newbury, Berks

Since the February issue, all programs for the Amiga have been in Amiga Basic. However you'll find most of the GW-Basic listings we've printed for the PC will also work on an Amiga.

You only need to make one small change to them. In place of the instruction:

SCREEN 1:CLS

you should put CLS.

We've checked the three programs you mention and they all work.

But the following small changes make them even better:

Database: You can make the program load and save cards from any disc in Drive 0 by just inserting two new lines.

```
1055 FS="DF0:"+FS
2055 FS="DF0:"+FS
```

Snakes Alive: This is better if you use a wider screen on the Amiga. Change W=40 in Line 30 to W=75

Healthy Lifestyle: The scrolling screen at the start is a bit slow if the PC version is used on an Amiga. Change T/8 in Line 430 to T/80 to speed it up.

Notice

Better to LET or not?

One word of criticism about your programs is the use of LET. This is unnecessary, even on my ancient Electron!

I note that even the Program Doctor is guilty. All the programs in *Let's Compute!* run quite satisfactorily with the LETs deleted.

Cheers for now. I could use a new cap to play golf in!

— Maurice Williams (65),
Llandrindod, Powys

On most computers, LET is optional. However, as some need it we always put it in. You're right that you don't need it on your Electron.

The same is true about the word THEN. This can usually be missed out on most computers.

A hat is on the way.

If you have any tips for other readers, send them in. And if you have any questions about your computer or software just ask us. We'll try to answer them on the Noticeboard.

Let us know what you want to see in future issues. And if we use your letter or ideas we'll send you a *Let's Compute!* baseball hat!

Send your letters to:

***Let's Compute!*
Europa House,
Adlington Park,
Macclesfield
SK10 4NP.**

Remember to tell us your age.

There's still time for the Floppy contest

We've had some smashing entries for January's floppy disc contest. It's amazing how many uses you thought of for old discs.

The closing date was January 3 and lots of you have told us that when you bought *Let's Compute!* it was too late to enter. So to please everyone we've extended the closing date to March 31.

So get your entries in the post now.

We've also been told by several people that they don't want to cut up their valuable copies of *Let's Compute!* Remember we accept copies of any contest entry forms – but only one per person.

Also, if you want to enter more than one contest you can save postage. Just send all the entries together in an envelope addressed to:

***Let's Compute!* Contests, Europa House,
Adlington Park, Macclesfield, SK10 4NP.**

I hope you like the poster.

— John Paul Cullen, Co
Durham

board

Get more from adventures...

Here are some hints that will help you solve the adventure we gave you last month – *The Golden Crown*.

The first thing you should do in any adventure is draw a map.

You must think of each location as a separate area. Then use squares to show all the different places you can go to.

Put a mark on your map when you can't go any further in a certain direction. This will help you to know when you have explored everywhere.

You may find some passages are one way. Make sure you label them.

In most adventures everything you find as you go around is useful. That's not true with *The Golden Crown*. A few sly tricks have been added!

We don't want to spoil your fun by giving you all the answers. But here are some important clues:

- You cannot finish the

Hints and tips

adventure unless you have found the dagger, the scroll and the key.

- If you can't get past the guard, find another way in.

- The magic word only works in the cellar.

That should be enough hints for you to find the crown and return it to the king. But in case you're still having problems we'll pin the map to the noticeboard next month.

Save your position . . . and save your time!

I have constantly read in magazines the words: "At this point save your position". I do not know how to do this so could you please tell me?

– Philip Kyte, Barnsley, South Yorkshire

You often find this in Adventure games, where you're moving from place to place. Each time you move there's a chance something could happen: You could, for example, be killed by a giant.

If you've spent hours getting there it's very annoying to have to go right back to the beginning and start again. So most adventures let you save your position at any time. Do it often!

This means that next time you play the game you can load the last saved position. It's as if you'd never been away.

The way you do the save depends on what adventure you're playing. On most you type **SAVE**, just as you would type **NORTH**.

To load your position the command is often **RESTORE** rather than **LOAD**. The instructions for the adventure should give you more details.

Where's the mistake?

My daughter Clare, who is 7, has recently obtained a BBC Master and finds *Let's Compute!* very helpful.

She enjoys the programs that can be typed in herself and on this subject she has a slight problem.

In the February issue there is an adventure game, *The Golden Crown*. It has been typed in and checked many times but still keeps coming up *Type Mismatch at Line 780*.

I cannot work out what we are doing wrong. Please could you put us straight on this problem?

Also, the *Land your own Rocket* program in the same issue is excellent. It will come in useful for Clare when she has to learn about multiplication and decimals.

– Mrs E Southworth, Leeds

The first thing to note is that the line referred to in an error message isn't always the line with the mistake. In the case of a reported error in a line containing **READ, the mistake is usually in the **DATA** lines.**

We suspect you've just missed a comma out somewhere between Line 920 and 1070. But it's tricky to find exactly where by just looking at your screen.

There is an easier way to find out where the mistake is. When the program stops and reports the error, simply type:

PRINT OS(1)

What you will see displayed is the last thing the program managed to read correctly. Suppose it's the words *silver key*.

Look for that in the **DATA lines. You'd probably find you've missed the comma between *silver key* and the zero following it in Line 1010.**

If that's not the mistake, it's somewhere near there. At least you don't have to look at all the **DATA lines.**

We're off on the road to

PART 1

Why not write your own adventure game? This new series will show how easy it is.

Adventure!

Writing an adventure is fun. And not only for you. It can give your friends lots of pleasure when they play it later.

And there's another good thing about writing adventures. You don't have to write a completely new program each time you want to create a new game.

Over the next few months we're going to show you how to write a program that will work for lots of different games.

It's called an *Adventure Manager*.

We'll be building it up section by section. In programming terms each of these is called a *routine*.

There will be lines in the program that will make the game jump to these routines when they are needed. These are known as *calls* to the routine.

That's enough of the jargon for now. Let's start building the game!

When you play an adventure your computer needs to understand the words the players type in. Each game will use different words. The program must be able to deal with all of them.

So the first thing we have to do is give our computer a list of words we want it to understand. Type in Lines 4999 to 5500.

This is a simple word list. It includes direction words like

NORTH and **SOUTH** - all your adventures will need these.

The **DATA** at line 5500 looks different. It's called a *rogue value* and it marks the end of the list.

The program will be written so that your computer knows it has reached the end of the list when it comes across a star (*). That way you can add more words without having to tell the program each time you do so.

This is an example of an important rule of programming: The more work you do when you start, the less you'll have to do later.

Now type in Lines 999 to 2000. These set up lots of things your program will need later. It's called an *initialisation routine*.

Next you need the line that makes the program jump to the routine - the *call*. That's line 10. Type it in now.

Before you **RUN** the program you should also type in Line 990. That stops the program when all the calls to the routines have been carried out.

Now you're ready to **SAVE** and **RUN** the program. Try it.

Nothing will seem to happen yet. What you have done is give your computer a list of words, each with its own space number.

You'll notice that in the **DATA** we've only used the first four letters of each word. This is usually

enough for the computer to recognise what the word is. But make sure you don't confuse your machine by using similar words like **LIST** and **LISTEN**!

All the words are directions. Look at Line 5010. You can see that **EAST** and **E** have both been given the same number - 2. This means the computer will treat each of them as the same word.

So it doesn't matter whether a player types in **EAST** or **E**. The computer will look up the figure 2 in its memory and take him in the same direction.

You play an adventure game by typing in instructions or directions. We'll now add some lines that print *What next?* This invites the player to tell the computer what he wants to do.

Type Lines 2009 to 2499. You also need the call to them, so add Line 20.

You'll want the program to show you the word numbers it's found, so add Line 100. *We'll take it out when we add the routines that use descriptions instead of the room numbers.*

SAVE and **RUN** the program again. It will now sit and wait for you to type something in. Try typing anything.

If you type a word that's not in the data two zeros will be printed. If you type something it understands the word or words will be changed into numbers. Try typing **North E**. See what happens?

All this may seem a complicated way of recognising a few words. You may think you could write a five line

What happens when you type something in?

When you answer the *What next?* question your reply is stored in **Y\$**. When you've **RUN** the program try entering: **PRINT Y\$**

You'll find your answer stored there. Now get your computer to check if any of the words are in your list.

Line 30 calls Lines 2500 to 2699 and they do this job.

The **REMs** in some of the lines are there to help you

understand what is going on. But don't worry if you don't quite get the hang of how it works. It will all come clear to you shortly.

REMark

REMs are put in programs to make them more understandable to humans. Your computer ignores them completely!

In this program some of the REMs are at the end of lines. Like this:

```
10 GOSUB 1000:REM SET UP START
```

You don't need to type in :REM or the following words.

Other REMs are alone on a line. For example:

```
999 REM SORT THINGS OUT BEFORE YOU START
```

These lines can be missed out entirely. But it's best not to. They could help you find things later.

program to do the same job.

But our program is very friendly. Any of the following will produce the same result:

```
N
NORTH
GO NORTH
RUN NORTH
PLEASE MAY I GO TO THE NORTH
```

Now you have a program that will look for ANY word you put in the data list. Try adding some of your own.

Just add a line between 5050 and 5500. Such as:

```
5060 DATA 10,HELLO
```

Look what happens when you run the program and type HELLO FROG. You will get:

```
10 0
```

That's because Hello has been given the number 10 and FROG is not in the list. It gets a 0.

Your program can now recognise direction words. But it's not an adventure yet. Your players will need somewhere to go - and exciting things to do.

Next month we'll add the lines that put places in your program. Then you'll be well on the way to seeing your own adventure come to life.

A CHALLENGE

So far your players will only be able to type what they want in capital letters.

So while you wait for next month's *Let's Compute!* here's a challenge. See if you can make the program work for small letters as well.

IS THIS YOUR COMPUTER?

This program works on a BBC, Archimedes, Electron, CPC, ST(Stos), Amiga and PC(GW-Basic). It will not work on a C64/128 or Spectrum.

```

Passing an exam . . . applying for a job . . . whatever you want to do in life you need to be able to SPELL!

There's mounting alarm about the appalling standards of spelling among Britain's schoolchildren. MPs, teachers, parents and employers are all stressing the vital importance of being able to spell correctly.

Yet most homes have what could be the ideal means of teaching spelling – the computer.

Instead of zapping aliens it could be turned into the best weapon of all to deal a body blow to bad spelling. With the help of a brilliant new software package that not only makes practising spelling painless but also loads of fun as well.

SPELL! is unique. It lets the user learn at his or her own pace. They can take as long as they like – or take on the computer in a high-speed challenge!

And this one package is ideal for everyone – with the lowest age group suitable for under-5s, while the more advanced words will stretch even the most able students.

It includes five different tests, each making use of more than 5,000 words – so much variety that you'll never get bored.

FIVE ways to improve your spelling

In a Flash: Read the word as it flashes on the screen, then type it in. For practice runs, the word is left on the screen as it is typed.

Rocket: Hidden words have to be discovered in this hi-tech version of the old favourite Hangman. If they are guessed correctly the rocket will blast-off. Fail and all that's left is a load of scrap.

Lunar Buggy: Type fast for fun. The aim is to key in the word as it's pulled across the screen by the buggy. It has to be completed before the letters drop down a crater.

All Mixed Up: Jumbled letters have to be sorted out to find the scrambled word. To help beginners – and anyone else who is stuck – clues can be obtained at the press of a key.

Conveyor Belt: Words pass by on the screen and have to be remembered. Then they must be typed in – spelt correctly. This is a challenging test of both spelling and memory.

All the programs have several options for extra flexibility – like a timer with on/off option to add that extra challenge.

In addition to using the 5,000 words provided, parents – or children – can create their own word lists for using with SPELL! This makes the package ideal for practising those hard-to-learn words, or for "Learn these spellings" homework.

- 5 DIFFERENT TESTS
- OVER 5,000 WORDS
- FOR AGES 5 TO 15

SPELL! only costs £8.95. It is now available on disc and tape for six of the most popular home computers and can be ordered on the form below.

Please send me a SPELL! package for my computer

A GREAT ALTERNATIVE

Win one
of 60
games

There's something here to suit almost everyone: Different types of games for most types of computer.

The prizes are all described here. And there are 10 of each.

All you have to do is study these letters. Then rearrange them to get a seasonal saying:

ADM SA A CHRAM REHA

The first 60 readers with the right answer to be pulled from the sack will receive a prize.

A disc for their PC, ST or Amiga or a tape for their CPC, C64 or Spectrum.

All you've got to do now is fill in the entry form and send it to us before March 29.

We've got all sorts of games from Alternative Software. And they're just waiting to be won!

Count Duckula - for Spectrum, C64, CPC, ST and Amiga. The popular cartoon hero has moved to computer games. Transported to Egypt you must find the mystical Sax before dawn. Explore the pyramid, solve puzzles and collect useful pieces.

Fun with Words - for C64, CPC or Spectrum. Enjoy learning with Thomas the Tank Engine. There are six games and you have to pick the right letter, match shapes and much, much more.

Jaws - for Spectrum, C64, CPC, ST or Amiga. Enjoy the terror of the deep. You are Police Chief Brodie. With your friend Hooper and shark expert Quint you must make the beaches of Amity Island safe. Get rid of the horror of the great white shark. Lives and your job is at stake.

Track Suit Manager - for ST, Amiga or PC. You choose any European country and start to manage their national team. Decide how the matches are to be played and who will play. You can suffer the victories or the defeats as they happen.

Fun with Numbers - for C64, CPC and Spectrum. Can you help Sooty win the big race? Or help Sweep get the right number of bones? Or even help Sue with her hat problem?

Entry Form

Address.....

PostcodeAge

When rearranged the words are:

My computer is (please tick):

ST☐
Amiga☐
PC (5.25in disc)☐
PC (3.5in disc)☐
CPC (tape only)☐
C64 (tape only)☐
Spectrum (tape only)☐

Now send to Alternative Contest, Let's Compute! Europa House, Adlington Park, Macclesfield SK10 4NP.

Here's your chance to say what you'd like to see in

Yes – we're asking for ALL of you to help us make *Let's Compute!* even better. So we need to know about you, which computer you use – and what you like (or don't like!) about *Let's Compute!* All you need to do is answer these simple questions, then send the completed

page to us. You don't even need to buy a stamp.

We've a special way of saying THANKS FOR YOUR HELP! One reader out of every 20 sending in this form will receive a very special prize! So don't delay – send in YOURS today!

1. How old are you?
2. Sex.....☐ Male ☐ Female
3. Do you have an annual subscription to Let's Compute!☐ Yes ☐ NO
4. What sort of computer do you mainly use?
5. Is it a different computer to the type you use at school?☐ Yes ☐ NO
6. Is it: ☐ Your own computer?
☐ A friend's computer?
☐ A school computer?
7. If you could change your computer, which one would you buy?
8. Do you type in programs from "Let's Compute!"?☐ Yes ☐ NO
9. What is the longest program you'd type in?
☐ 10 lines
☐ 20 lines
☐ 50 lines
☐ 100 lines
☐ Any length
10. Do you write your own programs?☐ Yes ☐ No
11. If yes, which language do you use?
☐ Basic
☐ Logo
☐ Other (Please specify)
12. What do you think of: (please mark from 1 (bad) to 10 (brill))

<input type="checkbox"/> Our cartoon style	<input type="checkbox"/> The Program Doctor
<input type="checkbox"/> Programs	<input type="checkbox"/> Logo
<input type="checkbox"/> Competitions	<input type="checkbox"/> Games Gang
<input type="checkbox"/> The Gadget Shop	<input type="checkbox"/> Peter's Project
<input type="checkbox"/> Games Reviews	<input type="checkbox"/> Rom and Ram
<input type="checkbox"/> The Safe Scientist	<input type="checkbox"/> Database
13. Do you think they are: Too technical (A) Too simple (B) or Just right (C)

<input type="checkbox"/> Our cartoon style	<input type="checkbox"/> The Program Doctor
<input type="checkbox"/> Programs	<input type="checkbox"/> Logo
<input type="checkbox"/> Competitions	<input type="checkbox"/> Games Gang
<input type="checkbox"/> The Gadget Shop	<input type="checkbox"/> Peter's Project
<input type="checkbox"/> Games Reviews	<input type="checkbox"/> Rom and Ram
<input type="checkbox"/> The Safe Scientist	<input type="checkbox"/> Database
14. Of the eight issues of "Let's Compute!" how many have you seen?

14. Where did you first see Let's Compute?
 - ☐ Newsagent
 - ☐ School
 - ☐ Computer Show
 - ☐ Another Magazine (please specify)
15. Have you had difficulty obtaining "Let's Compute!" from your newsagent? ☐ Yes ☐ NO
16. Who pays for your copy?
 - ☐ You
 - ☐ Parents
 - ☐ Other (Please specify)
17. How many other people read your copy of "Let's Compute!"

Are they: ☐ Brother/sister
☐ Parent
☐ Son/daughter
☐ School friend
18. What improvements would you like to see in "Let's Compute!"?
.....
.....
.....
.....
.....

Thanks for helping! Now all you have to do is fill in your Name and Address and send it off right away. And remember, one out of 20 replies win a prize! Good Luck!

NO STAMP NEEDED

BBC BASIC

WITH

ROM & RAM

CHANGE THE LOOP AT LINE 5 TO:
5 FOR I% = 1 TO 3

WHAT'S THIS
ERROR AT LINE 10
I HAVEN'T
CHANGED IT!

LINE 5 TO 25 LOOPS THREE TIMES LOOKING
FOR DATA TO READ...

... BUT THERE'S ONLY TWO ITEMS
OF DATA TO READ ON LINE 30

SO, AN ERROR IS GENERATED ON
LINE 10 EVEN THOUGH THAT LINE
IS O.K.

YOU CAN READ MORE THAN
ONE THING AT ONCE.

TYPE NEW, PRESS RETURN, THEN:

10 READ A\$, A
20 PRINT A\$, A
30 DATA ENGLAND, 7

THIS PROGRAM WILL CHOOSE A
RANDOM COLOUR:
10 FOR I% = 1 TO RND (4)
20 READ col\$
30 NEXT
40 PRINT col\$
50 DATA RED, YELLOW, GREEN, BLUE

WELL, ADD THESE LINES:
5 REPEAT
55 G=GET
60 UNTIL 0

YOU'LL SEE IT SOON RUNS OUT
OF DATA.

THIS IS BECAUSE IT STARTS READING
FROM THE START - OR WHERE IT
LEFT OFF.

ADD THIS LINE:
6 RESTORE

NOW IT
WORKS

RESTORE MAKES IT START READING
FROM THE FIRST LINE OF DATA AGAIN.

SAUSAGES!

YOU CAN ALSO SELECT WHICH LINE OF
DATA YOU WANT TO START READING FROM.
TYPE NEW, THEN THIS:

10 RESTORE 60
20 READ A\$
30 PRINT A\$
40 DATA FROG
50 DATA PIG
60 DATA DOG
70 DATA CAT

GRRR

OH NO!

TO FINISH, HERE'S A TELEPHONE BOOK PROGRAM

10 INPUT "Name " name\$
20 REPEAT
30 READ data\$, num%
40 UNTIL data\$ = name\$
50 PRINT name\$; ":"; num%

I'M
HUNGRY

HMM!
FOOD!

WAG

NOW ADD YOUR OWN DATA
LIKE THIS:

60 DATA FRED, 349912
70 DATA MARY, 256537
80 DATA MIKE, 696901

DOH-ER!

WHIP

WWWHAAT

YANK

OH NO!

GRRRRRRRRRRRR

OH YES!
NEXT MONTH
ROM GOES
MULTI FORMAT-
AT LAST!

WHAT A VERY POOR Joke

THE GADGET SHOP

CREATE YOUR OWN LABYRINTH

Gadget shop projects have a habit of sparking off other good ideas. This month's fascinating game was thought up as I played with last month's pinball machine.

In fact if you bought the gadget kit for last month you have all you need. This month's mega game uses the same bits.

You've probably seen the usual type of labyrinth game. You have to guide a ball through a maze and avoid it dropping down the holes.

Well, with the help of your computer you can do away with the walls and holes altogether. What's more, by simply changing the wiring or the software you can have a completely different game any time you want.

The object of this new game is to get your ball from the start to the finish in the fastest time possible. Along the way you must visit each one of the special stages.

You have to go to each in turn and you mustn't alert the guardian of the labyrinth. If you do - or if you visit a stage out of turn - you have to start again.

HOW TO BUILD YOUR LABYRINTH

The way the labyrinth made is very similar to last month's pinball machine.

First of all you need a board. Any size will do. I used one 30cm by 30cm.

Then get a small strip of wood and make a retaining edge all round. Glue or nail it to the board.

If you want to make the game mega-hard you can leave this bit out. But you'll spend most of your time picking the ball off the floor.

Next take some adhesive backed alu-

minium foil and lay down some tracks. The idea is to create stations where you have to hold the ball and traps which you have to avoid.

The diagram below shows the basic idea of what the traps and stations should look like. Remember if you want the foil to cross but not make connection use sellotape between the layers.

You can also use tape to prevent the ball making contact before getting to the station. Each station must be numbered

FOR ALL COMPUTERS

This gadget works with any computer that uses a nine-pin joystick plug. Using the modifications in the text it can also be used on a BBC Model B, Master and Electron with Plus One.

Stations and Traps from the foil

IN THE SHOP SOON: **AUTO MONEY BOX** ●

OUR BYRINTH

Gadget shop owner Mike Cook shows how you can make a Labyrinth without walls

so that you know which one to go to next.

The number of stations you will be able to have depends on what type of computer you have.

Acorn machines – apart from the Compact – have eight inputs on the user port. This means you can have up to eight stations. Other machines will only have five.

You need to use one station for the start and one for the finish. The rest can go anywhere.

The diagram below shows how to connect your labyrinth stations to your computer. Remember, a trap can be any station that you are not supposed to be visiting. The program shown is for the

are available

Acorn range of computers. The listing for other computers is provided when you order the kit or free if you send in an SAE – see the order form.

To play the game simply RUN the program. Move the board so that the ball sits over the start station.

You will then hear your computer beep. From this moment you are being timed.

A message to go to the next station will show on your screen. When you get there you will be directed to the next and so on until the end.

If at any time you trigger the trap or go in the wrong order you will be told to return to the start.

When you successfully complete the run your time will flash up. Press the spacebar to have another run. The pro-

gram is written in a very flexible way. Line 540 contains the station numbers in the order you must visit. Any numbers missed are traps.

We start at station 0 so that's the first number in the line and end up at station 1 so that is the last but one number in the line.

The numbers in between are the stations to visit. If your computer has eight inputs the numbers here can go up to 7.

You can repeat any station number to make the player thread a complex path through the labyrinth. This line must end in a -1 to tell the computer that there is no more data to read.

So get twisting and tilting and really sharpen up your reflexes.

I'll see you next month.

The *Let's Compute!* expert takes a break from Basic and looks at the top games

Master

Master Break is the latest release from Superior. The BBC, Electron and Archimedes versions have all been brought out together.

Based on the Radio One DLT quiz. It's your chance to amaze your friends with your general knowledge.

It's a mix between trivial pursuits and snooker. You'll find it surprising addictive.

Up to four people can play and must answer from a choice of six subjects. They're Science, Pop Music, Geography, Leisure, The Arts and History.

The subject for the first question is chosen randomly from the list. It's a red ball question. You must select the right answer from four.

If you get this right, you choose a coloured ball question. If you are right again you have a random red ball question to answer next. And so it goes on.

Each subject has a different colour

Speedball II

It's the future. For two years there hasn't been a single game of Speedball. But there are new rules, bigger pitches and more action.

You're in charge of the worst team in history – Brutal Deluxe. Your job is to get the team to the top of the league. Simple? No chance...

Speedball 2 is the follow up to the hugely successful Speedball. But, it has been improved and is definitely worth adding to your collection.

Divided into two, the match is the main part. You get an overhead view of Speedball which is great. The super graphics really add to the effect.

Speedball is very easy to play. Run up the pitch with the ball and hurl it at the goal. Then stop the other team doing the same.

There are loads of other features though. If you throw the ball down a hole it can spin out at the other side. You can leap and catch a ball in mid-air. Or even rush up and punch the other players!

In the other part of the game you are the manager. As you buy and sell players you try to make the best team you can.

It's very much along the lines of football manager games. It increases what Speedball has to offer.

The graphics and sound are brilliant. The players are colourful and move well. Even the still pictures are excellent.

Speedball 2 costs £19.95 for the ST and Amiga from Image Works.

A PC version is being worked on, and CPC, C64 and Spectrum owners may get a chance to play later in the year

This is a game you'll want to play again and again.

Simply brilliant

10

Teenage

Break

every time. The colours show how long you have to answer the questions.

The black ball questions score the most. Not because they are the most difficult. You'll find the timer bar disappears before your eyes.

You may decide to pass on answering some red ball questions. But you can only do this three times.

Sometimes you'll find that your trusty computer has put the ball directly over the pocket. If you get the next question wrong your friends will get the points – nice.

The digitised pictures and sounds on the Archimedes version are great. The timer really adds to the atmosphere. I panicked the first time I tried to answer a black question.

The right answers are not given, though it is nice when you guess correctly. It costs £9.95 for tape, £11.95 for BBC disc and £19.95 for Archimedes disc.

Good value for money

9

Master Break is just as good to play on your own or with friends. You'll need very quick reactions to get the maximum break of 147.

Mutant Hero Turtles

You can now get Teenage Mutant Hero Turtles for the CPC, C64, Spectrum, PC, ST and Amiga. The PC version is the original from the USA. The others are changed and improved for the UK. BBC Master 512 and Archimedes owners with a PC emulator and the PC version can join in the fun too.

You meet the same heroes and baddies as the TV cartoon series. The Foot, led by the Shredder, have kidnapped April.

Michaelangelo, Donatello, Leonardo and Raphael have two hours to rescue her. If they don't she'll be brainwashed and will become a member of the Foot.

There are six levels of arcade adventure to battle through. They take you into the sewers, city streets and even the Hudson river.

You have to fight, defuse bombs and leap from building to building. And at the end of each level you'll have to battle it out with a martial arts expert.

You can chose which of the heroes you want to play. Your movement is recorded on a map of the city.

Each turtle has a different weapon. You'll find friends as you play and they will give you information on where to find April. Pizza, of course, will help your energy level.

The graphics are nice to look at – especially on the ST, Amiga and on VGA PCs. The sound effects are quite good too.

Teenage Mutant Hero Turtles is from Image Works. It costs £24 for the ST and Amiga, £29.99 for the PC and CPC, C64, Spectrum costs £12.99 (tape) or £16.99 (disc). Some shops sell the games with lots of turtle goodies too.

All in all it's a good arcade adventure game and Turtle TV fans will enjoy it.

Definitely worth playing

7

Sound Blaster

Lots of games have great tunes and other sound effects. Have you ever wished your computer was louder so you could fill the room with sound? Then you could really annoy the neighbours!

If your computer speaker isn't big enough, Sound Blaster can help. It plugs into your computer and really boosts the noise.

You get several parts. First, there's an amplifier. This plugs into your computer and controls the sound level. You get a mains adaptor to give it power.

There's a pair of speakers for listening loud. You also get a pair of headphones so you can carry on playing when you've been told to shut up.

If you've used any kind of hi-fi equipment before setting up your Sound Blaster will be simple. For the best results put the speakers high up and lie them on their side.

When you first turn on make sure the volume control is low. You can then turn it up to what level you want and everyone else can stand.

Do watch out though. The speakers must be undone to use headphones and there is no proper on/off switch.

The red light will be on all the time. Unplug the unit when you're not using it.

The Sound Blaster costs £44.95. You can get it for all major types of home computer.

It's a great product. Just the thing to annoy mum and dad – until they find out about the headphones!

Blasting Fun!

9

No.2

What you'll need

- ★ A pram wheel.
- ★ A piece of wood (about 4cm by 4cm by 1m)
- ★ A screw to fix the wheel to the wood.
- ★ A piece of stiff card about 4cm by 10cm.
- ★ Two drawing pins
- ★ A computer

HOW TO USE IT

1. Place the pedometer at the point where you want to start measuring.
2. Walk to the point where you want to measure up to, pushing the pedometer in front of you. Count the clicks as you go.
3. Feed the number of clicks into your computer to find the distance.

So you want to measure a field but you haven't a ruler long enough! Not to worry. All you need is your computer - and the *Let's Compute* pedometer.

What's a pedometer? Just a wheel on the end of a stick. What you want to find out is the distance the wheel has rolled. A real one uses things like gears and complicated electronics. These work out the distance automatically.

On your simple one, you'll hear a click each time the wheel goes round. All you have to do is count the number of clicks. Then give that figure to your computer and it will do the rest.

Let's make a PEDOMETER

Ever wondered how far it is from home to school? Or the size of your playing field? Find out the easy way - without a ruler!

AT YOUR COMPUTER

Type the program in, SAVE it and RUN it. You'll be asked two simple questions. Here's how you should answer them:

How big is the wheel?

Measure the distance across the wheel (the diameter). Type it into your computer. Make sure you use the same units as you want to measure the big distance in.

For example, suppose you want to measure a field in metres. If your wheel measures 28.4cm your answer to the computer's question would be .284.

How many clicks?

Just key in the number of clicks your pedometer made.

You'll then be told how far you pushed your pedometer. If you measured the wheel in metres the distance is in metres. If you used feet, it's in feet.

And that's all there is to it.

You'll be asked if you want another go. You must answer with a capital Y for yes or N for no.

If you answer Y you won't be asked the first question again. The size of the wheel is the same all the time.

HOW TO MAKE IT

There are lots of ways you can make a pedometer. It depends on what odds and ends you have.

Here's one suggestion for how to make one. But you can always use your imagination to design your own.

Use a screw to fix a pram wheel to a piece of wood. All you then need is something to make a click each time it goes round.

One way to do this is to fold a small piece of card and fix it to the tyre. If it's a solid tyre you can use drawing pins to do it. But that isn't such a good idea if the tyre is full of air!

Remember, all you have to make sure is that every time the wheel goes round the card touches the wood. That makes the click.

That's one way to make a pedometer. Now make your own and start measuring.

If you use it to measure anything unusual write to *Let's Compute!* and tell us. If you include a photograph of yourself using your pedometer you might even see it pinned to the noticeboard.

HOW THE PROGRAM WORKS

Line 40 works out the distance round the wheel (the circumference). It uses the well known formula:

$$\text{CIRCUMFERENCE} = \pi \times \text{DIAMETER}$$

Line 50 multiplies this by the number of clicks to give the total distance.

Line 60 converts this to the nearest whole number. The method used was described by the Program Doctor last month.

```
10 CLS
20 INPUT "HOW BIG IS YOUR WHEEL";D
30 INPUT "HOW MANY CLICKS";N
40 LET C=3.14*D
50 LET T=C*N
60 LET T=INT(T+0.5)
70 PRINT:PRINT
80 PRINT "IT MEASURED ";T
90 PRINT:PRINT
100 INPUT "ANOTHER GO (Y/N)";QS
110 IF QS="Y" THEN PRINT:PRINT:GOTO 30
120 IF QS<>"N" THEN GOTO 100
```

IS THIS YOUR COMPUTER?

**Electron/BBC/Amiga/
Archimedes/
Spectrum/PC(GW-Basic)**

The program works as shown.

Commodore 64/128

Change Line 10 to:

```
10 PRINT CHR$(147);
```

ST(Stos)

Put # after the variables H, B, D, S, B and R. So, for example, H becomes H#.

PROGRAM DOCTOR

DOC, HOW DO I STOP SPIES LOOKING AT MY PROGRAM?

EASY! PUT THESE LINES AT THE START. THEN, IF ANYONE WANTS TO USE THE PROGRAM THEY HAVE TO TYPE IN A PASSWORD FIRST.

DON'T LOOK!
-please!

-ACME EYE CHART-

```
10 PRINT "WHAT IS THE PASSWORD?"
20 INPUT P$
30 IF P$="PASSWORD" THEN GOTO 50
40 PRINT "WRONG PASSWORD":GOTO 40
50 PRINT "YOUR PROGRAM GOES HERE"
```

WHAT IF I TYPE IT IN WRONG BY MISTAKE? IT WON'T LET ME HAVE ANOTHER TRY.

MOST PROGRAMS LET YOU HAVE THREE TRIES. ADD THESE LINES TO YOURS AND IT WILL DO THAT.

HA! HA!

```
5 LET T=0
34 LET T=T+1
36 IF T<3 THEN PRINT "TRY AGAIN":GOTO 10
```

BUMPER ACME GEL
~~~~~

THE PROBLEM AT THE MOMENT IS THAT SOMEONE COULD WATCH WHAT PASSWORD YOU TYPE. IT'S A GOOD IDEA IF IT DOESN'T SHOW ON THE SCREEN.

```
15 LET P$=""
20 LET L$=GET$
22 IF L$=CHR$(13) THEN PRINT:GOTO 30
26 LET P$=P$+L$
28 GOTO 20
```

HOW DO YOU DO THAT?

CHANGE LINE 20 AND ADD THESE LINES. NOTE THAT LINE 20 IS DIFFERENT ON SOME MAKES OF COMPUTER. CHECK YOURS IN THE BOX BELOW.

NOW NOTHING SHOWS ON THE SCREEN. I DON'T EVEN KNOW HOW MANY LETTERS I'VE TYPED!

ADD THIS LINE AND A STAR WILL SHOW EACH TIME YOU PRESS A KEY

FOOT NOTE

IS THIS YOUR COMPUTER?

ELK/BBC/ARCHIE  
WORKS AS SHOWN  
COMMODORE 64/128

CHANGE LINE 20 TO:

20 GET L\$: IFL\$="" THEN GOTO 20

SPECCY/CPC/ST(DOS)/AMIGA/PC (GW BASIC)

CHANGE LINE 20 TO:

21 IF INKEY\$ <> "" THEN GOTO 21

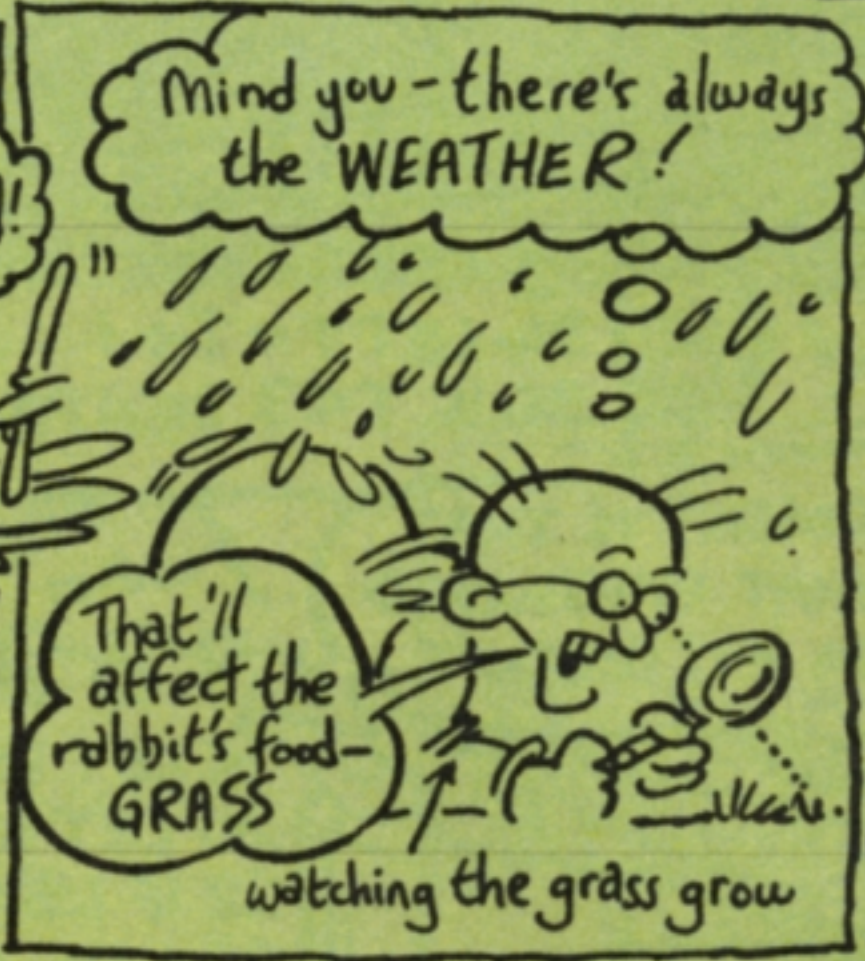

24 PRINT "\*";

THAT'S ALL THERE IS TO STARTING YOUR PROGRAMS WITH A PASSWORD!

# The Safe

# Scientist

## Nature IN THE Balance

### *The Safe Scientist looks at animal problems in the park*

Here's a game that's based on a small park in Exmoor. It contains a few pairs of buzzard along with a supply of their favourite food – rabbits.

You play the part of the warden. You must try to maintain a balance between the hunters and their prey.

A lot of the problem is out of your control. For example, the growth of the rabbit's food – grass – depends on the weather.

You run the park for four years. Each season you can decide whether to cull rabbits or introduce some more.

This may seem harsh. But if there are too many of our furry friends they will eat all the grass. Then they'll starve! That means the buzzard population will also suffer. In any case, selling the rabbits can help to pay your wages.

The Nature Park Problem makes use of what's called a mathematical model. All the possible events are simplified to basic equations in your computer.

For example, in your model each pair of buzzards will always produce three young birds. Their survival depends on the weather and how much food is available.

Again, your computer works this out using a simple sum. If you feel really brainy you could refine these sums and produce a more realistic picture of life in the park.

As ever, the way you use the program is up to you. But, as always in science, the idea is to investigate. Questions like:

What happens if you do nothing? Can you keep up a healthy buzzard population if you do intervene every season?

You could keep your own records of weather conditions. Then use them to try to work out how to manage the rabbits for the best effect.

**Next month we'll be putting the brakes on.  
Can you stop a car before it crashes?**

### **NATIONAL CURRICULUM AREAS COVERED**

What's this program got to do with science? And is it any help with the National Curriculum?

Well, one whole attainment target is about *Human Influences on the Earth*.

Also, the *Variety of Life* topic wants you to understand predator/prey relationships. You also need to know about pyramids of numbers and biomass.

The program covers all these areas. It also encourages you to investigate. And that's something every good scientist has to do!

**TURN OVER THE PAGE  
FOR THE PROGRAM**

A revolutionary new word processor from SPA – **in full colour!** You can choose exactly how you want WriteOn to appear. Beginners can use a very simple screen, with large letters and an uncluttered appearance; more experienced users can have access to WriteOn's advanced features step by step. And you can include PaintSpa or NewSPAper pictures in your writing.

- Full What You See Is What You Get word processing
- Simple, uncluttered screen
- Choice of large, easy-to-read typefaces
- Easy PaintSpa-like interface

- Type in colour or black and white
- Supports many colour and black and white printers
- Include PaintSpa or NewSPAper pictures
- 'Minipage' window on the text

More advanced users can use more versatile features – but WriteOn is designed so that younger children don't need to be worried by features like these. You can easily tailor WriteOn suit anyone's needs.

# SPA

Nimbus or IBM £44.85 (state which)  
(IBM requires EGA or VGA graphics)  
**PO Box 59, Leamington Spa,  
Warwickshire CV31 3QA**  
**Telephone: (0926) 422959**

There has been a need for some time for a modern, mainstream primary word processor which is able to take children from simple beginnings and introduce them gradually to a wider range of word processing features. WriteOn! fills the gap perfectly.

T.E.S.

# LET'S MAKE MONEY

Part 4

# Ready, steady - GO!

## Raise funds with the Let's Compute! car racing game

Bingo, raffles, wheel of fortune and lots of other fund raising events have one thing in common. They all involve an element of chance.

The idea behind them all is simple. You collect money from lots of people, keep some and split the remainder between a few winners.

Here's a short computer program that can give a new look to that sort of event. It's a car racing game!

Type in the program and try it. You'll be asked how many cars you want. Answer

5 as a test. Then press the spacebar and you'll see the cars racing. At the end you'll be told which car won. Press the spacebar and off they go again.

*So how do you use the program to make money?*

All you have to do is charge people to guess which car will win. Once a few people have paid run the program to find the winner.

Then keep, say, a quarter of the money you took. Split the remainder between the ones who guessed correctly.

## WRITE YOUR OWN PROGRAM

This program is intended as a frame on which you can base your own version. It can easily be changed. For example, you could improve the graphics and add a finish line. Or use sound to add more atmosphere to the race. To get you started, here are some changes that you can easily try. First, you can have more cars racing.

At the moment the program is set up for eight. That means there's room to fit the cars on all computer screens. But you can usually fit more. Just change the 8 in Line 10 to fit as many cars on your own screen as you can.

You can, in fact, easily fit more cars on your screen by moving them closer together. Remove the \*2 in Line 80 to do that.

If you only want a few cars racing change the \*2 to \*3 to move them further apart. Now, with more space between the cars there's room to fit lane markings as well!

**If you make any changes to the program we'd love to see them.**

```
10 INPUT "HOW MANY CARS";N:IF N>8 THE
N GOTO 10
20 DIM C$(N):DIM P(N)
30 FOR L = 1 TO N:LET C$(L)=" "+STR$
(L)+" ":LET P(L)=2:NEXT L:LET R=1
40 PRINT:PRINT"PRESS SPACE TO START T
HE NEXT RACE"
50 REPEAT UNTIL GET=32
60 CLS
70 FOR L=1 TO N
80 PRINTTAB(P(L),L*2);C$(L)
90 NEXT L
100 IF P(R)>30 THEN GOTO 140
110 LET R=RND(N)
120 LET P(R)=P(R)+1
130 GOTO 70
140 PRINT:PRINT "NUMBER ";R;" WON"
150 GOTO 30
```

## IS THIS YOUR COMPUTER?

### Electron/BBC/Archimedes

*The program works as shown*

### Commodore 64/128

*Change these lines:*

```
50 GET AS:IF AS <> " " THEN GOTO 50
60 PRINT CHR$(147);
80 POKE 211,P(L):POKE 214,L*2:SYS 587
32:PRINT C$(L)
110 LET R=INT(RND(0)*N)+1
```

### Amstrad CPC

*Change these lines:*

```
50 IF INKEY$<>" " THEN GOTO 50
80 LOCATE P(L),L*2:PRINT C$(L)
110 LET R=INT(RND*N)+1
```

### Amiga/PC(GW Basic)

*Change these lines:*

```
50 IF INKEY$<>" " THEN GOTO 50
80 LOCATE L*2,P(L):PRINT C$(L)
110 LET R=INT(RND*N)+1
```

### Spectrum

*Change these lines:*

```
20 DIM C$(N,5):DIM P(N)
50 IF INKEY$<>" " THEN GOTO 50
80 PRINT AT L*2,P(L);C$(L)
110 LET R=INT(RND*N)+1
```

### ST (Stos)

*Change these lines:*

```
50 IF INKEY$<>" " THEN GOTO 50
80 LOCATE P(L),L*2:PRINT C$(L)
110 LET R=INT(RND*N)+1
```

# The Games Gang

## Robocop 1, 2 and counting

Following the success of Robocop 1 and the new Robocop 2, a third movie is now being made in the States. As usual, Ocean is most likely to get the licence. But so far this has still not been confirmed.

By the way, if you're under 18 you couldn't get to see either Robocop 1 or 2. But you shouldn't have the same trouble with Robocop 3 - it will carry a 12 or PG certificate.

## Pam's Passwords

Archimedes players of Man-at-Arms can get on with the game thanks to a handy password from Nicholas Wright (7) from Ossett.

The password is:

INCUBUS

## Peter's Patch!

**Turrican** is Rainbow Art's excellent blaster. To help you through the C64 version there are three excellent pokes.

To use them you'll need an Action Replay-style cartridge.

Infinite time - POKE 3030,173  
Infinite gyroscopes - POKE 4133,173  
Infinite weapons - POKE 16365,0

## Problems in Persia

The Grand Vizier has given the beautiful Princess of Persia one hour to make up her mind. She either marries him or faces execution.

Is she doomed? Can anybody save her? You could - if someone hadn't got to you first.

You're now imprisoned in the palace dungeons. But maybe there's another way out...

Broderbund/Domark's Prince of Persia has you fighting your way right from the bottom of the Persian Palace to the princess' tower right at the very

top. The adventure is a combination of puzzle solving, fighting and acrobatic platform adventure. It's also in 3D. But what's most impressive about all of this is the main character's superb animation.

It's based on home movie clips taken by the author. You can see the most elegant and realistic jumping, leaping and running movements you're likely to find anywhere.

It's pretty addictive too! If you own an Amiga, Atari ST or PC don't forget to check it out.

# CHARLIE'S CHEATS!

If you are finding the ST version of **Shinobi** a little difficult here's a cheat. Pause the game and type in LARSXVIII.

You'll find that you now have an infinite number of credits.

Dean Scott from Perth has written in with some help for fellow Spectrum game players. If you need a hand on **Treasure Island Dizzy** hold down the A, O and P keys on the menu screen.

Then press Enter. But keep your fingers on the keys. When the game starts press C and you'll become invisible.

The Z and X keys will allow you to go where you want. The spacebar starts you playing again.

Here's one for Spectrum **New Zealand Story** players. Type FLUFFY on a new screen and CHEAT will appear at the bottom. You'll now have infinite lives. Also the Enter key will let you skip levels.

Geoffrey Swann from Ruislip has been looking hard at the CPC version of **Batman the Movie**. To profit from his studies hold down the E, D, 2, 0 and 9 keys to skip a level.

## Another King's Quest

The fifth instalment in Sierra's King's Quest series has just hit the shelves. So far it's only for the PC. But Atari ST and Amiga versions should follow soon.

Up to now playing a King's Quest adventure meant typing in commands as well as using the mouse. But this latest episode is entirely icon-driven.

It tells of Graham of Davenport as he attempts to rescue his family from the magician Mordack. The pictures are improved and there's even a CDrom version expected in the spring.

King's Quest V comes on 5.25in and 3.5in discs. It costs £39.99 (EGA) or £44.99 (VGA) – so get saving!

## Mafia Mayhem

The Godfather I and II movies were about goings-on in an American mafia family. They showed machine gun massacres, a severed horse's head in the bed (yeuch!) and lots of other macho antics.

Now Godfather III is soon to be released in the UK. And US Gold have announced they've blagged the licence for all three movies.

They are going to turn them into a series of action and adventure games. One of each game style is currently under development.

*Let's Compute!* will let you have more details as we get them.

COLLECTION TIMES  
9.00 AM  
5.00 PM

If you've any hints, pokes or cheats you'd like us to print send them to:

**Let's Compute!**  
**Europa House, Adlington**  
**Park, Macclesfield**  
**SK10 4NP.**

## Helpful Harry

**The Wimp Game** on the Archimedes has had a lot of you asking for help. To get through the kitchen follow this advice:

Having made a note of the letters and numbers in the lounge, enter these on the panel of the microwave. It will then open.

Examine the calendar on the wall. You'll need it in the next room but one.

Then turn on the kettle at the wall. Next bring the coffee and mug straight down from the shelf to the work surface and put the coffee jar into the mug.

When the steam comes from the kettle switch it off. Click on the kettle and water will pour into the mug.

A cassette will then appear from the slot on the work surface. Carefully pick it up and place it in the slot in the microwave. Don't drop it or you'll have to start again.

Help for **Gisburne's Castle** on the Electron or BBC comes from M Quarterman (11) Sawtry.

By following the moat you will eventually come to a log cabin. Here you'll find a blue bottle. It's perfect for poisoned arrows.

Once you get into the castle you'll need these poisoned arrows to kill the knights.

Spectrum versions RRP £11.99 (c) £14.99 (d)

### HENRIETTA'S BOOK of SPELLS

is a powerful program to improve spelling and language skills. It can even be used to help learn a foreign language. Probably the most comprehensive and challenging software of its type ever produced. And it's great fun to use!

"... the screens and animations are beautifully drawn ... children simply loved playing ..."  
PC TODAY August 90

"... give 'em something to laugh about and they'll forget it's homework."  
CRASH July 90

### FUN MATHS FOR 5-12 YEAR OLDS

## HOORAY for HENRIETTA

### HOORAY for HENRIETTA

helps you add, subtract, multiply and divide quickly and accurately.

It's fun and easy to use and has been carefully structured in line with the National Curriculum.

"... HOORAY for HENRIETTA achieves a perfect balance of learning and having fun."  
CRASH July 90

"... here's an educational program for kiddies to get their brains into gear."  
WHAT PERSONAL COMPUTER? July 90

"... very good picture/problem course ..."  
New Computer Express April 90

### What if...

You could only print text like this? With hundreds of pounds worth of computer and printer equipment, this seems a great shame to us.

That is why we spend great amounts of time and effort to produce the means to print text *like this*: We have over 200 beautiful, well made and professional typefaces available for you to use with your Archimedes and any printer. Most of them are PostScript® compatible, which means they can be used for professional DTP or simply for producing a school newsletter or poster. We are DTP specialists and sell everything, including hardware and software, you will need for designing and producing printed pages.

Contact us for your *free* catalogue of fonts and a price list.

£11 inclusive

## Mijas Software

### Small C System £69 (inclusive of VAT p&p)

Use the Mijas Small C System on the BBC B or MASTER series computers for games, educational and industrial software. Small C programs run up to 12 times faster than in BASIC. Your code is highly portable and can be recompiled to run on the ARCHIMEDES or R140 using the Acorn ANSI C compiler (not supplied) and on many other machines. You can also use the power of the ARCHIMEDES for the rapid development and test of BBC B or MASTER programs. Manuals and post sales support included.

This Small C System produces stand-alone programs with up to 40K of code in ROM and/or MAIN memory. Libraries, extendable by the user, provide memory allocation, multi-mode graphics, file handling, i/o formatting, string handling, and system calls. Full assembler interface.

The system includes the V3.0 Small C compiler & Libraries\*, Optimiser, Assembler, Linker, Source-Level Debug, and SHELL. SOURCE CODE is supplied for the compiler and all libraries. Using the MAKE facility and editable makefiles, C code is automatically compiled to assembler source, assembled and then linked with the minimum necessary library code.

Available for the MASTER series Computers, BBC B+ or B with sideways ram, and ARCHIMEDES. Software supplied on 80T double sided 5.25" or 3.5" ADFS or DFS disk. The ADFS disk contains the SHELL source code. The system is also available for other hardware configurations, including systems for the Mitsubishi MELPS processors, please write for details.

### Laser Typesetting Program £23 inclusive

Low cost DTP for any BBC B, MASTER or ARCHIMEDES. Requires an HP Deskjet or Laserjet printer or emulation. Use for letters, booklets, forms and manuals with rules and shading, full multi-font justification, in single or multi-column. Fast printing using the printer's internal fonts. ADFS or DFS disk with rom image, £23 inclusive of VAT, p&p. Eprom (avoids the need for sideways ram on BBC B) £7 extra.

Please state your computer system when ordering from:-

**MIJAS SOFTWARE, Winchester Road, Micheldever,  
Winchester, Hants SO21 3DG. Tel: 0962 89 352.**

Official orders, ACCESS and VISA welcome

\*Includes original Small C code supplied at the cost of distribution

# Part 6

## CARD INDEX DATABASE

1. Load a box of cards
2. Save a box of cards
3. Read/search for a card
4. Write on a new card
5. Throw away old cards
6. Change something on a card
7. Print the cards
8. Sort the cards into order
9. Stop the program

Cards free=45/Cards used=6  
What do you want to do?  
Please type in a number (1- 9)

# SORT THE CARDS

**Find the Facts:**  
**Roland Waddilove adds**  
**a search routine to the**  
**Let's Compute! database**

## DON'T BE IMPATIENT!

"Your database program doesn't work", wrote one very annoyed Let's Compute! reader.

"I typed it in and tried to sort the cards into order and the program stopped with an error message".

**Don't panic!** Some features of the program won't work yet. So far we haven't typed them all in.

We are building up our database month by month and looking at how it works at every stage. Remember, Rome wasn't built in a day!

In this month's article you'll find the missing subroutine to sort the cards into alphabetical order.

You can already use the database that we've been creating over the last five months.

So far you can type information in, save it, load it and search for any facts you want.

But an important feature of any good database is still missing. Very often you will want to sort the cards into order.

*This month we'll add the lines to do that.*

Start by loading the database program that you've already built up. Then enter the new lines listed below. SAVE your new, improved database.

When you've done that it's time to

check whether the program works. Run it program and choose *write a card* from the menu.

As a test, type in a set of five dummy cards. Just use a few letter Gs on to the first card, Bs on the second, then Zs, As and Fs.

These are just letters chosen at random. Use others if you want.

Now select the sort option on the menu. Look at the cards afterwards and you should see they're in alphabetical order. If they're not, carefully check your typing.

*Let's see how the new subroutine works.*

The information you type on to the cards is stored in an array called *C\$( )*. Each card has five lines of text so the first one is *C\$(1)*, *C\$(2)*, *C\$(3)*, *C\$(4)* and *C\$(5)*.

The second card is five lines after the first card and so starts at *C\$(6)*. Card three is at *C\$(11)* and so on.

The inner FOR...NEXT loop counter in lines 8040 to 8110 runs from 251 down to 6 jumping to the start of each card. Line 8050 compares the text in the first line of the current card with the text in the card immediately before it.

If the cards are in the right order the program jumps to the NEXT on line 8110. Otherwise lines 8060 to 8100 swap the five lines on the current card with the one before it.

There are many ways to sort text or numbers into the right order. Although it's not the quickest, this method is probably the simplest.

It's called a bubble sort. That's because the cards with the smallest numbers – or text that starts with lowest letters – bubble up to the top of the pile.

## The card sorting program

```
8000 REM ===== Sort cards =====
8010 CLS
8020 PRINT "Sorting the cards..."
8030 FOR X=6 TO 246 STEP 5
8040 FOR Y=251 TO X STEP -5
8050 IF C$(Y)>C$(Y-5) THEN GOTO 8110
8060 TS=C$(Y+0):C$(Y+0)=C$(Y-5):C$(Y-
5)=TS
8070 TS=C$(Y+1):C$(Y+1)=C$(Y-4):C$(Y-
4)=TS
8080 TS=C$(Y+2):C$(Y+2)=C$(Y-3):C$(Y-
3)=TS
8090 TS=C$(Y+3):C$(Y+3)=C$(Y-2):C$(Y-
2)=TS
8100 TS=C$(Y+4):C$(Y+4)=C$(Y-1):C$(Y-
1)=TS
8110 NEXT Y
8120 NEXT X
8130 RETURN
```

**This  
program  
works on  
all home  
micros**

## IS THIS YOUR COMPUTER?

**BBC/Electron/Archimedes/  
Spectrum/Amiga/ST(Stos)/  
CPC/PC (GW-Basic)**

*The program works as shown .*

**C64/128**

*Change the following line:*

8010 PRINT CHR\$(147);

## NEXT MONTH

**You'll add a new  
routine to print  
the cards. Then  
if you have a  
printer, you'll be  
able to produce  
printed cards.**

**Your own logo disc or tape for £1!**

Turtle graphics is a vital part of any Logo program. And that's what Turtle Logo is. Specially written for the Electron, BBC Micro and A3000/Archimedes series, it is on the tape or disc that comes with the Let's Compute! Club bumper pack.

You can find out how to join the Club on Page 32 - and about all the other goodies sent out to members.

However, if you only want Turtle Logo we'll send it to you for just £1 if you complete and return the coupon below

## ORDER FORM

Please send me the Let's Compute! Turtle Logo. I enclose cheque, postal order or stamps the value of £1.  
(Only suitable for Electron, BBC Micro or Archimedes series.)

Name .....

Address .....

Post code .....

Age .....

Please send it on:

- ☐ 5.25in 40T disc
- ☐ 5.25in 80T disc
- ☐ 3.5in disc
- ☐ Cassette

SEND TO:

Logo Offer,

Adlington Park  
Macclesfield  
SK10 5NY

# A KNOTTY PROBLEM!

Tight Turtle is as mean as they come! He wants to wallpaper his home but doesn't want to shell out.

He decided to draw the patterns on the paper himself. He's no artist, so he used his computer and the Logo language.

He devised the knotty little program on the right. It draws a fascinating twisting knot.

Our picture shows Tight hanging the paper. You can easily draw the same pattern using his program.

You first need to run the Logo Language. This is available for most makes of home computer.

(If you haven't got Logo and you're using an Acorn computer the Let's Compute! Turtle Logo is an ideal starting point - see the offer on the left.)

Once your Logo language is running type in Tight's program. Then save it by entering:

SAVE "KNOT

Now the program is in your computer. You can see Tight's square by typing:

KNOT 40

To draw patterns of different sizes just change the 40 to another number.

### Now it's time to try out your own design

There are many different ways to draw knots. That's because there are lots of places to start drawing from and lots of ways you can go.

You might even be able to find a simpler way of drawing this particular knot. Try finding an easier route round it.

Or you can try designing and drawing knots of your own. You should look for simple repeated shapes to make the task easier.

If you draw one - or write any other Logo programs - we'd love to see it.

Post it to Let's Compute! Adlington Park, Macclesfield SK10 4NP. There's a super Let's Compute! baseball cap for the writer of every one we print.

### Tight's program

## NORTHERN MICROMEDIA

Northern Micromedia is the publishing arm of NORICC, a regional IT Teachers Centre. We produce a wide range of stimulating educational software for children aged 5-16 and many titles are accompanied by useful support material.

Please write or telephone for a free catalogue to:

NMM, Resource Centre, Coach Lane Campus, Coach Lane,  
Newcastle-upon-Tyne NE7 7XA

Tel: 091 270 0424

ARCTIVIA is the ultimate trivia challenge for the Archimedes. Test your general knowledge with thousands of questions on various subjects. ARCTIVIA can be used as a game for 1 to 4 players or as a teaching aid by entering specialised questions on any subject using the Question Editor.

This package is designed to run on the Archimedes 310 upwards and contains the following:

- ★ ARCTIVIA GAME
- ★ QUESTION EDITOR
- ★ OVER 7000 QUESTIONS

Contained in files on:

- GENERAL KNOWLEDGE
- MUSIC
- TV and FILMS
- WORDS

(each question file is divided into 6 categories)

Further questions are available on additional Data Discs on specialised subjects and details of these may be obtained from the address below.

Order NOW and receive 2000 extra questions.

# The Weather Reporter

The Weather Reporter is a fully automatic weather station which continuously records wind speed, wind direction, temperature, hours of sunshine, hours of daylight and rainfall. It is accurate, easy to install, robust, vandal-proof and needs no maintenance.

The Weather Reporter does not need to be permanently connected to a computer. It will record the weather unattended even through weekends and school holidays. The data collected can then be downloaded and investigated using a simple serial lead and the supplied user-friendly software available for BBC, Nimbus or Archimedes/BBC A3000. It can also be exported for use with Oriel, Quest, Grass or Key. The complete Weather Reporter package, hardware and software, costs only £295 (exc. VAT).

To order or for more information, contact:

Advisory Unit for Microtechnology in Education,  
Endymion Road,  
Hatfield,  
Herts.  
AL10 8AU  
Tel. 0707 265443  
Fax. 0707 273651  
BT Gold 87:CBL001

## MASTER COMPACT CARTRIDGE ADAPTOR

Connects MASTER and ELECTRON cartridges (including our ROMPlus-144) to the COMPACT - Price £25. SAE for details

## INCREASE ELECTRON PERFORMANCE AND BBC COMPATIBILITY WITH OUR RANGE OF ADD-ONS

### E2P SECOND PROCESSOR

Gives the Electron equivalent performance to a BBC with a Second Processor. Adds a complete processor with its own 64k memory bank to run all programs while the Electron handles screen, keyboard, discs, etc.

Gives 30k memory for BASIC programs and 44k memory for HIBASIC programs. (Electron HIBASIC available separately) Gives up to 300% speed increase in programs.

Fits into a Plus One/ROMbox Plus slot.

Operating system available on ROM or 3.5" ADPS disc or Tape (state requirement)

Price £79 + £5 for case.

### MODE 7 Mk2 UNIT

Gives exactly the same Mode 7 display screen as the BBC. Allows BBC Mode 7 software to run on the Electron: Magazine programs, Adventure games, Educational, Wordwise, Prestel, Teletext. Includes Prestel software - Prestel requires a modem and our RS423 adaptor. You will need a ROM socket to hold the Mode 7 ROM, eg. in our RS423 adaptor. For Mode 7 programs with HIMEM above 4000 you will need a Shadow RAM board. Fits inside the Electron, alongside the Shadow RAM Board.

Price £49 for you to fit, or £59 fitted.

Also available as a kit - board and ROM for £25 - you buy the components.

### RS423 SERIAL CARTRIDGE

Connects the Electron to serial RS423/RS232 devices, eg. printers, modems. Allows the transfer of programs, data, etc. from one computer to another. Has the same socket, so uses the same leads as the BBC. Includes a socket for a 32k RAM or 16k ROM, eg. the Mode 7 ROM. Fits into a Plus One/ROMbox Plus slot.

Price £29.95 + £5 for a case + £20 for a 32k RAM.

### ROMPLUS - 144 ROM CARTRIDGE

Sideways ROM cartridge with Printer Buffer and RAM Filing System. Holds 8 ROMs or 7 ROMs and a 32k RAM. Fits into a Plus One/ROMbox Plus slot.

Price £39 + £20 for a 32k RAM

All prices inclusive of post, etc. - Please allow 28 days delivery.

# CALLING ALL MICE LOVERS...

When you leave your computer for the night, have you ever felt pity for the poor mouse? He's left all alone!

He may get cold without a warm coat. He hasn't got a house of his own. There's not even a mat to keep the cold out.

This poor creature needs help! And BeeBug have developed three very special products that every mouse will want:

- A mouse house. When you don't need him your mouse can have a quick snooze in a home of his own
- A mouse mat. Not only will it allow your mouse to move more easily over the tabletop, but it also keeps him clean.
- A furry mouse cover. Specially developed for British mice, this warm jacket fits over your mouse. It gives him eyes, ears and a nose. Not only does it keep the cold out. You can still use the mouse to run your favourite programs while he is wearing it.

You can buy a set of three from Beebug for £12.55. But to start rescuing some of the Let's Compute! readers' mice, TEN sets are to be given away free.

**TEN**  
homes  
for  
your  
friendly  
rodents  
must be  
won!

## To win

All you have to do to get one of these special mice sets is answer the three questions below. Then tell us what your mouse is called and why that's his/her name.

The ten people with correct answers and the best mouse names will win a prize.

## The Questions

1. In which nursery rhyme did the mouse run up the clock?
2. Who chased the blind mice?
3. Two famous cartoon characters are Tom and Jerry. Which one is the mouse?

Now fill in the Entry Form and send it to Let's Compute! by March 29.

### Entry Form

Name .....

Address .....

Post Code ..... Age .....

My mouse is called:

The reason for his/her name is (not more than 10 words):

### ANSWERS

- 1.....
- 2.....
- 3.....

Send to: Beebug Contest, Let's Compute! Europa House, Adlington Park, Macclesfield SK10 4NP.

# PRIZE WINNERS

## BAG A TURTLE

In the January issue of *Let's Compute!* we asked you to test your knowledge of Donatello, Michaelangelo, Raphael and Leonardo.

The prizes were 10 bags of turtle bits and pieces from Image Works the creators of the Teenage Mutant Hero Turtles computer game.

Names of the first 10 readers to be pulled from the sack were:

Ewall Anderson (6) Edinburgh; Owen Pritchard (10) Caerffili; Lee Alexander (8) Fairwater; Sarah Robertson (9) Aberdeen; James Hodgkinson (8) Felixstowe; Robin Plowman (8) Morden; Charles Ryder (8) Dorchester; David Lewis (6) Smallburgh; Nicholas Williams (8) Uxbridge; Peter Gillman (9) Radley.

## WIN A PRINTER FOR YOUR SCHOOL

Panasonic and Mannesman Tally had three printers on offer which you could win for your classroom.

We had sackfuls of correct entries from all over the country but the first two from we opened were:

Paul Elliot (9) from Spring Cottage Primary School in Hull and Stephen Hill (10) from Weston All Saints Primary School in Weston.

They will each be receiving a MT81 9-pin dot matrix printer.

If you were a member of the *Let's Compute!* Club you could enter the second part of the contest and win a 24-pin Panasonic printer. This was awarded to:

Michelle MacDonald (10) from Hammond Middle School in Lightwater.

## BEST SELLING AMIGA BOOKS

### AMIGA DOS INSIDE & OUT £16.95

An in-depth guide to AmigaDOS and the CLI. Covers the insides of AmigaDOS from internal design up to practical applications. Versions 1.2 and 1.3 are covered and this revised edition also includes AmigaDOS 2.0.

### AMIGA C FOR BEGINNERS £16.95

An introductory guide for the Amiga user that wishes to learn this popular language without a lot of technical jargon. Describes the C library routines and use of the most popular C compilers. Lots of programming examples.

### AMIGA DESKTOP VIDEO GUIDE £16.95

This is a book for everyone who wants to use the Amiga for video. You'll find information on video basics, video-tape equipment, video/Amiga interfaces, artwork and more.

### AMIGA FOR BEGINNERS £12.95

The ideal book for the first time user. A clear introduction to essential Amiga features including the Workbench diskette, AmigaBASIC and AmigaDOS. Recently revised to include Workbench 2.0 info.

### AMIGA PRINTERS INSIDE & OUT **NEW** £29.95

A comprehensive guide with easy to follow examples and simple explanations to help you use your printer more effectively. Learn AmigaDOS commands for printer control and printing tips and tricks from the experts. Includes a companion diskette with essential printer utilities.

### MAKING MUSIC ON THE AMIGA **NEW** £29.95

The Amiga has wonderful music talents. This book shows you how to take advantage of those capabilities, it starts with the fundamentals of music and progresses to the details of using software such as Music Construction Set, Aegis/Oxxi and AudioMaster and how to construct your own MIDI interface, includes companion diskette containing lots of music examples.

### THE BEST OF TRICKS & TIPS **NEW** £24.95

The best selling book 'Tricks & Tips' and its follow up book 'More Tricks & Tips' have been replaced by this single volume. The companion diskette is included. A great collection of programming hints and techniques for all Amiga users.

## AMIGA 2000

For the more serious or professional applications user, Commodore have a selection of systems based around the expandable Amiga 2000, at prices from £1295+VAT. The A2000 features a full 1Mb RAM (expandable to 9Mb), 9 system expansion slots, plus IBM compatibility with the use of PC-XT or PC-AT bridgeboards. Complete and return the coupon, putting a tick in the A2000 box, for details of A2000 computer systems.

**£1295** +VAT= £1489.25

## FLIGHT OF FANTASY

Flight of Fantasy is the very latest Amiga 500 pack from Commodore, featuring BRAND NEW software releases, to make this the most spectacular A500 pack ever! The pack features the Amiga 500 computer with mouse controller and TV modulator, as well as four top software titles. These include the following:

### DELUXE PAINT II:

The high quality graphics program that set the standard for other Amiga art packages. Deluxe Paint II includes powerful, easy to use tools that bring out the artist in you. Create masterpieces, presentations, 3D perspectives or just doodle.

### ESCAPE / ROBOT MONSTERS:

Here's something completely different - a science fiction story with comic book style graphics. Our heroes Jake and Duke are on the Planet X rescuing Humans who have been captured by the Robot Monsters and forced to create an evil Robot Army to DESTROY EARTH! Jake and Duke fight their way through hordes of evil Robots to help the Humans escape.

### RAINBOW ISLANDS:

Slip on your magic shoes, practise throwing a rainbow and you're ready to go island hopping. From the Island of Doh to Monster Island, you will encounter Doh himself, stinging insects, lethal combat machines, mechanical assailants, the formidable beings of legend and folklore. Finally enter the world of darkness and its inhabitants.

### F29 RETALIATOR:

The ultimate in flight simulation with a choice of two aircraft and four battle environments with dozens of different tactical missions. Aerial combat, strategic bombings, interactive ground based battles, seaguard carriers ... the list of features is endless. Real time cockpit displays, including 'true radar' enhance the realistic feel of this stunning simulation.

### PACK INCLUDES:

Before you decide when to buy your new Amiga computer, we suggest you think very carefully about WHERE you buy it. Consider what it will be like a few months after buying your Amiga, when you may require additional peripherals or software, or help and advice with your new purchase. And, will the company you buy from contact you with details of new products? At Silica Shop, we ensure that you will have nothing to worry about. Silica have been established for over 12 years, and have an annual turnover of £13 million. With our unrivalled experience and expertise, we can now claim to meet our customers requirements with an understanding which is second to none. But don't just take our word for it. Complete and return the coupon now for our latest Free literature and begin to experience the "Silica Shop Service".
