

# S-Pascal

## Further S-Pascal products for the BBC Microcomputer

Two packs for use with the Acornsoft S-Pascal system are currently being developed:

### S-Pascal Demonstration Programs

This pack contains 20 example programs which illustrate many of the features of S-Pascal. These include several graphics demonstrations, two different alphabetic sorting routines, a graphical solution of the classic 'eight queens' problem and two programs which together will calculate the value of a polynomial function at any point, find any factors it has and plot its shape.

Available:	Third quarter 1984
Available on:	Disc or cassette
Price:	Disc L11.50; cassette L9.95

### S-Pascal Utilities

This pack enables the compiler to be converted so that a source program can be compiled directly from cassette or disc and so doesn't have to be present in the computer's memory. This more than doubles the size of programs you can write. In addition the number of variables allowed and work space available is increased so more complex programs can be developed.

Also included in this pack is a cross-referencer, a formatter and other program handling facilities.

Example programs which take advantage of these extra facilities are provided to illustrate the new capabilities.

Available:	Third quarter 1984
Available on:	Disc or cassette
Price: Disc	L11.50; cassette L9.95

This document is intended to give a brief guide to future products produced by Acornsoft. The prices and dates given may be changed at any time prior to the release of the products. In addition the specifications given are not final and may be altered or extended at any time prior to release.
