

# 3D BOMB ALLEY

*Professional, Released On Cassette Only*

Game Type : Arcade  
Author : Simon Vout  
Standalone Release(s) : 1984: 3D BOMB ALLEY, Software Invasion, £6.95  
1985: 3D BOMB ALLEY, SInvasion/Dixons, Free In 10 Pack  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SOFTWARE INVASION, 50 Elborough Street, Southfields, LONDON  
SW18 5DN  
Disc compatibility : CDFS E00, DFS E00

## Instructions

A realistic 3D simulation of an explosive Air-Sea Battle, in which you must defend a fleet of ships from attacking enemy aircraft.

This game is compatible with the "First Byte" switched joystick interface.

**Instructions' Source** : 3D BOMB ALLEY (Software Invasion) Inner Inlay

## Review (Electron User)

Is it because war is so much fun that we turn it into games? Or is it because we play so many war games that we go so eagerly to war? These were some of the more serious thoughts sparked off by playing Software Invasion's game 3D BOMB ALLEY. Mind you, there isn't too much time to think when you're actually playing the game!

The scenario is obviously based on San Carlos Bay in the Falklands. Your fleet is at anchor in a narrow sea inlet and you are under attack from enemy planes. These appear in the far distance but rapidly grow larger as they near. To defend yourself you have to throw up a barrage of anti-aircraft fire. The trouble is that, although you can miss the planes, if they get through they don't miss you.

You get an extra ship for each ten planes downed and the game ends when you've lost your last ship.

It's a simple game with nice graphics and adequate instructions. The way the planes appear in the distance and then grow larger is a good technique but it's annoying when they slow down and even appear to stop when under fire. You can almost feel the micro thinking.

At first I thought that that would mean a slow game, but I soon learned differently as the planes came in at me five at a time. The main difficulty comes from the increasing number of enemy planes. If you like action where quick reactions are at a premium then this is the one for you.

Eileen Young, ELECTRON USER 2. 3

# 3D DOTTY

## *Professional, Released On Cassette Only*

Game Type : Arcade Platform Game  
Author : J. L. Harris  
Standalone Release(s) : 1987: 3D DOTTY, Blue Ribbon, £1.99  
Compilation Release(s) : 1990: PLAY IT AGAIN SAM 10, Superior/Acornsoft, £9.95  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : BLUE RIBBON, CDS House, Beckett Road, DONCASTER DN2 4AD  
Tel: 01322 21134  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### Instructions

The aim is to clear the dots on the three levels of each screen whilst avoiding the dreaded fungus. Any contact with the fungus will reduce your energy, and you lose a life when your energy reaches zero. The fungus can be blocked, but only three blocks are permitted at any one time. On completing a screen a bonus is added to your score, proportional to the amount of energy you have remaining.

There are eight different screens. After the eighth, the screens are repeated, but your energy is reduced by two units when you make contact with the fungus. You gain an extra life when your score reaches 5,000 and 10,000 points.

There is a practice mode to allow you to try any of the eight screens.

### Game Controls

Keyboard or joystick can be used on the BBC Micro version. Only keyboard control can be used on the Electron version.

Z - Left, X - Right, \* - Up, ? - Down, <RETURN> - Fire  
S/Q - Sound On/Off, <ESCAPE> - Quit Game

**Instructions' Source** : PLAY IT AGAIN SAM 10 (Superior/Acornsoft) Inner Inlay

### Review (Electron User) - "This'll Drive You Crazy"

3D DOTTY is a simple game in which your aim is to eat all of the dots on a screen. Success will take you through a series of eight rooms, similar in style, but of increasing complexity. Each screen consists of three large platforms drawn in 3D perspective. The higher platforms are supported on substantial pillars and this creates the first difficulty in eating all of the dots as some of them are behind pillars and can't be seen.

There are even some junctions behind pillars and these are quite a problem to negotiate. The levels are linked by ladders.

Your main problem is to avoid the fungus, which appears as a fast moving but rather shapeless snake. Contact with this nasty substance causes a very rapid loss of energy and a fairly swift loss of life.

Fortunately, you can drop anti-fungal barriers behind you, which will force it to chase you via a different route giving you a short breather. These barriers last for a few seconds and you can have up to three on a screen at a time.

The game's graphics are adequate, and I like the 3D effect, but the main character is rather small, and I am sure the fungus could have been made more interesting.

The sound is about par for this type of game. If you like persistent footstep beeps then it's fine. If not you can select the silent play option. Keyboard or joystick options can be chosen at the start of each game.

3D DOTTY is a quite a good budget-priced game with nice graphics, fast gameplay and it is fun to play. But for me, it lacks that compulsive edge that keeps me coming back for more. But at just £1.99 you can't really go wrong, and it has got to be worth a try.

# 3D MAZE

*Professional, Released On Cassette Only*

Game Type : Arcade Pinball-style Soccer  
Author : B. Cridland  
Standalone Release(s) : 1983: 3D MAZE, IJK, £2.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : IJK, Unit 5 Moorfields, Moorpark Avenue, Bispham, BLACKPOOL  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Pit your wits against the computer's logic in this highly realistic graphical game. The computer sets up the logical mazes (you choose the size), and then it shows you the view of the maze in 3D, each step you take as you battle against the clock to escape!

**Instructions' Source** : 3D MAZE (IJK) Inner Inlay

# 3D TANK ZONE

*Professional, Released On Cassette Only*

Game Type : Arcade Wireframe  
Author : Unknown  
Standalone Release(s) : 1983: 3D TANK ZONE, Dynabyte, £6.95  
Compilation Release(s) : 1986: SUPERSELLERS (DYNABYTE COLLECTION), Dynabyte, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+, Master 128  
Supplier : DYNABYTE, Unit F3 Railway Triangle, Farlington, HANTS  
PO6 1TG  
Disc compatibility : Incompatible. Writes to locations &400-&800.

## Instructions

As weapon commander, you must, with the aid of radar, scan the terrain surrounding the city and missile silos for marauding enemy tanks then destroy them before they get you. Watch out too for incoming jets and helicopters on the horizon. To aid you in your task, you have at your disposal a direct fire anti-aircraft cannon and an anti-tank missile launcher. The game features excellent 3D wire graphic tanks and battleground displays with realistic missile in-flight action and detailed instrument console.

**Instructions' Source** : SUPERSELLERS: THE DYNABYTE COLLECTION Inner Inlay

## Review (Electron User)

It's not easy being the commander of a missile silo. First there are the aircraft attacking you, then there are the tanks. And you're stuck in a hole in the ground with only anti-tank missiles and an anti-aircraft gun to ward off this unprovoked aggression. All the time your energy is getting lower and the shields weaker. No, it's not easy... Still, if you think you could do any better, have a go at 3D TANK ZONE.

Your Electron's screen becomes a view from the silo as you scan for the enemy. As you guide the sights of your AA gun to attack the jets and helicopters on the horizon, you have to watch the radar for tanks. When you see one you have to turn the turret and loose off a missile, quick. At first the action seems a little slow but, as the tanks get nearer and your energy drops, it's all too fast!

The graphics are simple but effective. The tanks appear in 3D wire form and the missiles fly in an annoyingly realistic manner. I say annoyingly because of the way they miss.

The instructions are thorough and the key controls are well laid out. It's an interesting game, very different from anything else I've ever seen on the Electron. While not the fastest program around, it should suit those looking for a change from the usual arcade remakes.

Tony Sinclair, ELECTRON USER 2. 3

# 5 COMPUTER HITS

*Professional, Released On Cassette Only*

Game Types : Arcade  
Release Information : 1985: 5 COMPUTER HITS, Beau Jolly, £6.95

## Review (Electron User) - "Golden Oldies"

CROAKER heads this compilation tape of five golden oldies and is similar to FROGGER, seen in the arcades many years ago.

Your aim is to dodge the traffic while crossing a busy road, then use floating logs and turtles as stepping stones to cross a river. Unfortunately for you, you're the only frog that can't swim. Later screens become more difficult as hungry crocodiles float past, and the turtles dive now and then. The graphics are well drawn, with smooth character movement. And although the sound may become a little monotonous, it can be switched off.

The next game is BLAGGER, which is a variation on the platforms and ladders theme featuring a burglar called Roger the Dodger. With him you can steal your way through twenty screens.

Most of the obstacles don't fit in with the scenario and are there simply to add spice: Conveyor belts and disappearing platforms are fine, but spaceships and railway engines are hard to explain, while giant mouths with gnashing teeth, although graphically effective, do not normally pursue even the most villainous criminal.

The sound effects are basic, with the movement not always realistic, resulting in Roger staying in the air for so long Rudolf Nuryev would be green with envy.

SWAG is next, another game for budding burglars. You must collect 250,000 diamonds before your opponent, all the while dodging bullets and killer droids.

The screen shows two houses where you and your opponent hide your ill-gotten gains, and also the bank where a deposit of gold will finance a further supply of bullets. Police cars interfere with your progress, but can be stopped after a drink that refreshes parts others can't reach, and shooting at their car.

The graphics are excellent, the sound is good and the action is very fast. For my money this is the best game on the tape.

MILLIONAIRE is a simulation game where you are head of a software company and must make the necessary decisions on marketing policy, including whether to trade with Honest Harry. The program is virtually all text, graphics being limited to a picture of the type of office you occupy, starting from a terraced house. The questions posed are reasonably representative of the sort of decisions made in business, but too much depends on luck.

The last item is BUG EYES 2, a multi-screen sequel to SPACE AGENT ZELDA MEETS THE BUG EYES. In the original game, Zelda took on the might of the Xxabaneans and was captured. Your job is to search their flagship and find the 25 keys to release her while avoiding the nasties ranged against you.

Sound quality is good with the graphics composed of smoothly moving chunky sprites. I especially liked the way that as you exit each screen, one of Sir Clive's C5s is waiting for you.

I rate BUG EYES 2 and SWAG as the best on this compilation and if you have neither of these it becomes excellent value. The other games tend to be a little dated and I would not buy it for them alone but they are well worth having to build up your collection.

## Review (Electron User) - "Collection To Collect"

COMPUTER HITS 3 is a compilation consisting of ten games spread over two cassettes.

Tape one starts with CENTIBUG where a segmented nasty dodges through the mushrooms intent on your destruction, while you and your laser attempt to serve him the same. This is not one of the better versions of this game although it is fast enough to be a challenge. Graphics are smooth but the sound is unimaginative.

The next offering is BRIAN JACKS' SUPERSTAR CHALLENGE where you tackle the man himself in eight different events. Success is not dependent on pure key hammering but on your skill in manipulating the necessary keys. Sound is almost non-existent but graphics are superb and rate a 9 in their own right. With events ranging from cycling to canoeing and from swimming to squat thrusts it could take some time to master. My only grouse is that events cannot be practised but must be taken in order.

The third game is SNOOKER with options for one or two players and a choice of either ten or fifteen red balls. Graphics are hard to fault and if two people have plenty of time and patience then it's great. However, the game is slow and the movement of the balls is sometimes unrealistic. It should be noted that the one player option is not against the computer but one player taking all the shots.

I like FELIX IN THE FACTORY, a ladders and levels game where your aim is to keep the generator topped up with oil despite the attentions of evil gremlins and a conveyor

belt full of parcels to scramble over. The graphics are great, the sound is superb - but why such a terrible choice of keys? A for up and Z for down is quite normal but P for left and the up and down cursors for jump and right respectively seems a strange choice.

Tape one ends with DANGER UXB where you cross blocks to defuse the bombs. The blocks disappear as you move so watch the route you take or the next bomb is harder to reach. Gain extra points on the way by collecting the flags but avoid the skulls or you will lose a life. On higher levels you have a reduced time limit to clear the screen, and you are harassed by a pair of Doc marten boots intent on stamping you flat. Sound and graphics are excellent and the game is most addictive. One of my favourites.

Tape two opens with ALIEN DROPOUT, an invaders style game with the variation of mutant moths. These settle in boxes at the top of the screen allowing you to shoot them from below and only escape to attack you when a particular box is full. This might have been addictive once upon a time but it looks very dated nowadays. There are six different skill levels but they do little except speed up the action.

In the second game on this tape, FELIX MEETS THE EVIL WEEVILS, our hero travels about his factory using aerosols against the mutating weevils and dodging ball bearings rolling down the chutes and conveyors. Excellent sound effects and nice chunky graphics give this game a very high rating.

The game JUNGLE BOY started life as TARZAN BOY and your task is to negotiate screens to rescue Jane. These screens are so packed with pitfalls and peril that the real Congo must seem tame by comparison. There are cheetahs, rock dropping gorillas, a relative of Hissing Sid and, as a reminder of the original publishers, there's even a comparatively benign alligator. Colourful, well drawn graphics make this one of the best arcade adventures around.

In MINESHAFT you move through screens of skeletal graphics collecting what are supposed to be lumps of coal while dodging various hazards. I've seen better games in magazines listings.

The last game is STRANDED, a graphics adventure which starts with you stranded on a strange planet and looking for a way home. I have had this game in my collection since its original release and for anyone tempted to try a comparatively simple adventure game this is one of the best.

Despite the criticisms there are enough first class games on the two tapes to make this compilation very good value overall.

## Review (Electron User) - "Rehashed Compilation"

Here is yet another bundle of the best (or supposedly best) games of yesteryear, the fourth in this particular series from compilation specialist Beau Jolly. In spite of the title however, this offering actually features twelve titles, GALAFORCE and KARATE COMBAT being thrown in free.

I find that compilations seem to be getting increasingly out of hand. More and more are appearing featuring games that have already appeared on at least one other compilation.

10 COMPUTER HITS 4 is a case in point: No less than eight of these games have already appeared on compilations - four of them on Beau Jolly's own FIVE STAR GAMES 2. The package caters well for shoot-'em-up fans, with ZALAGA, PSYCASTRIA, DEATHSTAR and the afore mentioned GALAFORCE.

ZALAGA was one of the first Electron games to offer a simple diet of pure mindless destruction. Hordes of aliens stream on to the screen before settling menacingly above you. Without warning they scream down towards you as you move your laser base to intercept.

The game is very hectic because the Zalagans have a nasty habit of curving off the bottom of the screen, then coming up and ramming you from below.

GALAFORCE takes this basic idea of a straightforward shoot-'em-up several stages further. It features a number of different types of brightly coloured alien, and a much greater variety of attack formations as well as a great musical accompaniment.

Unlike ZALAGA, GALAFORCE gives you up and down controls, as well as the conventional left, right and fire. Now you can go out and get 'em, rather than waiting helplessly to be overwhelmed.

Both ZALAGA and GALAFORCE allow First Byte and Plus 1 joysticks to be used, as well as having facilities to switch the sound on or off and end the game. However, it isn't long before you start another - just about a couple of seconds, to be precise.

Gary Partis' PSYCASTRIA must have appeared on almost every compilation since its original release. It is a super smooth sideways scrolling game covering four different scenarios - land, sea, the moon and deep space.

Although the idea is to shoot the ten energy pods on each level, you quickly learn to survive by simply shooting everything in sight. Each of the four attack phases must be cleared in one go; if you lose a life, you must start that level again. This feature - my only gripe with PSYCASTRIA - can get infuriating after a while, but the game is well worth a little perseverance.

DEATHSTAR is an excellent conversion of the arcade game SINISTAR, in which you are the pilot of a solitary mining spaceship in search of crystals. Shoot the asteroids to release them; once collected they act as bombs.

Competing with you are the worker ships, which use the crystals to assemble, piece by piece, the dreaded Deathstar. The workers are defended by warrior ships that shoot at you at the slightest provocation - remarkably accurately too.

DEATHSTAR's most impressive feature is the 16-way scrolling: As you move, the screen moves with you. A great blast.

In THRUST you jet around the galaxy in search of vital power pods. Unfortunately - for once - you are subject to the real physical laws of gravity.

You move around by burning your limited supply of fuel which can be replenished from fuel tanks dotted around each planet. The many hostile gun emplacements are problem enough, but your troubles really start when you manage to capture a pod, because then your ship's handling changes dramatically.

To finish a level you must destroy the planet's reactor before blasting off with your prize into the void. Great, but very tricky.

BUG EYES 2 is an arcade adventure in which you, as Agent Starman, must collect the 25 keys dotted around and about, in order to release your predecessor, Agent Zelda, from prison. Such diverse objects as jet-packed lizards, scissors, snakes and worms all bounce around merrily intent of robbing you of your precious oxygen supply. Unfortunately, the superb music and special effects are let down by a rather weak game.

REPTON needs no introduction to anyone. In this, his first adventure, you must collect all the diamonds while avoiding falling boulders and Repton-eating reptiles.

Some of the diamonds are hidden in safes; needless to say, the key is never easy to find. Playing number one again rather leaves me looking for the transporters, skulls and fungus - but it's as addictive as ever.

In THE MINE you tunnel through earth in search of buried treasure. However, the mine's many other inhabitants are all out to stop you. You can easily dispose of them with your neutraliser, but time is always against you. This is a fairly average

implementation of DIG DUG - fun, but not for very long.

BLAGGER is a MANIC MINER-style platforms and ladders game in which you run and jump around 20 increasingly difficult levels. As Roger the Dodger, burglar, you must collect all the keys and finally rob the safe before progressing to the next level. Although BLAGGER is a fun game, it is quite slow and jerky, and compares unfavourably with more recent offerings.

GHOULS is another Miner-type platform game. This time you are in a haunted house and must watch out for the spiders, poisoned spikes and collapsing floors. Although it was very popular in its day, it never grabbed me.

KILLER GORILLA is an implementation of the arcade machine game, DONKEY KONG, in which you must chase the gorilla of the title up increasingly difficult sections of scaffolding in an attempt to rescue the fair maiden from its clutches. The movement is rather jerky and the sound basic, but it's a game I still go back to on occasions. I think you will too.

KARATE COMBAT is a martial arts game, released as a competitor to YIE AR KUNG FU and WAY OF THE EXPLODING FIST. Although you can play against the computer or a human opponent, the practice mode is very useful, because there are seventeen manoeuvres to be mastered. Thank Buddha for joysticks - both the Plus 1 and First Byte protocols are supported. The graphics are finely detailed, but somewhat on the small side.

Although KARATE COMBAT was well received first time around, it lacks the technical merits of its competitors.

My main reservation about this collection is that so many of the featured titles have appeared on other compilations. If this problem does not affect you, then 10 COMPUTER HITS VOLUME FOUR is definitely not to be missed.

### **Review (Electron User)**

Whenever I see a compendium tape my reaction is to shudder. There is usually one reasonable program surrounded by a heap of others which vary from bad to awful. This one, however, is a pleasant exception, containing ten programs aimed at the user in school.

One superb innovation is that Dimax makes the listing freely available. Each program uses the same standard programming format so that the listing can be adapted to suit special needs. Indeed, Dimax will even sell the listings separately for just 40p each should your typing not be up to Olympic standard.

The games cover mathematical themes, letter recognition and a stiff test on capital cities. There are also quite reasonable versions of standard games such as Mastermind and Simon. While none of the ideas is especially original, the versions are well enough programmed to give interesting screen displays. There is even a version of Tree of Knowledge, a simple introduction to the setting up of a datafile.

For less than the price of a normal commercial program this tape offers a wide range of educational games which can be freely adapted. Indeed, there are even suggestions printed on the inlay of ideas to try.

Many parents will also find this a worthwhile purchase, especially as it has been written to run on both the Electron and the BBC Micro. My main criticism is that the Electron is a sophisticated machine which can use colour, detail, sound and animation to stimulate children using the machine. I am not convinced that Max Lang has exploited this to the full.

Philip Tayler, ELECTRON USER 1. 8

# 10 OF THE BEST - EDUCATIONAL

*Professional, Originally Released On Cassette, ADFS 1D00 And DFS 1D00 Disc*

## ***Professional, Released On Cassette Only***

Game Type : Strategy; Flight Simulator  
Author :  
Standalone Release(s) : 1984: 747, Doctorsoft, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : DOCTORSOFT, 258 Coneygree Road, Stanground, PETERBOROUGH  
Disc compatibility : Unknown.

### **Instructions**

#### **Briefing Summary (Also refer to 'Flight Plan' table)**

In general, falps allow slow flight without stalling. Stall speed is 200 knots without Flaps, 100 knots with Flaps.

Both Flap and Gear create extra drag.

In steady climb or descent with constant Power, control speed with Pitch (Nose Up/Down). Use Horizon position and VSI (Vertical Speed Indicator) to monitor Pitch changes.

In level flight control speed with Power. Watch for Height loss in turns.

#### **Navigation:**

(7 'Nav' points or 'Nav aids' including LHR and GAT runways.)

Pointer on compass points at selected Navaid. associated range and bearing also displayed.

If Hdg (Heading) agrees with bearing, with no wind, aircraft will pass over Navaid. To 'intercept' a specified bearing (say 90 towards a runway), if the bearing is *more* (say 105) steer *more* (say 135) and the bearing will reduce to the desired value. Gradually turn back to 'capture' the correct bearing.

#### **Approach:**

Start approach well out, starting down from 3000ft at 10nm Range. Don't forget Flap and Gear (refer to Table). Aim for a 3 degree slope down to the Runway (300ft per mile). Follow up with power to control speed.

Use the ILS (Instrument Landing System) if landing in the 90 direction at LHR or GAT. Localiser shows Left/Right deviation, Glideslope shows Up/Down deviation, from ideal path down to runway.

If all is well reduce sink around 100ft, reduce Power to idle after touchdown. If not OK, 'Go-around' again, Pull up, full Power, Gear and Flap as normal after Takeoff.

Happy Landings!

# 767 ADVANCED FLIGHT SIMULATOR

***Professional, Released On Cassette Only***

Game Type : Strategy; Flight Simulator  
Author :  
Standalone Release(s) : 1984: 747, Doctorsoft, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : DOCTORSOFT, 258 Coneygree Road, Stanground, PETERBOROUGH  
Disc compatibility : Unknown.

## Instructions

*"Flightdeck Software's 767 is an advanced, real-time flight simulator with all the state of the art aids, as used on a real Boeing 767, the most advanced airliner in the world. The Simulator can be used as an instrument flying procedure trainer up to Instrument Rating standard as required by the Civil Aviation Authority.*

*You can fly down an Instrument Landing System to six different runways and then takeoff to a new destination. The documentation takes you through twelve easy-to-follow lessons to help you build up your flying skills.*

*This program will keep you occupied for endless hours and at the end of it all you would be able to fly the real thing!*

*'Everything has obviously been so well researched and tightly programmed that the airfields are not only accurately shown, but are also stored in the computer to be the right distance from each other! So it is feasible to take off from Stansted and land at Birmingham, provided you have enough ability. If you don't, don't despair, for there is even an autopilot option which is invaluable during the early stages.... Flying the 767 make the adrenalin flow!' - A & B Computing November 1984"*

# A QUESTION OF SPORT

*Professional, Released On Cassette Only*

Game Type : Professionally presented quiz  
Author :  
Standalone Release(s) : 1988: A QUESTION OF SPORT, Superior/Acornsoft, £12.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : CDFS E00, DFS E00

## Instructions

Welcome to "A Question of Sport", the home computer version. Introduced by David Coleman, with team captains Ian Botham and Bill Beaumont, you at last have the chance to compete in the B.B.C.'s most popular TV Sports Quiz of 1988 on the same kind of one-to-one basis as your favourite sporting stars do on the show itself. In selected versions, you can play as Bill's or Ian's team with the options of a one- or two-player game. You can pit your wits against your family, your friends or, if you're on your own, against your computer - and you don't have to wait for the show to appear on TV. Now you can play whenever you're in the mood!

When loading the game, you will be asked whether you want to play a one- or two-player game. Move the cursor over your choice and SELECT. On some versions of the game, you will be able to define the keys you want to use (see PLAYING INSTRUCTIONS) as well. Choose your specialist subject by selecting the correct icon from the icons at the sides of the screen. Then select your other two team members so that they can best compliment your team captain's specialist subject. In one player mode in SPECTRUM, AMSTRAD and COMMODORE versions, choice of a captain is predetermined - then you select two team members. The computer selects its team members. If you are playing a two-player game, your opponent will be asked to select his or her team and specialist subject. At some stage (depending on which machine you have) you will be asked to choose which block of questions you want to answer.

The game has six exciting rounds that will test your knowledge of the sporting world to the limit.

The first is a "Pictureboard" round. This is an individual round. Each member of each team will be asked one question. The first question will be asked of a member of team one, the second of a member of team two. Thereafter questions will alternate. Each individual will be asked to choose one of the twelve numbered squares displayed: it will highlight to reveal the Olympic type sports symbol for the sport the question will be about. Wait while David asks the question, then select your answer from the four displayed, using the cursor and SELECT. If you get it right, you'll get two points; if you answer incorrectly, or "TIME OUT" is called, the opposing team will be given a chance to identify the correct answer for one bonus point. Each question will be asked only once.

Round two is called "Mystery Personality". You'll be given three clues to the personality's identity. After each clue, you will have a chance to select your answer from a choice of four: you will get three points if you answer correctly on clue #1, two points on clue #2 and one point on clue #3 - but beware! - if you answer incorrectly, your turn is over. So, if you can't answer clue #1 or #2, DO NOTHING - wait for the next clue. But if you answer incorrectly or "TIME OUT" is called on the last clue, you will be given no points and the next round will commence.

"Home or Away" comes next: This is an individual round. Each member of each team will be asked to select one question, either "Home or Away" and the Home question is on your specialist subject; Away is on a different subject. There's one point for each correctly answered Home question and two for a correct Away answer. The first question will be asked of a member of team one, the second question will be asked of a member of team two. Thereafter the questions will alternate. If you answer incorrectly or "TIME OUT" is called, the opposing team will be given a chance to identify the correct answer for one bonus point from the four answers shown.

"What Happened Next" speaks for itself. This is a team round. Each team will be asked one question. You will be given an outline of an event. Then David will describe four possibilities of "What Happened Next". Finally, you will be asked to identify from the four options shown, the correct answer. Beware - David will describe "What Happened Next" only once!

Round five is the "Quick Fire Round". You will get 60 seconds to answer nine questions. After each question, you will have a chance to select your answer from a choice of four. If you answer correctly, you will score two points. If you answer incorrectly, you will score nothing, and incur a two-second time penalty. You will get only one chance to answer each question. Incorrectly answered questions and/or any unanswered questions remaining if David calls "TIME OUT" are not passed to the opposing team. If you are playing any other versions of the game, the sequence is different. After each question, you'll have a chance to select your answer from a choice of four. Again you'll get 60 seconds to answer nine questions. However, whether you are playing the one- or two-player game, the first player to select an answer will stop the clock. David will tell the team who answered first whether their answer will stop the clock. David will tell the team who answered first whether their answer was correct and if it is, they will get two points. If not the opposing team will get one point. Only the first answer selected for each question will be considered.

The last round is another Pictureboard round: all you have to do is select from the remaining squares and answer the questions they conceal - your last chance to prove your mettle!

To ensure that this version of "A Question of Sport" provides many hours of entertainment and education, it has been designed to minimise the repetition of questions and answers. Selected versions of A QUESTION OF SPORT will therefore prompt you after you have played four games to load a new question block (to do this see the playing instructions). Other versions may start to repeat some questions after four games. When this happens, you are recommended to select another question block which contains fresh questions.

A QUESTION OF SPORT is an enthralling game for young and old alike and the only limit is your own knowledge. Good luck!

### **Loading Instructions**

After the game has loaded, the following message will appear on the screen: "PLEASE ENTER GAME CODE". You should then select a set of questions by pressing any key between A and M to load a question file from side one of the cassette, or between N and Y to load a question file from side two of the cassette. The question file you have selected will load in after the specialist subjects and team members have been chosen. To minimise repetition of questions, it is recommended that you start from question file A and work through to question file Y, remembering of course, that question files N to Y are on side two of the cassette. On completing a game, the next question file will load in.

### **Game Controls**

```
1/2 ..... Select One- or Two-Player Game
B/I ..... Select to Play as Bill or Ian

<SPACE> ..... Move Through Choices
<RETURN> ..... Select Choice
```

1/2/3/4 ..... Select Answer to Question  
H/A ..... Select Home or Away

**Instructions' Source** : A QUESTION OF SPORT (Superior/Acornsoft) Back & Inner Inlay

### **Review (Electron User) - "You May Confer"**

A QUESTION OF SPOT fans, and no doubt there are quite a few, can now have a bash at this popular quiz game in their own homes, courtesy of Elite, Superior and Acornsoft - it's a crowded loading screen with all those logos.

You are soon greeted by the familiar faces of David Coleman, Bill Beaumont and Ian Botham, and you can choose to be either Bill or Ian. Other options include a one or two player game and a choice of 25 question files. You can choose your specialist subject and two team mates from a board of well-drawn faces.

As in the television game, there are six rounds: Picture Board, Mystery Personality, Home or Away, What Happened Next, Quick-fire and then back to the Picture Board to finish off.

I expected the Picture Board to be similar to the television, however, this would be asking too much of the Electron's graphics. Instead, each square flips over to reveal an icon representing a sport.

A speech bubble appears over David Coleman's head and the question scrolls rapidly from right to left. Four answers are displayed multiple-choice fashion and you must choose the right one within a time limit. If you don't, or you get it wrong, the question is passed over to the opposition.

The Mystery Personality round is the same in name only. You are given three clues, one at a time, as to a person's identity. Three points are awarded if you get it at the first clue, two at the second and one at the third.

The third round tests your specialist knowledge, or you can choose to play away and answer on a foreign subject. The fourth round is What Happened Next? Here an incident is described and you have to supply the answer.

The penultimate round is Quick-fire Questions - everyone with their fingers on the buttons and the first to answer correctly gets the points. Finally it's back to the Picture Board to finish off the remaining squares.

The graphics are pretty good, with recognisable faces and well chosen icons, but there isn't much sound to speak of. If you like general knowledge, sport and trivia games you'll probably like this too. It's a fun game for all the family.

Jo Giles

### **\*\*\* Second Opinion \*\*\* (Electron User)**

A QUESTION OF SPORT is a fairly good attempt at reproducing the excitement and fun of a TV quiz program. However, the game won't appeal to everyone, and there is a limited supply of questions, though it should take you quite some time to work your way through 25 files.

# A VOUS LA FRANCE

***Professional, Released On Cassette Only***

Game Type : Educational; French learning aid  
Author :  
Standalone Release(s) : 1983: A VOUS LA FRANCE, BBCSoft, £9.95  
Compilation Release(s) : None  
Stated compatibility : BBC (Although the compatibility with Electron is mentioned)  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : BBCSOFT, 35 Marylebone High St, LONDON W1M 4AA  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"This software, produced in association with BBC Education's "A Vous La France" first stage radio and television language broadcasts, is a structured learning course to help you practise the basic skills required to speak French. Exercises range from shopping simulations to map reading and from a 'whodunnit' game to a French version of a one-armed bandit!"*

*Devised by Doctors Marie-Madeleine and Michael Kenning, the software comprises 45 programs based on the coursebook of the series. These are divided into fifteen units of three programs each; units 5, 10 and 15 of which are revision units. The accompanying booklet contains a description of each program as well as information on how to use them.*

*Based on the authentic, everyday language featured in the BBC's broadcasts, this software fully exploits the medium of computers for language learning.*

*The programs have been supplied on two cassettes and are designed to run on the BBC Model B and B+ Microcomputer, as well as the Acorn Electron. A converter program has also been provided to transfer the material to disc."*

# ABYSS

*Professional, Released On Cassette Only*

Game Type : Strategy/Educational Arcade  
Author : P. Martin  
Standalone Release(s) : 1983: ABYSS, CCS, £5.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : CASES COMPUTER SIMULATIONS, 14 Langton Way, London SE3 7TL  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Far away from here, in a hidden gorge through the Mountain of the Golden Lion, lies the forgotten ABYSS. Forgotten, that is, until now - when brave and sometimes foolhardy adventures strive to cross it. You are one of this elite band whose sole aim is to destroy the many evil monsters that lurk in the shadows, waiting for the next meal to come strolling across one of the many bridges in the ABYSS.

ABYSS is an unusual adventure game. It requires the player to undertake a succession of mental tests, aptitude tests and arcade games. To achieve your goal, which is to get to the end of the trail, you must complete every test correctly. The tests are randomised as to type and difficulty. The player can be lucky and have a succession of the easier tests. However, to achieve his goal, he will have to prove his intellectual prowess and be able to get the more difficult tests correct as well.

After each test, you return to the matrix and proceed to the next stage. To reach the next step you have to cross over rickety bridges. If you are unlucky the bridge will fail and you will be plunged into the ABYSS - never to be seen again!

The game is excellent fun to play as some of the tests are very intellectually challenging whilst others are inane! Because of this, the game appeals to all ages. At times, the game appears to be infuriatingly simple - yet because many of the tests are played against the clock - the game builds up to a tremendous excitement amongst the players.

The game is for one player. However, it may be played by two or three players alternatively, each competing to see how far down the trail they can get before being pitched into the ABYSS!

The rules are simple, the tests are not!

**Instructions' Source** : ABYSS (Cases Computer Simulations) Inner Inlay

## Review (Electron User)

ABYSS is described as an unusual adventure game, requiring you to undertake a succession of mental tasks, aptitude tests and arcade games. To achieve your goal, which is to get to the end of the trail, you must complete every test correctly. The tests are randomised as to type and difficulty so you can be lucky and have a succession of the easier tests.

However, to achieve your goal you will have to prove your intellectual prowess and be able to get the more difficult tests right as well. After each test you return to the matrix and proceed to the next stage. To reach the following step you have to cross over rickety bridges. If you're unlucky the bridge will fail and you will be plunged into the abyss.

It is a game for one player, the rules are simple and no problems were experienced in loading. The front of the cassette is labelled CCS adventure games, but to my mind this not really an adventure game.

As an adventure freak I was bound to dislike this program, since I had obviously expected an adventure. However having said that I could find no technical fault with it. It's a capable program, but not the adventure it purports to be, being more of a quiz than anything else.

Merlin, ELECTRON USER 1.12

# ACES HIGH

*Professional, Released On Cassette Only*

Game Type : Computerised Card Games  
Author :  
Release Information : 1984: ACES HIGH, Oasis, £9.95  
Compilation Comprises : 1. BLACKJACK  
2. PONTOON  
3. DRAW-POKER  
4. STUD POKER  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : OASIS. No further information given.  
CORNWALL TR10 8LR  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*Forget the baize table. No more shuffling those old playing cards. ACES HIGH brings four of the most popular casino-type games to the screen of your computer in amazing high resolution colour graphics.*

*These top specification programs contain the vital balance of skill and chance which has made games such as blackjack, poker and pontoon universally popular.*

- *Written for one to five players with several levels of play*
- *More than one player, and the computer takes the banker's chair. For a one to one, you're the banker and the computer has to outwit you*
- *At no time can the computer 'see' other players' hands or take account of them*
- *Reverses, stakes and 'pots' clearly displayed at all times, with a 'win or lose' analysis and pay-out after each hand*

**BLACKJACK** - *Bets are placed on the first card dealt and from then on strong nerve is a necessity as you go for the 'natural'. Includes such features as doubling of stakes and splitting the hand.*

**PONTOON** - *The great British game of chance. To 'stick', to 'twist' or to 'buy'; that is the question, in search of that elusive Pontoon or Five Card Trick.*

**DRAW-POKER** - *Conjures up the world's favourite form of poker. All the features you'd expect; 'calling', 'checking', 'raising', 'folding', discarding of cards and two rounds of betting.*

**STUD POKER** - *The most popular variation. Cards are dealt one at a time with a round of betting in between. All the usual features and as in Draw Poker, the program recognises all the standard poker hands.*

**ACES HIGH** comes with a full instruction booklet.

**ACES HIGH IS JUST ONE IN A SERIES OF QUALITY OASIS SOFTWARE PACKAGES!**

Welcome to the BBC Model B and Electron Card Games Compendium. Thank you for your purchase. We call it "The Best Deal Yet" and we don't think that you will be disappointed.

Now, in the comfort of your own home, you can enjoy that old favourite, Pontoon, or imagine yourself on that old Mississippi paddle boat steamer - or that Wild West Saloon, where the stakes are high in Stud and Draw Poker; you can join in with the

Jet-Set or Film Star circles in the Casinos of Las Vegas or Monte Carlo, playing for all, in Blackjack!

Many hours of fun are here - all that's required is your imagination!

### **Draw Poker**

Draw Poker is a computer program that allows you to play five card Draw Poker against the BBC Model B or Electron Microcomputer. Several levels of play are provided, giving the player the opportunity of playing with up to five 'computerised opponents'.

### **Playing Instructions**

To load DRAW-POKER, rewind the tape and type \*LOAD "DRAW-POKER" followed by RETURN, then press PLAY on the cassette recorder. When the program has loaded, type OLD followed by RETURN, then type RUN followed by RETURN.

After the title sequence, the player is invited to enter his skill level on the keyboard - what this does, is to set your number of computer opponents. The more you have, the more difficult the game. There is no need to press the RETURN key for this, or indeed, with only one exception, any input during the game.

Each player has a thousand pounds to bet with, in units of one pound - when this is exhausted, the player concerned takes no further part in the game.

Each player is dealt five concealed cards. The human player's cards in the top left hand corner are turned up for him, but none of the computerised opponents can see them, or take them into account in their play. The first round of betting now takes place. The human player is first and may FOLD, CHECK, CALL or RAISE by entering 1, 2, 3 or 4 when prompted to do so. Each player's remaining cash and last bet are displayed near their cards. The minimum bet is one pound and the maximum is one hundred pounds.

1. FOLD: If a player chooses to 'Fold', he puts no more money into the pot, but he loses any money he has already put in, and takes no further part in the hand.

2. CHECK: If a player chooses to 'Check', he does not put money in during this round, but may do so at his next turn. If all the players 'Check', the round of betting is over.

3. CALL: If a player chooses to 'Call', he must stay in the game at minimum cost, by putting in the same amount as the previous player's bet - this is done automatically by the computer.

4. RAISE: If a player chooses to 'Call', he must put in more than the previous bet. The minimum bet is the previous bet plus one pound. The maximum is one hundred pounds. All players must then 'Call' so that they contribute the same amount of money during the round.

If the human player chooses to 'Raise', he will be asked 'HOW MANY' cards he wishes to discard - you may replace up to five cards, or, if none are required, enter zero for a 'Pat' hand. If you press '4' in error, a bet of zero will return you to the menu.

NOTE: When raising, if the figure that you enter is less than three digits, eg. 7 or, say, 75; then press RETURN to complete the entry.

### **The Draw**

If the human player is still in the game, you will be asked 'HOW MANY' cards you wish to discard. You may replace up to five, or enter zero for a 'Pat' hand.

You will now be asked which cards you wish to be replaced, numbering from one on the left, to five on the right of your hand eg. if you wish to replace 2, 4 and 5; enter 245 and your cards will be replaced - the hand will be displayed again, with your new cards replacing the discarded ones.

Your opponents will now choose their discards - the number chosen will be displayed at their position.

A second round of betting now takes place. When all of the remaining players have called, the computer will sort and display their cards. The money in the pot will be awarded to the winner who will be indicated. The human player will be asked to press RETURN when he is ready to continue.

The computer will shuffle the cards and deal the next hand. The game will be over when the human player loses all his money or bankrupts his opponent.

### **The Rules Of The Game**

At the start of a hand, each player is dealt five cards face down. A player may look only at his own hand. The first player to open the betting may bet or check. Each player has the option, in his turn, of: dropping out ('folding'); putting in as much as the last bet ('calling'); or putting more than the last bet ('raising'). When all the active players have put the same amount of money into the pot, the first round of betting is over. The remaining players may then discard any or all of the cards from their hand, and receive in their place, an equal number of new cards from the unseen pack. This process, known as the draw, is conducted in clockwise order, starting from the first player.

Once the draw has taken place, there is a second round of betting, which is over when all the remaining players have put the same amount of money into the pot. The players all put the same amount of money into the pot. The players all turn over their cards and the player with the best hand takes the pot.

### **Ranking Of The Cards**

In Draw Poker, the Ace is always taken as HIGH. i.e. A, 2, 3, 4, 5 is NOT a straight, whereas 10, J, Q, K, A IS a straight.

Wild cards are not recognised in the game.

In order to determine the best hand, the following ranking applies (in descending order of value):

1. STRAIGHT FLUSH: Five cards of the same suit in an unbroken sequence, e.g. 2, 3, 4, 5, 6 of the same suit.
2. FOUR OF A KIND: Four cards of the same denomination, e.g. four Aces plus one other card.
3. FULL HOUSE: Three cards of the same denomination, plus two cards of any other denomination, e.g. Three Kings plus two Aces.
4. FLUSH: Five cards of the same suit NOT in an unbroken sequence. e.g. 2, 4, 5, 7 Q of the same suit.
5. STRAIGHT: Five cards of different suits in an unbroken sequence. e.g. 2, 3, 4, 5, 6 of any suit.
6. THREE OF A KIND: Three cards of one denomination, plus two different cards. e.g. Three Aces plus King and 9 of any suit.
7. TWO PAIRS: Two sets of two cards of same denomination, plus one other card. e.g. Two 5s plus two 9s and any other card (excluding 5 and 9). The fifth card is used as a tie-breaker in the event of two players having the same two pairs.
8. ONE PAIR: One set of two cards of the same denomination, plus three other cards. e.g. Two 5s plus any other three cards (excluding 5). The other three cards are used as tie breakers in the event of two players having the same pair.

9. HIGH CARD: If none of the above hands are possible, the value of the hand is taken as the value of the highest card in the hand. If two or more players have the same high card, the second highest cards are compared, and so on, until a winner is found.

## **Stud Poker**

Stud Poker is a computer program that allows you to play five card Stud Poker against the BBC Model B or Electron Microcomputer. Several levels of play are provided, giving the player the opportunity of playing with up to five 'Computerised opponents'.

### **Playing Instructions**

To load STUD-POKER, rewind the tape and type \*LOAD "STUD-POKER" followed by RETURN, then press PLAY on the cassette recorder. When the program has loaded, type OLD followed by RETURN, then type RUN followed by RETURN.

After the title sequence, the player is asked to enter his skill level on the Keyboard - what this does is to set the number of computer opponents; the more you have, the more difficult the game. There is no need to press the RETURN key for this, or indeed, any input during the game.

Each player has a thousand pounds to bet with, in units of one pound - when this is exhausted, the player concerned takes no further part in the game.

Each player is dealt one down card. The human player's down card in the top left hand corner is turned up for him - though none of the computerised opponents can see it, or take it into account in their play. Each player is obliged to contribute an ante of two pounds at this stage, which goes into a pot in the centre of the table - this is done automatically by the computer. The first card up is dealt, and the first round of betting now takes place. The human player is first and may FOLD, CHECK, CALL or RAISE by entering 1, 2, 3 or 4 when prompted to do so. Each player's remaining cash and last bet are displayed near their cards. The minimum bet is one pound and the maximum is one hundred pounds or the amount in the pot, whichever is the least.

1. FOLD: If the player 'FOLDS' he puts no more money into the pot but he forfeits any money he has already put in, and takes no further part in the hand.

2. CHECK: This means that a player does not wish to put money in at this stage, but may do so at his next turn. If all the players check, the round of betting is over.

3. CALL: This is putting in the same amount as the previous player's bet in order to stay in the game - this is done automatically by the computer.

4. RAISE: This is putting in more than the previous bet, the minimum is the previous bet plus one pound. All players must then call so that they contribute the same amount of money during the round.

If the human player chooses to 'raise', he will be asked the amount of his bet; if it is within the limits, and he has enough remaining cash, it will be accepted, otherwise he will be asked to re-enter it. If he has pressed '4' in error, a bet of zero will return him to the menu.

NOTE: When raising, if the figure that you enter is less than 2 or 3 digits, depending on how much you are permitted to bet, then press RETURN to complete your entry.

When all rounds of betting have been completed in this way, the computer will sort and display the cards of the remaining players. The money in the pot will be awarded to the winner, who will be indicated. The human players will be asked to press RETURN when he is ready to continue.

The computer shuffles the cards and starts to deal the next hand. The game will be over when the human player loses all his money or bankrupts his opponents.

### **The Rules Of The Game**

At the start of a hand, each player is dealt one card 'face down' and one card 'face up'. A player may look only at his own 'face down' card. A round of betting now takes place and all those who put in the necessary amount of money on this round, will stay in the game and receive a second 'face up' card. After receiving this card, those who put in the money stay in the game, the others drop out. The third 'face up' card is followed by another round of betting, then the fourth, and final round of betting now takes place. When the last round of betting is complete, those remaining in the game turn over their hands - the player with the best five cards wins the money (pot).

#### **Ranking Of The Cards**

In Stud Poker, the Ace is always taken as HIGH. i.e. A, 2, 3, 4, 5 is NOT a straight, whereas 10, J, Q, K, A IS a straight.

Wild cards are not recognised in the game.

In order to determine the best hand, the following ranking applies (in descending order of value):

1. STRAIGHT FLUSH: Five cards of the same suit in an unbroken sequence. e.g. 2, 3, 4, 5, 6 of the same suit.
2. FOUR OF A KIND: Four cards of the same denomination. e.g. Four Aces plus one other card.
3. FULL HOUSE: Three cards of the same denomination, plus two cards of any other denomination, e.g. Three Kings plus two Aces.
4. FLUSH: Five cards of the same suit NOT in an unbroken sequence. e.g. 2, 4, 5, 7, Q of the same suit.
5. STRAIGHT: Five cards of different suits in an unbroken sequence. e.g. 2, 3, 4, 5, 6 of any suit.
6. THREE OF A KIND: Three cards of one denomination, plus two different cards. e.g. Three Aces plus King and three of any suit.
7. TWO PAIRS: Two sets of two cards of same denomination, plus one other card. e.g. Two 5s plus two 9s and any other card (excluding 5 and 9). The fifth card is used as a tie-breaker in the event of two players having the same two pairs.
8. ONE PAIR: One set of two cards of the same denomination, plus three other cards. e.g. Two 5s plus any three other cards (excluding 5). The other three cards are used as tie breakers in the event of two players having the same pair.
9. HIGH CARD: If none of the above hands are possible, the value of the hand is taken as the value of the highest card in the hand. If two or more players have the same high card, the second highest cards are compared, and so on, until a winner is found.

### **Vingt-un**

Vingt-un (Pontoon) is a computer program that allows one player (punter) to play Vingt-un against the BBC Model B or Electron Microcomputer, with alternating banker, or, with up to five bankers, with the computer always playing the banker.

### **Playing Instructions**

To load VINGT-UN, rewind the tape and type \*LOAD "VINGT-UN" followed by RETURN, then press PLAY on the cassette recorder. When the program has loaded, type OLD followed by RETURN, then type RUN followed by RETURN.

After the title sequence, the player is invited to enter the number of punters who wish to play the game against the computer. If there is more than one punter, the

computer remains as banker throughout the game. If there is only to be one punter, the computer may or may not start as banker, and the banker changes hands as with a normal game; the identity of the banker will be indicated.

Each punter has one thousand pounds to bet with and takes no further part in the game should he run out of money. The game ends when all of the punters, or the computer, runs out of money - the program being then re-run.

Each punter is dealt one card. The computer's cards are in the top left hand corner, face down. The other punters' cards are face up, but the computer cannot 'see' them or take them into account in its play.

The first punter is invited to make his bet on his first card. The minimum bet is one pound, and the maximum one hundred pounds. The other punters make their bets in the same way and if the punter makes a bet, he receives a second card. Each punter is invited to TWIST (enter T), STICK (enter S) or BUY (enter B) as in a normal game, until he is satisfied with his total or 'BUST'. If he buys a card he is invited to make his first bet, his stake is increased, but the card is dealt face up for convenience.

NOTE: If, when betting, the figure that you enter is less than three digits, press RETURN to complete your entry.

After the banker's play, each punters' loss or gain will be indicated in turn before going on to the next hand.

When the punter is banker (one opponent game), the computer has the chance to STICK, TWIST (face up) or BUY (face down), before the human punter. Any change of banker will be indicated.

### **The Rules Of The Game**

A standard 52 card pack is used. Suits are irrelevant, only the face value of the cards is important. Cards from two to ten count as their spot value, court cards count as ten and Aces count one or eleven - at the player's discretion. The cards are only shuffled at the start of the game, or if the bank changes hands.

The object of the game, is to finish with a better hand than the banker's. A hand whose cards total over 21 is 'BUST' and loses. A hand totalling 16 or 21 beats the banker if the banker has a lower scoring hand, or is 'BUST'.

There are three special hands:

ROYAL PONTOON: Three sevens beat all other hands, and wins triple. This hand only applies to a punter, a banker's three sevens count as a normal 21.

PONTOON: 21 on two cards. This beats the banker, unless he has a PONTOON, and wins double.

FIVE CARD TRICK: A hand of five cards that is not 'BUST'. This beats all except banker's PONTOON or FIVE CARD TRICK and wins double.

### **The Play**

Each player receives his first card, and stakes on it an amount that lies between agreed limits, entitling him to receive a second card. The banker addresses himself to each player in turn, and finishes transactions with one player before he proceeds to the next. If the player is satisfied with his total, and requires no more cards, he says 'STICK' or is 'BUST'. He may acquire more cards by 'TWISTING' them face up, or buying them face down and increasing his stake. The banker must play before collecting the stakes of players who are 'BUST'. He turns his own cards face up, and deals himself more cards until he is satisfied with his total. If he is 'BUST', he collects the stakes of players who are 'BUST' and pays the others the amount they staked (double or triple for special hands). If he has a PONTOON, he collects double stake from everybody unless they have a ROYAL PONTOON. If he has a FIVE CARD TRICK, he collects double from everybody unless they have a PONTOON or ROYAL PONTOON. If

the banker's hand has a score of less than 22 (i.e. he is not 'BUST') he pays those with a higher count or better hand, and collects from those who with equal, lower or 'BUST' hands.

The cards are not shuffled, but are gathered up and placed at the bottom of the pack for the next deal. The bank changes hands when a player other than the banker has a PONTON.

## **Blackjack**

Blackjack is a computer program that allows one player (punter) to play Blackjack against the BBC Model B or Electron Microcomputer, with alternating banker or with up to five punters, with the computer always playing as banker.

### **Playing Instructions**

To load BLACKJACK, rewind the tape and type \*LOAD "BLACKJACK" followed by RETURN, then press PLAY on the cassette recorder. When the program has loaded, type OLD followed by RETURN, then type RUN followed by RETURN.

After the title sequence, the player is invited to enter the number of punters who wish to play BLACKJACK against the computer. If there is more than one punter, the computer remains as banker throughout the game. If there is one punter, the computer may or may not start as the banker and the bank changes hands as in a normal game. The identity of the banker will be indicated.

Each punter has one thousand pounds to bet with and takes no further part in the game when he runs out of money. The game ends when all of the punters, or the computer, runs out of money.

Each punter is dealt one card. The computer's cards are in the top left hand corner, face down. The other punters' cards are face up, as the other punters are playing against the banker, not each other. The computer cannot 'see' the other punters' cards or take them into account in its play.

The first punter is asked to bet on his first card. The minimum bet is one pound and the maximum one hundred pounds. The other punters make their bets in the same way, and if a punter makes a bet, he receives a second card.

NOTE: If, when betting, the figure that you enter is less than 3 digits, press RETURN to complete your entry.

If the first two cards are of the same rank, a punter is asked if he wishes to split them. If he enters 'N' the play continues as normal. If he enters 'Y', the two cards are split and a second card dealt to each. The punter now has two separate hands with the same stake on each.

If his first two cards total eleven, a punter is asked if he wants to double. If he enters 'N' the play continues as normal. If he enters 'Y' his stake is doubled.

Each punter is invited to TWIST (enter T) or STICK (enter S) until he is satisfied with his total or BUST. If a hand is split, the upper hand is dealt with first, and all transactions are completed on this hand before the lower hand is considered.

After the banker's play, each punter's losses or gains will be indicated, in turn, before going on to the next hand. For a split hand, the message for the upper hand is given first.

When a human punter is banker (one opponent game), the computer has the same opportunities as a normal player. Any change of bank will be indicated.

### **The Rules Of The Game**

A standard 52 card pack is used. Suits are irrelevant, all that matters is the numerical face value of the card. Cards from two to ten count as their spot value, court cards as ten and Aces as one or eleven - at the player's discretion.

The object of the game is to finish with a better hand than the banker's. A hand whose cards total over 21 beats the banker if the banker has a lower scoring hand or is 'BUST'.

There are two special hands:

NATURAL: 21 on two cards. This beats the banker.

FIVE CARD TRICK: A hand of five cards that is not bust. This beats all except the banker's Natural or Five Card Trick and scores double.

### **The Play**

Each player receives his first card, and stakes on it an amount that lies between limits, entitling him to receive a second card. If the second card is of the same denomination as the first, the player may choose to split them and play two hands. In this case, another card is dealt to each hand, the same money being staked on each hand. The banker may not split his own cards.

If a player's first two cards total eleven, he may double his stake.

The banker addresses himself to each player. He must finish all transactions with one player before he goes on to the next one. If the player is satisfied with his total, he can 'STICK'. If not, he may have up to three more cards 'TWIST'ed face up until he sticks or is 'BUST'.

The banker must play before collecting the stakes of any players who are bust. He turns his cards face up, and deals himself more cards until he is satisfied with his total. If he is BUST, he collects the stakes of the players who are bust, and pays the others the amount they staked, (double for special hands as previously described). If he has a Natural or Five Card Trick, he collects double stakes. With a total under 22, he pays those with a higher count, or better hand; and collects from equal, lower or bust hands. With a Five Card Trick, he beats a player's Five Card Trick, but not a player's Natural.

The cards are gathered, shuffled, and the next hand is dealt. The bank changes hands when a player, other than the banker, has a Natural.

### **The History Of Poker**

Poker, by all accounts, emerged in New Orleans at about 1820, and spread along the Mississippi in the steam-boat saloons. It was first played with twenty cards, straights and flushes not being recognised, though within ten years, the pack became 52.

The Draw appears to have been introduced during the American Civil War. Straights were ranked at around 1860-65; Flushes, though not clear, somewhat earlier. To complete the suite of games, Stud seems to have appeared at around 1870.

The derivation of the name is not clear. One theory is that the name was a Southern corruption of the French three card game Poque, possibly combined with the ancient Persian game, An Nas, which could have reached America via French settlers, who has been in Persian service. Another theory is that the name derives from the German game, Pochspiel, in which a player passed by knocking on the table and saying, "Ich poche".

The original game was Straight Poker, in which five cards were dealt. One period of betting followed - the winner of that taking the pot. From this developed Draw Poker, in which, after the first betting period, each player could seek to improve his hand by discarding some of his hand and 'draw'ing replacements. A second period of betting ensued before a winner could be determined.

Draw Poker is still regarded as the basic game and is recommended for beginners and home play. Serious players are now devoted to various forms of the next development, Stud Poker. In this development, each player receives five or more cards, from which

he selects any five as his eventual playing hand. Some of these cards are dealt face down (hole cards) for the player's eyes only, others face upwards (upcards) for all to see. There is no draw, but betting periods follow the deal of successive cards, giving more opportunity for betting and the application of skill.

### **Vingt-un**

Vingt-un, more commonly known as Pontoon, is the not-quite-French for the magic twenty-one, on which the whole game is based. The American version, and it is only an equivalent, is known as Blackjack.

There are no hard and fast rules laid down for the game. The basic object is to acquire cards whose combined face values must get as close to, or equal, 21.

Vingt-un is a banking game and one of the few that rewards skill; hence the popularity over the years, being recognised as a game that may be played for pleasure as well as money.

### **Blackjack**

Blackjack is the American equivalent of Pontoon. A count of 21 on two cards is known as a Natural. Players 'buy in' before the deal. If a player has a Natural, the banker pays him and collects from the others, without further play - otherwise they may 'STICK' on any total or call for a 'TWIST' for as many more cards as they wish, these being dealt face up. If the first two cards total 11, the player may double his stake 'double down'; the rule may be extended to totals of 10 or 9.

Optional payoff hands, calling for immediate payment from the banker, include: five, or more card tricks, paying double for each card over a four; 21 with 6-7-8, paying double, 21 with three sevens paying treble.

It should be noted, that these rules are those generally played to in American Casinos, and are given for interest only.

**Instructions' Source** : ACES HIGH (Oasis) Back Inlay And Booklet

### **Review (Electron User)**

ACES HIGH is a compilation package of four card games. These can be played either against the computer or between up to five opponents, depending on the game selected.

Draw poker and stud poker are played by the user against as many as five computer opponents. You are allocated £1,000 to start with, and the game ends when one player has accumulated all the money. The computer is always dealer and always to the same player first, which detracts a little from the reality of the game.

You are given the opportunity to fold, check, call or raise, depending on your hand. Don't worry if you don't understand these terms, or even if you don't know how to play poker, because all is adequately explained in a very handy, explicit booklet which is incorporated in the package.

Blackjack and Pontoon are very similar, but have subtle differences which become clear when you use Aces High. You win the chance to become banker if you get pontoon (in the game pontoon, that is) or a natural (in blackjack).

Again you are given £1,000 to start, and again play continues until one player has accumulated all the cash. All the programs are very simple to use and, as well as the booklet, instructions are given throughout the games.

They couldn't really go wrong with the graphics, but the cards are well depicted and the layouts good.

The games, as you would expect, are aimed at the more mature market, but kids from about ten years old upwards will enjoy the simpler pontoon and blackjack. As it is,

ACES HIGH gives all the family the chance to enjoy losing their shirts without really noticing it.

Adam Young, ELECTRON USER 2.11

# ACHETON

***Professional, Originally Released On DFS 1900 Disc***

Game Type : Text Adventure; Disc-based  
Authors : Jon Thackray, David Seal and Jonathan Partington  
Standalone Release(s) : 1987: ACHETON, Topologika, £9.95

## Instructions

### About The Author...

*Jon Thackray first encountered adventure games in 1978 while studying for his PhD at Cambridge, and started writing his own game soon after.*

*In 1982, he joined Acorn Computers and started looking at putting adventure games onto micros in his spare time. He has maintained a keen interest in adventure games ever since, both single and multi-use, and is now an Arch-wizard on the British Telecom multi-user dungeon.*

### About The Adventure...

*A mysterious body, known only as The Ruling Council of Acheton, has issued the following challenge to sentient life-forms everywhere:*

*"We hereby challenge the greatest adventurers in the known universe to uncover the dread secrets of our realm.*

*"ACHETON is no ordinary land. Although explorers are welcome, you may find that Death is the only reward. Deeds of heroic valour will be required, and feats of intellect that Newton and Einstein would have boggled at. Understanding of the arcane science known as Magic will be mandatory...*

*"For the successful adventurer, the rewards will be great: riches immense, power supernatural, and the knowledge that you have succeeded where others have failed...*

*"Good luck - you will need it!*

*Signed and Sealed in the four thousand and twenty-seventh year of the Reign of Yelka-Dekklm TV. May his Dread Majesty live forever!*

*GAME SIZE: Expansive, with a wide range and a very high standard of problems.  
RATING: A real challenge.*

## On-line Help

ACHETON comes with on-line help which you get into by typing HELP <RETURN>. The program will halt and wait for you to type in a number so that it knows which 'hint' you want. You therefore need to know which numbers refer to which hints. Pages 2-4 of this Hint Sheet contain a series of questions that players typically ask, like 'What do I do in the enchanted forest?' Various 'key words' have been deleted from these questions - making it harder to accidentally see the solutions to other questions - and are reproduced below. The numbers alongside the words refer to the questions. The number that follows each question is the number to key for that particular hint. Good luck!

# ACORN USER GRAPHICS

## *Professional, Released On Cassette Only*

Game Type : Graphics Cassette; Programs from ACORN USER  
Authors : Various  
Standalone Release(s) : 1985: ACORN USER GRAPHICS, £3.75  
Compilation Release(s) : None  
Stated compatibility : Electron Side A/BBC Side B  
Actual compatibility : As stated  
Supplier : REDWOOD PUBLISHING, 68 Long Acre, LONDON WC2E 9JH  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### Instructions

Graphics programs from past issues of ACORN USER magazine are listed below in the order in which they appear on the cassette.

INTRO	Introduction
PAINTBX	Paintbox program by Rob Fenton (Feb 85)
DESIGN MOVER EDITOR EDCODE	Sprite designer, mover and editor by Harry Sinclair (Sep, Oct, Nov 84)
DOTFILL COLFILL	Recursive dot and colour fill routines by Peter Sandford (Jan 85)
PIES MCFILL BARS MCFILL	Pie and bar charts by Peter Sandford (Feb 85)

The INTRO file contains a routine to transfer all the programs from cassette to disc in one go. Ensure you have a blank, formatted disc in your disc drive before you begin.

Instructions for Rob Fenton's Paintbox are included in the INTRO program. To load and run INTRO, select the correct side of the tape for your machine (BBC Micro or Electron), rewind to the start, type CHAIN"INTRO" <RETURN> and press the play button on your tape recorder. To load and run any one of the programs on the cassette, position the tape at the start of the program, type CHAIN"" <RETURN> and press play on your recorder. Refer to the appropriate article in ACORN USER for full details about each of the graphics programs. We advise you to perform a hard reset by pressing <CTRL><BREAK> before using any of the programs on this cassette.

# ACTION PACK 2

*Professional, Released On Cassette Only*

Game Types : Arcade  
Standalone Release(s) : 1987: ACTION PACK 2, Alligata/WHSmith, £3.99  
Compilation Comprises : 1. TARZAN BOY, Alligata  
2. DIAMOND PETE, Artic/Alligata  
3. VIDEO'S REVENGE, Budgie  
4. Q-BIX, Artic/Alligata  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ALLIGATA, 178 West Street, SHEFFIELD S1 4ET  
Disc compatibility : 1. ADFS 1D00, CDFS 1D00, DFS 1D00  
2. CDFS E00, DFS E00  
3. Unknown  
4. Unknown

## Instructions

Please see individual entries for each standalone title for complete playing instructions.

## Review (Electron User)

This collection of four games - some of them new - is only available from WHSmith.

The first game on the tape, VIDEO'S REVENGE, is a shoot-them-down space game using good quality, smooth graphics and adequate sound. You can move your craft left and right as well as forwards and backwards, and the various nasties approach from above or below. Like so many of these games, it's simple but addictive. I really like the title screen which has a message scrolling while the game loads.

Q-BIX is a version of the classic in which you steer a character around a set of cubes, changing the colours of the top surfaces. Of course there are adversaries who try to bump in to you and cause you to lose one of your lives. This game has poor graphics and is painfully slow. It will soon have you reaching for the <BREAK> key.

TARZAN BOY is an oldie and was reviewed as a single game in December 1985. For those who missed that review TARZAN BOY is a four screen ladders and levels game, with an awful lot of problems to overcome. Getting on to screen two is my limit in this attractive, smooth and flicker-free game. It is a little slow, but by hitting <BREAK> the game restarts with no sound and a lot more speed.

The final game is DIAMOND PETE and this obviously has its origins in REPTON. The aim is to collect sixteen diamonds from each of ten screens without letting any rocks fall on your head.

An added problem is the severe time limit. There are said to be ten levels as well as the ten screens, but I never got the chance to find out.

There is no way that this matches the outstanding quality of REPTON, but it is very good. It's smooth, fast and has good sound. The problems are well thought out, and it provides a very good challenge.

Overall I thoroughly recommend this package. Three of the games would make excellent singles, so it is a real bargain to get all of them at such a low price.

Sound .....	6

# ADDCOMM

## *Professional, ROM Chip Expansion*

### Instructions

Instructions currently unavailable.

**Instructions' Source** : Instructions currently unavailable.

### Review (Electron User)

As the name indicates, this is a utility program which adds commands to your Electron, giving you, in effect, an even more extended Basic. It is stored on a ROM chip and to be able to use it you must have a ROM card or box such as the Slogger Rombox.

The added commands fall into four categories:

- \* Graphics
- \* Logo graphics
- \* Toolkit Commands
- \* Miscellaneous

Electron graphics are already superb, but the ADDCOMM commands make them even better. There are, for example, commands for creating circles and ellipses. They are really easy to use. For instance:

```
10 MODE5
20 CIRCLE 640,512,400
```

will draw a circle of radius 400 screen units with its centre at the centre of the screen. If you don't like your screen being 1280 units across and 1024 units up, you can scale it.

```
SCALE 0,10,0,10
```

will make the screen 10 units across and 10 units down. To get a similar circle you need:

```
CIRCLE 5,5,4
```

On the scaled screen you cannot use MOVE, DRAW or PLOT but you can use SMOVE, SDRAW and SPLOT. Any line in a program can mix Basic and ADDCOMM statements or variables. Sp:

```
CIRCLE X,Y,RND(500)
```

is quite acceptable. Extra parameters give arcs.

If you've ever envied the colour fill routines you see in commercial programs it's easy with ADDCOMM. The statement FILL with X and Y co-ordinates will fill from the point specified to the edge of the screen or to a non-background colour.

This will fill any shape, however complex, even through text. If you fancy patterned filling, CFILL allows you to specify a mix of colours for individual pixels.

It's even possible to have a non-upright screen by using ROTATE, or to shift the whole thing up or to the side with the TRANS command. Logo graphics give you the chance to create displays with minimal use of co-ordinates. It's rather more like using a pen.

First you decide where to start on the screen (LOMOVE). This sets the position of the Logo cursor. You choose your PEN (dots, lines or fills) and then the ANGLE to draw and the distance to ADVANCE.

If you prefer relative rather than absolute angles, TURN can be used to rotate a

specified number of degrees. LCIRCLE and LELLIPSE draw circles/ellipses or arcs around the Logo cursor.

The Toolkit commands offer a mix of useful and informative commands. MEM displays in decimal and hex how much memory your program takes and what is spare. This is based on your current mode, so put yourself into the correct mode when using it.

CHAR is a superb command enabling you to design/edit VDU 23 characters. There are dozens of programs which do this, but this one can be used while you're actually writing your program.

GOODPROG attempts to mend a Bad Program, while FKEYS displays on screen the contents of your function keys. Both work well, and, because ADDCOMM becomes a part of your computer they sit there waiting to be used in crisis situations.

The same applies to LVAR, which lists all the variable names you've used. This can really help to avoid a muddle.

VERIFY is a facility that was missed out on the Electron. It checks that what has been saved on tape exactly matches the same program in memory.

LLIST is a line listing command. Unlike ordinary LIST, LLIST can be included in a program. Silly? Not at all. My error routine, when debugging programs is now:  
ON ERROR MODE6:REPORT:PRINT" at line ";ERL:LLIST ERL:END

This tells me the error and displays the problem line. Using FIND it is possible to list the whole program, including the possibility of different list formats such as multi-statement lines broken up.

Whenever I program I like to use meaningful variable names. It makes life easier for me, but the computer can handle the resident integer variables (A%-Z%) more quickly and efficiently.

Using the ADDCOMM command GREPL I can ask for a variable such as pos\_of\_prog and change it right through the program to F%. SREPL finds each variable you might want to change and then gives you the option of whether to change it or not.

I can now use variables that I understand and when the program is fully debugged, change to short fast variables. Not only that, I can use KILLREM to remove all REM statements and then superb COMPACT to combine lines, thus saving more memory and processing time.

Programs of mine that I have put through the processes save about one third of the original memory - and run more quickly into the bargain. For example, programs I and II are identical in what they do (selecting football pool numbers) but Program II has had its variables changed and its REMs removed. It has then been compacted and renumbered. Table I shows the differences. Imagine the effects on long programs.

#### **Program I: Long pools selector**

```
10REM POOLS PREDICTOR
20REM By Rog Frost
30REM
40REM
50MODE1
60rnd=RND(-TIME)
70VDU19;4;0;
80PRINTTAB(1,10)"Auto selection of twenty four numbers"TAB(10,13)"for
football pools"TAB(4,20)"Press space to get numbers"
90REPEATUNTILGET=32:CLS
100DIM choice%(55)
110FORselection%=1TO24
120number%=RND(55)
130IFchoice%(number%)<>0THEN120
140choice%(number%)=number%
```

```

150NEXT
160PRINT'
170FORprintout%=1TO55
180IF choice%(printout%)<> 0 PRINT printout%
190NEXT

```

#### Program II: Compacted

```

10MODE1:R%=RND(-TIME):VDU19;4;0;:PRINTTAB(1,10)"Auto selection of twenty
four numbers"TAB(10,13)"for football pools"TAB(4,20)"Press space bar to get
numbers":REPEATUNTILGET=32:CLS
20DIM C%(55):FORS%=1TO24
30N%=RND(55):IFC%(N%)<>0 THEN30
40C%(N%)=N%:NEXT:PRINT':FORP%=1TO55:IF C%(P%)<>0 PRINT P%
50NEXT

```

**Table I: ADDCOMM advantages**

	<b>Program I</b>	<b>Program II</b>
Time taken	2.1 seconds	1.9 seconds
Program length	394 bytes	246 bytes
Variable storage	291 bytes	232 bytes
Spare memory	7763 bytes	7970 bytes

So far all has been very good, but three of the miscellaneous commands are dreadful. POPGOS, POPREP and POPFOR allows you to jump out of subroutines, REPEAT/UNTIL loops and FOR/NEXT loops. All of these make for very bad programming and should be avoided.

Another command, LGOTO is like GOTO but instead of jumping to a specified line number, you jump to a label.

It works fine, but so far I've had no particular use for it. SETWIN allows you to predefine seven text windows which can then be edited with the WIN command. It's easier than VDU28.

The last miscellaneous command is SORT. This can be used to sort string arrays into alphabetical order. In truth, it actually produces ASCII order with upper case before lower case. It's a very fast sort taking just 0.75 seconds to sort 100 words into order.

To sum up, ADDCOMM is brilliant, particularly the graphics and the toolkit, but there is a small price to pay in terms of memory. It requires 256 bytes of RAM for its own use and so it pushes PAGE up to &F00. If you are going to load a long commercial program it's as well to turn ADDCOMM off. To do this type ADDCOMM and hit the <BREAK> key. \*FX 163 will turn it on again.

Firmware like ADDCOMM requires good documentation, and Vine Micros has achieved a winner here. The 72 page manual is clear, concise and simple giving full syntax and examples for each of the forty commands. ADDCOMM is the most valuable piece of software I've got. Every Electron owner who does some programming should consider getting it. It's easily worth the £28.

Rog Frost, ELECTRON USER 2. 9

# ADVANCED DISC TOOLKIT

## *Professional, ROM Chip Expansion*

### Instructions

Instructions currently unavailable.

**Instructions' Source** : Instructions currently unavailable.

### Review (Electron User)

ADT is a ROM compatible with both the Electron and the BBC Micros and designed to be used with either an ordinary disc filing system or the advanced disc filing system. The ROM adds 32 new \* commands which are available from within a program or directly from the keyboard.

Most of these commands use the disc filing system, but several don't, although I wouldn't really recommend it if you haven't yet upgraded to discs.

ADT is available as a ROM cartridge which plugs into the Plus 1 or as a bare ROM. This could be plugged into something like Slogger's ROMBOX, tested in the August issue of Electron User.

\*HELP ADT reveals all the extra commands and their syntax. Several commands, \*BACKUP, \*BUILD, \*FORM, \*TYPE and \*CATALL should be familiar. These have been included in the ROM as they aren't in the ADFS but are on the Welcome disc supplied with the Plus 3.

\*BACKUP copies the contents of one disc to another. \*BUILD creates a file, usually text, which can be executed when the disc is booted with <SHIFT> and <BREAK>. \*CATALL catalogues the whole disc and \*FORM formats a new disc. \*TYPE displays a text file without line numbers.

There are several useful search commands. \*DFIND searches a disc, \*MFIND searches the memory and \*BFIND searches a Basic program, printing out the address of all occurrences of a given string. The search can be for a hex or ASCII string.

Programs can be loaded and run at any address, relocation is automatic. \*MLOAD loads a program while \*MRUN loads, relocates and runs a program. This saves a lot of fiddling about with programs that have to run with PAGE set to &E00 for example. Memory contents can be examined in hex, ASCII or assembly language with \*MEX.

The disassembler is excellent and is the best I have seen so far on the Electron. It allows you to follow subroutines and branches by pressing the <RETURN> key when one is encountered. It even disassembles backwards!

A disc can be examined and edited with \*DEX and sectors loaded and dumped with \*SECTORS. \*DUMP displays the contents of a file. I didn't realise how important these commands were until I accidentally saved one file with the same name as another. By examining the disc, I found the old program and used \*SECTORS to load it back to PAGE and OLD to restore it.

\*LIST lists a text file like \*TYPE but adds line numbers. \*VERIFY checks that a disc is OK. \*FCOMP compares two files to see if they are the same and \*DCOMP compares two discs. \*SETADR changes the load and execution address of a file and \*FCOPY makes a copy of a file.

Several commands act on ROMs. \*ROMS prints all the ROMs present and \*UNPLUG turns off a particular ROM. This is necessary if one ROM is interfering with the operation of another and can happen if two ROMs have the same name for two entirely different commands. Simply \*UNPLUG the one you don't want.

\*FREE displays the amount of free space on a disc and \*MAP displays a map of free space. \*FSN tells you which filing system is active and \*XFER will copy a file from one filing system to another.

I've only briefly mentioned each command and given an indication of what it does. Many of the commands have several options and functions which are invoked by passing parameters and I haven't the space to explain in detail the full capability of such a comprehensive toolkit. Suffice it to say that it has just about every utility you're likely to need.

None of the utilities are new - they're all old hat on the BBC Micro. They are new on the Electron, however. The big plus point for this toolkit is that it's compatible with an ordinary DFS, the ADFS, the Electron, BBC Micro, and most commands work across the Tube.

One point worth mentioning though is that for some of the utilities to work in Modes 0 to 3, a link may need soldering inside the Plus 3 on the circuit board. However, all the commands work in Mode 6 whether the link has been made or not, so it's not all that important.

I found the ADT an invaluable tool. It saved time and effort and helped saved the day on several occasions. If you have discs, then you'll need a toolkit. Take a close look at ADVANCED DISC TOOLKIT - it's superb.

Roland Waddilove, ELECTRON USER 2.12

# ADVENTURE

*Professional, Released On Cassette Only*

Game Type : Text Adventure  
Author :  
Standalone Release(s) : 1983: ADVENTURE, Micro Power, £6.99  
Compilation Release(s) : 1987: PRES GAMES DISC 3, PRES, £9.95  
1988: MICRO POWER MAGIC, Micro Power, 1988, £7.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : MICRO POWER, 8/8A Regent Street, Chapel Allerton, LEEDS  
LS7 4PE. Tel: 01532 683186.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Adventure is a text-only game where the computer acts as your eyes and ears as you wander through the fantasy world to rescue the Princess from the Magic Caverns. You have to travel through more than 100 different locations and solve many problems to achieve this goal.

You interact with the computer by using one or two-word commands. Compass directions are used for moving from location to location. The most useful commands are already set up on the function keys:-

f0: INVENTORY  
f1: CHECK SCORE  
f2: GO NORTH  
f3: WALK EAST  
f4: RUN SOUTH  
f5: WEST  
f6: TAKE  
f7: DROP  
f8: KILL

The rest of the verbs that the computer understands are left for you to discover.

You are well advised to make a map as you go along so that all avenues open to you can be thoroughly explored. Lastly your recollection of stories from the Arabian Nights could stand you in good stead.

NOTE : MICRO POWER'S NEW SHOWROOM ADDRESS IS :  
NORTHWOOD HOUSE, NORTH STREET, LEEDS LS7 2AA. Tel : (0532 458800)

**Instructions' Source** : ADVENTURE (Micro Power) Inner Inlay

## Review (Electron User)

The Electron acts as your eyes and ears in this all-text adventure game where you wander a fantasy world trying to rescue a princess from magic caverns. You have a compass, but it is fairly unreliable, often making it impossible to retrace your steps. You're well advised to make a map as you go along.

The keyboard entry uses the standard verb/noun system such as "Take axe" or "Go West". The vocabulary available is fairly large though the game leaves you to discover this for yourself, only telling you the most basic commands.

One annoying feature is that the Electron can get bored if you take your time - and it tells you so! This is usually when you're completely lost and it doesn't help.

The game can be listed, but this provides no answers, which annoys me as I still can't get past the fierce rat and you can't kill him yourself. As the cassette insert tells you, your recollection of stories from the Arabian Nights should stand you in good stead.

As you might expect, there are various treasures and objects in the adventure, including a bottle of potent wine. You can drink the wine but hang on to the bottle.

All in all, the game is well written and the answers may take some time to work out, but the clues are all there. It's the type of program that has people looking over your shoulder giving "helpful" hints and ideas to try.

Although perhaps a little simple for the experienced adventurer, for the beginner it is an extremely good game.

## Review (Electron User) - "Enthusiasm Pays Off"

Whenever I see compilation tapes at bargain prices I am always a little worried about the quality of the software. I was especially concerned in this instance when I discovered that each adventure had been written by an enthusiastic amateur. But my prejudice proved ill-founded as I soon found that ADVENTURE 4 PACK is a smashing collection of text-only adventures.

PHILOSOPHER'S STONE, written by Graham Barlow, opens side one. It employs a very clever loading screen and an excellent choice between Mode 4 text or a mystical re-defined script. You take the role of Daverick Harpmoon on a quest to find the philosopher's stone, a rare substance which will change base metals into gold and produce an elixir of life.

You will soon find that the forest is a series of dead ends - but you will also come across a kleptomaniac pixie who is guarding a dog's dinner.

The second adventure is HEXAGRAM OF TRUTANIA VALLEY, which I have to admit is my favourite of the four. It is written by Michael Winter and Simon Clifford and involves a search to find six coloured triangles which together make up a hexagram. You begin your task in a town centre but after a few moves you find yourself walking through fields of turnips, oats and barley. The exit descriptions are excellent and remind me of the Level 9 style of writing.

You need to read these descriptions carefully to discover some poison and meat which can be used to kill the lion that guards the first triangle.

INNER SPACE is an anonymously-written adventure which is quite mystic and off-the-wall in character. The opening scenario is streets of derelict houses infested with flies which need swatting. In the back garden of one such house is a ladder to the clouds which is definitely worth climbing. The opening 30 moves require the seemingly random collection of objects in order to solve equally obscure problems.

The final offering is a Quill-written adventure entitled STRANDED ON ILOOFRAK. Author Matthew O'Donnell informs you that while you're working on a new form of teleport, an experiment in your lab goes terribly wrong and you find yourself transported to the small planet of Iloofrax. This adventure was spoilt for me by

some unfortunate errors in the location descriptions but was otherwise an enjoyable romp through a maze-ridden planet.

All in all, well worth the money and the best thing Potter has produced to date.

## Review (Electron User)

This is not, as one might think, a test of knowledge of adventures but an educational program in an adventure setting. Its purpose is to test children's knowledge of mathematics. The program comes in two parts, the quiz itself and a drawing program which is automatically CHAINED if the questions set in the quiz are answered correctly.

The quiz makes little use of the graphics capabilities of the Electron and all too much of the sound. I eventually used \*FX 210,1 to turn the sound off, though the kids loved it.

The program is well error-trapped and listable on loading. Being written in Basic, it is easy to adapt. Since you are not given the correct result when a wrong answer is given, this would probably be the first thing you would change.

The questions cover multiplication up to the 12 times table, division, addition and mixtures of these. Only whole numbers are used. The drawing game offered as a reward for successfully answering the quiz is a simple etch-a-sketch type program. It isn't as well error-trapped as the quiz but since this is also in the Basic that, too, can be easily changed.

The quiz won't teach children mathematics but it is novel enough to hold their attention and I found there was fierce competition to see who could get to the end first.

The reward stands up well against commercial packages, though a separate instruction sheet would have been helpful. A useful package that could be slightly improved, but is nevertheless good value for money.

Peter Lundstrom, ELECTRON USER 1.12

# ADVENTURELAND

*Professional, Released On Cassette Only*

Game Alias : SCOTT ADAMS ADVENTURE 1  
Game Type : Text Adventure (Rated Moderate)  
Author : Scott Adams

## Instructions

Wander through an enchanted realm and try to uncover the thirteen lost treasures. There are wild animals and magical beings to reckon with as well as many other perils and mysteries. This is the Adams Classic that started it all!

Difficulty Level : Moderate

## How An Adventure Works

Read the standard introduction to Adventure International adventures under SCOTT ADAMS SCOOPS.

**Instructions' Source** : ADVENTURELAND (Adventure International) Back Inlay

## Review (Electron User)

This was the first adventure ever to be released for a home computer, and if that isn't reason enough to buy it, let me state it is also an excellent one.

The object of your quest is to collect and store thirteen treasures. You start the game in a forest and though you aren't a social climber the view is disappointing. The axe is soon found in a sunny meadow and when I tell you that Bunyon's first name was Paul you'll know where to visit when you try some magic.

You might bear this in mind when you visit the quicksand, a definite case of sink or swim! The chiggers in the swamp will soon get under your skin so protect it. The cypress tree is worth a visit but it is not necessary to do so to finish the game, though it will provide a clue.

Having been given the chop, your next problem is getting down to the main body of the game. An examination of the room descriptions and a careful choice of wording is as essential here as it can be elsewhere.

Before you go back up you might consider playing the lead in Aladdin!! A score of 38 out of 100 should be your mark and a means of lighting the lamp will also be found underground, though don't go too far!

If you die you will go to limbo and you only have one move you can make here - a Hell of a choice! By now you are well into the main body of the adventure, and though you will still have to return to the surface several times the answer to most of your problems lies underground.

Scott Adams rates this game at moderate level. I think it is more like beginners' level, especially when you compare it with some of his later games. That is not to

say that it doesn't have some fiendish problems though! What makes it easy is the level of help given.

The seasoned adventurer can expect to finish it within a couple of days, but the novice will find it the perfect introduction to the genre. An excellent adventure that is worth having for its collectors' value alone. If you haven't got it, you should have!

Merlin, ELECTRON USER 3. 4

### **Solution (EUG #46)**

The first of Scott Adams' adventures is a journey through mystical, unknown lands, in which you must collect a blue Ox, jeweled fruit, a pot of rubies, a diamond ring, a diamond bracelet, a magic mirror, a golden crown, a thick Persian rug, a firestone, a golden net, a golden fish, some royal honey and the Dragon's eggs.

If the chiggers bite you, type GET MUD then DROP MUD (or it will get infected).

#### \*\*\* Treasure 1. The Blue Ox \*\*\*

## Instructions

It is the year 1996. The USSR having been dissolved five years previously by a series of revolutions, resulted in the creation of new democratic states. But with the collapse of the USSR, the arms' manufacturers for the NATO alliance lost their production market.

Therefore, in a bid to avert massive unemployment, a contest was set up to all budding pilots, with a prize of \$10,000,000 to the winner - of which there could only be one.

The contest: 'A Trial By Combat'. This is the fifth year of the contest, and you have reached the final round, which is all that stands between you and the prize money...

## Flying Manual

A list of all the keys used by each player to control their planes is given on screen. Firstly, the 'Flight' displays are described below:-

## Flight Displays

Each planes' display consists of three parts: (i) The Visual Window, (ii) The Instrument Panel and (iii) The Message Area.

## The Visual Window

The Visual Window is the main playing window, in which the 'outside world' is viewed. The ground and enemy planes are seen in this large window. Also, at the top of the window, five numbers make up the H.U.D. (Heads Up Display). Of the five numbers, the last one is the most critical. The five numbers are as follows:

The first two are the co-ordinates of the plane as viewed from above. N.B. The base of player #1 is at 0, 0 and the base of player #2 is at 1000, 1000. These bases are where the respective player can land to refuel and re-arm.

The number is the % amount of fuel left (at 0 the plane crashes).

The fourth is the direction (or heading) of the plane. This changes depending upon whether the plane is banking or not (and in which direction). The values are in the range 0-1000 and correspond to the following:

N = 0+	NE = 125+
E = 250+	SE = 375+
S = 500+	SW = 625+
W = 750+	NW = 875+

N.B. In order that the enemy plane appears in the middle of your sights, the direction value should be set to the base value of that direction, eg if travelling North, set to as near to 0 as possible.

The fifth number (and most important) is the amount of damage sustained due to enemy action. The maximum damage that can be sustained varies between different planes.

### **The Instrument Panel**

This makes up what is known as the H.D.D. (Heads Down Display) - despite being situated on the side of the Visual Window.

This panel contains all the other important values: speed, thrust, altitude (x0000 ft) and the pod number of the current selected weapon.

Also above this, there is the tracking radar, which shows the relative position of the enemy *taking account of the direction you are heading.*

### **The Message Area**

This is the thin rectangular box situated beneath the Visual Window. Warning messages appear in this window. One that must be noted, is the message telling the player that the runway is beneath. This warning means that the player is flying too high to land, despite being at the correct location to land. The solution is to descend.

The other message that must be noted is the weapon change notice - this appears and disappears rapidly after changing weapon, and so must be watched carefully.

### **Weapons Control**

When an enemy is in your sights ("ENEMY IN SIGHTS" in Message Area), your guns will hit the target (if guns selected), but once the enemy leaves the target, the guns will miss, despite still being able to fire.

The missiles when selected will only fire when locked onto the enemy (NB. They can miss - unlike the guns). Once an enemy is in your sights with your missiles selected ("MISSILE LOCKED" in Message Area), the missile remains locked on, even if the enemy moves out of your sights.

Finally, the two E.C.M. devices (Chaff flares and the Radar jamming systems) activate automatically (if selected) if an enemy missile is launched - the fire key has no use with these systems.

GOOD LUCK ! ! ! ! !

**Instructions' Source** : AERONAUTICAL DOGFIGHT II (Ultrasoft) Original Text File

### **Review (EUG)**

This is one of the fullest and most recent public domain releases on the BBC/Electron market. It is a two-player game only which requires both players to crowd around the keyboard in order to get to their respective keys. (That said, it is completely unprotected, so adept programmers could easily add a joystick routine or use one of the interrupt driven utilities published in ELECTRON USER.)

The objective of this aircraft simulation is to blast your friend out of the sky. There's a bit more depth to it though - in fact, quite incredible depth for a PD game - and you are allowed to decide in which airplane to combat and what missiles to equip it with. You can scroll through colourful Mode 1 pictures of each of the six planes and their statistics but, while good, this makes choosing the plane is a bit fiddly as you need to remember the statistics until you get back to the screen allowing purchase.

It's also just as fiddly to equip the plane; you frequently overload it and, instead of allowing you to make an alternative choice for the final weapon, you are forced to choose all the missiles all over again! It only really causes a problem for a few moments though as you soon decide on the best plane and can select it and ammunition in just a few seconds.

Then off into the skies...

**AERONAUTICAL DOGFIGHT II** is a 3D simulation written by a master of PD BBC software Adam Sandman. His first venture on the Electron, this is not an arcade jaunt but a 3D simulation along the lines of the Hewson simulators. The whole screen is constantly changing and there are two line horizons, one for each player, within windows, suitably distinguished from one another. As each player rolls their plane from left to right, the horizon tilts quite realistically.

Player one has the top half of a Mode 4 screen, player two takes the bottom. Each have instrument panels and bearing references of each plane in relation to the other. Immediate account of the actions is taken and players are reminded of the keys before the duel commences. But listing the code reveals at once the thousands of calculations that go on between each screen cycle and explains why the program is so painfully slow. Even if both players immediately turn to face one another, it takes over two minutes to get a good sight! Additionally, enabling the Master RAM Board does speed up the action noticeably, but has the unfortunate side-effect of crashing some instrument readings.

You can do a lot of things with it but for gameplay, it cannot stand on a standard Electron and seems to have been converted just from the BBC Micro version [Also slow! - Ed] with more suitable keys substituted. Yet the loading screen, plane statistics and graphics cannot be faulted. In particular, watch out for an amazing introductory sequence with inventive Mode 2 colour switching deceiving the eye into seeing six flying stars weave into a circle!

With the elimination of the instrument panel crash bug on the MRB, this would be a nice simulation - despite the limited numbers of people who would have the equipment to make it a viable purchase.

Dave Edwards, EUG #48

# AIRLINE

***Professional, Released On Cassette Only***

Game Type : Strategy; Management of Aeroplane Company  
Author : J. Jiggins  
Standalone Release(s) : 1983: AIRLINE, CCS, £5.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : CASES COMPUTER SIMULATIONS, 14 Langton Way, London SE3 7TL  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"Your objective in AIRLINE is to make enough capital by trading at a profit to take-over British Airways! You are required to decide on the number of aircraft to operate, whether to buy or charter, the level of staffing and maintenance, whether to enter into long-term contracts for supply of fuel and whether to repay loans. Problems encountered are tax demands, strikes, cancelled flights, hijacks and aircraft crashes. The program makes use of histograms, bar charts and graphics to assist the user to simulate the information available. Can you be more successful than Sir Freddie?"*

## 1. Object Of The Game

You are the Chairman of L-AIR, an airline which starts up business with £3 million. You have seven years to increase your net assets to £30 million which will enable you to raise enough finance to take-over British Airways. Situations and costs are realistic. The need to create revenue to cover fixed costs soon becomes apparent to the player. This program provides a good opportunity for you to see if you can be more successful than Sir Freddie!

## 2. Information Available

Bar chart forecasting pay-load i.e. passenger/miles market. Histograms showing Charter Rates expected for next year.  
Graph showing interest Rates for next year. (Model B/Electron only)  
Profit & Loss Account and Balance Sheet.  
Financial Times report. (Model B/Electron only)  
Telex messages.

## 3. Business Decisions Required

You may either charter, buy or sell aircraft.  
You have to decide on how many aircraft to operate.  
Levels of staffing, maintenance and insurance.  
Whether or not to enter into a long-term fuel contract.  
Whether or not to repay loans.

## 4. Problems encountered

Tax demands.  
Increase in fuel costs.  
Loss of revenue through cancelled flights, strikes, hijacks, air crashes and sabotage.

## 5. Graphs And Charts

### Bar Chart - Passenger Payload

The first chart to be displayed is a bar chart showing a forecast of the Passenger Payload for each level of activity. Generally it is best to select the number of aircraft with the highest payload factor. However, you should also consider the forecast of charter rates and the number of aircraft which you already own.

### **Histogram - Forecast of Charter Rates**

This chart shows a quarterly forecast of Charter Rates for the coming year. If Charter Rates are high, it is usually best to charter fewer aircraft.

### **Graph - Forecast of Monthly Interest Rates**

This graph plots a forecast of monthly interest rates. When Charter Rates are above normal, it is cheaper to borrow money and buy aircraft instead of chartering. However, you should consider that the market rate for each aircraft is £10 million. When aircraft are bought for more than £10 million, the additional cost will reduce your net assets as it will be debited against Capital Reserves.

## **6. Hints For Playing**

- a. From information in pay-load bar chart, decide on best high and low number of aircraft and take decision after watching level of Charter Rates expected.
- b. Cost of interest on loans needed to purchase aircraft is usually less than the cost of chartering the equivalent number of aircraft.
- c. Buy or sell aircraft when allowed to do so, but remember they have a market value of only £10 million.
- d. Risk of cancelled flights are higher due to lack of crew than lack of maintenance. Cost of crew is £50,000 per level per aircraft. Cost of maintenance is £90,000 per level per aircraft. Penalty for cancelled flights is £30,000 per flight per aircraft operated.
- e. It is usually not worth the risk of having a low insurance cover. Cover is cumulative, i.e. if you key 3 you are covered for both accidents to aircraft and claims from passengers and other third parties. Cost £20,000 per level per aircraft operated.
- f. Fixed overheads amount to £3.25 million, therefore losses may result even with a good pay-load factor when only one or two aircraft are operated. However, if the pay-load is poor for other levels, much greater losses may be incurred if one chooses to operate more aircraft.

# ALIEN BREAK-IN

*Professional, Released On Cassette Only*

Game Type : Arcade Shoot-'em-up  
Author : Clive Webster  
Standalone Release(s) : 1983: ALIEN BREAK-IN, Romik, £5.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ROMIK, 272 Argyll Avenue, Slough, BERKS  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

The citizens of Earth have fled before the oncoming Zargon fleet. You have been left to guard the Earth's supply of uranium . . . Suddenly the sky above you is filled by the enemy fleet . . . Things are worse than expected . . .

The mothership is laying pods that hatch on landing, or split into two if shot. Other ships are peeling off from the main fleet, and diving towards the holes made in the defences. The successful ones mutate into motherships which are indestructible.

Once the majority have mutated, they commence landing procedures.

You may make holes in your own defences to trap the hatched out pods. You can only do this five times.

Points:

Motherships = 0  
Attack Ships = 10  
Missiles = 20  
Diving Ships = 20  
Pods = 30

You start with three lives, but gain an extra life and an extra go at making a hole, every 10,000 points.

## Game Controls

A - Left, D - Right, S - Fire, SPACE - Make hole in ground  
P - Freeze/Unfreeze

An option to select your own keys for play is available during loading.

Standard joystick movements apply. Pull joystick backward and press fire button to make hole in ground.

# ALIEN DROPOUT

*Professional, Released On Cassette Only*

Game Type : Arcade; Shoot-'Em-Up  
Author : Richard Hanson  
Standalone Release(s) : 1983: ALIEN DROPOUT, Superior, £6.99  
Compilation Release(s) : 1989: PRES GAMES DISC 6, PRES, £9.95 (3.5" Disc)  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR, Department C, Ground Floor, Regent House, Skinner Lane, LEEDS 7  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

The objective of the game is to shoot the aliens out of their "boxes" before the "boxes" fill up. Once full, the aliens fly down relentlessly and explode as they hit the ground. The game features include six skill levels, rankings, hi-scores and increasing difficulty.

## Game Controls

Z - Left, X - Right, <DELETE> - Fire

**Instructions' Source** : ALIEN DROPOUT (Superior) Inner Inlay

## Review (Electron User)

ALIEN DROPOUT is a pleasant variation on the space invaders theme. A variation with moths! The idea is to blast the aliens as they descend from the top of the screen, the laser base moving in the familiar way, firing the familiar missiles. What's different is the way the moth-like aliens move. The master moth, who hovers in the centre, is indestructible until you've blasted some 200 of his minions. This is easier said than done as events tend to catch up with you making life (for you) and death (for the moths) more difficult.

On either side of the master moth are five boxes which act as staging posts for the minion moths. Here they collect on their downward journey, not pressing home for an attack on your laser base until there are five in a box. Your aim is to zap the moths before they fill the boxes. It's not easy, especially as the boss moth is laying down a column of fire that makes moving from one side of the screen to the other a trifle difficult, to say the least.

Eventually the moths make a breakthrough and you become more involved in protecting the laser base than in hitting the moths.

With six levels of play, good clear instructions and easy to use controls, it's a nice variant on an old theme that should appeal to young and old.

# ALPHATRON

*Professional, Released On Cassette Only*

Game Type : Arcade Shoot-'em-up  
Authors : Kevin Blake & Jason Sobell  
Standalone Release(s) : 1986: ALPHATRON, Tynesoft, £5.99  
Compilation Release(s) : 1988: MICROVALUE FOUR GAMES VOLUME 1, Tynesoft, £3.99  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : TYNESOFT, Unit 3 Addison Industrial Estate, Blaydon, TYNE & WEAR NE21 4TE. Tel: 091 414 4611  
Disc compatibility : CDFS E00, DFS E00

## Instructions

Your mission is to protect the Trilithium Refineries on the planet Karthos. You pilot a Megan Class Scout Ship equipped with a Delta Laser. The enemy attacks grow more and more frequent as wave after wave of enemy missiles pass overhead.

At all costs you must destroy the missiles before they reach the Refinery.

Each missile will deplete the Refinery Shields until eventually they collapse.

Your Scout Ship is fitted with landing, fuel and guidance computers. Your Control Panel also displays the status of the Refinery shield level.

Your fuel is very limited and must be replenished frequently by landing on your base pad.

## Game Controls

Z - Left, X - Right, <RETURN> - Fire, \* - Thrust

# ALPS (ADVENTURE LANGUAGE PROGRAMMING SYSTEM)

## *Professional, ROM Chip Expansion*

### **Instructions**

Instructions currently unavailable.

**Instructions' Source** : Instructions currently unavailable.

### **Review (Electron User) - "Climbing Icy Mountains"**

The Electron version of ALPS - Alpine's Adventure Language Programming System - has recently been converted from the original BBC Micro program. Alpine says, "Necessity being the mother of invention, we have actually squeezed in more features than the BBC Micro version has".

This adventure creator package includes a 16K ROM, User Guide, keystrip and either disc or cassette of utilities and sample adventures. As ALPS is a ROM-based utility, you will need either a Plus 1 and blank ROM cartridge or a ROMBOX. To evaluate the system, I converted my QUILLed adventure RELUCTANT HERO into ALPS.

An adventure program created by ALPS is made up of a list of rooms and objects, along with the program logic to handle them. The object and room descriptions and properties are stored in easy-to-use tables.

Up to 150 objects, and 255 verbs and synonyms can be defined. Each room and object has eight flags and a state value. Memory is set aside for them at the start, unlike THE QUILL, where the more objects or verbs you use the less memory there is available for the game.

Any object can be a light source and all or just some of the objects can be breakable, magnetic, heavy or sharp. The object's flags can be changed in the logic part of the program so that a blunt knife can be sharpened.

The object's state can be linked to messages so that a knife could be described as "A long jewelled knife with a sharp edge", "A long jewelled knife with a blunt edge" or "A long jewelled knife with a broken blade".

To save memory, the "A long jewelled knife with a" is the same in each instance, with the alternatives tagged on depending which switch is active in the object description.

Another memory-saving device is the hash symbol. Whenever it appears a predefined message is placed at that point. Any number of hashes can be used to reduce the text.

The technique can be used for the 150 possible locations, and any room can be designated as airless, flooded, poisonous and so on. The room state can be used to alter the description.

Automatic text formatting ensures that words are not split over lines so there aren't any worries about how messages appear.

Text compression must be done manually and I found this difficult to do effectively. Efficient automatic text compression is available on the extras disc or tape. It took about one minute to compress all the text in RELUCTANT HERO.

The optional extension disc allows you to produce large adventures by holding all the text on disc. Games can then have up to 255 locations. With the extras disc you can compress the text by up to 60 per cent.

Also, more predefined verbs such as GET ALL and DROP ALL are added, and a container is provided in which objects can be placed or removed. These verbs can be programmed using ALPS, but the Extras disc does it more efficiently.

A special starter program provides verbs like TAKE, DROP INVENTORY and the directions.

Standard movement is N, S, E, W, UP and DOWN, though you can program the game to accept any other direction, but at a cost - the more non-standard directions used the more memory will be needed to program them.

A useful feature is that each room has an exit routine for each standard direction, allowing you to have a conditional exit like a locked door or secret passage.

Before the player is moved the exit is checked to see if there is a special routine for it, and if so whether it allows movement at that time. If it doesn't then the player isn't allowed to proceed and a message can be given explaining why.

Automatic exit reporting is enhanced compared to the BBC Micro version. Every time a room is described ALPS looks at every connecting room and reports that "There are exits north to MSG and south to MSG" where MSG is the text in the room data table.

There are one 50 integer variables, compared to 64 in THE QUILL, but there are also eight On/Off flags and one state with a value of up to 255 for each object and room.

This leads to one of the problems of ALPS - trying to debug the logic. With THE QUILL the game can be run with all of the flag values displayed, but ALPS would have to display 2,700, which is not feasible.

Most of the familiar adventure keywords are present, but sometimes different words are used. Some common keywords are missing, among them are CLS, DROP, GET and PAUSE. However, DROP and GET are defined in the special Starter file, which means you can redefine how they react to a particular situation. Instead of printing OK you could have different messages for each object - memory permitting of course.

PAUSE can be programmed by using procedures. The delay is easily set by making the program loop a number of times. I found the loss of CLS to be irksome, but as I became more used to ALPS I found I didn't miss it as much.

All the flags can be set to zero or one wherever you are, so an action in one room or on one object can change the flag in another room or object. The state of an object or room can be incremented or decremented so allowing progressive changes.

Whole sentences can be typed by the player and either the first recognised verb and object can be acted on, or by extra programming, the whole sentence can be analysed and acted upon.

The on screen editor used in entering the logic part of the program is only a simple line editor rather than a full screen version. The function keys are used to enter the object, room and text editor as well as for inserting/deleting lines and text compression.

The utilities allow you to create standalone games that can be run without the ALPS ROM, print the room and object data lists and the text.

You can also examine two sample adventures, one small one with seven rooms and six objects, and a larger one with 50 rooms and 90 objects. You can play both of the games and access the data files so that you can see how they have been constructed.

The User Guide is a 38 page booklet which is, for the most part, easy to understand, though I felt the section dealing with writing the logic part of the adventure was not basic enough. The rest of the sections were well explained, particularly the one on sentence analysis.

ALPS is superb value for money and well supported by Alpine whom I found very helpful whenever I stumbled.

## Review (Electron User) - "Bubbling With Fun"

Regular readers will be aware as to how impressed I was with Riverdale's first release, SUDS. Now hot on its heels comes the sequel, entitled oddly enough, AMERICAN SUDS.

Bufs of Dynasty, Dallas, Hill Street Blues and the rest will find all their favourite characters here, albeit in slightly disguised form - only the names have been changed to protect the guilty. This must be the spoof to out-spoof all spoofs.

You begin this four-part adventure on the concourse of a major British airport and soon realise that you are reliving part of Mel Brookes' hilarious Airplane. An airline pilot wander by, muttering, "My name is not Shirley".

Once you have mustered a variety of artefacts, discovered the amusing password to the computer and collected your boarding pass, you can begin the adventure in earnest. Providing, of course, you survive the customs.

Once aboard the aircraft you may wish you have never bothered, as the gags come thick and fast. The humour is slick at its worst and at times outrageous. A tube of rubber solution, a spanner and a silk sheet are all you need to leave this flying death-trap, but it will take some experimentation and head-scratching to manoeuvre your escape.

You must sign a contract in blood and step back in fashion if you wish to progress to part two and star alongside JR (Just Revolting) in the new series of Dullus.

In the remainder of this laugh-along type-in, you will meet Captain Gorilla of the Kill Street precinct and discover that smoking really is good for you.

I found getting into the shed to be the most perplexing problem of the entire game. I eventually became enlightened to the fact that a nihilist approach to examination was most rewarding. The funniest sketch has to be that involving the mice and the Pie Wiper of Hamelin, but I'll leave you to unearth the true humour for yourself.

My one and only criticism is a familiar grouch on my part - the adventure is written using THE QUILL. All the usual limitations of parser, input and room description apply here, as they do in other QUILLed games. However, this adventure succeeds on every other score and will keep you in stitches for many hours.

Author David Edwards is fast becoming the unchallenged master of this genre of text adventures. I rate AMERICAN SUDS as more polished and funnier than anything from the Melbourne House stable and perhaps only equalled by Magus' majestic LOCKS OF LUCK and Riverdale's own SUDS.

## Instructions

*"32 ZONES OF INCREASING DIFFICULTY! The Galactic Government Dictatorship has divided the galaxy into zones, and has imposed strict travel formations for each zone. You have decided to fight for your freedom and for the liberation of other space travellers. Good luck, and remember the motto of the Astronaut's Anarchist Association 'LIVE FAST.....DIE YOUNG!!!!'"*

The Galactic Government Dictatorship has divided the galaxy into zones, and has imposed strict travel formations for each zone. Any travellers not conforming to the galactic government guidelines will come under attack.

Legend has it that beyond this galaxy lies an area of space where travellers are free to choose their own routes of travel, and freedom reigns. History refers to this area as "free space".

You have decided to fight for your freedom and for the liberation of other space travellers.

Hyperspacing to any zone is possible provided that you know the zone code (given before entering a zone). After launching, enter a four letter zone code. Entering an unrecognised zone code will transport you to the first zone (e.g. AAAA).

All Galactic Government sympathisers must be wiped out to progress to the next zone. A number of hits are required to wipe out most life-forms (some require more than others). Some life-forms are unaffected by your on-board blaster system, and you will have to find other means of killing them.

A skill bonus may be awarded on completion of a zone. This bonus is reduced with every wasted rocket you fire. The bonus is reduced by larger amounts for killing "Peace Protest Pods" which demonstrate in various zones.

The Astronaut's Anarchist Association have agreed to help you in your quest for "Free-Space", and have provided "Charity Zones" in which you have a chance to gain extra power. Colliding with "Anarchy Power-Paks" will boost your power. Any Power-Paks out of reach must be destroyed before you may leave the zone (Keep Space Tidy!!!).

Your power is depleted if you come into contact with any life-form (other than "Peace Protest Pods") or if you are hit by any G.G.D. missiles. Your existence is terminated if you run out of power...be warned!!

Good luck, and remember the motto of the Astronaut's Anarchist Association - "LIVE FAST ..... DIE YOUNG!!!!"

## Game Controls

Z - Clockwise, X - Anticlockwise, <SHIFT> - Blast  
P - Pause on/off, S/Q - Sound/Quiet, <ESCAPE> - Quit current game

**Instructions' Source** : ANARCHY ZONE (Atlantis) Back and Inner Inlay

### **Review (Electron User) - "Blasting Bargain"**

After four years you might imagine that every possible variation of the space shoot-'em-up scenario had been used. However, here comes yet another action packed, if-it-moves-blast-it type game with a slightly different slant on those old favourites, SPACE INVADERS and GALAXIANS.

It's called ANARCHY ZONE, and is released on the Atlantis budget label. This time the Galactic Government Dictatorship has divided up the galaxy into separate zones, and within these space travellers must restrict their flight paths to predefined routes.

Anyone straying from these narrow space lanes is liable to be fired on, and guess who has wandered into deep space? Yes, you have, and you are now under attack by wave after wave of all manner of alien vessels, all armed to the teeth with lasers, bombs and missiles.

The screen is split into two areas. The larger one is where the action takes place, while the smaller contains the score, power and remaining bonus.

You start off with your ship at the bottom of the display, and an alien battle fleet streams on to the screen, guns ablaze. You can move left and right and blast them with your own laser.

This may seem pretty ordinary so far, but where this game is different is that while the aliens swarm round the screen you can circle them, climbing up the sides of the screen and zooming across the top to attack them from the rear. Some aliens require several hits before they explode and some seemingly indestructible ones will have you scratching your head trying to work out how to destroy them - if you can take your hands off the keyboard, that is.

On wiping out a wave of aliens a new one appears with a different battle formation without giving you time to get your breath back, and it's into battle again.

At the start of each new zone a password is given, and this can be used to skip screens you've already mastered. This prevents the game from becoming tedious as you can continue from the screen you were finally destroyed in last time.

The graphics are excellent, with brightly coloured alien ships and an attractive control panel on the right. The sound effects are good too.

The action is fast and furious and I was quite surprised at the speed achieved on a standard Electron - no need for a Turbo board here, it's quite fast enough for me, thank you.

At only £1.99 this must rate as a superb bargain arcade game that mustn't be missed. If you like fast action arcade games you'll be quite at home with this and I can thoroughly recommend it.

Sound .....	8
Graphics .....	9
Playability .....	9
Value for money .....	10

## Review (Electron User)

I am almost at a loss for words to describe this superb program from Screenplay, previously available for the BBC and the Dragon. It is brilliantly simple in concept, yet the possibilities for its use are practically endless, being a program to create multicoloured sprites which can then be compiled into machine code for use in fast graphical action games. The sprites may be saved to tape, and a library of them may be built up for future use.

The first program, Creator, allows the design of up to 63 separate sprites, each with two associated figures formed by 180 degree rotation about a horizontal or vertical axis. Larger sprites may be defined, up to 30 pixels square, but in this case only nine may be created. They may have any colours, flashing or steady, and during the design stage the sprite is also shown life size for comparison.

Drawing the sprite is simplicity itself, as indeed is each feature of this program. When the sprite has been saved to tape, it can still be recalled and minor alterations made for smooth animation.

The second main program, Compiler, allows previously saved sprites to be compiled into machine code for future use in either Basic or machine code programs. Editing may still be performed at this stage, and the compiled code saved again onto tape. Extremely clear and detailed instructions on the subsequent CALL statements are given, as is an explanation of the built-in collision checking routine.

In addition to these excellent programs, there are also two demonstrations. One is a game called Dambuster, with modest but effective graphics, while the other is a marvellous scene in a tropical aquarium which I found myself staring at for a long time.

However I kept coming back again and again to the superb Creator program, creating endless multicoloured sprites simply because it was so easy and such tremendous fun.

This package is excellent value for money, being a very useful tool for the budding programmer. There is even a competition for an original program using sprites made with Animator, with a first prize of £200. I have the feeling that they will receive a lot of entries.

Phil Tayler, ELECTRON USER 1.11

# ANSWER BACK FACTFILE 500: ARITHMETIC

**Professional, Released On Cassette And ADFS 1D00 Disc**

Game Type : Utility Program To Extend ANSWER BACK Series (Ages 6-11)  
Author : Keith Spence  
Standalone Release(s) : 1985: AB500: ARITHMETIC, Kosmos, £4.95 (Tape) £5.95 (Disc)  
Compilation Release(s) : None  
Stated compatibility : BBC Master Compact  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : KOSMOS, 1 Pilgrims Close, Harlington, Dunstable,  
BEDFORDSHIRE LU5 6LX. Tel: 05255 3942/5406  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## General Introduction

*Extend any of your KOSMOS ANSWER BACK QUIZ programs with this fascinating collection of multiple choice questions and answers. Each FACTFILE 500 pack contains an enormous total of 500 additional questions and 2000 answer options covering TWENTY different topics.*

*Fully compatible with ANSWER BACK SENIOR, ANSWER BACK JUNIOR and ANSWER BACK SPORT.*

*FACTFILE 500 packs provide a wealth of supplementary questions, answers, facts and figures for use with any of KOSMOS ANSWER BACK quiz programs and games. They provide countless hours of entertainment and cannot fail to teach even the most reluctant pupil a great deal about the chosen subject.*

*FACTFILES can be used with each of the questions and answer modes supported by the ANSWER BACK programs, for example, Multiple Choice, True-False? and "Complete-the-Answer". You can try as many questions as you like in sequential or random order and the computer will keep a check on your performance, point out your mistakes and allow you to revise any weak areas. The ANSWER BACK quiz programs also allow you to relax and test your skill in a compelling game as a reward for successful learning!*

*FACTFILE 500 packs are fully compatible with the quiz creation, editing and saving facilities included in all ANSWER BACK programs.*

*FACTFILE 500 packs are available on an ever increasing range of educational and leisure subjects for most home and personal computers. Each pack contains a massive collection of 500 well-researched questions and 2000 answer options. Write or telephone if you would like to receive details of the complete range of subjects now available.*

## Instructions

This FACTFILE 500 pack has been designed to develop and give practice in the basic numerical concepts covering the areas of addition, subtraction, multiplication and division as well as practical topics including time, shape, money and measurement. The quiz covers the primary stages of mathematical development for children between 6 and 11 years of age.

## Contents

500 Multiple choice questions on the following topics:

(Note: Th = Thousands, H = Hundreds, T = Tens, U = Units)

AR1	Beginning Addition	AR11	Addition - HTU
AR2	Beginning Subtraction	AR12	Subtraction - HTU
AR3	Beginning Multiplication	AR13	Multiplication - HTU
AR4	Beginning Division	AR14	Division - HTU

AR5 Lucky Dip  
AR6 Addition - TU  
AR7 Subtraction - TU  
AR8 Multiplication - TU  
AR9 Division - TU  
AR10 All Sorts

AR15 Pot Luck  
AR16 Addition - ThHTU  
AR17 Subtraction - ThHTU  
AR18 Multiplication - ThHTU  
AR19 Division - ThHTU  
AR20 Take A Chance

First load the control program from your ANSWER BACK QUIZ, then use the LOAD QUIZ option from the program menu to load the required topic. The filename to key in (when asked by the program) should be selected from the above list, for example AR12.

This pack does not contain a computer program. It must be used with an ANSWER BACK program available separately.

# ANSWER BACK FACTFILE 500: FIRST AID

*Professional, Released On Cassette And ADFS 1D00 Disc*

Game Type : Utility Program To Extend ANSWER BACK Series (Ages 12+)  
Author : Keith Spence  
Standalone Release(s) : 1985: AB500: FIRST AID, Kosmos, £4.95 (Tape) £5.95 (Disc)  
Compilation Release(s) : None  
Stated compatibility : BBC Master Compact  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : KOSMOS, 1 Pilgrims Close, Harlington, Dunstable,  
BEDFORDSHIRE LU5 6LX. Tel: 05255 3942/5406  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## General Introduction

Please see ANSWER BACK FACTFILE 500: ARITHMETIC for this introduction.

## Instructions

Today, a knowledge of First Aid is essential. The growing use of chemicals, electrical and mechanical appliances at home, at school and at work enormously increases the risk of injury. First Aid can save lives - but only if you know how to use it.

This FACTFILE 500 pack has been compiled by a very experienced First Aider and a Doctor. It will provide a greatly increased awareness of essential First Aid techniques and will also be of considerable help to anyone following a First Aid course.

## Contents

500 Multiple choice questions on the following topics:

FA1	First Aid Principles	FA11	Shock
FA2	The Skeleton	FA12	Poisons and Poisoning
FA3	The Vital Organs	FA13	Fractures
FA4	Examination/Diagnosis	FA14	Joints and Muscles
FA5	Asphyxia	FA15	Burns, Scalds, Heat
FA6	Unconsciousness	FA16	Miscellaneous Problems
FA7	Heart and Other Attacks	FA17	Common Medical Terms
FA8	Resuscitation	FA18	Home Safety
FA9	Circulation and Bleeding	FA19	Ailments and Illnesses
FA10	Wounds and Bleeding	FA20	Revision

First load the control program from your ANSWER BACK QUIZ, then use the LOAD QUIZ option from the program menu to load the required topic. The filename to key in (when asked by the program) should be selected from the above list, for example FA12.

This pack does not contain a computer program. It must be used with an ANSWER BACK program available separately.

# ANSWER BACK FACTFILE 500: GENERAL SCIENCE

*Professional, Released On Cassette And ADFS 1D00 Disc*

Game Type : Utility Program To Extend ANSWER BACK Series  
Author : Keith Spence  
Standalone Release(s) : 1985: AB500: GENERAL SCIENCE, Kosmos, £4.95 (Tape) £5.95 (Disc)  
Compilation Release(s) : None  
Stated compatibility : BBC Master Compact  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : KOSMOS, 1 Pilgrims Close, Harlington, Dunstable, BEDFORDSHIRE LU5 6LX. Tel: 05255 3942/5406  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## General Introduction

Please see ANSWER BACK FACTFILE 500: ARITHMETIC for this introduction.

## Instructions

In this awesome age of rapid technological development a knowledge of science is an invaluable - almost vital - need.

This FACTFILE 500 pack covers a multitude of science subjects from Zoology and Botany to Astrophysics and Metallurgy. It is designed not only to help serious students of science but to help parents keep up with their children's understanding of this high-tech age! The quizzes contain a wealth of scientific information presented in a way which is great fun to use.

## Contents

500 Multiple choice questions on the following topics:

SG1	Astronomy	SG11	Zoology
SG2	Astrophysics	SG12	Miscellaneous
SG3	Botany	SG13	Mathematics
SG4	Chemistry	SG14	Constants and Laws
SG5	Electricity & Magnetism	SG15	Units
SG6	Geology	SG16	Computers and Computing
SG7	Heat and Energy	SG17	History of Science
SG8	Mechanics and Metallurgy	SG18	Discoveries & Inventions
SG9	Classical Physics	SG19	How Things Work
SG10	Modern Physics	SG20	Mixed Bag

First load the control program from your ANSWER BACK QUIZ, then use the LOAD QUIZ option from the program menu to load the required topic. The filename to key in (when asked by the program) should be selected from the above list, for example SG12.

This pack does not contain a computer program. It must be used with an ANSWER BACK program available separately.

## General Introduction

Please see ANSWER BACK FACTFILE 500: ARITHMETIC for this introduction.

## Instructions

This FACTFILE 500 pack has been compiled by a teacher of very young children aware of the most common difficulties encountered at this stage of learning. It approaches these problems in a wide variety of ways including spelling words from definitions, finding missing letters and identification of incorrectly spelled words. This FACTFILE is also specifically designed to develop the reading skills of children whilst aiding spelling ability and promoting a more independent approach towards spelling.

## Contents

500 Multiple choice questions on the following topics:

SL1	Common Problems	SL11	Ourselves
SL2	Endings	SL12	People
SL3	Plurals	SL13	Places
SL4	Vowels (Vowel Digraphs)	SL14	Food
SL5	Consonants (Digraphs)	SL15	Living Creatures
SL6	Past and Present	SL16	Colours
SL7	Shortened Words	SL17	Numbers and Measurement
SL8	They Sound The Same!	SL18	Time
SL9	The Home	SL19	Take a Chance
SL10	Trees and Plants	SL20	Ready for More?

First load the control program from your ANSWER BACK QUIZ, then use the LOAD QUIZ option from the program menu to load the required topic. The filename to key in (when asked by the program) should be selected from the above list, for example SL12.

This pack does not contain a computer program. It must be used with an ANSWER BACK program available separately.

## Review (Electron User)

This series of programs was first designed for the over twelves. This latest version is for 6 to 11-year-olds and contains a completely new range of topics. On the cassette are the master program and fifteen files of questions each containing fifty programs on the particular topic.

Topics included on the tape include: nature, music and nursery rhymes, lucky dip, famous people, science, the British Isles, word fun, around the world, brain strainers, games and sport, books and poetry, fun-sums, TV, films and theatre, spelling and take your chance.

The master program not only presents the questions on file but enables the user to create their own files. This is an excellent piece of software for the home and school. It can be modified and expanded to meet the demands of the individual user.

The various options have very clear and specific instructions and can be used by someone not familiar with the inner workings of a computer. They offer a flexibility not often found in such programs. The child user also experiences a well constructed screen format with a variety that continues to stimulate.

All questions are stored in the file with four answers - one answer correct, the others wrong. This enables the computer to present three different types of questions:

- \* Multiple choice - the user presses A, B, C or D.
- \* True or false - one answer appears, the user says whether it is correct or not.
- \* Complete the answer - the user has to fill in the missing letters.

In a fourth option, the computer presents a selection of different types of questions.

If an answer is correct then the user has the opportunity of saving the princess by dropping from the hot air balloon a sandbag to land on top of the dragon.

This encourages children who don't like answering questions alone. My experience has been that the killing of dragons is not necessary but it does not distract from the quiz itself. This is an excellent package and it should find its way into many homes and schools.

John Woollard, ELECTRON USER 1.12

# ANSWER BACK SENIOR QUIZ

*Professional, Released On Cassette And ADFS 1D00 Disc*

Game Type : Quiz Program Compatible With ANSWER BACK Files; Ages 12+  
Authors : Keith Spence and Susan Van Baars

BEDFORDSHIRE LU5 6LX. Tel: 05255 3942/5406  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*Quizzes are popular with everyone...*

*Quizzes combined with Space-Age sound and colourful graphics are irresistible...*

*Quizzes containing a vast selection of well-researched questions have immense educational value...*

*The ANSWER BACK quiz provides a unique adventure in education by allowing the successful challenger to participate in a simple and compelling game. The software package contains a highly sophisticated control program and fifteen thought-provoking quizzes, each covering a different topic in general knowledge.*

*FEATURES INCLUDE...*

*Multiple choice questions, True or false?, Find the missing letters, 'Pass' facility, Immediate correction of errors, Timer option, Performance summary, Re-run of questions passed or incorrectly answered,*

*An enormous total of 750 questions with 3,000 answer options are available but you tell the computer how many you want and on what topic. Should you ever tire of the fascinating quizzes, you can use the powerful yet simple creating, editing and saving commands to produce a multitude of quizzes to your own design."*

The ANSWER BACK quiz cassette contains a powerful control program and a series of self-contained General Knowledge quizzes. The control program is recorded at the start of side 1 of the cassette. The remainder of the cassette contains the quiz files Q1 to Q15. Each quiz covers a different topic, a full list of which appears opposite.

### **1. Loading and starting the program**

The control program should first be loaded using the command CHAIN"". On successful loading the screen will show the program title and a list of available facilities. This is known as the COMMAND MENU. At the bottom of the screen the message "Question Store Empty" will be seen. The question store is actually the part of the computer's memory in which a quiz is stored while it is being used. Only one quiz may occupy the question store at any time.

### **2. Program facilities**

The facilities listed in paragraphs 3 to 11 are available whenever the screen shows the command menu. Individual program facilities are requested simply by keying the first letter of the appropriate command. Your first command will probably be to load a quiz file into the question store.

### **3. Loading a quiz from the cassette (Key L)**

The program will ask you to key in the filename of the quiz you wish to try. Key in a filename (Q1 to Q15) from the list opposite, end with RETURN. If you wish to load the next sequential quiz on the cassette, the filename may be omitted.

#### **4. Beginning a quiz (Key B)**

To begin the quiz, key B. You will then be asked which format you would like. The options are:

- M = Multiple choice, where the computer presents a question followed by several answers. All you have to do is select the correct answer each time by pressing A, B, C or D as appropriate.
- Y = Yes/No, where the computer gives an answer to the question and you have to decide if the answer is correct or not.
- C = Complete the Answer, where the computer gives you part of the answer, and you have to fill in the missing letters.
- S = Selection of all three of the above.

Having made your choice the computer will ask how many questions you would like to try, whether you would like a random or sequential selection from the questions in store and whether you would like to be timed or not. The moonscape background for the quiz will then appear and the magic robot will ask the first question.

#### **5. Answering the questions**

If you answer the question correctly you will hear a high note from the computer and an alien spaceship will appear amongst the stars. You can command the magic robot to shoot down the spaceship by pressing the space bar. If the spaceship falls precisely into the centre of the volcanic moon crater, it will explode on impact with a blinding flash.

If you get the answer wrong, the computer will sound a low note and then tell you the correct answer.

If you do not know the answer to the question, you can 'pass' by pressing the DELETE key.

When you have completed the number of questions requested, a summary of your performance will appear. You will then have the option to repeat the questions you answered incorrectly and to discover the answers to those you 'passed'.

There are three special commands which can be used whenever the magic robot is waiting for your answer to his question.

- CTRL A = This displays the position number of the question within the Question Store (only required for editing purposes).
- CTRL F = Turn off the sound of the robot's laser gun.
- CTRL S = Turn on the sound of the robot's laser gun.

The number displayed on the small planet indicates which question you are on. The large planet shows elapsed time in minutes and seconds (if timer requested).

#### **6. Creating your own quiz (Key C)**

You can create any number of your own quizzes by successively keying in lists of questions and answers in the boxes shown on the screen. Each question must be accompanied by the correct answer and at least one wrong answer. The text for each question and answer should be terminated using the RETURN key. You can use the Cursor Down key to move the cursor down to the next line in the question box if required. The last two "wrong answer" boxes may optionally be left blank simply by pressing the RETURN key.

Mistakes in entering text can be corrected with the DELETE key provided the RETURN key has not been pressed, or by keying X (RETURN) as the first character in any answer box to return to the previous one.

Questions and answers may be repeatedly keyed into the Question Store in this way until your quiz is complete. There is room for 50 to 100 questions depending on

their length. A message "FILE FULL" will appear should you reach the limit. You can end quiz creation at any time simply by keying END (RETURN) at the start of line 1 of the question box.

A number of special keys may be used to enter the following symbols and accented characters in the text.

CTRL A = ^2	CTRL G = e(acute)
CTRL B = ^3	CTRL H = e(grave)
CTRL C = ^4	CTRL I = o(circumflex)
CTRL D = fraction 0.5	CTRL J = a(circumflex)
CTRL E = flying o	CTRL K = e(circumflex)
CTRL F = a(grave)	CTRL L = c(cedilla)

### **7. Saving a quiz on cassette (Key S)**

The Save command need only be used when a permanent copy is required of a newly created quiz or of a previous quiz which has been modified.

Enter a filename for the quiz (up to 8 characters). Enter a title for the quiz (up to 24 characters). Insert a blank cassette and switch the cassette player to the record mode when the RECORD then RETURN message appears. On completion of recording the tape should be rewound and the Verify facility requested.

### **8. Verify a saved quiz**

This facility should ALWAYS be used to check that a newly saved quiz has been successfully recorded. Enter the filename of the quiz to be verified and switch the cassette player to the play mode. The program confirms that verification is successful by printing "loading" then "OK". If verification fails, press the ESCAPE key and save the quiz again.

### **9. Add to current quiz (Key A)**

This facility may be used to add further questions to a quiz which is already held in the Question Store. Instructions for using the Add facility are identical to those for the Create facility (see paragraph 6).

### **10. Delete question (Key D)**

In order to delete a particular question you will need to know its position within the Question Store. This may be determined using the CTRL A command whilst running the quiz, as described in paragraph 5. The Delete command will ask you for the question number to be deleted and will give you a chance to change your mind in case you make a mistake.

### **11. Insert new question**

This facility enables you to insert a new question at a particular point in the quiz currently occupying the Question Store. You must first specify the point of insertion required, the question currently occupying that position will then be displayed. After confirming that this is the correct place for the insertion you can then enter the text for the new question and answers.

### **12. Contents**

**Review (Electron User)**

This marvellous little package is more than a quiz, more than a game and much more than so many of the educational programs on the market. High praise you say, but consider what you get for your money. A choice of fifteen quiz topics, each containing fifty questions, three different ways of answering - multiple choice, true or false and fill in the missing letters. Then there's a facility to pass if you're really stuck, a summary of your performance and the chance to re-run the ones you passed or got wrong. All this under the eyes of the micro timekeeper.

Add to that good graphics in the form of craters, planets, spaceships and your friendly robot with his laser gun. Mix in a little sound and you have part two - a game, triggered by correctly answering a question. A tone sounds, an alien spaceship appears from behind your planet, you hit the robot's laser fire button and try to shoot it down.

It's really compelling stuff. But wait...there's more to come. Being the mastermind that you are, it won't take you long to come to grips with the correct answers to most of the 750 questions available. Therefore you can create your own.

Even this can be done using the program's create, save and verify facility. Now you have a package made for the kids to do their homework with. You set the questions, and they get to shoot down all the nasties from outer space. Peace will reign in your household. Watch out, Magnus Magnusson. Your job's in jeopardy.

Ken Smith, ELECTRON USER 2. 4

# ANSWER BACK SPORT

**Professional, Released On Cassette And ADFS 1D00 Disc**

Game Type : Quiz Program Compatible With ANSWER BACK Files; Ages 12+  
Authors : Keith Spence and M Pendlebury  
Standalone Release(s) : 1984: ABACK SPORT, Kosmos, £9.95 (Tape) £12.95 (Disc)  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : KOSMOS, 1 Pilgrims Close, Harlington, Dunstable,  
BEDFORDSHIRE LU5 6LX. Tel: 05255 3942/5406  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*If you like sport...  
If you think you know your sports...  
If you like playing high-speed computer sports games...  
If you think you can challenge the KOSMOS sports team and win...  
...then this program is for you!*

*The program contains a choice of popular sports games combined with a gigantic collection of quizzes covering a multitude of sports subjects. If you answer the questions correctly you can try your skill in the game of your choice. If you don't know the answers, you can always cheat and play the games anyway!*

*The program contains a total of 800 questions and over 3000 answer options. But that is only the start, you can also create an unlimited number of quizzes of your own design, on any subject. These may be saved on blank cassettes and used whenever you like with your favourite sports game.*

**The game with a difference** - *The only limit is your imagination.*

The ANSWER BACK - SPORT cassette contains a powerful control program, a choice of high-speed football or tennis games and a massive series of Sports quizzes. Correct answers during the quizzes are rewarded with credit points which may be exchanged for another game's session whenever you like. Each of the 26 quizzes covers a different topic, a full list of which appears in the "Contents" panel.

### 1. Loading and starting the program

The control program is recorded at the start of side 1 of the cassette. The remainder of side 1 contains quiz files Q1 to Q12, side 2 contains quiz files Q13 to Q26. The control program is NOT recorded on side 2 of the cassette. The control program should be loaded using the command CHAIN "QUIZ" (If your computer has a disc interface, you must first type \*TAPE). On successful loading, the screen will show the program title and a list of available facilities. This is known as the **Command Menu**. At the bottom of the screen, the message "Question Store Empty" will be seen. The question store is actually the part of the computer's memory in which a quiz is stored while it is being used. Only one quiz may occupy the question store at any time.

### 2. Program facilities

The facilities listed in paragraphs 3 to 12 are available whenever the screen shows the command menu. Individual program facilities are requested simply by keying the first letter of the appropriate command. Your first command will probably be to load a quiz file into the question store (paragraph 3), or you may prefer to try out the games (paragraph 6).

### 3. Loading a quiz from the cassette (Key L)

The program will ask you to key in the filename of the quiz you wish to try. Key in a filename (Q1 to Q26) from the list overleaf, end with RETURN. If you wish to load the next sequential quiz on the cassette, the filename may be omitted.

#### **4. Beginning a quiz (Key B)**

To begin the quiz, key B. You will then be asked to enter your name (end with RETURN). If you have previously entered your name, you need only press RETURN. You will then be asked to specify which quiz format you would like. The options are:

- M = Multiple choice, where the computer presents a question followed by several answers. All you have to do is select the correct answer each time by pressing A, B, C or D as appropriate.
- Y = Yes/No, where the computer gives an answer to the question and you have to decide if the answer is correct or not.
- S = Selection of both.

Having made your choice the computer will ask how many questions you would like to try, whether you would like a random or sequential selection from the questions in store and whether you would like to be timed or not. The computer will then ask the first question.

#### **5. Answering the questions**

If you answer the question correctly you will hear a high note from the computer, your score will increase by one and you will be awarded three credit points. If you get the answer wrong you will hear a low note and then tell you the correct answer. The KOSMOS's team score will be increased by one.

If you do not know the answer to the question, you can 'cheat' by pressing the DELETE key. You will only receive one credit point however and the KOSMOS score will be increased by one.

When you have completed the number of questions requested, a summary of your performance will appear. You then have the opportunity to have another look at the questions you answered incorrectly or cheated on.

There are two special commands which can be used whenever the computer is waiting for your answer to a question.

Press Key P = Displays the position number of the question within the Question Store (only required for editing purposes).

Press Key G = Stops the CREDIT indicator flashing and tells the computer you would like to play the games.

#### **6. Playing the games**

During a quiz you gain credit points for correct answers or for cheating! These may be accumulated for as long as you like or immediately exchanged for turns in a game. The CREDIT indicator flashes to remind you that you have some unused credit. You can tell the computer you are ready to play by pressing the G key.

As soon as you have finished the current question, the computer will invite you to choose which game you would like to play. You can also use the games independently of the quizzes by keying F for Football or T for Tennis from the main command menu.

Tennis = The objective is to return the ball each time it comes in your direction. To do this you move your tennis player to the right or left then raise your racquet and strike the ball at the right moment!

Football = The objective is to prevent the KOSMOS team from scoring by moving your goalkeeper to the right or left to block the ball.

#### **7. Creating your own quiz (Key C)**

You can create any number of your own quizzes by successively keying in lists of questions and answers in the boxes shown on the screen. Each question must be

accompanied by the correct answer and at least one wrong answer. The text for each question and answer should be terminated using the RETURN key. You can use the DOWN ARROW key to move the cursor down to the next line in the question box if required. The last two "wrong answer" boxes may optionally be left blank simply by pressing the RETURN key.

Mistakes in entering text can be corrected with the DELETE key provided the RETURN key has not been pressed, or by keying X (RETURN) as the first character in any answer box to return to the previous one.

Questions and answers may be repeatedly keyed into the Question Store in this way until your quiz is complete. There is room for 30 to 100 questions depending on their length. A message "FILE FULL" will appear should you reach the limit. You can end quiz creation at any time simply by keying END (RETURN) at the start of line 1 of the question box.

#### **8. Saving a quiz on cassette (Key S)**

The Save command need only be used when a permanent copy is required of a newly created quiz or of a previous quiz which has been modified.

Enter a filename for the quiz (up to 8 characters). Enter a title for the quiz (up to 24 characters). Insert a blank cassette and switch the cassette player to the record mode when the RECORD then RETURN message appears. On completion of recording the tape should be rewound and the Verify facility requested.

#### **9. Verify a saved quiz (Key V)**

This facility should ALWAYS be used to check that a newly saved quiz has been successfully recorded. Enter the filename of the quiz to be verified and switch the cassette player to the play mode. The program confirms that verification is successful by printing "loading" then "OK". If verification fails, press the ESCAPE key and save the quiz again.

#### **10. Add to current quiz (Key A)**

This facility may be used to add further questions to a quiz which is already held in the Question Store. Instructions for using the Add facility are identical to those for the Create facility (see paragraph 7).

#### **11. Delete question (Key D)**

In order to delete a particular question you will need to know its position within the Question Store. This may be determined using the P command whilst running the quiz, as described in paragraph 5. The Delete command will ask you for the question number to be deleted and will give you a chance to change your mind in case you make a mistake.

#### **12. Insert new question (Key I)**

This facility enables you to insert a new question at a particular point in the quiz currently occupying the Question Store. You must first specify the point of insertion required, the question currently occupying that position will then be displayed. After confirming that this is the correct place for the insertion, you can then enter the text for the new question and answers.

#### **13. Contents**

Q1 Easy Ones First  
Q2 Club Football  
Q3 Pot Luck  
Q4 Guess the Sport

**Instructions' Source** : ANSWER BACK SPORT (Kosmos) Inner Inlay

### **Review (Electron User)**

Kosmos has developed quite a reputation for its ANSWER BACK programs, and the latest addition to the collection, the sports quiz, keeps up the good work. What you get for your money is more than 750 questions divided into 26 categories.

These must cover just about every area of sport. The questions can be multiple choice, or yes/no answers. The whole program is regarded as a sporting contest - you against Kosmos. Every time you get a question wrong, it's a point for Kosmos. But if you get one right, you will gain the point yourself.<sup>1</sup>

For each correct answer, you also get three credits, and these credits can be cashed in for a choice of two games - football or tennis. In football, you keep goal against a very competent Kosmos forward line, while in tennis you score points each time you hit the ball. Apart from the set questions, the program gives you the ability to create your own quiz.

This doesn't need to have a sporting theme - I've used it to create questions on science topics.

The program is well-written and bug-free. The games, while not arcade standard, demand some skill and are enjoyable to play. The main menu is clear and easy to use.

Rog Frost, ELECTRON USER 3. 3

# ARCADE SOCCER

*Professional, Released On Cassette Only*

Game Type : Arcade; Overhead Football Game  
Author :  
Standalone Release(s) : 1989: ARCADE SOCCER, 4th Dimension, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : THE 4TH DIMENSION, PO Box 444, SHEFFIELD. Tel: 01742 700661  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*ARCADE SOCCER really is football action at its very best. Using an overhead view to make gameplay as exciting as possible, it features everything that you could want in a football game. Corners, sliding tackles, throw-ins, goal kicks, dribbling, shooting, passing and much more. But not only does ARCADE SOCCER give you Total Action it also puts you in Total Control.*

*Firstly you can play with either keyboard or joysticks, against the computer and/or with up to 23 friends. The options are almost limitless; you can choose the skill of the goalkeepers, the speed and length of the game, play 'friendlies' or tournaments and even enter the most coveted of championships - the World Cup.*

*ARCADE SOCCER lets you control the action - 'It's brilliant.'*

1. The member of your team that you are controlling will be indicated by his jersey flashing black.
2. When a player has the ball, he can dribble it by moving in the direction that he wants to go. He can also kick it by pressing fire.
3. If the player has not got the ball, the fire button does one of two things. If he is close to the ball, it will perform a sliding tackle - this is the only way of taking the ball off another player. If he is not close to the ball, it will switch control to another player on the screen.
4. When a shot is taken at the goalie, he will automatically dive for the ball and will save it depending on his skill level. The higher the skill level, the more likely he is to save it. When playing friendlies, you can adjust the skill of the goalies. But when playing in the World Cup or the Challenge, the skill of the goalies is set by the computer.

## Game Controls

ARCADE SOCCER comprises of two basic sections, one controlling all the options and results, and the other where you actually play a game.

When you start a new game you will be presented with Round 1 of the World Cup (top) and the Status Icons (bottom).

### World Cup

Round 1 has sixteen teams. To qualify for the next round you must beat the team you are pitted against. Round 2 has eight teams. Round 3 is the semi-finals and Round 4 the final.

### Main Controls

- f0 This commences a friendly match.
- f1 This commences the next World Cup match.
- f2 This commences the next Challenge match.

f3 This allows you to enter players into the World Cup (1 to 16 players can be entered). When you press f3, an asterisk will appear to the left of the top left team. Use the 4 cursor (arrow) keys to move this around. Press <RETURN> to select a team. Press <RETURN> again if you wish to 'unselect' a team. When you wish to leave this option press <SPACE>.

### Status Icons

There are seven different parameters that you can change to affect the way ARCADE SOCCER plays. (These are at the bottom of the screen). The key that changes the status is given before each explanation.

PLY	TIME	K/J	SOUND	SPEED	SK1	SK2
P(PLY)	- Selects either 1 or 2 players for use on friendlies.					
T(TIME)	- Matches of 1 to 5 minutes each way can be played.					
J(K/J)	- You can play either using: keys only (0) ply 1 joystick, ply 2 keys (1) joysticks only (2)					
Q(SOUND)	- Either sound on or off.					
S(SPEED)	- This allows you to change the speed of the game (SLOW/MEDIUM/FAST).					
W(SK1)	- Skill level of player 1's goalie (friendly only). Team colour is white.					
R(SK2)	- Skill level of player 2's goalie and the playing ability if playing the computer (friendly only). Team colour is red.					

### In-Game Controls

Keyboard	1 Player	2 Player	
		Player 1	Player 2
Left	Z	CAPS LOCK	L
Right	X	CTRL	+
Up	*	W	[
Down	/	A	*
Fire	<RETURN>	E	£

Joysticks can also be used

f0 Pause On	f2 Sound On	f5 and f6 Quits Game
f1 Pause Off	f3 Sound Off

### **Review (Electron User) - "World Cup Thriller"**

One minute there are no football games for the Electron, then suddenly there's two - or at least one available and one promised. The Fourth Dimension scores first with its ARCADE SOCCER.

The game's main promotional features are that it is the only graphic football simulation available for the Electron and that up to 24 players are catered for. Thankfully, that doesn't mean 240 fingers and thumbs on the keyboard.

You can play a complete World Cup including 24 teams with computer, or human, players controlling some or all them. In one player mode you take on the computer-controlled teams, but with more than one player you may be matched against a human or computer team.

On loading the game you are presented with the first round World Cup match draws and a simple menu system in icon form. You can select which teams to control and choose to play a friendly challenge or cup match. It's advisable to play the first game as a friendly with the speed reduced to Slow so that you can get used to the keys and gameplay. For a friendly you can also adjust the skill of the goalies - to make sure you win I recommend a rating of nine for you and zero for the Electron. In the challenge and cup matches the skill is chosen at random.

The main play area, in Mode 5, is viewed from above with shirts either white or red, although the player who is on the ball flashes black and white. Normally you control the player nearest the ball, but you can flick between any of your players on screen by pressing <RETURN>.

Doing so if he is close to one of the opposition who has the ball results in a sliding tackle - the only type you get - and pressing <RETURN> when you have the ball kicks it in the direction you are facing. You can dribble until tackled or kicked.

The micro controls all the other players on your side, including the goalie. Apart from goal kicks you don't get to control his movement. While this works quite well it does mean that you can't change the player you are controlling while the goalie has the ball.

The ball is large and stays near the centre of the screen while everything else scrolls around it. All the obvious rules of the game are being adhered to, but I haven't been able to establish whether offsides are included. It is possible to play through the World Cup very quickly using the one minute each way option (it seems more like 45 minutes when you're getting thrashed 9-0 by the computer).

You can opt for up to five minutes each way if you prefer a longer game. Everything runs just as it should with first and second round eliminations, semis and finals.

If you are playing on your own I would advise not trying to run more than one team as you might end up playing against yourself! Only the full time scores are shown when two computer controlled teams play each other so you don't have to sit through every match.

Under the challenge option you play each team in turn until you lose. I haven't managed to progress very far, so I can't say what awaits the winner.

The graphics are as good as they could be, with garbage overwriting the top and bottom of the screen above and below the playing window. The sound is limited to a whistle, a ball against boot kicking effect and frying chips cheering and applause. You can switch off the sound, but I didn't find it annoying enough to use that option.

The game is very playable and you get a feeling of real involvement as you knock the ball into the corner of the net straight past the diving goalie. It's definitely one to play again and again, and if you can gather together enough friends it could make for a good day's enjoyment - and not a lot of games can do that.

Janice Murray

### \*\*\* Second Opinion \*\*\* (Electron User)

This soccer simulation is in a class of its own - it's brilliant. The graphics are good and the gameplay is addictive and exciting.

My tactics - which worked most of the time - are to boot the ball up-field and leg after it as fast as possible. On gaining possession you can dribble it past the defenders and blast it into the back of the net. Recommended for all football fanatics.

# ARCADIANS

*Professional, Released On Cassette Only*

Game Type : Arcade Shoot-'em-up  
Author : Orlando  
Standalone Release(s) : 1984: ARCADIANS, Acornsoft, £9.95  
Compilation Release(s) : 1988: ACORNSOFT HITS 2, Superior/Acornsoft, £9.95  
1989: PRES GAMES DISC 4, PRES, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+, Master 128  
Supplier : ACORNSOFT, 4A Market Hill, CAMBRIDGE CB2 3NJ  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Once the game is loaded, the first screen shows the keyboard controls, and asks you to select 1 or 2 to start - select 1 for one player and 2 for two players.

Move the laser-base across the screen to aim at the Arcadians hovering in convoy over you. Fire laser bullets at them while dodging shell-fire as they dive-bomb towards you. Arcadians in the different rows are worth different amounts [see below] and, when killed in mid-flight, are worth double their original number of points.

You start with three laser-bases, but can earn another one if you score 7000 points. You have to clear the screen before going on to the next sheet, where a tougher game awaits you!

## Game Controls

<CTRL> - Left, A - Right, <RETURN> - Fire  
Q - Quiet, S - Sound, <ESCAPE> - Return to menu

## Score

Score for each direct hit:

4	4	33	33	22	22	11	11							
4	4444	4	3	33	33	3	2	22	22	2	1	11	11	1
4444444444444444	3333333333333333	2222222222222222	111	11	111									
4444444444444444	3	3333333333	3	2	2222222222	2	1	11	11	1				
444	44	444	333333333333	222222222222	111	111								
44	33	22	11											
stationary	50	stationary	40	stationary	30	stationary	20							
flying	??	flying	80	flying	60	flying	40							

The top of 30 scores are displayed with the players' names at the end of each game. Your 'Rank' (displayed at the bottom of each screen during the game) shows your current position on this table.

# ARENA 3000

***Professional, Released On Cassette Only***

Game Type : Arcade Shoot-'em-up With Dual Joystick Option  
Author :  
Standalone Release(s) : 1983: ARENA 3000, Microdeal, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : MICRODEAL, St Austell, CORNWALL  
Disc compatibility : Unknown

## Instructions

*"It is the year 3000, can you destroy each wave of Killer Robots as they attack and rescue the Humanoid Survivor? Wave after wave of different Robots try to corner you in the Galactic Arena. Will you win? High speed arcade action game. Full colour graphics with sound. Machine language."*

It is the year 3000 A.D. The chief form of entertainment is the arena, where humanoids battle with mutants. Your only defence is a death ray, which always fires in the direction of travel.

Usually, the mutants will only die after being hit several times. You die instantly if you touch, or are touched, by a mutant.

As you clear each wave of mutants, they will be replaced by more of a different type. You start the game with three "lives" but gain an extra one for each 20,000 points.

First decide how you are going to control the game. There are three options:

### 1. KEYBOARD

Press the SPACE BAR to start.

Use the keys as follows:

Z - Left    X - Right    \* - Up    ? - Down    RETURN - Fire

### 2. SINGLE JOYSTICK

Press a FIRE button to start.

Use the joystick on which you pressed the FIRE button to control your movement.

### 3. DUAL JOYSTICKS

Press D to start.

Use the 'left' joystick to move and the 'right' joystick to control direction of shooting. Shooting is continuous so you don't have to worry about fire buttons as well!

With options 1 and 2, you always shoot in the direction in which you last moved. With option 3, the direction of shooting is controlled with the right-hand joystick.

During the game, the S and Q buttons will turn the sound ON and OFF respectively. If you want to answer the phone or draw breath, you can pause the game by pressing the SHIFT LOCK button and continue again afterwards by pressing CAPS LOCK.

## Top Ten Scores

If your score is in the Top Ten, you will be asked for your name to identify you in the 'Hall of Fame'.

**Instructions' Source** : ARENA 3000 (Microdeal) Back and Inner Inlay

### **Review (Electron User)**

Imagine that you're suddenly transported forward in time to the year 3000 AD. You find yourself the star of the chief entertainment of the time - the arena - where humanoids battle with mutants. Your only defence is a death ray and you need it. If you're touched just once by a mutant, you die. And some of the monsters take several blasts before they decide to die and leave you in short-lived peace!

A nightmare? No, just a brief description of ARENA 3000. You, of course, play the part of the humanoid, starting with three lives but soon losing them. Each mutant you kill adds to your points score and the cassette inlay tells you that you gain an extra life for every 20,000 points you score.

I wouldn't know as by then I've been swamped by mutants such as The Dreaded Oh Nos or the Jovial Jovian Jumpers. If they're jovial, I don't get the joke. And of course, every time you clear a wave of mutants, along comes another of a different type.

It's not easy but it is fun. With either keyboard or joystick control, sound on/off and pause facilities and a Hall of Fame, the game is well up to standard. The graphics are very good and the use of sound reasonable. A good version of an arcade classic.

Keith Young, ELECTRON USER 2. 3

### **Special Feature**

This game features a dual joystick option, designed to be used with the VOLTMACE 3B style of joysticks.

# AROUND THE WORLD IN 40 SCREENS

*Professional, Released On Cassette Only And DFS E00 Disc*

Game Alias : REPTON AROUND THE WORLD  
Game Type : Arcade; Overhead Maze Game  
Authors : Tim Tyler & Matthew Atkinson  
Standalone Release(s) : 1985: AROUND THE WORLD IN 40 SCREENS, Superior, £9.95  
1990: REPTON AROUND THE WORLD, Superior/Blue Ribbon, £2.99  
Compilation Release(s) : 1989: PLAY IT AGAIN SAM 8, Superior/Acornsoft, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"REPTON returns...to conquer the world.*

*After the success of REPTON 3, we were overwhelmed with requests for us to publish another set of screens for the game. We have now produced another 40 new screens which, although enticingly amusing, are even trickier to complete than the original 24 screens of REPTON 3.*

*These new screens feature Repton voyaging around the world. In America, Repton is a sheriff with a penchant for hamburgers and whisky; his job is to jail all the bandits and avenge the Red Indians. The Arctic sees Repton as an eskimo being "hotly" pursued home to his igloo by polar bears and penguins. Across to the Orient, and Repton is a kung-fu master amongst the pagodas, rickshaws and Chinese dragons. Repton becomes a deep-sea diver in the Oceans; he searches for pearls around the rotting shipwrecks which are inhabited by dangerous octopuses and squids. Finally, in Africa, Repton reaps his rewards by defeating the tribesmen, caging the parrots, and collecting the apples, bananas and pineapples - whilst watching out for falling coconuts!"*

AROUND THE WORLD IN 40 SCREENS has, as the name suggests, a total of 40 screens. These are provided as five cassette files with eight game screens in each:

File 1: AMERICA  
File 2: ARCTIC  
File 3: ORIENT  
File 4: OCEANS  
File 5: AFRICA

The AMERICA file is loaded automatically when the game is first loaded.

The AMERICA, ARCTIC, ORIENT, OCEANS and AFRICA are on side 2 of the cassette. To load any of these files, simply select the "L" option on the main game screen, and enter the appropriate filename.

## Objective Of The Game

In order to succeed in your journey Around the World you must complete each of the 40 screens without using any passwords. Each new set of characters is based upon the **original REPTON 3 characters**.

For the AMERICA screens, you will notice that the rock and the diamond have been replaced with a wagon-wheel and a hamburger respectively. Therefore, on the AMERICA screens, Repton pushes the wagon-wheels (as if they were rocks) and collects the hamburgers (as if they were diamonds).

Similarly, on the OCEANS screens, the monster and the spirit have been replaced with an octopus and a squid respectively. So Repton is chased by octopuses (instead of monsters) and squids (instead of spirits).

To avoid confusion, the following game instructions refer exclusively to the **original REPTON 3 characters**.

To complete the game, you must carefully determine your routes through each screen in turn, with the aim of defusing the time-bomb by passing over it. However, before the time-bomb can be defused, you must first:-

- (a) collect all the diamonds (including those concealed in safes or cages),
- (b) collect the golden crown, and
- (c) kill all the monsters.

Each screen has a time-limit and, if you do not complete the screen within this time-limit, the time-bomb will explode and you will lose a life. Repton can, however, travel backwards in time because whenever a time-capsule is collected, the time-bomb's clock is reset.

Each screen comprises a series of puzzles. Many of these are interlinked and you may have to solve a number of small puzzles to enable you to tackle a large one. The puzzles may, in some cases, seem impossible - but we assure you that Around the World can be completed.

Rocks will fall if unsupported and should one land on you it will kill you. You must also avoid the monsters, spirits, skulls and fungis - contact with these is fatal.

When an egg falls, it cracks upon landing and a monster hatches out. The monsters are killed by pushing or dropping rocks onto them.

There may be up to eight spirits on each screen. They always follow the walls to their left until they reach a cage. When a spirit enters a cage, it changes into a diamond. A spirit may become dazed if you drop a rock onto it or collect all the diamonds immediately surrounding it. This is to be avoided as the spirit will then move endlessly in a small circle.

Watch out for the poisonous fungus which grows incessantly sealing your fate. Trap it in by surrounding it with rocks if you can, or you may never live to collect the golden crown.

Your route may be blocked by a safe. If so, you must locate a key which will open all of the safes on the screen revealing a diamond within.

Each screen may have a maximum of four transporters. They cause you to be rematerialised at some other location on the screen, but each transporter can be used once only.

### **Game Controls**

Z - Left,    X - Right,    \* - Up,    ? - Down,    M - View Map (Screens A-E only)

<ESCAPE> - Kill Yourself (Useful if you become trapped),    <SHIFT>-R - Restart Game

P - Enter Password,    L - Load Data File,    S/Q - Sound On/Off

K - Select Keyboard Control,    J - Select Joystick Control (Plus 1 Interface)

F - Select Joystick Control (First Byte Interface)

### **Scoring**

5 points ..... for collecting a diamond  
20 points ..... for killing a monster  
50 points ..... for collecting a crown

### **The REPTON 3 Series Editor**

Full instructions for the editor package supplied with this game are detailed under REPTON 3.

**Instructions' Source** : AROUND THE WORLD (Superior/Acornsoft) Back and Inner Inlay

### **Review (Electron User) - "All Abroad With Repton"**

Since the successful launch of REPTON 3, Superior has been inundated with letters asking when it would release a new set of screens.

Well it is my great pleasure to announce that it's here, entitled AROUND THE WORLD IN 40 SCREENS. The package consists of five files, each containing eight mind blowing screens.

The cassette represents excellent value for money since not only do you get forty new screens, there is also a copy the REPTON 3 screen editor. So, if you didn't buy it first time round, here's your chance to see what you've been missing.

As the title suggests, each of the five files is based around a different country or environment. The characters all retain their original characteristics, so boulders fall, eggs hatch and monsters chase, but every last one of them has been redefined to match their new surroundings.

Repton's voyage begins in the Wild West where 'Clint' Repton has to clear the town of hamburgers inside a strict time limit.

The boulders have been replaced by wagon wheels, the monsters are now Red Indians and the spirits have changed into bandits who must be jailed.

The remaining four files are set in the snows of the Arctic, the mysterious Orient, the ocean depths and Africa. A great deal of time and effort has gone into creating a graphical treat, and a series of puzzles that as just as testing as the first collection.

In the original REPTON 3 you had the chance to load a new series of screens if you grew bored with the first set, but you were still playing with the same old characters.

By using a brand new character set with each group of screens your attention is held much longer - it's now far easier to keep the eyelids open at three in the morning.

Unfortunately, the vastly different character sets cause a few problems when loading a new file. You don't know which are safe to touch and invariably lose a few lives.

The best course is to use your first venture into a new landscape as a suicide exercise, walking blindly into the different characters and noting what happens.

The inherent expandability of REPTON 3 has been exploited to the full by Superior. If it continues to release extensions such as this, our little green skinned buddy could be around for many a year.

Tel: 01322 21134  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

You are the maintenance man just arrived from Earth. Your task is to repair the leaking air pipes in caverns under the Moon's surface, which supply the scientists of COLONY 11, a research station. The inhabitants of these underground caverns are indestructible, so must be avoided.

To help you avoid them you are wearing a jet-pack, enabling you to fly over them, but watch your fuel supply. Press the RETURN key to take off and again to land. You can't use the jet-pack on the surface.

To repair the pipes, you are carrying a plasma laser which when fired underneath the pipe engulfs the leak and seals it. This also drains your fuel supply so use with care.

If you leave a screen without repairing all the leaks, on returning to that screen all the leaks will appear again!

The air tanks on the Moon's surface can be used to replenish your air supply, by plugging in to them. Your air indicator will show how much air you have. CAUTION - DO NOT OVERFILL!

The game ends if you run out of air, fuel or lives. With every screen you complete an extra life is gained. You lose a life if you come into contact with any inhabitant, so be warned.

On certain screens there are transport pads. You stand on the pad and press SPACE and you will then be transported to the transporter directly above or below you.

When the pressure indicator is full then that round is completed. A bonus will be added to your score; the next round then increases speed making it harder to complete. GOOD LUCK!

## Control Keys

Z - Left, X - Right, \* - Up, ? - Down  
SHIFT - Fire, RETURN - Jet pack, SPACE BAR - Transport  
COPY - Freeze, DELETE - Unfreeze

**Instructions' Source** : ASTRO PLUMBER (Blue Ribbon) Inner Inlay

## Review (Electron User)

If you are a devotee of moving through underground caverns while trying to avoid mutant monsters, then ASTRO PLUMBER is well worth looking, especially as it is firmly at the budget end of the market, available on cassette for just £2.50. The scenario is the moon and you play the role of the plumber who has recently arrived

at Colony 11 to fix a rather leaky air supply system. What else would you use to mend leaking pipes but a plasma laser?

This does the job perfectly well but drains your oxygen supply rather dramatically. Oh, by the way, I suppose they did tell you on Earth that there are funny little sprites wandering around the system which cannot be avoided? At least you'll appreciate the rather nice jetpack they gave you, so that you can fly over them, although again this drains the air supply.

Still, all is not lost because there are air tanks up on the surface which you can plug into before dropping back underground to try to finish the job.

There are several screens - some with additional features like transport pads which move you quickly up and down the system's levels. There are a couple of snags including the rather long time delay between being killed and the magical reincarnation. This is further aggravated by the fact that the monsters keep moving during this time, and have an annoying habit of being too close when you reappear!

Generally, though, this is a fairly enjoyable game with no original ideas, but plenty of excitement for younger players.

# ATOM SMASHER

*Professional, Released On Cassette Only*

Game Type : Arcade Shoot-'em-up  
Author : Clive Webster  
Standalone Release(s) : 1983: ATOM SMASHER, Romik, £5.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility :  
Supplier : ROMIK, 272 Argyll Avenue, Slough, BERKS  
Disc compatibility : Unknown

## Instructions

The scene - the heart of a runway nuclear reactor. To delay meltdown you must shoot the protons with your remote controlled super laser. Each time that you shoot a proton, an extra electron is released. If you shoot an electron, you speed up the impending meltdown. There are nine skill levels.

The game starts with a blue electron moving around the neutron.

To delay meltdown you must shoot the proton which moves around the purple nucleus, with your remote controlled super laser.

Each time that you shoot the proton, an extra electron appears. If you collide with an electron, you lose one of your three lives. If you shoot an electron, everything speeds up for a short time, until the electrons cool down a little. If you delay in shooting the proton, meltdown starts.

The molten debris approach the nucleus from each side. You can blast the debris away, but the only way that you can stop it from advancing, is to keep shooting the proton.

When selecting a skill level, 1 is easiest, 9 is hardest.

Points are awarded for the time that you survive, i.e. the longer that you survive, the higher the score.

You have three lives.

## Game Controls

Z - Left, X - Right, : - Up, / - Down, <RETURN> - Fire

A joystick option is also available.

P - Pause/Continue, Q/W - Sound off/on

## Instructions

THIS game is taken from the sensational television programme in which our hero 'OZ' establishes an international reputation for himself laying bricks and 'Living All Right'.

### The Building Site

Oz's working day sees him on the site with instructions from Herr Fuhrer to build 'ze tallest and videst vall'. He must not get in the way of the watchful Erics, nor fall over the edge of the wall...and there are tumbling trowels to watch out for as well. If Oz can build to the top, a cement bonus is awarded. The more bricks he lays, the more marks he earns to spend on his favourite pastime - drinking.

### The Bier Keller

In the evening, it's off to the local drinking establishment with Marks in his pocket. If he has worked hard building the wall, it could be a rough night for Oz. But the more pints he downs, the more likely it is he will fall over a table, bump into a wall or get dropped by one of those fearsome German barmaids, who seem to appear from nowhere...and there is no drinking after 11:30, so get supping!

### The Way Home

Somewhat worse for wear, Oz has to find his way back to the hut, but in the darkened streets, police cars lie in wait ready to pounce on our unsuspecting Geordie brickie Oz. Should he find his way through the unlit maze, an over-zealous security guard has to be evaded too. Oz can retrace his steps at any time but no extra points are gained and his stamina will be sorely stretched.

## Game Controls

Z - Left, X - Right, O - Up, K - Down

**Instructions' Source** : AUF WEIDERSEHEN PET (Tynesoft) Inner Inlay

## Review (Electron User)

For any fans of the popular TV show, this may have a special appeal. The central character in our neat little plot is Oz, the well known loudmouth. Our Oz is put into a variety of tricky little situations over in Dusseldorf, and it's up to you to get him out of them!

Firstly, at the building site, Oz is under instructions to build as wide a wall as possible, and if you thought bricklaying was easy, try this! As well as avoiding the watchful Erics and the falling trowels, poor Oz must be careful not to tumble from the wall. The more wall he builds, the more marks he earns for his night at the bier keller.

At the bier keller, Oz must try to drink as many pints as possible before 11.30

(clock provided). The more he drinks, the more fearsome the barmaids become and the more numerous the tables to fall over. If you're not full of pity already, you will be when you find he's got to guide himself home as all the street lights in Dusseldorf flicker and die.

He must remember the route, then try to find his way through a pitch-black maze of lamp-posts and police-cars! Even when he gets to the hut, he has to avoid the security guard! Is it really worth going out? You may well ask.

Take the controls and see for yourself. The keys are easy to operate and you will find the graphics well up to standard. But just allow me a few grumbles, being the fusspot I am!

First, the instructions are a little harsh on the eyes in glaring Mode 2. Mode 1 would be preferable. Second, the game seems to be a little slow-moving in parts - particularly when the lights are going out. Finally, more adventurous sound effects wouldn't come amiss.

All in all, though, a promising game for all ages, with plenty of variety.

Bev Friend, ELECTRON USER 2.10

# AVON

## *Professional, Originally Released On DFS 1900 Disc*

Game Type : Text Adventure; Disc-based  
Author : Jonathan Partington  
Standalone Release(s) : None  
Compilation Release(s) : 1990: AVON and MURDAC Double-Pack, Topologika, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : TOPOLOGIKA, 1 South Harbour, Harbour Village, Penryn,  
CORNWALL TR10 8LR  
Disc compatibility : CDFS E00, DFS E00

### Instructions

*'All hail, great master, grave sir! Hail! Welcome ever smiles, and farewell goes out singing...'*

*In this light-hearted but immensely challenging look at The Bard's world through the keyboard of modern man, you find yourself, after watching too many Shakespeare plays (or perhaps reading them) wandering around a strangeland. Here they use a richer language than usual and some of the scenes remind you of certain Shakespeare plays. How you are going to return successfully to the present day is something that you will have to find out for yourself!*

*Why does the adventure take place on three different dates? What is the significance of the lady Portia's caskets? Why does Yorick sometimes say "Golesida" and sometimes something else? Why do you suddenly find yourself wearing an ass's head? These are just some of the tantalising puzzles that you'll meet when you welcome AVON...An exhaustive knowledge of the Shakespearean Canon is not necessary as, in most cases, just the problems rather than the solutions are taken from Shakespeare. If you get really stuck, Topologika's much-praised on-line 'Help' system is there to stop the sighing...*

*AVON is Jonathan Partington's first release since his best-selling KINGDOM OF HAMIL (also available from Topologika).*

Little Seedbottom  
Near Stratford  
ENGLAND

Hotel Topologika  
  
1st April 1989

My Dear Aunt Jocasta,

How are you? How is Uncle George? I hope you got my letter from Paris. The Louvre was just amazing, and the hamburgers in the fast food opposite Gare du Nord were nearly as good as yours.

I will be eternally grateful to you both for enabling me to see Europe. Despite having been born and brought up in the States, I still feel, like you, so British! Seeing the land of one's ancestors in one's youth is surely better than hanging on for one's retirement. It's a shame your health wasn't up to the trip.

Thank you for your card. Yes, I had an interesting twentieth birthday. I treated myself to an excursion to Stratford-upon-Avon, Shakespeare's town. 'Treat' is probably not the correct word. It was the weirdest trip I've ever known.

It began like any other. According to the coach driver, we had six hours free. I tried to stay with Araminta (that girl I wrote you about from Paris) but she went off with some 'Nam veteran.

Anyway, Ann Hathaway's cottage was out of this world. I had a cup of English tea, then bought some postcards (I've put one in with this letter to save a stamp), then found this quaint old antique shop. That's when things started to go wrong. Well, not exactly wrong. They just started to, well, happen. I'll try to explain.

This old, brass cauldron in the shop window caught my attention as I walked by. The shop was run by these old ladies, and when I said that I was interested in viewing the cauldron, they flipped. I mean they seemed to think I really did want it, and wouldn't take 'no' for an answer. Of course there was no way that I could have shipped it back to the States. It was even more enormous than that old rocking chair you used to have! (Did Uncle George ever fix it for you?)

My refusal seemed to offend them. They began to cluck and moan. I felt like I was in a Spielberg movie! I was out of there quick, I can tell you. I could swear one of them was after me with a broom. Outside the shop was this enormous pine tree which seemed to groan - yes, groan - as I ran past it. I took refuge in a pet shop a couple of blocks away, where an asp tried to bite me! I dived into the museum (strange to be in a country where people have to pay to check that no one has run off with their own heritage). I got out of there when an ass's head looked me up and down.

Well, all this had brought on a migraine, so I asked a policeman where I could find a drug store. He looked at me kinda strange, as did the chap in the drug store, shoving this green, bubbling phial under the counter as he sold me some pills.

Outside, the spring sun was still up, so I headed for the river. The Avon was as beautiful as Fodor's said it would be. I began to feel a whole lot better, strolling along, letting the pills and the fresh English air do their thing. Maybe I'd imagined it all. Maybe I was just overtired. I'd sure done a heck of a lot of travelling in the last few days. Maybe it was all just a bad dream, and I'd wake up in a minute or two back on the coach.

I must have taken a wrong turning. Suddenly I had the strangest of feelings. Don't ask me how, but right then I began to realise what was going on, and the thought sent a shock down my spine. Before my very eyes, the scenery was changing. The woods across the river looked like Scotland, the streets might have been Egypt, or London or Venice - anywhere. There was nothing I could get my bearings from. Modern Stratford was leaving me behind.

Even the ground at my feet looked different, unnatural. It was made of boards. I wondered if I was on some sort of platform or stage. Maybe I'd strayed onto some sort of riverside film set, I thought: that would explain some things. But the whole area looked too realistic: those were real trees, real buildings, and across the river, the suddenly muddy, boiling river, were real people.

But wait: why were they pointing at me? It was horrible; I hate people staring at me. This was worse: they were talking about me too, their voices drifting across the churning water: "Marry, 'tis a strange churl, that standeth over there. Methinks it knoweth not the time of day!"

Then I realised something even more horrible. Their clothing was completely different to mine. Where I was wearing Levis and my old football shirt (I know you disapprove of that, Auntie, but when one is travelling) these olde worlde hippies had on long flowing garments that swung stiffly in the increasingly chill breeze. It felt like winter, was winter, and it would be dark within minutes.

To cut a long story short, I was standing in a world that, although it was at that moment definitely NOT Stratford-upon-Avon, still had this Shakespearian flavour. I'd been transported into The Bard's world - the world of his plays - and players.

You're thinking your nephew's gone nutty, I suppose, that Europe has gone to my head. Please please believe me, Auntie. This *really* happened. I had to use all my wits to get back to the modern woruld. Luckily, I didn't need to know all that much about the Bard himself - or his works.

Not time for any more right now, Auntie. I'll write again in a day or so. Don't worry about me. How is Uncle George getting on in Kashmir?

Your loving nephew,

Jonathan

## Screen Display

The top line contains a short description of where you are, together with your current score. The bottom section displays your current location in greater detail, together with your own input and the game's responses.

## Specimen Commands

**GO NORTH, THEN EAT THE PIG, E, SW, IN**

**GET ALL BUT THE DUCK AND GOBLET, AND LEAVE**

**GET** - takes the first relevant object

**DROP** - similar

**TAKE THE PIG AND UNICORN, WAIT**

**SAY HELLO**

**HELLO** - equivalent to saying it

**LOOK** - gives a full description of where you are

**SAVE** - stores your current position on disk

**RESTORE** - brings back the saved game

**RESTART** - begins at the beginning

**QUIT** or **STOP**

**VERBOSE** - makes program always give the full description of where you are

**NORMAL** - makes program give full description the first time you arrive at a new place, with short descriptions for later visits

**INVENTORY** - lists your current possessions

## The puzzles

You may be puzzled why the EXAMINE command is of only limited use. The game is conceived in such a way that in solving the puzzles you are not involved in merely happening to discover things about the objects. It is only by manipulating them where possible, or combing them in some way, that the relevant features are revealed. Some locations, however, do contain hidden depths...

## On-line HELP

If you get completely stuck, on-line help is available by typing HELP. Look up your problem on the list of hints and give the hint number you require.

You will then be given some sort of clue. The HELP facility is structured in stages so that you will initially get a partial clue, and will be given due warning if the entire puzzle is about to be revealed to you!

## **Review (Electron User - Double Review Of AVON and MURDAC) - "The Bard's Tale"**

Topologika is a software house that has steadily gained a first class reputation in the provision of adventure games and educational software. It's not surprising really when you remember that the stable of writers includes such luminaries as Jonathan (KINGDOM OF HAMIL) Partington, Jon (ACHETON) Thackray and Peter (PHILOSOPHER'S QUEST) Killworth.

Just issued is a double-game blockbuster from the combined talents of Jonathan Partington and Jon Thackray. The disc contains two quite different text only adventures that delight my purist heart: AVON and MURDAC.

The package consists of the usual neat folder containing the disc, two leaflets introducing the background to each adventure, two sealed envelopes embellished with the admonition DON'T BE TEMPTED - concealing clue sheets - and last, but not least hour upon hour of fun and frustration.

I'll begin with AVON, since that should be regarded as the A side of this particular release. As the title hints, it is a brilliant romp that pays tribute to that Swan of Avon, that Bard illustrious, Will Shakespeare no less.

As a tourist from the United States, here you are in Stratford absorbing the atmosphere when slowly but steadily the magic of history begins to take effect - as the introduction puts it, "There was nothing I could get my bearings from. Modern Stratford was leaving me behind."

And so you suddenly find yourself in the following location: "You are standing on a flat plain. From here it seems that all the world's a stage, and all the men and women merely players. They have their exits and their entrances to the north, south, east and west."

With these words you are pitched headlong into a world redolent of Shakespearean references and allusions, many extremely funny, and a number of puzzles that need deductive and observational power to solve them rather than literary know-how.

I strongly recommend a good wander round the many locations that you can visit without needing to solve any puzzles first. I am delighted to say that Jonathan here follows the philosophy I heartily approve of - he doesn't pack the early stages of this adventure with puzzles that must be solved before you can advance any further. Other, lesser writers, or would-be writers, please note and follow the example set by these experts.

The only tiny problem that has to be overcome early on is that of finding some way of seeing in the dark - and those three charming ladies on the blasted heath have the answer to that. And, what's more, are quite willing to see eye to eye with you regarding your need.

Another acquisition which will be useful from very early on in the game is the equivalent to the packing-case used as a storage medium in DUNGEON ADVENTURE - and you should remember what use Sir John Falstaff made of it in The Merry Wives of Windsor, too.

The language is at times lyrical and at others acts as a vehicle for the zany humour that characterises this adventure. I really must give a few examples to whet your appetites:

"A rather dull-looking constable appears, cries 'Havoc!' and lets slip the dogs of war. In fact a small Chihuahua appears and stands barking at you. "Drug squad," says the constable. 'I must search you for certain substances.'"

"You sit down at the feast. To your horror a ghastly vision appears and shakes its gory locks at you. It is the ghost of the Scotsman you have so foully slain! You stand and address this shadow, this unreal mockery, which only you can see. This displaces the mirth of the guests, who stand not upon the order of their going, but

go at once. The ghost avants and quits your sight, melting into the wall to your north-east."

"You are at the centre of the wood. To the south is a cottage which probably belongs to a retired criminal, for it bears the name Dunsinnin."

The parser is of the kind we have grown to accept as normal for a sophisticated adventure from a top flight author. It happily accepts multiple input such as GO NORTH, EAT THE PIE, OPEN DOOR, IN and can deal with exclusions such as TAKE EVERYTHING EXCEPT THE GOBLET.

It's very helpful when mapping to be given a long location description first time there and a shorter one on subsequent visits, but you can arrange to have the full description every time by entering the command VERBOSE.

At the heart of the adventure - apart from the treasures to be collected - are a number of fascinating puzzles which will have many of you muttering away to yourselves as you try to solve them.

For me, the most fascinating was the casket problem: Lady Portia - from The Merchant of Venice - has three caskets, of lead, silver and gold.

The problem is working out in which order to open them so as to get the real prize as against the booby prize. You'll encounter this problem three times, since the action of the game takes place on three different dates - January 6, March 15 and June 24 - and a potion is your passport to time travel.

There are a whole host of less complex puzzles, some of which need applied common sense and some a little general knowledge. Thus, you can pacify a musical gaoler provided you know who is his favourite composer.

Similarly, you have to drink that old toper Sir John Falstaff under the table - which is perfectly feasible provided you use your loaf.

It's possible to get thoroughly pie-eyed on the Ides of March, but at the same time it could turn out to be a lifesaver. I'd also recommend that you indulge in some asinine behaviour similar to that of King Nebuchadnezzar as recorded in the Book of Daniel.

A couple of final hints for this superb adventure: The command WAIT is invaluable at certain points in the game - and don't be afraid to draw your bow at a venture.

AVON is a game I can gladly recommend to expert and novice alike.

Moving on to THE MONSTERS OF MURDAC, which is billed as a free inclusion, we come to an adventure of a very different type. Personally, I think MURDAC should be sold in its own right.

I should say right away that this is not for beginners, being designed to bewitch those who rate themselves as competent or expert. The initial scenario consists of 14 locations only, but since one is a locked house that contains a cellar you needn't worry. In fact, there's around 70 locations in all.

However, while careful mapping is essential, the chief pleasure has to do with solving quite complex puzzles rather than exploring exotic locations.

The opening problem was, to my mind, very difficult, since it involved a minimum move sequence to locate a building site while something could still be done. However, if you are successful, I would refer you to Psalm 98 verse 7 as found in the Book of Common Prayer - and urge you to remember how Joshua fought the battle of Jericho.

Also in the opening sequence, a sword needs to be obtained. Remember how King Arthur got Excalibur? Well, making the appropriate noises could well go you the same sort of favour.

Perhaps the chief puzzle in MURDAC is working out how to free the wizard's daughter from her roll-guarded cell (shades of TWIN KINGDOM VALLEY) without ruining your chances of solving other problems as well. You'll need to be a master of disguise, totally trustworthy and also adept at timing.

There's a lovely description of the place where you find the wizard:

"You are at the top of the hill, which falls away steeply on three sides. In the distance you can see various curious scenes, including a disused shooting gallery, a garden from which giant rocks are taking off, a large cornfield, a giant spider's web and a distant bungalow by the seaside. The path leads back downwards from these awe-inspiring sights."

If I tell you that the spider's web is a reference to QUONDAM, can you work out what the other adventures are?

One important objective in the game is working out where to keep your treasures - but don't deposit them before you are sure you won't need them again. They tell me that cold showers are good for you, but a hot one can be invaluable for getting a monkey off your back.

Finally, both adventures contain mazes - with a difference. One in AVON is redrawn every time you go there, and not a single one can be mapped by dropping things. How times have changed.

This two-disc game is an absolute must for any serious adventurer.

Mad Hatter

### \*\*\* Second Opinion \*\*\* (Electron User)

I prefer adventures which concentrate more on puzzle solving and less on mapping a large number of locations and AVON and MURDAC fit the bill.

# BALLISTIX

*Professional, Released On Cassette Only*

Game Type : Arcade; Overhead M/Code Ball Game  
Authors : Martin Edmondson & Peter Scott  
Standalone Release(s) : 1988: BALLISTIX, Superior/Acornsoft, £9.95  
1990: BALLISTIX, Superior/Blue Ribbon, £2.99  
Compilation Release(s) : 1990: PLAY IT AGAIN SAM 14, Superior/Acornsoft, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : CDFS E00, DFS E00

## Instructions

### Winning a level

To win a level, you must score three goals before your opponent scores three goals. To score goals you fire balls from your firing arrow at the puck (the large red ball) and drive it into your opponent's goal. Note however that if the puck is travelling at very high velocity when it reaches the goal, it may rebound out.

You should also try to score as many points as possible. A goal scores from 15 to 85 points, depending on how "good" it is. For example, goals scored from the centre of the ground tend to gain higher points than those scored in front of the goal or from the edges. Bonus points can be obtained by shooting bonus point tiles (illustrated below\*) and by collecting a full set of RICOCHET letter files.

### Overall objective in the one-player game

Your overall objective in the one-player game is to beat the computer over 29 levels of play and reach the final "victory" screen with as high a score as possible.

Whenever the computer wins a level, the game is terminated and you return to level 1. You can use passwords to commence play from a higher level, provided you have previously reached that level and hence obtained the password. To obtain the highest score you can, it makes sense to commence from level 1.

### Overall objective in the two-player game

Your overall objective in the two-player game is to win more of the 30 levels of play than your opponent, whilst obtaining as high a score as possible.

An alternative objective in the two-player game is simply to obtain a higher score than your opponent.

You can use passwords to commence play at any level you wish, provided you have previously reached that level and hence obtained the password.

### Game Options

From the title screen, the first level of the one-player game is selected by pressing the 1 key, the first key of the two-player game is selected by pressing the 2 key. Once the password is known for any subsequent level, in either the one-player or two-player game, that level can be selected by pressing the P key, and then typing in the four-letter password.

### Features Activated By Shooting Tiles

R,I,C,O,C,H,E,T .... Collect a full set of RICOCHET tiles for a bonus of 100-500 points.  
50, 100 ..... 50 point bonus, 100 point bonus  
SPLITTERS giving four new balls

	SPLITTERS giving eight new balls
X .....	Stop opponent's fire for duration of bleeps
	Randomly change ball's direction
S .....	Stop puck dead
? .....	Send puck in random direction at random speed

## Firing Controls

The keys to move the positions of the firing arrows and to fire balls are redefinable (by pressing the C key) before commencing play. Initially the keys are defined as:

BBC Micro			Electron	
Player 1	Player 2		Player 1	Player 2
Z	>	Move Left	Z	<
X	?	Move Right	X	>
Q	{	Move Up	W	`
A	*	Move Down	S	+
TAB	`	Fire	Q	-

## Other Controls

SHIFT and COPY .....	Pause Game
SHIFT and DELETE .....	Restart Game
S/Q (when game is paused) .....	Sound On/Off
SHIFT and ESCAPE .....	Quit Game

## Review (Electron User) - "Having A Ball"

BALLISTIX, Superior Software's latest release, is a sort of cross between a pinball machine and shove ha'penny, making it unlike anything you've seen before. It's a one or two player game and is great fun either against the micro or a friend.

The game is played on a court and the screen shows about half of this from a bird's eye viewpoint, scrolling as necessary to reveal the rest. At either end of the court is a goal, yours at the bottom of the screen in the one player game. You can take your pick in the two player version.

The puck - a large red ball - is released in the centre of the court. You control an arrow which automatically follows the puck a short distance away and always points toward it. You fire small balls at the puck in an attempt to knock it into the opposing goal.

While you're about this tricky business your opponent or the computer is attempting to reverse the process.

The computer opponent simply takes the form of gravity - it's like playing uphill. It might not sound difficult, but in practice it certainly is.

You score points for goals, but the number you receive depends on how good the goal is. Run the puck over the line and you won't score many, but a long shot from halfway down the court earns a lot.

To add interest and create a lot of frustration various objects litter the court and special tiles can be shot for extra features and bonuses. Arrows accelerate the puck in the direction they point, which more often than not isn't the direction you want to go. Also the puck can disappear down black holes and reappear in the centre of the court. Tunnels such in the puck and blast it out of the other end. Ridges present barriers and magnets attract it. Oil slicks and deadspots stop the ball.

Bonus tiles can be shot and RICOCHET letters can be collected for a further bonus. Splitters shatter the ball into four or eight bits, other tiles stop or send the puck off in a random direction.

You start off on a court with very few extra features, and on scoring three goals you move on to the next and harder level. More features are progressively added to increase the difficulty. With 30 levels to master, BALLISTIX is very challenging. One feature I particularly like is that on completing a level you are given a password so you can skip any levels you've mastered next time you play.

The Mode 5 feature are excellent, and minor colour changes add a little variety. The sprites are well defined and clearly visible over the background court graphics. The court scrolls quite quickly, though it jerks a little, but I didn't notice this while playing.

The sound effects are limited, just the odd beep here and there when the puck is hit or bounces off an object. A tune or two would have brightened up the game.

BALLISTIX is original, fun and very addictive. Each new level is a challenge which brings a new court layout with several surprises. I found it just as much fun as a one player game with a friend. If you're on the lookout for something completely different, BALLISTIX could be right up your street. Recommended.

Roland Waddilove

### \*\*\* Second Opinion \*\*\* (Electron User)

I found BALLISTIX interesting initially, but after a while it became tedious. The two player version has more challenge, so if you can't find an opponent to play it with I'd forget it.

# BALLOON BUSTER

*Professional, Released On Cassette Only*

Game Type : Arcade; Burst Balloons In Set Sequence  
Author : Mike Williams  
Standalone Release(s) : 1989: BALLOON BUSTER, Blue Ribbon, £2.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : BLUE RIBBON, CDS House, Beckett Road, DONCASTER DN2 4AD  
Tel: 01322 21134  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"Buster the Clown enjoys a good laugh and something that gets him chuckling is bursting balloons.*

*"His latest challenge is to burst balloons in a set sequence. Unfortunately, his colour blindness prevents him from getting a high score. He needs help...your help.*

*"So don the red nose and join him in this hilarious balloon busting escapade!"*

Get the red nose; the wig; the size 36 shoes and the make up and join Buster the Clown as he has a hilarious time 'busting' balloons.

Buster has a brilliant throwing arm, but he has a problem in judging distances. He'll be depending on you to control the strength of his throw so you don't burst more than one balloon at a time. Time can also be wasted if Buster is allowed to throw too hard!

Oh! There's one other problem. Buster is colour blind! He knows that the balloons have to be burst in a set colour sequence but he can't figure out which colour should be first and so on.

Buster is depending on your good eye sight and judgement in this brilliant yet frustrating game!

So go on have a laugh and 'bust' a few balloons!

## Game Controls

Z - Jump left, X - Jump right, <SPACE> - Turn left/right  
<RETURN> - Press for power, release to fire, <ESCAPE> - Start again

**Instructions' Source** : BALLOON BUSTER (Blue Ribbon) Back and Inner Inlay

## Review (EUG)

There are many games with strange storylines held within the blurb of the cassette inlay card, all trying to entice you into buying them. But none are half as weird as the one given with BALLOON BUSTER.

You are a clown called Buster who, for some unknown reason, enjoys bursting balloons in colour sequence. Being both colour blind and very inept at judging distances, he needs help and this is where you come in. It is your job to pop the balloons in the correct colour order and with the right amount of throwing power, all against the clock.

It doesn't sound all that inspiring and to be honest the game is downright useless! Burst a balloon out of sequence - (you're not told what the sequence is, so you have to guess!) - and you get an annoying beep with the error message 'OUT OF SEQUENCE'. Pop more than one balloon with a single throw and that annoying beep is back along with the message 'TOO MUCH POWER'. As you have to guess the colour sequence, you get the beep and message almost every throw!

All this left me in a state of frustration and feeling as though I had wasted my money. The graphics are fine and the animation is quite smooth (if a little flickery in places). In fact, I like the way Buster looks up at the ball when he throws it.

The sound is very bad, only a little better than that of SPITFIRE '40. There are no pause or sound on/off facilities and the High Score table is unchallenging as there are no high scores on it! Presumably nobody could be bothered to play it - and I wouldn't blame them either!

If you *do* complete level one (Great willpower and a *lot* of patience is needed!), you are greeted with a few background colour changes and the balloons are moved around a bit more.

Once your three lives have been lost through incorrect colour choice or too much power in your throw, you can replay the last level you were on via a five second credit-type timer.

The inlay blurb describes BALLOON BUSTER as a "brilliant yet frustrating game". I would describe it as useless and overpriced. It may only be £2.99 and a new release but Blue Ribbon have plenty of better games than this for the Elk, so avoid it at all cost.

## Review (EUG)

Every now and then I discover a game which had a really rough time and this is a prime example. By rough I don't mean treated roughly in an Electron User review, although their boob with the EXILE review defied belief, but more that the game got a rough deal by never even *being* reviewed...hence no-one knew of its existence.

BALLOON BUSTER by Blue Ribbon is a commercial release that has a very 'neat' feel to it; the packaging is just as bright and attractive as the game itself, it uses a colourful Mode 2 screen, it is written in pure machine code, it incorporates a whole new idea and it's very enjoyable to play.

You control a happy little clown armed with one juggling ball. Up above are a number of different coloured balloons. The idea is to burst them in a pre-set order by hurling the ball according to the rules: don't hit more than one balloon with the same throw, don't hit a balloon of the wrong colour and don't stand around too long thinking - but don't leave yourself in the position where the next sequential coloured balloon is left 'blocked' by one of the others!

And, um, that's it. Because the game is of a 'puzzly' nature, there's no real call for a prologue or explanation why you need to do what you need to do. Yet the 'puzzle' has been uniquely crossbred with an arcade forum; the action takes place upon a theatre stage, you retain and are awarded (on completion of certain screens) a number of 'lives', you must accurately judge the power with which you throw the ball and you progress up through harder and harder levels.

The time limits on the levels are strict and you can frequently run out of time by bouncing your clown in the wrong direction even only a couple of steps. Frequently

when I realised this, I panicked and lobbed the ball much harder than normal! Games which have this type of effect take acquired skill to master...and it's fun to try!

A nice touch is that, when you run out of lives, you are returned to either the level you were playing or the one preceding it without having to play all the screens again from the start. This is done by the use of a 'Continue' and ticking down counter - a feature present on many Spectrum and Amstrad games but one which I think is unique to the Electron and is yet another 'arcady' feature!

Adding a spectacular loading screen, fast execution speed within the game and the addictiveness of the idea makes for one of the better Elk games on the market...yet one I have never seen reviewed before! On disc it plays like a dream. On tape, the loading screen takes time to load and, although very nice, is rather cumbersome after the third occasion. Of course, it's easy to just take out the line which loads the screen and spin on the tape!

Overall, the sprites are jolly, the layout is tidy and the idea is unique. This game has been unfairly underexposed; go and seek out a copy of it today!

Dave Edwards, EUG #46

# BANDITS AT 3 o CLOCK

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Dogfight  
Author : John Taylor & Ed Hampartsoumain  
Standalone Release(s) : 1983: BANDITS AT 3 o CLOCK, Micro Power, £6.99  
Compilation Release(s) : 1986: MICRO POWER MAGIC, Micro Power, £7.95  
1987: PRES GAMES DISC 1, PRES, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : MICRO POWER, 8/8A Regent Street, Chapel Allerton, LEEDS  
LS7 4PE. Tel: 01532 683186.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

BANDITS AT 3 O'CLOCK is a two player aerial dogfight game set in the skies over Belgium. Each player is at the controls of enemy bi-planes and the first to notch up seven kills is the winner. Take-off is achieved by holding down the climb button as your plane accelerates down the runway. A plane can be shot down by shooting at its propellers. The conquering pilot must retain control of his plane for several seconds before victory is recognised and the next round commences.

A plane cannot be shot down while it is flying through the cloud but it can crash into the other plane. Either plane can be shot down by flak, and if a player flies too close to the enemy airship it will be fired at. Flying off one edge of the screen will cause you to appear at the other side of the screen, but if a plane flies into the red at the top of the screen it will be prone to stall.

The options menu appears when the program has completely loaded, when the <ESCAPE> key is pressed, or at the end of every game. Press the initial letter of the option you wish to add or remove.

## Game Controls

Player 1 : A - Dive, Z - Climb, X - Fire  
Player 2 : : - Dive, / - Climb, . - Fire

A one player practice option is provided which allows you to perfect your dogfighting technique. The computer takes over the controls used by Player 2.

# BAR BILLIARDS

***Professional, Released On Cassette Only***

Game Type : Bar Billiards Simulation  
Author :  
Standalone Release(s) : 1985: BAR BILLIARDS, Blue Ribbon, £1.99  
Compilation Release(s) : 1986: BLUE RIBBON GAMES DISC 2 (Blue Ribbon), £14.95  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : BLUE RIBBON, CDS House, Beckett Road, DONCASTER DN2 4AD  
Tel: 01322 21134  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"A superb simulation of the highly popular pub game. This program offers one or two player option, top or bottom spin and smooth realistic ball movement. A must for all sports fans."*

## Points

The points awarded for potting a ball are as shown below: (N.B. Potting a red ball gives double-points).

- 1) Potting a ball in a pocket at the end of the table gives from top to bottom; 10, 20, 30, 20 and 10 points.
- 2) Potting a ball in the centrally position 'Red Peg' pocket gives 100 points.
- 3) Potting a ball in either of the outside 'Red Peg' pockets gives 50 points.
- 4) Potting a ball in the 'Black Peg' pocket gives 200 points.

## Foul Strokes

- 1) Black Peg is knocked over - present total score is lost.
- 2) Red Peg is knocked over - current break is lost.
- 3) Cue ball fails to make contact with another - current break is lost
- 4) Any ball that returns past the end line - any points that may have been scored with that shot are lost.

## Special Points

- 1) If all the balls are on the table then the ball nearest the end line will be used as the cue ball.
- 2) A built in time limit of 15 minutes is set for each game.

## Game Controls

The game can be played with the following controls:

### For cue ball direction:

Z - Left, X - Right, : - Up, / - Down, Space - Shoot  
T - Shoot with top spin, B - Shoot with bottom spin  
Cursor keys - Move cue ball in 'D'  
S - Sound, Q - Quiet, <ESCAPE> - Abandon game

**Instructions' Source** : BAR BILLIARDS (Blue Ribbon) Inner Inlay

## Review (EUG)

As table-top games go, BAR BILLIARDS is a curiosity item both when simulated on screen and even nowadays in an actual pub. Despite the protestations of Blue Ribbon on the inlay, the game is certainly not raved about [Not in student drinking circles anyway - Ed] so most players will come to it ignorant of its rules. It must also be stressed foremost that its title isn't simply a yooof way of saying the bog-standard billiards game. BAR BILLIARDS is completely different.

This being so, one may have thought Blue Ribbon would devise a gentle way of introducing how to play it in its instructions. But annoyingly, they don't. Thus your first game has to be a trial and error knockabout with docs to the left, screen with latest foul stroke penalty displayed to the right and puzzled countenance on visage firmly in the middle.

The main screen, preceded by a list of key controls and the weird blank screen that simply says 'Press N to continue', is nicely laid out with the most part occupied by an horizontal overview of the BAR BILLIARDS' table. An information box sits at the bottom with "Break points" bottom left and "Time remaining" bottom right while the scores of each player are laid out, in the wall-hanger style beloved of these sports, across the top in tens, hundreds and thousands. The last category may surprise you if you're used to playing POOL or SNOOKER sims (with a maximum break value less than a fifth of 1,000) but potting x ball in y pocket in BAR BILLIARDS will net you a whopping four hundred points!

The niceties of BAR BILLIARDS revolve around hole positions and pegs. Unlike other comparable tables, the holes are set not at the corners of the green felt but actually in the table itself. The end with the D has no holes at all whilst the opposite one has a row of five evenly spaced ones. Four holes at the corners of a diamond shape mark the centre of the table and potting a ball into one of these is the most desirable as these pockets reap the highest point returns. But these four holes are guarded by pegs which you must not knock down under any circumstances.

You always shoot from the D, although you can manoeuvre the cue ball around inside of it, and you quickly learn, as in SNOOKER, that the idea is to use the cue ball to hit another ball into a hole. Unlike in SNOOKER, you begin with only two balls on the table and a stash of white balls (which are displayed in a column to the left of it).

The ZX\*/ combination of keys will 'drag' a line out from the cue ball toward the ball you are aiming at, extending it and tilting it at the requisite degrees as you wish; a method which you also see in the version of SNOOKER released by Acornsoft. Always be aware though, that the length of line approximates the strength with which you will hit the cue ball. This is not an ideal situation as it means you can take aim but then, if you wish to strike the cue ball lightly, you must retract the line somewhat. Unless you are firing in a multiple of 45 degrees, it is hard to manipulate the keys to do this without losing the accuracy of your original aim. In Acornsoft's SNOOKER the length of the line is immaterial and when you press the fire key, a 'strength' bar fires up for the length of time it is held down. Comparing the two you realise the disadvantage of BAR BILLIARDS' method.

If you're following the rules all right so far, you will remember the stash of white balls and the two balls on the table. One of them comes straight from the stash and is coloured, quite obviously, white. The other is red. The aim of the game, as you have to discover if you're new to it, is to "keep potting" and keep the other player off the table. The holes all score varying points; those that are not guarded by pegs, for a white ball, score 10, 20, 30, 20 and 10 from top to bottom. For a red ball, the scores are doubled. In the 'diamond' (which is not painted as such but is the best way of referring to the 'peg' holes), the scores are drastically higher: three holes guarded by red pegs gain 50, 100 and 50 points similarly; the remaining hole guarded by the black peg will add 200 points onto your total. Again, potting red doubles the score.

In a perfect world, the "keep potting" would work so: Shot one would pot the red with the white; the red coming out again into the D to be used as the cue ball to pot red again. You'd then continue likewise for the fifteen minute time limit. Alas, it's designed not to be so easy.

The peg diamond frequently obscures any shot that could guarantee a successful pot of ANY colour. Taking risks is foolhardy, and knocking any balls around any peg requires extreme care. If you knock down the black peg, you lose ALL your score so far - and remember you must always shoot from the D! So even if you have the red

teetering on the edge of the hole guarded by the black peg, between it and the cue ball stands a risk of losing everything!

Frequently you'll miss all balls by playing safe. If so, you must take the shot, from the D, again. Simple. BUT if your cue ball collides with another, and neither is potted, ANOTHER ball will be taken from the stash and set in the D. This vicious circle can result in a table full of white balls, although after seven, it is the ball nearest the D which is transported inside of it to become the cue.

Phew! Well, they're the rules. Once you re-read and digest them, although you'll still find the game quite difficult, you will appreciate the rather nifty information displayed in the afore mentioned box after each shot. A fantastic touch is that its display is often positive as you improve, with remarks like "Good shot!" and "GREAT shot!" helping to counterbalance all the fouls you're destined to make in that first game.

The rules have necessarily had to take up the majority of this review but it is testament to the game's playability that all are implemented. The graphics' quality is also high and the sliding score tab and super-smooth scrolling balls (which never seem to fluxate) lend a real touch of professionalism to what is a snip as a budget title.

The biggest irk is that, when firing full strength at a cluster of balls, they do not spin off in the way Mr Einstein proved. Sometimes all unrealistically stop dead, presumably bouncing off one another, with a series of 'hit' blips!

BAR BILLIARDS is a unique little simulation, suitable for one and two players. Its scant documentation does to some extent reduce its market to those who know the pub game and the strange inclusions of the 'press N' screen feature plus a Game Over tune sounding uncannily like "The Farmer's In His Den" are out of place. But the table code can hardly be faulted and the graphics and playability make for an enjoyable game.

Dave Edwards, EUG #55

# BARBARIAN

## *Professional, Released On Cassette Only*

Game Type : Arcade; Slash-'Em-Up; Swordfighting  
Author : Peter Scott  
Standalone Release(s) : 1986: BARBARIAN, Superior/Acornsoft, £9.95  
1991: BARBARIAN, Superior/Blue Ribbon, £2.99  
Compilation Release(s) : 1990: PLAY IT AGAIN SAM 11, Superior/Acornsoft, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : CDFS E00, DFS E00

### Instructions

The evil sorcerer Drax has abducted the beautiful Princess Mariana to satiate his nefarious desires. A powerful warrior is sought to vanquish Drax's demonic guardians and free the Princess. You are that warrior, a mighty barbarian wielding your broadsword with deadly skill.

The game is in two parts, Combat Practice and Fight to the Death, either of which may be loaded. When using the cassette versions, type CHAIN "COMBAT" to load Combat Practice or type CHAIN "FIGHT" to load Fight to the Death. On the disk version, you will be prompted to choose between the two from a menu.

Each warrior can survive twelve blows, which are counted off at the top of the screen above the snakes (Player 1 on the left).

### Demonstration Mode and Practice Mode

For both Combat Practice and Fight to the Death, a Demonstration Mode shows the various fighting moves and a Practice Mode allows you (as Player 1) to play against a passive swordsman in order to practise your moves. There is a time limit of 90 seconds for each duel.

### One-Player Mode

In Combat Practice, you perfect your swordsmanship against ten of the finest warriors in the land, each more skilful than the one before. In Fight to the Death, you fight for the Princess against the ten evil minions of Drax and finally the evil one himself stands before you. There is no time limit; the time capacity is replaced by the skill level of the opponent you are facing.

### Two-Player Mode

In the two player game, you fight your friend, against the background of two alternating screens in Combat Practice, or two different alternating screens in Fight to the Death. Points will be awarded depending on the difficulty of the move used (score for Player 1 is given on the left).

There is a time limit of 90 seconds for each duel. At this time, if both are still in the game, their strengths will be restored and the next duel will commence.

### Game Controls

Select Mode (Demo, Practice, 1/2 Players) ..... 1  
Sound Effects On/Off ..... 2  
Pause On/Off ..... 3  
Select Keyboard/Joysticks ..... 4  
Exit from Game ..... SHIFT and ESCAPE

### BARBARIAN Fighting Moves - Keyboard Control

The keys to control the swordsmen are redefinable. Initially, they are defined on the BBC Micro as:

	Player 1	Player 2
Left	Z	>
Right	X	?
Up	Q	{
Down	A	*
Strike	TAB	`

The following combination of keys are used to make these moves for a right-facing character. For a left-facing character, the moves are reversed.

Without Fire Button Pressed

Z and Q ..... Protect Head  
Q ..... Jump  
X and Q ..... Protect Body  
X ..... Move Forward  
X and A ..... Roll Forward  
A ..... Crouch  
Z and A ..... Roll Back  
Z ..... Move Back

With Fire Button Pressed

Z and Q ..... Web of Death  
Q ..... Neck Chop  
X and Q ..... Head Butt  
X ..... Body Chop  
X and A ..... Kick  
A ..... Leg Chop  
Z and A ..... Overhead Chop  
Z ..... Flying Neck Chop

**Review (Electron User) - "This Could Slay You"**

After the blaze of publicity that preceded this game's release, with an expensive advertising campaign featuring two rather well-built and scantily clad models, I was really looking forward to a game of excitement and action.

I wasn't disappointed. This game is similar to YIE AR KUNG FU, only this time the figure you control uses a sword instead of his hands to fight opponents.

In this one or two player game the scenario is a fight against the ten evil minions of the sorcerer Drax - and finally the sorcerer himself - in order to free the beautiful Princess Mariana. At first the opposition is easy to despatch but as they get more proficient the task gets harder.

You can select your preferred keys for both players or you can play the game with a joystick. From there you are presented with the choice of combat practice or starting the game itself: The Fight to the Death.

The former gives you the choice of a demonstration which shows the 16 different fighting moves you can make, or you can practice against a passive opponent. The latter is useful, and it was while I was busy hacking away at some poor, helpless chap that I discovered it's possible to decapitate an opponent, which in turn leads to the most entertaining sequence in the whole game:

This involves a goblin-type creature which normally comes on at the left-hand side of the display once a combatant is dead, crosses the screen and exits at the right-hand side dragging the body behind him. If there's been a decapitation, the goblin collects the body as usual but casually punts the head off screen.

While still in combat practice mode you can opt for either one or two player modes. In the first you are pitted against a warrior who you must defeat in order to have the privilege of fighting another, slightly more proficient, one.

This goes on until either you defeat ten of them or, as is more likely, one of them beats you. A fight ends when one of the combatants has taken twelve hits or is decapitated. In the two-player mode you each control a warrior and fight against each other. The same victory conditions apply, but you also have the added pressure of having to complete the duel in 90 seconds.

If you do, by some miracle, manage to defeat all of the computer's opponents you can enter Superior's own BARBARIAN competition.

The Fight to the Death is almost exactly the same as the combat practice mode. Again you can watch a demonstration, fight a passive opponent or a second player. The only difference is that if you opt for the Fight to the Death in one-player mode, you get to fight the evil sorcerer Drax after defeating the ten Conan lookalikes.

Combat is punctuated by the sound of swords biting into flesh and the satisfying THUNK as your warrior headbutts his opponent. These few sound effects can be turned off. There is no signature tune, which some would say is a blessing, but I find Superior's tunes are better than most and it's unusual for them not to bother with one.

My only disappointment was with the graphics. I've no grumble with the quality - which is excellent - but I was disappointed with the quantity. There seem to be only four screens, and the two arena ones featured on the packaging are the only ones I've come across in Fight to the Death mode.

You begin fighting in front of someone sitting on a throne. In the second bout you face your opponent in front of Drax and the captive Mariana - who, by the way, bears no resemblance to the young lady featured on the packaging. Then it's back to the man on the throne again and so on.

The other two screens only appear in the combat practice mode. Again they alternate, this time featuring two wilderness scenes, the first in daylight and the second at night.

Another point is that your adversaries are exact clones of your warrior except that yours is wearing a white vest. Even so, there have been a few times when I've watched one of the warriors making mincemeat out of the other congratulating myself on some nifty swordwork, only to realise that it's the bad guy who was doing the hitting.

If you are a fan of games which simulate physical combat, martial arts and the like, you will find BARBARIAN an excellent addition to your collection. To its credit, BARBARIAN has little for me to criticise.

# BARBARIAN II : THE DUNGEON OF DRAX

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Adventure  
Author : Peter Scott  
Standalone Release(s) : 1988: BARBARIAN II, Superior/Acornsoft, £9.95  
1990: BARBARIAN II, Superior/Blue Ribbon, £2.99  
Compilation Release(s) : 1990: PLAY IT AGAIN SAM 13, Superior/Acornsoft, 1990, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Enter the world of sorcery, evil beings and all-powerful monsters as you join the Barbarian and Princess Mariana on their perilous journey to the Dungeon of Drax.*

*The evil Drax has vowed to wreak disaster on the Jewelled Kingdom; only with your help can the Barbarian and the Princess have victory! You'll need brains and muscle for this tortuous adventure! Do you have what it takes?"*

## Prologue

At the finale of BARBARIAN - THE ULTIMATE WARRIOR, the Barbarian defeated the warriors of Drax and thus freed Princess Mariana from his evil spell. Drax fled to the dungeons beneath his black castle, vowing to wreak disaster on the Jewelled Kingdom.

It is decided that there is only one way to stop Drax. The Barbarian and Mariana - herself an accomplished swordswoman - are the only two warriors skilled enough to survive the perilous journey to Drax's lair. They must stop him before it is too late.

## Levels

You must fight your way through three levels - the WASTELANDS, the CAVERNS and the DUNGEONS - before arriving at the fourth level, the INNER SANCTUM OF DRAX. These sections must be played in the correct order.

Each of the first three levels is a maze consisting of approximately 26 screens. As you view each screen it is possible to walk left, right or into doors or caves at the back of the screen. The direction you are walking, as viewed on a map, is continually changing and therefore a compass (in which the arrow always points north) has been provided at the bottom of the screen.

It is not advisable to leave a level without first collecting all the available magical objects. These are the orb, the shield, the jewel, the potion, the axe and the key. You will find it useful to construct a map of each level to find your way through the maze and to find out where the exit is placed.

## Monsters

On each of the first three levels you must fight five or six different types of monster, some of which can be killed with one well-placed blow.

They are:

The WASTELANDS - Saurian Beasts, Neanderthal Men, Apes, Mutant Chickens, Stabbers, Floaters.  
The CAVERNS - Carnivores, Orc Guards, Crabs, Slithering Things, Stingers.  
The DUNGEON - Pit Things, Dungeon Masters, Giant Grubs, Gobblers, Eyes, Orclets.

If you survive to the INNER SANCTUM OF DRAX, you must face the Living Idol, a great Demon and, finally, the dreaded Drax!

### **Energy And Lives**

Your energy is displayed as a bar at the top right of the screen. When it runs out you lose a life. You start the game with five lives (indicated as filled-in ovals below the "BARBARIAN II" title). More lives can be gained throughout the game by collecting any skulls you may find. These contain the life-force of warriors who have preceded you. When you lose all your lives you restart the current level.

The energy of the current monster you are fighting is displayed as a bar at the top left of the screen. When it runs out the monster is destroyed.

### **Choice Of Character**

You may choose to play as either the Barbarian or Princess Mariana. At the beginning of the game the two characters will appear : choose to play as Princess Mariana by pressing key 1 or as the Barbarian by pressing key 2.

### **Magical Objects**

In each of the first three levels there are two magical objects that you will need to collect in order to survive throughout the quest.

The ORB guards against death from Drax's magic.  
The SHIELD guards against instant death from the Demon's fire.  
The JEWEL disables the Living Idol when reached.  
The POTION increases your resistance.  
The AXE increases your strength.  
The KEY opens portcullis doors.

### **Scoring**

The more difficult fighting moves will score highly and do more damage.

### **Game Controls**

Z - Left, X - Right, \* - Run, ? - Turn Around  
<RETURN> & Z - Kick, <RETURN> & X - Flying Neck Chop

<RETURN> & \* - Overhead Chop, <RETURN> & ? - Low Chop  
<SHIFT> - Jump, <SPACE> - Enter Cave

Note : These controls are for a left-facing character. For a right-facing character, RETURN and Z give a Flying Neck Chop and RETURN and X give a Kick.

P/O - Pause On/Off, <SHIFT> & <ESCAPE> - Restart Level (Score lost)

**Instructions' Source** : BARBARIAN II (Blue Ribbon Re-release) Back & Inner Inlay

### **Review (Electron User) - "Brutal Cut-'Em-Up"**

The original BARBARIAN from Superior Software/Palace was a smash hit in 1988 with its exciting hand-to-hand combat, superb graphics and grunts, groans and clanging of sword against sword. Two features made it stand out from the crowd - the scantily clad Maria Whittaker on the box and adverts) though nothing was said of the equally scantily clad male), and the graphic depiction of the unfortunate warriors being decapitated. In the sequel, BARBARIAN II: THE DUNGEON OF DRAX, both features are retained.

Load up the game and you'll be presented with a picture of a dungeon with two warriors standing either side of a burning brazier. This screen heralds the first of the changes from the original game - you can choose to be either the barbarian of the title or the Princess Mariana. I tried both, but couldn't distinguish any difference in combat ability.

After choosing your warrior the rest of the game is loaded. The action takes place in the bottom half of the screen while a large BARBARIAN II banner lies just above

the play area and an information strip is at the very bottom. In this a sword on top of a shield always points north and a scroll shows the current level plus your score.

Each of the first three levels consists of around 28 screens and you can walk left or right or through a cave to the next location. There's no scrolling, and each new screen flicks up fairly rapidly. The first level is the wastelands, the second the caverns and the third the dungeon.

The object is to make your way to a certain location on one of the 28 or so screens. Your first problem is to hack and slash your way through the monsters which inhabit each screen. These include dinosaurs, furry two legged beasts, cavemen, chickens and other creatures which defy description.

Apart from the monsters, the other main obstacle is the way the screens are mapped. For instance, if you walk left off once screen you can appear on the right of the next or at the mouth of a cave also on the right. In the heat of the battle it's very easy to become confused about which way you are facing. The sword-compass always shows which direction is north.

There are objects to collect which will help you in your mission to destroy Drax. An axe increases your strength, a globe guards against Drax's magic, a potion increases your strength, a shield guards against the demon's fiery breath and so on.

The number of fighting moves has been reduced to four and I found that just one or two were required to kill the opponents. The hard part is finding the right location to take you to the next level and the fighting aspect takes up a smaller proportion of the action.

The graphics and animation are excellent and the gory decapitation scene is still here. The sound effects add to the atmosphere and the whole game is professionally produced. BARBARIAN II is an excellent sequel to the original hack and slash cut-'em-up combat game as this version has more depth, better graphics and improved sound. If you liked BARBARIAN you'll like this too.

Roland Waddilove

### \*\*\* Second Opinion \*\*\* (Electron User)

I was disappointed by BARBARIAN II's lack of fighting manoeuvres - it's what made the original so good. However, I welcome the new exploring and mapping aspect, plus the collectable objects, and these features add more depth of gameplay. If you're on the lookout for a new combat challenge BARBARIAN II fits the bill quite nicely.

# BARON

## *Professional, Originally Released On Compilation Tape*

Game Type : Arcade Adventure Platform Style  
Author : Angelo Sparacino  
Standalone Release(s) : 1991: BARON, Superior/Blue Ribbon, £2.99  
Compilation Release(s) : 1990: PLAY IT AGAIN SAM 11, Superior/Acornsoft, 1990, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : Unknown

### Instructions

The King, on hearing news that his old friend the Wizard had been imprisoned by the evil Baron, sends an army forth to rescue him. The young Prince Jason was left behind, but, eager to help, he took a short cut and landed in trouble inside the Baron's forbidding castle.

By finding four objects which belong to the Wizard (Book of Spells, Wand, Crystal Ball and Ring) and transporting them to his cell, you can rescue him.

There are 133 screens with 49 objects. You can carry only two objects at any one time. Objects can be dropped on coloured bases. Creatures to get past are the Bear, Mouse, Dog, Rabbit and Wolf. Guards can be killed by shooting into their faces (jump and shoot at the same time).

To use a Transporter, place a Power Crystal on the power crystal base next to the Transporter, then operate the switch and stand in the Transporter. There are six Power Crystals, but each can be used only once. (To try transporting, collect the Power Crystal in Room 27:02 and use it with the Transporter in Room 27:03. However, this is not the correct route to take in the game!)

At the top of the screen is the room co-ordinate, energy level and the score in terms of the percentage of the game completed.

To get you started: Pick up Key 2 in room 27:03; open Door 2 in Room 09:04; pick up Head in Room 08:06; pick up Key 1 in Room 10:06; open Door 1 in Room 20:04; drop Head in Room 25:04 (What effect does it have?); pick up Power Crystal in Room 22:06; operate Switch in Room 21:06 to remove Brick in Room 30:01; pick up Scroll 3 in Room 23:-6 (What ophidian effect does it have?). Now you're on your own!

# BATTLE 1917

*Professional, Originally Released On Cassette Only*

Game Type : Strategy; Wargame twist on Chess  
Authors : P. Martin & Mark Lucas  
Standalone Release(s) : 1983: BATTLE 1917, Cases Computer Simulations, £5.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : CASES COMPUTER SIMULATIONS, 14 Langton Way, London SE3 7TL  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Mark Lucas won the Cambridge Award with BATTLE 1917 because it is a highly original Wargame. The game is played by two players on a board 21 x 32 showing a map which changes with every game. Each player has 29 pieces including infantry, cavalry, tanks, artillery and a King. The object of the game, like Chess, is to kill the enemy King who is the weakest and slowest piece on the board. The game will appeal equally to all ages and all skills. This is the machine age's answer to Chess.

## 1. Introduction

This wargame is based on the campaign of the First World War. It requires you to exercise all the skills and tenacity of the Generals during that terrible catastrophe.

## 2. The Pieces

	Maximum distance	Lakes	Forests & Wire	Fighting Strength	Comment
INFANTRY	5	no	no	+1	
CAVALRY	6	no	no	+2	
TANKS	3	no	yes	+3	flattens forests & wire
ARTILLERY	3	no	no	+0	fires shells
KING	2	no	no	+0	game lost if killed

## 3. Minefield

The first piece to pass over a MINEFIELD has a 4:1 chance of clearing it. If the piece is unlucky, the MINEFIELD will explode, destroying the piece.

## 4. Compass

This is an "on-screen prompt" to help the players.

```
8    1    2
7    +    3
6    5    4
```

e.g. KEY 1 to move NORTH, KEY 0 indicates NO MOVE.

## 5. Fighting Strength

When a piece is moving and meets an enemy in his way, they fight.

Each piece scores a "BATTLE NUMBER" which is a number from 0 to 5 plus his particular FIGHTING STRENGTH.

## 6. Artillery Fire

The shells may fall exactly on the square required, or fall slightly short, or go slightly over. RANGE 1 should only be used in extreme circumstances as there is a 1:3 chance of self-destruction!

If the shell falls on any piece (enemy or own), or FORESTS or WIRE or MINEFIELD, it is destroyed.

Shells falling "OFF BOARD" or "ON COMPASS" are not shown and shells falling into LAKES just make a splash.

### **7. King**

He is the slowest, weakest piece in the army. As the object of the game is to kill the KING, you should try to keep him out of the way, and well protected.

Never send him through a MINEFIELD, and look out for enemy ARTILLERY sneaking up to ten squares away trying for a "lucky long shot".

### **8. Tactics**

Try to keep the units of four pieces together in formation, rather than leaving some behind.

**Instructions' Source** : BATTLE 1917 (Cases Computer Simulations) Inner Inlay

# BATTLEFIELDS

*Professional, Originally Released On Cassette Only*

Game Type : Wargame With Graphics  
Author : Humphrey Walwyn & Ian Trackman  
Standalone Release(s) : 1985: BATTLEFIELDS, BBC Soft, £12.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : BBC SOFT, 35 Marylebone High Street, LONDON W1M 4AA  
Disc compatibility : Unknown

## Instructions

BATTLEFIELDS has been developed to run on both the Electron and the British Broadcasting Corporation Microcomputer, cassette-based and with Operating System 1.0 onward.

### The Blue and the Grey

The American Civil War has been called the first modern war in history. The Confederate States of the South battled against the Union States of the North. Though the South could not match the North in manpower and industrial and economic strength, its armies were better led. The North was compelled to fight campaigns of offence, while the South could largely rely on a defensive strategy. This war was essentially fought on two fronts. In the East, the Confederates compelled the Unionists to maintain large armies to protect their administrative heartland. West of the Appalachians, it was a struggle for territory that culminated in General Sherman's march through Georgia. When General Lee finally surrendered on April 9th 1865, the South was exhausted. But the war could so easily have gone the other way...

In this two-player game, you can see how the South could have won; or how the Union could have defeated the Confederacy in two years instead of four.

### The Emperor and the Iron Duke

WATERLOO is one of the most evocative names in British military history. Napoleon has arisen like a phoenix and Europe was once more in danger of yielding to his military genius. In this final battle, however, Napoleon's intelligence was matched by the will of Wellington. Having already badly mauled the Prussians at Ligny, Napoleon delayed falling upon Wellington's army at Waterloo. When he finally attacked, he was unaware that the Prussians had regrouped and were marching to Wellington's aid. But it was a 'damn close run thing'...

In this two-player game, you can re-fight the Battle of Waterloo and even, for a short while, alter the course of history.

## The Manual

### Loading The Programs:

There are seven files on this tape.

TITLE ..... the BBC Publications logo  
INTRO ..... the BATTLEFIELDS title picture  
WTRLOO ..... the WATERLOO title sequence  
WTRGAME ..... the main WATERLOO game  
CIVWAR ..... the CIVIL WAR title sequence  
CIVGAME ..... the main CIVIL WAR game  
COPIER ..... tape-to-disk transfer program

To play WATERLOO, rewind the tape to the beginning and type:

\*TAPE

PAGE=&E00  
CHAIN""

To play CIVIL WAR, wind the tape to the beginning of the CIVWAR file and type the commands above.

If you want to use the files from disk, see the tape-to-disk copier notes on page 2.

These programs will also run on the Electron and on the 6502 second processor.

### **The Listings**

The programs can be loaded and listed, but for memory reasons have been 'crunched'. You can 'uncrunch' them using a utility program such as the "Toolbox" package by Ian Trackman (BBC Publications 1983).

### **Tape-To-Disk Copier**

After the CIVGAME program on this tape, there is a short machine code program called COPIER. This will copy all the programs on the tape onto a disk.

1. Place a blank formatted disk in Drive 0 and press <CTRL><BREAK>. The screen should be in Mode 7. Do not reset PAGE to &E00.
2. Position the tape at the right place and type \*RUN COPIER.
3. When the program has loaded, the "Searching" message will immediately be displayed.
4. Now rewind the tape to the beginning and then press PLAY on the recorder.
5. Wait until the entire tape has played through, i.e. until the COPIER file itself has appeared.

Your programs will then all be on disk. You can run the software by typing CHAIN"TITLE". Alternatively, you can \*BUILD a !BOOT file. If you want to write a menu program, the two games can be started with CHAIN "WTRLOO" and CHAIN "CIVWAR".

The BATTLEFIELDS programs will run from standard disk systems without any problems. They should run on alternative systems (where PAGE can be set to &1900 or less) although they have not been tested on these. They will also run on the 6502 processor with greater speed of response.

### **CIVIL WAR**

CIVIL WAR is a two-player game in which the Confederate forces engage the Union forces in a diagrammatic representation of the American conflict of 1860-1865. A typical game will take about one-and-a-half to two hours' playing time.

Each player issues orders to each of his/her 10 units in turn, and in secret. Both players then look at the screen as the computer moves all the forces through all of their orders and calculates the outcome when opposing forces clash, as well as the points gained for territory captured. If neither side has won sufficient points for a victory after one year of the war, play moves on to the next game year and the sequence is repeated.

### **The Game**

At the start of the game a map of the south-eastern United States will be displayed. The squares held by the Union forces in the north have a dark blue background; those held by the Confederate forces in the south have a white background. The sea is a light blue.

Some of the land squares show the following additional characteristics:

- # Areas of fortification or other defences which enhance the defensive capability of a unit on that square. These 'hash' squares can also represent towns that are not supply centres but are worthy of inclusion because of their importance.
- Diamond These represent difficult terrain, including mountains, marshy ground and unnavigable rivers. The diamond squares are not supposed to be totally representative of all the difficult terrain on the map, but they do represent the more tactically significant features, including the

Appalachians, the Florida swamps and the northern reaches of the Mississippi. Diamond squares do not aid military potential, but may obstruct movement occasionally, sometimes with dire results.

The rest of the land map squares are divided into:

Dots (open terrain)

State boundary lines (as open terrain)

Supply centres or bases (marked with the appropriate lower-case initial letter). Starting at the top left and moving towards the right across the Unions states, these are marked thus:

s	St Louis
c	Cairo
i	Indianapolis
c	Cincinnati
w	Washington
p	Philadelphia

Starting at the left hand side of the map of the Confederate States and moving to the right across the white area of the map, you will find:

n	New Orleans
j	Jacksonville
m	Memphis
c	Chattanooga
a	Atlanta
j	Jackson
c	Columbia
r	Richmond
n	Norfolk

### **Supply centres and units**

Each of the 10 units (numbered from 0 to 9) has a particular city supply centre upon which it is based. Once the game starts, the units are free to move anywhere on the map, one square at a time, without the need to keep in touch with their supply centre. If, however, a supply centre fails, then any units which are based upon it will be lost and removed from the map and the game. Some supply centres may have only one unit (for example, Union Army No. 9 is based upon St Louis) but other supply centres such as Washington or Richmond may have many forces based upon them, and so their loss can be catastrophic.

### **Winning**

The first side to reach a total of 50 points wins the game. One point is gained each time a unit occupies a square of enemy territory. The background colour of the newly occupied square changes to the colour of the occupying force. As points are gained, so points are lost by the opposing side.

When the game begins, the Confederate forces start with 40 points and the Union forces with 10. This is to reflect the relatively weak political position of the Northern States in the early months of the war. A quick Southern unchecked advance occupying large tracts of Northern territory will almost inevitably bring about a Southern victory. The Northern player will have to try and check the Confederate advance by foreseeing the likely moves and should make a point of invading the South on a reciprocal basis, otherwise the initial total margin of 10 points shown will be quickly lost. (Occupation of sea-grid squares does not gain points.)

### **The Units**

Each side starts the game with 10 units. The three units numbered 0, 1 and 2 are fleet units and units numbered 3 to 9 are army units. The strength of each unit varies from mere hundreds to scores of thousands of men. The effective combat potential in each unit is further affected by its morale, which is rated on a scale from 0 to 12. The higher the morale rating, the greater is its fighting effectiveness. Morale ratings increase with victory and decrease with a unit's defeat. Losses will be suffered by any unit involved in combat and will mount.

If a unit's strength or morale ever falls to zero it is destroyed and removed from the game and map.

### **Playing The Game**

On starting the game, both sides are asked for the names of the respective commanders. All such text messages or questions are displayed at the bottom of the screen. Enter a name of NOT MORE THAN EIGHT CHARACTERS and press <RETURN>.

The bottom of the screen will now clear and a summary of your names plus the starting points for each side will be printed. Press the Space Bar.

Both players now look at the screen while the computer shows the initial strengths, supply centres and dispositions of all units. The units are numbered from 0 to 9 and each unit's corresponding supply centre will flash in turn. Make a note of your opponent's dispositions and supply centres, because you won't get another chance. Of course, if you wish you can agree that each player looks only at the disposition of his or her own forces.

### **Orders-input Stage**

The Confederacy inputs its orders first, while the Union player looks away. Each unit is given eight consecutive movement orders selected from the following list:

N	North	E	East
W	West	0	Stand still
S	South		

There are no orders issued for combat. Combat ensues whenever opposing forces are ordered to occupy the same square of territory, land or sea. All eight consecutive orders MUST be given for each and every unit. If you do not wish a unit to move, type in zero. Examine the map carefully and chart the movements of your units. Remember that your opponent's movements will be carried out simultaneously, even though you each issue orders separately. A square cannot be occupied by more than one unit (but see the description of convoying later). You will thus have to plan each unit's orders with care to avoid a logjam. For example, a unit with an orders-input of WWWW00EN has been ordered to move four squares west - that is, one square to the west on each of four consecutive moves - followed by two 'moves' at a standstill, and then moves of one square to the east and one square to the north.

Fleets may move over any sea-grid square. They may also occupy any coastal square (with territorial and points advantage if the coastal square is enemy territory) providing that the fleet unit's previous position was at sea. This means that for a fleet to capture a stretch of coast, it will have to occupy a coastal square, move out to sea, move back to the next coastal square, and so on.

Note that the Mississippi River consists of sea-grid squares until just north of Memphis. This enables fleets to sail upriver.

Army units may move over any land square but may not move over sea-grid squares (but see convoying below). From a practical point of view, note that a unit may not cross the Mississippi without a supporting fleet.

### **Convoying**

There is one exception to the general rule that no two units may occupy the same square. If you order an army unit onto the same square as that occupied by one of your fleet units, the army unit will be deemed to have been convoyed. Make sure that all the orders issued to the fleet are the same as the orders issued to the army unit. If an army unit is ordered into the sea it will be destroyed. If a fleet is destroyed at sea by enemy action or is forced to retreat, it is likely that any army being convoyed will perish.

NOTE that convoying is a hazardous business. Unless you have practised convoying techniques, it is not a recommended tactic.

A passage across the Mississippi can easily be carried out if a friendly fleet is anchored in the river and the army unit is simply passed onto and through that fleet's square.

### **Movement In General**

Movement off the map by army units is prohibited. Sometimes, if a diamond square has hindered movement, your remaining orders will be out of step with your plans, but the unit will continue to obey your original orders perhaps with unforeseen results. The only time orders can be revoked is at the orders-input stage by using the <DELETE> key. Please note that enemy supply centres, cities, or enemy hash squares may randomly prohibit movement in a similar fashion to diamond squares. This is to simulate the fact that an enemy city, even unoccupied by enemy forces, may still possess an inherent defensive capability to hold up an opposing unit's progress.

Once your eight consecutive orders have been entered, press the <RETURN> key. After all the Confederate players have received their orders, it is time to change places. The Confederate player looks away while the Union player inputs his or her orders.

### **Combat**

When both players have input their orders they may jointly look at the screen. The computer first deals with the sea orders. It randomly selects any one of each of the three sea orders, then similarly selects an opponent's sea order. It works through the sea orders of both sides in this way, then deals with the land orders of both sides in a similar fashion.

The bottom of the screen will show: the unit's name; the order number (from 1 to 8); the count of the total number of orders/movements so far; and the direction ordered for that unit.

The fleets from both sides are moved first and then the armies. If a unit is unable to move, the computer will indicate this. Other messages, such as information on convoying or the fall of supply centres, will be shown at the bottom of the screen. If a unit is being convoyed, then the screen will show only the fleet unit.

Successful occupation of any enemy square will be 'beeped' over the computer's loudspeaker.

Holding down the space-bar speeds up the action.

When two opposing forces are ordered to the same square, battle is joined. The outcome depends upon the combined strength and morale of each unit and it is quite possible for inferior numbers to defeat a superior force with lower morale. The defending unit has no advantage unless it is upon a hash square or friendly supply centre.

The screen will show this combat advantage by displaying a DOUBLE hash next to the defending unit's name.

A unit that loses a battle may be forced to retreat while the victorious unit occupies its square. The direction of retreat is always the same as that of the attacking direction of the enemy unit. If a unit is forced to retreat onto enemy territory it will be destroyed utterly. This must be borne in mind when invading enemy territory, since a successful enemy flank attack may result in your annihilation. An army unit forced to retreat to a sea-grid square, or a fleet unit forced to retreat to an illegal land square, will be similarly destroyed. A particularly bad defeat may result in the remaining orders for that unit being cancelled, which will result in no further movement for that unit in the course of that year's campaign.

If a unit is destroyed it will be removed from the game and map.

As combat takes place, both sides will suffer casualties. The strength and morale of units will, however, be replenished at the end of each campaign year.

## **WATERLOO**

This is a two-player game in which the Allies under Wellington fight the final battle against the French under Napoleon. Each player begins by getting a status report on his forces and a report of sightings of the enemy. He/she then gives orders to his/her forces. The computer moves all the forces to their new positions and, if opposing forces are close enough, combat ensues. If sufficient forces are involved in a combat area, a full-scale battle will then follow. After each hour's play the computer will produce a summary of the outcome of the fighting up to that point. Both sides are asked for an appropriate code word of not more than five letters. (Keep this word secret from your opponent.)

Press <RETURN> after entering your code word.

## **Battle Summary**

First, the screen will clear. Then a BATTLE SUMMARY will give you the relative strengths of the combatants at the beginning of the game, in points. Note that there are more Allied points than there are French. This is an indication of their numerical superiority. As the game progresses so the points will change according to battle losses. In addition, the French have a small number of points added to their total at the end of each game hour to reflect the Allies' need for a speedy victory. Follow the instructions at the bottom of the screen.

## **Confidential Information**

When this screen comes up, enter your code word - in secret! Both sides have the same opportunities to move all their forces; but all orders are carried out simultaneously, even though the Allies input their orders first. That is, the computer will not carry out the Allies' orders until the French orders have also been registered. It is important that the whole of the sequence that follows below is observed by each side in total secrecy! The French player must not look at the screen while the Allied player inputs his or her information, and vice versa.

## **Status Reports**

These are set out like this:

UNIT    INFNT    ARTIL    CAVAL    MRL

(INFNT stands for infantry, ARTIL for artillery, CAVAL for cavalry,  
MRL for morale.)

## **The Units**

Each side has 10 units referred to by the names of their commanders (e.g. Blucher). The French are an integral group, but the Allied forces are divided into two separate groups, both of which are under the Allied player's control:

1. The Anglo-Dutch forces form the first five units listed (Wellington...Uxbridge)
2. The Prussians form the remainder (Blucher...Bulow)

Some units are leader units (e.g. Wellington and Uxbridge on the Allied side and Napoleon and Ney on the French); these have a small supporting body of cavalry. The presence of leader units on the battle field increases the overall fighting potential of their friendly forces. In the case of the Allies, both Blucher and Wellington will have this effect whether the forces be Prussian or Anglo-Dutch.

## **Infantry, Artillery And Cavalry Strengths**

These figures will, of course, change during the game as losses are accumulated in the course of battle.

INFANTRY strengths are the heart of each unit, but artillery and cavalry strengths can prove to be the decisive factor.

ARTILLERY takes effect only in the initial stages of a battle, but can cause severe casualties against opposing units with inferior gunpowder.

CAVALRY has a minimal effect on the outcome of a battle, but its role in intelligence-gathering and increased manoeuvrability is vital (see later).

### **Morale**

The Allied units all start with a morale rating of six points; the French start with seven points. These ratings reflect the efficiency and cohesion of the respective forces, and will change during the game. Morale is probably the single most important factor governing the fighting strength of each unit. You could, for instance, have a huge numerical strength with a morale of three and be outweighed by your opponent with fewer men but a morale of six. Morale rating decreases each time a unit is forced back or entangled, by a forced retreat, with other units. Once morale drops to zero, the unit ceases to exist.

### **The Orders Map**

Both sides in turn must look at the map of the scene of battle, which depicts the Waterloo campaign area. Two types of geographical features are represented:

TREES indicate thickly forested ground, which may hinder movement. Whether they do or not is decided by the computer, as umpire, on a random basis. If your unit is 'lost in forests' then it will not be able to move for this game hour. You may have better luck at extricating your unit on the next turn.

TOWNS (shown by small hut symbols): do not inhibit movement, but do increase the defensive potential of a force, making it more difficult to dislodge (see below).

### **The Reporting Stage**

Before each side may input their orders. you will see, on-screen, the reports of all units.

Each side sees only its own units and receives information reports according to the following rules:

1. If your unit has no cavalry, it sends no information on enemy units.
2. If your unit has cavalry, it reports on all enemy units within one square.
3. If your unit has more cavalry than the enemy unit, it reports the location of all such enemy units within two squares.

Each friendly unit reports in turn and displays its own position on the screen as a lower-case letter. If no opposing units are reported, the next friendly unit makes its report until all units are on the screen map.

At the beginning of the game, the French forces are to the south of the map (i.e. towards the bottom), whereas the Allies are spread between two areas - the Prussians to the south-east, around the town of Ligny, and the Anglo-Dutch all over the centre and north-east of the map. No units are in contact with enemy units at the beginning of the game; therefore, the reporting stage will flash by very rapidly at this point, as no unit has anything to report. Later, as contacts are made, you will see that any opposing units found will be displayed on the map in 'reverse video'. Remember, the layout of your forces must not be looked at by your opponent. This is a war game played as in real life, where your opponent's moves are a matter for guesswork and conjecture on your part. It is not a board game with both armies displayed openly.

Later, if and when many enemy units are sighted, there may not be enough room on-screen for all of the reports. In that case the display will halt part-way through, waiting for you to press the <SHIFT> key.

### **Orders-Input Stage**

When all units have reported in, the bottom of the screen shows the time and date, the orders-input line and a 'moves-compass' (at the bottom right of the screen). Each of your units is now ready to receive orders in turn.

One-by-one, your units flash their lower-case letters on the screen, and the words 'Orders for...' will be shown on the bottom-left. Please note that, where possible, the relevant lower-case letter is the initial letter of the full name. There are, however, exceptions (such as, 'q' for Blucher and 'x' for Napoleon).

The orders-input lint shows 'Orders for...' followed by the unit's name. If it is a leader unit, then a flag will be shown next to it. If the unit consists only of cavalry, a horse's head symbol indicates this. Each game move refers to one hour of campaigning. Each unit may move only one square vertically or horizontally. If a unit consists only of cavalry, it may move two squares vertically or horizontally, or one square diagonally.

For example:

Wellington is a cavalry unit, and may move in any of the following directions:

horizontally	W1, W2	E1, E2
vertically	N1, N2	S1, S2
diagonally	NW, NE	SW, SE

Orange contains infantry and artillery, as well as cavalry. It can therefore only move one square vertically and horizontally:

vertically	N1	S1
horizontally	E1	W1

If you wish, you do not have to move at all. Press the zero key twice. Of course, to move in the other directions, type in the two-character abbreviations you see on the moves-compass display. There is no need to press <RETURN>.

If you make a mistake whilst entering the first of the two letters/digits that make up a command, press <DELETE>. The computer will acknowledge with 'Orders not understood' and you can re-enter the command. However, you cannot change your mind after you have typed the second digit!

There is no limit to the number of units that may occupy the same square of the map. Similarly, any number of opposing or friendly units may end up on top of each other in the same town, or forest, or other square. There is no advantage to the Allies in moving first: remember, the computer only actually moves all the units after both sides have issued their orders.

Once all your orders have been issued, the computer analyses your moves and may give one or more messages.

### **Checking your orders**

1. '...orders have gone astray': In real-life battles, orders do sometimes go astray, and the computer makes provision for this, by generating a random chance that units may move in a completely different direction to that given in their orders. Sometimes this will lead to unforeseen combat with the enemy.
2. '...lost in the forest': The computer will make a random decision on a unit getting bogged down in heavily forested country. If you move onto a forest square, you may be lucky and be able to advance on your next turn; or you may be stuck there for any number of moves. This applies whether you have moved onto a forest square voluntarily or have been forced to retreat onto a forest square when in the Full Battle mode (see below), as you may not be able to move out of the forest in the next game hour.

Once the computer is happy with your orders, it will display 'All movement orders checked'. At the conclusion of the Allies' orders-input, the players change places and the French receive reports and input their orders, while the Allied player looks away.

### **Checking For Contact With The Enemy**

After both players' orders have been input and checked, it is time for both players to look at the screen and see what effect, if any, their moves have on the course of battle.

If no engagement or engagements result, play reverts to the confidential inputting of code words and battle orders, or both players make new moves for the next hour of game-time.

#### **Contact Made**

If opposing units clash on the same square or on neighbouring squares, then the computer displays the message 'Contact made' and shows the crossed-swords symbols on the squares where the engagement is taking place. Other units on both sides will be brought into the engagement if they are within one square of the unit which made the initial contact. In this way, it is quite possible for a single unit to set off a large-scale engagement involving many adjacent units.

#### **Start Of Combat**

As both players continue to look at the screen, the names and strengths of the opposing units caught up in the battle are displayed. If the hut symbol is shown next to a name, that unit's strength is enhanced since it is fighting from within a town. If the flag symbol is shown next to a unit, a commander is present and the strength of the entire force is enhanced.

If there are more forces engaged than there is room for on the screen then press the <SHIFT> key to scroll it.

The battle-strength points are not the same as the total Allied or French points but are a reflection of the strengths, morale and other factors of the opposing forces currently in combat.

The engagement begins with two rounds of artillery combat, during which the opposing artillery corps engage each other, inflicting losses on enemy infantry and cavalry where applicable. If there are no artillery components in a combat, the play moves on to the next stage.

After the artillery engagement, one of two things can happen:

1. The opposing units and strengths are of sufficient number to progress to a full-scale battle.
2. If insufficient strengths are involved, or the computer deems that the opposing forces are disorganised, play moves on to general skirmishing.

#### **General Skirmishing**

One or more rounds of general skirmishing may take place as the currently battling forces fight it out. Losses will be inflicted on both sides and the battle-strength points will reflect the course and outcome of the engagement. Once the period of general skirmishing is complete, the screen will display the combat summary.

#### **Combat Summary**

All opposing units are mentioned, along with reports as to how they fared. If a unit 'holds firm' then its morale is unchanged and it does not move from its current position. If a unit is forced to retreat, its morale will probably be adversely affected and the unit moves one square north (Allies) or south (French). If the unit is routed its future effectiveness will be severely reduced, and if a unit is destroyed it will never again be displayed on the map.

#### **Full Battle Mode**

When the initial point of contact of two opposing high-strength units is on the same square, rather than an encounter involving two neighbouring squares, then play moves to the battle map. The screen turns red and the next sequence of play involves an expanded view of the battle square and its neighbouring squares. The game moves are now reduced to 10-minute battle-time intervals, so that the following procedure will be run through every 10 minutes during a game-hour.

#### **Confidential Information**

Both sides in turn now secretly input their code words and examine the strengths of all their units which are involved in the combat zone. Secret information is also relayed on the main map, with all friendly units displayed and a single crossed-

sword symbol showing the square where contact has been made. The opposing player's view will, of course, be completely different to your own.

After both sides have secretly examined their information, the screen clears to display nine squares of the main map. At this point, both players look at the screen. The central square (with a crossed-sword border) is the main contact square. Other squares may show a border of hut symbols (a town square from the main map). Within each square information is displayed as to what forces (if any) are in that square.

The Allies are in the left-hand part of the square; the French on the right. You will see the unit's lower-case letter, followed by an upper-case I (if infantry is involved); C (for cavalry); and A (for artillery).

During each 10-minute game-period each side may move one unit one square horizontally or vertically, whether the unit is on or off the battle map. In this way, you can quickly bring reinforcements into the battle position. Hide the keyboard with one hand so that your opponent cannot see what you're up to! When asked for 'Allied orders?' or 'French orders?' the respective player presses two keys: firstly, the unit letter, then the direction (N, S, E, W). For example, the Allied player secretly pressing W and S is ordering Wellington (W) one square to the south. All units involved in the central combat square will inflict losses upon all enemy units in the same square. If there are no enemy units in your square, then no combat will take place. If you do not wish to move any units, then type zero (not the letter O). There is no screen confirmation of your input - this is to preserve secrecy!

Note that battle orders *must* be typed in correctly, else they will be taken as orders that have gone astray.

There are, of course, six periods of ten minutes within the game-hour, so battle losses on the battle map are proportionately greater than in general skirmishing. Use your moves wisely on the battle map, and never get involved in a battle with overwhelmingly superior enemy forces on the same square if you can help it! A planned retreat with a sacrificial rearguard might be to your long-term advantage. The computer will not allow more than one battle-map scenario to be played per game-hour.

At the conclusion of one hour's fighting on the battle map the computer reverts to the combat summary, where reports are given about individual units (see Combat Summary).

#### **After All Combat**

It is quite possible that an entire game may progress without a battle map being displayed. Heavy losses can be inflicted on an army during several rounds of general skirmishing and an entire army can become disorganised and routed by a series of disorganised skirmishes. The battle map enables units to become more organised and so inflict heavier losses on the enemy; or, correspondingly, through a set-piece retreat, avoid a larger engagement with perhaps heavier losses. The battle map enables intelligent planning.

Units can be involved in more than one engagement within the game-hour, either when they are forced to retreat and come into contact with fresh enemy units, or when they stand firm and re-engage the same enemy units.

Waterloo itself is to the north of the map, and the strategic crossroads of Quatre-Bras is in the middle of the map, very near Orange's unit. If you look up a campaign map of the Waterloo/Ligny battle area in Belgium, you will see that other important towns such as Nivelles and Wavre are all represented on the computer screen. However, no rivers or roads are shown on-screen; these have been omitted so that the game does not become over-complex to play.

**Instructions' Source** : BATTLEFIELDS (BBC Soft) Back Inlay And Instruction Manual

## **Review (Electron User)**

In BATTLEFIELDS, a two-in-one deal of two player games, BBC Soft is offering a game of strategy, the American Civil War, and a game of tactics, Waterloo.

In case you're puzzled as to the difference between strategy and tactics, strategy is the manipulation of armies, people, politicians and resources to make history go the way you want. Tactics are how you manoeuvre elements of armies to achieve victory in battles.

Put more simply, strategy is how you win wars, tactics are how you win battles.

American Civil War presents you with a map of the south and east states of America which were involved in the conflict. The object is to capture a proportion of your opponent's territory and wipe out his forces.

Each side starts at pre-set locations with three fleets and seven armies, details of which are given for both players at the start. Each turn is equivalent to one year of the war, divided into eight movement phases representing about one month's campaigning. Players input all eight moves for each turn in secret and the computer then does the rest.

You quickly become used to the movement system but planning your moves to cope with what your opponent may do is definitely more challenging.

This is an excellent little strategy game and a good introduction to this type of computer wargaming.

The second part of the package. Waterloo, is representation of the famous last battle of Napoleon which brought the First Empire to an end. It covers the area around Waterloo and may last for the equivalent of several days. Each turn represents an hour of time.

The armies consist of units commanded by a named general, with most units made up of a mixture of artillery, cavalry and infantry. Initially the Allies are to the north and east and the French to the south. Each side inputs its movement orders, which are carried out by the computer.

First though - and this is the most interesting part - it reports whether any of your units have sighted or contacted the enemy. Based on this you plan your next move, but you have to remember that the reports relate to where the enemy was, not where they are now.

When you do clash with the enemy the computer will decide whether it is just a skirmish, and calculates the casualties accordingly. Alternatively it gives you a close up of the battle area and the battle takes place in 10 minute segments. I find the last an excellent idea, but wish that more detail could have been incorporated.

As with American Civil War you quickly get used to the movement system, but finding and dealing with the enemy is another problem. Both games have good, clear graphics bearing in mind and the scale they are working at, and will keep players busy for a few hours.

I do not believe that there is yet a true wargame available for the Electron of a standard acceptable to serious wargames, but BATTLEFIELDS is certainly leading the way.

# BATTLEZONE 2000

*Professional, Originally Released On Cassette Only*

Game Type : Strategy; War-Game  
Author : M. C. Lothlorien  
Standalone Release(s) : 1983: BATTLEZONE 2000, Lothlorien, £9.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : M.C. LOTHLORIEN, 56A Park Lane, Poynton, STOCKPORT SK12 1RE  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

### A. Setting and Objective

This is a wargame of the 21st Century in which you have control of the forces opposing the single enemy unit known as The Ogre. There are ten levels of play.

Your mission is to stop the Ogre from leaving the bottom of the map. The only way to do this is to destroy all its tread units. The Ogre itself is a computer-controlled supertank, which is bristling with weapons. It has missile systems, main and secondary batteries as well as a host of anti-personnel weapons. Each of the weapons shown has attack, defence and range factors as shown in table 1.

The Attack factor is a measure of the destructive power of each weapon, whereas the defence factor is a measure of the resistance of each weapon to attack. Range is the number of "squares" through which a weapon may fire. (The weapon can only fire within its range). The Ogre is a tread or track vehicle, and the number of "squares" it is able to move in any one turn is governed by the number of tread units divided by 15, e.g. If The Ogre has 60 tread units, it has four movement points, 45 tread units gives three movement points, etc.

**TABLE 1 - OGRE (YOUR ENEMY)**

Weapons	A	D	R
Missiles	6	3	5
Main Battery	4	4	3
Sec. Battery	3	3	2
Anti-personnel	1	1	1

MOVEMENT is determined by number of tread units (1 at 15, 2 at 30, etc)

Key: A - Attack Factor      D - Defence Factor      R - Range Factor

**TABLE 2 - YOUR FORCES**

	A	D	R	M
Command Post	0	1	0	0
G.E.V.	2	2	2	4+2*
Heavy Tank	4	3	2	3
Missile Tank	3	2	4	2
Infantry	3	3	1	2
Howitzer	6	1	8	0
Crater				

\*Movement of four units in the First phase and two units in the second Key as per Ogre, M - Movement (maximum number of squares in one turn)

### B. Your Forces

Under your command, you have a number of different units (see table 2).

Command post - represents your position on the map from where you can issue orders to your units. It is unable to move or attack.

G.E.V.	- (Ground Effect Vehicle) : a hovercraft type of armoured vehicle, which is extremely fast and manoeuvrable. In order to reflect this feature, the G.E.V. has TWO movements per turn.
Heavy tank	- heavily armoured tank, not too far removed from present day tanks.
Missile tank	- a less heavily armoured tank capable of firing missiles. Each missile tank is well equipped with missiles (unlike The Ogre which quickly runs out).
Infantry	- infantry equipped with power suits for mobility and protection. Are armed with anti-tank weapons.
Howitzer	- An immobile heavy missile cannon capable of long range attacks. This unit may NOT move - it will remain stationary throughout the game unless destroyed.

The attack, defence, range capabilities of each of these units is shown in Table 2.

## **C. The Play**

### **1. Before play begins**

You will be shown what units are available to you and how many of each you have. If you are not satisfied with the mixture of units provided, you may change them.

The map, with craters and The Ogre in position will then be displayed and you will be asked which level of difficulty (1-10)?

Next, all your units will also be displayed, in position, on the map, and you must decide who moves first.

Having decided who goes first, The Ogre's current status will appear on the bottom line.

O	The 'Ogre'
ML2	number of Missiles left
MB1	number of main batteries
SB4	number of secondary batteries
AP8	number of anti-personnel weapons
TR45	number of tread units remaining

## **2. Sequence of play**

### **a) Basic game turn sequence**

- i) Ogre moves
- ii) Ogre attacks any unit within range of its weapons
- iii) Destroyed or disrupted units are determined
- iv) Players movement turn
- v) Units may attack Ogre if in range
- vi) Second player's movement turn (G.E.V.'s only)
- vii) Repeat again from i) to vi)

### **b) More details of each phase:**

- i) Ogre movement is determined by the computer. Any of your units in its way will be destroyed (removed from the map) or disrupted (unable to fire or move for one turn)
- ii) Ogre attacks are also determined by the computer. You will be told which units are being attacked, which of The Ogre's weapons are being used, and finally the result of the attack.
- iii) Units which were destroyed will be removed from the battle area, and units which are disrupted will change colour (yellow to blue). A disrupted unit is unable to fight or move until it becomes reorganised (usually one whole turn).
- iv) Player's movement. Except for the Howitzer and Command Post, which cannot move, you will be asked to move each unit in turn.

A unit may move any number of squares up to a maximum of its movement points, as per table 2. A unit may NOT move onto another unit or into a crater.

If you don't want to move a unit, then input its present position.

Illegal moves will not be accepted.

- v) If any units are within attacking range of The Ogre then they will be displayed below the map. You will then be asked in turn if you wish to attack The Ogre ML (missiles), MB (main batteries), SB (Secondary batteries), AP (anti-personnel) or TR (tread units).

IF you say NO to any of them, you will be asked about the next one, e.g. to attack tread units (TR), you must say NO to ML, NB, SB and AP. If, for instance, you have indicated that you wish to attack the MB, you must then input the position of the attacking unit. You may attack any one target with as many units as you wish, the more attacking units, the greater chance of success. WHEN YOU HAVE INPUT ALL THE UNITS YOU WISH TO USE IN A SINGLE ATTACK, INPUT Z. The result of combat will then be determined, and the attacking units removed from the list of those displayed under the map.

When all eligible units have made their attacks, this phase ends.

NOTE that only one unit at a time may attack tread units, although a number of single unit attacks on the treads may be made in any one turn.

- vi) Second movement phase - you may move G.E.V.s up to two 'squares'

### **End of Game**

You win if you stop The Ogre moving and destroy all its weapons before it exits the map. The Ogre wins if it exits the map.

# BATTLEZONE SIX

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade; Blast From Centre Of Screen In 8 Directions  
Author : Robert S. Turner  
Standalone Release(s) : 1986: BATTLEZONE SIX, Kansas, £3.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron. Crashes On BBC Machines.  
Supplier : KANSAS CITY SYSTEMS, Unit 3, Sutton Springs Wood,  
CHESTERFIELD. Tel: 0246 850357.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### Instructions

Play the most hectic battle of your life in the ultimate Zap game!

The myriad of aliens use virtually every screen movement imaginable, all with one purpose - to get you!

And would you believe 100 - yes, 100! - different screens. Never before achieved.

Base and firing control in eight directions. Pause control to enable saving to tape. Shield control. Sound on/off. Speed control.

One of our best ever and sure to be a real winner.

### Game Controls

Z - Left, X - Right, \* - Up, ? - Down, <SHIFT> - Temporary Shield  
= - Pause On/Off, f0/f1 - Save/Load Game (While Paused)  
Q - Sound On/Off, S - Change Speed, <ESCAPE> - Quit Game

**Instructions' Source** : BATTLEZONE SIX (Kansas) Mail Order Advertisement

### Review(EUG)

Games produced by software house KANSAS were only ever available by mail order and came in uninspiring standardised boxes; the combination did little to foster any urge to buy their arcade games and the result is this game is one of the hardest titles to find in the Electron world. [Their adventures fare only marginally better. - Ed] This will be the first review of BATTLEZONE SIX you'll have seen.

Described in mail order literature as "the ultimate Zap game", the non-existent scenario/instructions with the game itself immediately make it a mindless machine code blasting affair. You control a circular base that looks like an eye with tentacles, and are situated in the centre of an almost full-screen window with the intention of shooting any other sprite that moves, with your infinite supply of bullets.

The game is unlike any other - no bad thing - and, rather than blast a set number of 'baddies', you play until each screen's timer bar runs down to zero. In the playing area itself, you begin each of the 100 screens alone. You can move left, right, up, down and diagonally with the correct combinations of the standard Z, X, \* and ? keys and fire with <RETURN>. Your bullets always travel in the direction you are travelling so, for example, Z, \* and <RETURN> will send bullets off at 10 o'clock until you release \* (when they will change to 9 o'clock). This way of controlling the bullet flow results in your sprite moving constantly back and forth across the screen.

Also moving around the screen by now will come the decidedly hostile "things to shoot". These take on a variety of guises, from flashing dandelion bulbs to tiny billiard table bombs. Some (standardised gun sprites) skate around the outside edges of the window clockwise then anticlockwise. Some (lightning bolts) bounce around "FRENZY lepton-style". Others appear, pause and then explode if not hit, sending shrapnel in all directions. Yet more bob about aimlessly. As you progress through the screens, more and more appear at the same time as well as new varieties. The game also gets quicker and quicker.

Generally, within ten seconds, the empty screen has descended into anarchy, or even the BATTLEZONE of the title. (But why SIX, we wonder!) The constant manoeuvring of your sprite in order to shoot, more than often leads to you coming very close to whatever you're trying to hit. Make contact with it, or a bullet loosed toward you, and you'll endure a fantastic PLANETOID-style explosion and be sprayed over the whole of the playing area!

As the game is set in Mode 2 and the use of colour optimised, all lightning bolts, guns, bombs, aliens and bullets look very slick. The execution speed though is below par. On a standard Electron, the speed of the first screen betrays the jerky movement of all the characters, including your base, spoiling the imagery; on a TURBO Electron, execution whizzes along at such a pace as to make the game far too hard. Now, because the game's author, Robert Turner, has implemented a speed faster/slower option, this CAN be easily overcome. It's a bit fiddly to change though as you must pause the game, press S, type a number then restart it.

We now come to what seems a very strange concept for an arcade game: the ability to save your position. By pausing, then pressing <FUNC><1>, you will leave the Mode 2 screen completely and see a small Mode 4 menu from which you can save the high score table, your position, both, return to the game or catalogue a tape. You get a similar menu with <FUNC><0> for loading data back in. Going back to the game pits you in precisely the same predicament as you were when you paused it; even bullets and aliens are reproduced exactly as they were!

This is a surreal addition to a game of this type; interesting to see and use but somehow not quite qualifying as a rival for the password systems seen in similar titles (eg. ANARCHY ZONE by Atlantis). Note that you must save any data to tape (even on the disk version) as the tape system is enabled via machine code when the program executes.

There is also a sound on/off option executed with the pause facility; and whenever pause is enabled, the border flashes constantly. With the high score table superimposed on top of a demonstration battle, there is some pretty impressive machine code at work in this title and it even comes complete with snappy little introductory music and credits. And if the going gets too tough, with the save AND a shield option, making you totally invincible for ten seconds, the odds against you always being wiped out on the fourth or fifth screen become quite negligible.

Unfortunately, despite new "things to shoot" appearing quite regularly, the game really lacks imagination and becomes monotonous. With 100 screens to get through, completion - even allowing for advantageous saves and reloads - will take a hardened player days if not weeks, and the repetitiveness of each screen will not tempt many to try. That said, if you want a mindless and unique shoot-'em-up with a professional edge, it's worth a shot. If you can find it.

Dave Edwards, EUG #54

# BBC MASTERMIND

***Professional, Originally Released On Cassette Only***

Game Type : Quiz; Based On BBC TV Show MASTERMIND  
Author : Boswell Taylor  
Standalone Release(s) : 1984: BBC MASTERMIND, Mirrorsoft, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : MIRRORSOFT, Holborn Circus, LONDON EC1P 1DQ  
Disc compatibility : Unknown

## Instructions

*"This computer simulation of BBC TV's most popular quiz contest presents all the excitement and tension of the original - with one great difference - you, your family and your friends are the contestants!"*

*Your computer assumes the role of Mastermind Questionmaster Magnus Magnusson, presenting you with two minutes of questions on your chosen subject and two minutes of general knowledge questions. One, two, three or four contestants can play, and once loaded the program is self-explanatory.*

*This pack contains two cassettes. Two sets of general knowledge questions and two sets of special subject questions - FILMS & TV and SPORT AND GAMES are included.*

*If you would like to write your own questions for use with the BBC Mastermind program, an accessory program - BBC MASTERMIND QUIZMASTER is available separately."*

This booklet contains instructions on how to load and run your BBC MASTERMIND program. As with the television programme on which it is based, you will be questioned on a special subject and on your general knowledge. There are six sets of special subject questions and four of general knowledge currently available. Two sets of special subject questions and two of general knowledge have been included with this pack. The other sets are available separately.

You may already be aware that MASTERMIND's accessory program - BBC MASTERMIND QUIZMASTER - is also available separately and ONLY the relevant documentation is included in this booklet.

## Using The BBC Mastermind Program

1. Once the first part of the program has loaded, the title screen will appear and you will hear MASTERMIND's signature tune.

You will be asked if you require instructions. If this is your first time, type "Y" and the screens that follow will give you information about the program as well as helpful hints on how to get the most out of answering the questions, scoring points, typing in answers, etc.

If you type "N", or once the instruction screens have been displayed, you will be press SPACE. The rest of the program will now load. If you are using a cassette, stop the tape when prompted.

2. The next screen asks you to type in the number of contenders - up to four will be accepted.
3. Now simply follow the screen instructions. The first contender types in his/her name, occupation and special subject, pressing <RETURN> after each input.

N.B. The special subject must be one produced specifically for the BBC MASTERMIND program - either pre-recorded or created using the BBC MASTERMIND QUIZMASTER program. Please make sure that you type in the name of the quiz correctly.

4. a) If you are loading from cassette, insert the Data cassette into the recorder, making sure that it is rewound, press SPACE as instructed and start the tape. The loading of the questions and data will take about four minutes. Stop the tape when instructed.  
  
b) If you are loading from disk, simply press SPACE.
5. When the questions are loaded, you will see the message: "KEN, You have two minutes on FILMS AND TV starting NOW!!"

Now the program and the first set of data have been loaded, you are ready to start the quiz.

#### **Notes On Running The Quiz**

As you are working against the clock, type in your answers as quickly as possible. If you make a mistake whilst typing, press the DELETE key to erase the last character. Press <RETURN> when you have keyed in your correct answer. The score is given in the bottom right hand corner of the screen, so that you can keep track as you go along.

To pass a question, simply press <RETURN>. Please note that only 16 passes are allowed in each round.

You will be awarded 1 point for every correct answer - near answers may be accepted, although spelling mistakes generally will not be.

If your answer is wrong, the correct answer is given. If the answer is not exactly correct, but contains a 'key' word, the screen will display 'I CAN ACCEPT THAT' and give the exactly correct answer.

N.B. Answers should be typed in upper case (capital letters) and on recent BBC models this will be done automatically. However, if you are using the 0.1 model, make sure that the CAPS LOCK key is depressed before typing in answers.

After the score has been displayed, all those questions passed are presented again along with the correct answers. In the event of a tie, the contender with the lowest number of passes wins the contest.

The next contender is then called. If he chooses the same special subject, the data will not have to be re-loaded. In order that the questions are not repeated, the 60 questions are divided equally between the number of contenders, so with four contenders each will be allocated 15 questions. It is unlikely that in normal circumstances more than 15 questions will be answered in a two minute round, but in that event 'QUESTION LIMIT' is displayed. Once a question has been answered, it will not be used again. If a different special subject is requested, follow the instructions in step four to load the chosen subject.

When all the contenders have answered their special subject questions, the scoreboard is displayed. The first contender is recalled to start the round of general knowledge questions. If you are using one of the pre-recorded Mastermind data cassettes, the general knowledge section follows the special subject section. Therefore, you should leave the cassette in place after the last contender's special subject has been loaded. However, if you are using one of your own quizzes, you will have to change cassettes.

Press SPACE and then start the tape.

If you are loading from disk, ensure you have the correct disk in place and enter the name of the general knowledge quiz you wish to load. The general knowledge quizzes included in this pack are called "GEN1" and "GEN2".

Press the SPACE bar when prompted to start loading.

When each contender has completed the general knowledge quiz, you will see the scoreboard again and the winner will be announced. You now have the option to print your results. If you wish to do this, type "Y" and then select your printer type.

The quiz has now ended, press "Y" if you would like to play again.

# BBC MASTERMIND QUIZMASTER

*Professional, Originally Released On Cassette Only*

Game Type : Utility; Create Question Files For BBC MASTERMIND  
Author :  
Standalone Release(s) : 1984: BBC MASTERMIND QUIZ, Mirrorsoft, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : MIRRORSOFT, Holborn Circus, LONDON EC1P 1DQ  
Disc compatibility : Unknown

## Instructions

*"BBC MASTERMIND QUIZMASTER*

*"BBC Mastermind Quizmaster is a question generator accessory program for use only with the Mirrorsoft/Ivan Berg Mastermind Program.*

*"The quizzes you can create are limited only by your own imagination. Help your children with their schoolwork, test your family's memories of a recent holiday and test knowledge across any subject in an exciting and competitive way. \*Note for teachers: Use this program in conjunction with BBC Mastermind to check pupils' knowledge on school subjects and you'll have a highly motivated class on your hands in no time.*

*"The program is menu-driven, easy to use, and has all the necessary features to allow you to create, review, edit, add, replace and delete your own specialist subject or general knowledge quizzes for use with your Mirrorsoft/Ivan Berg BBC Mastermind Program.*

*"Please note that the instructions for use of this program and advice on creating your quizzes are included in the BBC Mastermind pack.*

*"The question files generated with this program may only be used with the Mirrorsoft/Ivan Berg BBC Mastermind program."*

## Using the program

Once the program has loaded, the title screen will appear while MASTERMIND's signature tune is playing. The program's Main Menu will then be displayed.

It is a good idea to see the capabilities of the program before creating your own quizzes, so you should first load in one of the quizzes already contained in the BBC MASTERMIND pack. Turn to the section GET SAVED QUIZ and follow the steps given for loading a quiz.

There are four options on QUIZMASTER's Main Menu.

### 1. Create Quiz

The questions you can create with this program should be written in the same way as those you have seen in the BBC MASTERMIND program, where the 'quizee' must type in exactly the right answer, correctly spelled. There is no allowance for a definite or indefinite article ('the' or 'an' etc) unless it has been entered by you, the quiz-writer, as part of the answer.

There is a space for a 'keyword' to be entered as well as the answer. This is usually part of the answer; for instance, if the answer is 'John Lennon', you may want to put in 'Lennon' as the keyword. The keyword may also provide an alternative to the answers if there are two possible correct answers. Similarly, if, for example, an answer is the number 8 and the keyword as 'EIGHT'. The keyword feature

helps ensure that points are awarded in cases where the answer that has been typed in is correct, but does not exactly match the answer devised by the quiz-maker.

### **Notes**

1. Questions must not be longer than 184 characters, including spaces (about 5 screen lines). Answers and keywords should have a maximum of 31 characters each. A beep tells you when the maximum limit has been reached.
2. When writing questions, you do not have to press <RETURN> at the end of each line, as line lengths are worked out for you by the computer.
3. You may enter questions and answers in either upper or lower case, but remember that the answers will always appear again in upper case (capitals) only.
4. Each question and answer should be checked thoroughly before you press <RETURN>. It is much easier to correct a minor slip now, using the DELETE key than to correct it in the EDIT section, where you will have to re-type the whole question. If you do detect an error after you have pressed <RETURN>, make a note of the question number and leave it until you use the EDIT section.
5. There is a fixed question limit of 60 and when this is reached, the BBC/Electron will display END OF QUIZ.

### **Keying in Questions**

1. Select option 1 from the Main Menu and press <RETURN>. NOTE: The CREATE QUIZ option is only used to start a completely new quiz. If you wish to complete one you have already started, go to the EDIT Menu and choose Option 1, ADD QUESTIONS.

If a quiz or part of a quiz is still in memory, you will be asked if you wish to delete the existing questions first. If you wish to save them before creating a new quiz, type "N" and go to the SAVE QUIZ section for details.

2. The first question screen will be displayed. Type in your first question. See NOTES above for details on writing questions. When you are completely satisfied with your question, press <RETURN>.
3. Now you can type in the answer. Remember to check for errors before pressing <RETURN>. If you decide that there should be a keyword for this question, you can enter it after the answer. If you decide that there is no suitable keyword, or that it is unnecessary, simply press <RETURN>.
4. This section will end automatically when you have entered the maximum of 60 questions. If you have entered less than 60, press ESCAPE to end.

The EDIT Menu is now displayed and you can review and edit your quiz. See EDIT QUIZ below for details. If your quiz was not complete after the CREATE QUIZ section, you can now add more questions using the ADD QUESTION option on the EDIT Menu.

### **2. Edit Quiz**

Option 2 from the Main Menu allows you to edit a quiz in memory. If the quiz has just been created, it will already be in memory. Otherwise load the quiz from cassette/disk (see SECTION 4, GET SAVED QUIZ).

N.B. To return to the Edit Menu after making your changes using any of the options explained below, press the ESCAPE key.

### **Editing Questions**

After selecting option 2 or having just loaded a quiz into memory, the EDIT Menu is displayed:

1. **ADD QUESTION** allows you to add questions to the quiz already in memory. There is a limit of 60 questions, so if the quiz is already full, you will have to delete

a question before adding one. The questions are added in exactly the same way as when they were created. See CREATE QUIZ for details.

2. **DELETE QUESTION** deletes selected questions from the quiz already in memory. Having selected Option 2 from the EDIT Menu, you will be asked for a 'Quest. No. or word to find?'. Type in the number of the question you wish to delete or the word you wish to find and press <RETURN>.

a) If you have asked for a question number, that question will be displayed and if there are more questions to follow, you will be asked whether you wish to 'browse?'. This is a very useful facility. Type "Y" and the next question is displayed and so on, until you find the right question.

b) If you have asked to find a word, the first question in the quiz containing that word is displayed and you will be asked if you wish to 'Continue Search?' This is also a very useful facility for locating a question when you can't remember the number, or if you want to jump quickly from one question to another. Type "Y" and the next question containing that word is displayed.

If the word you have asked to find is not located, or you have typed it exactly as it appears in your question, you will hear a bleep and be told that it has not been found. Remember that answers and keywords are always stored in capitals.

When you no longer wish to continue searching or browsing, type "N" and you will be given the option to delete that question. Only a response of "Y" will result in the question being deleted. You will also be given the option to delete if, when using the browse feature, you reach the last question in the quiz. Type "N" if you do not wish to delete the question after all.

3. **REPLACE QUESTION** allows you to replace a question in the quiz. Having selected option 3 from the EDIT Menu, you are asked for 'Quest. No. or word to find?', just as with DELETE QUESTION. The procedure for replacing a question is the same as for deleting one, with the browse and continue search features. See DELETE QUESTION for details.

If you decide to replace a question, the old one is deleted and the screen clears for you to type in your replacement question. (See CREATE QUIZ for notes on how to write a question).

4. **REVIEW QUIZ** allows you to page through the whole or just part of the quiz.

Type in the number of the question from which you would like the review to begin, or the word you wish to find, and press <RETURN>. This option has the same features of browse and continue search as DELETE QUESTION - see Option 2 for details.

When you reach the end of the quiz, 'End of Quiz' is displayed and you must press any key to continue. If you request a question that does not exist, 'No question' is displayed.

5. **PRINT QUIZ** will print out the complete quiz if a printer is attached. You will be asked which type of printer you have, so choose whichever is applicable and press any key to start printing.

6. **END EDIT** will return you to the Main Menu.

### **3. Save Quiz**

#### **Notes**

Having completed and edited your quiz, it is a very good idea to save it on cassette or disk before you run it. Accidents can happen, and if the quiz is lost all your hard work will be in vain. The quiz in memory will be lost if:

- a) You select CREATE QUIZ from the Main Menu and then type "Y" when asked if you wish to delete the existing questions.
- b) If you END the program from the Main Menu by typing "5" by mistake.
- c) The BBC/Electron is accidentally switched off.

The SAVE QUIZ option is also useful if you wish to write your own quiz in stages. It is easy to save part of a quiz and load it into the memory for adding to at another time using ADD on the EDIT Menu.

#### **Saving Questions**

1. Type "3" (SAVE QUIZ) from the Main Menu and press <RETURN>. You will be asked for the name of the quiz.

If you are using a cassette, and a quiz you have created is to be used in the general knowledge round, you must call the file "GENERAL".

If you are using a disk, the filename should be a maximum of seven characters and no spaces should be included.

Type in the name of your quiz and press <RETURN>.

N.B. Make sure you write down the filename of your quiz for future reference.

2. You will then be asked if you are saving to disk or tape.
  - a) If you are saving your quiz on tape, type "T". Place a blank tape into the cassette deck, press the RECORD and PLAY keys on your cassette recorder and press <RETURN>.

NOTE: For convenience of loading and to avoid possible errors, you should save one quiz only on each side of the cassette. You may of course record the same quiz twice - one after the other - as a further safeguard.

  - b) If you are saving to disk, insert a new formatted disk into the disk drive and then type "D".
3. When the saving process is complete, you will hear a short bleep and the Main Menu will be displayed.

#### **4. Get Saved Quiz**

This option retrieves a perviously created and saved quiz from cassette or disk.

#### **Retrieving Saved Quiz**

1. Select option 4 from the Main Menu and press <RETURN>.

Please note that if you try to load a quiz while you already have a quiz in memory, the original quiz will be erased. You will be asked first if you wish to delete the existing questions - you must type "N" here if you want to save this quiz.
2. When the computer's memory is clear, you will be asked to give the name of the quiz you wish to load. Type it in, spelt exactly the same as when it was saved - be careful to use capital letters in the right places - and press <RETURN>.
3. You will be asked if you are loading from disk or tape.
  - a) If you are loading from tape, type "T". Place the relevant data cassette into the cassette recorder and start the tape when instructed.
  - b) If you are loading from disk, insert the relevant data disk into the disk drive and then type "D".

4. When the loading is complete, the EDIT Menu is displayed. (See EDIT QUIZ for an explanation on how to review and edit the quiz.)

**5. End**

This option ends the program and clears the memory. Please ensure that the quiz you have been working on is saved before you use this option.

# BEACH HEAD

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Classic Invasion Game  
Author : Peter Johnson  
Standalone Release(s) : 1984: BEACH HEAD, US Gold, £9.95  
1988: BEACH HEAD, Americana, £2.99  
Compilation Release(s) : None  
Stated compatibility : Electron Side A/BBC Side B  
Actual compatibility : As stated. Electron version works on BBC.  
Supplier : U.S. GOLD, Units 2/3 Holford Way, Holford, BIRMINGHAM B6  
7AX. Tel: 024 356 3388  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"BEACH HEAD is a multi-screen action game which requires different skills and provides new sequences as you progress through the game. You will encounter secret passages, squadrons of enemy planes sheeling fron enemy ships, an almost impenetrable enemy held beach and a fortress with a huge cannon that never misses! If you feel you are up to the challenge! Joystick or keyboard."*

Choose skill level 1-3 by typing appropriate number.

## AERIAL RECONNAISSANCE

Manoeuvre your fleet using the joystick. Choose between the Hidden Passage, on the outer edge of the peninsular, or a Frontal Assault through the main channel.

## THE HIDDEN PASSAGE

Here use the joystick to turn left or right, push forward to increase speed and pull back to slow down. Avoid the mines and torpedoes and you may surprise the enemy.

## GENERAL QUARTERS

Use your joystcik to ain anti-aircraft guns. Pull back to raise and push forward to lower sights.

## NAVAL BATTLE

Joystick now controls your heavy guns. You will be told how far long or short you are in metres, each degree of elevation is 200m.

## BEACH HEAD

Each ship you navigate to the harbour carries two tanks. Once landed you must avoid the obstacles to reach the fortress of Kuhn-Lin.

## KUHN-LIN

You must land ten shells on the fortress to destroy it. However, only one target is vulnerable at once. Also the fortress is defended by a cannon that will destroy your tanks.

## Game Controls

Select joystick by pressing fire or keyboard by pressing SPACE.

The keys are:

Z - Left, X - Right, : - Up, / - Down, <RETURN> - Fire  
<DELETE>/<COPY> - Pause/Restart, <ESCAPE> - Abort Game

**Instructions' Source** : BEACH HEAD (Americana Release) Inner Inlay

**Review (Electron User)**

It's time to get your tin hats out and lead the assault on the enemy territory in BEACH HEAD. This is one of the first conversions of US Gold's legendary Commodore 64 software, and it's great!

By moving the cursor which represents your forces, you can select one of two opening scenarios. In the first you must guide your fleet through a narrow channel which is mined and is constantly criss-crossed by enemy torpedoes. You score for every ship successfully negotiating the channel, but you inevitably lose a few ships.

The second option is to skip this section and proceed with a full complement of ten ships to the anti-aircraft game. This part of the game is great fun - enemy aircraft dive at your ship with guns blazing.

You now take on the role of gunner, moving the gun up, down, left and right, pumping out shells at wave after wave of fighters. Speed and accuracy are essential here, as with each hit from the enemy your damage points increase. Each time the total reaches 20 damage points, you lose another ship. The enemy places defeated, their fleet now comes into play.

My first attempts at lobbing shells at silhouettes of enemy vessels were disastrous. I then noticed a small notice on the display informing me of how long or short was - aren't computers wonderful?

Having survived this melee, the surviving ships head for the beach and land their cargo of tanks - the number of tanks landed being proportional to the number of surviving ships. The tanks must be guided through a tortuous maze of tank traps and gun emplacements.

Finally they reach their target - a huge gun mounted on top of a hill. The hill is protected by numerous guns which must be eliminated before the large gun is destroyed.

The graphics are excellent, and the fact that your performance on each level determines your fire-power on the next is a great idea.

James Riddell, ELECTRON USER 3. 3

# BED BUGS

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Defend A Bed!  
Author :  
Standalone Release(s) : 1984: BED BUGS, Optima, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron only  
Supplier : OPTIMA, 36 St Petersgate, STOCKPORT SK1 1HL  
Disc compatibility : Unknown

## Instructions

*"Fleas! Beg Bugs! And all you wanted was a quiet night... The pests are after your feet and you'll have to move fast to stop them. Swot them with a jam sandwich or crunch them with your false teeth. If you're desperate you can always phone for help but whatever you do, do it quickly. You need cunning tactics and nimble fingers! BED BUGS guarantees hours of hilarity for the whole family."*

Further instructions currently unavailable.

**Instructions' Source** : BED BUGS (Optima) Back Inlay

## Review (Electron User)

To quote from the game: "Just when you thought it was safe to go to sleep..." BEDBUGS, the new game from Optima Software, should safely disrupt your calmest dreams. You begin with a bed alive with little nasties which are liable to nibble your feet at any time.

However you needn't despair, because you are armed with, believe it or not, a jam sandwich which you use to swat the bugs. You also have a sponge to wipe up the sticky jam and a pair of false teeth that you can use to crunch the irritating fleas. As a last resort there's a telephone that you can use to call Doctor Soothe or Pestdeath. These two will help you, always provided that they're in to answer the phone.

You choose your weapon from a "menu" on the left of the screen and chase the fleas across the bed. When you land on one you press <RETURN> and the little blighter is no more. You mustn't, however, swat your feet (ouch!), fall off the bed or get yourself stuck in the jam, for heavy penalties are given.

The sound is reasonable, especially the familiar introduction tune, and the graphics are good although not striking. The keys are sensibly placed and easy to use, avoiding the possibility of accidentally pressing <BREAK>.

All in all an original game for kiddies which will keep them occupied for hours.

## Review (Electron User)

Let's face it, the User Guide that comes with the Electron isn't the easiest of books to understand. Many people get frustrated if they find programming a problem and can't find the answer in it. Beebug have attempted to help them with their STARTER PACK.

What you get in the pack is a slim, but well-written, booklet explaining how to use the features of the micro that beginners want most - graphics and sound. There is a strong emphasis on the structured approach to programming, with not a GOTO in sight. The booklet also has a hotchpotch of hints, which almost everybody should find interesting.

These cover features of Basic, the operating system and memory, as well as books to read and where to find help if you have a problem. The pack is aimed at both the BBC Micro and the Electron. One chapter is concerned solely with Mode 7. However, it's clearly marked BBC only, so should not cause any problem.

It also contains a cassette of programs (described in the book). There are eight games programs and six utilities. The utilities include a "Bad Program" aid and a character definer. In theory, these are useful, but the other utilities - a function key editor, a memory display, a utility editor and a sound wizard - are rather poor.

Having two different programs in memory is never easy. The games are a varied and tidy selection of arcade-type and strategy games. Old favourites are there such as Life, Galaxians, Connect 4, Reversi and Marslander. There is a version of Zombies and a football game. The pick of the bunch is Blockblitz, which provides all the frustration and irritation to make you play it again and again.

To complete the pack, you also get a screen planning sheet, some character planning sheets and a function key strip. The trouble with the package is that the cassette and booklet don't complement one another.

If you are a real beginner, the booklet may be beyond you, but then the tape provides a selection of good magazine-type games to keep you occupied. However, if you wish to dabble in programming, then the booklet is useful, and, if you want the programs as well, the whole package represents good value.

Rog Frost, ELECTRON USER 2.11

# BERT BOOT

***Professional, Originally Released On Cassette Only***

Game Type : Educational; Ages 8 to 12  
Author :  
Standalone Release(s) : 1985: BERT BOOT, Highlight, £6.95  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : HIGHLIGHT, 36 Sherbourne Close, Barry, SOUTH GLAMORGAN  
CF6 5AQ. Tel: 0446 745482  
Disc compatibility : Unknown

## Instructions

*"Multiplication and division problems. Said EDUCATIONAL COMPUTING 'It is certainly the most amazing visual representation I have seen yet in a piece of educational software.'"*

Even working out multiplication and division problems can be fun when you have BERT BOOT, the intrepid insect squasher, to help you!

This entertaining program takes children through the process of solving multiplication and division problems in 8 carefully graded stages, allowing you to choose the number and type of problem.

If your answers are at least 80% correct, then you can play BEAT THE BOOTS; an exciting arcade game in which your insects have to tackle droves of vicious footware to reach the safety of the jam pots.

**Instructions' Source** : BERT BOOT (Highlight) Back Inlay

## Review (Electron User)

With BERT BOOT, Highlight Software have attempted to brighten up straightforward multiplication and division practice. The start of the program is a boot called Bert. Bert's passion in life is squashing insects. You can choose to practice multiplication, you are told how many insects Bert can crush in one second.

You then watch him do it - and afterwards you are asked how many he can squash in a certain number of seconds. If you have opted for Easy, you are given help with how to tackle the problem. With Medium, you get less help, and on Hard you're on your own.

The same options are available for division, except that now you are told how many seconds it takes Bert to squash a number of insects. Your job is to find out how many he can squash in one second.

To make the "work" more palatable, there is a reward in the form of a game if you get at least 80 per cent of your answers right.

Now to the drawbacks. When it's said that Bert squashes eight flies in one second, he actually takes more than two seconds. This is not only wrong, it can also be very tedious. Watching the demise of 90 insects takes over 40 seconds.

Another problem concerns the division part of the program. The computer "beeps" every time Bert has done one second's worth of crushing. To successfully answer the division questions, you need only remember the number at which you heard the first "beep". The reward game is based on the charming notion that the insects should have

a chance of outwitting streams of boots and helping themselves to some jam. It is in fact a version of FROGGER.

It's a nice idea, but made very frustrating by the fact that the keyboard buffer isn't cleared. This means that when you get your first insect to the jam, the second one starts, out of control, and probably commits suicide.

Also, the keyboard delay time and auto-repeat need setting, so that your insect doesn't start, stop and then start again. The keys you have to use are the cursor keys. You are expected to discover this for yourself.

These are bad keys on the Electron, being right by <BREAK>, and are better avoided in children's programs.

These faults could easily be put right and I hope that Highlight will amend them in future and perhaps provide an upgrade for exiting customers. If that were done, I could recommend this educational program for home and school use. As it stands, the idea is good and the graphics appealing but it is too frustrating for children to use.

Rog Frost, ELECTRON USER 2.12

# BEST FOUR - LANGUAGE

*Professional, Originally Released On Cassette Only*

Game Types : Educational, Ages 5-12  
Release Information : 1985: BEST FOUR - LANGUAGE, ASK, £9.95  
Compilation Comprises : 1. WORDS WORDS WORDS, ASK  
2. HIDE AND SEEK, ASK  
3. FACEMAKER, ASK  
4. PODD, ASK  
Stated compatibility : Electron/BBC Dual Versions  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : APPLIED SYSTEMS KNOWLEDGE, London House, 68 Upper Richmond Road, LONDON SW15 2RP. Tel: 01-874 6046  
Disc compatibility : DFS E00

## **WORDS WORDS WORDS, Ages 5-10**

Spell over 80 everyday words in 8 different scenes and see the objects come to life.

## **HIDE AND SEEK, Ages 5-12**

An entertaining memory game with over 40 different objects and several levels of difficulty.

## **FACEMAKER, Ages 5-12**

Draw your family and friends as they've never been seen before! Build up over a million faces, identikit style.

## **PODD, Ages 5-10**

This latest educational cult figure, Podd, will enchant you. Use your imagination (and the dictionary) to think of things that Podd can do.

## **Instructions**

Please see individual entries for each standalone title for complete playing instructions.

# BIOLOGY

## *Professional, Originally Released On Cassette Only*

Game Type : Educational  
Standalone Release(s) : 1985: BIOLOGY, Letts Keyfacts, £12.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : LETTS KEYFACTS. No further information.  
Disc compatibility : CDFS E00, DFS E00

### Instructions

*"Computer-based techniques can lead a student to a clearer understanding of problem areas in a subject. The Letts Keyfacts Revision Software series provides suites of programs specifically designed to develop insight into these areas of difficulty. Each package contains up to ten interactive programs based on major topics found in all the current 16+ (O-Level GCE, CSE and GCSE) syllabuses.*

*As an integral part of a revision scheme the programs will assist understanding and reinforce learning. A variety of approaches are used to maximise the student's interest and to introduce an element of enjoyment into home study. Graphics are presented in an imaginative, interactive way as a positive teaching aid. An illustrated booklet provides information on how to get the most out of the programs.*

*BIOLOGY. Ten interactive programs, approved by subject teachers and tested by students are contained on the two cassette tapes. Topics included are:*

* Variety of life	* Support and locomotion
* Nutrition	* Transport in animals
* Food webs	* Visual co-ordination
* Breathing	* Reproduction in plants and animals
* Homeostasis	* Genetics

*Titles in the series: BIOLOGY, CHEMISTRY, COMPUTER STUDIES, ENGLISH LITERATURE (Henry IV Part I and The Merchant of Venice), GEOGRAPHY, MATHEMATICS, PHYSICS."*

### Loading

Both sides of Tape 1 and 2 contain a number of programs which can be accessed sequentially as on the introductory tape provided with your computer. Alternatively, you may access each program out of sequence by 'loading' it by name.

When starting at the beginning of each side of both tapes, use the program name "BIOLOGY": CHAIN"BIOLOGY" <RETURN>

Further running instructions are given in this booklet, and the programs contain information on how to use them. If you experience loading problems, consult your manual. However, the following general instructions will help:

The <ESCAPE> key does not function during the programs.

Pressing <BREAK> will stop all programs, but you must re-load in order to run them again.

Pressing <SPACE> will increase the speed of some programs.

### How to use the programs in a revision scheme

The programs on these cassette tapes have been divided to make your revision more approachable and enjoyable. Organisation is the key to making the most of your revision time. For each subject follow these simple rules.

1. Know your syllabus. A quick reference to the relevant syllabus analysis table to be found at the front of Letts Study Aids Revise series is advised.
2. Devise a timetable, as soon as the Mocks are over, which will allow you to go through the syllabus at least twice (more for problem areas).
3. For each topic, read all your available material - class notes and textbooks. Make summary notes as you do, then test yourself. Keyfacts Multiple Choice or Letts Study Aid Objective Questions will give invaluable practice and help. Finally, run the relevant computer program which will both test your knowledge and give you another perspective.
4. Just before the examination, use all your summary notes to jog your memory and the whole subject program suite to reinforce your understanding.

The biology programs fall into two categories. The graphics-based programs are built up by interaction with the user and you acquire an indepth understanding of the structure and functioning of the organs or systems concerned. The second category involves the application of a large body of knowledge, e.g. in Homeostasis you should know how temperature, water balance, breathing rate and blood glucose levels are controlled in a mammal. If you are knowledgeable you can test yourself, while if you are less prepared, you can learn and understand a great deal of information in a stimulating way.

#### **The Programs (Program loading names in brackets)**

##### *Tape 1 Side A*

Variety of life ("VARLIF")  
Nutrition ("NUTR")

##### *Tape 1 Side B*

Food webs ("WEBS")  
Breathing ("BREATHE")  
Homeostasis ("HOM")

##### *Tape 2 Side A*

Skeleton and locomotion ("LOCO")  
Blood ("BLOOD")  
Circulation ("CIRC")

##### *Tape 2 Side B*

Visual co-ordination ("EYE")  
Reproduction ("REPROD")  
Genetics ("GENES")

### **The Programs**

#### **1. Variety of life ("VARLIF")**

The first screen displays a menu. You are invited to make a selection from 1-4.

- 1 Plants
- 2 Invertebrates
- 3 Anthropods
- 4 Vertebrates

The computer then selects four classification groups within the chosen category. Numbered, labelled boxes appear on-screen. Beneath the boxes the Latin name or the common name of a randomly-selected organism appears. You type in the number of the box to which the organism belongs.

If you are unable to identify the appropriate classification group for an organism, up to three clues based on group characteristics may be requested.

Should you still fail to identify the correct group, the name of the organism is placed in the correct box by the computer.

#### **2. Nutrition ("NUTR")**

Processes, substances and organs relevant to nutrition in plants or animals are randomly selected by the computer and clues to their identification appear on-screen. If the first clue is insufficient, up to four more clues of decreasing difficulty may be requested.

If you are still unable to deduce the identity of the item after five clues have appeared, the correct answer is presented.

Ten items are randomly selected initially from a bank of over 50 items and you may ask for a further ten items on completion of each selection.

### **3. Food webs ("WEBS")**

The first screen displays a menu of habitats from which you can make a selection:

- 1 Meadowland
- 2 Woodland
- 3 Fresh water
- 4 Seashore

Numbers appear on-screen in position for the construction of a food web. Randomly selected organisms appear at the base of the screen for you to identify as producer (P), herbivore (H), carnivore (C) or decomposer (D). Correct identification results in the appearance of the organism in the appropriate numbered location.

When all locations are filled, construction of the web begins as you are asked to select examples of two-link food chains - e.g. 9-6. The food web is a SIMPLIFIED version and not all links can be displayed onscreen, thus not all links with decomposers are present. As correct two-link chains are identified, the organisms are linked by arrowed lines.

When all possible two-link food chains have been identified, you are asked to identify three-link chains - e.g. 9-6-3.

When all the possible three-link chains in the simplified web have been completed, you are asked to identify four-link chains - e.g. 9-6-3-1.

Since some routes are occupied by more than one chain, the web will appear complete before you have identified all the chains. To overcome this problem you should keep a record of all the chains as they are typed in.

### **4. Breathing ("BREATHE")**

A sectional view of the lungs in the thoracic cavity is built up onscreen in response to correct answers to specific questions. The letters for each response are displayed as dashes and you are provided with help one letter at a time if in difficulty. The correct answer appears in response to pressing '?'.

Following successful construction of the diagram, a table appears on a new screen for completion. The table compares the characteristics of inspiration and expiration. As different characteristics are randomly displayed, you select the appropriate location in the table by typing in I or E together with the number of the associated item (e.g. I3 = Inspiration, Ribs).

The final screen is a simulation of some of the changes identified in the table.

### **5. Homeostasis ("HOM")**

The first screen displays a menu of factors which contribute to the steady internal state of the body and you are invited to select 1-4.

- 1 Temperature control
- 2 Water balance
- 3 Breathing rate
- 4 Blood glucose level

The second screen presents you with a choice of degrees of difficulty from 1-5. Computer response is slowest for 1 allowing longer for thinking!

Following selections a graphic representation appears on-screen showing the normal range and the extremes for the option chosen. A line graph appears well above or below the norm. Now you must act as the unconscious brain and aim to restore the body to normality before time runs out.

### **6. Skeleton and locomotion**

A clue appears on-screen, the correct answer to which begins the drawing of the skeleton. As each clue is correctly answered, so the entire skeleton is constructed.

Each answer is represented on-screen by a dash for each letter and if you are in difficulty the correct letter will appear after you press "?" for help.

The exercise may be repeated any number of times until you have a sound basic knowledge of the structure of the skeleton.

## **7. Transport**

Two programs, one on blood, the other on circulation are available.

### **a) Blood ("BLOOD")**

The first screen displays a menu:

- 1 Blood vessels
- 2 Exchange of substances in capillaries; lymph
- 3 Blood composition
- 4 Blood functions
- 5 Blood groups

The selected screen fills with a potential paragraph represented by a dash for each letter and appropriate punctuation. You are asked to predict words, typing in one letter for each dash. As these are correctly predicted, they are displayed in the correct locations on-screen. If you have difficulty in completing the paragraph, typing in 'X' automatically completes the passage.

This extended Cloze technique will enable you to learn a lot of information in a logical way.

### **b) Circulation ("CIRC")**

Questions appear on-screen, the correct answers to which result in the gradual construction of a diagrammatic representation of the circulation. Answers should be keyed in capital letters. After two incorrect attempts, the correct response automatically appears, together with the appropriate part of the diagram.

Finally you are asked to name those blood vessels which (a) carry oxygenated blood and (b) carry deoxygenated blood. When these are correctly identified, flow of blood is simulated inside them.

The exercise may be repeated any number of times to reinforce your learning.

## **8. Visual co-ordination ("EYE")**

A diagrammatic cross-section of the eye is built up gradually as you respond correctly to specific questions about the structure and accommodation of the eye. The answers are represented initially on-screen by one dash per letter. Lower case letters should be keyed in. Help is given after two false attempts when the initial letter appears automatically. The other letters will appear in sequence after two incorrect attempts. When all basic structures are present, light rays from a distant object appear, which are focussed onto the fovea by a flattened lens.

Next you are asked to type in the changes which occur to the eye for near viewing and these changes appear on-screen as the correct responses are given.

Finally you are invited to adjust the lens using the arrow keys to focus light rays from objects at varying distances from the eye onto the fovea. If the focus is not corrected, you are asked to identify the defect simulated.

You may repeat the program until you have a clear understanding of the subject.

## **9. Reproduction**

The first screen displays a menu of life cycles:

- 1 A flowering plant
- 2 Cabbage white butterfly
- 3 A frog
- 4 A mammal
- 5 The pork tapeworm

You are invited to select from 1 to 5.

Stages in the life of the selected organism are then randomised and appear out of sequence on-screen. The first stage is produced at the top of the list. You are then asked to type in the letter alongside the event which follows (i.e. the second stage). There are fifteen stage in total for each organism. As you choose each event, it changes from yellow to blue (light to darker on black and white) on-screen, making future selections easier. Should you wish to retrace your steps you may press the '/' key. This will change the last item selected back to yellow and allow you to restart.

When all the stages have been arranged in sequence you can call up your score and the correct sequence of events.

#### **10. Genetics ("GENES")**

The first screen displays a menu:

- 1 Definitions
- 2 Dominance
- 3 Incomplete dominance
- 4 Sex-linkage

You are invited to select from 1 to 4.

"Definitions" asks you to identify the words in sentences which appear as dashes. Each sentence begins with the word to be defined, e.g. genotype, phenotype, allelomorphic gene, dominant, recessive, etc. If you have difficulty in completing the definitions, type in 'X' and the sentences are automatically completed.

Selections 2, 3 and 4 invite you to complete genetic crosses and to answer questions about the genotypes and phenotypes of the filial generation. The program is confined to monohybrid inheritance and uses an unusual and very clear method to display genetic crosses.

Dominance is represented by eye colour, incomplete dominance by the ABO blood groups and sex-linkage by haemophilia. After two unsuccessful attempts to type in the correct genes (and chromosomes in the case of haemophilia), the correct ones automatically appear. Resulting hybrids and related answers are also supplied after two abortive attempts.

# BIOLOGY 'O' LEVEL

*Professional, Originally Released On Cassette Only*

Game Type : Educational; Revision Aid  
Author :  
Standalone Release(s) : 1983: BIOLOGY O LEVEL, Paxman Promotions, £3.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : PAXMAN. No further information.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

This package is designed to be of assistance to Biology students prior to taking their 'O' Level examinations but may also be of considerable help to CSE students although the content will exceed CSE requirements in some areas.

As a computer controlled revision program it makes use of wide-ranging multiple-choice questions to trigger memory refreshment of previously learnt material. It is aimed at reinforcing ordered recall as a suitable preparation for the examination and to help with conventional revision techniques.

Other packages in this series are available for Chemistry, Physics and Mathematics.

# BIRDS OF PREY

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Shoot-'em-up; INVADERS clone  
Author : Clive Webster  
Standalone Release(s) : 1983: BIRDS OF PREY, Romik, £5.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility :  
Supplier : ROMIK, 272 Argyll Avenue, Slough, BERKS  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"BIRDS OF PREY is a game of skill and reflexes (there are four skill levels). The birds swoop down from space, bombing you as they do so, then they circle menacingly, still dropping bombs. There are other hazards as well! - A game that nobody can beat!!"*

BIRDS OF PREY is a very skillful game. The object of which is to get the highest score possible.

You start with three lives and get a bonus life every third time that you clear the screen.

You are attacked by:- Swoopers, Kamakazee Birds and Death Bombs. The Birds start off in formation at the top of the screen, with Swoopers peeling off from the formation, and coming in to attack, and then circling, bombing you whilst they do so. Kamakazee Birds also peel off from the formation, and then swoop at you as they descend. If they miss you they go off the bottom of the screen, re-appearing at the top.

You are also periodically attacked by Death Bombs. If you do not shoot them before they reach the bottom of the screen, you lose one life.

## Scoring

Birds whilst in formation;

White = 10, Yellow = 20, Red = 30, Circling Swoopers = 50, Death Bombs = 70.

Kamakazee Birds are worth 100 points.

## Game Controls

Z - Left, X - Right, <SHIFT> - Fire  
Alternatively, use a joystick.

Q/W - Sound Off/On, P - Pause On/Off, <ESCAPE> - Quit (While Paused)

# BIRDSTRIKE

***Professional, Originally Released On Cassette Only***

Game Type : Arcade Shoot-'em-up  
Author : Andrew Frigaard  
Standalone Release(s) : 1985: BIRDSTRIKE, Firebird, £2.99  
1987: BIRDSTRIKE, Firebird, £2.99 (BBC Side A/Elk Side B)  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : FIREBIRD, Wellington House, Upper St. Martin's Lane, LONDON  
WC2H 9DL  
Disc compatibility : Incompatible. Customised Tape Loaders.

## Instructions

Wing the planes to release a carrier pigeon, shoot the pigeon and add a note to the stave at the top of the screen. if you can complete the tune you will be rewarded with a bonus of 1500 points and move onto the next level.

Attacking planes will drop bombs and relentlessly home-in on your position at the bottom of the screen. Planes can only be destroyed by hitting them dead centre. If all the planes are destroyed but insufficient notes placed on the stave to complete the tune, your bonus is lost and you will be given a second chance.

## Control Keys

Z - Left, X - Right, RETURN - Fire  
Q - Quiet, S - Sound  
R - Pause On/Off

**Instructions' Source** : BIRDSTRIKE (Firebird) Inner Inlay

## Review (Electron User) - "Bag That Birdie"

BIRDSTRIKE is a recently re-released title from the Firebird Silver budget range.

The game starts in the first World War, with biplanes and carrier pigeons, but the idea is nevertheless simple. Move a gun emplacement from side to side along the bottom of the screen - if anything moves, shoot it.

A great deal of attention has been devoted to the background detail and the result is a simple, but surprisingly effective Belgian rural scene with cottages, trees and a country church. My only complaint is that your gun emplacement escaped this attention.

Six biplanes lurk above the cloud cover. One by one they swoop, rapidly homing in on you, showering bombs as they come. You can loose off two shots at once - you certainly need to.

A direct hit on the centre of the plane causes it to vanish in a cloud of smoke, reappearing as a small cross in the graveyard of the church. Destroy all six to move on to the next screen.

If your marksmanship is less than perfect, your quarry will disappear off the bottom of the screen and dive again. Needless to say, any contact is fatal and even a wingtip is enough to flatten you, leaving only a skull as your memorial.

If you hit a plane but only clip its wing, a delightfully animated carrier pigeon is released, cheeping merrily, wings flapping. Shooting the birdie adds a note to the music staff at the top of the screen. After twelve pigeons have been brought down the screen ends, you are awarded a substantial bonus and a tune is played.

Your attackers are now World War II single-wing fighters. You have a similarly unhealthy attraction for them, but can deal with them the same way.

After two more screens - jet fighters and then helicopters - you are once again back in 1914 with no apparent increase in difficulty.

I found the game very enjoyable - my only complaint is the way it slows down when simultaneously displaying a plane, pigeon and gun emplacement. It rather takes the edge off the fast action.

## Instructions

Follow the exploits of Roger the Dodger, master burglar, as he works his way through numerous buildings - searching for the golden keys, robbing safe after safe but always on the alert to the many obstacles and alarm systems and those spooky, cooky nightwatchmen. When one screen is cleaned out you move on to the next level in an endless pattern of banks, shops and houses. 20 screens, 4 lives

High Resolution Graphics And Imaginative Sound Effects. Age: 11+.

## Points

100 points per key  
Time bonus for completion of each screen  
Extra man every 10,000 points

## Game Controls

Z - Left, X - Right, <SHIFT> - Jump

**Instructions' Source** : BLAGGER (Alligata) Back Inlay

## Review (Electron User)

Feel in the mood for some thieving? Like to rob a safe or two? Well BLAGGER gives you the chance.

As Roger the Dodger, intrepid master burglar, you have four lives and 20 different screens to search for golden keys in houses, shops and banks. Spectrum owners have made a lot of fuss recently about a game called Jet Set Willy, but I'm certain that Blagger would give it a run for its money.

It's nothing if not addictive, and a great deal of patience and thought are required in order to work out how to get through each scene. Some surfaces disappear as you walk over them, mysterious gooseberry-like objects kill you if you touch them and sundry nasties such as spaceships, humbugs, gnashing teeth, locomotives and RG signs must be avoided. Don't ask me what RG stands for, I don't know.

After collecting all the golden keys for the safes on one screen, you have to reach a safety zone before the game progresses to the next level. This is difficult if you've eroded away the only escape route while collecting the keys! Also there's a time limit for each screen, which adds to the fun.

The game is a winner and is very much a "just one more go" piece of software. The program makes good use of graphics although the sound can sometimes get a little irritating. The keys are easy to use, the instructions clear and the game itself very enjoyable, sure to give many hours of entertainment.

Steve Yarwood, ELECTRON USER 1.12

# BLAGGER v2.0

***Professional, Originally Released On Cassette Only***

Game Type : Arcade Platform Game  
Authors : R. S. Goodley and Hac Man  
Standalone Release(s) : None  
Compilation Release(s) : 1990: PLAY IT AGAIN SAM 12, Superior/Acornsoft, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : CDFS E00, DFS E00

## Instructions

Try to gain the highest score you can by collecting all the keys on each of the twenty levels, as quickly as you can!

When you have collected all the keys on a level, you should move to the safe, which will open and permit your passage to the next level.

Each key gives a score of 100 points. In addition there are bonus time points. You start with four lives.

## Game Controls

## Practice Mode

To help master each of the twenty levels of Blagger, a practice mode has been built into the game. To enter the practice mode, press simultaneously the four keys which spell the name A L I X. This can be done at any time.

In the practice mode, you can start on any level you wish. Simply wait until the level you wish to play is shown on the screen, then press <SPACE>. However, to obtain the maximum score possible, you should start from level 1 and play through all the levels!

# BLAST!

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Platform Shoot-'Em Up Adventure  
Author : Sam Inglis  
Standalone Release(s) : 1990: BLAST!, Audiogenic, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+, Master 128  
Supplier : AUDIOGENIC, PO Box 88, Reading, BERKS  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Your mission to the far side of the galaxy leads you to a strange, apparently uninhabited world. You prepare to land, but suddenly your craft spins uncontrollably into a vast underground cavern complex.*

*There's only one way to escape! You must destroy the alien command centres in the eight caverns that make up the underground complex. Be sure to avoid the deadly missiles fired by the alien defences - and beware the anti-matter that lines the cavern walls. You'll need nerves of steel if you're to meet the challenge - make one mistake and you'll be blown sky high!"*

On the far edge of the galaxy known as XL-614 is a dwarf star orbited by a single planet 60,000 kilometres across. According to the Astro-Geological Survey, this planet is composed almost entirely of antimatter, and as one of the foremost physicians of your generation you are detailed to investigate.

As you come into land, the ground beneath suddenly gives away, and you find your craft spinning uncontrollably inside a vast underground cavern complex. Eventually you regain control of the ship, only to find that you are under attack. Instinctively you reach out to turn on your alarm beacon, but even before you touch the button you realise that it's pointless - the nearest Federation ship is 2000 light years away.

This time you're on your own!

## How To Play

To escape you must destroy the alien command centres in each of the eight caverns that make up the underground complex. You must avoid not only the missiles fired by the alien defences, but also the cavern walls, which being anti-matter are equally deadly.

Can you survive the deadly perils of the caverns?

## Colour/Monochrome Option

The game can be played using either a colour or a monochrome display. Select the mono option if you do not have a colour monitor or TV.

## Game Controls

Use S and Q to turn the sound on or off, P to pause the game, or U to resume a paused game. Press <ESCAPE> to abort the game.

You can choose the main keys that are used to play the game - use whichever you prefer, but not the keys listed above since they are already allocated.

The default keys are <CAPS LOCK> and <CTRL> to rotate left and right (Z and X on the Electron), <SHIFT> for thrust and <RETURN> to fire.

**Instructions' Source** : BLAST! (audiogenic) Back and Inner Inlay

## **Review (Electron User) - "Blast!"**

It all begins as a straightforward astro-geological survey of an anti-matter planet in the outer reaches of the galaxy. As you make your final approach there is a rumbling below your ship, the ground falls away beneath you, and you tumble into the abyss.

After minutes of grappling with the controls you finally manage to stabilise the ship only to find yourself in the first of eight alien caverns.

BLAST!, from Audiogenic, is based quite unashamedly on the Superior Software classic THRUST. Most of the original elements are there - the small triangular spaceship, the relentless pull of gravity, and the ever-present threat of alien attack.

Unlike the multi-screen scrolling backgrounds of THRUST, BLAST! limits the size of its caverns to a single screen and achieves its complexity by reducing the size of the sprites. The game controls are very similar, allowing ship rotation, thrust and fire. There is no tractor beam because you aren't required to collect any power units.

Not only does Audiogenic provide a facility for fussy players to define their own control keys, it also panders to the needs of those less wealthy Electron gamers who are condemned to play on a monochrome monitor. During the loading procedure you are asked what type of display you will be using; a monochrome reply results in the program defaulting to a selection of colours more suited to your needs.

The object of the game is to destroy all alien command centres of which there are three in each cavern. With these out of the way you are free to attempt the next level. Not surprisingly, the aliens aren't going to leave their command centres sitting around for any old Tom, Dick or astro-geologist to blow to pieces.

The alien offence/defence system consists of several categories. Wall-mounted gun emplacements that loose a constant volley of randomly aimed laser blasts, highly mobile, but dumb, Catherine wheel devices trundle around the cavern walls, and less mobile, but not so dumb, homing mines gravitate towards you relentlessly.

In addition to the indestructible cavern walls there are rows of little barrier blobs that create temporary obstructions throughout the caverns. The accessibility of some of the command centres is restricted by the physical shape of the cavern itself - nasty little narrow and angled corridors are often the only route to a centre.

On the higher levels the complexity and ferocity of the onslaught increases quite dramatically. Volcanic eruptions belch streams of explosive bubbles across your path. On level four the usually obstructive, but immobile, barrier blobs succumb to the effects of gravity and begin tumbling from the skies.

The leisurely, but thoughtful, approach that has served you so well in the previous levels now has to be abandoned in favour of a less systematic, blast everything, technique. It is at times like this that you really appreciate your ship's auto-fire cannon.

You begin the game with three spaceships, each having infinite supplies of fuel and firepower. Such generosity enables the cautious player to take his or her time to complete each cavern without loss of life. On the other hand the Joe Cool space aces out there are most welcome to try and take out the command centres before the countdown timer reaches zero, thereby qualifying for a handsome bonus.

BLAST! has managed to re-create the physics that worked so well for THRUST. Minute blips of thrust are necessary to maintain the ship's position in space and all sideways drifts have to be compensated for with a brief thrust in the appropriate direction.

When you are expected to fly a ship through tortuously twisting narrow caverns the accuracy of the collision detection routines is of paramount importance. There is nothing more frustrating to an ace pilot than to see his ship consumed by flame when he knows for certain that he missed the wall with millimetres to spare. BLAST!'s routines are perfection. You can fly your ship to within a pixel of an object in complete confidence, knowing that the craft will not spontaneously combust.

The graphics used throughout will never win any prizes for style or originality, but I don't consider this to be a major failing. BLAST!'s main strength is its superb gameplay.

This is a game that responds to the skilful player. With four fingers working in unison the ace pilot can pivot his craft in the narrowest of tunnels while simultaneously blasting mines and command centres.

Within half an hour you can be flinging the ship about at high speed on the lower levels in an attempt to reap the largest possible time bonus. I enjoyed it and I'm sure you will too.

Steve Brook

### **\*\*\* Second Opinion \*\*\* (Electron User)**

There is no doubt where the programmer of BLAST! got the idea for this arcade game - THRUST. The graphics are different, but the gameplay is essentially the same.

Fly your spaceship through the caverns and destroy the alien command centres. Your ship has momentum and also weight, making it difficult to manoeuvre in small spaces - most of the caverns are small and have gun emplacements too.

BLAST! is good, addictive fun and will appeal to all THRUST devotees. However, it is quite expensive.

*"From Simon Vout, the author of 3D BOMB ALLEY. The battle continues...*

*"A captivating 3D Tank Battle Simulation with Revolving, Exploding Tanks, 3D Shell Fire, Detailed Scrolling Landscape, High Score Ranking System and Realistic Sound."*

*"FIRST BYTE Joystick Compatible."*

**Instructions' Source** : BLITZKRIEG (Software Invasion) Inner Inlay

## Review (Electron User)

One of the most straightforward, yet most addictive, games I've ever had the pleasure to meet, BLITZKRIEG is a winner. Based on the familiar arcade game, the idea is to destroy as many enemy tanks as you can, gaining points in the process, while sustaining as little damage as possible.

You can receive only ten direct hits, then you're a goner. You start out as a private, and are promoted every 10,000 points. I won't tell you what rank I reached, though rank is probably the right work.

There are smaller tanks and larger ones out to get you - and watch out, because they don't wait too long before they turn and fire, so get your shot in first.

The graphics, with their 3D effect, are absolutely superb. Although all in green, the detail achieved is striking and the sound effects are also good.

However, your gun position can only sweep from left to right. It seems a pity that it isn't more mobile and can move backwards and forwards too.

A First Byte joystick option is available, plus a pause facility if the kettle boils at a particularly unnerving moment. There is also a sound on or off option. The keys are well placed and simple to use - kids from 9 to 90 will find it easy and great fun.

# BLOCKBUSTERS

***Professional, Originally Released On Cassette Only***

Game Type : Quiz Based On The TV Series  
Author : Unknown  
Standalone Release(s) : 1984: BLOCKBUSTERS, Macsen, £6.95  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : MACSEN, GBA Ltd, 17 Nott Square, Carmarthen, DYFED SA31 1PQ  
Disc compatibility : Unknown

## Instructions

*"BLOCKBUSTERS from Macsen Software is based on the well-known television series of the same name. The TV is a Central Production made in association with Mark Goodson and Talbot Television."*

## Introduction

BLOCKBUSTERS is a version of the successful TV quiz game adapted for the popular home computers. It is a game for two single playres played on a 4 x 4 matrix of hexagons, each player attempting to form a path across the matrix. The cassette itself includes the game itself and hundreds of general knowledge questions to give you hours of competitve enjoyment.

Due to memory constraints on the BBC/ELECTRON, the questions are split into a number of separate files.

## Loading

After loading the main program you will be asked whether or not you wish to load new questions. If you answer "Y" the next set of questions on the tape will be loaded into memory. If you answer "N", the computer will use the questions already in memory. Should there be no questions in the machine, a new set will be loaded from tape.

## Playing

Before playing the game, you will be asked:

- \* whether or not you wish to have Sound,
- \* the number of games in the series (1 - 9), and
- \* the level of difficulty (1 - 9) - the higher the difficulty level, the shorter the time allowed.

Each player will then be allocated a colour (White or Blue) and a key to interrupt (A or \*). N.B. There is no need to use the Shift key.

During the game, the question is written across the screen and may be interrupted by either player at any time by pressing his key. If the answer is incorrect or time runs out, the whole question will appear for the other player. A clock on screen counts down the time allowed for answering. Some questions will accept two alternative answers (e.g. singular and plural) and, if a slight misspelling occurs, the player will usually be given another opportunity to answer.

To load new questions or restart, press <ESCAPE>.

# BLOCKBUSTERS GOLD RUN

***Professional, Originally Released On Cassette Only***

Game Type : Questions And Answers Based On The Television Series  
Author :  
Standalone Release(s) : 1985: BLOCKBUSTERS GOLD RUN, Macsen, £9.95  
Compilation Release(s) : None  
Stated compatibility : BBC Side A, Electron Side B  
Actual compatibility : As stated  
Supplier : MACSEN, GBA Ltd, 17 Nott Square, Carmarthen, DYFED SA31 1PQ  
Disc compatibility : Unknown

## Instructions

*"GOLD RUN from Macsen Software is based on the well-known television series BLOCKBUSTERS. The TV game is a Central Production made in association with Mark Goodson and Talbot Television."*

Gold Run is complementary to Macsen's BLOCKBUSTERS program. It is a single player game, adapted from the successful TV quiz. The objective is to answer a series of general knowledge questions with 2 or 3 word answers and forge a path across the 5 x 4 matrix of hexagons. The cassette includes the game itself and hundreds of general knowledge questions to give you hours of competitive enjoyment. Due to the memory constraints of the BBC/ELECTRON, the questions are split into a number of files.

## Loading

After loading the main program, you will be asked whether or not you wish to load in new questions. If you answer "Y", the next set of questions will be loaded into memory. If you answer "N", the computer will use the questions already in memory. Should there be no questions in the machine, a new set will be loaded from tape.

## Playing The Game

Before playing the game, you will be asked:

- \* Whether or not you wish to have sound
- \* The level of difficulty (1-9) - the higher the difficulty level, the shorter the time allowed.

During the game, a question may be chosen by pressing the first letter of the 2 or 3 letters shown in a hexagon. There is no need to press <RETURN>. As the question is written across the screen, it can be interrupted by pressing <SPACE>. Having then typed your answer, press <RETURN> to have the computer check it. A clock on screen counts down the time allowed for answering. If a slight misspelling occurs, the players will usually be given another opportunity to answer.

As long as you continue to make the GOLD RUN from gold to gold within each game's time limit, the computer will keep track of various running totals.

To load new questions or restart, press <ESCAPE>. Pressing <BREAK> will delete the game from memory. If this occurs, it will have to be reloaded.

# BLOCKBUSTERS QUESTIONMASTER

*Professional, Originally Released On Cassette Only*

Game Type : Expansion Utility To BLOCKBUSTERS  
Author :  
Standalone Release(s) : 1985: BLOCKBUSTERS QUESTIONMASTER, Macsen, £9.95  
Compilation Release(s) : None  
Stated compatibility : BBC Side A, Electron Side B  
Actual compatibility : As stated  
Supplier : MACSEN, G.B.A. Limited, 17 Nott Square, Carmarthen, DYFED  
SA31 1PQ  
Disc compatibility : Unknown

## Instructions

QUESTIONMASTER is a program that enables you to set up a set of questions for use in the Blockbusters game. The cassette includes the program and a further collection of 500 questions for the game itself.

## Creating A Quiz

After loading, the main menu will appear, including the following options:

1. Set New Questions
2. Edit Questions
3. Read Questions
4. Load Questions
5. Save Questions
6. Print Questions

Pressing <ESCAPE> will always return you to this menu. If no database is present start on 1 or 4.

1. With this option, you can create a new database. If there is no database in memory, you will have to start by selecting a minimum of 16 letters to be included. These will be shown on a coloured background on selection. Press RETURN to start entering. When you have chosen a letter you will be presented with an on-screen form in which to enter the question and answer. The up cursor key will take you back from the answer if you wish to re-enter the question. Do not format as this is done automatically in the game. After one question is completed, the form re-appears for the next. This option clears the letter before entry, therefore option 2 (Edit) should be used to add questions to a letter. If your answer does not start with the current letter, or if there is insufficient room an error message will be displayed and the question will not be accepted. The amount of room left and the current letter are displayed at the bottom of the screen. Two alternative answers may be given by separating them with a slash, '/'. The second need not start with the current letter.
2. Choose a letter from the screen display and then give the number of the question to edit. It will appear on screen as in 1 and can be re-entered if required. If your number is greater than the number in memory, it will be assumed that you wish to add a question. All questions are added on to the end of a letter.
3. Choose a letter from the screen display, or RETURN to start at the beginning. The questions and answers will be displayed formatted on screen.
- 4/5. A set of questions may be loaded or saved once a filename is entered. Reload into BLOCKBUSTERS as outlined below.
6. As for 3 but output is to the printer. Remember to set up the printer beforehand if this option is required.

7. This ends the program and clears memory.

**Loading Questions Into The BLOCKBUSTERS Game**

To load the extra questions (Q1, Q2, Q3) into BLOCKBUSTERS; first run the game, then place the extra questions tape, correctly positioned, in the recorder and answer 'Y' to the prompt 'Load new questions?'. Press PLAY and the new set(s) will be loaded.

# BLUE DRAGON

*Professional, Originally Released On Cassette Only*

Game Type : Text Adventure  
Author :  
Standalone Release(s) : 1985: BLUE DRAGON, MP Software, £6.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : MP, 165 Spital Road, Bromborough, MERSEYSIDE  
Disc compatibility : CDFS E00, DFS E00

## Instructions

Instructions currently unavailable.

**Instructions' Source** : Instructions currently unavailable.

## Review (Electron User)

Either these adventures from MP Software are getting harder or I'm losing my touch. Your task is to find the location of the Sun God's treasure and defeat the ferocious blue dragon which guards it.

At the start you find yourself on a beach. To your left is a bird perched upon a high rock. It's not impressed with your efforts to catch it. To your right is an evil-smelling rubbish dump that, surprisingly, is not to be avoided. Behind you is an empty gully. Is this how I got here, you think? Wrong! Ahead of you is a narrow track up the cliffs to a forbidding castle high above.

You should be able to solve most of the mysteries surrounding you and, provided you have found that elusive knight (hint), you should be able to collect all the goodies and wipe the sneer off that bird's face. On doing so you find that the bird is in reality a beautiful princess who has been transformed by an evil wizard. (Surely after all these adventures there can't be that many evil wizards left?)

Anyway, noble soul that you are, you volunteer to follow the bird to a land far away and then your quest begins in earnest. After a couple of hours you reach the same point as me. (I'm the one in the corner with the beard and pointed hat.)

Can you uncover the secret of the "triangular slot in the wall by an almost invisible door"? If so, please write to me c/o Electron User and let me know, because I couldn't! To be fair (excuses, excuses), I had just received MP's two latest adventures and was eager to try them out.

Anyway, back to BLUE DRAGON. I'm always impressed by any game that I don't manage to finish. This is no exception. I daresay there is an object somewhere that will open the door and one day I am determined to go back and find it.

Overall, definitely superior to earlier MP adventures and of about average difficulty.

Merlin, ELECTRON USER 2. 5

# BOBBY CHARLTON SOCCER

*Professional, Originally Released On Cassette Only*

Game Type : Arcade  
Author : Simon Vout  
Standalone Release(s) : 1985: BOBBY CHALTON SOCCER, Dacc Ltd, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron

## Instructions

*"A game designed to capture the imagination. Further modules to be added at regular intervals. From three minutes to 45 minutes play duration. Two players, one player versus computer or computer only. Full teams of 11 players per side. Select team characteristics - formation and individual player skill, accuracy and stamina. Authentic moves: kick-off, throw-ins, goal kicks, corners, passing, shooting, etc. Optional injuries can be added. Large three dimensional aerial view of the pitch. Sound effects: Uses 16 colour mode 2 graphics. ANALOGUE JOYSTICKS OPTIONAL BUT PREFERRED. This game contains: Module 1 : MANAGER/Module 2 : MATCH-PLAY"*

## Introduction By Bobby Charlton

I am not just endorsing this game, I have been involved in its concept giving guidance and advice.

Welcome to BOBBY CHARLTON SOCCER. I am sure you will enjoy many hours of playing the world's greatest sport, in your own home, in a way not possible before. We have developed this computerised soccer game in such a way as to most closely match the real thing as is possible, with not only full 22 player all-action matchplay, but many other features such as the pre-match levels for each player, and the way that over-worked players tire faster than their team-mates. With full control over every player's movement, direction, speed and each kick controlled in strength, direction and height, all from the joystick (or keyboard) you have everything you need to play top-class soccer against your mates or even against the computer.

When soccer is played on a computer, I think it is important that the players have as much of the field in view as possible, so that accurate passing to men on the flanks or farther up the field can be made. To achieve this, we made our men smaller and the field view larger. The idea is that you pass the ball much more, involving the whole team, rather than concentrating on one man all the time. Many 'true-to-life' features have been added to ensure that maximum realism is felt when playing, such as the men slipping and falling if you turn them too quickly, and stamina levels dropping when too few of them do all the work. So you can see, the only way to win is by playing your team as a team, accurate passing, gradual build-up and the shot on goal, and even then the accuracy of each man may vary according to how you built up your team before the match. We have enjoyed putting this game together and we're sure you are going to enjoy playing it.

- Bobby Charlton

## How To Play

The game may be played by two players, or by one player against the computer. There are two parts to the standard game, the first in which each player constructs his team and briefs his men. The second part is the match itself, which is played in full with each player controlling the actions of his team with his joystick (or keyboard keys).

## Part 1 - Manager Module

At the start of a game each player takes on the role of the team manager. This is the 'dressing room' phase of the game, during which you determine the distribution of skills and stamina amongst your men and the formation they are to play, including any number of special 'variations'. For each of your eleven men you are able to set the levels of 'skill', 'stamina' and 'accuracy' that they possess on a scale of 1 to 5.

At first, the levels are all set at 3, which means a total of 9 per man. The total for the team is therefore 99 (11 x 9). You may adjust the levels for any or all of your eleven men, but the overall total must never exceed 99. That means, of course, that the total qualities for both teams are equal, but what really counts is that some men can be made better players than others, and only you know which, not your opponent. When the match is under way you can concentrate your game towards the stronger men, increasing your chances of scoring. Adjust the 'levels' for the man currently under the cursor by pressing keys 1-5, firstly for 'skill', then for 'accuracy' and finally for 'stamina'.

The other main area of control over your team's strategy is in positional play. You can select one of the standard formations, which will be displayed on the screen with the men in the appropriate positions. You may then move any of the men to new positions, so creating your own 'special' match tactics in positional play. During this 'positioning' process you see a bird's eye view of your half of the pitch, with the keeper at the bottom and the centre line across the top. Select the player to be moved by placing the flashing cursor over him. The number of the selected man is displayed at the top-left of the screen. Now move that man in any direction using the cursor keys (for small steps) or shift and cursor keys (large steps). The flashing cursor is moved with the '<' and '>' keys (<SHIFT> not necessary).

Once both players have completed their manager strategies, and the length of the game has been selected, it is time for the actual match to begin. If you taken the option to include injuries, these will be randomly allocated (if any) to your men by the computer. The effect of injuries will be felt in the performance of any man unlucky enough to get them. Although the 'injuries' option may be omitted, it is for the sake of realism that we have included them in Bobby Charlton Soccer, and realism is, remember, the main aim of this game.

Side B of the cassette contains some valuable tips from Bobby Charlton on the use of the Manager Module.

### **Game Controls**

< / > - Move flashing cursor from man to man  
1 - 5 - Set Skill, Accuracy and Stamina levels  
Cursor keys - Move man under CURSOR (<SHIFT> for large steps)  
Q - Quit. At end of each player's session

### **Part 2 - The Match**

The whistle blows and the game begins. This part of Bobby Charlton Soccer needs the least in the way of explanation. If you are familiar with the real game of soccer then there is little else you will need to know to play the game on your computer. Your on-screen view of the pitch pans between left-goal, centre-field and right-goal, according to the flow of play. This works in such a way that there is always half of the total field area in view and all men positioned in the area of view will be seen in correct perspective on the screen. It is possible to see *all* of your eleven men at one time, which means that your options for passing the ball could not be better.

### **Control of Your Men**

For one of your men to take possession of the ball, he must be under control of your joystick. If the ball is not currently with one of your men, you can press fire button to transfer joystick control to the man closest to the ball. Pressing the button again will transfer control to the man second closest. This means you can always change control which will effectively alternate between the two men closest to the ball at any one time. As play progresses, this will involve different players

as the rest of your team are all controlled by the computer, and are constantly moving with the flow of play. More on this later.

Once the man under control of your joystick gains possession, he will take the ball with him as he runs, according to your movements of the joystick. The direction of the man's movement is the same as that of your joystick, but his speed depends on the distance you push the joystick from the centre. The farther you push, the faster he runs. Just as in real life, a man who runs too fast for too long will become tired and slow down. His 'stamina' will have been depleted and you will have to let him rest in order to recover. The man under joystick control is always losing 'stamina' at a rate determined by the amount of running you make him do. All the remaining ten players are recovering their 'stamina' but at a slower rate than it was lost during hard work.

Another thing to remember is that if you run a man in one direction and then suddenly try to run him in the opposite direction, he may slip and with your man on the ground possession of the ball will be lost.

### **Passing and Shooting**

So you have possession of the ball, but what are you going to do with it? The decision is yours and it will depend on many things. You know which of your men has the ball, his number is shown at the bottom of the screen on your side of the field. You also know the levels of 'skill', 'stamina' and 'accuracy' that your man started with (the pressure is on you to remember the levels you allocated). So together with the current state of play and your position on the pitch, you have to decide whether to attempt to dribble, pass to a team-mate or take a shot. A 'skilful' player will be better at dribbling and tackling, an 'accurate' player will be better at passing and shooting, and of course, 'stamina' comes into reckoning too.

If you decide on a pass or a shot, this is how it's done. Press and hold down your fire-button, point the joystick in the direction the ball is to go, again the farther you push, the harder the kick, and then release the fire-button. The player will then kick the ball and the longer you held down the fire-button, the 'higher' the ball will rise.

### **Gaining Possession**

The player under control of your joystick may gain possession by various methods. A loose ball may be collected by running your man so that his feet co-incide with the position of the ball. If your opponents have possession, you may attempt a tackle, the outcome of which is decided by the accuracy of your approach to the ball and the comparative 'skill' levels of the two men involved. Of course, your opponent will attempt to dodge your tackle by dribbling the ball out of your path. Another way of getting the ball is by intercepting a pass. After a man has made a pass or attempted a shot, the ball is in flight and is no longer in possession of either side. Therefore the first man to reach and intercept the moving ball then takes possession.

### **Ball Out of Play**

If the ball goes out of play then a throw-in, corner-kick or goal-kick is awarded as per the standard rules. The decision is given against the side to last have contact with the ball. A player from the side given the advantage is moved by the computer to the appropriate position, the whistle blows and play continues. A goal, when scored, is added to the total of the scoring side and play is resumed from the centre-spot with a kick-off.

### **Half-time and Full-time**

At half-time, the two sides are switched, including the score-line, and the second half is played in reverse direction to the first. At full-time, the final whistle blows and, after a brief pause, the scores are set to zero, the men, returned to their playing positions for kick-off and all stamina levels. etc. are reset as per the levels you gave them in the Manager Module. The game is then ready to start another match. If you wish to reuse the Manager Module after a match has been played, you must restart the game completely by reloading from the start.

### **Control of Men and Goalkeeper**

As you pass control from one man to another, the number of the man selected appears at the bottom of the screen, on the side of the pitch you are defending. The controlled man is also indicated on the pitch by the presence of a short black line just below him. The goalkeeper is shown wearing the same colour shirt as the outfield players, but he is high-lighted by the presence of a permanent 'broken' black line beneath him.

### **'Injuries' And Their Effects**

The types of injuries that may be optionally allocated to your men by the computer, are those that could be described as 'minor'. After all, a seriously injured player would not be called upon to play. The effects of the various types of injury are as follows:

Cold Infection	Stamina reduced 50%
Bruised Leg	Accuracy reduced 50%
Stitched Wound	Skill reduced 50%
Strained Thigh	Stamina and Accuracy reduced 50%
Pulled Muscle	Stamina and Skill reduced 50%

### **Keyboard Option**

Bobby Charlton Soccer has been designed to make full use of the 'variable' nature of analogue (or proportional) joysticks and there is no doubt that a more enjoyable game is to be had when analogue joysticks are used. However, the option to use keyboard keys in place of joysticks has been included, particularly for the convenience of Acorn Electron owners who need to install the Plus-1 interface module in order that analogue joysticks can be used. For those players who wish to use the keyboard option (keys described below), the action of varying the speed of running, or force with which the ball is kicked, is determined in relation to 'how-long' the appropriate key(s) is held down. Direction other than straight up and down or stragiht across are achieved by proportional use of two keys simultaneously. The key representing the fire button works in exactly the same way as the fire button on the joystick. When the keyboard option is selected, the joysticks are disabled and vice-versa.

### **Game Controls**

- 1 - Toggle red team between manual and auto
- 2 - Toggle blue team between manual and auto
- 3 - Toggle sound on/off
- 8 - Jump to end of match
- 0 - Toggle pitch colour

### **Red Team:**

X - Left,    C - Right,    A - Up,    Z - Down,    V - Fire

### **Blue Team:**

< - Left,    > - Right,    : - Up,    / - Down,    M - Fire

# BOFFIN

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Platform Style  
Author :  
Standalone Release(s) : 1985: BOFFIN, Addictive Games, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ADDICTIVE, 7A Richmond Hill, BOURNEMOUTH BH2 6HE  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Features of the game: Giant Puffer-Blimps, Trampolines, Huge Tarantulas and Manta-bats, Electrified Fencing/Barbed Wire, Hydraulic Rams. 25 Caves for the Electron!"*

The aim of Professor Boffin is to pass through a series of caves as quickly as possible by destroying all of the unlucky horseshoes in each cavern and then touching the resident owl, guardian of each cave.

There are two different versions of BOFFIN on the tape. BOFFIN v.2 is recorded first, followed by v.1. BOFFIN v.2 runs on the Acorn Electron and also the BBC Micro. It has 25 different caverns. The first version of BOFFIN runs on the BBC Micro and features high resolution graphics and 20 caverns - all completely different from those in BOFFIN v.2.

## Playing The Game

Points are gained by destroying the tripods, petri-dishes and horseshoes. When you have completed the screen, there is a time bonus and you gain an extra life. An extra life is also achieved at every 5000 points.

There are various obstacles and creatures which will help, hinder or stop your progress through the caves. Barbed wire (low electrified fencing in BOFFIN v.2) must not be trodden on. Giant hydraulic rams must usually be jumped over because they will slam you into deadly neutron magnets embedded in the cave roofs. Giant Puffer-Blimps are dangerous and often block vital routes - however, they are only full of air and there is a 2800 point bounty on them...

Use the umbrella to break long falls and to reach objects on high ledges (especially tripods which can only be destroyed with the umbrella). You cannot start a jump when your umbrella is raised but you can use it to control your flight in mid-air.

Trampolines provide a useful way of gaining height - try jumping up and down on the central area. The deadly massive Tarantulas lurking around in many of the caves must be given a wide berth if possible, however, if care is taken it is possible to walk safely on their backs! Manta-bats are useful allies; try walking onto the sensitive centre of their backs - when they've done their stuff, just jump off.

Both versions of BOFFIN feature full eight-name hi-score tables which include the game number with each score so you can easily keep track of your progress.

## Game Controls

Z - Left, X - Right  
<RETURN> - Jump with..., X - Raise Umbrella, > - Lower Umbrella  
<COPY>/<DELETE> - Pause/Resume, Q/S - Sound Off/On, <ESCAPE> - Quit Game

**Instructions' Source** : BOFFIN (Addictive Games) Inner Inlay

## **Review (Electron User)**

Following the success of FOOTBALL MANAGER, Addictive Games has released BOFFIN. The football game was mainly strategy, but BOFFIN is pure arcade action. Professor Boffin must travel through a complex of twenty caves. I'm not sure why, but he will need your help anyway.

The route through each cave is constructed from small ledges. The professor can leap between some of these but others must be negotiated by different methods.

Each cave is littered with numerous unlucky horseshoes. The professor has to collect every one before touching the lucky owl. If you have forgotten any horseshoes then touching the owl isn't so lucky.

Movement consists of left, right and jump. The professor carries an umbrella which can be raised and lowered. The brolly is very useful when falling from great heights, and can also be used to reach high objects. As I said earlier, some ledges and even some horseshoes cannot be reached by jumping.

Fortunately the previous inhabitants of the caves were trampolining enthusiasts and they left their equipment. Great heights can be easily reached by bouncing in the centre of a trampoline. The straight up and down jumps are easy. Judging a trampoline jump sideways to a ledge takes a little more practice.

Additional points can be obtained by collecting petri dishes and tripods. An extra life is awarded for the completion of each screen and for every 50,000 points scored.

A game of this kind would not be the same without the bad guys, though there aren't that many around. The game's real difficulty lay in the actual physical layout of the screen. The only hazardous character present is an enormous tarantula. This chap is a real humdinger. He is drawn in superb detail and the characteristic jerky movement of such arachnids - not a programming defect - is impeccable.

Another quite daunting creature is the manta-bat. Thankfully these are friendly and can be used as a living escalator when you can't find a trampoline.

The ladders and levels section of the arcade market is very crowded. Fortunately for Addictive, I feel that Professor Boffin has sufficient originality to succeed against all the competition.

LINCOLNSHIRE DN20 9AX  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

You play the role of Bono, an amiable dragon who lives in a castle by the sea. As a shrewd business-dragon, keen on "nice little earners", you make your living by selling soap to the giant monsters who bathe in the sea surrounding the castle. The monsters are so large that they need plenty of soap, and in order to keep their business you must supply them regularly.

## Your Objective

Your castle is the headquarters of "Bono's Bathing Company". Inside the castle are 22 increasingly hazardous chambers where you and your business partner, Fozzy, produce soap by an age-old recipe: collecting skeletons and boiling them in a cauldron. Five skeletons are needed to make one bar of soap. Once you have collected five skeletons, simply move to a cauldron and touch it.

Before you move into the next chamber, you must produce five bars of soap; you must also deliver each bar in turn to the bathing monsters by climbing up the staircases which exit from the castle chambers. However, your employment is hampered by the deadly creatures that inhabit the chambers and you will also encounter many obstacles in your path.

## The Deadly Creatures

There are three types of deadly creature that reside within the castle.

## Monsters

If a monster catches you, it will kill you immediately. There are three ways to deal with monsters:-

- (1) Trap them in by using a glook. If a monster is unable to move it will die and you can then collect its skeleton.
- (2) If you only need to pass by a monster, your friend Fozzy can assist. He is capable of holding the monster so that you can pass unharmed. Fozzy will hold a monster only if he is directly in between you and the monster.
- (3) Lure the monster into a trapdoor. However, the monster will then disappear without trace - you will be unable to take its skeleton.

## Spiders

Spiders love to eat skeletons. Spiders always follow the left-hand edge of the chamber, unless they become stunned. They cannot be killed themselves but their venomous bite is fatal to you. Fozzy, incidentally, is invulnerable to their poison.

## Glooks

Glooks are unusual creatures who are attracted to the smell of the soap being used by the bathing monsters; they always move towards this aroma. The direction in which the glooks move is determined by the current aroma direction, which changes each

time a bar of soap is delivered up the stairs. The direction you enter the stairs will be the direction of their next aromatic inclinations. You can push glooks out of your way.

### **The Chambers of the Castle**

As you journey through the chambers you will come across a number of doors. To open each door you will need to use a key.

In each chamber there is a hidden volcano full of glooks. The volcano is "uncovered" by treading on a certain part of the ground and an active volcano may spell disaster for your business enterprise. If you become trapped, you have the option to commit suicide - thereby losing one of your lives.

Trapdoors, if used correctly, can swallow up pesky monsters, but watch your own step too!

In some parts of the chambers, you will see monsters trapped in by the surrounding earth. You should usually aim at ensnaring these monsters by removing some of the earth and trapping them in by using a glook.

The maximum number of skeletons, soap and keys you can carry is nine of each.

### **Your Partner : Fozzy**

Your friend Fozzy is a useful guy to have around, although he is rather dim. He usually keeps to the right-hand edge of the chamber, unless he becomes dazed. If he does, give him a push and you will soon bring him round. He is strong enough to be able to hold monsters whilst you pass by, and he can also protect you from the spiders. Fozzy has a limited amount of energy and he will die if it runs out. This will occur if he is trapped. Fozzy has three lives.

### **The Password Feature**

On completing a chamber, a password will be shown on the screen. Use this password in future if you want to skip previous chambers and start the game at the chamber of your choice.

### **The Status Screen**

At the bottom of the game screen, you will see the status section - where your progress is monitored. The indicators from left to right show : Lives remaining, Fozzy status and lives remaining, Skeletons being carried, Keys being carried, Volcano activity, Aroma Direction and Counter, Score, Chamber Level, Soaps carried and Soaps required.

Fozzy's Status Indicator will also change when Fozzy is dead, trapped, holding a monster or active.

### **Game Controls**

Z .....	Move Left
X .....	Move Right
* .....	Move Up
? .....	Move Down
RETURN .....	Action (see below)
P .....	Enter Password (at start of game)
ESCAPE .....	Kill Yourself (useful if you become trapped)
SHIFT and R .....	Restart Game
COPY .....	Pause On
DELETE .....	Pause Off
S .....	Pause On
Q .....	Pause Off

If you press the <RETURN> and momentarily press the appropriate direction key, Bono can push glooks or dig earth without actually moving from his current position.

## Certificates And Badges

If you complete BONECRUNCHER without using passwords, a special message will be displayed on the screen.

If you write to Superior Software before December 31st 1989, stating this special message and including details of where you purchased the game, we will send you a signed congratulatory certificate and a "Bono's Bathing Co." badge.

**Instructions' Source** : PLAY IT AGAIN SAM 7 (Superior/Acornsoft) Inner Inlay

## Review (Electron User) - "Good Clean Fun"

In BONECRUNCHER you play the unlikely part of Bono, a cute little green dragon who lives in a castle by the sea. As an enterprising soul, you have set up Bono's Bathing Company making soap, a commodity prized by the monsters who bathe in the moat. As everyone knows, real soap is made from bones. So to keep the customers happy you must collect the skeletons littered around the castle and boil them up in your cauldron. This turns them into luxurious skeleton soap.

However, the castle is anything but a safe place. There are trapdoors through which you can disappear without trace. On top of this, some of the skeletons are not yet skeletons - they're live and very deadly monsters, with an insatiable appetite for little green dragons.

A further hazard appears in the shape of giant spiders that rush around the walls biting any hapless dragons in their path. These will also eat any bones they find. You must race the spiders to collect the skeletons before they do.

The castle is also inhabited by Glooks, large creatures who love the smell of soap. When you have climbed up a stairway to supply another customer with a bar of soap, they will - after a short delay - all move in the direction faced by this stairway. Although a Glook is not harmful in itself, it will crush you if you get in its way.

An added problem is that you may find yourself, or the way forward, blocked by Glooks if you are unfortunate enough to take a bar of soap up the wrong stairway. However, you can push them or take advantage of the direction they are trying to move to suffocate monsters and turn them into skeletons.

Fortunately, Bono's Bathing Company is not a one-man show. Your partner Fozzy, is the brawn of the operation, strong enough to hold monsters and spiders at bay. He's not very bright however, and you must keep an eye on him to make sure he is not trapped or wandering in circles.

BONECRUNCHER is similar in appearance to Superior's classic REPTON, with smooth four-directional scrolling and fiendish puzzles. However, the two games are quite different.

The addition of Fozzy and the Glooks brings an entirely new dimension to the game, not the least of which is that the Glooks' movement causes the layout of each chamber to change repeatedly around you.

The humour in BONECRUNCHER is probably its most appealing aspect. The skeletons grin at you and tap their feet expectantly, and if you stand still for more than a few seconds Bono will start to yawn and stamp his foot impatiently. The monsters are also beautifully animated, jumping up and down showing a mouthful of teeth.

BONECRUNCHER will delight game players of all ages - another sure-fire hit.

## Review (Electron User) - "Rocky Original"

Before you say wearily, "Oh no, not another Repton-type game", let me put the record straight. BOULDERDASH has the enviable reputation of being the game which inspired REPTON and all its clones all those years ago.

So why is it finally being released for the Electron/BBC Micro market which by now must surely be saturated to bursting point with diamond-digging maze games? The answer is, as ever, that the original is usually the best. Not always, but in this case it is certainly true.

I, like many others, cracked my maze-digging teeth on REPTON long before I ever heard of BOULDERDASH. I first played BOULDERDASH on an Amstrad CPC464 about a year ago, and thought to myself that REPTON had better watch out.

Little did I know that this newcomer actually predated my favourite by quite a stretch, albeit on a different machine - the old 8 bit Atari.

Well, here it is at last on the Electron, and jolly good it is too. You play the part of Rockford, a cute little character who is a right little hoarder, and addicted to those big glistening diamonds scattered about the place just waiting to be scooped up.

Unfortunately, opposition to Rockford's greed lies in the form of hundreds of lethal boulders, deadly butterflies and a rapidly growing, pulsating amoeba.

You won't meet the amoeba until the later levels - there are sixteen in all - but the other hazards are present right from the start.

Most obviously dangerous are the boulders. Although this doesn't need explaining to REPTON fans, the boulders are imbedded in earth and digging for diamonds undermines their support. If a boulder falls on Rockford, it's curtains.

A large element of strategy is involved in turning things to your advantage. Boulders may be pushed either left or right, and as they will topple off the edge of a precipice - which can be dug carefully to suit your requirements - traps can be laid for the mutant butterflies.

Dropping a boulder on a butterfly mutates it into nine separate diamonds. As a set quota has to be collected, butterfly crushing is a necessary pastime - especially on levels deliberately low in their supplies of diamonds.

Collecting the full quota for a given screen causes a door somewhere in the maze to be activated. It won't always be near you, so when you hear the bang, which signifies its opening, a quick dash is indicated, especially if time is running short - there is a time limit for each level.

The green amoeba encountered on later levels is a real pain. It grows at a phenomenal rate and after a certain point it will turn into hundreds of boulders, which will then rain destruction on Rockford's head. Another incentive to hurry things up.

What surprised me the most about BOULDERDASH was the way the screens have been copied faithfully from the original version on the 8 bit Atari. The two micros are worlds apart and the programmer has done a good job in converting a game.

As far as I could tell, every single diamond and boulder is in the same location as in the original version, and it was with great excitement that I realised that I could complete level after level using exactly the same techniques that I had spent so long working out a year ago on the Amstrad.

That is the mark of a truly successful game conversion. Even the sprites are identical, except that the Electron/BBC Micro version runs in Mode 5, using just four colours - but then so does REPTON.

My only niggle, oddly enough, was in the keyboard control. Rockford simply would not stop smartly on the spot when I released the keys.

Instead - during what were usually tightly calculated manoeuvres - he would plough ahead for one more move, totally mucking up the strategy and sometimes getting himself crushed under an impromptu rockfall.

My verdict is that BOULDERDASH is the original diamond digging game and it's still the best ever. Buy it, even if you are an unshakeable REPTON fan - you'll be amazed at just how addictive it can be.

There are many, many more secrets further into the game which I'm not going to spoil by revealing here.

# BOXER

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Platform Game  
Author : Wal Mansell  
Standalone Release(s) : 1984: BOXER, Acornsoft, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : ACORNSOFT, Betjeman House, 104 Hills Road, CAMBRIDGE CB2 1LQ  
Tel: (0223) 316039  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"BOXER is a fast moving arcade-type game in which you try to catch balloons despite your opponent's attempts to stop you. Dodge falling weights, and the hammers, boxing gloves and dumb-bells which hurtle across the rafters and will knock you flat if you can't avoid them!"*

*"Complete with sound effects, full colour graphics and table of high scores, BOXER is fully compatible with either keyboard or joysticks."*

You and your rival are competing for the attentions of a young lady. At the bottom of the screen, she is releasing balloons which you must try to catch when they get stuck in the rafters of the Gym. Any balloons which escape to the top of the screen will be awarded to your opponent.

If you collect five balloons before he does, your score will be increased by the bonus in the top right-hand corner of the screen, and you will move to a more challenging Gym. If your opponent is the first one to collect five balloons, you will lose a life and stay in the same Gym.

You can only catch balloons safely while they are caught in the rafters. If you try to grab or touch one while it is moving you will fall over. This will also happen if you have contact with your opponent or any of the boxing gloves, hammers or dumb-bells which move across the Gym.

Every time you get three falls, you will lose a life. Gloves and hammers can be punched and dumb-bells jumped over to score points. Points can also be scored by jumping up to the punch balls at the bottom of the screen.

## Game Controls

Z - Left, X - Right, : - Up, / - Down, <RETURN> - Punch, <SHIFT> - Jump  
Q/S - Sound Off/On, <COPY>/<DELETE> - Pause On/Off, <ESCAPE> - Quit

BOXER can also be played using a joystick controller. Pushing the joystick up will make the boxer jump, except when he is at the bottom of a rope, in which case he will climb the rope. Press the Fire button to punch to get up after a fall.

## Scoring

Hammer (punched) .....	100
Glove (punched) .....	100
Dumb-bell (jumped) .....	100
Punch ball .....	1000
Collecting a balloon .....	200

You start the game with three boxers but you will receive a bonus boxer for every 10,000 points you score, up to a maximum of three at any one time.

A table of the eight highest scores is displayed at the end of each game.

**Instructions' Source** : BOXER (Acornsoft) Back and Inner Inlay

### Review (EUG)

There will be many readers who will raise their eyebrows ceiling high on seeing a review of Acornsoft's BOXER. They will feel that as possibly **the** most abundant title for the Electron, and certainly one of the earliest, Wal Mansell's platformer (which, let's face it, has very little to do with boxing at all!) has already done so many rounds that it should be truly exhausted.

But interestingly enough, simply because it **was** so quick on the scene, BOXER missed out on an appraisal by a Software Surgery and, with versions across all machines and all media formats, other readers probably reckon a review is long overdue. Seconds out, then...

The match, as indicated, is a platform game; done nicely in Mode 2 and including several rules swiped from the sport to give it a sense of individuality: You are a boxer fighting an opponent; three falls and you're out; survive one "Round", which is how levels are termed, and you go on to the next one. It's a simple game of ladders, ropes and rafters, huge hulking boxer and sundry sprites and a high playability factor thanks to machine code programming.

Yet your scene is not a boxing ring but a gymnasium. Or so the inlay would like you to believe - When was the last time you went into a gym with four floors, ropes connecting them and dangerous boxing gloves and dumbbells hurtling across each? Digression over, the object of the game is not to compete with your opponent for the World Title but rather for the Miss World collection of pixels standing on the bottom platform.

However, impressing this particular girl is strange. Evidently of a camp thinking two men pulverising each other for entertainment is a bit cruel, she has elected that the two instead try to catch balloons she releases! So what we have here is a gym where floating balloons become stuck in rafters above her and it's up to you to both reach and head-butt [Is that allowed in boxing? - Ed] them before they free themselves.

Sounds simple and, once you've got the hang of it, it is...for a few "Rounds". In contrast to you though, your opponent doesn't need to 'butt five balloons to become the hero of the hour; it is simply enough that **you** let five balloons get away to the top of the screen to ensure **his** victory! It's also worth nothing that HE is completely unaffected by all the gym instruments whizzing to and fro. And is carrying a big, infinite stack of weights (They look more like pies when he drops them!) for the sole purpose of depositing them on your head if you're on the rafter beneath him!

Anything that moves in BOXER is no touchy-touchy. Failure to obey the rule results in your boxer crashing to the ground. This even includes the balloons themselves which cannot be headbutted until they become lodged somewhere. As the game toughens up, the length of time they stick around dwindles and, with increased numbers of gym instruments flying across at foot, chest and head height, you are less likely to be able to have time to consider a risk-free strategy for reaching them all.

Control in this game is very simple. Z, X, \* and ? are used to walk left and right and climb up and down ropes whilst <RETURN> punches and <SHIFT> jumps. None of the fiendish gym equipment is unavoidable with a combination of each - although look out for the unexpected fast-flying boxing glove after you've been knocked down once and try to get back up - and punching any object successfully will make it disappear. If you wish, you can opt to use a Plus 1 joystick.

Each time you collect five balloons, your boxer falls in love, i.e. little red hearts appear around his head, and you move to a harder gym. The situation is reversed should you miss five (and you lose a life).

When a game is over, you are shown the High Score table and, if good enough, asked to enter your name. Pretty standard stuff but nicely done in that same way that all Acornsoft arcade games seem to share.

BOXER may be old [Released in 1984! - Ed] but it's worth having. The Electron version is unfortunately too fast on a BBC (and the BBC version too slow on an Electron!) but each version is exactly the same and shows just what comparable speed an Electron can achieve when games are correctly converted. It's also reasonably addictive and, as it's also on ADFS (PAGE at &1D00 ok) disk, deserves to bound about a bit longer.

Dave Edwards, EUG #51

# BOZO THE BRAVE

*Professional, Originally Released On Cassette Only*

Game Alias : ZORAKK THE CONQUEROR  
Game Type : Arcade Shoot-'Em-Up  
Author :  
Standalone Release(s) : 1986: BOZO THE BRAVE, Tynesoft, £6.99  
Compilation Release(s) : None  
Stated compatibility : BBC/Electron Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : TYNESOFT, Unit 3 Addison Industrial Estate, Blaydon, TYNE & WEAR NE21 4TE. Tel: 091 414 4611  
Disc compatibility : CDFS E00, DFS E00

## Instructions

Direct Bozo through the three lands of Havoc collecting in each a piece of the Crown of Ultimate Darkness.

Control Bozo's direction with N,S,E,W keys. Brigands will be encountered in either the Tomb or the Ruin where they may attack. If they do, you may retreat by hitting any key. If you stay and fight, and the number of Brigands reaches zero before you do, you have won the battle and will be rewarded with one of the following:

More warriors

More gold

More food

A map (so you won't get lost)

A bottle of potion (to protect from the plague)

A sword (so you can fight off the dragon)

A piece of crown (you may now enter the next land by travelling west off the screen)

## General

**The Dragon** - when this attacks, he will steal one quarter of your gold unless you have a sword when all gold stolen from you will be returned

**The Plague** - when this strikes, you will lose one quarter of your warriors unless you have the potion when one quarter of your warriors will recover

## Locations

**The Tomb and the Ruin** - you may encounter Brigands and therefore do battle in one of these.

**The Sanctuary** - if you are low on food, gold or warriors, the Sanctuary may help you here

**The Bazaar** - You can buy more warriors or food here with your gold. You can pay anything between four and six bags of gold for each warrior or bag of food. You can haggle by pressing the H key once, this may increase or decrease the amount. To buy, simply press Y for each unit.

BOZO THE BRAVE was previously released as ZORAKK THE CONQUEROR.

# BRAINTEASERS

*Public Domain, Originally Released On ADFS 1D00 And DFS E00 Disc*

Game Type : Strategy; Compilation Of Brainteasing Puzzles  
Author : Genevieve Ludinski  
Standalone Release(s) : 2001: BRAINTEASERS, EUG, PD  
Compilation Release(s) : None  
Stated compatibility : BBC/Electron Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : EUG, 42 Canterbury Road, REDCAR TS10 3QF  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

BRAINTEASERS was supplied without instructions. All instructions on screen.

## Review (EUG)

I recently received this freebie disk and thought I'd do a bit of a review. Bang in the disk, <SHIFT><BREAK> and you're presented with a screen attributing original copyright to one Genevieve Ludinski and the fact that these have been improved by our glorious leader. You just have sufficient time to read this and then you are presented with a menu of 28 games/puzzles. At first I wasn't sure how to navigate this but was soon able to deduce that <:> took you up and </> took you down.

I've probably mentioned before that most of my "Elk"ing is done through emulation on my ACORN Risc computer these days, and this can sometimes run things a bit fast. I have a fix that slows things down a bit, but even with that I often find up and down scrolling a bit 'jumpy' so, speaking personally, I would have preferred a number or letter allocation for each menu item. Or even being able to select an item just by pressing the first letter of its title. This would also enable a random selection, obviously. However, these programs are all in basic, so any time delays, etc, can be adjusted for those who like to fiddle.

There seemed to be something for puzzlers of all persuasions; a word search, some spot the difference types (but with a time limit to give it a nice edge), some mathematical stuff (some of which was a bit beyond me I must admit: Histogram rectangles, what's that all about?) and also one or two puzzles with a musical theme, which personally I really enjoyed.

My two particular favourites were Close Encounters and Don't Paint The Cat. With Close Encounters, you are given a short burst of a tune and the number keys 1 to 8 are your notes. You then have to press these in the right order to play the sound you've just heard and, by so doing, you can progressively lower a spaceship until it lands. For something relatively straight forward, I actually found it incredibly difficult!

With Don't Paint The Cat, someone is painting a fence and if you don't solve the musical puzzle quick enough, the cat (sitting at the end of it) gets painted as well. Great fun.

All in all then, a nice 107ks worth of PD BRAINTEASING fun!

John Crane, EUG #56

# BREAKTHROUGH

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Bat N Ball Style  
Author : Ian Collinson  
Standalone Release(s) : 1990: BLAST!, Audiogenic, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+, Master 128  
Supplier : AUDIOGENIC, PO Box 88, Reading, BERKS  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Trapped in a world of fire and energy, you must battle for the most valuable prize of all - your life. You can escape only by using your magical powers to destroy the rocks that block your path or to create new blocks that act as stepping stones on the road to freedom. Don't forget to pick up the key to the exit door - otherwise your efforts will be in vain.*

*"There are 100 screens just waiting to trap, tease and test your powers of perception before you finally break through to the outside world. But beware, there are only 99 seconds to complete each screen!"*

Each screen contains two types of blocks, light blue blocks which are indestructible, and red ones which can be smashed if you move next to them and press <RETURN>. If you press <RETURN> when next to an empty space, you will create a block that you can jump onto if you wish.

Move around the screen by pressing the Z and X keys. Press <SHIFT> and either Z or X to jump onto an adjacent block. To complete a level, you must collect the key for that level, then unlock the exit door.

Watch out for *fireballs* on some screens - they are lethal! Other dangerous hazards are *spiders* and their *webs*, *ghosts* and *vampire bats* which hang from blocks just waiting to drop on you when you walk below. With a little ingenuity, you will soon discover ways in which each of these hazards can be combatted.

Some of the blocks have strange rotating centres. These contain objects that you can collect. Collect three *diamonds* for an extra life (you start with three lives) or an *hourglass* to slow the timer to half speed. The *crown* and *magic potion* award bonus scores. Often there are two bonus objects to be found in the same place. Can you work out how?

## Passwords

When you complete five screens in a row, a password will be displayed allowing you to start the game at a screen other than the first. There are 19 passwords in all (no password is needed for the first five screens). Passwords are revealed at the start of the first screen that they represent - for example, to learn the password for screens 05 to 09 you must successfully complete screens 00 to 04.

## Status Screen

When the high score table is displayed, instead of pressing <SPACE> to start the game, press <RETURN> to display the status screen. S and Q allow you to turn the sound on and off (these keys also function during the game). The status screen also allows you to start the game on a screen other than the first - provided that you know the password. Press C and enter the number of the screen at which you wish to start (00 to 99); you will be asked to enter the password for that screen.

## Pausing The Game

Press P to pause the game, then O to restart. You can press R to restart the current screen - at the cost of a life - or else CTRL-R to start a new game.

**Instructions' Source** : BREAKTHROUGH (Audiogenic) Back and Inner Inlay

### **Review (Electron User) - "Reaching New Levels"**

I always think that playability is the most important virtue of any game. The sound may be poor and the graphics crude but if it's playable, I'll keep coming back for more. Also, with a few notable exceptions such as ELITE, simple ideas often make the best games. BREAKTHROUGH from Audiogenic is one game that can be described in this way.

Although the title makes it sound like another BREAKOUT bat and ball clone, BREAKTHROUGH is totally different. It is basically a 100 screen platform game in which you are a little wizard. Navigate your way around each screen avoiding the fireballs, vampire bats and various other nasties, collect a key and make your way to a door. It's simple - or is it?

The controls are certainly very easy to use: Left, right, jump and create/destroy a block. It's this last feature that holds the key to the whole game. By destroying existing blocks and creating new ones you can change the shape of the screen by making doorways and staircases in which to gain access to unreachable nooks and crannies.

Certain types of block can't be destroyed and these are invariably positioned awkwardly just to make things difficult. When used in conjunction with fireballs and the other nasties they can produce some very tricky screens. However, there are certain compensations: Some blocks contain hidden goodies that can give you bonus points, extra lives, or half the speed of the countdown timer. Very useful.

The 100 screens are not linked, as in an arcade adventure. They are separate but in order of difficulty, and a useful screen skipping facility is provided so you don't have to start at the beginning each time. Each five screens you are given a new password which can be used to skip screens you have already mastered.

This is certainly an engrossing game, and is extremely addictive because of its simplicity. The graphics are rather small compared to those used in many other games on the market these days, and there is a strip of garbage across the top of the screen, but don't let that put you off - it's a great game.

There isn't any sound to speak of, just the odd effect here and there - and it runs fairly slowly, but this isn't a problem. In fact it positively helps, as I found it unplayable with my SLOGGER Turbo switched on.

BREAKTHROUGH is not too hard and strikes me as being an effective way to encourage children to think logically - there are certainly enough puzzles to ponder. If you are after something a little out of the ordinary, this could be right up your street.

Martin Reed

### **\*\*\* Second Opinion \*\*\* (Electron User)**

This is great for puzzle fanatics. The graphics are good and the screens are well thought out. The first presented no problems and took all of five minutes, but they get progressively more difficult. It's nice to play a non-violent game for a change. I think I'll just have one more go and see if I can crack screen 11.

# BRIAN CLOUGH'S FOOTBALL FORTUNES

*Professional, Originally Released On Cassette Only*

Game Type : Strategy; Part Board Game  
Author :  
Standalone Release(s) : 1989: BRIAN CLOUGH'S FOOTBALL FORTUNES, CDS, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+, Master 128  
Supplier : CDS, CDS House, Beckett Road, DONCASTER DN2 4AD  
Tel: 0308 890000  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*BRIAN CLOUGH'S FOOTBALL FORTUNES is a football management game with a big difference. In an exciting departure from earlier computer simulation games, BRIAN CLOUGH'S FOOTBALL FORTUNES combines an excellent range of computer based features with an fascinating board game. The result for the players is a package which gives the social aspects and skill of other best-selling board games with the flexibility and speed of play which only a computer can supply.*

*BRIAN CLOUGH'S FOOTBALL FORTUNES can be played by two to five players who take on the roles of team managers. Each manager must successfully steer his team through the season, using his skill to make his team stronger as the game proceeds. He competes with human and computer controlled teams in a ten strong league, and the F.A. Cup. From the second season onwards, each team will also enter one of three European competitions.*

### FEATURES INCLUDE

- \* Ten Strong League
- \* F.A. and European Cups
- \* Four Skill Levels
- \* Variable Game Length
- \* Computer Die
- \* Teleprinter
- \* Constantly Updated League Tables And Assessments Of Each Manager's Performance

### CONTENTS INCLUDE

- \* Computer Program
- \* Playing Board
- \* Five Coloured Counters
- \* 112 Player Cards
- \* Six Immunity Cards
- \* Pack of Money
- \* 10 Spare Player Cards

## 1. Introduction

BRIAN CLOUGH'S FOOTBALL FORTUNES is a football management computer/board game suitable for two to five players. Each player takes on the role of a club manager. The object of the game is for each manager to successfully steer his team through the season, using his skill to make his team stronger as the game proceeds. Each manager competes with human and computer controlled teams in a ten strong season onwards, each team will also enter a European competition as follows:

League Champions : - European Cup  
FA Cup Winners : - European Cup Winners Cup  
Remaining Clubs : - UEFA Cup

## 2. How To Win

The winner of BRIAN CLOUGH'S FOOTBALL FORTUNES is the manager who survives to the end of the game, and has the highest number of game points. Game points are points awarded by the computer program, based on each manager's performance in League and Cup competitions and on the amount of cash he has left at the end of the game.

It is very important not to confuse game points with points obtained by winning League matches. It is not enough to do well in the League.

The main aim of every manager is to create as strong a team as possible by increasing the total star rating of his side. While doing this he must not neglect any section of his team, or he will lose matches. He must buy from and sell to other managers, borrow and loan players, buy players in Auction, and cope with problems thrown at him from the computer. He must resist the temptation to spend carelessly, or sell players too freely. Any action which results in poor team performance or low cash levels will cost him game points.

### **3. The Equipment**

1 computer disk or cassette, the playing board, 5 coloured counters, 112 football player cards, 10 blank player cards, a selection of Banknotes and 6 immunity cards which are held by the bank.

### **4. What The Computer Does**

The computer program records the information about the human players and the teams they will manage during the game. It allocates the initial squads to each manager, rolls the die when instructed to do so, and decides the results of fixtures based on information given to it by the managers.

The computer awards game points, keeps track of League fixtures, updates the League table and game points table, and decides to gate receipts for each fixture. It controls the fixture lists for cup competitions and randomly allocates Selection problems and Manager's Luck when told to do so by the computer operator. The program menu shows the facilities the computer controls, and the keys you need to use.

The computer will not keep track of a manager's money, or changes in his team strength. This information must be given to the computer as necessary. It is the manager's responsibility to ensure that he receives money owed to him, gets back loaned players, has his correct team strengths entered into the computer and so on.

### **5. Loading Instructions**

Loading instructions are printed on your disk or cassette. When you wish to return to the menu at any point in the game, press M or RETURN/ENTER as appropriate for your machine.

### **6. Setting Up The Teams**

To start the game, load the computer disk or cassette and tell the program the number of players (i.e. managers) who will be playing.

Then choose the skill level at which to play. Level 1 gives the easiest game, and Level 4 the most difficult. Skill Level 1 has computer teams with lower star ratings than Level 4 computer teams.

Finally, enter your name and choose the club you want to manage. Once this information has been entered, the computer will select your squad of fifteen players and you take the corresponding cards from the pack of players.

### **7. Star Ratings**

Each player has a star rating of 1 to 5 (5 being the best). The players are of five types - Goalkeeper (G), Defender (D), Midfielder (M), Attacker (A) and the Utility player (U). There are ten blank cards which allow you to create your own players, but you should remove a player of the same type and star rating from the pack if you do so. When your squad has been assigned by the computer, pick up the cards and arrange them on the table in front of you as shown below.

G4	Total Defence star rating
D4 D2 D2 D1	= 4 + 4 + 2 + 2 + 1 = 13
M1 M3 M4	Total Attack star rating
A3 A4 A2	= 1 + 3 + 4 + 3 + 4 + 2 = 17
Reserves U1 U3	

You must always play this 4-3-3 formation. At the start of the game, each manager will be allocated two Utility players as part of his initial squad. Since the two Utility players are his reserves, they do not form part of his Attack value (17),

Defence value (13) or his total team strength (13+17=30). If one of the Utility players has a higher value than one of the specialist players, then the manager should put the Utility players into the team. In the squad illustrated below, he has put his U3 player into the Defence, and placed the D1 player in the reserves.

G4	Total Defence star rating
D4 D2 D2 U3	= 4 + 4 + 2 + 2 + 3 = 15
M1 M3 M4	Total Attack star rating
A3 A4 A2	= 1 + 3 + 4 + 3 + 4 + 2 = 17
Reserves U1 D1	

The manager now has a two star increase in the strength of his defence value, and his total team strength has improved from 13+17=30 to 15+17=32. The only exception to this substitution rule is when a Utility player replaces the Goalkeeper. In that case, the Utility player has a value of only one star, regardless of his face value.

### **8. Nominal Values**

Each player has a nominal value based on his star rating, with each star having a value of £20,000. The Goalkeeper in the same squad has a nominal value of £80,000, the U3 player is worth £60,000, and so on.

### **9. Officials**

When each manager has selected his squad and arranged them in the correct pattern, shuffle the remaining player cards and place them face down on the board. These cards now become the Auction Pile. The managers then appoint a banker and a computer operator - preferably not the same person. The banker gives each manager £200,000 made up of one £100,000 note, one £50,000 note, one £20,000 and two each of £10,000 and £5,000 notes. Each manager then chooses a coloured counter and places it on the Start square.

It is the banker's duty to ensure that sponsorship money and gate receipts are paid from the bank and fine and cash penalties imposed by Manager's Luck, Selection Problems and Crisis are paid into the bank. The banker also acts as auctioneer of players and must ensure all players who should do into or out of the Auction Pile do so. The banker issues Immunity cards when instructed by Selection Problems and collects them immediately after use.

The computer operator inputs team and manager information as required during the game, uses the computer die on behalf of the managers and calls up information screens as requested by them.

### **10. Game Duration**

Before starting the game, the managers should decide how long they wish to play. This can be a certain number of seasons, or a specified length of time. We recommend a minimum game length of two seasons so that the European competitions can be reached. The game duration is a verbal agreement between the managers and no computer entry is required.

### **11. Starting The Game**

The managers are now ready to start their first season. The sequence of play from now on will be: board move - play match - board move - play match. To begin this sequence, the computer operator uses the computer die for each manager by pressing the key designated in the menu. The manager then moves his counter the appropriate number of squares.

### **12. The Board**

Each square on the board presents the manager with a different situation with which to deal between matches. They are summarised as follows:

WAGES - The manager must pay his entire wages into the bank. The amount depends on the squad's total star rating and is determined by the chart shown on the board. The total star rating must include all the manager's players, even

those suspended, injured or loaned to him. This does not include players on loan to other managers, but the manager is not allowed to loan players out between landing on the Wages square and paying their wages to the bank.

- MANAGER'S LUCK - This can be good or bad and is randomly selected by pressing the appropriate computer key as shown in the menu. When money is involved, a manager will get cash from or pay it to the bank. It will be clear from the wording on the screen in which direction the money moves.
- AUCTION - When a manager lands on this square, the top card on the Auction Pile is turned face up and the auction begins. The top bidder pays the purchase fee to the bank. Each player has a nominal value, but this has no effect on bidding at this stage. If none of the managers wishes to buy the player in auction, the card goes to the bottom of the Auction Pile. If a manager makes the highest bid in an auction, but cannot pay when called to do so, he forfeits half his cash to the bank, rounded up if necessary, and the auction restarts without the offender.
- 50% AUCTION - This square is like the ordinary Auction, except that if the manager who landed on the square is the highest bidder, he only pays half of his bid to the bank. In return for this privilege, he must bid in multiples of £10,000.
- SELECTION PROBLEMS - Pressing the key designated in the menu will reveal the manager's problem, randomly chosen by the program. Careful attention to the wording of the problem will show exactly what must be done. For example, "best player" means the player with the highest star rating in your squad. In the sample squad shown, this is the M5 player or the D5. Your "best player in any team section" means you can choose your A4, M4, D4 or your G4 player. Players who are lost, injured or retired as a result of Selection Problems or Manager's Luck go to the bottom of the Auction Pile and players sold to the bank become subject to the rules of Bank Finance.
- SPONSORSHIP - A manager on this square immediately receives £30,000 from the bank.
- BANK FINANCE - This square allows you to sell any of your players to the bank for three quarters of their nominal value. There is no limit on the number of players you can sell in this way, but you must ensure that you can carry on playing. A manager cannot voluntarily sell to the bank unless he lands on this square, but he can sell or load a player to another manager at any stage of the game subject to the rules covering loans and transfers. A player held by the bank can be bought by any manager at any time for a minimum of one and a half times his nominal value. Managers can make competing bids and the banker must take the highest offer. The rules for Auctions apply to a manager who cannot pay for a player when required to.
- SUNDAY - A day off. Nothing needs to be done. And nothing nasty happens.
- CRISIS - Any manager landing here is fined £50,000 and loses his best specialist player in any one of the four team sections. That is, he must sell his Goalkeeper - or his best Defender - or his best Midfielder - or his best Attacker. He cannot sell a Utility player. He must sell to the bank, which will pay three quarters of the player's nominal value. The player is then subject to the rules of Bank Finance.

### **13. Playing The Matches**

Once all the managers have used the computer die and completed their moves on the board, the computer operator calls up the next fixture list (see menu) so that each manager knows which teams he and his colleagues are going to play. He then selects the appropriate screen (with the designated key) and inputs the team strengths for each manager. The Goalkeeper and Defenders combine to give the strength/star rating

of the defence, and the Midfielders and Attackers give the strength/star rating for the attack. Any reserves are ignored at this stage of the game. Once the team information has been entered, the computer will determine the results of each game and show them on the screen.

#### **14. After The Match**

Now each manager can receive his gate money from the banker. He will be given half of the amount shown on the computer monitor screen and the size of the gate receipts depends on the league positions of the teams playing any given fixture. If you are doing well in the league and meet another top flight team, you will have a big pay day. On the other hand, if you and your opponents are scraping along the bottom of the table, forget the summer tour of South America - you won't be able to afford it!

When ready, the managers set off on another round of the board moves prior to the next set of fixtures. Cup matches will be played on a knockout basis, but the competition will cease for the season if all the human teams are eliminated. If a manager's team has been eliminated from the competition, he will not participate in the computer fixture, but must take his turn at the board. He therefore risks the same hazards as the Cup teams, but he can expect no gate money on that turn.

#### **15. Miscellaneous Rules**

The essence of BRIAN CLOUGH'S FOOTBALL FORTUNES is the way the managers interact with each other and the computer teams. Managers who are prepared to wheel and deal have infinitely more fun, and will get closer to the thrills and pressures of real-life football management. Alliances can be made or broken as the flow of play dictates and the manager who shows most skill in making deals, selling, buying and borrowing players, will win the game, just as in the real world, however, some rules have to be observed.

A) TRANSFERS/LOANS - Loans and transfers are a key feature of the game, and the following conditions apply:-

1. A transfer is the outright sale of a player from one manager to another. A loan is when one manager allows another to use one of his players for one or more matches. In either case, the financial arrangements are agreed by the managers themselves.
2. For a loan to take place, both teams involved must be playing in the current round of the new season.
3. Immediately the semi-final of any Cup competition has been played, no new loans or transfers can take place until the start of the new season.
4. Transfers do not depend on either team playing in the current round of fixtures, but the Cup semi-final deadline still applies.
5. Managers can buy players whenever one becomes available in the bank or from the Auction Pile. This applies even after Cup semi-finals have been played.
6. If all Cup competitions cease before the semi-final are reached, managers can make loans or transfers until the first semi-final of the next season's competitions.

B) THE SQUAD - There is no limit on the size of the squad, but each team must have the correct formation and number of players for each game. If a manager cannot field a full side, the Defence and Attack values are entered as 5 and 6 respectively, and gate money for that fixture is forfeited. In order to continue playing and accumulate game points, it is important to maintain the size and composition of the squad sensibly.

C) BANKRUPTCY - If a manager is unable to pay a debt, even by selling players, he must resign. His players go to the bottom of the Auction Pile and his team values are set at 5 for Defence and 6 for Attack from then on. His counter is removed from the board, and he takes no further part in the game. A bankrupt manager is disqualified from winning the game. When only two managers start the game, the surviving manager thus automatically wins.

D) IMMUNITY CARDS - If you are issued one of these valuable cards by the banker after landing on a Selection Problems square, you may use it to get out of a later

Selection Problem, or sell it to another manager. It does not give immunity to the Crisis square or Manager's Luck. The Immunity card may only be used once and must then be returned immediately to the bank.

E) TOP PLAYER - A "Top", "Best" or "No. 1" player is the one with the highest star rating in your squad, team or team selection, depending on the context. It excludes any players on loan to you.

F) GAME POINTS - Every manager is awarded game points based on his performance in the League, FA Cup and European competitions, and his cash balance at the end of the game. The game points table is constantly updated and can be seen at any time by pressing the key designated in the menu. Remember, it is game points which decide the winning manager, not match points won in the League.

G) PRE-SEASON FORTUNES - Before each season, except the first, each manager must accept a Manager's Luck and Selection problem.

#### **16. The Winner**

At the end of the game, the computer asks each surviving manager how much money he has left, and this is converted into game points. These points are then added to the existing game points, and the overall winner is decided.

# BRIAN JACKS' SUPERSTAR CHALLENGE

*Professional, Originally Released On Cassette Only*

Game Type : Arcade; Sporting Contest  
Author : Dave Wainwright  
Standalone Release(s) : 1984: BRIAN JACKS' SUPERSTAR CHALLENGE, Martech, £7.95  
1987: BRIAN JACKS' SUPERSTAR CHALLENGE, Ricochet, £2.99  
Compilation Release(s) : None  
Stated compatibility : BBC Side A, Electron Side B  
Actual compatibility : As stated  
Supplier : MARTECH, Martech House, Bay Terrace, Pevensey Bay,  
EAST SUSSEX BN24 6EE  
Disc compatibility : CDFS E00, DFS E00

## Instructions

The object of this game is to challenge and try and beat Brian Jacks in a series of eight physically demanding events. These events have been chosen by Brian to test not only the competitor's strength and stamina, but also their skill and co-ordination.

The instructions have been kept to a minimum. Most of the strategy involved is for you to discover.

IMPORTANT: Unless stated otherwise, the power in each event is increased by moving the joystick from side to side, or by tapping the "Z" and "X" keys alternately.

### 1. Swimming

Every so often, you have to breathe. To achieve this, simply press the fire button or the return key at the right moment. Failure to breathe correctly, when your head is under water for example, will have an unfortunate effect on your swimming ability.

### 2. Canoeing

Correct lane drift by holding stroke longer on one side.

### 3. Archery

The elevation of your shot is changed by pushing the joystick up or down or pressing the "\*" key for up, and the "?" key for down.

### 4. Cycling

To change up a gear, move the joystick up or press the "\*" key. To change down a gear, move the joystick down or press the "?" key.

### 5. 100 meters

### 6. Squat thrusts

Moving the joystick left or tapping the "Z" key will move you in one direction only and similarly, moving the joystick right or tapping the "X" key will move you in the opposite direction.

You have to do as many squat thrusts as you can in 60 seconds. A squat thrust will not be counted if either your knees do not come up to your elbows or your feet do not cross the line.

### 7. Arm Dips

You have to do as many arm-dips as you can in 60 seconds. An arm dip will not be counted if either your shoulder does not reach the judge's fist or your arms do not fully straighten again.

To complete one arm dip press the fire button or the return key to start moving down. Move the joystick from side to side or tap the "Z" and "X" keys to arrest this fall and then to push yourself back to the start position.

### **8. Football**

The object of this event is to dribble a ball around cones and then to try and score a goal. You have three goes at this, but you only have two minutes in which to do it.

Movement around the field is by using the keys "Z", "\*", "X" and "?". By pressing two keys at once, the number of directions of movement can be increased to eight.

When in front of the goal aim the cursor by using the joystick of the same keys as above. You will have to be quick.

Speed of movement around the pitch is increased by pressing the fire button or <RETURN>.

**Instructions' Source** : 10 COMPUTER HITS 3 (Beau Jolly) Inner Inlay

### **Review (Electron User)**

The object of this game is to challenge and try to beat Brian Jacks in a series of eight activities. The skill of play is entirely dependent upon your ability to manipulate five keys of the keyboard or use a joystick and fire button. The instruction for each event are very brief and it takes several attempts before a good technique can be developed.

The first challenge is a 50-metres swim. Using Z and X, you have to co-ordinate your strokes to keep a straight line. Periodically, you have to take a breath by tapping the RETURN key. On the earlier rounds, it's relatively easy to beat Brian.

Still in, or on, water, canoeing follows. Although you still use the Z and X keys to paddle, the technique is subtly different. The archery section that follows requires you to hit a moving target by predicting its movement and judging correct elevation of the bow. The wind speed is given as a guide. This challenge certainly needs practice.

A cycle race makes up the fourth section. This time the keys are used to drive the pedals. Careful use of the gears has to be made to enable a fast speed to be accomplished. The next event, the 100-meters sprint, is the simplest of all the activities.

The superb graphics of many of the sections are highlighted in the squat thrust competition. Using the familiar Z and X keys you move the body through four stages between being stretched fully out and the squat position. Again, the technique requires practice and development before a high score can be achieved.

The arm dips have equally impressive graphics. To lower the body, the RETURN key is tapped once. Raising it requires several taps of Z and X which are also used to arrest the fall of the body.

The final section is a football challenge. I found this most difficult to understand. The instructions with the package are extremely limited and non-existent in the program. You first have to collect the ball, dribble it between the cones and then into the red semi-circle.

I didn't realise when I fell over the first cone that I'd lost the ball. Then I tried to move the ball to the centre of the screen and not go into the semi-circle. Once in the semi-circle you have only a few seconds to aim your kick and fire. Be warned - the goalkeeper is very good!

At the end of each event the scores for you and Brian are shown and the running totals displayed before the next challenge.

Overall, this program meets the high standards set by other Martech programs I've used. While there's a great emphasis on key-tapping, I was pleased to see that there were considerably different techniques to be adopted for tackling the various challenges.

John Woollard , ELECTRON USER 2.12

WEAR NE21 4TE. Tel: 091 414 4611  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Compete in six stunning Rodeo Games Events in this impressive simulation which brings all the magic of the Rodeo Games to the computer screen!"*

## TRICK SHOOTING

The object of this game is to shoot as many targets as possible until you either run out of ammunition or time. In the first half of the game, your targets are 'pop-up' western characters, such as gunfighters, sheriffs etc.

The second half of the game comprises of a man throwing bottles which spin in the air, these you shoot. Both the games scroll back and forth when you move your gunsight.

Keys: Z - Move target left    X - Move target right  
      \* - Move target up       ? - Move target down  
      RETURN - Reload        SPACE - Reload when required

## KNIFE THROWING

This game is set against the backdrop of an Indian Reservation. Among the teepees is an Indian brave, and a squaw on the rotating wheel. Points are scored for hitting the wheel and not the squaw!

Keys: Z - Move target left    X - Move target right  
      \* - Move target up       ? - Move target down  
      RETURN - Throws knife

## BRONCO RIDING

In this game, you must try to stay on a wild Bronco (horse) for one minute. The Bronco jumps, spins, kicks, etc. in an attempt to throw you off. Should you fail to keep your balance, then you are spectacularly thrown through the air, to land with a bump!

Use Z, X, \*, ? to counteract horse motions i.e. opposite to direction shown by arrows.

## CALF ROPING

This game is set at a rodeo show. You must chase a calf across the arena with your lass spinning as you go. When you catch up with the calf, you throw the lasso round its neck and pull back to stop it. If you fail to pull back quickly enough then you are dragged from the horse and across the area! The view of the arena is from directly above.

Keys: Z - Moves roper left    X - Moves roper right

\* - Moves roper up      ? - Moves roper down  
<RETURN> - Throws Rope

### **STEER WRESTLING**

Set again in the rodea arena, this game is viewed from the side and above. You must chase a full grown steer on your horse. When reaching it, jump on it from your horse. If you manage to grab the steer, the game shifts to a window which displays you wrestling with the steer until you either bring it to the ground or it escapes.

Use <RETURN> to leap from horse, then use Z and X alternately to wrestle steer.

### **STAGE COACH RESCUE**

The Stage has been hi-jacked by rogue Indians. You must chase the Stage, avoiding objects the Indians throw at you until you grab hold of the coach and climb aboard. You now fight it out with an Indian on top of the Coach. The victor stays aboard.

Tap Z and X alternately to move horse forward (you can hold X) and \*, ? to move horse alongside coach. When beside coach hold <RETURN> to jump aboard. Slug it out with the Indian using X (block). \* - High Punch and ? - Low Punch.

**Instructions' Source** : BUFALLO BILL'S RODEO GAMES (Tynesoft) Back & Inner Inlay

### **Review (Electron User) - "Yeee...Haaaaa!"**

To say that BUFFALO BILL'S RODEO GAMES is an immaculately programmed and superbly presented package would be an understatement - this game is a classic. Not only are the six events extremely playable, they are also crammed with sound effects and illustrated with some of the best colour displays I have ever seen on the Electron.

Up to four players can enjoy the events, the first being the Trick Shooting, a difficult test of hand-eye co-ordination. Superimposed on a desert background is a floating gunsight, the vertical and horizontal movement of which is under your control.

One by one, a series of cardboard cut-out characters begin to flip up with increasing regularity and you must knock them down again before the brief time limit expires and they fall automatically. Variety is provided with the inclusion of good guys who should not be gunned down and vultures that can be plugged for a handsome bonus.

The fun continues in true western style as you enter part two of this event. A lone character tosses bottles into the air which act as flying targets and a real test of marksmanship.

Each event is followed by a resounding Yee-ha and very impressive league table. Staying with the target practice theme, we move on to event number two - the Knife Throwing.

Following a dramatic increase in scale we are treated to the view of an Indian squaw strapped tightly to a rotating wheel as she trustingly waits for her partner to launch eight-inch, razor-sharp blades in her general direction. The tension builds as each blade thuds into the spinning wheel, surely your luck - or should it be hers? - can't hold out much longer. Finally the inevitable happens and the badly judged projectile elicits a scream from the unfortunate assistant.

Calf Roping is the order of the day as we reach the half-way stage of Bill's Wild West extravaganza. An aerial view is used to follow the progress of galloping calf and pursuing cowboy. The trick is to ride alongside the animal and then throw a rope around its neck without taking a tumble yourself.

This is easily the most difficult event so far, since the mini steer has no intention of giving up peacefully and will try its best to unsaddle you - a technique at which it is most competent.

I found the Bronco Riding by far the briefest of the six events - especially when I was playing. Sat astride a fiercely bucking bronco, your sole objective is to stay in contact with your mount. An arrow system indicates the direction in which you are currently overbalancing, your job is to pound the key to move you in the opposite direction. It's not easy.

Steer Wrestling is similar in many respects to calf roping. A gallop at full speed followed by an athletic leap on to the charging steer and you are expected to pit your 12 stone frame against over a tonne of thrashing bone and muscle. No mean feat for Arnold Schwarzenegger, yet your fearless reviewer's keyboard bashing technique was more than man enough for the job.

In event number six you are called upon to retrieve a stagecoach that has been stolen by rogue Indians. By pummelling the Z and X keys you gallop towards the speeding vehicle with the intention of leaping aboard when alongside. Unfortunately the Indian on the roof has other ideas and continually tosses the passenger's luggage in your path.

Once on the stagecoach you climb to the roof and slug it out with the renegade redskin. The loser is the one who falls from the still speeding coach.

All of the events consist of three separate rounds, often of increasing difficulty. A very welcome feature that Tynesoft implemented is the replay facility - at the end of the third round you are always offered an opportunity to play the complete event again.

BUFFALO BILL'S WILD WEST RODEO SHOW is the best multi-event game to be released for the Electron this year. It is a product that further reinforces Tynesoft's mastery of this genre of game. Yee-ha!

James Riddell

### **\*\*\* Second Opinion \*\*\* (Electron User)**

Another in a long line of multi-part games from Tynesoft, and it's sure to be a winner. The variety of games, the superb graphics and addictive gameplay means you won't tire of this package as quickly as some of the cheaper offerings currently on sale.

### Instructions

The Xxabaneans (nicknamed the Bug Eyes) have set their sights on conquering the planet Earth. Galactic Intelligence have succeeded in locating the flagship, disguised as a meteorite and have managed to find out their plans. Their power generator is trained on Earth, ready to wipe out civilisation. It can only be approached by penetrating the ten levels of the ship, which are heavily guarded by Bug Eyes and devious booby traps. This power generator must be destroyed before the ship gets within range of the Earth. For this assignment, Galactic Intelligence have picked their best agent - the delectable Space Agent Zelda.

### Game Controls

During the loading process, you will be presented with three options for Left and Right controls.

**Instructions' Source** : AUDIOGENIC POWER PACK (Audiogenic) Inner Inlay

### Review (Electron User)

It's amazing how much Icon have improved since their early days. BUG EYES is their best yet. It's described on the rather smart cassette case as a fantasy arcade adventure. I wouldn't agree with the adventure part but it's certainly a good game.

Your objective is to reach the master power generator at the heart of a giant spaceship. This must be destroyed to prevent the Bug Eyes from reaching Earth.

There are ten different levels to be negotiated within the ship. At first it's quite easy with just a few bits of machinery to avoid. But on later screens there are various bugs and monsters bouncing up and down and flying around.

There are expanding and contracting platforms and disappearing walkways. If you're too slow they're gone and you'll fall on to rows of deadly spikes.

It's a fairly simple game with only two keys to control the man, left and right. The main difficulty is timing your run across the platforms and under the machinery so that you're not squished or hit by flying bugs.

The graphics are superb and although it's in Mode 1 with only four colours they're very sharp and move smoothly. The demonstration mode, which flicks through all the screens, is quite nice to watch.

BUG EYES is a simple but enjoyable game which will keep you amused for a while. Arcade addicts may think it a bit too easy, but I found it just about my level.

## Instructions

*"Light years from Earth lies the rusting hulk of the Xxabanean flagship, disabled while on its mission to vapourise our planet by the super-heroine Space Agent Zelda! She managed to destroy its power source, but was captured in the attempt and locked away in the depths of a distant and desolate asteroid. You, as Space Agent Starman, must penetrate the defences of the ship and collect the 25 keys required to free Zelda from her intergalactic prison.*

*"But beware. Some of the old Xxabanean booby traps are still in operation and strange alien creatures have moved into the empty hulk. You only have five refills of oxygen and your limited supply is depleted more quickly by collisions with objects and creatures. You must find the keys before it runs out.*

*"This package contains a BBC-B version and an Electron version. This is a flicker-free zone and a no-go area for nasty small sprites!*

*"Here's what the critics said about Bug Eyes...  
"'Flipped!' Home Computing Weekly Top Rating  
"'The graphics are superb,' Electron User."*

## Game Controls

Z - Left, X - Right, : - Up (in lift), / - Down (in lift)  
Q/S - Music Off/On

**Instructions' Source** : BUG EYES 2 - STARMAN TO THE RESCUE (ASL) Inner Inlay

## Review (Electron User)

After completing her mission to destroy the Xxabanean flagship, agent Zelda was captured and imprisoned in the depths of a desolate asteroid. You are agent Starman and must negotiate the asteroid's defence systems and find the 25 keys which are required to free her.

Neither the title nor the rather mediocre cassette cover do anything to entice you to buy the game, which is a pity as the game is a stunner. BUG EYES 2 could be summed up by the term "big is beautiful". Each of the screens in this ladders and levels game looks like it has been painted with a four inch brush.

The graphics for both the background and the sprites are big, chunky and colourful. The simplicity of each screen does not necessarily make the game easy. It has been designed in such a way that you feel each screen is merely a tiny portion of a larger unseen screen.

Some of these sub-screens are linked directly - for instance, falling off the edge of a cliff will take you straight into the screen below. Other screens are accessed

via the lift shafts which riddle the asteroid. On leaving the lift you are hoisted on to a Sinclair C5 and driven to the next screen.

The reliability of this mode of transport is suspect as you occasionally have difficulty starting the vehicle. You enter the asteroid with five lives and a life is lost each time your oxygen supply is exhausted.

You can fall from any height without suffering damage but contact with an alien will deplete your oxygen supply. The types of aliens range from huge spotted caterpillars to enormous dinosaurs which fly with the aid of jet packs.

Playing BUG EYES 2 is relaxing and enjoyable, and for my money it is one of the best games of its type to date.

# BUGS

***Professional, Originally Released On Cassette Only***

Game Type : Arcade  
Author : Dennis Ibbotson  
Standalone Release(s) : 1984: BUGS, Virgin Games, £1.99  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : VIRGIN GAMES, 61/63 Portobello Road, LONDON W11 3DD  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"Gardening will never be the same again!!"*

Everything in the garden's fine - but *not for long!* Suddenly, both you and your garden come under attack from a whole *army of nasties* which are out to get you. Armed with only a FAST FIRING SPRAY CAN it is up to you to destroy the *falling bugs*, the *vicious scorpion* which lays a trail of *deadly stings* and the *ever-present spider* which just will not leave you alone, until you zap him, but he has many friends who take his place.

As each attacking wave of BUGS is beaten off - yet another arrives - moving faster and faster. And don't be fooled by the slow moving *snail* crawling across the screen, his trail will prevent you from destroying the attacking bugs. Zap him now - before it's too late! It's now all up to you, be prepared for a fast-moving game that just goes on getting *faster and faster* - almost for ever!

## Game Controls

A - Up, Z - Down, < - Left, > - Right, <SPACE> - Fire

**Instructions' Source** : BUGS (Virgin Games) Inner Inlay

## Review (Electron User)

Just when you thought it was safe to go out onto the lawn and sunbathe, along comes BUGS from Virgin Games. All is not well in the garden. You are being overrun by an army of marauding bugs. All you have to repel them is your trusty bug-blasting spray can, your fast reactions and quick wits.

The bugs start at the top of the screen, slowly working their way nearer and nearer to where you are at the bottom. Don't concentrate on them too much or you'll miss the spider that bounces along, just waiting to gobble you up. You can jump upwards or sideways to avoid it, but it's a persistent little beast - always there when you least expect it.

And that's not all. Watch out for the harmless looking little snail crossing the screen. He may look sweet but that trail he's laying can stop you hitting the other bugs. Also the scorpion that crosses the screen leaves a trail of deadly stings waiting just for you.

The instructions, both on screen and on the pack, are clear and simple, as is the keyboard layout. The sound is very good and the graphics are excellent. Fast, funny and addictive, it's a very good game for the younger Electron buffs. That's if their parents will let them have a go.

Bev Friend, ELECTRON USER 1.10

# BULLSEYE

## *Professional, Originally Released On Cassette Only*

Game Type : Questions And Answers Based On The Television Series  
Author :  
Standalone Release(s) : 1984: BULLSEYE, Macsen, £9.95  
Compilation Release(s) : None  
Stated compatibility : BBC Side A, Electron Side B  
Actual compatibility : As stated, but note there are different question files!  
Supplier : MACSEN, G.B.A. Limited, 17 Nott Square, Carmarthen, DYFED  
SA31 1PQ  
Disc compatibility : Unknown

### Instructions

BULLSEYE is a version of the successful TV quiz programme, adapted for popular home computers. It is a game for two players, played over four rounds. Skill at answering questions from any of nine different categories is combined with simulated dart throwing to gain high scores.

The cassette includes the game itself and two question files containing hundreds of questions, to give you hours of competitive enjoyment. (Because of space constraints on the BBC and Electron micros, the questions have been divided into several files.)

### Loading

To run the game, make sure that the cassette is rewound if necessary. Type in CHAIN"" and press RETURN. Then press PLAY on your recorder. Several programs will be loaded. Make sure that if your recorder is not motor controlled, you stop it as soon as BULLY appears (and the BULLSEYE theme music starts). Then press the SPACEBAR to continue.

At this stage, you will be asked if you want to load a new set of questions. If you answer "Y", the next set of questions on the tape will be loaded into memory. If you answer "N", the computer will use the set already in memory. Remember to restart and stop your recorder if necessary.

Note: Each side of the tape contains the program but holds different question files.

### Playing The A Game

- \* Indicate whether sound should be disabled or not.
- \* Enter the name of each of the two players. (Press RETURN at the end of each name.)
- \* Select the skill level for this game. This will affect the amount of time you have to answer questions. To alter the skill level press the SPACEBAR and notice how the skill level indicator at the bottom left of the screen changes. The more red that shows in this box, the shorter is the time allowed for answers. Press RETURN when the level is set as you wish.
- \* At this stage, you will be taken through each of the four rounds that make up the game. Details of each round are given later.
- \* At the end of the game, the winner will be highlighted. Press the SPACEBAR to start the next game.
- \* The game may be restarted at any time by pressing the ESCAPE key.

### Dart Throwing

To position the hand ready for dart throwing, press the left or right cursor keys. This causes the hand to move across the screen. When a dart is thrown, it will land roughly on a line drawn from the top of the screen to the bottom, passing through the position of the hand at that moment.

How far above or below the hand position the dart will land is ruled by the dart's strength of throw. To set this, hold down the SPACEBAR and notice the "STRENGTH" indicator at the bottom left of the screen change. Judge the strength you want to release the SPACEBAR at this stage to throw the dart.

### **ROUND 1**

Each player is called to the ockey three times. (Notice the THROWER name at the top left of the screen.) A dartboard with eight sections is shown. Each section is marked with a letter from A to H, with one section being highlighted by having its letter printed in white. Each section is linked with a subject - the subject for the highlighted section being shown at the left of the screen.

The player can select the subject on which he would like to answer a question by pressing the SPACEBAR to move the highlighted letter clockwise one segment at a time.

Having selected the ideal subject, a dart can be thrown using the left and right cursor keys and the SPACEBAR, as explained in the section on dart throwing.

A question will then be posed on the subject that is hit. (If this is also the subject chosen by the player, a bonus score is awarded, this being higher the closer the dart comes to the bullseye.) Answer the question correctly and your score increases. Answer incorrectly (or not at all within the time allowed) and your opponent has a chance at answering and gaining points.

### **ROUND 2**

This round uses a normal dartboard.

Each player is called to the ockey to throw three darts. The player with the higher score then wins an attempt at answering a general knowledge question to win points. Again, an incorrect answer gives the opponent a chance to answer.

This is repeated three times in all.

### **ROUND 3**

This is a bonus round, where the player who is currently winning throws nine darts at a special dartboard showing eight red segments and eight black segments.

Hitting a red segment ONCE ONLY scores a bonus. The bonus is increased for each red segment hit. Hitting a red segment TWICE loses the last bonus added and the bonus available for the next segment is also reduced. Hitting black segments has no effect.

### **ROUND 4**

The player with the higher score is asked whether or not he wishes to gamble on the last board. (If not, the other player must gamble.)

Whichever player accepts the challenge has four darts to throw at a normal board in order to score 101 or more.

Success means his score is doubled.

Failure means his score is halved.

### **Notes On Answers**

- \* If you make a slight mistake in spelling an answer, you will usually be allowed a second chance.
- \* Numeric answers must be given using the number keys (eg type 5 rather than FIVE).
- \* Answers are all single words. Unless stated otherwise or unless a person is usually known by first name alone, surnames should therefore be used to identify people.

**Instructions' Source** : BULLSEYE (Macsen) Inner Inlay

## Review (Electron User)

Electron owners can now experience the tension of ITV's popular dart throwing quiz game called BULLSEYE. The game's format faithfully follows that of the TV program except that it involves just two players.

The first part involves throwing a single dart at a board divided into eight segments. If you hit the area you aimed for you win points and get a question. A correct answer to the question earns you more points. A wrong answer means your opponent can try to answer it.

Each player has three turns at this and points can only be scored when the section is hit for the first time.

Round two uses a standard match play dartboard. Again the players take turns to throw darts and the person with the highest score earns a question. If this is answered correctly, the darts' score is added to that player's total.

After three rounds the winner moves on to the prize board. Nine darts are thrown and if they land in the small red sections more points are won.

The fourth part of the game involves a gamble. If you can score 101 or more with four darts your score is doubled. If you fail your score is halved.

The graphics are good, with the dart board being drawn quickly and neatly. Bully is drawn even more quickly and he bears a good likeness to the TV version. Even the text is well presented using an unusual but clear set of characters.

A couple of spelling bugs are an irritant. I'm not an expert at darts but I thought the line you stand at was called the oche. Macsen have their own version.

I'm also left wondering how they want me to spell the Greek philosopher Plato. With several files of questions, I suppose a couple of mistakes are inevitable. More annoying is the fact that the Plus 1 on the Electron has to be disabled before loading this game.

This game lacks a little something. The excitement of the TV program lies in the cash and prizes that competitors win. Mere points seem very dull by comparison.

The darts throwing is also rather predictable. I could consistently throw twenties by but the trebles were more elusive. Despite all this the game is quite fun to play if a little slow at times.

## Instructions

Guide Bumble around the maze swinging the turnstiles and collecting the pollen, keeping clear of the toadstools and the fire barrels. Pursuing you around the maze is a bunch of scuttling spiders who can only be killed by luring them into the fire barrels - they are unaffected by the toadstools. The pollen flashes to let you know that a spider is about to emerge from the central lair.

When all the pollen has been collected, panels open in the box marked 'OUT'. Enter the box to progress to the next maze.

## Scoring

Each Pollen Dot	.	.	.	.	.	.	.	.	5
Killing a Spider	.	.	.	.	.	.	.	.	250
Peach	.	.	.	.	.	.	.	.	100

Clearing 3rd Screen	.	.	.	.	.	.	.	.	150

An extra life is awarded at 4000 points.

Alternatively you may use joysticks via a switch-type joystick interface.

## Game Controls

Z - Left, X - Right, : - Up, / - Down

**Instructions' Source** : BUMBLE BEE (Micro Power) Inner Inlay

## Review (Electron User)

Micro Power have gained an enviable reputation for producing quality software for the Electron. BUMBLE BEE is yet another addition to the range. The game has its origins in Pac man and will appeal to arcadians who love being chased round a maze by assorted bugs and beasties. However it requires a lot more thought than the original when playing.

You are the bumble bee in the title, scurrying round a maze of swinging turnstiles collecting pollen grains. Spiders emerge and chase you making the task more difficult. When you have collected all the pollen you buzz over to the Out sign and move on to the next screen. At 4,000 points you gain an extra life to add to the three provided at the start.

The interesting part of the game is the turnstiles. You can swing them but the spiders can't. So you can block off the spiders in a different section, or swing a turnstile into their path if they are about to pounce on you.

Entering your name into the high score table is almost as hard as the game. The letters of the alphabet are printed in a grid and you have to fly over the correct letters to spell your name - and it's not easy as you buzz about the screen at top speed. After an hour the high score table was full of names like RLANDI, RON AND and ROFLANG!

The only grumblers are the length of the loader - 7k is just too long so I didn't bother with it and just \*ran the main program. And if you want to use joysticks you need a switch type joystick interface - it ignores the Plus 1.

BUMBLE BEE is a well written addictive arcade game with colourful, smooth graphics and good sound. It's well worth buying, so start saving your pennies now.

Roland Waddilove, ELECTRON USER 2. 5

# BUMPER BUNDLE

*Professional, Originally Released On Cassette Only*

Game Type : Arcade  
Release Information : 1985: 5 COMPUTER HITS, Beau Jolly, £6.95

## Review (Electron User)

BUMPER BUNDLE is a tape collection of four programs: BUG BLASTER, LUNAR RESCUE, HELL HOLE and CROWN JEWELS.

BUG BLASTER is an action-packed arcade game with the sole object of blasting everything that moves - and those things that sit still! You control the left and right motion of the zapper which fires vertically. You can push it up and down, but the window of movement is limited to the bottom five lines of the screen.

At the start, the display contains randomly placed mushrooms. Immediately, a centipede begins crawling left then right across the screen and slowly descending. As you fire and hit the bug, it breaks into separate sections, each with a life of its own.

Falling vertically down the screen and moving from left to right are various other creatures - spiders, scorpions, dragonflies and snails. Each of these scores points if zapped. If you come into contact with any of the bugs there's an explosion and one of your three lives is lost.

Your LUNAR RESCUE mission is to descend from an orbiting station, carefully avoid the asteroids, and land. After a man has boarded your craft, it ascends. On the way up you have to avoid or destroy the aliens.

Eventually, you dock the rescue vehicle on the mother ship. You have three attempts in each game. Scoring is based upon the number of aliens zapped and the difficulty of the landing site chosen.

HELL HOLE is definitely a more intellectual arcade game. I've spent many hours working at it, but I still haven't sussed out how to trap or capture the fiend. Please let me know if you have the answer. Like the two other arcade games, the graphics and sound are very good. All three are quality software.

The fourth program of the suite is an adventure game based upon the unlikely event that a joker has stolen the CROWN JEWELS and then hidden them at various locations in London. The graphics are not outstanding but, as far as I could tell not having finished it, the adventure is well worth pursuing.

I was really impressed with this collection of programs. All four proved to be of a high standard in presentation and content. This is truly a BUMPER BUNDLE.

## Review (Electron User - Covering Series BUILDING SOCIETY CARE, CASH CARE and VAT CARE)

People who wish to do the simple tasks well need look no further than The Care Utility Series from Squirrel Software. I have tested three of Squirrel's programs:

- \* CASH CARE copes with up to sixty categories of income/expenditure in either one or two accounts.
- \* VAT CARE produces the three-monthly VAT liability reports on up to 150 sales or purchase postings per month.
- \* BUILDING SOCIETY CARE handles a maximum of 208 deposits, withdrawals or rate changes in any year to a building society account thereby allowing one to know the interest earned at any given time.

It is a great compliment when I say that CASH CARE is the sort of program which you'd wish you could produce at home over a weekend. At the cost of a take-away meal, Squirrel have taken all the chore out of getting a useful program.

VAT CARE adopts the same no frills approach. For the small tradesman who loathes keeping the books and is not interested in copious management information, this is the ideal system.

Whereas Bank and Vat Care work on the time honoured principle, BUILDING SOCIETY CARE is more like a spreadsheet. This is so that you may experiment in order to test the effect of money being moved around. Each row represents a transaction, while each cell of the matrix represents the detailed effect the transaction has upon the account. At a cost of ten to fifteen pounds each, they represent excellent value for money.

## Review (ELBUG - Combined Review Of BUN FUN, SUPER GOLF and TRAFALGAR)

The three games reviewed here all come from a relatively new software company called Squirrel Software. The first of the three, BUN FUN, has a rather uninspiring name and, once running on the Electron, turned out to be a rather uninspiring game.

You are in a factory which makes buns, and you have been left in charge of placing the icing and nuts on top of the buns. Your pay at the end of the day depends on the number of completed buns you produce and the amount of waste you create.

After playing this game a couple of times, I had no desire to continue playing it.  
Rating: \*

The second game, SUPER GOLF, was an improvement over the last, in that there was more to think about and it was enjoyable to come back and play it again.

The choice of colours used in the program made it difficult, often impossible, to follow the ball (although if you are a keen spectator of golf on television, you may well be accustomed to the fine art of finding the ball!).

Up to four players are allowed to play this game, and at the end of every hole, a score card is displayed for each player. The course consists of the usual eighteen holes, with the option to miss out any hole.

It is a pity that this game does not generate sound effects, especially for driving off, and that the ball does not roll on if it lands on the side of the mountain the program often creates for some of the greens. Rating: \*\*

The third and final game called TRAFALGAR was the best out of all the games from Squirrel Software. The object of the game is to sink as many of the opposition's ships as possible at the Battle of Trafalgar.

The game allows two players or one player and the computer to do battle. Sometimes the computer seems to have a remarkable aim, especially when it's losing!

The graphics are clear and well designed, with interesting sound effects. The visual effects of the ships exploding and sinking were particularly striking. Rating: \*\*\*

In conclusion, BUN FUN was not an enjoyable game, and SUPER GOLF did not play as realistic a game of golf as other similar programs on the market. TRAFALGAR is the best game so far from Squirrel Software, though if they want to compete seriously

with some of the larger software producers, they will have to increase the standard of their games software quite considerably.

## Instructions

### Introduction

BUSINESS GAMES contains two educational games. Although intended for use in business and economic studies, teaching the games are entertaining and thought-provoking in their own right.

This guide describes the two programs that make up BUSINESS GAMES.

STOKMARK, which simulates the conditions of the stock market, with realistic behaviour of share prices based on an analysis of real companies.

In TELEMARK, four teams or players each control the finances of a firm that makes and sells televisions.

In both these games each player in turn will be prompted either to select an option (for example, Yes or No) or to enter numbers or letters: the <RETURN> key should be pressed after each selection or input.

## STOKMARK

This is a game for between one and eight players, each of whom tries to make as large a profit as possible by buying and selling shares on the stock exchange.

### How to play

1. Once the program has been loaded step through the introductory screens by pressing <SPACE> as prompted. You will then be prompted to type in the number of players (1-8) and their names. (Remember to press <RETURN> after entering each name.) The order in which the names are entered will be the order of play throughout the game.

The <DELETE> key can be used to correct typing mistakes while entering data, but after you have pressed <RETURN> mistakes cannot be rectified.

2. Each player starts with £1200 which can be used to buy in stock initially. The computer asks each player in turn how they will trade. In response to the question "Which shares will you trade?", reply by selecting one of C, D, E or F, and then type in the number of shares you want to buy.

For example, to buy shares in Electrix enter E, followed by the number of shares you wish to buy as prompted by the computer.

3. In subsequent rounds the computer asks whether you want to buy or sell according to whether you possess shares or not. After specifying the kind of shares (C, D, E or F) and typing B or S to buy or sell, type in the number of shares you want to trade.

4. After the third round a valuation is given, showing who is 'worth' the most in terms of capital and shares owned; this person is in the lead. (Rounds are numbered in the top right-hand corner of the screen.) Dividends are paid after every fourth round, and displayed as shown below:

DIVIDENDS PAID

- C) Colemine pays 10 per cent
- D) Derfoods pays 11 per cent
- E) Electrix pays 15 per cent
- F) Fintrust pays 12 per cent

DIVIDENDS RECEIVED

	(C)	(D)	(E)	(F)	Total
Jonathan	15	29	21	42	108
Sarah	8	19	0	12	39
Dave	27	14	18	42	102
Pippa	12	13	0	36	61

Press SPACE BAR to continue

5. News of current events and company news affecting share prices is displayed at intervals during the game.
6. If a player does not want to trade when their turn comes round they can type M to miss a turn.
7. The first player or team to reach a valuation of £5000 is the winner.

**Explanation of terms**

Dividend = IF a person invests their money in a company by buying shares, they can expect a return on their investment in the form of a share of the profits. This share of the profit is referred to as a 'dividend'.

In this game, all the companies declare half their profits as dividends, and calculate their value as a percentage of the original share price (i.e. 100p since all shares are 100p to start with). Dividends are paid after every fourth round.

Price = THE current market price of the shares.

Price to Earnings ratio = The P/E is the ratio of the market price of the share to its earnings in terms of profit. In other words  $P/E = \text{Price per share} \div \text{Profit per share}$ . A low P/E is a sign of high profits in relation to price.

Punter = A SMALL gambler on the Stock Exchange.

Yield = WHEN trying to assess the performance of shares the yield is an important indicator of their worth. You will see that initially the yield of all shares is the same (10), but the yield of the shares will fluctuate during the game. The yield is calculated as:  $\text{Yield} = (\text{Nominal value} \times \text{dividend}) \div \text{Market price}$ .

As the game progresses you will see the yield fluctuate according to how the current market price changes in relation to the original 'nominal' value of 100p. Notice that a high market price does not in itself give an increased yield, but high dividends will always work in favour of the yield.

**Some general advice**

When buying shares, use the Price to Earnings ratio and the Yield to assess their performance.

As a general rule, the price of shares will increase when they are bought, and will decrease when they are sold; such is the law of supply and demand, where something which is sought after becomes less available and more expensive, and something which is not in demand becomes more readily available and cheaper in price.

**TELEMARK**

The object of this game is for each of four players or teams to try to make the largest total profits, or to win more than half the market share of televisions.

### **How to play**

1. Once the game has been loaded step through the introductory screens by pressing <SPACE> as prompted. Then name the players as prompted by the computer. (Remember to press <RETURN> after entering each name.) The order in which names are entered will be the order of play throughout the game.

The <DELETE> key can be used to correct typing mistakes while entering data, but once <RETURN> has been pressed, mistakes cannot be rectified.

2. Every player starts off with 2165k (the letter 'k' means £1000). All numbers are rounded down to whole thousands on the screen to keep it simple, but are stored in the computer as pounds.
3. The computer will keep accounts for each players, but you may find it helpful to work out a break-even chart on paper along the lines of the sample break-even analysis detailed shortly. Some blank charts (including charts for a break-down of cash flow) are stapled into this booklet for your use.
4. The computer asks each player to make various decisions, the first few of which require Yes/No answers. Select Y or N, or alternatively, type Q (Query) for information.

### **Allocating funds**

5. The first decision to be made is whether to build a factory for 1000k and then whether to build an extension.

When you buy a factory or an extension half the money is spent on buildings, and half on plant or machinery. Buildings retain their value in full, but there is 10% depreciation on machinery, and this is taken into account when calculating profit at the end of each round.

6. There is space in the factory to build or store 12 batches of televisions, and an extension provides sufficient space for four more batches.

Every player starts off with twelve market shares, which correspond to the maximum capacity of the factory to begin with - i.e. to produce and store twelve batches of televisions.

To expand, you need an extension, which will provide room for four further batches, and you need to bid for a larger market share by spending 25k on extra marketing. Thus if a player decides to produce a larger number of TVs than their current market share, they are asked whether or not they would like to bid for more market shares.

7. As in real life, there is an element of chance in the game. A decision to spend on better management could result in improvements to the firm's performance, but equally, could gain nothing, or even result in the threat of a strike for which the player is penalised. The chances of suffering a penalty in the first two rounds is nil, but chances increase in later rounds.
8. In each round the computer detects a sum for overheads. These consist of bills for the rates, electricity, transport and so on, and the amount varies according to the size of the firm.

### **Working out a selling price**

9. You can charge anything between 1 and 50 for your televisions. Avoid letting the other players see the price you type in (the number itself will not be displayed on the screen).

If you are somebody who does not like to leave these things to chance, then it is worth working out a break-even price for your TVs as shown in this example:

### Break-even analysis

1) Work out depreciation and plant value	e.g.
New factory	1000
Extension	400
	----
CAPITAL SPEND (subtotal)	1400
Capital Spend DIV 2 (for plant)	700
Add the old plant value	0
Plant value DIV 10 (for DEPRECIATION)	70
	----
NEW PLANT VALUE	630
	----
2) Add up your planned current spend	
Opening stock value	0
Management	25
Risks	0
Overhead	
factories @ 120k each	120
extensions @ 10k each	10
16 batches of TVs @ 20k each	320
Market bids @ 25k each	25
	----
CURRENT SPEND (total)	500
	----
3) Add depreciation	
Depreciation	70
	----
TOTAL COSTS	570
	----
4) Divide by how many you might sell	
Total costs/market share (e.g. 12)	47
Total costs/market share +4	36
Total costs/market share -4	71
5) Decide how many you will sell	
6) Less innovations @ 2k each	0
	----
7) = BREAK-EVEN COST (e.g. for 16)	36
	----
8) Add PROFIT (say 4)	4
	----
9) = SELLING PRICE	40

The break-even price, as its name implies, is the lowest price you can charge and still cover your costs. Once you know what the break-even price is, you can decide on a price that you think the market can bear, and which allows you some profit. Bear in mind, however, that the higher the price the more risk there is of losing market shares.

If you charge less than 1 the computer sets up a black market to raise your price to 50. If you charge more than 50 then an importer takes all your market shares with a price of 51.

10. If you have won any innovations they are worth 2k for every batch you sell and the computer takes this into account when calculating your profit.
11. When you have input prices, the computer compares them and decides how many you actually sell.

If you have bid for extra market shares and your prices is lowest you might gain four more market shares, in order words sell 16 TVs instead of 12. But if your prices is highest you might lose 4 market shares. It is possible to lose more than 4 under certain circumstances.

12. The computer finally displays a series of four information sheets which compares the performance of all four players; notes on these are given below.
13. When each player or team has examined their finances, and decided on a strategy for the next round, the game continues.

#### **A Market shares report**

This shows the proportion of the market currently held by each player, and is based on the number of TVs they have sold. The number of TVs sold by a player is calculated by the computer on the basis of how their selling price compares with the prices set elsewhere in the market.

The winner of the game is the player or team who succeeds in winning over 24 market shares.

#### MARKET SHARES REPORT

	4	8	12	16	20	28	32
	*	*	*	*	*	*	*
Simon 12	XXXXXXXXXXXXX						
Neil 8	XXXXXXXX						
Cathy 10	XXXXXXXXXX						
Tim 16	XXXXXXXXXXXXXXXXXX						

#### **B Profit and loss account**

This gives each player's profit or loss figure for the round, which can be calculated as follows:

- Deduct production expenses from the revenue (money obtained from the sale of televisions) to discover the profit before depreciation.
- From this figure deduct 10% depreciation, to obtain the profit or loss figure.

#### **C Total profit**

This gives an overall view of the amount of cash each player has (with loans subtracted) and the total profit during the course of the game.

#### **D Balance sheet**

A company's balance sheet summarises its financial position by showing all that it owes, including what it owes to its shareholders (or liabilities) in one column and all that it possesses (or assets) in another column. The two columns must add up to the same amount, being balanced by total profit or loss. Here the balance sheet is abbreviated to show the major items as they appear in the game.

As a training exercise you might like to work out your own profit and balance sheet, and check it against the computer's.

# BY FAIR MEANS OR FOUL

## *Professional, Originally Released On Cassette Only*

Game Alias : PRO BOXING SIMULATOR  
Game Type : Arcade; Beat-'Em-Up  
Author :  
Standalone Release(s) : 1987: BY FAIR MEANS OR FOUL, Superior/Acornsoft, £9.95  
Compilation Release(s) : 1990: PLAY IT AGAIN SAM 12, Superior/Acornsoft, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : Unknown

### Instructions

The objective of the game is to defeat each of the opposing boxers over 15 rounds or within five chances (lives).

In the Two Player Mode, you complete against a friend. In the One Player Mode you complete against the computer, and attempt to become the World Champion by defeating six opponents, each in turn more difficult to beat. Once you have become the World Champion, you then continue to defend your title against tough opponents.

The chances (lives) remaining for each boxer are indicated in the top corners, inside the silhouettes of men on the BBC Micro version. The changing colour of each silhouette indicates a moderate chance and green indicates a very good chance of achieving a successful foul move. On the Electron version, the safety factor is indicated by the red/white oblongs.

Apart from foul moves, there are also of course the standard legal moves, including punches and blocks. It will be noticed that a knock-out does not normally indicate the end of a bout, simply the end of a round exhausting all of the boxer's energy. This energy is then restored at the beginning of the next round.

If two players become too close, they will automatically go into a hold position and cross sides of the ring. On repetition of this move, a player runs the risk of forfeiting a chance (life).

### Game Controls

## Review (Electron User) - "It's A Knockout!"

In spite of its rather peculiar title, BY FAIR MEANS OR FOUL (BFMOF) is in fact a boxing game in the mould of Tynesoft's THE BIG KO. I first became aware of the game's development well over a year ago, and was about to consign it to legend when it dropped through my letterbox.

Like THE BIG KO and the various karate games that have appeared on the Electron, BFMOF allows you to execute a variety of boxing moves. These include a body blow, uppercut, standard punch and duck punch - all perfectly legal manoeuvres. You can also move backwards and forwards and block your opponent's blows by engaging either a high guard or low guard. These are the fair moves. You can however, also execute four foul moves - head butt, knee, kick and groin punch - hence the name of the game.

Like any boxing match, the fights are supervised by a referee who will try to ensure a good clean fight. However, there are times when his attention wanders, so if you want to play dirty, strike quickly.

The probability of executing a foul move without attracting the referee's attention is indicated by the colour of a box below your score. If it is red then you will certainly be spotted, and red/white indicates that you stand a reasonable chance of getting away with it. A white silhouette gives the all clear to any dirty move.

The referee's attention is constantly changing, so he may be watching one competitor with an eagle eye while the other may be able to execute all kinds of ungentlemanly moves. You start off with five lives and will lose one if you are caught attempting an illegal move.

Each player - you can square up to another human or the computer - has an energy level which falls every time your opponent lands a punch. When it reaches zero you

lose a life. Fortunately, your energy builds up gradually, but you will have difficulty in avoiding your opponent for any length of time. Your energy is restored to maximum at the end of each round, so you can sometimes hang on long enough to fight another day.

Rounds are one minute long, and the time can seem to go very quickly if you are losing. If neither player manages a knockout, the one with the highest energy level at the end of the round is the winner. The defeated player loses a life.

Like author Michael Simpson's other game, WAY OF THE EXPLODING FIST, BFMOF pits you against a number of increasingly skilful and vicious opponents. Your first only knows a few moves and is a fairly clean fighter. Later ones can call on a wider range of skills and manoeuvres and do not hesitate to use them.

The ring scene graphics are not particularly impressive, and the game seems rather devoid of colour - a stark contrast to EXPLODING FIST. However, the animation of the two boxers is very lifelike, as they swing their arms and jump around on their toes.

The crowd certainly believes in audience participation. If you manage to land a punch, a little "Get him!" or "Again!" speech bubble appears in the air behind you. If you manage to win a round, your fans go wild and celebrate with a deafening roar.

However, they are not particularly patient, and will soon start to shout "Chicken!" if you are seen to be avoiding the action. The referee is a little more subtle - he just goes to sleep. Above all, the audience likes to see clean fighting, and if you or your opponent stoop to ungentlemanly tactics, the audience will soon voice its disapproval by booing the offender.

The players can be controlled using either the keyboard or joysticks, and the controls can be selected individually - one player can use the keyboard and the other a joystick.

You can switch the sound on and off at will, and if you don't like the crowd encouraging or booing you, simply turn them off as well. The game features a demonstration mode that can give you a good idea of strategy and gameplay. Watch it closely.

BY FAIR MEANS OR FOUL is the result of a well-used idea approached from a different direction and, as such, has been implemented well.  
Martin Reed

### \*\*\* Second Opinion \*\*\* (Electron User)

I'm not one to stop up until three o' clock in the morning just to see Mike Tyson slogging it out with some other prize-fighter. However, I did enjoy this conversion of the popular blood sport.

The graphics are quite good, though they certainly aren't the best I've seen. The animation is reasonably fast and the sound is OK. Overall a competent arcade combat game that deserves to do well.

Disc compatibility : Unknown

## Instructions

### Objective And Scoring

You have been deposed from your throne in Camelot after being accused of cowardice, stupidity and generally mismanaging the Kingdom. In order to convince your subjects that you are worthy of the throne, you must successfully fight your way through the castle and surrounding terrain against various creatures, including soldiers, witches and warlocks.

To succeed in your mission, you must collect over 3,000 points. There are six bags of gold to recover, for which you score 450 points each. You also score points by killing creatures, with higher scores being obtained for creatures which are more difficult to kill. For example, you will score more points for killing a witch than a soldier, but it will take more shots or drain more energy to do so.

### Objects

Some of the rooms contain objects. These can be picked up by standing in front of them and pressing the P key. Five objects can be carried, but only one of any type of object, e.g. only one key. When collected, a brief description of the object appears at the top of the screen.

### Energy

You start the game with some energy, but this is lost in various ways, e.g. by colliding with the various creatures in the game, or by falling in the water. Energy can be replenished by collecting the hearts that are hidden in some of the casks. However, be careful as the casks sometimes contain demons, who will jump out and drain your energy!

### Time Limit

There is a time limit to the game. When the timer reaches zero, you will die. There are many doors and puzzles in the game. When you open a door or solve a puzzle, you will be rewarded with additional time. So it is important that you try to solve the puzzles in a logical order.

## General Hints

All the creatures in the game can be killed. However killing a creature only temporarily removes it from the screen. On returning to the screen you will find that it has been replaced by another creature who is more vicious and harder to kill.

Killing something in one part of the game can affect other parts. Generally speaking, the more killing you do, the harder the game will get!

## Game Controls

Z - Left, X - Right, \* - Up, ? - Down  
<RETURN> - Jump (Press longer to jump higher), P - Pick Up Object  
<SPACE> - Throw Fireball, <SHIFT> - Use Spellbook (when carried)

<COPY>/<DELETE> - Pause On/Off

**When Game Is Paused**

S/Q - Sound On/Off,      <ESCAPE> - Quit Game

# CASTLE ASSAULT

*Professional, Originally Released On Cassette Only*

Game Type : Arcade  
Author :  
Standalone Release(s) : 1985: CASTLE ASSAULT, Blue Ribbon, £2.50  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : BLUE RIBBON, CDS House, Beckett Road, DONCASTER DN2 4AD  
Tel: 01322 21134  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

A glittering reward awaits the intrepid atop the heavily defended towering turrets of this forbidding fortress. On your quest for god you will be assailed by a menacing menagerie of meanies, namely crabs, snakes, lobsters, spiders, bugs and beetles. Watch out for those malicious malades (the deadly Flying Ducks) as you dodge dalling rocks, scale ladders and negotiate moving platforms. Collect various different fruits for bonus points on your way. Bonus man for every two bags of gold collected.

Hi-score table, increasing difficulty, fantastic animation and highly realistic sound, constitute this truly stunning and imaginative game from Blue Ribbon.

## Game Controls

# CASTLE FRANKENSTEIN

*Professional, Originally Released On Cassette Only*

Game Alias : EPIC ADVENTURES #1  
Game Type : Text Adventure  
Author : Melvyn E. Wright & Dave M. Johnson  
Standalone Release(s) : 1984: CASTLE FRANKENSTEIN, Epic, £3.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : EPIC, 10 Gladstone Street, Kibworth Beauchamp, LEICESTER  
LE8 0HL  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

EPIC adventures are full-scale machine code adventure games. Sophisticated compression techniques have been used to provide a large number of locations and puzzles in each game. The adventures take place in a fantasy world which you must explore in order to find the solution to each game. You will require a combination of cunning, logic and magic, not only to complete your task but even to remain alive.

Each game is played by typing ordinary English sentences into the computer, which responds by describing your surroundings and telling you what is happening. Full playing instructions are included in each game.

Each adventure has the following features:-

Approximately 230 fully described locations, ultra-fast response, fast save of partially completed game on tape, scoring, disk compatible.

CASTLE FRANKENSTEIN is a full-scale adventure in which you have to explore the ruins and grounds of Castle Frankenstein in order to find and destroy the Monster which he has created.

It is nearly twenty years since the Frankenstein Monster was last seen or heard of. He is thought to have been destroyed in a fire at the Castle, but recently a series of unsolved murders has taken place in the nearby village, and the people fear that the Monster is on the loose again.

They have chosen you as the one to put an end to the curse that has plagued them ever since Dr Frankenstein brought his hideous creation to life.

Are you brave enough to explore the Castle, with its many dark tunnels and secret passages, and search for the Monster?

## Playing Instructions

Commands may be entered in the form of complete sentences. It is usually only necessary to enter the first two or three letters of most words, but if this doesn't produce the expected result, retype in full.

The program has a vocabulary of approx. 140 words and it is part of the game to discover what these are. However, some words that you will need to know are listed below. Most of them have single letter input.

NORTH, SOUTH, EAST, WEST, UP, DOWN, IN, OUT  
TAKE - To pick up an object  
DROP - To drop an object  
INVENTORY - To list your possessions

LOOK - To describe your surroundings  
SCORE - To obtain your score  
SAVE - To save the current game on tape  
LOAD - To load back a SAVED game  
QUIT - To end the current game

During the game you will need to use a lamp. Use the words ON and OFF to work the lamp.

### Helpsheet

This is an alphabetical list of all the locations, objects, characters and items referred to in CASTLE FRANKENSTEIN. The location and purpose of each item is given, and the information provided in one entry will usually lead you to other items in the list. If you cannot find the word you are looking for, it probably plays no significant part in the game.

It is up to you how you use these clues. You may want to read through them as you play the adventure, or you may prefer to use them only if you get stuck. In this case, a fair amount of will-power will be required to avoid reading entries that you do not wish to see!

Due to our policy of continually improving our produces, there may be minor differences in detail between these clues and your version of the game.

**ALCOVE:** Underneath the castle kitchen. See Table.

**ALE:** See Barrels of Ale.

**ANNEX:** Next to the library.

**BARRELS OF ALE:** In the inn storeroom. You cannot open these.

**BATTLEMENTS:** On the roof of the castle, above the collapsed wall.

**BEER BOTTLE:** See Bottles.

**BELL:** On the back of the shop door. Not used.

**BLIND MAN'S CABIN:** See Cabin.

**BOOK:** See Notebook.

**BOTTLES: BEER:** In the inn storeroom. Use this to carry water. See Waterfall. You may empty this anywhere or drink from it.

**OF CHEMICALS:** In the equipment storeroom. Not used.

**BOTTOMLESS CHASM:** See Chasm.

**BOW:** See Violin Bow.

**BRIDGE:** See Rope Bridge.

**BUILDING:** See Laboratory.

**CABIN:** In the clearing south of the narrow path. Enter it.

**CAN OF PARAFFIN:** In the cabin. See Lamp.

**CASTLE:** On top of the mountain.

**CAVE:** At the bottom of the stone steps underneath the experiments room.

**CELL:** See Dungeon.

**CELLAR:** Underneath the inn.

**CHAINS:** In the experiments room. Not used, but see Scoring.

**CHAIRS:** In the library. Not used.

**CHAMBERS, STONE:** See Stone Chambers.

**CHASM:** Out of bounds. As is the large hole leading into a room on the next floor.

**CHEMICALS:** See Bottles.

**CLEARINGS:** North of the forest.

Next to the cabin.

**CLOAKROOM:** Off the entrance hall.

**COBWEBS:** In various locations. For atmosphere only.

**COFFIN:** In the disturbed grave. Use the spade to dig it out. Open it.

**COIL OF ROPE:** See Rope.

**COIN:** In the coffin. See Shop.

**COLLAPSED WALL:** In the castle. You cannot get past here. Climb the rubble.

**COOKER:** In cabin. Not used.

**CORRIDOR:** See Tight Corridor.

**CRUMBLY ROCKS:** See Narrow Ledge.

**CRYSTALS:** See Flask.

**DARK TUNNEL:** Underneath the inn. Emerges at the base of the waterfall.

**DEEP PIT:** See Pit.

**DESK:** See Writing Desk.

**DINING ROOM:** Off the entrance hall.

**DISTURBED GRAVE:** In the graveyard. Dig here with the spade.

**DOORS:** **CABIN:** To the east of the cabin. Enter it.

**STONE:** See Rings.

**TRAP:** In the inn storeroom. Open it.

**WOODEN:** At the back of the castle. Use the key to unlock it, and the metal rod to prise it free, then open it.

**DUBIOUS PASSAGE:** You can negotiate this OK.

**DUNGEON:** Underneath the castle kitchen.

**ELECTRICAL EQUIPMENT:** In the laboratory. For atmosphere only.

**ENTRANCE HALL:** Behind the ring-stone in the castle wall.

**ENTRANCES AT WATERFALL:** See Waterfall.

**EQUIPMENT STOREROOM:** See Storerooms.

**EXPERIMENTS ROOM:** Off the laboratory. See Rings.

**FIREPLACE:** In the cabin. Not used.

**FLASK:** In the equipment storeroom. This holds the pink crystals. Pour the water from the bottle to form the pink solution. You will need this to revive the monster.

**FOOD:** In the castle kitchen. You can eat this if you are really hungry! You must place this on the floor before pulling the ring in the sulphur pit.

**FOOTHOLES:** Behind the waterfall. See Shallow Recess.

**FOOTPRINTS:** Outside the cabin. These were left by the monster when he visited the blind man.

**FOREST:** North of the village road, between the village and the mountain.

**FRANKENSTEIN'S: LABORATORY:** See Laboratory.

**MONSTER:** See Monster.

**NOTEBOOK:** See Notebook.

**FUMES:** Wear the gas mask to protect you from the sulphur fumes.

**GAS MASK:** At the top of the waterfall. Wear it, see Sulphur Pit, Scoring.

**GENERATOR:** See Wimshurst Generator.

**GRAVE:** See Disturbed Grave.

**GRAVEYARD:** Lies between the mountain path and the castle.

**GUN:** See Shotgun.

**HALL:** See Entrance Hall.

**HAMMER:** In the alcove. Use this to knock the rod into the ground at the top of the steps underneath the experiments room. See Rope, Scoring.

**HAT:** See Tin Hat.

**HOLE IN WALL:** See Chasm.

**HORN:** Ygor blows this to exert power over the monster. It is no use to you.

**INN:** East end of village. The adventure starts here and you must return here to finish the game.

**INSTRUMENTS:** See Musical Instruments.

**IRON KEY:** See Key.

**KEY:** At the bottom of the waterfall. See Wooden Door, Scoring.

**KITCHEN:** There are two: One in the cabin, and the other off the entrance hall in the castle.

**KITCHEN EQUIPMENT:** In cabin. Not used.

**KNIFE:** In the dining room. Throw this at Ygor to kill him. Use it to cut the rope bridge.

**LABORATORY:** Across the rocks just outside the library. Cross the rope bridge to get to it. See Operating Table.

**LAMP:** In the forest. Before you can light this, you must be carrying the paraffin and the match. You will need it to see in the dark, although no harm will come to you if you do not have it. The lamp cannot be refilled once it has run out.

**LANDING:** Above the entrance hall.

**LEDGE:** See Narrow Ledge.

**LEVER:** See Rod.

**LIBRARY:** Off the landing.

**LIVING ROOM:** In the cabin.

**LOOSE STONES:** On the mountain path. You will eventually fall into the pit if you proceed, but there is a way out.

**LOW PASSAGE:** At the top of the narrow steps, inside the mountain. Use the spade to dig your way out of here.

**MAN IN CABIN:** Attacked by the monster. You cannot do anything with him (except pay your last respects!).

**MAP:** In the shop. No use, although you can read it. (You didn't think we'd make it that easy, did you?!) See Scoring.

**MASK:** See Gas Mask.

**MATCH:** In the inn. Use this to light the lamp. See Lamp, Scoring.

**MEDICAL SUPPLIES:** In the equipment storeroom. Not used.

**METAL: RINGS:** See Rings.

**ROD:** See Rod.

**MONSTER:** He is initially at the bottom of the sulphur pit (See Rings). He follows you when you meet him. You must revive him during the game, using the pink solution and the winhurst generator (Read the Notebook). See Rope Bridge for how to kill him. See also Ygor, Food, Stone with Ring, Reviving the Monster.

**MOUNTAIN:** North of the forest.

**PATH:** Winds up the mountain side. Half-way up, it split into two. Up leads to the pit. East leads to the graveyard.

**TRACK:** Runs east-west at the base of the mountain. You cannot pass the vegetation at the east end.

**MUSIC ROOM:** Off the landing.

**MUSICAL INSTRUMENTS:** In the music room. Not used.

**NARROW: LEDGE:** Above the sulphur pit. Be careful here, a wrong move could be fatal. The ridge is only passable from east to west.

**PATH:** Leads from the base of the mountain to the cabin.

**TUNNELS:** These lead to the waterfall.

**NOTEBOOK:** In the library. Read it for information.

**OPERATING TABLE:** See Tables.

**PARAFFIN:** See Can.

**PASSAGE:** See Long, Winding or Dubious.

**PATH: MOUNTAIN:** See Mountain Path.

**NARROW:** See Narrow Path.

**PINK: CRYSTALS:** See Flask.

**SOLUTION:** See Flask.

**PIT:** Up the mountain path. You can get out of here along the narrow tunnel leading to the top of the waterfall. See also Sulphur Pit.

**RATS:** In the dungeon. For atmosphere only.

**RECESS:** See Shallow Recess.

**RESURRECTION:** If you get killed, you can choose to be resurrected up to a maximum of three times. You will lose points for this which you cannot regain, so you are advised to load back a saved position whenever possible, instead of opting for resurrection.

**REVIVING THE MONSTER:** During the game you will need to revive the monster in order to enable him to assist you. Do this in the laboratory. The notebook gives more information. See also Monster, Ring near the Experiments Room, Wimshurst Generator, Flask.

**RINGS: IN THE ANNEX:** Pull it.

**NEAR THE EXPERIMENTS ROOM:** You must lift this stone but will need the assistance of the revived monster to do it.

**AT THE TOP OF THE PILE OF STONES:** Pull it.

**IN NARROW TUNNEL:** Don't pull it!

**ON THE STEEP SLOPE:** Pull it.

**IN STONE CHAMBER:** Pull it.

**ON THE STONE STEPS:** Tie the rope to it.

**AT THE BOTTOM OF THE SULPHUR PIT:** Pull it. (But see Food and Ygor.)

**ROAD:** Runs east-west through the village.

**ROD:** In the small storeroom. See Wooden Door, Hammer, Rope, Scoring.

**ROOM, SMALL:** See Small Room.

**ROPE:** In the cloakroom. Tie this to the metal rod to descend the steps underneath the experiments room. See Scoring.

**ROPE BRIDGE:** This spans the rocks leading from the library to the laboratory. Cross it. You can cut it with the knife. If you do this whilst the monster is still standing on it he will fall to the rocks.

**SCORING:** Apart from scoring points for solving the various puzzles etc, you will also score points for picking up the following objects: Violin, bow, key, gas mask, rod, rope, hammer, generator, chains, match, spade, map, sword, shotgun, tin hat. Note that you do not need all of these objects in order to complete the game.

**SERIES OF TUNNELS:** These lead from the cave to the waterfall.

**SHALLOW RECESS:** You end up here after jumping into the water at the top of the waterfall. Go down to the footholes.

**SHOP:** On the village road. Enter it. You will need a coin to buy anything.

**SHOPKEEPER:** In the shop. You cannot do anything with him.

**SHOTGUN:** In the shop. Not used, but see Scoring.

**SLOPE:** See Steep Slope.

**SMALL ROOM:** Around the back of the castle, at the top of the pile of stones.

**SPADE:** In the graveyard, north of the disturbed grave. See Disturbed Grave, Coffin, Low Passage, Scoring.

**SPOON:** In the dining room. Not used.

**STAIRCASE:** See Steps.

**STEEP SLOPE:** Leads up the side of the castle. If Ygor is alive, he will throw rocks on your head! Wear the tin hat.

**STEPS: NARROW:** Lead up from the opening tunnel.

**PIT:** Lead down from the narrow ledge into the sulphur pit.

**STONE:** 1) Underneath the inn storeroom.

2) Underneath the experiments room. See Rope. The monster will kill you if you try to descend these with him present. You must kill him first. See Monster.

**WOODEN:** Off the entrance hall.

**STONE: CHAMBERS:** There are two: One next to the cellar, the other next to the pit.

**DUNGEON:** See Dungeon.

**STEPS:** See Steps.

**STONE WITH RING:** Near the experiments room. See Rings.

**STONES: LOOSE:** See Loose Stones.

**PILE OF:** Round the back of the castle. Climb these.

**STOREROOMS: EQUIPMENT:** Off the laboratory.

**INN:** Inside the inn.

**SMALL:** Off the small room.

**STRANGE NOISE:** At the bottom of the sulphur pit. See Ygor.

**STUDY:** Off the landing.

**SULPHUR PIT:** You will need the gas mask to protect you from the fumes. See also Rings.

**TABLES: IN THE CASTLE KITCHEN:** Move or push it.

**IN THE DINING ROOM:** Not used.

**IN THE LIBRARY:** Not used.

**OPERATING:** In the laboratory. Although you do not need to do anything with it, it is used to revive then monster.

**TIGHT CORRIDOR:** On the ground floor of the castle, leading to the winding passage.

**TIN HAT:** In the shop. See Steep Slope, Shop, Scoring.

**TOMBSTONES:** In the graveyard. For atmosphere only.

**TRACK, MOUNTAIN:** See Mountain Track.

**TRAP DOOR:** See Doors.

**TREES:** In the forest. You do not need to climb them.

**TUNNELS: DARK:** See Dark Tunnel.

**ENTRANCES:** See Waterfall.

**NARROW:** See Narrow Tunnels.

**SERIES OF:** See Series of Tunnels.

**VEGETATION:** At the east end of the mountain track. You cannot get past this.

**VILLAGE:** You start the game here.

**VIOLIN:** In the cabin. Not used, but see Scoring.

**VIOLIN BOW:** In the music room. Not used, but see Scoring.

**WATER:** You will need this to make a solution from the pink crystals. See Bottle, Flask.

**WATERFALL:** There are three tunnels which emerge here. Two at the top and one at the bottom. Access to one of the top tunnels is gained by falling down the pit. You cannot pass directly between any of the tunnel entrances, although you may jump into the water at one of them. You may drink or fill the bottle at two of these entrances.

**WIMSHURST GENERATOR:** In the equipment storeroom. This is an early device consisting of two spinning disks, for generating very large voltages. Operate it to revive the monster. See Scoring.

**WINDING PASSAGE:** Leads down to the sulphur pit.

**WOODEN: DOOR:** See Doors.

**STAIRCASE:** See Steps.

**WRITING DESK:** In the study. Not used.

**YGOR:** He stands guard on the castle battlements, and will throw rocks at you (see Steep Slope). He also controls the monster, (see Horn). You must kill him (see Knife) before pulling the ring in the sulphur pit. If the monster sees Ygor dead, he turns nasty!

**Instructions' Source :** CASTLE FRANKENSTEIN (Epic) Inlay and Hint Sheet

### **Review (Electron User)**

CASTLE FRANKENSTEIN is a text adventure originally written for the BBC Micro and has now been converted to run on the Electron. The plot centres around Frankenstein's monster. Originally he was thought to have perished in a fire 20 years ago. But now, because of unsolved murders in the area, there's a growing suspicion that he's alive and well and intent on vengeance. The villagers have elected you to be their champion, and your task is to find and destroy the monster.

To help you the cassette comes with an insert which gives general information about the game. Something I found rather strange about this insert was a claim that the tape was disc compatible. I suspect this was intended for the BBC rather than the Electron. However it probably won't be long before the Electron has discs, so curiosity made me try putting the tape onto a friend's BBC Micro with discs. I found you could not use it on disc without using a routine to move it down in memory. Even then the save-game option would only work with cassette. I would be interested to know if the same is true of the BBC version.

On loading the program presents instructions and background information. Then begins one of the best all-round adventures I have ever seen for the Electron.

I will not reveal anything about the actual playing of the game. That's a pleasure I'll let you experience for yourself. Whoever wrote this program has an extremely devious mind, and makes you work very hard for each piece of progress. Yet, at the same time, he allows you to roam quite a distance before presenting you with puzzles to solve. This, I feel, is the proper way to write an adventure.

The beginner has lots of locations to explore to get the feel of the game, but the more experienced adventurer can go through them rapidly to reach the puzzles.

There were a few minor things I wasn't happy with. For instance, there's no on-screen indication of exits. But I've probably just got into lazy habits with other adventures. The program itself responds very quickly to keyboard input, and the save-game facility - which is an absolute necessity - is very fast.

Overall, an extremely good adventure and excellent value for money.

Merlin, ELECTRON USER 1. 7

# CASTLE OF RIDDLES

***Professional, Originally Released On Cassette Only***

Game Type : Text Adventure  
Author :  
Standalone Release(s) : 1984: CASTLE OF RIDDLES, Acornsoft, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : ACORNSOFT, Betjeman House, 104 Hills Road, CAMBRIDGE CB2 1LQ  
Tel: (0223) 316039  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"The adventuring trade just isn't what it used to be," you reflect gloomily. "Nobody seems to need a trusty sword or a keen intellect any more." You're down to your last silver piece, and there's tomorrow's dinner yet to be found. Sitting at the inn you contemplate earning an honest living for a change. Perhaps a steady income wouldn't be too boring, after all...*

*Suddenly, a cold draught and the slam of the door distract you from your train of thought, and seconds later, a tall, silver-haired figure in a black cloak slips on to the bench next to you...*

*So begins your magical adventure, with wizardry and hocus pocus of all kinds, booby traps and fiendish riddles to be unravelled along the tortuous route to the Magic Ring of Power. Your reward is to keep the treasure that you find on the way."*

# CASTLE OF THE SKULL LORD

*Professional, Originally Released On Cassette Only*

Game Type : Text Adventure  
Author :  
Standalone Release(s) : 1985: CASTLE OF THE SKULL LORD, Samurai, Free In Dixons Ten Pack (Bugged)  
1986: CASTLE OF THE SKULL LORD, Samurai, £6.99 (Debugged)  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+, Master 128  
Supplier : SAMURAI, 4/6 Library Street, WIGAN  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

In a battle lost in the mists of time, the necromantic Skull Lord attacked and defeated the race of noble Dwarves. The Dwarves lost many treasures, the most valuable of these being the "Crown of Dwarves' Kings". For many ages did they attempt to regain this artefact and for many years did they fail.

Now in desperation they call upon you, noble warrior, to attempt that which is beyond their power.

Your quest: To regain the fabled crown and defeat the all-powerful Skull Lord.

The adventure is of the classic format. Simple verb-noun combinations are expected and will usually be understood.

## Some Useful Words

N/North = Move North  
S/South = Move South  
E/East = Move East  
W/West = Move West  
L/Look = Re-describes Your Current Location  
Inventory = Lists Your Possessions  
Get/Take = Pick Up An Object  
Drop = Drop An Object  
Wear = To Wear A Wearable Object  
Remove = To Remove A Worn Object  
Quit = End Game

N.B. Objects cannot be dropped if they are worn!

# CASTLES AND CLOWNS

***Professional, Originally Released On Cassette Only***

Game Type : Educational Arcade Games  
Authors : Betty Root & Fisher-Marriott  
Standalone Release(s) : 1985: CASTLES AND CLOWNS, Macmillan, £5.99  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : MACMILLAN, Macmillan Publishers Limited, 4 Little Essex Street, LONDON WC2R 3LF  
Disc compatibility : CDFS E00, DFS E00

## **Instructions**

*"Two great games of fun and skill for kids of 4-8. See your children's reading abilities grow as they play and learn.*

*\* Teaches initial letters and sounds \* Designed by one of Britain's top reading experts \* One or two players \* Choice of nine speeds \* Disk copyable*

*Devised by Betty Root, one of Britain's leading experts in reading. Betty Root is the 1985 President of the United Kingdom Reading Association and is in charge of the Centre for the Teaching of Reading, University of Reading. She is especially well known for designing educational games for young children.*

*Programmed by Fisher-Marriott, award-winning software developers.*

*The cassette contains two different games, one on each side : KING OF THE CASTLE and CLOWN."*

## **Copying to disk**

The publishers allow you to make one copy only of each program on to disk. Any further copying is prohibited and is an offence under the Copyright Act. Make sure you have a formatted disk with at least 15K spare memory for each program. You must make your copy as soon as the program has loaded and the main menu screen has appeared, before any key has been pressed.

Press <CTRL> and D simultaneously then release. The program saves automatically in two parts: CASTLE and BYTES; CLOWN and SHAPES.

To load the programs from disk type CH."CASTLE" or CH."CLOWN" then press <RETURN>.

## **Running the programs**

Both games are great fun for children but they also have an educational purpose. They help children recognise initial sounds and letters of words. They also give children practice in finding their way around the computer keyboard. The games involve an element of chance as well as skill, so children of varying ages and abilities can play together happily.

## **Program settings**

To play the game without sound effects, wait until the menu screen has appeared, then press CTRL and S simultaneously.

Type 1 or 2 then press <RETURN> to select a one-player or two-player game.

Type a number between 1 (very slow) and 9 (very fast) to select an appropriate speed.

To break out of the game at any stage and return to the menu for re-selection, press <CTRL> and Z simultaneously, then release. New options can be set and the game begun again.

When you have finished playing one game, and want to load another, press <CTRL> and <BREAK> simultaneously then release.

## **KING OF THE CASTLE**

### **Two player game**

Pictures appear in two castle towers, one set for each player. The pictures are numbered for each player in turn and the computer's number generator produces a number at random. The player must press the initial letter of the word represented by the appropriate picture. For example, the computer generates the number five. Picture 5 is a mushroom, so the player must find the letter M on the keyboard and press it before the time is up. If successful, the window shuts. The winner is the first to shut all his or her windows.

### **One player game**

This works in the same way, but with one set of pictures numbered 0 to 9. The aim is to shut as many of the windows as possible.

## **CLOWN**

### **Two player game**

A picture appears on each side of the clown in turn. If a player's picture begins with the letter shown on the clown's hat, then he or she must press A (left-hand side) or <RETURN> (right-hand side) respectively. Spotting a correct match wins a balloon: a mistake loses one. The winner is the first to get six balloons, which carry the clown away.

### **One player game**

This works in the same way, but with the player (right-hand side of the screen) challenging the computer (left-hand side of the screen). The player must press <RETURN> to indicate a match.

# CATERPILLAR

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Shoot-'Em-Up Caterpillar In Field  
Author :  
Standalone Release(s) : 1983: CATERPILLAR, Romik, £5.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ROMIK, 272 Argyll Avenue, Slough, BERKSHIRE  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

So you thnik it's safe to go out? Jungle warfare has been declared by the denziens of the garden - and you're the prey! Defend yourself against the repeated attacks of its inhabitants.

Whilst doing a spot of gardening, you notice an assortment of creatures attacking your strawberries.

Picking up a spray can of insecticide you attempt to kill them. To your horror, they then start to fight back...soon you're fighting for your life.

You start with five lives and gain a bonus life at 10,000 points.

## Game Controls

Choose your own keys for play or use the standard set which are:

Z - Left, X - Right, : - Up, / - Down, <RETURN> - Fire

Press P to pause/restart the game.

Of eight skill levels, selected by keys 1 to 8, the most difficult is 8.

## Scoring

Scorpion .....	1000 Points	Caterpillar head ...	100 Points
Frog .....	???? Points	Caterpillar tail ....	20 Points
Flea .....	250 Points	Strawberry .....	10 Points

# CAVEMAN

*Professional, Originally Released On Cassette Only*

Game Type : Arcade; Platform Caper  
Author : Peter Foy  
Standalone Release(s) : 1986: CAVEMAN, Kansas, £3.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : KANSAS CITY SYSTEMS, Unit 3, Sutton Springs Wood,  
CHESTERFIELD. Tel: 0246 850357.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

The object of this game is to mine gold, diamonds and coal. To score on the first two screens (gold and diamond) the miner must first fill his barrow by completely mining one level and return with his load to the bank at the top right hand side of the screen. When these two screens are completed the furnace on the left hand side of the screen will be low and must be filled with coal on the third screen.

When the miner descends below the first mining level the troglodyte will attempt to destroy him, but the troglodyte itself can be destroyed if it is lured out of the top of the mine. Unfortunately it will be replaced by another on the lowest level.

The miner can move between levels by either using the constantly moving lift or by digging between levels and automatically leaving a ladder. Only one ladder can be used at each level and although the troglodyte cannot use the ladders neither can the miner take his barrow up or down them.

Apart from being caught by the troglodyte the miner will also be destroyed if he falls down the lift shaft or furnace. The barrow with its load will also be destroyed by falling down the lift shaft but will be replaced by a new empty barrow at the bank. There is an unlimited supply of barrows but only three miners.

## Game Controls

The four cursor control keys are used to move the miner around the screen.

**Instructions' Source** : CAVEMAN (Kansas) On-Screen Instructions

## Review (Electron User)

It's no joke being a miner these days - at least not in this offering from Kansas City Systems. It takes you back to days of yore when gold, diamonds or coal were hewn from the rock by pickaxe power alone. There are no bodies to help here though. Once you've won your precious load, you pull your own truckful back to the paymaster. That niggardly soul will notice if you haven't filled your truck and will reward you with fewer points.

Life is cheap down the mines. The rather crude arrangement of lifts is unguarded - one false step and you're dead. You can construct your own ladders but, of course, heavy trucks don't go up or down them.

These accursed mines have seven levels and the Troglodyte lives on the lowest. Once you're below the first level, it relentlessly chases you. This can be to your advantage because he dies at the surface. It's too bad that the next generation hatches out on level seven to replace him.

While you dig for gold and diamonds on the first two screens the mine furnace is burning down. That's why coal is needed from the third mine. There's no pay for coal. The instructions included in the program explain all of this. In fact they are a model that other software houses might like to look at.

If it all sounds good, don't get too excited. The graphics, while smooth, are very ordinary. You might even call them crude. Some of the sound is strange to say the least, although the noise of pick on rock is quite pleasing.

There are also odd bugs. When Troglodyte snuffs it he is not removed from the screen unless some other object moves over him. Also it's possible to fall down non-existent lift shafts.

It's a pity that the cursor keys are used for movement. Apart from being too near <BREAK>, they are too cramped up for easy use. However, I could get the game to work with my Plus 1 joystick using the Joyplus program (Electron User, March 1985).

Kansas have a good idea here and CAVEMAN is fun to play, particularly in outwitting the Troglodyte. The program suffers from its simple graphics and from a lack of variety in the screens but makes up for it in amusement.

Rog Frost, ELECTRON USER 3. 2

# CAVEMAN CAPERS

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Sideways-scrolling Action  
Authors : Jason Sobell, Kevin Blake, Ian Elliott & David Crofts  
Standalone Release(s) : 1985: CAVEMAN CAPERS, Icon, £7.95  
1987: CAVEMAN CAPERS, Audiogenic, £7.95  
Compilation Release(s) : 1986: ELECTRON POWER PACK, Audiogenic, £9.95  
1988: FIVE STAR GAMES 3, Beau Jolly, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ICON, 65 High Street, Gosforth, TYNE & WEAR  
Disc compatibility : CDFS E00, DFS E00

## Instructions

Ogg, the caveman, has just discovered a new form of transport - Kickstart the turtle. All day long he tries to train Kickstart to jump and run. However, the turtle isn't too keen and Ogg keeps falling flat on his face. Help Ogg ride Kickstart, avoiding snakes, pterodactyls, holes, toadstools, dinosaurs and other prehistoric hazards. Get him to the 'phone box so that he can tell his wife that he'll be late for tea!

Continuous scrolling and multi-screen action with excellent graphics and sixty levels.

## Game Controls

Z - Left, X - Right, <RETURN> - Jump, Q/S - Sound Off/On

To set initials - use Z and X to move the Hi-Score cursor, then press <RETURN>.

**Instructions' Source** : CAVEMAN CAPERS (Icon) Back Inlay

## Review (Electron User)

If your idea of fun consists of tearing through the prehistoric wilderness standing on the back of a runaway tortoise, CAVEMAN CAPERS is for you. Press the Spacebar to start the game and the background begins to scroll from right to left.

Balancing precariously on the back of a turbo-charged tortoise, you must leap over the potholes as you career towards almost certain disaster. Some well-timed stabs at the <RETURN> key are sufficient to get you past these first obstacles.

Having been broken in gently, you will now be buzzed by pterodactyls while still jumping craters. With the use of the Z and X keys to move our caveman hero short distances to the left and right, you can avoid nutting the birds.

Section three seems quite easy as there are no craters to jump - just a series of purple snakes hanging down from the treetops. The problem with the snakes is that they are bobbing up and down. Should they be in the down position as you pass below, then it's PROHeadache for our hero and shellshock for his transport.

The next two levels are very similar. The first involves using extended jumps to clear some toadstools and in the second you're jumping logs.

The next stage is the one that is giving me great difficulties at the moment. I'm having trouble with the crabs. One minute they're lying nice and quiet on the ground, the next thing you know they're doing flipping star jumps at about waist height!!

Icon has really gone to town on the graphics with this game as every character is drawn on a grand scale and in the brightest of colours. One character who has not yet played a part in the game is a rather large dinosaur who keeps poking his head on to the screen and grinning mischievously. I'm sure he's up to no good.

CAVEMAN CAPERS is an excellent game. It's got fast action, simple controls and is just brimming with humour.

James Riddell, ELECTRON USER 3. 4

# CENTIPEDE

## *Professional, Originally Released On Cassette Only*

Game Alias : CENTIBUG  
Game Type : Arcade Shoot-'Em-Up Centipede In Field  
Author : Richard M.P. Hanson  
Standalone Release(s) : 1983: CENTIPEDE, Superior, £9.95  
Compilation Release(s) : 1988: 10 COMPUTER HITS 3, Beau Jolly, £9.95  
1989: PRES GAMES DISC 6, PRES, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR, Department C, Ground Floor, Regent House, Skinner Lane, LEEDS 7  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### Instructions

The centibug descends from the top of the screen weaving intimidatingly between the mushrooms. Your objective is to shoot all of the segments of the centibug before it reaches the bottom of the screen.

Features include: spiders, snails, flies, six skill levels, hi-score, rankings and increasing difficulty.

### Game Controls

Z - Left, X - Right, <DELETE> - Fire

**Instructions' Source** : 10 COMPUTER HITS 3 (Beau Jolly) Inner Inlay

### Review (Electron User)

Another entry into the insect world. A long, hungry caterpillar wends its way from the top of the screen to the bottom where you are located. Can you stop the vicious little beastie or will it eat you alive?

There are six skill levels to keep you on your toes. You dodge around the bottom of the screen using the Z and X keys to control movement, hitting the Delete key to blow the centipede to kingdom come.

While you're doing this you have to keep your eye open for the nasty spider that hangs around your end of the screen as he, too, will eat you if he can. Also the poor, inoffensive little snail which wanders across the screen is worth a shot or two for, harmless though it is, it's worth 1,000 points. Collect 10,000 or 20,000 points and you get extra lives.

The sound and graphics are very good, the instructions clear and the choice of keys simple to use. It's an amusing and entertaining game for those with fast fingers and a dislike of creepy-crawlies.

Peter Gray, ELECTRON USER 1.10

# CHEAT IT AGAIN JOE 1

*Professional, Originally Released On Cassette Only*

Game Type : Compilation Of Cheat Loaders  
Author : Unknown  
Standalone Release(s) : 1988: CHEAT IT AGAIN JOE 1, Impact, £2.95

## Instructions

Joe is a keen games player but tends to get a bit stuck. Imagine his delight at finding this superb selection of easy cheats to get him going. These cheats work not only with the original version of the games but also with the following compilations: PLAY IT AGAIN SAM 1 & 2, SUPERIOR COLLECTIONS 1, 2 & 3 and ACORNSOFT HITS 1 & 2.

N.B. You load the 'cheat' from this cassette before you load the game.

The order of the cheats on each side is shown below. Insert the cassette, type \*TAPE and press <RETURN>.

Now load the cheat. Eg to load the STARSHIP COMMAND cheat, then CHAIN"StarshipCo" (as shown below), press <RETURN> and start tape.

Watch the screen for further instructions and you will be instructed when to load the game.

## Review (Electron User - Double Review Of CHEAT IT AGAIN JOEs 1 and 2) - "Making Things Easy For Gamers"

After I started the Arcade Corner column I began receiving, at regular intervals, copies of The Pokes Disc, a collection of pokes and cheat routines for many of the best-selling Electron games.

These offered exceptional value for money: Priced at the level of a budget game, they offered help - in the form of pokes, passwords, hints and tips - for almost every possible aspect of many of the top games.

This enterprising venture was the brainchild of Mark Gidley, a highly talented individual who also devised all the pokes.

CHEAT IT AGAIN JOE is, in effect, an updated version of Mark Gidley's Pokes Disc, with Impact Software's marketing muscle behind it. It comes as two volumes - with a third being released soon - on either tape or disc, and each is available separately. However, the two really complement each other, and I would certainly recommend buying them together.

When I first heard that CHEAT IT AGAIN JOE was under development, my feelings were mixed. Certainly, this produce could raise a number of problems, both legal and moral. When I received my copies, however, I was glad to see that CHEAT IT AGAIN JOE avoids any such transgressions. The cheat routines are themselves encrypted and give nothing away to anyone who manages to disentangle them.

In common with its Pokes Disc predecessors, JOE offers exceptional value for money to fans of many of the major titles released in the last couple of years. For a mere £3, tape owners receive a generous selection of pokes for 20 top titles. However, Disc drive owners fare even better: For an extra £2 they get pokes for the Disc versions of 20 games, plus all the pokes from the cassette.

CHEAT IT AGAIN JOE is certainly rather unusual, in that - to the best of my knowledge - it is the first offering of its kind released by a major company.

I have often received letters saying that routines featured in my column have drawn old games out of the cupboard and given them a new lease of life; JOE offers the same.

The collection seems to have been designed with the novice user - or at least the novice hacker - in mind, and a great deal of thought has been put into making the system easy to use. The tape or disc is loaded in the usual way: CHAIN"" and <SHIFT><BREAK> respectively. Once the first part has finished loading, the micro presents you with a list of names of the games featured in that volume.

Using the cursor keys moves a highlight bar up and down the screen and pressing <RETURN> selects the game. Alternatively, pressing the Spacebar presents another page of game titles. When you've selected a game, the micro tells you about the cheat facilities provided for it and another press of the Spacebar brings up a request for the version of your game.

In some cases, such as Superior's REPTON 2, JOE caters for both the original stand-alone game and a compilation version.

The disc version of JOE caters for all four versions of REPTON 2 - the original tape, the original disc, the Superior Collection tape and the Superior Collection disc.

Once the version is selected the appropriate poke routine is loaded and you are prompted to insert the tape or disc. Follow the on-screen instructions and the game will load, apparently normally, but with all the promised modifications in place.

As one who can claim to specialise in this sort of thing, I know how long Mark must have spent devising the pokes in these compilations, and the result is very worthwhile.

Martin Reed

### \*\*\* Second Opinion \*\*\* (Electron User)

Ordinary games players often need help when tackling difficult arcade games. Would I use it? Not on your Nelly! I'm determined to master the games the hard way.

# CHEMISTRY

***Professional, Originally Released On Cassette Only***

Game Type : Educational  
Standalone Release(s) : 1985: CHEMISTRY, Letts Keyfacts, £11.50  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : LETTS KEYFACTS. No further information.  
Disc compatibility : CDFS E00, DFS E00

## Instructions

Instructions currently unavailable.

**Instructions' Source** : CHEMISTRY (Letts) Booklet

## Review (Electron User)

This chemistry package follows the standard format for Letts' revision programs. You get two cassettes crammed full of programs, along with a small booklet explaining how the software can be used - all in a neat library case.

As usual there are ten programs. The first deals with atomic structure and bonding and is a Cloze activity. This means aspiring O-level or CSE chemists must complete a piece of text by typing in the missing words.

They can choose whether to have only a few of the chosen words missing or the whole lot. If they get stuck, pressing X enables them to see all of the text. Activities like this are not only considered educationally sound, they should also be of real benefit to a revising pupil.

Program two moves on to the centre pillar of inorganic chemistry, the periodic table. Students are expected to enter various elements on to a blank table.

Options include entering chemical symbols, atomic numbers or electron structures. The idea is good, but the presentation could have been improved. Nevertheless it is a useful revision program.

Formulae and equations come next. This is another very important topic and any fairly friendly help from a micro is a good thing. This program considers various reactions and you have to balance the equation.

Alternatively, a list of chemicals is given and you decide if they are reactants or products. The equation for the reaction is then given and you must balance it. There follows a program called deductions. Here you are presented with a series of clues as to the identity of a substance.

Some clues are mathematical and calculator, pencil and paper will be needed. If you can't get the substance within five guesses you are told what it is.

The last program on tape one is concerned with electrolysis. With a choice of molten electrolytes or solutions, you must identify the ions present and to which electrode they move. The ion equation must then be completed. Tape two begins with two related programs on apparatus. In the first of these you must put together the equipment needed to prepare the gas of your choice.

This is done by selecting the correct pieces from a collection and swapping them around. This is very fast, smooth and fun. When completed, all other bits of

apparatus are cleared from the screen and then you label your diagram and complete the equation for preparing the gas.

The second program gives you a wrong diagram. You identify the fault and label it.

The third program, acids, bases and salts, returns to the Cloze idea. There are four pages of text to complete. Then in a separate section you must decide whether a reaction goes in the direction shown. You are also asked a few questions about it.

Pupils actually get marked on this section which is surely helpful when revising.

The third section introduces the concept of molarity and then asks you to predict titration results. It's a little complicated.

The package ends with two programs on organic chemistry. The first is a series of Cloze procedures, enlivened with diagrams to illustrate the principles involved.

Working through this program certainly reminded me of the organic chemistry I used to know. The second program requires identification of isomers and homologues. I found this the weakest program on the tapes. There were just too many CHs on the screen for me.

The instructions suggest that this program is to test your powers of observation. Mine obviously are not good enough. This is without doubt what it says - a revision package. Don't expect it to teach you if you know absolutely no chemistry, because you will end up very confused.

Despite the large amount of material here, the price of £11.50 seems a bit steep. It is, however, fit for its purpose and pupils taking chemistry at 16+ levels could find it useful.

Rog Frost, ELECTRON USER 3. 4

# CHEMISTRY 'O' LEVEL

*Professional, Originally Released On Cassette Only*

Game Type : Educational; Revision Aid  
Author :  
Standalone Release(s) : 1983: CHEMISTRY O LEVEL, Paxman Promotions, £3.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : PAXMAN. No further information.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

This package is designed to be of assistance to Chemistry students prior to taking their 'O' Level examinations but may also be of considerable help to CSE students although the content will exceed CSE requirements in some areas.

As a computer controlled revision program it makes use of wide-ranging multiple-choice questions to trigger memory refreshment of previously learnt material. It is aimed at reinforcing ordered recall as a suitable preparation for the examination and to help with conventional revision techniques.

Other packages in this series are available for Physics, Biology and Mathematics.

# CHESS

## ***Professional, Originally Released On Cassette Only***

Game Type : Graphical Chess Simulation (Against Computer)  
Authors : Arthur Norman and Nick Pelling  
Standalone Release(s) : 1984: CHESS, Acornsoft, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ACORNSOFT, Betjeman House, 104 Hills Road, CAMBRIDGE  
CB2 1LQ. Tel: (01223) 316039  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## **Instructions**

*"A chess-playing program with a high-resolution graphics display of the board, and the following features:*

- \* Play white or black against the computer, or play against another player, or in auto-mode the computer plays itself*
- \* 10 levels of play, giving novice to professional standards*
- \* Computer moves in twenty seconds at lowest level*
- \* Board display with joystick, cursor, or co-ordinate entry of moves and rejection of illegal moves*
- \* Plays according to current FIDE-ratified rules, and displays moves as standard FIDE notation (for example, the 50-move rule etc.)*
- \* Continuous clock display for tournament chess*
- \* Allows any position to be set up, and 'mate in n' problems to be solved*
- \* Whole games or single board positions can be saved to cassette*

*This program has been designed to support both joysticks, and a printer when available."*

## **Introduction**

This chess-playing program helps the novice chess-player by its use of friendly interfaces, such as joysticks and cursor-keys, to get to grips with chess, while at the same time providing a game of increasing complexity on the higher levels for all further advanced players.

## **Notation**

The game displays the last few moves in algebraic notation, the official notation now endorsed by FIDE (Federation International Des Echecs) for use in tournaments: the only modification is that whereas most tournament players use abbreviated literal algebraic (ie Bc4, Ngf3, ed:), the form used for display here is expanded literal algebraic (ie Ng1-f3, Bd3Xh7+, g7-g8Q, etc.)

Using this system, there can be no ambiguity, and the letters and numbers conform to a simple co-ordinate system (displayed on two sides of the board during a game) which can be picked up quickly by a beginner, giving him a first step into the vast wealth of chess literature, most of which is now published in this, or very similar, notation.

## **Move Entry**

The player first selects either joysticks or cursor-keys. A move is then made by first moving the flashing cursor above the starting square and pressing the fire button (or the <RETURN> key respectively); then, doing the same for the finishing square will specify a move.

The 'usual' style of entering moves is possible at any time: this involves typing a sequence such as 'd2d4' or 'g1f3' specifying the start and end co-ordinates of the move. Attempts to play illegal moves are met with a message to 'Try again' and no penalty is meted out to the player. If you promote a pawn, the computer will ask you which piece you wish to promote into; answer by pressing "N" for a knight, "B" for a Bishop, "R" for a Rook or "Q" for a Queen.

Castling requires special explanation: to castle (if castling is possible), you should first specify your king's current square, and then specify the square that he would be at if he castled on that side of the board.

So, White king-side castling is carried out by the string 'e1g1', and is printed in the lower window as '0-0': queen-side castling is printed as '0-0-0'. These conform to the accepted standard of algebraic notation.

'En passant'; although the program both plays it and allows you to play it under the correct circumstances, it is only displayed as though it were normal pawn capture. This is in keeping with the accepted notation, which also does not treat 'en passant' as being different from other moves.

#### **The Main Menu**

The program starts with the main menu, which provides the following options selected by single keys:

- W     This gives you White against the computer.
- B     This gives you Black against the computer.
- P     This lets you play against another person: if joysticks are selected, then the two players are each allotted a particular joystick to use during the game.
- A     Auto. The computer plays itself on the current level of difficulty.

#### **Skill-level (0-9)**

There are ten levels of difficulty ranging from 0 (easy) to 9 (very hard).

Be warned: on levels 8 and 9, response-time may be in the order of hours!

#### **Additional Commands**

- J     Joysticks on/off. When the joystick flag (at the bottom of the screen) is on, it indicates that you may enter moves using the joystick. So that you know where the current cursor position is, the flashing cursor option is enabled with the joystick option.
- C     Cursor on/off. This option allows you to disable the cursor during a game, if you do not want the flashing on the screen while you are thinking. However, it is quite useful for seeing the computer's on the lower levels of play.
- T     Tick on/off. This allows you to enable or disable the ticking clock. In addition to ticking, on the levels above level 5, the computer will bleep when it has made its move.
- L     Load a game from your filing system (tape, disc, etc) into the computer's memory. The program will prompt you for the file's name.
- S     Save a game to the currently selected filing system. You will be prompted for the name of the file to be saved, plus any additional information of interest (such as opponent's name, date, etc.)

E This transfers control to the Chess Editor.

RETURN This either starts a new game (if the last game ended in checkmate or stalemate), or, if you escaped from the old game to change some option, <RETURN> lets you continue the old game.

Where applicable you are presented with the following options:

R Restart game from a board position set up by the problem section of the program. This is only possible if there is a message on the screen saying it is possible!

N Start from initial board position, both armies fully intact.

During a game, ESCAPE may be pressed at any time. This is not destructive, since you may continue the current game from the menu by pressing <RETURN> or 'fire' on either of the joysticks. You may make alterations to the options (such as level, which side or sides the computer is playing etc.)

### Editor

P Print or play through the game. The program asks you whether you wish to list the moves so far to the currently selected printer. If you do not reply by pressing the "Y" key, it then enters the 'playback' mode. Here you can play through the moves played so far by pressing the up or right cursor for forwards through the moves, and the down or left cursor for backwards.

Holding down the SHIFT key with a cursor key has the effect of a fast-forward or fast-rewind through the game. If you press ESCAPE to exit at any stage between the first and the last position reached, you will be asked if you wish to continue the game from that stage. Be careful! If you answer "Y" then all the game subsequent to that will be lost forever (unless you have previously saved it to a filing system!), but all relevant attributes (such as castling flags, etc, but NOT clock-times) are restored as though the game were at that point.

F Find and display a solution to the current position and report the number of moves taken.

N New board position. Wipes the board clean, but stores the old position away in memory, so that it may subsequently be recalled by pressing "0".

R Read current game position. This transfers the current position in the game to the problem board. This is a more direct way of reading the game position than typing "P".

I This sets up the problem board with the initial position (that is, the position that games usually start from).

O Old board position. Retrieves the position previously stored away by pressing N (or by various other miscellaneous routines).

L/S Load/Save board position to a filing system. This also saves the board's attributes (ie which side is to move, level of search, etc) and allows additional information (such as composer, date, etc) to be saved with the file.

W/B These select the side to try and checkmate from the current position. This would also be the side to move first if you decided to start a game from that position.

2-5 These select the level of search (in whole moves). During a search, the computer will look at all lower levels first; so, if it is looking for a mate

in 3, and there is a mate in 2, it will find, and display, the shorter sequence. Searches deeper than 5-move mates are not possible in this version.

### **Solving Chess Problems**

All that remains to be done is to give a sample chess problem that can be solved by the program, to give you an idea of how to use the facilities provided. To enter a piece at a square, simply move the flashing cursor over that square and type "wn" for a white (k)night, "bq" for a black queen or "wp" for a white pawn, for example. Pressing DELETE deletes the contents of the square. Note that the program does not allow pawns on the first or eighth rank, nor more than a single king per side, nor more than sixteen pieces per side.

# CHES

## *Professional, Originally Released On Cassette Only*

Game Type : Chess Simulation  
Author :  
Standalone Release(s) : 1983: CHES, Micro Power, £7.95  
Compilation Release(s) : 1987: PRES GAMES DISC 3, PRES, £9.95  
1988: MICRO POWER MAGIC, Micro Power, £7.95  
Stated compatibility : Electron  
Actual compatibility : Electron. Electron version plays fast on BBC.  
Supplier : MICRO POWER, 8/8A Regent Street, Chapel Allerton, LEEDS  
LS7 4PE. Tel: 01532 683186.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

When the program has loaded the screen will clear and the following 9 options will appear.

Analyse Blitz Continue Display Load Play Quit Replay Save

Any of these options can be selected by pressing the initial letter of the option required. You can also select whether you require Player Versus Player, Player Versus Computer or Computer Versus Computer by entering 0, 1 or 2.

### ANALYSE:

You are first asked if you wish to recall a position; only type 'Y' if a position is already set up for analysis. If you type 'N', the board is displayed and each square is now 'blinked' in turn. You can insert a piece at the current square by entering the initial of that piece (use 'N' for Knight), the colour (b or w) and a number 0 or 1 to indicate that the piece has not been moved previously. Press the space bar if you wish the space to be empty. The 'DELETE' key moves the cursor back.

When the board is set up as required, press the '.' key. You can save this position and store it on tape if required (see the section headed SAVE). Now select your colour, the level of play and the side to move first.

### BLITZ:

In this option you are allowed a fixed time limit to make your move, otherwise you forfeit your go. The limit can be set at 10, 20 or 30 seconds by replying 1, 2 or 3 to the question 'Level?'.

### CONTINUE:

Used to continue a game after it has been reloaded from tape.

### DISPLAY:

Allows you to modify the display colours. Enter a logical colour (0-7) for each of the following: 'black' pieces, 'black' squares, 'white' squares, 'white' pieces. An invalid entry returns the display colours to their default values.

### LOAD:

Load a game position from cassette.

### PLAY:

First select your colour and the level of play (0-9). On even levels, the computer uses a shortened move list and randomises its selection. On odd levels, it uses the full move list and selects the best move from this list. The response times vary but the following times give you some indication of what you can expect:

Level 1 - 10 secs; Level 3 - 1 min; Level 5 - 5 mins; Level 7 - 30 mins; Level 9 - 2 hours.

Now the chess board will be displayed. Clock displays at opposing ends of the board indicate the time taken so far by that player. Enter your move by typing the co-ordinates of the piece you want to move followed by those of the square you want to move it to.

For example, to make the opening move 'Pawn to King 4' (P-K4) enter e2-e4; there is no need to enter the hyphen - this will be inserted automatically. The computer will reject all illegal moves. If you make a bad move, wait until the computer has replied, then press 'DELETE'. This will return the board to the position before the 'mistake', then you can try again. You can also resign by pressing the 'ESCAPE' key; this will return you to the options menu.

To castle; move the King to the necessary square and the rook will move automatically, providing that you are in a position where castling is legal. For example, a white queen's side castle is entered as e1-c1.

To capture en passant, move your pawn to the appropriate square and your opponent's pawn will be taken, if en passant capture is legal.

Thus, to capture a black pawn on e5 with a white pawn on f5 enter e5-e4. If your pawn reaches the 8th rank you can promote it to the piece of your choice by entering b, n, r or a.

#### QUIT:

Returns you to BASIC. To play CHESS again, type OLD 'RETURN' followed by RUN 'RETURN'.

#### REPLAY:

Re-runs the moves played in the previous game. Press the space bar to advance to the next move. Each move is listed to the left of the display. On reaching the end, the program returns to the options menu; by selecting ANALYSE you can choose your colour and level, and continue the game where it was terminated.

#### SAVE:

Allows you to save a game onto cassette with a filename of 10 characters or less.

**Instructions' Source** : CHESS (Micro Power) Inner Inlay

#### Review (Electron User)

The sheer size of the task is astonishing - how does one put a game as complex as chess into a micro? How MICRO POWER managed to do so as well as this is truly remarkable. It is a version I found totally absorbing, and one which I would certainly recommend.

On loading, which was straightforward and presented no difficulty, a menu of options is presented. Each option is most carefully explained on the cassette inlay, and they enable one to set the parameters for any chosen game. The colours of the pieces and/or the board are easily changed to any combination, so invisible chess becomes possible - and very difficult!

The most obvious choice from the menu is Play, but even then various other decisions have to be made. It is possible to play against the Electron, to have the computer play itself, or to use the micro simply as a medium through which two human opponents do battle.

There are several skill levels, although one obviously has to trade power against speed of response. Average times are given for various levels, with the ninth grade taking about three hours per move. At my standard of chess that would rival watching the proverbial paint dry.

At lower levels the computer still plays a decent game. It inclines to be orthodox in style, although it enjoys forays with the Queen. One very helpful feature is the

chance to retract a bad move. In fact, by clever use of the built-in facilities, it is even possible to swap sides mid-game.

It is also possible to set up any required board layout to allow analysis of various ideas. I found these powerful options to be a most useful aid with my 10-year-old chess club members at school.

My favourite choice of play was Blitz Chess, in which one is given only a limited time to make a move. This time can be set as low as 10 seconds, which certainly stimulates the adrenaline. If no move is made in time, the computer claims another go. Here the computer has a great advantage, being troubled with neither fatigue or panic, nor by the telephone ringing.

Obviously any such complex program is almost certain to include the odd bug, and this is no exception. When playing Blitz Chess, as explained before, the turn reverts to the computer if no move is made within the time allowed. In one case I was in check but made no move within the limit. The computer promptly took my king and told me I was still in check!

In another game, with the micro playing itself, play reached a state where the board alternated between two positions. This continued for over a quarter of an hour, with the same yoyo moves, until I put an end to the pieces' misery.

However, with these few minor problems put to one side, all the features of chess are faithfully reproduced in this version, including castling and en-passant. Illegal moves are disallowed, as well as a very occasional legal move, and the whole gives the feeling of a well-designed program.

It offers good value at the price, and its range caters from beginner to advanced club player - and probably beyond.

# CHESS

## *Professional, Originally Released On Cassette Only*

Game Type : Chess Simulation  
Author : Richard Hanson  
Standalone Release(s) : 1983: CHESS, Superior, £7.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR, Department C, Ground Floor, Regent House, Skinner Lane, LEEDS 7  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### Instructions

When initially loaded, the program will display a list of options similar to that shown below:

```
1...Set levels
2...Play
3...Replay
4...Save
5...Load
6...Continue game
7...Solve problem
8...Choose input
*...OS command
```

The usual options required after loading are Set Levels, followed by Play.

### Entering Operating System Commands

Any operating system command can be entered. However some commands (e.g. LOAD, COPY and COMPACT) may result in the Chess program being overwritten.

### Setting Sides And Levels

When changing levels, the current settings will be displayed on the screen; any of these settings can be altered by simply typing in the new value. To leave the value unchanged just hit <RETURN>. To go back to the last value, hit DELETE. When you have set all the levels to the required values, hit ESCAPE.

Either a human or a computer can be selected to play black by hitting the appropriate key (C for computer, H for Human) in response to the prompt:

Black(C/H)

and similarly for white.

There are a further four values required to set the levels (in the case of a human player, this sets the level used by help - see below) and also the amount of time available for each move. These four values are:

**1) LEVEL (1-8)** - This is the number of "half-moves" that the program looks ahead. (A move is a move by both black and white, whereas a half-move is a move by just one side).

**2) CARE (0-2)** - The number of extra half-moves considered taking account of captures only.

**3) SUB-LEVEL (0-9)** - This controls the number of moves considered at each level of lookahead.

**4) SPEED (0-9)** - This is similar to the sub-level except that the number of moves considered depends on their relative merit instead of being a fixed number.

In all cases, the higher the number the more difficult the level.

During play, the computer will beep when there is only one minute left for a move to be made. If you fail to make a move within the time limit, you can choose to either forfeit your move or the whole game.

### Entering Moves

There are three different ways of entering moves; option 8 allows you to choose the method you prefer. The choices are:

**1) Co-ordinate** - Type the letter first, followed by the number.

**2) Cursor** - Use the cursor keys to move the cursor to the required square and then hit <RETURN>.

**3) Joystick** - Use the joystick to position the cursor to the required square and hit the fire button.

To castle, you should enter the squares that the king is moving from and to.

When you have entered your move, the piece will flash. Hit DELETE if you have made a mistake, otherwise hit <RETURN> (or hold down the fire button if using joysticks) to confirm your move.

When the computer has made its move, it will flash the moving piece - you can alter the move it will make as follows:

Hit f2 to force the computer to make the worst move still being considered.

Hit f3 to make it play the next worse move.

Hit f4 to make it play the next better move.

Hit CTRL-B to make it play the best move.

Hit any other key (or the fire button) to acknowledge its move. Note that it is possible to prevent the pieces from flashing for the remainder of the game by hitting CTRL-W when a piece is flashing. To switch the flashing back on, hit CTRL-W just before a piece moves.

Other Options Available At Your Move:

Hit f0 to take-back.

Hit f1 to resign.

Hit f3 to modify the board.

Hit f4 to toggle on/off display of the best move found so far.

Hit f5 to change levels and sides.

Hit CTRL-S to change colours.

### Modifying The Board

When modifying, the piece-type being modified is displayed at the bottom-right of the screen; the type of piece being modified can be changed by hitting N.

Entering an empty square will place a piece of the type displayed in the square. Entering a square containing another piece-type will have no effect.

Hitting f1 will reset all pieces to their starting positions.

Hitting f2 will reset all pieces for the current game - this is the same as f1 unless the board has been modified since a new game was started.

Hitting f4 will clear all pieces of the current type.

Hitting f5 will clear the entire board.

When you have finished modifying, hit CTRL-Q to quit modifying.

### Replay

At the end of each game, the list of options is displayed, one of these is to replay. This will replay the last game, move by move from the beginning (or the last time it was modified). With this option, use the following keys:

Hit SPACE to go on to the next move.

Hit DELETE to go back one move.

Hit P to play from that point.

### Take-Back

This causes all the pieces to be moved back to the positions they occupied at your last move. Any number of moves can be taken back.

### Help

If CTRL-H is hit at your move, the computer will suggest a move.

### Changing Displayed Colours

This facility allows you to change the colours used to display the board and pieces. Two values are required - the first determines which colour is to be changed as shown below:

Value	Initial colour	Main Uses
CTRL @	Black	Background, Black pieces
CTRL A	Red	"Black" squares
CTRL B	Green	"White" squares
CTRL C	White	White pieces, text

The second value gives the colour to be displayed, as follows:

Value	Colour	Value	Colour
CTRL @	Black	CTRL D	Blue
CTRL A	Red	CTRL E	Magenta
CTRL B	Green	CTRL F	Cyan
CTRL C	Yellow	CTRL G	White

### Save And Load

These options are used to save a copy of the last game played, and re-load a previously saved game.

### Quit Thinking

Hitting CTRL-Q at any time will interrupt the computer's evaluations, and force the computer to make a move.

### Error Conditions

There are two error conditions that may be encountered:

- 1) Game too long - This error indicates that the game currently being played is longer than the maximum allowable 128 moves. To recover, use option 7 (modify and play) and quit modify immediately.
- 2) Too many moves - Reduce level, speed and/or sub-level, and use option 6 to continue the game.

# CHIP BUSTER

*Professional, Originally Released On Cassette Only*

Game Type : Arcade  
Authors : Mark Monckton and Tony Monckton  
Standalone Release(s) : 1985: CHIP BUSTER, Software Invasion, £9.95  
1987: CHIP BUSTER, Software Invasion, £3.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : SOFTWARE INVASION, P.O. Box 68, LONDON SW19 4TX  
Disc compatibility : Incompatible. Customised Loaders.

## Instructions

In CHIP BUSTER, the object is to keep your computer circuit board in working order by running about the tracks repairing damaged components. The damage is caused by "bugs" which "byte" large holes in the board.

To repair the board, you must move the man so that both feet are on the damaged part, then hammer away until the part is repaired. Bugs may be killed with the hammer but only when they are chewing.

When the countdown timer has reached zero, your bonuses will be given and the next board will contain more bugs. From level nine onwards, the tracks become invisible.

The game will end when you run out of lives or the circuit board blows up, which will happen when every section has a damaged part.

## Game Controls

Z - Left, X - Right, : - Up, ? - Down, <RETURN> - Hammer,  
Q/S - Sound On/Off, <ESCAPE> - Quit, <COPY>/<DELETE> - Pause On/Off  
D - Damage Report

**Instructions' Source** : CHIP BUSTER (Software Invasion) Back Inlay

## Review (Electron User)

If you've ever taken a peek inside your Electron, you'll know that the insides are very complicated, with the tracks between the chips very hard to follow. Software Invasion use this maze as the location for CHIP BUSTER, and a very good idea it is too.

Having established this reasonable scenario they then decided to stretch our credibility a bit - the maze is infested with bugs which 'byte' holes in the circuits. You control a repair man whose job it is to keep the computer running. He has none of the usual tools to help him, not even a soldering iron.

In fact all he has is a large hammer, which I'd have expected to do even more damage than the bugs, but it seems to work for him. There are three circuit boards to choose from - Electron, standard BBC and B Plus. Contrary to real life expectations, these are apparently very prone to faults.

There's no joystick option, so keys Z, X, \* and ? are used to move around. Press <RETURN> and the miniature electronics wizard starts hammering away to fix the holes or kill the bugs while they're chewing.

A damage report is available at any time by pressing D, and once you've figured out where each named area is you can run off to the one most in need of attention.

Should you fail in the allotted time, the computer crashes and there are more bugs and invisible tracks to liven up the higher levels.

CHIP BUSTER's sound options allow the excruciatingly awful music to be turned off. Animation is quite good, scrolling by the screenful when you move to the edge of the screen, and the colours have been well chosen for maximum clarity on a colour TV, but are less clear on a monochrome one.

Although competently written, this really is a variation on the well worn arcade maze game theme. I was a bit disappointed that more wasn't made of a good idea. However it is fast and fun enough to keep the youngsters amused for a while.

Sound .....	2
Graphics .....	6
Playability .....	6
Value for money .....	5
Overall .....	5

# CHILDREN FROM SPACE

*Professional, Originally Released On Cassette Only*

Game Type : Educational; Ages 5-12  
Author : Cathy Conlin  
Standalone Release(s) : 1984: CHILDREN FROM SPACE, Acornsoft/ASK, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : A.S.K., London House, 68 Upper Richmond Road, LONDON SW15  
Disc compatibility : DFS E00

## Instructions

Follow the adventures of Beng and Zoma as they explore the Earth. Having only recently arrived from their home in space, they have a few problems with their English - they get words mixed up, spellings muddled and don't always know the right words to use. What they need is Earth children to help them out by correcting their daily reports.

Having helped Beng and Zona, children will spot errors in their own written work much more quickly. But there's much more to Children from Space than dry exercises in grammar. The events which involve these two friendly visitors are by turns, humorous, surprising and endearing.

## In all A.S.K. programs

<RETURN> Remember: once you have typed in your response a program will  
< icon > deal with it until you press the <RETURN> key.

<ESCAPE> You can always return to the beginning of a program by pressing  
< icon > the <ESCAPE> key.

<DELETE> You can rub out anything typed in, before the <RETURN> key is  
< icon > pressed, by using the <DELETE> key.

<\_Hand\_> Means : Please press the space bar to carry on with the program  
< icon >

< ? > Means : the program did not expect the response it has just re-  
< face > ceived. Perhaps there was a typing error? In any case, to carry  
on, just press the space bar and try again.

<CTRL> All of our programs incorporate sound. There are various volume  
levels - holding down the <CTRL> key and pressing the <S> will  
<S> change the level - keep pressing the keys until you are happy  
with the volume.

Note: The program will not run on computers that have 0.1 operating systems.

## Introduction

CHILDREN FROM SPACE is a game involving two children, Beng and Zoma. They have just arrived on earth from the outer space. The purpose of their visit is to look around our planet and to make a report to Captain Daro. Unfortunately, their English is not very good and so they need some help with the language. Can you help them?

The game has four episodes each of which helps Beng and Zoma learn a different aspect of the English language; correction of common spelling mistakes, changing of tense, ordering of jumbled sentences and choosing the more appropriate of two words to fit into a sentence.

## **How to use it**

When the program is loaded, you will get the message "Beng and Zoma arrive on Earth. To help with their report, press the spacebar now." After pressing the spacebar you will visit the four screens in turn.

In each scene you will find the same sort of layout. Most of the screen has a picture of the scene being visited. Pictures may also appear in a small box on the right. At the bottom of the screen, you will see the current sentence that is part of Beng and Zoma's report. There are mistakes in these sentences, and to help Beng and Zoma, you must type in new versions of them.

Remember when typing that sentences must have capital letters at the beginning and full stops at the end, and spaces between the words. To get a capital letter, hold down the <SHIFT> key and press the letter you want. Also, don't forget that you always let the computer know that you've finished typing a sentence, by pressing the <RETURN> key.

## **The shops**

The first scene that Beng and Zoma arrive at, on their visit, is the shops. When Beng and Zoma start their reports, they make common spelling mistakes. What you have to do is to try and help them get the spellings right. In the sentence you see on the screen, one of the words is wrongly spelt. Try and see which word it is, and then type in the whole sentence correctly. If you get the sentence right then you should see something happening on the screen. Watch carefully to see what it is! If you make a mistake, the '?' symbol appears, and the computer will show you where the mistake is. If you do not correct Beng and Zoma's mistake then it is this that will flash, but if you have copied the rest of the sentence incorrectly then that will flash. Both types of mistake make the whole sentence flash. When you are ready, press the spacebar and see if you can type in the sentence correctly this time. If you make another mistake, then the <Hand Icon> symbol appears. When you press the spacebar you will be shown the whole sentence, correctly spelt. Press the spacebar to get the next sentence.

When you have tried five sentences, then Beng and Zoma will move on to...

## **The school**

Now you have to try and help Beng and Zoma change the tense of the sentences you see. They are shown to you in the present tense (e.g. At playtime the girls are skipping.) and you have to change them to the past tense (At playtime the girls skipped.) Type in the whole sentence in the past tense. If the sentence is correct then you should see something happen on the screen, as in the shops scene. Press the spacebar, and have another go at typing the sentence in, with the past tense of the word shown. If you get it wrong, you get one more attempt before being shown the answer.

After changing the tense of five sentences Beng and Zoma go to...

## **The seaside**

Beng and Zoma now find that their sentences are becoming jumbled up (e.g. sky Birds in flew the). You have to see if you can help them get the words in the sentence into the right order (Birds flew in the sky). Type in what you think is the right sentence. If you get the order wrong then you will get two more goes at typing in the whole sentence. If the order is still wrong, then you will be shown the correct answer.

After correcting the order of the words in five sentences, Beng and Zoma take a trip to...

## **The countryside**

When Beng and Zoma arrive at the countryside they find that they need to choose one of two words in a sentence (e.g. Zoma looked for fish in the river/grass). Help them decide which word is more likely, and type in the sentence with the best word (Zoma looked for fish in the river). You only get one chance to get the best alternative

in the sentence, after which the correct answer will be shown. Once again, you get five sentences to try.

### **After visiting each scene...**

After you have been to all four scenes Beng and Zoma you will find yourself back at the start. One of two things might now happen to you: you either get a message from Captain Daro saying that it is time for Beng and Zoma to return home, or you will be allowed to return with them to one of the four scenes. Choose which one, and give Beng and Zoma some more help.

### **Educational notes**

Once children have reached a reading age of seven, it is necessary for them to practise a number of skills if successful literacy is to be achieved. This program helps achieve a greater degree of accuracy in reading, spelling and visual discrimination while at the same time creating an atmosphere of fun and success. Unless children enjoy reading, once they have mastered the basic skill, then they will not readily pick up a book and read for pleasure. This could prevent any further developmental skill in reading taking place. This stage has to be carefully encouraged and fostered by giving opportunities for children to succeed at their own level of reading.

As this program is an aid to language development it is important, as far as possible, for two children, or a child and adult to work through the program together, talking over the problems which are presented, and discussing reasons which are presented, and discussing reasons why particular answers are chosen.

There are four scenes, each presenting a different task for the children.

1. A visit to the shops. The sentences shown contain some of the most commonly misspelt words. Often, when children read, it is the pattern of the word which provides the clue to the meaning, rather than the individual letters in the word. Here the children are made aware of letters without realising that they are "learning spellings". Once words are learnt on a computer, they are rarely forgotten.
2. A visit to the school. In this section children have to change sentences from the present to the past tense. This is an important area of language development, as past and present can be confusing, and by working through this section consistently, an awareness of the time element will be generated.
3. A visit to the seaside. Each sentence has been "mixed up" to help children become aware of the need to "make sense" of a sentence. Sorting sentences will help children achieve a high degree of accuracy in this important "sense-making" area. This will particularly help in their own story writing and sentence construction.
4. A visit to the countryside. In each sentence, there is a choice of words from which the correct one should be selected. The purpose of this is to foster an awareness of alternatives. Obviously at this stage the alternatives are not too difficult. Some of the ones which are presented are for fun. These are to emphasise to children that reading can be funny. Others contain a more difficult concept for children to grasp, ie the choice of the correct descriptive word enhances, or makes sense of, the storyline.

Children like to help others. By helping Beng and Zoma prepare their reports for Captain Daro they are inadvertently helping themselves with a few reading concepts, and a great deal of fun and enjoyment. The more times they use the program, the greater the skill and enjoyment.

Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### Instructions

Who'd have thought a country farmyard could be so stressful? You must collect the eggs before the nasties get out and eat up all your corn. Watch out for the crazy duck - if she gets out of the cage, you're in real trouble!

Up to four players can compete against one another.

Full instructions are included within the program.

### Game Controls

Select your own keys or joystick.

**Instructions' Source** : CHUCKIE EGG (A n F) Inner Inlay

### Review (Electron User)

Remember the old arcade game where you had the unnerving task of leaping over seemingly endless gaps in your path, climbing ladders and being chased by ghoulies, ghosties and beasties as you progressed? Were you addicted, as I was? If so, then CHUCKIE EGG, the new game from A & F Software, will be right up your street.

You control a cute little man with fast moving legs who starts at the bottom of the screen and has the task of collecting all the eggs. This has to be done before the nasties get out and eat all the corn. And be warned, if you bump into a nasty you're a gonner.

It is also wise to keep an eye on the crazy duck in the cage at the top left. If she gets out you've had your chips - with or without eggs.

It's not easy, but you do have a stock of lives to get through before your little man is annihilated. Once one level is cleared of eggs you progress higher, progressively harder with lifts and landing stages adding to the action. You've got to be quick thinking and have fast reactions to collect all your eggs.

The sound and graphics are excellent and the key allocation is particularly good. Although the program gives you one set of keys you can choose your own, a feature more software houses should follow.

It's a great game, compelling and entertaining and should appeal to all ages. A winner.

Trevor Roberts, ELECTRON USER 1.11

## Instructions

*"KENNETH FELD presents RINGLING BROS. & BARNUM AND BAILEY, THE GREATEST SHOW ON EARTH (R), C I R C U S G A M E S!*

*Step right up, see the main attraction. Tynesoft welcomes you to the greatest show on earth, Ringling Bros. and Barnum & Bailey combine to bring you Circus Games, capturing the thrills and excitement of the Big Top! We challenge you to attempt the High Wire - do Flips, Cartwheels and Hand Stands then ride the Unicycle. Try your hand at Trick Horse Riding - Attempt the daring feats on horse back and warm to the applause of the crowd. For the real spirit of the adventure Tiger Taming dares you to face the fierce Bengal Tigers. Make them stand on their podiums, walk through an obstacle course and jump through flaming hoops. Your skill and judgement are vital when it comes to tackling the Trapeze - you may discover that you're a real high flyer."*

### **\* \* \* TIGHTROPE \* \* \***

The walker must perform a series of tricks on the high wire, including handstands, 180 degree spin cartwheels and flips before mounting the silver unicycle to conclude the performance. The performer commences walk automatically, press the Up key to continue walk whilst at the same time keeping the walker's balance with his pole by moving right or left keys. There are two views of the action - one overhead, the other from the side. The events is split into three sub-events.

#### **Event 1**

The walker must cross the wire perofrming a somersault or can do more tricks if so desired.

#### **Event 2**

The walker crosses the wire performing a handstand and cartwheel - again, can perform more if desired.

#### **Event 3**

Ride Unicycle both across wire and back again.

## **Controls**

To perform:

A somersault	=	Forward and Fire
A handstand	=	Left and Fire
A cartwheel	=	Down and Fire
A 180 degree spin	=	Right and Fire

When landing on the wire after performing a trick, press Fire instantly otherwise a loss of balance will occur and result in a fall to the sawdust below.

## **Scoring**

You start with 5 points.

You gain 0.5 points for the first event.  
You gain 1 point for the second event.  
You gain 2 points for crossing on the Unicycle on third event.  
Minus 0.2 points for losing balance.  
Minus 1.5 points for a fall.

### **\* \* \* TRICK HORSE RIDING \* \* \***

The rider must perform a series of tricks whilst mounted on the horse cantering around the ring.

The display at the top of the screen shows the rider's balance. To stay on the horse keep the arrows in the centre of the display. The display at the bottom of the screen depicts the position of the horse as it circles the ring. When the rider walks on, press Fire to commence the jump onto the back of the horse.

The event is split into three sub-events of competition:

#### **Event 1**

From the saddle position jump either side of the horse and stand on saddle for half the ring.

#### **Event 2**

Perform a handstand and somersault.

#### **Event 3**

Whilst standing, perform a 180 degree spin in both directions and a handstand.

#### **Controls**

To keep your balance move Left and Right in line with the Balance Display Meter.

UP	= To stand
DOWN	= To sit
DOWN AND FIRE while seated	= Handstand
LEFT AND FIRE while seated	= Jump
RIGHT AND FIRE while seated	= Jump
UP AND FIRE while standing	= Somersault
LEFT AND FIRE while standing	= Spin
RIGHT AND FIRE while standing	= Spin

#### **Scoring**

You start the event with 5 points.  
Event 1 - 1.1 points.  
Event 2 - 1.7 points.  
Event 3 - 2.2 points.  
Minus 1.5 points in a sub-event if you fall off the horse.

### **\* \* \* TRAPEZE \* \* \***

The action takes place high up above the ring without a safety net. The crowd is captivated by their every action. The flyer has to perform crosses and re-crosses across the arena. A sequence of tricks, double or triple somersaults, mid-air somersaults and corkscrews have to be carried out under the watchful eye of the judges for a good score.

The flyer will automatically catch the trapeze as it passes the platform. Moving the Left or Right keys speeds up the flyer giving him more height. Press Fire to release the flyer from the trapeze. The event is split into 3 sub-events:

#### **Event 1**

Swing back and forth between the two platforms.

#### **Event 2**

Whilst flying from the trapeze, perform a corkscrew and a single somersault.

### Event 3

Flying from trapeze, perform a double or triple somersault.

#### Controls

Left	=	Moves flyer's legs back
Right	=	Moves flyer's legs forward
Fire	=	Release from trapeze
To perform somersault	=	Right and Fire
To perform corkscrew	=	Left and Fire

#### Scoring

You start with 5 points.

Gain 1 point	=	Completing Event 1
Gain 1.5 points	=	Completing Event 2
Gain 1.5 points	=	Completing a Double Somersault
Gain 2.5 points	=	Completing a Triple Somersault
Lose 1.5 points	=	Each fall

A flyer can only be credited with either a double or a triple somersault but not both.

### **\* \* \* TIGER TRAINING \* \* \***

A large cage is placed in the centre of the ring - the door opens and in bounds a Bengal tiger. You, as the Trainer, have to get all the big cat to perform a series of tricks, jump through a flaming hoop, jump onto a podium and walk through a tube on the obstacle course without being devoured by the magnificent animal.

The Trainer holds a chair in his left hand to defend himself and calm the tiger if he is put under threat. The chair is operated by any key and Fire.

In the Trainer's right hand is a whip; this is used to move the animals to your selected position. The whip is controlled by Fire alone. The Tiger's Head Cursor is controlled with Left/Right, Up/Down. This is used to show the direction the whip is directed. If the Tiger's Head Cursor enlarges, it indicates a direct hit on the animal. This is dangerous and unnecessary as it will only annoy the big cat and cause a threat, major threat and, eventually, an attack.

To direct the Tiger, place the tiger's head in direction you want the animal to turn then crack the whip, until it is fully extended.

#### Display Meters

At the bottom of the screen is a rectangular Threat Meter.

Half filled Meter	=	Threat
Full Meter	=	Major Threat

The 'Threat' can be reduced by correctly using the chair, otherwise an attack will take place.

#### To Gain Maximum Score

To achieve the maximum score get the tiger to complete the obstacle course in obstacle order thus avoiding incurring penalty points.

#### Scoring

You start with a 5 points base score  
Then 3.5 points for the tiger that completes the full obstacle course  
Minus 0.1 points for an ineffective whip command  
Minus 0.4 points for hitting the tiger with the whip  
Minus 0.5 points if the tiger makes a major threat  
Minus 1.5 points if you are attacked by the tiger

Once you have completed the International Competition and your final score is greater than one of the existing High Scores, then the Ring Master will announce your inclusion in the High Score Table.

### Game Controls

Z - Left, X - Right, : - Up, / - Down, <RETURN> - Fire  
<ESCAPE> - Stop, £/\_ - Pause On/Off

**Instructions' Source** : CIRCUS GAMES (Tynesoft) Back and Inner Inlay

### Review (Electron User) - "Big Top Extravaganza"

Donning sequinned tights and a lurex leotard, I step flamboyantly into the circus ring. Stefan Brookolini, master of high wire and tamer of big stripy pussy cats, is ready to take part in the circus spectacular of the year, CIRCUS GAMES, courtesy of Tynesoft.

Up to four players can compete in the big top tournament - a four event extravaganza that includes tiger training, tightrope walking, trapeze and trick horse riding. I suggest you take advantage of the practice option - at these there will be no audience to laugh as you plummet to your three deaths.

The tiger training event was quite puzzling - according to the instructions the ring should have contained an obstacle course over which the tiger was to be guided, a tiger-head cursor, a tiger and me. All of the afore mentioned items were present except for one - me. I was nowhere to be seen.

I hope my absence was not due to cowardice on my sprite's part. Although this is an interesting game section, the big cat's colours were very poor indeed and he looked like a mottled tabby rather than a striped tiger. That apart it's great fun.

Old timers who remember Superior Software's HUNCHBACK will have a distinct advantage when playing event number two, the trapeze. You stand there high above the ring and as the rope swings towards you, you jump and grab hold. By moving your legs at the correct time you can increase the height of your swing - one of the most critical factors affecting your success. Swing too high and you will soar into the lights, too low and you will plummet like a falling trapeze artist.

As if swinging wasn't enough to cope with, you must time your release so that the far trapeze is within your reach as you complete your graceful arc across the ring. And if you intend scoring any points at this event you had better perform an assortment of twists and somersaults to impress the judges.

The tightrope event employs a dual view display as the walker is seen both from the side and above. The top view allows you to see when you are beginning to overbalance to the left or right, a state of affairs which can be corrected using the appropriate keys.

A remarkable degree of realism has been programmed into this event. Just as in the real discipline, there is a tendency for the inexperienced walker to make a dash for the far podium - this invariably finished with the artiste providing an involuntary demonstration of Newton's laws of gravity.

The final event is the easiest of the four. Sitting and standing on a galloping white charger you have to perform a series of somersaults and handstands. Once again the left and right keys are used to maintain your balance while the fire key initiates any of the four breathtaking stunts. All events are realistically animated and respond well to the controls, but the sound is limited to a few beeps.

CIRCUS GAMES is a new and interesting variation on the decathlon type of program that has proved so successful over the years. I see no reason why this game should be any different.

Steve Brook

**\*\*\* Second Opinion \*\*\* (Electron User)**

CIRCUS GAMES is another blockbuster of a package from Tynesoft. If you've got a disc drive then the disc version is an absolute must as loading time is cut to seconds. You can practice events and chop and change as much as you like.

The graphics are excellent, and though the attempt at digitised sound at the start is interesting, it doesn't quite work. Overall it's a superb compilation of unusual and interesting games.

LINCOLNSHIRE DN20 9AX  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

### The Objective

Marduk the Dictator has established a base in an old deserted castle. His slaves have built a teleport which will soon be used to transport the alien invasion force from the planet Codar to Earth. Your mission is to destroy the teleport system before it is too late.

You must find and bring the five crystals to the temple on the island (thus activating the teleport system), teleport yourself to the alien planet, and bring back the bejewelled figurine which you will find in Marduk's palace. When this is brought back to Earth a field of antimatter will obliterate the teleport system and the invasion will be averted!

### The Adventure

You start in the "Main Hall" with 150 energy units. You can carry up to two objects at once. At the top of the screen is the name of the room and space for two objects. Below this is the number of energy units remaining, your score and the room co-ordinates relative to the "Main Hall".

### Keys

Keys open doors of the same colour. If you have the correct key both door and key disappear. To assist those with black and white televisions, a letter appears at the top of the screen to aid identification.

### Objects

Only those objects found on coloured bases can be picked up. These include: Egyptian statues, crystals, iron bars, a barrel, an ice crystal, a trampoline, a cannonball, a bucket, etc. Some of these will disappear when they are used.

### Monks

The tall, fearsome monks guard certain rooms. They can be dealt with by shooting a spell into their faces. This skill's soon mastered. However, the monks re-appear when you return again to that location.

### Energy

Energy is gained by collecting flasks and solving puzzles. Energy is lost by firing spells, by colliding with adversaries and burning objects, and by spending too long underwater. One unit is lost every 25 seconds due to the radiation emerging from the crystals. If you are losing energy quickly, you will be magically transported to the point where you entered the room. With a few exceptions, all screens can be traversed without losing any energy. There are almost 1000 units to be collected, but only 300 units are needed to complete the game.

## Hints

- \* Draw a map and work out the most efficient way round. Collect all the flasks as they boost your energy substantially. Take your time and use PAUSE to plan your next moves.
- \* Notice that you can move about while jumping. This may help you to jump higher on the trampoline.
- \* You could start by collecting the crystal which can be seen in the room directly above the "Main Hall". But what should you do to appease the wolf guardians in the temple? You will see the answer along the way, but you will need to do something to this object before the wolves will accept it.
- \* Finally, no object is useless! With the right amount of patience and skill you will eventually be rewarded with an impressive finale of sight and sound as the teleport system is destroyed.

### Game Controls (Layout 1 of 4)

```

Z..... Move Left      *..... Move Up
X..... Move Right     ?..... Move Down
RETURN..... Action: jump, pick up an object, drop an object,
                    push a switch, increase climbing speed
SPACE BAR or SHIFT ..... Cast Spell
P ..... Pause
At this point you can press J or K to select joystick or keyboard
S ..... Sound On      Q..... Sound Off
ESCAPE..... Escape from danger. Hold down to end game.
(Alternatively, you can use a switch-type joystick and the SPACE BAR).
```

**Instructions' Source** : PLAY IT AGAIN SAM (Superior/Acornsoft) Inner Inlay

### Review (Electron User)

There are now so many games available for the Electron that we are becoming spoilt for choice. Just occasionally, however, a real beauty comes along, and for me CITADEL, from Superior Software, is one of these.

CITADEL is a role-playing quest game. A particularly evil dictator has made his base in an old castle and built a teleport system there. It will be used to transport his invasion force of aliens, and your job is to destroy it. To do this you have to find five crystals hidden in various locations in the castle and its surrounding lands.

Sounds very like a traditional adventure - but now for the arcade bit. One room at a time is shown on screen, complete with your hero. You have to guide him round, up ladders, down ropes, leaping over fires by using conventional control keys Z/X for left/right, and so on. Move out of the room in any direction and the next room flashes up instantly. Useful objects lying around can be picked up and a lot of extremely nasty creatures have to be avoided or zapped with a spell. You need to be pretty quick with the control keys here.

CITADEL is great fun, and you need to play it to appreciate it. I've spent four weeks playing nothing else, and still only solved half the puzzles. Not only is it very enjoyable, it's also very difficult. For me, it's almost the perfect game. You need arcade skill to move your hero around the castle safely. You need logic to work out the purpose of the various objects.

The game is well programmed, with excellent graphics and sound. To sum up, as the old advert said, CITADEL is sheer enjoyment. Game of the year, for me.

```

Sound ..... 8
Graphics ..... 9
Playability ..... 10
Value for money ..... 8

# CITY DEFENCE

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Shoot-'Em-Up  
Author : Trevor Hall  
Standalone Release(s) : 1984: CITY DEFENCE, Bug Byte, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : BUG-BYTE, Liberty House, 222 Regent Street, LONDON W1R 7DB  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

You are under attack. Deadly missiles are approaching your ground bases, from above. Each missile is capable of totally destroying its target. Your duty is to defend your cities from the waves of missiles by firing rockets from your three bases and steering them towards their targets. You may have up to five rockets in the air at once, but beware - you can only direct the last one fired, and you only have a limited number of rockets available for each wave. Luckily, between waves of missiles you get a chance to reload! To stay in the game, you must preserve your cities.

## Game Controls

Five keys are used to control the game:

J - Launch rocket from left base  
K - Launch rocket from centre base  
L - Launch rocket from right base  
FUNC - Steer last rocket fired to the left  
Q - Steer last rocket fired to the right

A bonus is awarded for every 1500 points scored. There is on-screen scoring for one or two players, and the program also keeps track of the high score.

**Instructions' Source** : CITY DEFENCE (Bug Byte) Inner Inlay

## Review (Electron User)

As sole defender of a group of cities you have to fight off deadly missiles using the almost inevitable laser base. You have four cities to defend and three bases from which you can fire. Sadly there are only ten rockets available in each base. When your supply is exhausted, the enemy continues to attack ruthlessly until your planet lies in ruin.

After you've seen off each wave of enemy missiles your supply of rockets is replenished. Provided you have managed to save at least one city from the preceding screen, away you go again.

Extra cities are awarded for every 1,500 points, and other features include a two player option - very welcome when your friends play for hours - and a hi-score facility.

All in all I was impressed with City Defence. The instructions were concise yet clear and appear on screen as well as on the inlay card. The sound was good and did not become annoying as often happens. Indeed the sound produced by an attacking wave of missiles was really quite tuneful, although it could not be turned off if it did become tedious. The use of graphics was fair, if not exactly startling.

Perhaps a hardened arcade fanatic might be a little disappointed at the absence of

one or two features present on the original - for example there are no spaceships appearing from time to time. Having said that, to most people this game will provide a good deal of entertainment and is great fun to play.

Steve Yarwood, ELECTRON USER 2. 2

# CLASSIC ADVENTURE

*Professional, Originally Released On Cassette Only*

Game Type : Text Adventure  
Authors : John Jones-Steele  
Standalone Release(s) : 1985: CLASSIC ADVENTURE, Melbourne House, £9.99  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : MELBOURNE HOUSE, Church Yard, Tring, Hertfordshire HP23 5LU  
Disc compatibility : Unknown

## Instructions

CLASSIC ADVENTURE was the first major computer game and now it's become a classic in its own time. This exciting new release of CLASSIC ADVENTURE for the BBC will enable you to slay dragons, find hidden treasures and bribe trolls: and as your skill increases through more and more victories and discoveries, you too can become a master adventurer. Side 1 uses full 32K for BBC. Side 2 modified to suit Electron.

Before Crowther and Woods wrote Adventure in 1978, games all had something more or less in common. The player knew the rules, and had to try to use them to get the best possible score. In an Adventure, the aim of the game is to discover the rules!

To do this, the computer acts as your eyes and hands. It will tell you where you are and what you can see. You can tell the computer what you would like to do by giving it simple one or two word commands like "THROW AXE", "CLIMB" or "DRINK WATER".

The aim of the game is to find the many fabulous treasures hidden, and often guarded, in the Colossal Caves, and get them back to the building. But take care! Magic is said to work in the caves, and things are not always what they seem! Many things you pick up have strange side-effects and there are shady and often unfriendly characters lurking in the dark.

Typing "INFO" will get you some general information about playing CLASSIC ADVENTURE. To see how well you are doing, type "SCORE". "HELP" may be helpful at times. "INVENT" gives you an inventory of what you are carrying. "QUIT" allows you to finish the game.

Don't forget the caves have very twisty tunnel so if you go "NORTH", going "SOUTH" doesn't always get you back where you were!

## Hints

The computer only uses the first four letters of the words you enter so you can save time by typing "TAKE SILV" rather than "TAKE SILVER". The direction commands can be abbreviated to a single letter. If you have tried several different ways to do something without success, it probably can't be done. Try dropping something, or move on to something else - there's plenty to see in the Colossal Caves. Experienced adventurers generally make maps as they explore, and although mazes are difficult to chart, it can be done! If you get really stuck, go adventuring with a friend - they may think of something you haven't.

And remember the etiquette of adventuring - revealing the tricks is like announcing the end of a whodunnit - the act of a cad!

**Instructions' Source** : CLASSIC ADVENTURE (Melbourne House) Back and Inner Inlay

## **Review (Electron User)**

It wouldn't really matter how good or bad this program is - as it is the only Electron version of the original Colossal Cave adventure, I'd have to recommend it. So it comes as a bonus to find that this adaptation is superb.

I haven't played the original Crowther and Woods version so I can't say how close to the original this is. However, it seems to have all the problems I have read about so it must be a full - or nearly full - adaptation of the original.

In it you play the part of a typical greedy adventurer. You come hotfooting it, flushed with success from your last adventure. You've heard of the fabulous treasure to be found in the area and are eager to get your share.

Armed with the objects you find above-ground you race off to the grating that gives access to the labyrinth of caves below. You soon come across your first major obstacle - a large venomous snake. Its teeth soon puncture your ego as well as your skin. It is at this point that you realise that things aren't going to be quite as easy as you thought.

Careful exploration of the earlier locations soon reveals the solution - though the final answer is for the birds. You'll also find the first magic word. This returns you to the building but remember to turn off your lamp - it won't last forever.

You progress slowly, solving a maze and other puzzles and finally enter the main body of the adventure. Eventually you will solve the game but it is more likely to take weeks rather than days. Well, what else can I add? Very few adventures ever reach the standards set by this one. It is deservedly called Classic. Somehow it is exciting to visit all these locations I have heard so much about before. In a way it is like a legend coming to life. All I can say is it's a superb game and one that no true adventurer should be without. Magic!

Merlin, ELECTRON USER 2. 4

# CLASSIC ARCADE GAMES

*Professional, Originally Released On Cassette, ADFS 1D00 Disc And DFS 1D00 Disc*

Game Alias : COMPENDIUM OF CLASSIC ARCADE GAMES  
Game Types : Arcade (1 Text Adventure)  
Standalone Release(s) : 1987: CLASSIC ARCADE GAMES, Database Publications, £3.99  
Compilation Comprises : 1. SNAPMAN, Database  
2. ALIEN INTRUDERS, Database  
3. PANZER ASSAULT, Database  
4. MAYDAY, Database  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : DATABASE, Europa House, Adlington Park, Adlington,  
MACCLESFIELD SK10 4NP. Tel: 0625 878888  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## SNAPMAN

In this close relative of the arcade favourite you must guide your man sucessfully through the maze, matching energy pellets and avoding hostile aliens.

### Game Controls

Z - Left, X - Right, : - Up, / - Down

## ALIEN INTRUDERS

This is an exciting version of the all-time classic. With only your laser for protection, you must destroy waves of alien intruders that threaten you.

### Game Controls

Z - Left, X - Right, <RETURN> - Fire

## PANZER ASSAULT

Get ready for battle! You are a tank commander engaged in vicious street combat against encircling enemy forces. How long can you stay out before you are overwhelmed?

### Game Controls

Z - Left, X - Right, : - Up, / - Down, <SHIFT> - Fire

S/Q - Sound/Quiet, <ESCAPE> - Abandon Game

There is also a joystick option.

## MAYDAY

A futuristic adventure game to challenge your powers of deduction as you guide the sole survivor of a stricken space freighter through the wreckage of his craft.

Most keywords can be abbreviated to a single letter followed by a full stop.

**Instructions' Source** : CLASSIC ARCADE GAMES (Database) Inner Inlay

## Review (EUG)

When games describe themselves as "classic", it's best to tread with caution. Database Publications' collection of four machine code arcade games is a case in point; on either tape or disk you get SNAPMAN, ALIEN INTRUDERS, PANZER ASSAULT and MAYDAY and you'll probably agree that the majority do not sound too familiar. True

classics are very recognisable: most computers have their clones of TETRIS, HOPPER and PAC-MAN that can be thus described. What can make all the difference is the modesty of the packaging. It's when OTHERS describe them as classics, after an amount of time has passed, that they can rightly claim the title.

It might be a bit harsh to begin a review this way as Database Publications do not claim these four games are brand spanking new classics of the time. Rather, they seek to collate some of those clones referred to; possibly that even possess such an elitist accolade.

SNAPMAN, not altogether unsurprisingly, is the new version of PAC-MAN with four different coloured ghosts and a yellow munching circle you must navigate around a maze. Subtle differences to the Acornsoft SNAPPER are in there - instead of dots, you follow a green line trail, the ghosts are more closely related to the original PAC-MAN arcade game and a collision with one of them and your character sinks smoothly into oblivion - but it's not as professionally presented vis-a-vis loading and title screens. There's no joystick option yet the arcade screen layout does seem neater, the sprites 'cuter' and the execution speed perfect.

It's a nice reworking although the original SNAPPER is so popular, and appears on so many compilations, that it was never destined to take its crown.

Next on the menu are those rows of Space Invaders that move slowly (in fact, not so slowly in this version) from side to side and down the screen towards your laser at the bottom. Protecting you are three big yellow blobs under which you can take shelter or blast away from underneath in order to hit the ALIEN INTRUDERS who are pounding away at them from the top. The 'official', if that's the right word, release of this game is Micro Power's ELECTRON INVADERS. Actually, INTRUDERS is just a little bit better in terms of sprites, speed and addictiveness. Making a fantastic use of colour and seamlessly doing about a million different things at once, it's a real achievement on the little Electron and incredibly fast on a Turbo one or BBC.

Even the 'reporter' that scrolls across the top of the screen is incorporated. But it falls down, like the first, on its boring high-score table and introductory screen plus lack of joystick option.

There's no doubting that these first two games are the best. The coding and screen layouts are faultless and the sprites very colourful. It's with the move to PANZER ASSAULT that things get stranger. This is a maze game where you control a tank, and although this is mostly a m/code game it's just a CHR\$ definition you control, set in a maze with enemy tanks appearing out of nowhere. You must simply blast a set number of tanks each level until you are blasted away by one of them. This may be an arcade game but it could never be in the same league as the earlier ones! It does what it's supposed to, includes a joystick option and also has a nice layout on screen. Supposedly, it's another classic? Afraid not. It's original yet it's unimaginative and boring. Placed here, it serves only as a kind of ironic reinforcement that cloning sell-out tried and tested' arcade games can result in holding one's attention span longer than a brand new one!

The title MAYDAY also sounds rather unfamiliar but one might suspect this was to be a version of the BOMBER arcade game. It's not. Extraordinarily, this game is actually a text adventure!! Now this has to be the most predictable shot in the foot for reviewing purposes. Media that describes itself as a compendium of arcade games (classic or not!) needs to adhere to that categorisation. It's as annoying as when, as a child in BOOTS, you picked up the latest 8 bit game, saw the graphics on the back cover and after buying it realised they were from the AMIGA or ST version!

Of course, there are no graphics in MAYDAY. You are faced with a Mode 6 screen with the location description and choice of GO NORTH, etc. The adventure in itself is best suited to beginners and takes place on a troubled space freighter in the future. In point of fact, if you like text adventures, it's not all that bad at all. But it's not a classic and it's not an arcade. And most importantly, it shouldn't appear on a compilation that states that it is!

Europress, the new name for Database, have released this disk into the Public Domain so you can pick it up in most libraries for just one pound. If you are new to the Electron then you'll probably enjoy those two 'true' classics and spend a little time playing around with PANZER and MAYDAY. Remember also that, from a sales point of view, the title CLASSIC ARCADE GAMES sounds much better than FOUR GAMES and, without its original title, it might never have made it to review.

A final point to make is there are only a very rare number of disks that work with Electron ADFS's PAGE set to &1D00. This is one of them! Consider it...

# CLOGGER

## ***Professional, Originally Released On Cassette Only***

Game Type : Overhead Maze Game; Large Sprites!  
Author :  
Standalone Release(s) : 1988: CLOGGER, Impact, £4.95  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : IMPACT, Neepsend House, 1 Percy Street, SHEFFIELD S3 8AU.  
Tel: 01742 769950  
Disc compatibility : CDFS E00, DFS E00

### **Instructions**

*"In a strange and mystical land, many years ago, lived a peaceful race of beings known as the Cloggers. Cloggers were unusual creatures with three feet and no head but with strange powers that enabled them to perceive their environment in a way incomprehensible to man.*

*Cloggers also had a great love of art and, in order to achieve the status of Master Clogger, needed to prove their artistic appreciation. To do this, all young Cloggers had to undertake a series of cunningly conceived tests. These consisted of reassembling various pieces of artwork scattered around dangerous landscapes in the hidden valleys of Clogland.*

*Few Cloggers ever reached the status of Master Clogger. The task is truly awesome with countless problems to be solved and pitfalls to overcome. The time taken to complete each landscape is also crucial but the powers that be have kindly left a little food. However, this should be eaten with moderation as guzzling it down can lose some of its energy value.*

*Each of the eighteen landscapes becomes progressively more complex with increasing numbers of individual tests of initiative.*

*There are drills to be found which can be used (sparingly!) to create essential passageways; powerful lawnmowers to clear the deadly Cloggrass; plus springs, rebounding gyroscopes and buffers which all hinder your progress.*

*One ill-considered action can render your whole future worthless.*

*Would you have become a Master Clogger?"*

### **Loading**

The game consists of a main program plus four game files of five levels each.

You will be given a loading picture and then a menu from which you can select one of the four game files: SLIPPER, BRUSHES, ARTIST or PAINT.

Other game files can be loaded from the Instruction Page in the game itself.

The game objective is to become a Master Clogger, you must complete the twenty levels without using passwords. You have five lives with which to do this.

Each level requires you to gather 21 pieces of a picture and push them to the finish area. They must then be inserted in the right way to build up the complete piece of artwork. You must also eat all the cakes. When both the above have been achieved, the level will end and you can move on to the next one. You will then be given the password for that level.

The finish area is always seven objects wide by three objects high. This can be at any position on each particular level. It will be full of earth, which will need to be removed before the pieces of artwork can be inserted.

### **Playing Instructions**

Certain pieces of artwork may seem inaccessible. You will have to find out the route to them by using or moving the drills, lawnmowers, buffers and gyroscopes on the way. This must be done within a limited time period.

### **Maps**

A map of each level can be obtained by pressing M during the game. Time will continue to tick away so plan your strategy quickly.

### **Picture Screen**

To see the finished piece of artwork that needs to be assembled press P during the game. You can also see the clock ticking away. Appreciating the finer points of the artwork is not recommended at this stage.

### **Time Limit**

Time is limited for each level and if time runs out, you will run out of energy and lose a life. However your energy can be increased, and therefore your time increased, by eating cakes which will each give an extra 30 seconds worth of energy. (Don't eat too much at a time - the maximum time you can have at any stage is ten minutes). The only stage that time will stand still is on the status screen. So don't hang about!

### **Clogger's Almanack**

Whilst completing the tests that will make you a Master Clogger are largely dependent on your skill and initiative, the Clogland Council does supply a brief advisory almanack. This advises of the hazards that await you and tools that will be at your disposal.

### **Read carefully:**

Cakes	- Eating a cake increases your energy and thereby increases your time by 30 seconds. (Note - Don't forget that all the cakes must be eaten before a level can be completed)
Apples	- Eating these increases your score and removes a possible barrier
Earth	- This can get in the way. If in doubt, remove it but don't waste time
Cloggrass	- This is fatal on contact. It can be removed with a lawnmower
Lawnmower	- Used to remove Cloggrass
Springs	- These are a barrier unless approached from one particular side. If you find the right way to approach it then it will be removed
Gyroscopes	- When pushed, these will fly off until stopped by another object or reflected by a spring. If reflected by a spring, they will return to their original position
Buffers	- These can be used to solve problems caused by gyroscopes
Drills	- There are two of these on each level. One drills to the left and the other drills to the right. Each drill will cut through any THREE objects and then disappear. It is advisable to only use drills to cut through objects that cannot be removed in any other way.

### **Game Controls**

Z - Left, X - Right, : - Up, / - Down, <ESCAPE> - Suicide  
P - View Picture, M - View Map, S - View Status Screen & Pause

### **Status Screen Controls:**

P - View Picture, M - View Map, <ESCAPE> - Quit Game, <SPACE> - Return to Game

### **Controls Available From Instruction Page:**

L - Load a file, E - Enter password

### **Passwords**

Puzzles 2, 3 and 4 of the SLIPPER set are accessed by typing BALLET, OXFORD and POLISH respectively.

Puzzles 2 and 3 of the BRUSHES set are accessed by typing HARRIET and MOTTLEY respectively.  
Puzzles 2, 3 and 4 of the ARTIST set are accessed by typing TIPTOP, IMPALA and BRITISH respectively.

### **Review (Electron User) - "Pretty As A Picture"**

Every now and again something original and fun crops up in the Electron games market - remember FRAK! and the original, heady days of REPTON? Now here is a newcomer which will surely join the list of these all time classics. It's CLOGGER, a welcome new release from Impact who have moved on from posters, helpsheets and cheats and are now producing full feature arcade games.

Cloggers lived in a strange and mysterious land in days of yore. They were totally peaceful creatures who stomped merrily around on their three feet pushing a bulldozer in front of them. Their lack of a head in no way dimmed their intelligence - in fact they had wonderful powers of observation.

Cloggers also loved art, and it is this love that forms the main drive of the game, since in your attempt to become a Master Clogger you must find pieces of artwork and assemble them to make a complete picture.

Your aim is to complete 20 landscapes - an Electron bonus as the BBC Micro version has only 18 - by collecting the 21 picture pieces and putting them together in the finish area. Each landscape is about sixteen times the size of the screen and the scrolling is very smooth, both sideways and up and down. Clogger in fact, stays firmly in the middle of the screen spinning his feet like a whirling Manxman while the scenery moves around him.

As well as making the picture, Clogger must also eat all the cakes which are scattered around. These boost your energy and provide 30 extra seconds in which to complete your task. The maximum survival time you can have is ten minutes, so it doesn't pay to gorge too long on cakes - far better to save them until you need them.

Apples are eaten to score points and to get them out of the way. Earth just needs removing before picture pieces can be pushed through it. The bouncy springs can cause a problem, but these can be removed if pushed from the correct side.

Apart from lack of time, there is only one fatal problem. Cloggrass grows lush and green in places. Any contact with it will cause Clogger to fade away, but it can be cut. A couple of lawnmowers can be found on each level and these remove the grass with a satisfying noise.

The other tools to be found are the drills. These can remove three thicknesses of wall - or anything else for that matter - and then they vanish. Their use must be carefully planned. There are two more scenery items. Gyroscopes will, if pushed, fly away until they hit a barrier. There they stop unless the barrier was a spring, in which case they fly back to their starting point. Buffers can be pushed around to control the wild movements of gyroscopes.

The task of completing pictures would be all but impossible if you could not access the map. Pressing M will display a clear map of the entire landscape. This shows the current positions of everything, including Clogger himself. The pieces of picture are just shown as blank tiles - no actual picture detail can be seen. Incidentally, while looking at the map, the time ticks away, so map work needs to be hasty.

It is also possible to see the completed picture by pressing P at any time. Once again, don't admire the artwork for too long. The third option is to press S to see the status screen which tells you how much time is left, how much of the picture you've completed and how many cakes you must still eat.

The status screen is a true game pause and Clogger time stands still. The game may also be ended here by pressing <ESCAPE>. At first sight, CLOGGER has many of the attributes of the REPTON games. They play is similar in that your character is steered around a maze in search of goodies. CLOGGER, however, uses the entire screen for the game and still achieves a speedy scroll.

The characters are all large and colourful, and Clogger himself was conceived with a real touch of humour. I particularly like the way he performs a wheel spin when he bumps into a wall.

The sound consists of various beeps and noises which signify different events - pushing a gyroscope, eating an apple and so on.

CLOGGER is another arcade adventure which will require brain power rather than manual dexterity to solve. At its bargain price, buy it and see it race to the top of the charts.

Rog Frost

### \*\*\* Second Opinion \*\*\* (Electron User)

CLOGGER is a superb game very reminiscent of the REPTON series, but there are sufficient differences for it to avoid being simply a clone. The graphics are good, and the game is very playable. The main playing screen is a little dull and an attractive border would help brighten things up a little.

If you are a fan of this type of scrolling puzzle game and would like a change from Repton's adventures I can thoroughly recommend CLOGGER.

## Instructions

For many years a war has ensued between the Allied Nations and the Volgans. You play the role of Commander John Stryker, commissioned by the Allied Nations to undertake a perilous mission that, if successful, will give the Allies a fundamental strategic advantage over the warmongering Volgans.

Your task is to locate and seize the Volgan's latest weapon: a new spacecraft (codenamed Z11) which is equipped with the revolutionary matter/anti-matter warp drive facility. You have landed on the mysterious planet Volga, and you must now penetrate the Volgans' underground defence systems, find the spacecraft and requisition it.

## The Game

You can jump, run, kneel, crawl, climb up and down ropes, ascend and descend by using lifts, fire your laser blaster, drop mines, and pick up any objects that you find. You can also access information via your wrist terminal computer, and you can fly for short distances by using a jet-pack.

There are many objects scattered around that you can collect and use. To pick up an object simply run over it.

In order to be able to requisition the Volgan's Z11 spacecraft, you must collect four sets of plutonium rods (to power the craft) and a navigation ROM which is required by the spacecraft's computer.

As you descend below the planetary surface, you will pass through four different zones of Volgan activity:-

- \* The Surface Defence,
- \* The Ancient Shrine,
- \* The Crew's Quarters,
- \* The Missile Factory.

Each zone has three sub-levels called sectors. These are simply numbered 1 to 3. You start at "Surface Defence - sector 1" and descend through sectors 2 and 3, and then on to the next zone.

Moving from one sector to another is accomplished by entering a lift and pressing the appropriate key to ascend or descend. However, you need one security password in order to ascend or descend by 1 sector. Volgan soldiers are strategically positioned defending each sector. As you descend, the Volgan soldiers become more powerful: they inflict more damage and possess a higher armour-stress factor - you will need to shoot them several times to kill them.

You can kill a Volgan soldier in several ways:-  
(1) by shooting him,

- (2) by dropping a mine in his path (you can leave the mine and when the Volgan runs into it you will hear it explode no matter where you are in the sector),
- (3) by jumping onto a Volgan soldier (not always effective),
- (4) by crashing into a running Volgan soldier, or
- (5) by tricking two Vologans into shooting each other (while you jump out of the way).

### **Micro-Film Maps**

To look at the micro-film maps, you must have first picked up a microfilm cassette - you'll find one in the Surface Defence zone. Press "A" to access the wrist terminal computer and then press "M" to view a map of the current sector. The map can be scrolled to display the entire sector. The positions of the Volgan soldiers are also shown.

### **Using a Jet-Pack**

When you walk into a jet-pack, you will be placed onto the jet-pack: you can then thrust left and right, and by pressing RETURN you can thrust upwards. Release RETURN and you float downwards. The jet-pack has its own built-in blaster which does not drain power from your own blaster energy. The jet-pack also has its own computer which is accessed by pressing "J" - it shows the current blaster energy and the remaining jet pack fuel. The jet-pack can be refuelled by picking up a fuel canister.

### **Two Important Objects**

Most of the objects that you will discover are required for one purpose or another. But the mystery crates are particularly useful. When you pick one up all of its contents are assumed to have been picked up. The contents are usually several security passcards and/or energy cells. Springs are also extremely useful: they allow you to jump higher than normal - but picking up any other object immediately cancels the effects of the spring - so plan your movements carefully.

### **The JUMP Option**

You can jump immediately to the start of zone 2 or zone 3 if you have reached it in a previous game. To do so, press "J" on the introductory screen and you will start at zone 2 (or zone 3 if you have reached that far previously). Your status (lives, energy, equipment, etc) will be set exactly as it was when you first entered that zone.

However, to requisition the Volgan's Z11 spacecraft and receive the congratulatory message you must complete the entire game without the JUMP option.

### **The Wrist Terminal Computer**

Press the "A" key to access your wrist terminal computer. The computer screen will show you important information. The current zone is displayed (Surface Defence, Ancient Shrine, Crew's Quarters or Missile Factory) and under this is shown the sector within that zone (1, 2 or 3). Also displayed is your score, the number of lives remaining, and the number of mines which you are currently carrying. Each time you enter a sector after using a lift you will automatically be given six mines in exchange for your security passcard.

The suit energy and blaster energy are shown graphically as energy bars. Your suit energy is decreased each time you are shot by a Volgan soldier and if your suit energy reaches zero, you will be unable to fire your blaster until you have recharged it. To recharge either suit or blaster energy you must first pick up an energy cell, then access your wrist terminal computer and press "S" to recharge your suit energy or "B" to recharge your blaster energy.

Finally, the number of spare security passcards and energy cells which you are carrying is displayed.

### **Control Keys**

Z - Run Left,    X - Run Right,    \* - Fire Laser Blaster,    RETURN - Jump  
+ - Climb Rope/Ascend in lift,    > - Climb down rope/descend in lift/kneel/crawl

D - Drop a mine,    A - Access wrist terminal computer  
J - Access jet-pack computer,    O - Leave jet-pack,    Q - Lose a life  
ESCAPE - Restart game

(Note: Stryker cannot crawl off the screen. To move to the next screen, he must stand up and run across)

### **Introductory Screen Controls**

1 - Sound off,    2 - Sound on,    J - Depth Jump (if offered)

### **Wrist Terminal Computer Ctrls**

M - Display micro-film maps and enemy positions  
S - Recharge suit energy,    B - Recharge blaster energy  
SPACE . Exit from wrist terminal computer

(Original inlay includes graphics of characters and objects)

## Instructions

*"COLOSSUS allows one player to play a complete game of Bridge with the computer controlling the other three hands. Each hand is bid according to the Acol system. Included are the Blackwood, Stayman and Baron conventions. The strong two club and take-out doubles are also supported. All four hands are displayed at the end of play.*

*"COLOSSUS has the following features:-*

*32K/ELECTRON VERSION*

- \* Rebid/replay option*
- \* Skip to the next hand*
- \* Magazine subscription offer*

*64K VERSION*

- \* Rebid/replay option*
- \* Skip to the next hand*
- \* Hands with a specific point count/balanced distribution generated*
- \* Hand input facility*
- \* Variable speed of play*
- \* Card autoplay/recommend option*
- \* Claim trick(s)*
- \* Displays the score to rubber*
- \* Magazine subscription offer*

*"COLOSSUS TUTOR - a series of 10 hands to illustrate the fundamental principles of the game."*

## General

The Colossus program allows one player to play a complete game of Bridge with the computer controlling the other three hands.

Each hand is bid according to the Acol system. Also included are the Blackwood (aces and kings), Stayman and Baron conventions. The strong 2 club and take-out doubles are additionally supported.

Some computers have the memory required to display all four hands at the end of play followed by the score to rubber.

## Playing A Game

As normal, the player sits South. To follow suit, just enter a single letter or number to indicate the card to play:

i.e.     A   K   Q   J   T   9   8   7   6   5   4   3   2

To lead or discard, press a second key to indicate the suit:

i.e.     S   H   D   or   C

If a singleton is held in the suit led then this is automatically played as is the last trick.

To abandon the hand, press E. Press F to restart the program on the Master version.

### **Opening Leads**

Partners bid suit, top of three card honour sequence, ace from AK, king from Kq, fourth highest of the longest suit held (no trumps), singleton or high-low from a doubleton. If sensible, partners lead will be returned.

### **Bidding Instruction**

<SPACE> - No bid, D - Double, R - Redouble

Otherwise enter two characters, the level 1-7 followed by the letter of the suit.

### **Bidding System**

N.B. HCPs = High card points: Ace = 4, King = 3, Queen = 2, Jack = 1,  
< = less than, > = greater than

#### **a. Opening Bids**

1 of a suit ... 12 - 19 HCPs

If two suits of equal length are held, the higher ranking is bid with two exceptions:

- i. The suits are spades and clubs. Clubs are bid.
- ii. The hand distribution is 4441. Here the suit below the singleton is bid except when the singleton is clubs when hearts are bid.

1NT ... 12-14 HCPs & a balanced hand (No singleton voids or five card suits).

2 of a suit ... > HCPs (2 clubs => 22)

2NT ... 20-22 HCPs & a balanced hand

3 of a suit ... 4-10 HCPs and at least a seven card holding

Opening bids of 3NT or higher are not made.

#### **b. Overcalls**

Suit ... 11 with a six card suit

12 with a five card suit

> 13 jump overall, minimum six card suit

1NT ... 15-17, a balanced hand a stop in the called suit

2NT > 17 HCPs a balanced hand and a stop in the called suit

Double ... (for take out) > 13 HCPs and a singleton/void in the suit bid (below the three level). This distribution is not necessary for hands with > 15 HCPs. Partner must take out the double into their best suit. With > 8 HCPs they must also jump. It is possible to pass if the suit doubled is their best (a double of a NT contract is always for penalties).

Pre-emptive overcalls are not made.

#### **c. Replies to Opening Bids**

To one level bids: <6 HCPs ... No bid

< 10 HCPs ... Support partners major with four cards or more.

If you have a four card major that can be bid at the one level, you must mention it.

Raise partners minor with four card support.

Bid your best suit at the one level. Otherwise make the limit bid of 1NT. Do not bid at the two level. If two suits of equal length are held, the lower ranking is bid.

10-12 HCPs ... Jump raise partners major with four card support. Any four card major. With four card support, jump raise. Bid your best suit or 2NTs with a balanced hand. A bid of 2H over 1S required a five card suit due to the bidding space consumed.

> 12 HCPs ... Change the suit, show support, if held, on the next bid (delayed game raise). With > 15 jump shift or 3NT.

TO 1 NT: If you have an unbalanced hand, you must either use the Stayman convention or make a takeout bid into your best suit (jump with > 12 HCPs). The takeout into a suit at the two level is regarded as a sign off.

The Stayman convention is used if you have > 10 HCPs and a four card major. You bid two clubs. Partners must then bid their best major if they hold more than three cards in either major or a diamond denial. With a balanced hand, no bid with less than ten points, 2NT with 11 or 12 points otherwise three no trumps.

#### **d. Replies to Overcalls**

TO 1NT ... With a balanced hand, pass with less than eight HCPs, 2NT with 8 or 9 HCPs and 3NT with ten plus. Unbalanced hands: The Stayman convention may not be used in response to an overcall, 2C being for takeout. With > 11 jump in your best suit.

TO SUIT OVERCALL: As the overcall requires a five card suit, support may be given with a three card holding. A single raise is made with 6-11 HCPs, a jump raise with > 11.

As game is not likely with a holding of less than twelve points, (take-out double is used with strong hands in preference to an overcall) a no trump bid is made to show lack of sympathy for partners suit. A change of suit (requiring > 5 cards) is not forcing.

#### **e. Replies to Strong 2 Bids:**

With < 5 HCPs ... 2NT

#### **f. Replies to 2NT:**

With a balanced hand and > 4 HCPs bid 3NT. With an unbalanced hand, bid 3 clubs. This is Baron and request partner to bid his lower ranking four card suit except if clubs when 3NT is bid.

#### **g. Replies to 2 Clubs:**

This is a conventional bid showing > 22 and is no indication of a club holding. Bid two diamonds with less than eight points and 2NT with eight points. You cannot pass as partner may be able to make game.

#### **h. Replies to Three Level Bids:**

With < 16 HCPs, no bid. With 16 plus, either raise partner or bid 3NT.

#### **i. Openers Rebid:**

IF PARTNER SUPPORTED then with:

< 16 HCPs ... bid > 15 HCPs ... raise

IF PARTNER BID 2NT over 1NT then bid 3NT with anything but a minimum.

IF PARTNER BID A NEW SUIT then you are obliged to keep the bidding open except after 1NT - 2D/2H/2S. Here you pass the weak take out.

12-15 HCPs ... Support with a four card suit.

Rebid with a six card suit. New suit.

15-16 HCPs ... With a balanced hand, 1NT may be bid. Used to show a hand suitable for, but too strong to open, 1NT.

> 15 HCPs ... As above with jump. A 2NT rebid requires > 16 HCPs. Note: if partner bid at the two level, then 2NT may be bid with > 14 points. A new suit bid by you at the three level is forcing for one round.

IF PARTNER BID 1NT over your suit and your hand is not unsuitable for trumps then:

< 17 HCPs ... No bid 17-18 HCPs ... 2NT 19 HCPs ... 3NT

To rebid your opening suit or a new suit at the minimum level is a sign off/preference request. A new suit at the three level is forcing for one round.

#### **Blackwood Slam Convention**

A check to see if the partnership is missing any aces/kings before moving into a slam. It is generally held that if the bidding indicates that in excess of 32 points

are held, the possibilities for a slam must be examined. The convention is only used after a suit has been agreed. A bid of 4NT by the player will produce the prompt, "Blackwood?"

An entry of "Y" requires North to reply according to the number of aces held:

5C ... 0 or 4 aces      5D ... 1 ace      5H ... 2 aces      5S ... 3 aces

A bid of 5NT produces a similar sequence re. the number of kings held.

NB: The program will initiate Blackwood.

## **Colossus Tutor**

### **General**

A series of ten hands have been chosen to illustrate a number of the fundamental principles of the game. On each hand the player must enter the correct, pre-determined bid and then play before continuing to see a description of the hand.

### **Instructions**

Initially the player is asked to enter the number of the hand to be played (1-10).

The entry format for the bidding and play is consistent with that used in Colossus Bridge. However, if entry does not tally with the pre-determined best bid or selection, a beep is produced and the player must try again! The E key may be used to skip the analysis.

### **Hand Overview**

# COLOSSUS CHESS 4

***Professional, Originally Released On Cassette Only***

Game Type : Graphical Chess Simulation; The Most Superior For Electron  
Author :  
Standalone Release(s) : 1988: COLOSSUS BRIDGE 4, CDS, £12.95  
1991: COLOSSUS BRIDGE 4, CDS, £3.99  
Compilation Release(s) : None  
Stated compatibility : Electron Side A/BBC Side B  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : CDS, CDS House, Beckett Road, DONCASTER DN2 4AD.  
Tel: 01302 890000  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"COLOSSUS is probably the most complete computer chess program available for any home computer, written using the very latest techniques by a computer chess programmer of ten years' experience. It has the widest range of true features available, including some never before implemented on any home computer chess program.*

*"COLOSSUS also has a perfect understanding of all the rules of chess, including under promotions, the fifty move rule and all draws by repetition. It can also handle all the standard mates, including the very difficult King, Bishop and Knight versus King.*

*"COLOSSUS comes with a comprehensive instruction manual and is easily the best chess program for casual and serious players alike.*

*"This program is compatible with the BBC B, B+, Master and Electron. The B+ and Master have many extra features."*

## SECTION 1. INTRODUCTION

### 1.a General

Colossus is the best computer chess program available on any home computer. It is written using the very latest techniques by a computer chess programmer of ten years experience. It has been tested against a wide range of other chess programs and proven stronger than any of the opposition. It has the widest range of true features and sub-features available, including some never before implemented on any home computer chess program. Colossus also has a perfect understanding of all the rules of chess, including under-promotions, the fifty move rule and all draws by repetition. It can also handle all the standard mates including King and two Bishops versus King and the very difficult King, Bishop and Knight versus King.

### 1.b Running the program

Please follow the instructions for loading printed on the cassette/disk label or see Appendix 7 at the rear of this manual.

### 1.c Quick guide

Colossus has so many features, that at first you may be overwhelmed by the sheer size of the manual. However you do not have to read it from cover to cover but merely sample the relevant sections as your knowledge of the program increases. The only sections you should need to read to get started (apart from this introduction, of course) are "3.b Your Move" and "4.a Cursor Movement". Then the most commonly used commands in section 4.c are "Go", "New Game" and "Type".

After that the other sections can be read at your leisure, as you discover the truly amazing features that Colossus has to offer.

## **SECTION 2. DISPLAY**

### **2.a General**

The display uses two screens to provide clear, extensive information as to the state of the game, the program's current thoughts and the past move record.

The main screen shows a graphics chess board and various messages and questions as required. The second screen shows the past move record, including the player names and chess clocks and also information on the program's thought processes including lookahead positions examined, current-line and best-line with evaluation. The display can be toggled between the two screens by pressing the <SPACE> bar.

Electron version only: Because of the shortage of memory, the bottom section of the screen has to be used as program code/data area, which is the "mush" you can see being used as the program works.

### **2.b The board**

The main screen has a graphics board printout showing the current position. Letters and numbers around the board indicate the algebraic notation used for each square.

### **2.c Messages and questions**

Various messages and questions are displayed around the board as necessary. these are explained in more detail in later sections.

### **2.d The move record**

The secondary screen shows the last moves made by each side in two columns including move numbers. Above the moves are displayed the colours, player names and elapsed-time chess clocks for each side. (There is a slight variation in the position of this information on the screen dependent on the format, however, this is self-evident.)

#### **2.d.i The player names**

Above each column is displayed the names of the white and black players. The program's name is displayed as Colossus while its opponent's name is displayed as Opponent.

#### **2.d.ii The clocks**

Below the player names are displayed the elapsed-time clocks for white and black. The clocks are in the format "hh:mm:ss" (hh = hours, mm = minutes, ss = seconds). The clocks show the total time used by each side in the game so far.

#### **2.d.iii The moves**

The moves are displayed in algebraic notation with the from-square followed by the to-square. The separator between the from- and to- squares indicates whether the move is a capture or not ("x" signifies a capture, "-" signifies a non-capture). Castling moves are indicated with the from and to-squares of the moving king. En-passant captures are indicated by the letters "EP" printed over the move. Promotions are indicated after the move by a "/", followed by a letter to indicate the promoted piece ("N" = knight, "B" = bishop, "R" = rook, "Q" = queen).

Checks are 'indicated' by a "x" being printed after the move.

### **2.e Technical information**

The bottom of the secondary screen is used to display detailed information of the program's thought processes. This information can provide a great insight into how a good chess program works, but only takes a fraction of one percent of the program thinking time to display it.

#### **2.e.i Lookahead**

When the program thinks about its move, it displays the lookahead depth of its search. The depth is printed in "ply" or "half-moves". The program will search most move sequences to at least this depth, with some being searched much deeper.

### **2.e.ii Positions examined**

The number of positions examined in the tree of move sequences is displayed. This number is updated at every position and in fact takes very little time because of the single-byte/character type of display. The program examines, on average, about 170 (dependent on format) positions per second in the middlegame.

### **2.e.iii Best line**

The program displays the best line it has found so far in its search. This can provide you with the usual "hint" move and also an analysis of the game in the next few moves beyond the "hint"! (Usually the line will contain a "null" move. This simply means a passive, non-capturing move has been assumed).

Also displayed is the evaluation of the best-line, as two numbers. The first is the material evaluation (in terms of number of pawns up or down), the second the positional evaluation. A positive number means the program is better, a negative number means the opponent is better.

If the best-line is found to lead to a checkmate then the material score will be set to plus or minus 62, with the positional score a measure of how many moves to the checkmate.

### **2.e.iv Current line**

The move sequence the program is currently considering is displayed. This can be seen to change as the search progresses. The length of the line shown, can be adjusted as required (for further details see the "Quantify" command described later).

### **2.e.v Assumed move**

Colossus thinks on its opponents time. It assumes that the opponent will make a particular move and then continues thinking about its next move. Sometimes the program will not have a move to assume and then will not think ahead. The move assumed is displayed so that you can follow the program's thought processes and to provide a "hint" move. However, the quality of this move is for you to decide. If you play a different move from the one assumed, the time is wasted, but the program will correctly predict about one third of your moves.

## **SECTION 3. PLAYING A GAME**

### **3.a New Game**

When a new game is started, the pieces are set-up in their initial positions, the clocks are reset to "00:00:00", the move display list cleared and you are given the option of moving first.

Typing: <SHIFT> "G" for Commodore 64/128/Spectrum/MSX/Amstrad CPC/PCW or "G" for Atari/BBC/Electron/Master or <CTRL> "G" for Apple II, will make the program take the white pieces and move first. (For further details, see the "Go" command described later).

### **3.b Your move**

Whenever it is your turn to move, the program asks "Your move?" at the bottom of the main screen. You enter moves by the following cursor positioning method (see the later section "Cursor movement" for further details).

- 1) Move the cursor to the square of the piece you wish to move, and press the <RETURN/ENTER> key of the joystick #FIRE#. This causes the from-square to be displayed. If you accidentally enter the wrong from-square, it can be cancelled by pressing the <ESCAPE/DELETE> key. (The cursor is shown as an inverse line drawn through the current square).

- 2) Move the cursor to the square you wish to move to and again press the <RETURN/ENTER> key. This causes the "to-square" to be displayed. If the move is illegal, the message "Illegal" is displayed and the move entry cleared. You must then return to step-1 above and try again.
- 3) If the move is a pawn promotion the program then asks "Promote to?" You must then specify the piece you wish to promote to by typing one of the following: "N" - knight, "B" - bishop, "R" - rook or "Q" - queen. If you press any other key, the program assumes you promote to a queen.

Note : If you wish to enter a castling move, you should move the king two squares either way. If you wish to enter an en-passant capture, you should move the pawn as in a normal capture. The legal move is now indicated on the board, by flashing the cursor on the from-square, then moving the piece and flashing the cursor on the to-square.

### 3.c Colossus move

When the program computes its move it displays the message "Let me think..." below the board. The technical information on the secondary screen is updated as the search progresses. When the program has finished its search, it prints the selected move in the move-record and to the right of the board, and also indicates it on the board (in the same way as your moves are indicated). Pressing the <ESCAPE/COMMODORE/DELETE/EXIT> key whilst the program is thinking about its move will cause it to abort its search, displaying the message "Escape" and make the best move it has found so far. If the program has found that its move leads to checkmate, it announces the move with the message "Mate in N" where N is the number of moves till the mate.

### 3.d Game over

When a game is completed, the clocks are stopped and the program displays a message, to the right of the board, to indicate the final state of the game. The messages are: "Drawn": the game has been drawn by 3 fold repetition of position, the 50-move-rule or by neither side having enough material to mate the opponent. This occurs in the cases of King, King and Bishop or King and Knight versus a lone King.

"Checkmate": the side which moved last delivered checkmate. "Stalemate": the side to move is in stalemate. "Time-up": the side to move lost "on time". This occurs only if you are playing an "All-the-moves" game. (See "Type" command described later).

The program then asks "What now?" and waits for you to enter one of the program commands.

Type <SHIFT/CTRL> "N" to start a new game (for further details, see the "New-game" command described later).

## SECTION 4. KEYBOARD ENTRIES

### 4.a Cursor movement

The cursor is indicated by an inverse line, drawn through the middle of the current square. It can be moved in three ways.

#### 1) Cursor keys

Four cursor controls, provide single square movement in any direction. The <LEFT-ARROW> and <RIGHT-ARROW> keys give left/right movement, while the <UP-ARROW> and <DOWN-ARROW> keys give up/down movement. If the cursor is moved off one edge of the board, it reappears at the opposite edge.

#### 2) Algebraic keys

The cursor can be moved immediately to any rank, by typing any one of the number keys "1" to "8". It can be moved to any file by typing one of the letters "a" to "h". This allows algebraic notation to be used when entering moves e.g. typing e2 <RETURN/ENTER> e4 <RETURN/ENTER> will enter the common opening move Pe2-e4. Note that if the rank or file of the from- and to-squares is the same, the key sequence can be shortened, i.e. in the above example e2 <RETURN/ENTER> 4 <RETURN/ENTER>

would also work.

### **3) Joystick**

Use of joystick is available to certain formats. Once loaded a message is printed to show current joystick status. The initial position of the cursor depends on the current side to move.

If white is to move, the cursor starts on a1.

If black is to move, the cursor starts on h8.

### **4.b Numeric Data \*IMPORTANT\* Please Read**

Many of the programs require numbers to be entered to set-up new values of parameters etc. The program employs a simple to use, error-proof method for entering numbers. First the current value of the parameter is displayed at the query position.

To increment the displayed value, use the <UP-ARROW> key. If the new value is above the upper limit for that parameter then it is reset to its lower limit. To decrement the displayed value, use the <DOWN-ARROW> key. If the new value is below the lower limit for that parameter then it is reset to its upper limit.

To enter the new value into the program, press <RETURN/ENTER>. (If you do not wish to change the current value then press <RETURN/ENTER>, instead of using the "increment" or "decrement" keys).

### **4.c Commands**

The following commands can be entered, when it is your turn to move or when the game is over. To enter a command, just type its first letter (shown in capitals in the descriptions below) with the <SHIFT-CTRL> key also pressed. On BBC machines press capital only. The commands are ordered alphabetically and are designed to be easy and logical to use and to greatly increase your enjoyment of the game of chess.

Note 1: If the selected command requires numeric input, and you are viewing the secondary text screen, then the program will automatically switch back to the primary graphics screen.

Note 2: If the command is entered, then any "think on the opponent's time" will be aborted.

#### **Alter position: Type <SHIFT> "A"**

Any legal chess position can be set-up with this command. When selected the program displays the message: "Alter position: SSSSS: Command?" (where SSSSS is the side to move).

When in "Alter-position" mode, a further subset of commands allow you to adjust the board thus:-

#### **Get initial data: Type "G"**

If after changing part of the position, you decide you have made a mistake, the initial position can be retrieved with this command.

#### **Move-number: Type "M"**

The program asks "Move number?", thus allowing you to enter the new move number required. (See section 4.b for details on how to enter numeric data.)

#### **Side-to-move: Type "S"**

This toggles the side to move between white and black. When pieces are added to the board, their colour is determined by the current side to move.

For Clear, Pawn, Knight, Bishop, Rook, Queen, King:  
Type "C" , "P" , "N" , "B" , "R" , "Q" or "K".

To change a particular square, place the cursor over it and enter one of the above, to determine the new status of that square. (Note that algebraic control of the cursor is not available in "Alter position".) When a square is changed the cursor will move one square to the right to make the setting up of complete rows of pieces very easy.

**Wipe: Type "W"**

This removes all pieces from the board, thus allowing positions with very few pieces to be set-up more quickly.

**New game: Type <SHIFT> "N"**

The "New-game" command is still available in "Alter position" mode. (See full description later.)

**Exit: Type "E"**

This allows you to exit from "Alter-position" when the required position has been achieved. (Remember to set the correct side-to-move before exiting). If the position is illegal for any reason, the message "Illegal" will be displayed and "Alter-position" will not be exited. You must then correct the error before exiting. Illegal positions occur with any of the following:-

- either side has no king
- either side has more than one king
- either side has a pawn on the first or eighth rank
- either side has more than eight pawns or promoted pieces
- the side to move is in check.

When you exit "Alter-position", if you have made any changes, the current game-record is cleared of all previous moves, so that you cannot "back-step" through these (now possibly illegal) moves. (Note that changing the side-to-move or the move-number is also considered as a change.)

**Back-step: Type <SHIFT> "B" & For-step: Type <SHIFT> "F"**

All the moves in the game are stored in the program's memory. This allows you to step backwards or forwards through the game record, to get to any required position. This can be used for several reasons:-

E.g. After you accidentally lose a piece, you can recover your error using back-step.

E.g. If you wish to try a different line earlier in the game, you can back-step to the required position and then carry on playing the different line.

Stepping through the game record only does one move at a time so you must do an even number of steps if you still want to play for the same side.

Note: In fact the program only has room in memory for about the most recent 120 moves. This should be enough to store most games completely. If however, the game goes on for more than 120 moves, the game record is automatically updated to store the most recent 120 moves. You cannot then back-step right to the beginning of the game.

**Colours: Type <SHIFT> "C"**

The ink, paper and border colours can be set to any of the available colours. The only limitation is that the ink and paper colours cannot be the same, because this would cause the display to 'disappear'. If you try to enter conflicting colours the message "Illegal" will be displayed and you must re-enter another colour for the ink than the paper or the piece "colours" will appear inverted i.e. the "white" pieces will appear darker than the "black" pieces.

**Disk/Tape: Type <SHIFT> "D"**

This allows you to save/load move-records and positions to/from the disk/tape.

The program asks "Load or Save?" Type "L" to load a previously saved record, or "S" if you wish to save the current record. Any other keypress will abort the

"Disk/Tape" command. The program then asks for a file number (from 0 to 255), which is used as part of the file name on the disk/tape. (See section 4.b for details how to enter numeric data.)

If any error occurs during loading the current move-record will be lost. Note that the program parameters, such as playing speed, elapsed time, are not saved and so may need to be reset after loading. The <ESCAPE/STOP/BREAK> key can be used to abort a save/load early.

**Elapsed-time clocks: Type <SHIFT> "E"**

The elapsed time clocks for both sides can be set from 00:00:00 to 255:59:59. First the program asks for the new value for the white clock and then the new value for the black clock. (See section 4.b for details on how to enter numeric data). This can be used to set up reasonable values for the elapsed time clocks, if you change the playing speed in mid-game. The program makes extensive use of the elapsed time clocks to determine how quickly it should play e.g. if you increase the elapsed time on the program's clock it will then play quicker to keep within the average time it is currently set to.

**Go: Type <SHIFT> "G"**

This forces the computer to move for the current side. This can be used repeatedly to make the computer play several moves against itself or to force the computer to resume play, for the "side to move", after the "Supervisor" command has been entered (see later). It also allows you to switch sides with the program in mid-game.

After a new game has been initiated, this will make the program play for white. In this case the program automatically clears the clocks and sets the orientation for you to play the black pieces up the board.

This command is ignored if the game is over.

**Invisible: Type <SHIFT> "I"**

This allows you (if you feel confident enough) to play the equivalent of a game of "blindfold" chess, as sometimes done by strong chess players. The program asks "Invisibility?", when you must enter a number from 0 to 3. The number entered determines which pieces on the board are made invisible. 0 is the default value where both sides pieces are displayed.

- 1 will make all the white pieces invisible.
- 2 will make all the black pieces invisible.
- 3 will make all the pieces invisible.

The moves are still indicated on the board and displayed in the move record.

When "invisible" is selected, the word "Invisible" appears at the top right of the board, to avoid confusion.

**Legal moves: Type <SHIFT> "L"**

All the legal moves by any piece of the side to move can be shown. First position the cursor on the subject piece and type <SHIFT> "L". The legal moves will be shown in sequence by flashing the cursor on the target squares. The cursor is then returned to the subject square. If no legal moves exist the cursor will not move. This can be used as a tutorial aid for learners.

**New game: Type <SHIFT> "N"**

A new game can be started with this command. If you have not used "Alter-position" since the last "New game", then the game record is left intact until the first move of the new game is entered. This allows you to replay through the whole of the last game, by using the "Fore-step", or "Replay" commands.

**Orientation: Type <SHIFT> "O"**

The orientation of the board of the printout can be reversed, so that you can play the black pieces up the board. The algebraic notation is also reversed. This is most useful when you wish to play black against the program.

**Play-self: Type <SHIFT> "P"**

This makes the program play a game against itself, by moving for both sides.

When a game is completed, the program pauses for a few seconds to allow you to study the final position, and then starts a new game automatically. This command is ignored if the program is in "problem" or "infinite" mode (see later), or the game is over. Pressing the <ESCAPE/COMMODORE/EXIT/DELETE> key whilst the program is thinking about its move (but not while it is indicating its move on the board) or after the game is over, will stop the program playing against itself and allow you to resume play for the current side to move.

When playing against itself, both player names are displayed as "Colossus".

**Quantify parameters : Type <SHIFT> "Q"**

This allows you to adjust some of the program's internal parameters to make it function in different ways. (See section 4.b for details on how to enter numeric data). The program first asks "Book?". The parameter value can be 0 or 1. If it is set to 0, the program will not search its "openings book" for moves (effectively making openings easier for you).

If it is set to 1, the program will use its book in the normal manner. The program then asks "Prediction?". The parameter value of this can be 0 or 1. If it is set to 0, the program will not predict your move or think ahead on your time (effectively making the whole game easier for you). If it is set to 1, the program will predict your move in the normal manner.

The program then asks "Line depth?" The number of moves in the "current line" display can be set from 1 to 15 ply.

The default is 1, i.e. the moves at the first play of the tree are displayed. The program then asks "Dimensions?" The parameter value can be 2 or 3. If it is set to 2, the graphics board printout will be the two-dimensional representation as used in chess literature.

If it is set to 3 the board is displayed as 3-dimensional as though you were looking at a real board and pieces. The program then asks "Draw score?". The "material" part can be set from -9 to +9 and the "positional" part from -60 to +60. The lower the draw score is set the more the program will keep trying to win. The higher the draw score is set, the more the program will be happy to allow a draw (effectively making it easier for you to achieve a draw by repetition of position).

**Replay: Type <SHIFT> "R"**

The whole game-record can be replayed from the start to the final position to demonstrate the game-so-far to a spectator. The program pauses between moves to allow you to follow the game. The pause time can be set from 0 to 20 seconds. (See section 4.b for details on how to enter numeric data).

You can interrupt the replay by pressing the <ESCAPE/DELETE/COMMODORE/EXIT> key during one of the pauses. When an action replay is in progress, the message "Replaying" is displayed below the board.

**Supervisor: Type <SHIFT> "S"**

This stops the program making any moves, and allows you to play moves for both sides.

This allows you to set-up a required position by playing through a sequence of moves, or to play a friend using the program's board display.

All moves entered are still checked for legality. When supervising, both player are displayed as "Opponent".

**Type of playing mode : Type <SHIFT> "T"**

The program has six modes of play, to allow different speed and style games to be selected. The more time you give the program to think about its move, the better it will play.

The program asks "Type?" and allows you to select one of the following:

1) **Tournament mode**

Full tournament parameters can be set-up.

First, the program asks for the move number of the first time control.

Second, the program asks for the number of moves to secondary time controls.

Third, the program asks for the time of the first time control.

Fourth, the program asks for the time for the secondary time controls. The program is not strict about time control and will not claim a win "on time", if you exceed any time control. The program, will usually never exceed its own time control.

2) **Average mode**

This is really an easy usage version of Tournament mode, instead of entering all four parameters needed for tournament mode, the program simply asks you "Move time?".

The program will then control its search to use on average the time you enter. (Entering 0 seconds for the average move time, selects the program's fastest level). This effectively provides thousands of "levels" of play.

Note 1: in fact, this mode sets up tournament parameters of 60 moves to each time control, with 60 times the average move-time being allocated for each control.

Note 2: this is the initial mode, with an average of 10 seconds per move.

3) **All-the-moves mode**

In chess clubs, most games are played with chess clocks, with each player having say five minutes to complete the game or "lose on time". This mode allows you to set the complete game-time and the program will try to play all the moves of the game within the specified time. If either player exceeds the game time, the game will be terminated with the message "Time up". By using the "Elapsed time clocks" command, you can "handicap" the program or yourself, by putting some time on one of the clocks before starting the game. This can be very useful for players who are much worse or much better than the program.

4) **Equality mode**

In this mode, the program will attempt to keep its elapsed time clock, closely matched to your elapsed time clock, effectively playing at a similar speed as you are playing.

If you make several quick moves, the program will also probably have to play quickly to keep up with the "pace" you are setting. If, however, you think for a long time over some moves, the program will also be able to think longer over its moves. In practice, the program's clock will trail yours by a few minutes.

5) **Infinite mode**

This mode can be used to solve chess puzzles of the form "find the best move in this position". It searches all combinations of all moves to ensure that it does not miss a sacrifice. It continues searching, further and further ahead, until you tell it to stop or it finds a forced checkmate for either side, or it has searched 12 ply ahead (the program's maximum lookahead) or there is only one legal move in the position.

This is very useful for postal chess games where you can just leave the program running overnight (or sometimes even longer) to find the best move. When the program starts searching for the move, the clocks are set to 00:00:00:, so that the time taken on the move can be recorded.

Also note that the openings book is not searched in this mode.

Of course, the program may find the same move in much less time using its normal playing mode, because certain "obviously bad" moves are ignored.

#### 6) **Problem Mode**

This mode is used to solve chess mating problems. When selected the program asks "Problem Type?".

The program can solve three types of problems:-

- 1) Normal mates - of the form "White to move and mate black in X moves"
- 2) Self mates - of the form "White to move and force black to mate white in X moves" and
- 3) Help mates - of the form "White to move and help black to mate white in X moves". Of course, Colossus can find mates for black just as easily. Colossus is the first home computer chess program ever to be able to solve selfmates and helpmates.

The program then asks "Mate in?", whereupon you must enter the number of moves till the intended mate. Colossus can solve mates up to seven moves ahead. When the program starts searching for the mate, the clocks are set to 00:00:00, so that the time to find the mate can be recorded.

If the program finds a mating move, it prints the mating line below the move record, it prints the mating line below the move record, stops the clocks and asks "Continue?".

If you are satisfied with the discovered move, then pressing "N" will cause the program to make this move immediately. If however, you wish the program to continue searching for any alternative mate, press "Y" and the program will restart the clocks and continue searching for another mate. This process is repeated until no more mating moves are found, in which case the program will then make the last mating move found, on the board. If the program does not find any mate, the message "No mate" is displayed and the program automatically enters "Alter-position" to allow you to select another position or correct the current one.

Colossus is one of the fastest problem solving chess programs in the world!

#### **Use next best : Type <SHIFT> "U"**

After the program has made a move, you can instruct it to choose a different move from those remaining. You can use this repeatedly until all the moves have been used up. When no more moves are available, it prints the message "NO MOVE MOVES" and starts choosing from the whole move list. If the program is still using its openings book, it will choose the next book alternative (selected at random). This can be used to examine the program's book choices to select the line you prefer. (No non-book moves are considered!) If the program is out of book, it will choose the move it considers to be its next best choice from the remaining moves.

#### **Volume : Type <SHIFT> "V"**

The volume of the program's "beeps" can be adjusted from 0 (silent) to 7 (loudest).

#### **Write to printer : Type <SHIFT> "W" (PCW ONLY)**

You can print the current board position, the current move record or the moves as they happen to the printer. The program asks "Board, Record or Moves".

If you type "B" the current board position will be printed. The print is also in the normal "white-up the board orientation" as found in all chess literature.

The white pieces are printed as capital letters. The black pieces as lower case letters and the empty squares as dots. If you type "R" the current move record will be printed. A header is printed first for clarity. Also, if you have used "Alter position" then the initial position is printed before the list of moves.

If you type "M" the program responds "moves?" You can then enter a value of 0 or 1 to adjust the move printout (default). A value of 1 prints moves by both sides as they are played.

If you start a new game with continuous printout on, then the move record header is printed for clarity. Any other key pressed will abort the "Write" command.

## SECTION 5. PROGRAM INFORMATION

### 5.a Statistics

Author : Mr M.P. Bryant  
Publisher : C.D.S. Software Limited, Nimrod House, Beckett Road,  
Doncaster, South Yorkshire, England DN2 4AD.  
Estimated Rating : 1850+ELO (156+BCF)

### 5.b Openings book

The program has an openings 'book' of about 3000 positions, which it uses to play the first few moves of the game quickly and accurately. Lines vary from 2 ply to 17 ply deep. When there is a choice of book moves at any position, the program will choose between them at random, with a slight bias towards the moves which the program itself considers best.

### 5.c Results

Colossus 4.0 has been tested against numerous other home computer systems and has beaten them all. In tests, sixteen games were played on various levels, with an equal number of whites and blacks for each program. One point was awarded for a win, half a point for a draw, no points for a loss. The result of these tests were as follows:

Colossus 4.0 (Apple II) beat the following programs by:-

Mychess 2.0	Beyond	CBM 64	10.6
White-Knight Mk 12	BBC Publications	BBC	11.5
Sargon III	Hayden	Apple II	12.4
Superchess 3.5	CP Software	Spectrum	12.4
White-Knight Mk 11	BBC Publications	BBC	14.2
Parker Chess	Parker Games	Atari	14.2
Cyrus IS Chess	Sinclair	Spectrum	14.2
Superchess 3.0	CP Software	Spectrum	15.1
Chess 7.0	Odesta	Apple II	16.0
Sargon II	Hayden	Apple II	16.0
Chess	Atari	Atari	16.0
Chess	Acornsoft	Electron	16.0
Grandmaster	Audiogenic	CBM 64	16.0
Chess	Psion	Spectrum	16.0
Master Chess	Mikro-Gen	Spectrum	16.0

Of course, the results cannot be guaranteed precisely, in every set of sixteen games. In practice, they are bound to vary slightly either way, but they do give a very good guide to the relative strengths of the program.

# COMBAT LYNX

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade; Air To Ground Battle Simulation  
Authors : Nick Wilson and Julian Todd  
Standalone Release(s) : 1986: COMBAT LYNX, Durell, £9.95  
                          1990: COMBAT LYNX, Alternative, £1.99  
Compilation Release(s) : 1987: FIVE STAR GAMES, Beau Jolly, £9.95  
Stated compatibility : Electron Side A/BBC Side B  
Actual compatibility : As stated  
Supplier : DURELL, Castle Lodge, Castle Green, Taunton, SOMERSET  
          TA1 4AB. Tel: (01823) 54489  
Disc compatibility : Unknown

## **Instructions**

### Loading

If you wish to use a joystick (or two joysticks), make sure that it is connected to the keyboard before switching on. Place the cassette in the tape recorder and then press the <PLAY> key on the tape recorder. If you have a disc or Econet system connected, type \*TAPE before attempting to \*RUN the program.

### Generally

This is probably the most comprehensive 'real-time' battle simulation program ever written for a home computer. It can be played on a simple level as a 'shoot-them-up' game, or a more stealthy player can make use of the intelligence map to locate and destroy selected targets. The most skilled players will be able to protect their bases with mines, support forward bases under attack with air cover and fresh troops, and also intercept and destroy enemy vehicles (land and air) while in flight between bases. A game could last five seconds or five hours depending on the dexterity and tactical skill of the player.

### The Controls

In these instructions, words or numbers in angle brackets, such as <RETURN> or <X>, are keys on your computer. The function of these keys is shown in capitals, for example FASTER or SLOWER. Joystick 1 is represented as <J1> and joystick 2 as <J2>. The joystick positions are indicated as <J1U> for joystick 1 up, <J2L> for joystick 2 left, etc. The joystick fire-button is represented as <J2F>. Here is a list of the standard key settings:

### In Flight

<C>	.....	Slower	.....	<J1D>
<<>	.....	Faster	.....	<J1U>
<Z>	.....	Left	.....	<J2L>
<X>	.....	Down	.....	<J2D>
<>>	.....	Up	.....	<J2U>
<?>	.....	Right	.....	<J2R>

### Intelligence Map

<M>	.....	Enable Map (On/Off)	.....	<J1L>
<Z>	.....	Left	.....	<J2L>
<X>	.....	Down	.....	<J2D>
<>>	.....	Up	.....	<J2U>
<?>	.....	Right	.....	<J2R>

### Arming Weapons Systems

<X>	- When You Land At A Base	.....	Enter Arming Sequence	.....	<J2D>
-----	---------------------------	-------	-----------------------	-------	-------

<RETURN> ..... Exit Arming Sequence  
 <SHIFT> ..... Select Standard Weapons Load  
 <+> ..... Increase Arms Load  
 <-> ..... Decrease Arms Load  
 <Cursor Up> or <Cursor Down> ..... Move To Next Item

### **Firing Weapons Systems**

<Cursor Left> - Select Weapon ..... Arm Left ..... <J1L>  
 <Cursor Right> - Select Weapon .... Arm Right ..... <J1R>  
 <SPACE> ..... Weapons Sights On ..... <J2F>  
 <SPACE> ..... Fire Weapon ..... <J2F>  
 <Z> ..... Weapon Sights Left ..... <J2L>  
 <?> ..... Weapon Sights Right ..... <J2R>  
 <X> ..... Weapon Sights Down ..... <J2D>  
 <>> ..... Weapon Sights Up ..... <J2U>

### **Micro-Screen Messages**

<f1> ..... Base 1 Position  
 <f2> ..... Base 2 Position  
 <f3> ..... Base 3 Position  
 <f4> ..... Base 4 Position

### **General Game Controls**

<H> ..... Temporarily Halts Play  
 <1> to <4> at start of game ..... Skill Level (4 is hardest)

### **Starting Play**

After loading you can start the game by pressing <1> to <4> to set the skill level (4 is the most difficult). You are allowed three 'lives' each game; after which you will be returned to the score table.

### **Your Mission**

You will have four bases which you must support with troops and air cover. Base 1 has an endless supply of fuel and weapons, and the ability to instantly revitalise injured troops brought back from the other bases. All the bases start with thirty fully equipped soldiers. You provide the only allied air support. Enemy land vehicles will slowly converge on your bases unless stopped by mines that you have dropped or by the other weapons of your COMBAT LYNX helicopter. You may attack any aircraft that you see, and all targets that appear on the intelligence map. Your bases may get instantly wiped out in direct attacks by enemy tanks, or just suffer a number of casualties as the result of passing or minor attacks. If you lose Base 1 you will be deprived of fuel and weapon supplies and the game will come to a fairly rapid and unpleasant conclusion. Houses and trees should not be used as targets.

### **Arming The Helicopter**

At any of the bases you will be presented with the opportunity to re-arm immediately after landing, so that you can select a new load for your next sortie. If you don't want to bother with selecting a special set of weapons, just press <SHIFT> and you will be given the standard load. Otherwise each time you press the <+> or <-> keys you will alter the current item (shown in red) by one unit and you should then press <Cursor Up> or <Cursor Down> to move to a different item. It is up to you to decide how you make up your total load - you may decide to carry a lot of fuel and few weapons, or perhaps fewer weapons and extra soldiers.

You can go through all the arming items in turn and then back to the start again until you are satisfied with your load, at which point you should press <RETURN> to commence battle.

The CANNON and MACHINE GUN PODS and STRAFING ROCKETS fire in the direction that the helicopter is pointing so that when you are sighting them you will also be moving the helicopter. They will be less effective against tanks than the HOT missiles which

are wire-guided anti-tank weapons, and can be armed independently of the direction of the helicopter. Having fired the HOT missile you can then home it onto the target with the standard direction keys. There are also heat-seeking ANTI-AIRCRAFT MISSILES, which will hit most aircraft in front of the LYNX without the need for aiming. Finally there are MINES which may be usefully deployed around your bases!

Please note that in this game you are allowed to carry more weapons than would be possible in reality.

### **The Intelligence Map**

At any time, you can inspect the intelligence map by pressing the <M> key. A second press of the <M> key will return you to the normal flight screen. The map shows the battlefield in relief, with squares of colour denoting the height of the land to green, blue, black and red going from low to high ground. Vehicles and bases are shown on the map by symbols. To move around the map use the standard direction keys. Minefields are indicated by red crosses.

The co-ordinate position of the centre of the intelligence map will be displayed in red in the centre of your screen, below the co-ordinate position of your LYNX. You will be able to note your own co-ordinate position and be able to change your direction to make contact with a vehicle that you have seen on the map. Unfortunately, the intelligence map is only as good as the latest information - you may search in vain for a vehicle that has just moved away from its last reported position on the map. Generally though, the map is very useful, especially for landing, when you will be able to see your LYNX move into position directly above the base, as you come into land very slowly, then hover over the bases before descending. Note that you cannot control the LYNX while looking at the map.

### **The Message Micro-Screen & Base Reports**

You can use the micro-screen to find the co-ordinate positions of the bases. Press the <f1>, <f2>, <f3> or <f4> keys to get a report on one of the bases (1, 2, 3 and 4 respectively). If you manage to return injured personnel to base 1 they are instantly restored to full active service and may then be re-deployed. When any of your bases are attacked the number of injured personnel there increases. A base that has no able-bodied personnel left which gets even lightly attacked will be wiped out.

### **Flight Controls**

Your helicopter is seen from behind. You can see it fly straight (forwards or backwards) and at an angle of 45 degrees to the right or left of the four points of the compass (N, S, E, W). As this angle increases beyond 45 degrees, the 'direction of view' will flick from one point of the compass to the next, eg: from North to West. This may appear confusing at first, especially as the helicopter will be seen from the right when NORTH is the 'direction of view' and then be seen as the left as you flick through to WEST as the new 'direction of view'. To keep track of your flight path, watch the compass and your flight co-ordinates.

NOTE that you will suffer more enemy attacks the higher you fly.

On the left of your flight screen you will see three guages for engine temperature, speed (forwards and backwards), and fuel. Be careful not to overheat your engines, or run out of fuel. Warning lights at the bottom right of your screen will flash when this is happening. When landing you must use the intelligence map to check that you are directly above a base, the speed guage to check that you are hovering or moving very very slowly, and the height guage to check that you are coming down gently.

### **Firing Weapons**

This is a two or three stage process. First you must select the weapon system that you wish to fire by pressing the <Cursor Left> or the <Cursor Right> keys, or if you are using a joystick, by pressing <J1L> or <J1R>. As you press these, the colour of the currently selected weapon will move right or left across the bottom of the six 'weapon status' guages at the bottom left of the flight screen. These guages are marked as follows:

```

R ..... Rockets, multiple strafing type ..... unguided
G ..... Gun pods, machine-gun type ..... unguided
C ..... Cannon, 20mm Oelikeron ..... unguided
T ..... Tank attack, HOT missiles ..... wire-guided
A ..... Air attack, Sidewinder missiles ..... heat-seeking
M ..... Mines, underslung for air release ..... dropped

```

You can only fire one weapon system at a time. All the weapons are fired by pressing the <SPACE> FIRE key or <J2F> on the joystick. The heat-seeking missiles will be ineffective at long range, at a wide angle, or against very fast jets. Dropped mines can be seen on the intelligence map, and are effective against all enemy land vehicles. You can have a maximum of ten mined squares on the intelligence map at any one time.

NOTE that mines can be dropped when the intelligence map is on. A mined square will be effective against the enemy vehicle, after which it will be ineffective and will disappear from the intelligence map.

With all the other weapons systems, the first press of the <SPACE> FIRE key or <J2F> will activate an attack cursor on an infra-red display. The unguided weapons will fire in the same direction as the helicopter, and must therefore be sighted by using the flight direction controls before being fired by a second press of the <SPACE> FIRE or <J2F>. The wire-guided HOT missile system has a guidance system which is independant of the helicopter's flight path and so is less likely to result in you crashing into a hillside while aiming!

### **Skill Levels**

Skill level from 1 to 4 may selected (4 being the hardest). At higher skill levels the enemy forces move around more quickly, and their missile attacks become more frequent and accurate. Enemy attacks on your bases will be more severe, and your fuel will run out more quickly.

### **Scoring**

```

Jet plane ..... 50
Helicopter ..... 40
Tanks and lorries ..... 10

```

**Instructions' Source** : COMBAT LYNX (Durell) Back and Inner Inlay

### **Review (Electron User)**

In COMBAT LYNX, Durrell Software have come up with a unique and exciting war game. As the pilot of a fully-armed and potentially lethal Lynx helicopter, you are required to provide air support for four bases. These are constantly under threat of attack by enemy ground forces. You have a whole arsenal of weapons at your disposal, including landmines, wire-guided and anti-tank missiles, air-to-air missiles, and gun pods.

You can select any mix of weapons systems or a standard load. Your defence can be offensive or defensive and, to help you in this, you've access to a constantly updated intelligence map. This shows the ground contours, the positions of your bases and the dispositions of enemy forces.

From this you can decide where best to lay your mines and where to find the enemy vehicles which you can then strafe with your guns or destroy with your missiles.

While this is going on, you're constantly under attack by enemy missiles. Luckily these aren't guided, and can be easily avoided once you get the hang of the controls.

They're not the only hazards, however - because, like any flying machine, you have a limited range and need to keep a watchful eye on the fuel and temperature gauges.

The instrument panel also incorporates an airspeed indicator, altimeter, compass, and a very useful map co-ordinates indicator which relates directly to the intelligence map.

You can preset the co-ordinates of a particular target and then watch as your position winds down to coincide with them as you guide your machine towards it. Don't do as I did and become so interested in this that you fly into a hillside!

There's more to the game than merely zapping the enemy. Your bases sustain damage and casualties occur in the defence. The wounded have to be taken to hospital (Base No 1) and movements of fresh troops are undertaken by means of your helicopter.

Equally inevitable is the fact that as you get airborne with a helicopter full of wounded, a desperate call for help comes through from a base under heavy attack. What do you do?

It's not for the young or slow of reflex, as flying the helicopter, avoiding missiles and firing the weapons takes a great deal of acquired skill.

There are at least fifteen separate keys to use, some having dual and triple function depending on the situation. But I do feel that some of these could have been situated in a slightly more convenient way.

The graphics are highly detailed, extremely colourful and very well defined, and I was particularly impressed with the realistic way in which the weapons systems worked.

There are four levels. The "easy" still required a great deal of skill and the "hardest" was, for me, virtually impossible. Together with the very professional packaging, this all adds up to a superb game, thoroughly recommended.

Adam Young, ELECTRON USER 2.11

# COMMANDO

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Shoot-'Em-Up  
Authors : Trevor Harwood & John Nixon  
Standalone Release(s) : 1985: COMMANDO, Elite, £9.95  
1988: COMMANDO, CDS, £2.99  
Compilation Release(s) : 1988: PLAY IT AGAIN SAM 3, Superior/Acornsoft, £9.95  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : ELITE, Anchor House, Anchor Road, Alridge, WALSALL  
Disc compatibility : CDFS E00, DFS E00

## Instructions

You are Super Joe the crack combat soldier of the eighties battling against all odds to defeat the advancing rebel forces. Equipped with only an M60 machine gun and six hand-grenades, you carry out your lone crusade, forcing your way into hostile territory. Mortars, grenades and dynamite rain from the skies and explode around you. Enemy bullets fly past you in all directions and trenches, cliffs and lakes block your path. Rebel forces appear from caves, strong holds and troop carriers to stop your progress. You must show no mercy. You must not retreat. You must keep pushing yourself further and further into enemy lines, collecting supplies of hand-grenades from defeated outposts, until you reach your final objective, the fortress.

Developed with the aid of Capcom to produce the closest possible home-computer simulation of the original arcade No. 1 hit game. Have you got the skill and stamina to defeat the enemy?

The object of the game is to advance as far as possible into enemy lines whilst destroying rebel forces, installations and vehicles. Along the way you should pick up as many boxes of hand grenades as possible so as to replenish your stock.

## Game Controls

Z - Left, X - Right, \* - Up, / - Down  
<RETURN> - Fire, <SHIFT> - Grenade  
Joystick compatible. Press SPACE bar for grenade.

**Instructions' Source** : COMMANDO (Elite) Inner Inlay

## Review (Electron User)

This is a game for the red blooded macho man who catches bullets in his teeth and eats three shredded wheat for breakfast. Armed only with an M60 machine gun and six hand grenades, you must make your way far behind enemy lines, annihilate the enemy troops and destroy their fortress.

COMMANDO is a clone of the arcade hit of the same name, and it's not a bad effort. Using joystick or keyboard you can move the soldier in any of eight directions and your bullets are always fired in the direction in which you last travelled.

Hand grenades differ from bullets in that they are always thrown up the screen irrespective of which direction you are travelling. The action begins in a desert which is sparsely covered with trees and sand dunes. As soon as you appear you must start running forward while spraying bullets at anything which moves.

There's no chance of hitting any of your own troops as there are none - this is a suicide mission for which you drew the short straw. Having survived the desert you encounter your first obstacle, for your foes are guarding a road bridge under which

you must travel. Not only must you beware of soldiers coming under the bridge towards you but you must also avoid the hand grenades thrown by the motorcyclist who rides to and fro across it.

Following another stretch of desert you arrive at a high wall with a huge gateway. As you approach the wall the gate opens and tens of troops rush out. These must all be killed before you are allowed to pass through the gate.

The next expanse of desert is riddled with trenches from which little men pop up and shoot at you. The game seems endless as you complete screen after screen of hectic action.

COMMANDO provides the same kind of excitement I felt when I first played ELITE many moons ago, and I shall go back to it time and time again.

Sound .....	6

# COMMONWEALTH GAMES

***Professional, Originally Released On Cassette Only***

Game Type : Arcade Shoot-'Em-Up  
Authors : Dave Crofts and Kevin Blake  
Standalone Release(s) : 1986: COMMONWEALTH GAMES, Tynesoft, £7.99  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : TYNESOFT, Unit 3 Addison Industrial Estate, Blaydon, TYNE & WEAR NE21 4TE. Tel: 091 414 4611  
Disc compatibility : Unknown

## Instructions

*"This superb sports simulation explores new territory in programming with a new sprite compression technique used for the first time to give you the very best in graphics display. Compete against the computer and the clock in 8 challenging sports events in search of the coveted world record - Weight Lifting, Cycling, Rowing, Running, Long Jump, Hammer, Swimming, Steeple Chase"*

Prior to the start of Event 1, the number of players and initials are entered. It is recommended that the tape counter is noted at the commencement of loading on this Event, so that tape can be rewound to this position when the final event Six Medallist screen is displayed.

A High Score Table will be displayed at the end of each Heat. Events indicating PROPORTIONAL POWER require a slow initial rhythm on the Z/X keys building up to a maximum speed.

## Event 1 - Hammer

You start rowing slowly, increasing speed using above keys. After third revolution the Angle Meter will rapidly increase from zero upwards, hitting <SPACE> will stop the angle and launch the hammer.

\* PROPORTIONAL POWER

## Control Keys

Z and X - Increase Rotation, <SPACE> - Select Hammer/Start Throw

## Event 2 - Swimming

You swim over 200 metres (4 lengths) against the computer and the clock. You have control over the lower swimmer. The gauge indicates the amount of air in the swimmer's lungs, holding down <SPACE> will increase this amount but at the same time reduce your speed.

\* PROPORTIONAL POWER

## Control Keys

Z and X - Swimming Stroke, <SPACE> - Start/Breathe

## Event 3 - Cycling

You are shown a side and front view of your cyclist and an aerial view of the race track. An indicator on the power gauge will display the maximum possible speed for a particular bend; go too fast and....!! Another indicator on the track shows your current position.

\* PROPORTIONAL POWER

## Control Keys

Z and X - Increase Pedal Power

#### **Event 4 - Running**

You race against the clock as well as a computer opponent over 400 metres. You control the bottom runner.

#### **Control Keys**

Z and X - Increase Leg Power

#### **Event 5 - Long Jump**

At the end of run-up, hold down Space Bar; the take-off angle will increase until the Space Bar is released.

#### **Control Keys**

Z and X - Increase Leg Power, <SPACE> - Start Run/Take Off Angle

#### **Event 6 - Steeplechase**

Run over 400 metres. When a hurdle approaches, hit <SPACE> to jump. This will also cause you to decelerate, therefore timing your jump correctly will result in a lesser drop in speed.

\* PROPORTIONAL POWER

#### **Control Keys**

Z and X - Increase Leg Power, <SPACE> - Jump

#### **Event 7 - Rowing**

Race against the computer and the clock. You control the two rowers by hitting each of the action keys in the sequence Z, X, <, >. The distance markers on the banks show metres remaining for each boat.

#### **Control Keys**

Z, X, <, > - Two Man Rowing Action, <SPACE> - Start

#### **Event 8 - Weight Lifting**

You have two attempts at each weight. You must qualify at one weight to move to the next. There are five weight levels in all. As this is the last event, failure to qualify will result in a Game Over for that player. To continue game at end of Event, rewind tape to Event 1.

\* PROPORTIONAL POWER

#### **Control Keys**

Z and X - Increase Lift Power

**Instructions' Source** : COMMONWEALTH GAMES (Tynesoft) Back And Inner Inlay

#### **Review (Electron User)**

As so many athletes boycotted this year's COMMONWEALTH GAMES in Edinburgh, you have been given the opportunity to enter eight of the events. Have you got what it takes to compete with the world's greatest athletes?

The events are stored on one side of a cassette and must be loaded in strict sequence - there is no menu allowing you to load individual events. You compete in hammer throwing, swimming, cycling, 400 metres, long jump, steeplechase, rowing and weight lifting. Pressing the Z and X keys alternately determine power or speed, while the Spacebar initiates a throw.

The graphics are drawn on a grand scale - none of these weedy little stick men running around. In the hammer throwing you only see the top half of the athlete as he turns in the circle. After his third turn, a meter displaying an angle bursts into life. Hit the Spacebar when it reaches the angle you desire and away soars the hammer to an incredible distance - about five metres in my case.

The cycling is another graphically pleasing and original event. The action takes place in three separate screen windows, the top displaying a plan of the circuit and

indicating your position. The next one provides a sideways view of you on the bike, and the third a head-on view. Great care must be taken not to enter the bends too quickly or you will find yourself rolling down the track ahead of the bike.

In the events which are completed quickly, such as the hammer, the ability to re-run would have been helpful. Likewise with the long boring events such as the 400 metres.

It would also have been nice to have had an abort key which allowed you to skip one or two of the heats if you so wished. COMMONWEALTH GAMES is a fine example of an athletics program, but could have been even better with a little more forethought.

# COMPETITIVE MATHS

*Professional, Originally Released On Cassette Only*

Game Type : Educational; Mathematics Quiz  
Author :  
Standalone Release(s) : 1985: COMPETITIVE MATHS, <Unknown>, £6.95  
Compilation Release(s) : None  
Stated compatibility : Unknown  
Actual compatibility : Unknown  
Supplier : Unknown  
Disc compatibility : Unknown

## Instructions

Instructions currently unavailable.

**Instructions' Source** : COMPETITIVE MATHS (<Unknown>) Back And Inner Inlay

## Quick Peek (Electron User)

Improve your mental arithmetic by beating the clock to a new high score. The idea is to answer as many quick-fire questions as possible within a minute. You can choose any of addition, subtraction, multiplication or division - with varying skill levels.

ELECTRON USER 3. 3

## Review (Electron User)

This is one of those programs you might tend to dismiss on first sight. However on persevering I became quite addicted to it. The idea is to choose a mathematical subject out of addition, subtraction, multiplication and division. You are then asked for the level of difficulty - there are three.

Now sit back and prepare yourself for the next sixty seconds of quickfire mental arithmetic questions as the computer prepares its barrage. I found I could cope well with the addition and multiplication questions, but when it came to subtraction or division I has some catching up to do.

That's where the program came into its own for me. Due to its competitive nature you feel that you can't stop - not yet anyway, just got to beat that last score.

After a while the questions became easier for me and I moved to level three. The levels of difficulty are well worked out. Each time you achieve a maximum score of 39 you move up a level.

On level 3 I have as yet been unable to better my high score of 27. One complaint I have about this program though is that in the rush to type your answer in, it is often easy to hit a wrong key and this causes a point to be deducted from your score. I suppose this helps to train your reflexes but I still found it somewhat frustrating.

This is an addictive game, that is both fun and educational for children and adults alike.

Robin Nixon, ELECTRON USER 3. 7

# COMPLETE COCKTAIL MAKER

*Professional, Originally Released On Cassette Only*

Game Type : Educational; Novelty Cocktail Database  
Author :  
Standalone Release(s) : 1985: COMPLETE COCKTAIL MAKER, Acornsoft, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ACORNSOFT, Betjeman House, 104 Hills Road, CAMBRIDGE CB2 1LQ  
Tel: (0223) 316039  
Disc compatibility : CDFS E00, DFS E00

## Instructions

If you are a party person (and can stand the competition) be sure to include COMPLETE COCKTAIL MAKER in your guest list. The program contains data sufficient to concoct over 300 different drinks to suit every mood and taste.

Browse through its large bank of colourful recipes or give your friends the fun of devising their own cocktails from drinks you happen to have. Alternatively, use the program to confide in your computer - name some favourite ingredients; divulge your personal tastes; share even a part-remembered phrase or word to summon up some piquant taste long lost in the mists of time.

*It's a must for every party season.*

The computer program is based upon an original idea and original material contained in a book entitled The Complete Cocktail Maker by Geoffrey Hindley, published by Ebury Press, copyright (C) Geoffrey Hindley 1983.

## Introduction

The COMPLETE COCKTAIL MAKER contains details of over 300 interesting and colourful cocktails which will suit every mood and taste. You can browse through them at your leisure and find out how to mix your favourite drinks on your own home. Alternatively you can try finding out which drinks you can make with the contents of your cocktail cabinet, simply enter all your ingredients and in a few moments you'll be presented with the whole possible range.

## Using The Program

The program starts by displaying the Main Menu:

- 1 BROWSE
- 2 A DRINK CONTAINING ...
- 3 A DRINK MADE USING ...
- 4 DESCRIBE THE DRINK ...

Choose one of the options by entering the number next to it and pressing <RETURN>. The Main Menu can be returned to at any stage by pressing ESCAPE.

## Option 1 - Browse

Option 1 allows you to browse through all the cocktails which the program knows about. The cocktails will be displayed in alphabetical order and to move through them you should use the right and left arrow keys. These keys take you to the next cocktail and the previous cocktail respectively. Using the | (SHIFT and left arrow) and ^ (SHIFT and right arrow) keys will move you on ten recipes in either direction (or to the last or first ones if less than ten recipes in remain at that end). The keys \ (CTRL and right arrow) and ~ (CTRL and left arrow) move to the last and first cocktails respectively.

## Option 2 - A drink containing...

This option allows you to search for all the cocktails which contain one or more particular ingredient, eg you may wish to search for all the cocktails which contain vodka and orange juice. Four menus will be presented displaying liqueur flavours, spirits, other alcoholic and non-alcoholic ingredients. The liqueur flavours menu is shown first and you can move to the others using the right and left arrow keys.

To select a particular ingredient move to the page containing it, place the cursor to the left of the ingredient using the down and up arrow keys and then press COPY. This will have two effects; firstly it will tell the computer that you are only interested in drinks containing that particular ingredient and secondly it will change the colour of the ingredient and secondly it will change the colour of the ingredient on the screen as a reminder for you that it has been selected.

If you change your mind about including a particular ingredient you can cancel your selection by carrying out the same procedure as described above for selecting it but pressing the DELETE key instead of the COPY key. This will revert the ingredient back to its original colour.

When you have selected all the ingredients you want in your cocktail then press <RETURN>. A 'Searching' message will appear and the computer will look through to find all the cocktails which it knows about that meet your criteria. Remember that the more restrictive you are about what the cocktail should contain, the longer this search will take and the fewer cocktails will be found. A search for a drink which contains one or two specified ingredients will take about 15 seconds.

After the search is complete, the program will display the first cocktail that it has found. You can then move through all of them as described in option 1. If no cocktails have been found then a message will be shown and by pressing the Space Bar you will be presented with the whole file to browse through.

You may wish to make your rules less stringent if a search has failed to find any cocktails or maybe just one or two. Alternatively, if you searched for all the ones containing just one common ingredient, eg orange juice, it could find too many for you to look through. In either of these cases you could press ESCAPE to return to the Main Menu, select option 2 again and re-enter your new selection. However, an easier method of returning to your menus with the ingredients you previously selected still indicated. This allows you to check which ingredients you chose and to alter, add to or reduce your selection.

NOTE: After pressing ESCAPE you will not be able to return to your original selection.

### **Option 3 - A drink made using...**

This option allows you to find all the cocktails you can make using the range of ingredients you have available in your drinks cabinet. Ingredients should be selected in a similar manner to option 2 above. In this case, however, you may find it useful to use [ (SHIFT COPY) or SHIFT DELETE to include or cancel all the drinks shown on the current screen.

It is assumed that you will always have some of the possible non-alcoholic ingredients, eg water, sugar etc and so these are not listed but are automatically selected for you.

To start the search again, press <RETURN>. The 'Searching' message will be displayed and a few seconds later, the first recipe found will be shown. You may move through the recipes as described in option 1. If no cocktails are found then a message will be shown and by pressing the Space Bar you will be presented with the whole file to browse through. You may return to the menu pages by pressing "D" to see which ingredients you included. This allows you to see the effect of adding a couple of bottles to your cabinet without having to re-enter all the ones which were originally marked as being included.

NOTE: After pressing ESCAPE, you will not be able to return to your original selection.

#### Option 4 - Describe the drink...

In this option you are asked to enter the name or part of the name of the cocktail you want information about, then if the program knows about the cocktail it will display the recipe for it. For example, entering PINA COLADA will present you with the recipe for this cocktail. However, if you PIN was entered, several recipes will be presented in turn: PEPINO, PEPPIN THE INSPIRED, PINA COLADA, PINEAPPLE SIMPLE and PINK DAIQUIRI.

#### **How The Cocktails Are Displayed**

The information about a typical cocktail is shown below.

SHIMMERING SUMMER		
Liqueur Flavours		
APRICOT 1p		
Spirits		
VODKA 3p		
Other Alcoholic		
CAMPARI 1b		
Non-Alcoholic		
LEMON JUICE 1p		
ORANGE JUICE		
EGG WHITE quart		
Decorations		
COCKTAIL CHERRY		
ORANGE SLICE		
ICE		
Shake and top up		

The ingredients are listed under four different headings; liqueur flavours, spirits, other alcoholic and non-alcoholic. In addition, there is a fifth category which lists the decorations which are suggested for making the cocktail more attractive when serving it. In most cases, the ingredients will be followed by a number and letter, eg 1p, 2d or 3b. This indicates the amount to be used; p is an abbreviation for part, d for dash and b for barspoon.

The actual volume of a 'part' depends on the number of drinks required. To start with, the easiest way to make up small numbers is to use a medicinal measuring beaker with millilitre graduations. A standard 4oz cocktail glass holds just over 112ml (1 fluid oz = 28.4ml). If you are making two drinks of a recipe requiring, let us say five main parts, then simple arithmetic shows that you need about 225ml in total or, divided by 5, 45ml of each part.

A barspoon has the same capacity as a teaspoon. The dash is an intermediate small measure but a rough guide gives four dashes to the barspoon. Where the dash or barspoon features in a recipe that quantity is needed for each of the drinks to be mixed.

If no amount is indicated then the ingredients should be added to taste. Although the amounts are those recommended by the author, they should not necessarily be stuck to rigidly. Try experimentin by altering proportions to find out what effect this has.

When ingredients such as rum or sherry are included then use the type of your preference. Liqueurs are classified by their flavour and when, for example, a recipe calls for an orange flavoured one then any in this category may be used. The flavour categories which the individual liqueurs are classified under are as follows:

Almond	Amaretto
Blackcurrant	Creme de Cassis
Apple	Apple Brandy, Calvados
Cherry	Cherry Brandy, Maraschino
Apricot	Apricot Brandy
Drambuie	Drambuie

Orange	Cointreau, Curacao, Grand Marnier, Mandarine Napoleon
Herbal	Benedictine, Green Chartreuse, Yellow Chartreuse, Galliano
Banana	Creme de Banane
Mint	Creme de Menthe
Cacao/Coffee	Chocolate Liqueur, Coffee Liqueur, Creme de Cac- ao, Kahlua, Tia Maria
Aniseed	Anisette, Pernod

The final piece of text concerns the mixing method. Nearly all cocktails are mixed on ice either in a shaker or a mixing jug, and ideally the glasses should be chilled as well. When mixing cocktails the following rules generally apply:

1. Pour non-alcoholic ingredients first (unless fizzy), followed by the still alcoholic ingredients and finally any fizzy ingredients.
2. Shake when the recipe includes fruit juices, eggs, cream etc with a sharp, vigorous action but not for too long. Top up shaken drinks with any fizzy ingredients or non-alcoholic ones which are to be added to taste.
3. Stir when all the ingredients are clear, as shaking would tend to cloud them, as does too-energetic stirring.

Do not expect the final cocktail to be the same colour as the one shown. Cocktails come in over a million different shades. Ours are as realistic as is possible working with only eight different colours. In some cases it will depend on which ingredients you have used, eg 'Flying Boat' is illustrated as being made using Blue Curacao, however if you only have one orange flavoured liqueur which happens to be Cointreau then the drink will be an orange colour.

The following lists the type of glass to be used according to capacity:

Cocktail glass. Capacity 3-4 ounces.  
 Highball glass; tall, straight-sided tumbler of 8-12 ounces cap.  
 Wine glass. Capacity 4-8 ounces.  
 Old-fashioned glass or whiskey tumbler of 8 ounce capacity.  
 Campagne glass. Capacity 5 ounces.

**Instructions' Source** : COMPLETE COCKTAIL MAKER (Acornsoft) Inlay and Mini-manual

### Review (Electron User)

One of the main uses of home computers, apart from alien zapping, is the storage and retrieval of information in databases. These can be based on any topic and the COMPLETE COCKTAIL MAKER is a database concerned with that complex set of drinks. It contains information in over 300 with details of how much of each ingredient is needed. Not only that, but it tells you how to mix them and what type of glass to serve them in.

On loading, you are presented with the command menu which gives you four options. Browse allows you to look through all the recipes in alphabetical order. For each drink you are given the liqueur flavour needed, the spirit required as well as any other ingredients. The recipe also suggests what decorations to use and the mixing method. A picture is drawn of the type of glass to use which also gives some idea of the final colour of the drink.

Option two is A Drink Containing. You specify which ingredients you want, chosen from four different lists. Any cocktail containing your specified substances is then displayed on the screen. In the event of none being found the program reverts to Browse mode.

A Drink Made Using sounds almost identical, but in fact means that not all of the ingredients have to be used in the cocktails. You could enter the entire stock of your drinks cabinet and find all the cocktails you could make.

The final option allows you to enter the name of a cocktail and the computer will

display its recipe. If you enter part of the name, all drinks containing the letters you entered will be found.

The program comes with a twelve page booklet which clearly explains how to use the program. The whole package is well produced and, if you are into cocktails, it's very useful. The trouble is, it contains no samples.

Rog Frost, ELECTRON USER 2. 9

# COMPOSER

## *Professional, Originally Released On Cassette Only*

Game Type : Utility; Make Music  
Author :  
Standalone Release(s) : 1984: COMPOSER, MicroMart, £4.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : MICRO MART, 1st Floor Edward House, Tindal Bridge, Edward  
St, BIRMINGHAM B1 2RA. Tel: 0044 (0) 121 233 8707  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### Instructions

This program was written to enable you to enter music into your Beeb from a representation of a Keyboard drawn graphically on the screen. The program also has the ability to save and load tunes you have entered, edit any notes you may have entered incorrectly and an exercise mode where you will be taught how to read music.

The program is menu-driven, which simply means you are given a number of options, and entering the number of the option you want will go to the correct part of the program. If you wish to return to the menu at any time, you just press <ESCAPE>.

NB. When composing, if END is not marked tune may not replay correctly.

### Option 1: Load A Tune

To load a tune you will be asked for a filename, this is the name you give to the file when you save it. When loaded you will be asked for the tempo you wish the tune to be played at; 1 is very fast and 10 very slow. You will find that 3, 4 or 5 are right for most tunes. Pressing the red function Key f0 will replay the tune and print on the staves. To exit this part of the program, press Q.

### Option 2: Compose A Tune

This option draws a representation of a piano Keyboard on the screen with all the white notes named, for those who are not familiar with a Keyboard. Above this are printed the staves where the music will be printed and underneath the length of the notes in numbers and graphical representation of notes as printed on the music.

The first thing you are asked for is the length of the bar you require and this must be given as the number of crochets per bar. For example a tune in 4/4 time requires a bar count of 4.

The next thing you are asked for is the Key you are going to compose in. This determines the correct sharps and flats which are written on the staves. NB. Although the sharps and flats appear on the staves you must enter all notes correctly off the Keyboard, i.e. if the tune calls for an Eb you must enter it as such and not just as E.

Then you can actually begin composing. The note is to be entered in two stages. First you must enter the pitch by moving the flashing cursor to the note you require on the Keyboard by means of the grey arrow Keys on the computer. When you have the cursor correctly positioned, you simply press <RETURN>. Next you enter the length value from the numbers under the Keyboard or the drawings of the notes by again positioning the cursor as above and when correctly positioned pressing <RETURN>.

The length of a semi-quaver is 1, a crotchet 2, a minim 4 and a brieve 8. Dotted notes are also shown.

Using Option 8 you can initialise for single bass notes or arrpegio chords further information is given under Option 8. These are usually found on modern music written above or below the staves. Most chords last for a whole bar and the length for the chord must be entered accordingly.

You then carry on composing your tune or copying it from music note by note. If you want to enter a chord note and a melody note you must enter the low note first. Bar lines are written automatically according to the length of bar you have selected.

When you have finished you must end the composing by moving the cursor to END on the far right of the Keyboard and pressing <RETURN>. NB. If you escape from this option in any other way the end of tune marker will not be set and strange things may happen on replay.

### **Option 3: Replay A Tune**

You will be asked which tempo you wish the tune to be played at, 1 is very fast, 10 is very slow; you will find 3, 4 or 5 is right for most tunes. The music will then be played and written onto the staves. The marker above shows the note actually playing.

### **Option 4: Save A Tune**

You will be asked if you are sure that you wish to save the tune, answer Y or N, and then for a filename. This can be up to 10 characters long for cassette and seven characters for disc. The tune will then be saved for subsequent reloading.

### **Option 5: Change Instrument**

Choosing this option allows you to change the way the melody notes are replayed. You are given nine options and pressing the appropriate red Function key will change the sound. The envelopes which govern this are held in PROCNEWENV(g) and the user can alter this if they want a different envelope. This is at line numbers 2880 to 2990.

### **Option 6: Exercise**

This option works in reverse to the rest of the program in that you will be given a note on the staff and you must enter the correct note on the Keyboard. First you will be asked for the limit of notes you wish to be tested on, these are marked by moving the cursor to the lowest note and pressing <RETURN> and then the highest note and pressing <RETURN>. Then a note will be printed on the staves and you must move the cursor to the correct note and press <RETURN>. If you are correct, the note will play and your score will be incremented. Otherwise you will get another two goes to get it right after which you move onto the next note. After 20 notes you will be given your score. N.B. After each try the cursor returns to a random position on the Keyboard so if the note is the same do not just press <RETURN>.

### **Option 7: Edit**

If you have entered a note wrongly either in pitch or length this facility allows you to overwrite this. You single step through the tune and are given the option to change the pitch or length of each note. Answering Y to the question will allow to change the pitch or length by positioning the cursor on the correct note or length. Pressing any other Key will move on to the next note. NB. The facility will only overwrite. It is not possible to insert notes missed out. If a note has been entered that should not be there then making its length 0 will erase it.

### **Option 8: Initialise**

You are given a choice of single bass notes, that is notes below MIDDLE C on the keyboard, or arrpegio which sounds a major chords.

Hints: When you have got used to how the program works, you can speed up entry by moving the cursor in a horizontal direction just below the keyboard and just above the length of the notes.

## Instructions

Set in a malfunctioning Plutonium Plant, your job is to collect 50 valuable plutonium crystals.

The crystals are spread evenly across the ten chambers of the plant, but beware the various hazards :- collapsing floors, conveyor belts and escalators, mutilated life forms and your greatest problem, the limited air supply which is only replenished after completing each chamber.

You have three lives, but you do gain an additional one after completing every second chamber.

The following are the correct screen passwords which, when input during the 'Hall of Fame Hi-Score table' will enable you to practice each level.

2. Icarus    3. Quasar    4. Ariane    5. Sirius    6. Pulsar    7. Apollo  
8. Altair    9. Nebulla    10. Vostok

## Control Keys

Z - Left,    X - Right,    RETURN - Jump  
ESCAPE - Restart,    P - Pause,    C - Continue  
Q - Quiet,    S - Sound

**Instructions' Source** : CONDITION RED (Blue Ribbon) Inner Inlay

## Review (Electron User) - "Red Alert"

CONDITION RED refers to the danger point in an atomic reactor, and this offering from Blue Ribbon has you set in a malfunctioning plutonium plant where you are required to collect 50 plutonium crystals before a meltdown occurs.

This is a ladders and platforms game, and the plutonium crystals are spread over 10 screens, any of which may be accessed by means of a password. A full list has been provided to enable you to enter any particular screen while in practice mode.

Controls are fairly standard, with Z and X providing the left and right movements and <RETURN> for jump. It is possible to pause the action and switch off the sound effects. Plus 3 owners should ensure that the ADFS is disabled before loading.

The various hazards range from collapsing floors to electrified ones - and the conveyor belts and escalators can carry you straight into trouble.

You must learn to cope with a fancy line in mutating monsters, and to make matters worse you are only equipped with a limited air supply, though this will be topped up after you complete each screen. You start the game with three lives, but an extra one is given after every second screen.

Mode 2 is used for the graphics, and they are therefore extremely colourful. All the characters are remarkably well drawn, in fact one mutant, which resembles a little pink devil with white horns, is so appealing it is almost a pleasure to fall foul of it. Unfortunately, the sound effects let the game down a little.

Movement is very smooth in spite of the fact that a lot is happening at once on each screen, and key presses in particular are very responsive. It is easy to forget when playing this game that it is in a budget price range, as the appearance is so good.

It is only let down by a lack of variety of mutants, as they are basically only three types - a devil, a robot and a bug eyed monster, all of which make quite predictable horizontal or vertical movements.

It would have been nice to have had a screen designer but for £1.99, you can't complain.

# CONFUZION

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade; Sliding Block Puzzles To Defuse Bombs  
Authors : Dave Kirby and Paul Shirley  
Standalone Release(s) : 1984: CONFUZION, Incentive, £7.95  
1989: CONFUSION, Alternative, £2.99  
Compilation Release(s) : None  
Stated compatibility : BBC Side A, Electron Side B  
Actual compatibility : As stated  
Supplier : INCENTIVE, 54 London Street, READING RG1 4SQ  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"The Scenario : A huge 64 storey automated industrial plant used for the production and storage of deadly Confuzion Bombs versus a highly intelligent and quick thinking mind (yours!!)*

*The Objective : To destroy the complete complex by eliminating the entire explosive stock pile.*

*CONFUZION : Its features include Bonus levels, Extra Sparks, Skill Stepping, Speed Spark and Multiplayer options. A totally addictive and frustrating arcade game using a fresh and original playing concept. THE FUZION OF MIND AND MACHINE."*

## Background

You are in a huge 64 storey automated industrial plant that is used for the production and storage of deadly Confuzion Bombs. This place is considered to be one of the greatest threats to mankind. Having gained access to the computer control room - your mission now is to explode every bomb on all of the factory's 64 levels.

## Factory Information

64 LEVELS (8 SECTIONS EACH WITH 8 FLOOR)

SECTION 1	LEVEL 1 - 8
SECTION 2	9 - 16
SECTION 3	17 - 24
SECTION 4	25 - 32
SECTION 5	LEVEL 33 - 40
SECTION 6	41 - 48
SECTION 7	49 - 56
SECTION 8	57 - 64

You have authorised access to the first level in each of the first six sections (1, 9, 17, 25, 33 & 41).

The assembly lines consist of sliding pallets which were used for the movement of components. The pallets are left covered in sections of fuzewire.

## Objective

To destroy the complete complex by eliminating the entire explosive stockpile.

## Skill Stepping

This feature allows you to continue from the last level completed in your previous game provided you answer Yes to the New Game prompt.

## During Play

Move pallets into the adjacent space using up, down, left and right controls. Lay a fuze from the spark to the bombs. The spark will burn along the fuze and blow up the bombs.

All the bombs should be destroyed before the timer fuze burns out - watch this at the top of the screen. Look out for warning signs when the timer is low. Running into dead ends, solid blocks or off the edge of a pallet will reduce the life of your spark.

## **Information**

### **Practice**

Level 1 is the ideal floor for becoming familiar with the controls.

### **Sparks**

You begin with five sparks and will be awarded a Bonus spark after every fourth level.

### **Bonus Levels**

You have no information on BONUS LEVELS other than that they occur at every 8th level!?!

### **Sprinkler System**

In certain areas, the factory sprinkler system releases water droplets which will extinguish the spark if they collide with it.

## **2 Player Consideration Option**

Whilst competing with opponents who can amass six bonus sparks in the time it takes to lose all yours, Confuzion allows you to restart your game without having to wait for the other player to finish.

### **Planning Ahead**

While a bomb is exploding advanced players can program a route into a buffer which will be executed at high speed on completion of the explosion.

### **Confuzed?**

If you find difficultly in controlling the pallet movement - try defining the keys for the opposite directions. i.e. down as up and up as down. This has the effect of controlling the space, rather than the pallets.

### **Relax**

Relax with Confuzion - The Music by Private Property (side 2 of tape).

## **Game Controls**

Z - Left, X - Right, : - Up, / - Down, <SPACE> - Speed, <ESCAPE> - Abort

### **Use the following keys on the title screen:**

f0 - Player Mode 1 or 2

f1 - To redefine player 1 controls

f2 - To redefine player 2 controls

<SPACE> - Select level

### **Select Level Screen**

Up Control - Step up level

Down Control - Step down level

Space Bar - To start game

**Instructions' Source** : CONFUZION (Incentive) Back and Inner Inlay

## **Review (Electron User)**

What an absolutely brilliant game! Remember when we were children, how we used to play with those slide puzzles where squares had to be moved around to create a picture? Well think of that and you've got a good idea of CONFUZION. Dark, evil forces - the editor's friends - have set up a factory manufacturing deadly confuzion bombs. It's your mission to destroy all 64 levels of the factory by detonating the bombs.

The screen is made up of squares, each containing a section of fuzewire. You have to move these squares about so that a spark can travel along the fuzewire to ignite the bomb. This is not as simple as it might sound. Your spark only has a limited life, as shown by the timer at the top of the screen. Its life is made even shorter by running into a dead end - no fuze - or off a block into open space.

Later levels become even harder as drops of water - which will extinguish your fuze - fall from the factory's sprinkler system. Each level becomes progressively harder, with more and more bombs to detonate and more water drops.

The keys are easy to handle and are user-definable. More than one person can play, but there are several common features missing. There's no sound on and off and no Hall of Fame. But to make up for this you can skip completed screens. And the reverse side of the tape will have you humming along as you play the game.

All in all an excellent game, guaranteed to keep you addicted for hours.

Chris Day, ELECTRON USER 3. 2

# CONSTELLATION

***Professional, Originally Released On Cassette Only***

Game Type : Utility Program  
Author : Richard Hanson  
Standalone Release(s) : 1984: CONSTELLATION, Superior, £6.99  
Compilation Release(s) : 1989: PRES GAMES DISC 5, PRES, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR, Department C, Ground Floor, Regent House, Skinner Lane, LEEDS 7  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

This fascinating program enables the user to "view the stars" from any point on the Earth's surface, on any date and at any time. A total of 455 stars in 50 constellations may be viewed, and the "telescope" may be moved up, down, left or right, zoomed in or zoomed out. The stars can be displayed by magnitude or constellation.

**Instructions' Source** : CONSTELLATION (Superior) Inner Inlay

## Review (Electron User)

This well written program enables the user to view the stars from any point on the Earth's surface on any date and at any time - all without leaving the comfort of your armchair. Your monitor can now show a vast array of more than 450 stars in 50 major constellations. For your part, move the telescope-display up, down, right or left as well as zooming in or out, all via the keyboard.

The well constructed program allows you to view the heavens in two different ways - as you might observe by looking up into the night sky by the varying magnitude of the stars and secondly, the display can be changed to show each constellation by a code of letters. For example, a group of letter Gs indicate the position of the constellation Gemini.

Using this letter code, all fifty constellations are listed, the accompanying notes giving additional information to the user.

All in all a very good educational package which is simple to use. Amateur astronomers might also like to consider this one if they're fortunate enough to own an Electron.

Ken Smith, ELECTRON USER 2. 4

# CONTRACT BRIDGE

*Professional, Originally Released On Cassette Only*

Game Type : Bridge Simulation, Age 11 Plus  
Author :  
Standalone Release(s) : 1984: CONTRACT BRIDGE, Alligata, £6.99

## Instructions

*"Light Fingers Lonegan is robbing the Acme Diamond Company, the world's largest supplier of uncut gems. The police are inside the office block, slowly combing each floor. Can 'Fingers' find all the diamonds and get back to his car or will he run out of ammunition and end up in jail?"*

Search the Acme Diamond Company and steal the fortune in un-cut diamonds that are kept there. Many of the diamonds are in the mines, but there is a rumour that the mines are haunted. Unfortunately you have set off the automatic burglar alarm and the police are now searching the building.

You have a limited supply of bullets for your .45 Magnum, so use them sparingly. Can you get the diamonds back to your car and collect more bullets? Can you find the combination to the safe? Will you be captured or even worse, killed?

## Game Controls

Z - Left, X - Right, \* - Up, ? - Down, <SPACE> - Fire/Start  
<COPY>/<DELETE> - Pause/Continue, <ESCAPE> - Quit Game

<RETURN> to change Sound Effects Option on Title Screen.

**Instructions' Source** : COPS N ROBBERS (Atlantis) Inner Inlay

## Review (Electron User) - "Dodgy Scenario"

The latest budget release from Atlantis features Light Fingers Lonegan who is raiding the headquarters of the Acme Diamond Company. He has set off the alarm system, which means the whole building is swarming with police. Lonegan must try to find all the diamonds, open the safe and escape to his car.

Points are scored for collecting diamonds. These gems look suspiciously like an asterisk symbol and may be coloured blue or green. I had to guess they were meant to be the jewels.

Additional points are scored for shooting policemen. Lonegan is armed with a 0.45 Magnum. His poor carrying capacity necessitates frequent trips back to the getaway car.

If Lonegan makes the trip to the cellar, the policemen are replaced by ghosts. They are hell-bent on tracking down the villain, but are armed only with truncheons, which means they must get close to Fingers to be able to haul him off to jail.

The other activity Lonegan must attempt is safe breaking. This involves finding a three number code by guesswork. The numbers on the safe change in response to a prod from the robber's nose. I have not yet cracked the combination.

The graphics aren't really up to par, even for software at this price. The sprites are simple and undergo a soft of jerky animation, but the overall speed of movement is quite good. The scenery that supports the action can probably best be described as plain or perhaps boring.

I find this game wholly inappropriate. It strikes me as abhorrent that success is measured by the ability to shoot policemen or steal diamonds. It should have been given a fantasy setting where the nasties which must be shot are not recognisable as creatures from the Earth.

COPS AND ROBBERS was never destined to be a blockbuster. As it stands it surely must be given a miss.

# CORN CROPPER

*Professional, Originally Released On Cassette Only*

Game Type : Strategy; Management of Farm  
Author : P. Martin  
Standalone Release(s) : 1983: CORN CROPPER, CCS, £5.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : CASES COMPUTER SIMULATIONS, 14 Langton Way, London SE3 7TL  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"CORN CROPPER is a simulation of a commercial wheat farm. You start with cash resources of £50,000, 30 acres of rich arable land, a tractor and two farm workers and are required to build up your assets to £250,000. Decisions on when to plant, irrigate, fertilise, spray and harvest are required. Cash resources are limited and therefore strategic decisions are required as to whether to buy seed corn, land or invest in farm machinery or whether to increase labour costs by employing more workers. The graphics include a Farm map and histograms. There are five levels of difficulty."*

## 1. Introduction

In this simulation, you are the manager of a large wheat farm. The objective of the game is to run the farm profitably by careful management and to accumulate total assets of £250,000.

## 2. Information Available

This program is menu driven. The menu gives a choice of 4 types of information or making a "Command". (See 3 below).

The **WEATHER FORECAST** shows likely rainfall and average temperature for the month. Any likely deficiencies in rainfall can be remedied by irrigation. However, average temperatures are factors one has to live with! Beware of the weather forecasts - the weathermen do not always predict the correct amount of rainfall!

The **CROP STATUS REPORT** shows by means of a histogram, the stage of growth that the crops have reached together with whether fertilisers have been applied. This report must be referred to in order to ascertain if crops are ready to harvest.

The **FARM MAP** shows the area which is cultivated and fertilised, the stocks of seeds and harvested wheat and how long ago the crops were sprayed with insecticides. This information should be referenced before a decision to plant is made.

The **CASH ACCOUNT** shows cash expenditure and receipts during the month. Useful to consult before any major expenditure is made.

The **INSTRUCTIONS** summarise the criteria which is used in the simulation.

**HELP** gives a short summary of Commands.

In addition to the above, a Balance Sheet is prepared each month showing the comparative figures of previous month. This totals the net assets and shows you how you are progressing towards your target of £250,000. A Profit and Loss Account is also prepared every six months showing the profit and loss for the period. Your total assets will increase by any profit you make plus any increase in value of the land and current assets.

After each month is completed, a second report is shown showing results of your decisions.

### 3. Business Decisions Required (Commands Available)

You are restricted to taking only 3 decisions each month. From the following options you must decide whether to and when to:

<I> Irrigate  
<B> Buy land, seeds, tractors or a combine harvester  
<P> Plant seeds  
<F> Fertilise crops planted  
<SP> Spray crops with insecticide  
<H> Harvest ripe crops  
<S> Sell land or ripe crops  
<HI> Hire additional labour

To effect a decision (command) you are required to key the <bracketed> capital letters and <RETURN>.

### 4. Problems Encountered

Drought, Insect attack on crops, Rats eating seed corn, Frost damage and Fire.

### 5. Hints On Play

Crops need an optimum amount of water each month. You should aim to irrigate them in order that the total level of water is between 80-92mm each month. If crops have more or less water they may be affected and acres of wheat will be lost.

Before planting crops you will need enough unused land and enough seeds to plant the acreage you require planted. You are therefore advised to buy enough land and seeds before planting.

Fertilising two month old crops doubles the yield of the crop. Effects of fertilising will be lost if insects attack or too much or too little water is applied or if there is frost damage. If you spray your crops you will need to spray all your cultivated land. Costs £15 per acre and lasts for five months.

Harvesting, planting and fertilising can be restricted if you do not have enough workers or tractors. Combine harvesters will harvest your ripe crops five times faster than a tractor.

### 6. Levels Of Difficulty

There are five levels of difficulty.

You are advised to start at the easiest levels 5 and 4. These levels also have prompts for Weather Forecast if you have forgotten to ask for one and Cash Account when balance of cash is less than £100.

In the more difficult levels you will have lower temperatures to contend with. (The wheat will take longer to grow and could be damaged by frost). Also the cost of fertilisers and sprays will be more while the value of harvested wheat will be less.

**Instructions' Source** : CORN CROPPER (CCS) Back And Inner Inlay

### Review (Electron User)

An unusual new game for those older ones among you who fancy taking all the decisions, CORN CROPPER can really grab your attention. It brings all the harrowing (sorry!) decisions involved in running a farm into your front room. But don't be deterred!

There are five levels of difficulty. The higher the level, the greater the adversity. So start at the lower levels. The object of the exercise is to increase your initial assets of £50,000 to £250,000 over 55 months. You are asked to take decisions as to planting, irrigation, harvesting and selling.

You are not on your own though. To help you make decisions, the Electron gives generous monthly bulletins on the weather, crop progress and your cash flow situation.

All in all, a challenging program with a nifty rendition of "The Archers" tune to boot! Hope that doesn't put you off.

Keith Wilmot, ELECTRON USER 1. 9

# CORPORATE CLIMBER

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Platform Game  
Author :  
Standalone Release(s) : 1983: CORPORATE CLIMBER, Dynabyte, £7.95

## Instructions

This fast action game is only for the most keen minded of entrepreneurs. Caught in the capitalistic pursuit of corporate expansion, your ambition is to obtain the ultimate accolade - the key to the executive washroom!

The program is in three parts.

The object of the game is to walk the corridor avoiding the taxmen in the lifts and collecting various items on the way. At the end of each corridor, you are moved up to the next level. Too long a delay on a particular level will result in increasing blood pressure and should be avoided. Difficulty levels may be chosen from the options page.

**Instructions' Source** : CORPORATE CLIMBER (Dynabyte) Inner Inlay

## Review (Electron User)

CORPORATE CLIMBER takes you into the cut and thrust world of business. Here you start as a lowly tea boy and propel yourself along various levels gaining promotion at the end of each unit until you earn the ultimate accolade - the key to the executive washroom!

Your screen displays a cross section of an office block. You start at the bottom (of course) and work your way across each level, avoiding the taxmen on the way. The executive washroom is on the roof and it's here where you must end up.

As in real business, there are pitfalls - this time in the shape of taxmen whizzing up and down in the lifts. An encounter with one of these fellows sets you back to the beginning of the level you happen to be on at the time.

As all this is going on your bonus, displayed at the top of the screen, is quickly ticking away and when it reaches zero, up goes your blood pressure until you have a heart attack and snuff it. All good clean fun, plenty of colour and good sharp graphics.

There are three levels of skill - easy, suicidal and impossible. And they mean what they say! You also have a choice of sound on or off to preserve your sanity!

Adam Young, ELECTRON USER 2. 1

# COSMIC CAMOUFLAGE

***Professional, Originally Released On Cassette Only***

## Instructions

Steer your Laser Ship through a hail of cosmic debris, defending yourself with Laser Belts and Radiation Bombs. Each sector is more difficult than the one before and after the initial zero gravity sectors, the gravitational force increases to low, medium and finally high. When the pace gets desperate, change position with the Warp Drive, or become invisible to the cosmic debris by using your Camouflage Cover, Can you beat the high scores? Can you reach Sector ninety-nine?

When you shoot the Asteroids, they will break up to give you two small Asterites or an Asterite and a Hermit Craft, or, rarely, two Hermit Craft. Shooting a Hermit Craft and collecting the residual canister will result in an increase in your supply in turn of Radiation Bombs, or Warp Drives or Camouflage Covers. The Starcraft, Octanoids and Decanoids will move towards you, unless you engage Camouflage Cover. When a Starcraft is destroyed, a Spore is produced: when a Decanoid is destroyed, four Spores are produced. The Spores will move rapidly towards you, unless you engage Camouflage Cover.

## Scoring

5 points ... Asteroid	20 points ... Octanoid	30 points .. Starcraft
10 points ... Asterite	90 points ..... Hermit	50 points ... Decanoid
	Craft	90 points ..... Spore

## Game Controls

<CTRL> - Rotate Left, A - Rotate Right, <RETURN> - Fire, <SHIFT> - Thrust  
<CAPS LK/FUNC> - Radiation Bomb, Q - Warp Drive, <DELETE> - Camouflage Cover

<SPACE> - Re-enter Sector, E & <ESCAPE> - Quit Current Game  
< - Lower Start Sector, > - Raise Start Sector  
f0/f1 - Pause On/Off, S/Q - Sound On/Off

# COUNT WITH OLIVER

***Professional, Originally Released On Cassette Only***

Game Type : Educational; Ages 4-7  
Author :  
Standalone Release(s) : 1983: COUNT WITH OLIVER, Mirrorsoft, £6.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : MIRRORSOFT, Holborn Circus, LONDON EC1P 1DQ  
Disc compatibility : Unknown

## Instructions

*"Two entertaining games to introduce children to the basics of counting and simple addition and subtraction.*

*In TOYSHOP Oliver asks the young player to count toys in a shop window. Using plain language in large letters, Oliver makes his requests and the player answers using the number keys. With three sorts of toys, in three colours, the program introduces the idea of sets as well as numbers. The program is carefully graded, getting more difficult only when the child has mastered the earlier stages.*

*In LOLLIPOPS Oliver is at a shop asking for lollipops of different shapes and colours. Addition is introduced naturally as Oliver collects different sorts of lollipops. Subtraction follows when hungry Oliver eats some. Oliver swells visibly as the game progresses; who can guess what will happen? Carefully graded in difficulty, the program follows naturally from TOYSHOP using amusing illustrations and clearly written sums to introduce the first steps in simple arithmetic.*

*Recommended for 4 to 7 year olds. Older children will enjoy these games also."*

## Playing The Games

Both programs start with a demonstration loop. If no key is pressed, the game will proceed with imaginary answers. Once a key is pressed, the game will restart with unlimited time for answers.

Oliver introduces himself and asks "Will you help me get some toys?" or "I like Lollies, do you?" Any key will start the games.

All questions in the rest of each program require numerical answers only. Each time a question is asked the player is required to enter the correct number using the number keys. Two tries at each answer are allowed. The games do not progress in difficulty until a correct answer is given.

In Lollipops the answers to the sums require double digits when playing the game through a second time in the same session.

The sound may be switched off in both programs by pressing <S>. Pressing <S> a second time will restore the sound.

# COUNTDOWN TO DOOM

*Professional, Originally Released On ROM Cartridge Only*

Game Type : Text Adventure  
Author : Peter Killworth  
Standalone Release(s) : 1985: COUNTDOWN TO DOOM, Acornsoft, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC Master 128  
Supplier : ACORNSOFT, Betjeman House, 104 Hills Road, CAMBRIDGE CB2 1LQ  
Tel: (0223) 316039  
Disc compatibility : Unknown

## Instructions

While orbiting the treasure-laden, but inhospitable, planet Doomawangara (Doom for short) your ship suffers a devastating attack from the local air defence system. Grounded on Doom, your ship is both damaged, and threatened with total disintegration due to the corrosive effects of the Doom atmosphere. Repairs to the ship must be made before you can escape, and there's also a tempting array of treasure to be collected; but the clock is ticking away all the while, and it's only a matter of time before the ship will disappear in a cloud of dust, whereupon you must resign yourself to a life in the wilderness of Doom.

This ROM Cartridge is designed for use with the Electron Plus 1.

To load and run the program:

1. Switch off the computer.
2. Insert the ROM Cartridge into the front cartridge slot with the label facing you.
3. Switch the computer on.

The title page will appear in a few seconds. While using the program, keep the ROM Cartridge in the cartridge slot. When you wish to leave the program, switch off the computer before removing the ROM Cartridge.

As you play the game, you'll find that you will want to SAVE a game at a particular point (for example, before doing something risky, or simply to return to the game at a later time). You will be prompted to find a suitable area on one of your tapes, followed by the usual RECORD then RETURN message. This will put the 'dynamic' part of the database onto tape - this is the part which attends to the general house-keeping - where you are, where the objects are etc. The file is automatically called INIT so if you make several SAVES, you'll need to keep track of which INIT is where.

If you wish to restart at one of these positions, load the program as usual, but select S to start from a saved position. You'll be asked to Position the database file. Locate the SAVED position on tape, set it playing, and press RETURN. Once INIT is loaded (about 45 seconds) the game will start from where you left off.

Should you QUIT or die, you'll be asked if you want another game. Y or y will return you to the start of the game; N or n will simply end it.

## Playing the game

The game starts with a description of your immediate surroundings and any objects you might be able to use (try TAKE or GET followed by the name of the object). The computer becomes your eyes and hands. It will tell you what you can see and what is happening to you. You must tell it, in return, what to do (it prompts you with a colon).

Use commands of one or two words, in upper or lower case (typically a verb or a verb and object). The computer only looks at the first four letters of any word you type,

so that the command Northeast must be typed as NE to distinguish it from North (or N - there are various abbreviations you will pick up as you play).

### **Some general advice**

Passages bend sometimes, so going north from one area doesn't necessarily bring you into the next area from the south. (You can try BACK or B if you're confused). EH? means the computer doesn't understand the first word you said; I don't understand that! usually means the second word wasn't understood. Some objects can have special properties, as you'll find out; some of them are a help and some a hindrance.

### **Useful words**

Part of the fun is finding out what words are understood! However, a short list of those you might not guess is given here:

To move in some direction, try something like MOVE UP, CLIMB, WEST, GO SOUTH.

To get or drop a gun, for example, try GET GUN or DROP GUN, GET, TAKE and DROP alone pick up or drop the first object the computer sees.

To get a full description of your immediate surroundings, use LOOK.

To get a list of your possessions, use INV (for inventory).

To stop altogether, use Q, QUIT or STOP.

To save a game for later - and the computer won't let you do this sometimes for reasons only time will explain - use SAVE.

Certain geometrical shapes are particularly significant in the game. However, words like 'square' refer to a specific object, so don't worry if you mention a square and the computer says it can't see it - it's talking about an object you probably haven't found yet.

### **Score**

During the game, you can display your score by typing SCORE and pressing <RETURN>. Finding treasures and working ship components will earn you points, as will depositing them in the ship's cargo hold, and you will gradually discover other ways of gaining points. The maximum score is 250. You can end (and win) the game once your ship has all six components (in the cargo hold) by taking off from the planet with all six treasures. But beware, finding them all is NOT easy!

### **Hints And Answers**

Here is a list of commonly asked questions about Countdown to Doom, together with a set of hints and answers.

1. I can't get out of the spaceship.  
H. The door is jammed. How would you unjam it?  
A. Try lighting the fuse!
2. I keep blowing myself up.  
H. Try leaving the explosive behind in a sensible place, then going away!
3. I blew the door up, but it's still there.  
H. How would you move it in real life?  
A. Push it.
4. I keep dying in the swamp.  
H. There are two distinct puzzles to the swamp. For one, you need to be able to tell which are the safe bits before you tread on them. You'll need some equipment. For the other puzzle, you need to rush in and stay alive. For that, you'll need something with oxygen.  
A. To cross swamps, find and wear the goggles. To sink into swamps, find and wear a not-too-ancient spacesuit.

5. I'm lost in the jungle.  
H. You shouldn't be! Each area of the jungle has its own description. Look carefully!
6. I get too cold and die on the glacier.  
H. Well you would, wouldn't you? Try warming up the far end of the glacier.  
A. Fire the phaser at the end of the glacier.
7. The phaser kills me.  
H. It needs to be colder to work.  
A. Go to the far end of the glacier.
8. The monster kills me when I try to go past or take the crystals.  
H. It's unbeatable as an adult. Can you beat it when it's baby?
9. I get the crystals but I'm dying from their radiation.  
H. Spend as little time as possible holding them.  
A. Make taking the crystals the last thing you do back in time.
10. I die in the desert.  
H. Remember the warning about quiet!  
A. Try doing something noisy like jumping or shouting or banging.
11. The pit is killing me.  
H. Acid + alkali = ?  
A. Get the can and throw it in first.
12. I can't get back from beyond the desert.  
H. Really? Head up-river and try using the vine.
13. The blob kills me when I pick it up.  
H. Try catching it in a useful receptacle.
14. The platform runs out of power at the wrong place.  
H. Yes, it's odd when you need even, or vice verse. There is a route back to the ship which needs one move more than normal. Can you find it?
15. I die when entering the artefact through its NE entrance.  
H. Yes, you do. That's the exit!
16. I can't get into the artefact through its SW entrance.  
H. Yes, you can. Just don't take anything with you.
17. I can't get out of the curving corridor in the artefact.  
H. A little muscle helps.  
A. Push one of the niches.
18. I'm lost in the pneumatic tubes maze.  
H. You can label the rooms and their orientation.  
A. Drop objects to identify a room. Their position will show you which way round you are.
19. The robot takes all my objects.  
H. Yes, he does. Can you de-activate him?  
A. Use the word hidden in the cryptogram. There are sufficient clues around to make solving it easy.
20. The flickering screen kills me.  
H. De-activate the robot by it and see what happens.
21. When I leave the computer room, I die no matter which door I go through.  
H. Then you didn't treat the computer right. It was waiting for input.  
A. You should feed it with disks first - in the right order.

22. The computer spits out my disks.  
H. Then you're feeding it in the wrong order.
23. I killed the rat and the computer seemed upset.  
H. Poor old rat! What harm did he do to you?
24. I got the present from the computer but died going through a door.  
H. Twit! Haven't you got the order sorted out by now?
25. I sank OK to the bottom of the swamp but died when I moved.  
H. Look at the state of your spacesuit - it was ancient! Surely there's a time when it wasn't!
26. Below the swamp it's pitch dark. I'm lost. How do I get light?  
H. Yes indeed; you can map the area without light.  
A. Try 'dropping' and 'getting' objects to label rooms. INV will tell you which room you're in. You can then map the maze.
- 27a I die in the volcano going down  
H. Yes you do! Always!
- 27b I die in the volcano going up  
H. One of the routes out of the machine room is the correct one, but it keeps changing.  
A. Think of the machine noises as times on a clock, with the 'safe' direction.

Supplier : TOPOLOGIKA, 1 South Harbour, Harbour Village, Penryn,  
CORNWALL TR10 8LR

## Instructions

### About The Author...

*By profession a theoretical research oceanographer - and an occasional anthropologist and magician - PETER KILLWORTH fell in love with adventures when he discovered 'Colossal Cave'. His own first attempt at this new art form ('Philosopher's Quest', originally published by ACORNSOFT) sold 25,000 copies.*

*'The programming,' he recalls, 'was totally functional, and fairly crude by my current standards. But the plot and puzzles were good. It's very easy to write a bad adventure (it just needs hard work); but a good one needs plotting like a novel, the appropriate writing skills, and the ability to create new puzzle types instead of just repeating old patterns'.*

*His family occasionally see him away from his computer terminal at home. They do NOT play adventure games.*

### About The Adventure...

*You set off from Earth in your one-man ship, and are soon orbiting Doom.*

*Doomawangara - Doom for short - with its weird climate that varies from desert to jungle, glacier to swamp; the gome, aeons ago, of the Ancients, whose crumbling dwellings at last begin to show up on your scanners, their images giving you the feeling that they're watching you - not the other way round. Doom, famed across the Galaxy as a POTENTIALLY lucrative tive source of income, its surface littered with crashed treasure ships, rapidly corroding in the intensely volatile atmosphere.*

*Only those known as adventurers would dare to land.*

*You make one more pass over the enticing planet, wondering if YOU have the courage. The decision in made for you when your ship comes under a sudden and violent attack that sends it tumbling out of control until it hits the surface with a force that could have killed you.*

*You pick yourself up and survey the wreckage, knowing that both you and your ship are well and truly doomed unless you can find the spares to repair it in time...*

*GAME SIZE: Medium.     RATING: Medium.*

**DOOMAWANGAKA.** Abbr:    Doom. Climate:    Varies dramatically from desert to jungle, glacier to swamp. Atmosphere intensely volatile; explorers must guard against rapid corrosion of equipment and spaceship alike. Dangers:        Atmosphere, as above. Automatic defence system. Also the Ruins, reputed to have been the home, aeons ago, of The Ancients; none who has entered them has ever returned. Special features: The large number of crashed spaceships littering its surface, many of which had been

carrying treasure from one planet to another, make Doom a potentially lucrative source of income for that special breed of Explorer known as Adventurer...

- Extract from INTERGALACTIC TIMES, Vol. 3, Sec. 7, pp 167

You set off from Earth in your one-man ship, and are soon orbiting Doom.

Before you can contemplate a landing, however, your ship comes under a violent attack from Doom's automatic defence system. "No wonder most ships never come back!" you tell yourself as your ship tumbles out of control towards Doom's surface with you playing the controls like the expert you are.

Nothing you can do can prevent the crash-landing, however, and your ship hits the ground with a force that would have killed you had you not jumped at the last moment to absorb some of the momentum...

You pick yourself up and survey the wreckage, knowing that your ship will corrode away in a mere 400 Time Units. Repair it by then or you'll be stuck on the planet forever. DOOMed, in fact...

To function properly, your ship needs certain items (see below).

**DILITHIUM CRYSTALS** (for power - very dangerous to handle)

a **MOTOR UNIT**

a **NAVIGATION UNIT BOX**

a **LIFE SUPPORT SYSTEM**

a **MEDIKIT**

a **NUCLEAR REACTOR**

Without these, your ship simply won't fly. If any are too old or corroded, they won't work. If you can leave these components (and any treasure you find) in your cargo hold, what's left of your ship's systems - controlled by an intelligent console in the control room - will reassemble your ship and fly you home, hopefully a much richer person.

But remember - the corrosion clock is ticking away...

### On-line Help

COUNTDOWN TO DOOM comes with on-line help which you can get into by typing HELP <RETURN>. The program will halt and wait for you to type in a number so that it knows which 'hint' you want. You therefore need to know which numbers refer to which hints.

Pages 2-4 of this Help Sheet contain a series of questions that players typically ask, like 'How do I get out of the spaceship?'

Various 'key words' have been deleted from these questions - making it harder to accidentally see the solutions to other questions - and are reproduced below. The numbers alongside the words refer to the questions. The number that follows each question is the number to key for that particular hint. Good luck!

### **Review (Electron User) - "Disc-based Adventures"**

I have never been much of a science fiction fan, but COUNTDOWN TO DOOM was always one of my favourite Acornsoft adventures. Now released in a totally rewritten form by its author Peter Killworth, this game is definitely worth a second look.

It is presented in a stylish black folder with an excellent hint sheet and superb pamphlet on playing adventure games.

The adventure has been greatly enlarged with extra locations and excruciating puzzles, a new parser and layered atmosphere at each location.

You play the role of a pilot of an interplanetary spaceship which has crashed on the planet Doomawangara, a world at its best inhospitable and at its worst your graveyard.

It has a weird climate that varies from desert to jungle, glacier to swamp, and is the home of many crashed treasure ships.

Your task is to find spares to repair your ship so you can escape from this galactic hell hole. The problems are manifold and even if you have solved the original Acornsoft version of this game, that is no guarantee you will be successful this time.

The discs still need to be collected and inserted in the order in which you found them, and the blob is still present, but is encountered much later in the game.

The goggles are essential protection and the rat must not be harmed. Other than that, everything else in the adventure has changed almost beyond recognition.

The beginning is complex, the main part of the adventure riddled with new problems and the end-game is quite novel.

The quest basically involves collecting an assortment of items and then deciding upon their correct use.

Even experienced adventurers will find themselves resorting to the hint sheet on more than one occasion and planning a new strategy or approach.

Peter Killworth has gone to great extremes to make the whole experience more polished and enjoyable. The constant disc-access slows down manoeuvres, but is worthwhile payment for a bigger and better game.

I wholeheartedly recommend this adventure, whether or not you have played the Acornsoft original. New versions of ACHETON and KINGDOM OF HAMIL are promised and I await them with anticipation.

### **Review (EUG)**

Not the Acornsoft ROM cartridge version, Peter Killworth's COUNTDOWN TO DOOM re-release by Topologika is a mammoth upgrade to the original with many more puzzles, locations and characters. In many respects a cult classic it is both one of the few Electron games solely produced on disk (and in fact one of only ten games ever which were customised to work only with PRES' AP4 upgrade) and one that is still available from its software company to this day.

The first installment in a trilogy of text adventures about the plague planet Doomawangara (followed by RETURN TO DOOM and THE LAST DAYS OF DOOM in 1988 and 1990 respectively), it mixes a surprisingly detailed narrative of exits and locations with unexpected sarcastic comments when you try particular actions.

The scene is set when your spaceship crashlands and a countdown (of the title) starts ticking away to ship collapse. The description of what is left of your ship's interior hardly inspires hope that any of it is fixable but, with Doomawangara best described as a spaceship graveyard, there is a small chance you can collect enough sundries to get the craft airborne again. A simple puzzle will see you out onto terra firma (after blowing up even more of your ship) and present you with a swamp, jungle, valley, desert, mountain path and narrow path; all exquisitely detailed as, you will quickly appreciate, is the norm.

What is irksome about continuing from this point is that any false sense of security you had developed thanks to the simplicity of your escape is then repeatedly squished. Almost every move you make now results in a hideous and sometimes quite unconnected death. For example, you choose the desert, death by heatstroke; swamp, death by drowning; narrow path, death by slugs falling out of the sky; etc.

As in all adventures, there are objects to find and use correctly. Unlike in many, there is no need to EXAMINE anything. Doing so brings up the message "I've already told you everything you need to know about that!" which comes direct from the hand of Peter Killworth, **not** the Doom-stranded adventurer who is referred to in the second person. Once again though, you are forced to die a number of bloodthirsty deaths to discover what is safe to pick up or manipulate. Oh, goody, a gun, I'll fire it. Dead. What's that blob wriggling towards the cliff? I'll TAKE it. Dead. And these are only in the first six or seven locations! Bearing in mind that professional adventures such as this tend to get harder and harder the further the adventurer manages to progress, some will probably be very discouraged by these early setbacks which, if you have not SAVED the position, immediately return you to the start of it.

A better solution, which is contained in some other Topologika releases, is to ask "Do you want to pretend you hadn't done that?" and wait for the inevitable Y keypress. This saves a large measure of frustration.

As you may have guessed, I have not personally made much headway in this hellhole but apart from the spotless spelling and atmosphere, the game has one more feature to recommend it and this is the on line help facility.

With the original disk comes a sheet of most-likely-to-be-asked questions. However, instead of having to decrypt a coded answer or look it up on another sheet, you obtain the answer from the game itself by typing HELP and then the NUMBER following the appropriate question. You get one hint and, if this is too cryptic, can ask for further ones until you are given a solution. In this way, the game's appeal is advanced as you can make progress without needing Britain's Biggest Brain.

Presented in a stylish clear plastic folder with an illustrated low-down on the planet and a playing guide, COUNTDOWN TO DOOM suggests at every level that it is a very serious adventure which will tax the old grey matter to bursting point. This is exactly what the software itself does and it's no bad thing at all. It incorporates many new items over the original version and, although it includes some tried (or should that be tired?) and tested puzzles from other adventures, manages to cram in a few new ideas too. If you can live with being knocked off every few minutes, and don't mind responses like "Gee, I hope you enjoyed that!" if you do something Killworth considers unnecessary, then give this adventure a go. But be warned though, it's not easy!

Dave Edwards, EUG #54

# COUNTER ATTACK

***Professional, Originally Released On Cassette Only***

Game Type : Strategy; Puzzle (Assumed)  
Authors : R. L. Edwards, A. D. Wright and D. G. Stading  
Standalone Release(s) : 1983: COUNTER ATTACK, OIC, £3.99  
Compilation Release(s) : None  
Stated compatibility : BBC/Electron Dual Version  
Actual compatibility : As stated  
Supplier : OIC LTD, 15 Burghead Close, College Town, Camberley, SURREY  
GU15 4XL  
Disc compatibility : Unknown

## **Instructions**

*"Simple in concept, stimulating in practice. Skill level selection allows the game to be equally enjoyed by infants and serious game players alike."*

The object of this game is to make a line of your counters, horizontally, vertically or diagonally.

## **Play**

The game takes place on a verical 7x7 board. Players take alternate turns and on his turn, a player may select a column on the board into which his counter will be dropped.

## **Winning**

The Winner is the first player to make a line of four counters. Note: If, on his turn, your opponent makes a line of your counters, this is not taken as a win for you - you must have the line set up at the end of your turn.

## **Turns**

On your turn you may...

1. drop a counter into a column - just press a number between 1 and 7,
2. rotate a row left or right - press the left or right arrow key then the number of the row to rotate, or
3. rotate a column up or down - press the up or down arrow key followed by the number of the column.

## **Notes**

1. You cannot place a counter into a column that is already full.
2. Rotating a row or column may leave empty gaps in a column - gravity will cause the counters above the gap to fall and fill it.
3. Rotating a column up when it is not full is a waste of a turn.
4. You may change your mind about your move any time before pressing a number - just press the correct key (arrows for rotate, P for Place).

## **Options**

### **Selecting Options**

During the initial loading of the game you have the opportunity to alter various aspects of it. You may change the colours of the background, board and counters; the number of counters to be made in a row; select sound on or off and select whether the object is to make a line or not make a line.

# COUNTING FUN

## *Professional, Originally Released On Cassette Only*

Game Type : Educational; Ages 3-5  
Author :  
Standalone Release(s) : 1985: COUNTING FUN, Gemini, £5.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron only  
Supplier : GEMINI, 18A Littleham Road, Exmouth, DEVON EX8 2QG. Tel  
(0395) 265165  
Disc compatibility : Incompatible. Customised Loaders.

### **Instructions**

Uses easily recognised characters, such as clowns and penguins and will teach the pupil to count as quickly as possible. It is easy, enjoyable, colourful and fun, and will appeal to children aged 3 - 5, giving them a flying start and a secure basis upon which subsequent arithmetic learning can be built.

### **Running The Program**

After loading, an instruction page is screened. Press the space bar to proceed to an illustration of the objects depicted in the program. Press the space bar to move through the pages. On the counting page, a number of objects will appear and the child must count them by pressing the space bar which increments a large number next to the objects. If the child 'over-shoots' the number, the space bar should be repeatedly pressed until the number is reached again. Once the child thinks he/she has the correct answer, <RETURN> should be pressed.

A correct response will result in a happy face appearing with appropriate sound effects. With an incorrect response, a sad face appears with sound effects. The number is changed to the correct value and shown in light blue, the items being individually counted by the computer.

To obtain the next question, press the space bar. Ten questions are asked and a score out of ten is given at the end of the test. If <ESCAPE> is pressed during the test, the program is restarted at the instruction page.

### **Useful Hints for Parents and Teachers**

Type \*RUN to load. Follow screen prompts as they appear and you will quickly learn how to use the programs.

# CRACK IT! TOWERS

*Professional, Originally Released On Cassette Only*

Game Type : Graphical Educational Adventure  
Author :  
Standalone Release(s) : 1985: CRACK IT! TOWERS, Mirrorsoft, £9.95  
Compilation Release(s) : None  
Stated compatibility : BBC Side A, Electron Side B  
Actual compatibility : As stated  
Supplier : MIRRORSOFT, Hoborn Circus, LONDON EC1P 1DQ  
Disc compatibility : Unknown

## Instructions

*"CRACK IT! TOWERS, A game for puzzle fans of any age!*

*Home of the team that brings you Crack It! puzzle magazine, CRACK IT! TOWERS conceals a magic secret within its walls. Each of the rooms in Crack It! Towers contains a puzzle which you must solve to have any hope of completing your quest. There are arithmetic problems, spelling games, anagrams and more. You'll meet some rather odd characters who may or may not be friendly - some of them will try to attack you or steal your precious keys as well.*

*If you fail a particular challenge, you'll find yourself in the moat. But you can also gain bonus keys in mysterious Maze of Skulls - if you play your cards right!*

*CRACK IT! TOWERS has three levels of difficulty - but if you start doing too well, the challenges will get harder. The word problems can be infinitely varied with different sets of words so that parents and teachers can change them to keep the challenge going.*

*If you like puzzles, you'll love CRACK IT! TOWERS!"*

## Visitors' Guide Book

### A Message From The Owner

It appears that you are under the misguided impression that you can crack the secret of CRACK IT! TOWERS. Well, I think we should get one or two things straight before we start.

Crack It's the name, and evil's my game - so beware the curse of Count Crack It! You wouldn't want to cross me, now, would you?...

If you really think you can claim all seven golden keys and steal the secret of my powres from the innermost reaches of the Towers, you had better read this guidebook thoroughly...or you won't have a bat's chance in hell...! I can take on all sorts of different disguises, and my pets will be out to get you too. You'd better be able to swim, too, as if you fail a single challenge, you'll be in the moat before you can say SPLASH! You need seven golden keys to even attempt entry into the last secret room. My pets will grab every opportunity to steal them from you, but you can win bonus keys in the Maze of Skulls.

You'll find all the practical help for taking up the challenge on your computer on the back of the inlay card. What follows here is the theory - you just have to trust that I'm not misleading you...

**Important Note** : Before you can enter any of the rooms, you have to pass my manic mental arithmetic tests - thinking caps on now!

## ROOM 1

This is the home of the first of my pets - Oswald the Rubber-Necked Duck. You must guess what he wants for his dinner today, and if you get it right, Oswald will gobble up the word (instead of you, heh, heh, heh).

Try different letters, one at a time, until you can complete the word. Each time you press a letter that IS in the word, it will appear in its correct place. Letters that are not in the word appear in its correct place. Letters that are not in the word appear in a 'reject' line at the bottom of the screen. You have nine tries to get it right, and if you use a letter twice, you automatically fail.

Hint: Try the commonest letters of the alphabet first - you should be able to make an educated guess once you've got some of the letters right.

## **ROOM 2**

My second pets are not very pretty to look at - but neither am I, so we get along fine! However, they are rather stupid, as they keep asking you to shoot them - but watch out, because they've trapped you in their ranks, too.

The maximum number of shots you can have each time is given at the top of the screen. Choose a number to shoot and type it in. They start disappearing from the right-hand end. Now it's my turn to get rid of a few of the ugly little blighters. You are at the left-hand end, and if you manage to avoid shooting yourself, you'll win a golden key.

Hint: Work out a plan of action quickly before you start playing and you should manage to survive.

## **ROOM 3**

This is where I keep my nocturnal friends, the black bats. They won't like you and your laser gun one bit, and will use their radar-guided sonar bombs to get you out of their hideaway as quickly as they can. To survive, you must fire on them *and* keep yourself out of their firing line.

You can avoid the bombs by pressing Z and X to move your laser left and right - but if it's hit, you'll fail the challenge. At the bottom of the screen, you'll see a take-away sum, and at the top different numbers will appear in quick succession. Press <SPACE> when you spot the right answer - if you're right, your automatic gun will knock one out. Then a different sum appears. You must knock out five bats before you get to win your key.

Hint: If you miss the right answer, it will come round again, but you'll have lost valuable time.

## **ROOM 4**

This is my swimming pool, where young Jim the Jellyfish has his daily work out. Unfortunately for him, I also let my sharks exercise here - at the same time. (I have to keep him on his multitudinous toes somehow!)

Start by typing in the number of the lane Jim is to swim down. He'll move there and start swimming down from the top automatically, and you'll get your key when he reaches the finish line. But beware! A warning will sound when a shark is near, and he'll poke his nose out right in Jim's way, and a sequence of numbers will appear at the bottom of the screen. Work out the next number in the sequence, type it in and press <RETURN>. If you get it right, Jim will swallow the shark whole. But if the shark wins, you'll find yourself in the moat.

Hint: One of the lanes is completely free of sharks - but I'm certainly not going to tell you which one. It changes every time you play anyway.

## **ROOM 5**

This room's not for the squeamish - it's my spiders' playroom. Today they're all dangling off the ceiling, ready to drop on you at any minute. But if you're clever, you can make them drop on your stick of dynamite instead.

At the centre left of the screen is a multiplication sum. Work out the answer, type it in and press <RETURN> and one of the spiders will start sliding down towards you. By pressing the Z and X keys to move the dynamite left and right, manoeuvre it to the point where the spider will land, so he will self-destruct on impact. Then a new sum will appear. You need to hit three spiders before you can claim your key.

Hint: There's no cheating allowed either - you can't hit two spiders at the same time.

#### **ROOM 6**

This is where my extraterrestrial playmate, Albert the Alien, lives. For reasons best known to himself, he feels most at home in a minefield. If you can guide him right across the minefield, he'll let you take the golden key.

At the top of the screen, you'll see the word DIRECTION. Choose which direction you want Albert to move - N(orth), S(outh), E(ast) or W(est), and type it in. Then STEPS will appear. Choose how far he should move and type in a number between 1 and 9. Albert will then move, following your instructions (Someone should tell him who's boss around here - he seems to follow anyone around!). Landing on a mine means instant death for both of you.

Hint: Try to plan one move ahead as you go - you only have a limited time to complete the journey.

#### **ROOM 7**

Things are getting pretty spooky up here - this is the Haunted Tower and only my spectral friends from 'the other side' (ghosts to you) can stand the creepy atmosphere.

Once the tower has materialised, you'll see a row of letters jumbling around at the bottom of the screen. Work out what the word is and type in the first letter as quickly as you can. If you're right, you must then type the rest of the word in correctly. Press <RETURN> and hey presto! you win another golden key. But like everything else at Crack It! Towers, nothing's quite as simple as it looks. As soon as the letters start jumbling, my ghosts will start drifting across the screen, one at a time, to bite large chunks out of the tower. If all five make it to the other side before you've solved the problem, the tower will collapse, and you'll be in the moat again!

Hint: Plan your strategy carefully, as you can't press a key while there's a ghost on the move.

#### **ROOM 8**

Come on! You didn't really think I was going to give you any clues at this stage, did you?

#### **Bonus Keys**

Each time you successfully complete a challenge and gain a key, I'm generous enough to offer you the chance of winning a bonus key in the Maze of Skulls.

You can explore the maze in the helicopter I've provided, using Z and X to go left and right, and P and L to go up and down through the gaps between the fences. Seventeen identical white skulls will appear in the maze at random. Fourteen are quite harmless - you can fly right up to them (you must be going forwards), press <SPACE>, and they'll disappear. Two of the skulls are deadly - if you get too close to them, they'll turn green and blow you up. But there is one skull which hides a golden key - if you're lucky enough to find it, the skull will transform itself.

Hint: Although this is a game of chance, I will give you one clue. There's a number at the top of the screen which is something to do with screen co-ordinates - but you'll have to work out what!

#### **Other Problems In Store...**

##### **When You Fall In The Moat**

Whenever you fail to complete one of my little tasks, you'll get a ducking in the moat. However, as you will have realised by now, there will be more than cute little ducklings swimming around in there.

My pernicious piranha fish have a taste for golden keys as well as human flesh. You'll survive if you have no keys, but if you do have any, watch out! The minute you hit the water, all three of them will start heading towards you, and a question will appear at the top of the screen. You must answer it before they get to you, or I won't be responsible for the consequences!

#### **The Green Spider**

As soon as you have at least one key, you're vulnerable. He will appear from nowhere and eat your key...unless you hit <SPACE> first. He'll go away then - for now.

#### **The Blue Skull**

Once you have at least three keys, watch out for this one in the castle doorway. You must hit <SPACE> before he can whizz out and swallow up one of your keys.

#### **The Ugly Bug**

When you've amassed four keys, he'll pop up on the left-hand side of the screen and scuttle towards your hard-won hoard. Press <SPACE> as soon as he appears to block his path.

#### **The Black Hat**

Just when you've chosen the next room to challenge, he'll glide out through a window and hover longingly around your key score. A three-letter word will appear at the top of the screen - but with one letter missing. You have just ten seconds to select the right letter to complete the word. Beware - there's usually more than one option, but only one right answer!

#### **The White Ghosts**

The first white ghost can jump out on you whenever he feels like it - but he's not interested in your keys. His purpose in life is to transport you to my dungeons and keep you there till you answer his question correctly - or his spiders will get you!

His sibling, the second white ghost, can only catch you when you've amassed six keys (and you thought you were nearly there, didn't you?). You must guess his age, or he'll steal a key. Be careful, you only have a certain number of tries at this.

#### **Power Failure**

Because Crack It! Towers is in the middle of nowhere, we sometimes get power failures - just when they're least expected. You'll hear a big bang when the generator blows, and everything will go black. To restore the power, watch out for the word that will appear on the screen - you must concentrate as it's only there for a few seconds. Then type it in correctly, and bingo! the lights will come on again. If you're wrong, one of my friends will creep up under cover of darkness and steal one of your keys - but you won't be able to stop him!

Well, that's all the help you're going to get from me - I think I've told you far too much anyway, but the people who wrote the program said I had to be reasonable, otherwise you wouldn't even bother to breach the walls of my fortress.

I'd say 'Good Luck' if I were a nice person, but as you know, that's one thing I'm not!

Signed Count Crack It!  
Crack It! Towers, November 1985

**instructions' Source** : CRACK IT! TOWERS (Mirrorsoft) Back and Inner Inlay

#### **Review (Electron User)**

CRACK IT! TOWERS describes itself as a puzzle game for all ages. Mirrorsoft have done well to think of some kind of explanation because it's far easier to say what

the program is not. It certainly is not an arcade game or an adventure. It has educational elements, but it isn't a learning program. What is it then? It's a whole load of fun for Electron and BBC Micro owners.

The aim is simple to find the secret of Count Crack It! You must collect seven golden keys which you'll need to open the eighth room in his castle. To gain the seven keys you must visit various rooms and solve a set of puzzles and problems in each.

In room 1 in the castle you try to discover what Oswald eats for lunch. This can best be described as a hangman type game. Success will earn you a key while failure will pitch you into the moat. If you end up in the moat the piranha will start swimming towards you.

A question such as 184 divided by 4 will flash on the screen. A correct answer will stop the fish and you will survive to visit more rooms.

Room 2 features a logic game in which you must shoot some beasties while trying to avoid shooting yourself. It's a version of the ancient game of Nim and it's easy to make mistakes.

Room 3 looks a bit like space invaders, but with bats bombing you. Before you can fire back you need to match a subtraction sum with its correct answer. This room is fiendish, requiring you to concentrate on three different areas of the screen, do a calculation and keep your base away from the bombs.

The castle swimming pool can be found in room 4. It will come as no surprise to learn that the Evil Count Crack It! keeps sharks in it. To avoid them you will have to add a number to a sequence such as 5, 10, 15, 20 and so on.

Room 5 is the spiders' playroom. You have to move your stick of dynamite around to make a spider fall on it, but before any spider falls you must get a multiplication sum correct.

On to room 6 where Albert the Alien lives - in a minefield. In a limited time you must issue commands such as "west 3" to steer him to safely.

Room 7 features ghosts who won't destroy you if you are quick enough at solving an anagram.

You can enter the rooms in any order, but they all need unlocking by adding a set of numbers together. If you succeed in any room you can try for a bonus key by entering the maze of seventeen skulls. If you pick on the right skull, aided by a devious clue, you win. The Count keeps many more nasty friends who leap out at unexpected moments and steal precious keys or put you into prison.

Some of these can be stopped by hitting Space, but others require you to complete words or solve number problems very quickly. If you get fed up with the words defined in the program you can enter your own selection.

My whole family have found this an addictive program. None of the tasks are difficult in themselves, but to succeed you will need fast reflexes and an alert brain.

Mirrorsoft has come up with something quite out of the ordinary and for my money, it's a real winner.

# CRACK-UP

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Bat And Ball; ARKANOID-Clone  
Author :  
Standalone Release(s) : 1990: CRACK-UP, Atlantis, £1.99  
Compilation Release(s) : None  
Stated compatibility : BBC/Electron Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ATLANTIS, 28 Station Road, LONDON SE25 5AG  
Disc compatibility : Unknown

## Instructions

*"Joystick or Keyboard. 100% Arcade Action. 100 years from now, when war is a distant memory and mindless violence is considered the ultimate in anti-social behaviour, what outlet will there be for your feeling of aggression? There will always be CRACK-UP!"*

CRACK-UP is a game for 1 or 2 players and features 32 action-packed screens. The aim of the game is simply to destroy each wall of bricks and move onto the next screen. But be warned, some of the bricks take more than one hit to destroy them and others cannot be destroyed at all.

To make the game even more difficult, some of the bricks are invisible. They act the same as ordinary bricks (i.e. some can be destroyed and others are indestructable), except that you cannot see them. There are 7 bonus bricks which appear at random (some will appear more than once), these are:-

- B, Bonus Level - moves you to the next screen.
- C, Catch Ball - FIRE to release.
- D, Double Balls - doubles the damage you can cause.
- E, Extended Bat.
- L, Laser Bat - FIRE to cause extra damage.
- S, Slow Ball.
- X, Extra Life.

## Game Controls

Press J to select Joystick or Keyboard, then P to select 1 or 2 players and L to select start screen (between 1 & 5). Remainder of 32 screens can only be accessed by completing of the previous screen. Whilst on title screen press Q for sound off or S for sound on.

Keyboard controls are: Z or < to move left, X or > to move right, SHIFT or RETURN to release ball/fire laser bat.

Press COPY to pause, DELETE to restart and ESCAPE to quit game.

# CRANKY

## *Professional, Originally Released On Cassette Only*

Game Type : Educational; Ages 5-12  
Author : Jeannie Billington  
Standalone Release(s) : 1984: CRANKY, Acornsoft/ASK, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : A.S.K., London House, 68 Upper Richmond Road, LONDON SW15  
Disc compatibility : CDFS E00, DFS E00

### Instructions

CRANKY the crazy calculator doesn't like rain. On wet days Cranky's circuits get damaged, so that some of the calculator's keys don't work any more. The fault is shown on 1-100 number square, and you can repair Cranky by constructing the numbers in the pattern. You've only got two numbers with which to do this though. If you make the repair successfully then you can use Cranky as a calculator! Careful planning will help you repair Cranky quicker.

Helping repair Cranky will give children a chance to explore the interesting relationships between numbers, at their own pace, thus giving confidence with number manipulation.

### In all A.S.K. programs

<RETURN> Remember: once you have typed in your response a program will  
< icon > deal with it until you press the <RETURN> key.

<ESCAPE> You can always return to the beginning of a program by pressing  
< icon > the <ESCAPE> key.

<DELETE> You can rub out anything typed in, before the <RETURN> key is  
< icon > pressed, by using the <DELETE> key.

<\_Hand\_> Means : Please press the space bar to carry on with the program  
< icon >

< ? > Means : the program did not expect the response it has just re-  
< face > ceived. Perhaps there was a typing error? In any case, to carry  
on, just press the space bar and try again.

<CTRL> All of our programs incorporate sound. There are various volume  
levels - holding down the <CTRL> key and pressing the <S> will  
<S> change the level - keep pressing the keys until you are happy  
with the volume.

Note: The program will not run on computers that have 0.1 operating systems.

### Introduction

CRANKY is a happy pocket calculator. When it rains, Cranky doesn't like it. This is because the rain damages some of Cranky's circuits. You can see which circuit has been damaged because it appears in Cranky's eyes. This pattern then appears on the 1-100 number square, and you can help repair Cranky by constructing the numbers in the pattern shown. Because Cranky is damaged, you can only use the numbers 3 and 5 to do this. However, it is possible to make all of the numbers in the patterns with these two keys. As you repair Cranky, you can use the numbers you make, as you go along, to help you construct new numbers.

There is another side to the game too: If you decide to Play Challenge, then you can pick the two numberxs which you want to use to repair Cranky's circuits. Be careful though, as not all of the pairs of the keys you can choose, will enable you to repair Cranky. At the end of either game, if you are successful, you can use Cranky as an adding and subtracting calculator.

Playing with Cranky gives children a chance to find out the relationship between numbers for themselves. It also lets them explore the effects of constant addition or subtraction, and so gives more confidence in number manipulation.

### **How to use it**

When you have loaded the program, the first thing you see is a picture of Cranky. You will now be asked if you want to "Help Cranky" or "Play Challenge". Press 1 or 2 and then the <RETURN> key. For "Help Cranky", the next menu that appears asks you what colour you want to use. Of the three, red is the easiest, blue is slightly more difficult and green is the hardest. Choose which colour you want, press 1, 2 or 3 and then the <RETURN> key. In "Play Challenge" you get the colour menu after you have chosen the two numbers. Within each level some patterns are harder to make than others.

### **Help Cranky**

If you have selected this game you will now see that it is raining on Cranky. The spacebar symbol appears, and, when you have pressed it, Cranky's eyes will show you the patterns that represent it, Cranky's eyes will show you the patterns that represent the faulty circuits. The eyes will settle on one pattern and Cranky will ask you to help mend the fault using the 5, 3, +, - and = keys. When you press the spacebar again, the patterns on Cranky's eyes will be displayed on a 1-100 number square.

Your aim now is to make all of the numbers in the pattern shown. See if you can do it, without making any of the numbers outside of the pattern.

When you have pressed the spacebar to start playing, you have to type in a starting number. This can be 3, 5, 33, 35, 53 or 55, these being the only numbers you can make with the 3 and 5 keys.

You can now add numbers to, or take numbers from, your starting number. To add, press the + key, and type in your next number. To subtract, press the - key and type in the next number. If you want the sum of all of the numbers you have typed in so far, hold down the <SHIFT> key and press the = key (The T key has the same effect). The answer will be calculated, printed, and then highlighted on the number square.

Remember, you can only add and subtract numbers made with 5 and 3, or numbers you have already made on the number square. For example, if you start by typing 3 + 3 =, to give you 6, then at any time thereafter, you can type in the number 6. The game will not accept any numbers not already made.

If you press the = or T keys, to get the total, and it would have been less than 1 (the lowest number on the square) then the ? symbol appears, and a message telling you "Less than 1". When you press the spacebar, the last sequence you typed in will be erased (back to the last time you pressed = or T). The same will happen if the number is over 100 except that the message will be "More than 100".

When you have made all the numbers in the pattern, the pattern will flash, and the spacebar symbol appears. When you press it, the scene returns to Cranky. However, fixing one of Cranky's faults can often cause another one to occur, and, if this is the case, then you go back to the start of play again. You now have to fix the new fault shown.

If you mend all of Cranky's faults, as they occur, then you can use Cranky as an adding and subtracting calculator. Use Cranky in the same way as when you were fixing the faults, except now all of the numbers can be used.

## Play Challenge

If you have decided to Play Challenge, then you have to select two numbers (in the range 1-9) which you want to use to try and make the pattern. Type the number you want and then press the <RETURN> key. Now do exactly the same thing for the second number. The play will now be the same as it was for Help Cranky. Watch out though, as with some choices of numbers you can't make all of the numbers in every pattern. Some choices are much harder than others. Part of the challenge is to find out which ones are which.

## Educational notes

This program is particularly suitable for children between the ages of eight and eleven, although many younger and older children, and adults, have also enjoyed playing with the game. The program helps children develop their own addition and subtraction techniques, by discovering number patterns and relationships, and inventing their own number strategies. The game also works by encouraging children to be creative by exploring ideas which interest them.

The "faulty circuits" that appear in Cranky's eyes all highlight different number patterns and relationships. The columns, rows and diagonals are the easiest ones to make, the multiples and rectangles are slightly more difficult, and the diamonds and saw-tooth patterns are the hardest. Through playing the game, children discover the patterns, and gain confidence in manipulating numbers. A first they should try adding and subtracting 5s and 3s (Help Cranky), but later they should choose their own two numbers.

It is important at this stage that children have the opportunity of discovering the different types of pattern in their own way, and time, and that they are free to develop their own strategies for mending the "faulty circuits".

The game has been tried with many children and adults. Some use trial and error strategies to start with. Others spot that some patterns become easier of certain numbers are made first. These numbers may or may not be in the pattern. There are a whole variety of strategies and techniques that can be used. Finding out other people's strategies can be both interesting and informative.

Most importantly, the program gives children the opportunity of exploring their own ideas. All sorts of challenges and questions can emerge:- Can I make any number using 3s and 5s? How many different ways can I make 79? What is the quickest method I can use? Why can't I make all the numbers using 2 and 6? What would happen if I used multiplication and addition instead of subtraction and addition?

Children should be allowed to raise, and attempt to answer, their own questions. In doing this they are developing their inherent ability to act as mathematicians, and will discover that mathematics is exciting and creative, as well as useful.

# CRAZEE RIDER

*Professional, Originally Released On Cassette, ADFS 1D00 Disc And DFS 1D00 Disc*

Game Type : Arcade Motorcycle Racing  
Authors : Kevin Edwards  
Standalone Release(s) : 1985: CRAZEE RIDER, Superior/Acornsoft, £9.95 (Tape), £12.95 (5.25" Disc), £14.95 (ADFS Disc)  
1989: CRAZEE RIDER, Superior/Blue Ribbon, £2.99  
Compilation Release(s) : 1987: PLAY IT AGAIN SAM 2, Superior/Acornsoft, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

The objective of the game is to achieve as high a score as possible by:

- (a) finishing in qualifying position (the first six) on as many racetracks as you can,
- (b) earning bonus points by knocking other riders off their bikes.

You can push other riders off their bikes at any stage during the game. It is particularly easy to do so at the start of the race by steering alternately left then right: usually 4 or 5 riders can be pushed off their bikes during this "craze" scramble at the start. At the end of the race, you will hear a finishing bell as you complete the lap, and your bike will gradually slow down to a stop - during this slowing-down phase you will often be able to knock one or two more riders off their bikes.

A map of the current race circuit is shown at the top of the game screen. Your bike is shown on the map as a small moving square and the start/finish line is also indicated. Your speed and your current position in the race is displayed at the bottom of the screen. Each race has 60 participants.

At the start of the race the red, amber and green starting lights are shown. Wait for the green light to appear before you start to accelerate. If you try to accelerate before the green light appears, you will be penalised and your bike will stall.

Keep clear of the edges of the road as much as possible. If you veer towards the road edges your bike will gradually slow down until you steer away.

## Crashes

There are three types of crash that may occur:

- (1) If you steer into another bike and your bike is in front of the other bike, you will knock the opposing rider off his bike. A small "hit token" is placed at the top-right of the screen, and you are awarded a bonus score at the end of the race.
- (2) If there is a shunt between your bike and an opposing bike which is just in front of you, a side collision will occur and your bike will simply lose some speed.
- (3) If you drive right up the back end of an opposing bike, then it's a full rear crash: your speed will be reduced considerably and your bike will be disabled for a short period of time.

## Bonus Points

Whenever you knock an opposing rider off his bike, a "hit token" appears at the top-right of the screen. Then, at the end of the game, you score a 200-point bonus for every rider knocked off.

### Game Controls

Z - Steer left, X - Steer right, \* - Accelerate, ? - Decelerate  
<ESCAPE> - Exit from game, S - Sound on/off, H - Halt on/off  
K - Toggle joystick/keyboard, J - Toggle joystick type: D = Digital, P = Plus 1

Standard joystick movements apply. The type of joystick interface is shown bottom right of the screen. The digital interface recommended is First Byte.

### Title Page Controls

C - Change colours

Press the "C" key on the title pages before restarting the game. You can now change the foreground colours to any colour except black by pressing the "1","2" or "3" keys. Press SPACE to exit from the colour-change mode.

1-6

Select to start the game on racetrack 1 to 6 (only available if you have qualified from all the preceding racetracks)

### The Racetracks

* Le Mans	(France)	* Misano	(Italy)
* Anderstorp	(Sweden)	* Silverstone	(U.K)
* Paul Richard	(France)	* Nurburgring	(W. Germany)
* Brands Hatch	(U.K)		

### JUMP option

You can jump immediately to the start of the race on racetracks 1-6 provided you have already qualified from all the preceding racetracks in a previous game. To do so, press the "1", "2", "3", "4", "5" or "6" key whilst on the title pages. You will hear an audible beep confirming your selection, and the next race will take place on the chosen racetrack.

However, to see the codewords on completion of the 7th, 14th and 21st racetracks you must not use the JUMP option.

**Instructions' Source** : PLAY IT AGAIN SAM 2 (Superior) Inner Inlay

### Review (Electron User) - "On Yer Bike!"

Don your crash helmet and zip up your letters. You'll need nimble fingers, fast reactions and a kamikaze streak if you are to survive CRAZEE RIDER, a superb motorcycle race game.

The screen display shows your bike, speedometer, race position indicator and view of the track. At the top is a bird's eye view of the race track - there are seven in all.

As the starting lights change to green, 59 bikes fly past as you accelerate towards the first bend.

The micro cheats here as the computer controlled bikes accelerate to maximum speed instantly, whereas it'll take you at least half a mile.

Luckily, your racer has been tuned by the best mechanics in the business and they have managed to squeeze a few extra horses out of the engine. This means, flat out on the straight, chin on the handlebars you can easily overtake the fastest of the micro bikes and work your way up the field.

The back markers can be a problem as they have an annoying habit of getting in the way at the worst possible movement, usually in the middle of a bend.

These aren't easy to negotiate, but you can see what's coming up by looking at the plan view of the track at the top of the screen. Your position is shown as a large red dot.

After discovering you can't crash or go off the track, my first instinct was to simply hold the throttle wide open. I soon discovered this wasn't the best tactic however and your speed drops rapidly as you near the edge of the track or ram the bike in front.

It soon becomes clear that it's best to follow the racing line through the bends. With one eye on your speedo and one finger on the brake, swing from outside the track to inside and slide back out again by snapping the throttle open as you exit the bend.

Although CRAZEE RIDER is a fair simulation of a motorcycle race it's not intended to be accurate. It's more of a cross between an arcade game and a simulation. Points are gained by riding round the track and passing the opposition. You can also ride alongside the computer bikes and ram them off the track to gain bonus points.

Providing you finish in the first six you move on to race at the next track. It'll take a few laps to familiarise yourself with the layout, but unfortunately, you aren't awarded this luxury.

CRAZEE RIDER is an exciting game - it's fast, challenging and there's plenty to keep you entertained.

# CRAZY ER\*BERT

*Professional, Originally Released On Cassette Only*

Game Alias : ER\*BERT  
Game Type : Arcade; Cubic Domain  
Author :  
Standalone Release(s) : 1987: CRAZY ER\*BERT, Alternative, £1.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+, Master 128  
Supplier : ALTERNATIVE, Units 3-6 Baileygate Industrial Estate,  
Pontefract, WEST YORKSHIRE WF8 2LN. Tel: 07977 79777  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Move ER\*BERT on his crazy travels through his cubic domain.

Starring : Crazy Er\*Bert  
Supporting cast: Boris the Gorilla, Coily the Snake  
Featuring : Cascading balls, deadly discs, balmy bananas, rotating rota-hats

Great fun in this arcade-style classic!

**Instructions' Source** : CRAZY ER\*BERT (Alternative) Back and Inner Inlay

## Review (Electron User) - "Cheap And Cheerful"

CRAZY ERBERT is a cuddly looking little character who plays the hero in this 3D Pacman type game. Living in a world made up of interconnected cubes, his simple aim is to visit each one and paint its top surface a different colour. He treats his cubes as stairways and travels diagonally up or down. Four keys are needed to steer him and these take a bit of getting used to.

At the start of the game, you can select from ten levels of difficulty and whether the movement should be fast or slow. I find the slow option is quite fast enough for me.

It's an odd gripe, but what a pity there is no sound on/off option. The sound effects are nice, but many games players have a need for silence at times.

Erbert does not live alone and the other occupants of his world are all enemies. He is persistently chased by two well-drawn large and colourful characters, Coily the Snake and Boris the Gorilla. If they catch him one of his three lives is lost.

If Boris or Coily try to follow, they vanish for a few vital seconds. This not only gives a chance for safe movement, but also some bonus points.

Erbert can also collect a Rota Hat which allows him a limited flight. Two extra keys are required to manage the flying skills. Elevators and rota hats can only be used once.

To add to the problems, some unseen giant is rolling boulders down the cubes. If higher skill levels are chosen, some of the cubes convert themselves into vaporisers. These have a detrimental effect on Erbert's life expectancy, but they don't last too long themselves.

Also at the higher levels, Erbert can't paint the cubes in one go. He applies an undercoat on the first visit and requires a second to apply the top coat. If you

wish to score high points you can pick up Boris' banana. This causes him to lose his temper and chase you.

If you manage to re-colour all the cubes you move to a new and more complex screen. There are four in all, which means that with ten levels and two speeds, there are eighty possible combinations to choose from.

A few years ago this game would have rated as amazing value at only £1.99. Now, it is merely ordinary, though it will amuse the kids with its bright and cheery graphics.

# CRAZY TRACER

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Overhead FRENZY Style Game  
Author : Wal Mansell  
Standalone Release(s) : 1984: CRAZY TRACER, Acornsoft, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : ACORNSOFT, Betjeman House, 104 Hills Road, CAMBRIDGE CB2 1LQ  
Tel: (0223) 316039  
Disc compatibility : Unknown

## Instructions

*"You are in charge of a paint roller which you must guide around the edges of a maze of rectangles. Trying to prevent you from repairing these lines are several monsters which attempt to catch and crush the roller as it moves along. There are two different kinds of screen to paint: one which offers you the chance of gaining bonus points by painting in rectangles containing different objects, the other which poses the problem of how to avoid running out of paint.*

*CRAZY TRACER is fully compatible with either keyboard or joysticks."*

Paint along the lines on the screen by guiding your paint roller along them, whilst avoiding the monsters which are chasing you.

There are two types of screen. On the first, you must paint along the dotted lines, going in any direction you wish. When you have painted along all four edges of a rectangle then it is automatically coloured in. Your task is to completely colour in all the rectangles. You can gain bonus points by colouring in rectangles while they have an object inside them. A maximum of four objects will appear at random on each screen.

On the second type of screen the rectangles have numbers in them which indicate how many points you receive for colouring them in. The paint roller leaves a trail of red paint behind it as you move along. Once you have coloured in a rectangle you will have enough paint left to colour in an adjacent rectangle. Failure to complete painting round one of these will result in the paint running out and no trail being left. You can, however, obtain more paint by going back to a completed rectangle.

The game alternates between these two screens with the number of monsters chasing you increasing every other screen up to a maximum of six. You start with three rollers and lose one whenever a monster manages to catch you. A bonus roller is awarded for every 10,000 points you score; you can have a maximum of three rollers at any time.

A 'jump' option exists which causes the monsters to jump so that you can travel safely beneath them. Only three jumps are allowed for each roller per screen. The jumps still available are indicated by the number of acorns at the top of the screen.

## Game Controls

Z - Left, X - Right, \* - Up, ? - Down

Alternatively you may use a joystick. The position of the joystick determines the direction in which the roller moves. The Fire button causes the monsters to jump.

<COPY>/<DELETE> - Pause/Continue Game, S/Q - Sound/Quiet, <ESCAPE> - Restart

**Scoring**

Bonuses of 200, 400, 600, 800 and 1000 points.

Further bonus for colouring in all four rectangles containing objects. A bonus roller is awarded for every 10,000 points you score, up to a maximum of three rollers at any one time.

Supplier : ATLANTIS, 28 Station Road, LONDON SE25 5AG  
Disc compatibility : Unknown

## Instructions

*"Arcade/Adventure. Vampire bats, ectoplasm bolts, slime covered ledges and acid pools. All these and more must be faced if our mega hero, Dirk Daring, is to successfully negotiate the depths of Creepy Cave and recover his door key from the evil ghost."*

Dirk Daring, adventurer, explorer, space pilot and top goal scorer for Manchester United, was returning home after winning the world karate championships, when an evil ghost stole his front door key and vanished into the depths of Creepy Cave. Leaping from ledge to ledge, avoiding vampire bats and ectoplasm bolts, Dirk takes off in pursuit. There is only one way through each cavern, and only one exit. Collecting the crucifix from each screen will earn extra points but be careful as there is a limited air supply. Can you help our mega hero to recover his key and get home in time for supper?

## Game Controls

Z or < - Left, X or > - Right, <SHIFT> - Jump  
"Controlability" Feature allows Left and Right Movement while jumping.  
P - Pause On/Off, S/Q - Sound On/Off

**Instructions' Source** : CREEPY CAVE (Atlantis) Inner Inlay

## Review (Electron User) - "Over-priced budget game"

CREEPY CAVE is a budget-priced game from Atlantis where you, as Dirk Daring, must recover your front door key from an evil ghost who nicked it from you one day. Quite what a ghost would want with your front door key, apart from gaining access for a quick spot of haunting, isn't too clear - but the game is quite good fun anyway.

The first thing that greets you when you load CREEPY CAVE is precisely that - a foreboding picture of a very creepy-looking cave indeed. After the game starts, you must wait for the ghost to float across the first cavern where it begins to leer at you in safety, dangling your door key like a carrot before a donkey.

Infuriated by this show of arrogance, you start off across the cavern floor and promptly dive head first into a pool of acid. Back at the cave entrance you try again. This time a great leap sails you across the acid to the far shore. Ahh! Now you know how to make that infernal ghost grin from the other side of its ectoplasm. Or do you? With mounting satisfaction, you hop from ledge to ledge and finally the opposite side of the cavern is within sight.

With one mighty leap the ghost is before you. Except that you are now in the second cave, and that manic ghost again floats away from you to a safe position, still dangling your key enticingly.

Cave number two is much more interesting, with moving belts to contend with besides the ever-present acid pools. After negotiating a relatively safe path and receiving only a couple more acid baths, again the far end of the cave is reached.

But what's this? Now flaming red-hot chunks of stone are falling from the ceiling and plopping into the acid pools. You begin to wonder whether a quick trip to the key-cutting shop with your spare key might not have been in order after all.

CREEPY CAVE is quite good family fun. There is no blood and guts, the game is easy to play yet quite addictive, and you never know what surprises the next cave will hold. The story is perhaps a little off-the-cuff, but who cares? The days when games were sold on a storyline itself are long gone.

For a little less money CREEPY CAVE would be an excellent buy. As it is, with dozens of great budget games appearing every year, Atlantis may have less of a demand for it than there would have been even as little as a year ago.

# CRICKET

***Professional, Originally Released On Cassette Only***

Game Type : Arcade Cricket With Graphics  
Author : Margaret Stanger  
Standalone Release(s) : 1985: CRICKET, Bug-Byte, £1.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : As stated  
Supplier : BUG BYTE, Mulberry House, Canning Place, LIVERPOOL L1 8JB  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"First set the field, the pace, one player or two, and then thunder down the wicket to try and beat the 'Merry Hackers'. It's fully animated action by Margaret 'owzat' Stanger."*

It is Summer 1985. The Merry Hackers and The Naughty Nuns are looking forward to their annual game of cricket. Unfortunately the sunshine went AWOL. This was a bit of a blow so they set about writing a computerised version. Many happy nights were spent in the local huddled around a computer, playing cricket. It is here that I come in. Wandering into the "Rue Barbe" I found a copy lying on a table. After trying it out, I wanted to sell it to a brilliant, fabulous company called 'Big Byte' or 'Bog Boot' or something like that anyway. I spent a year making the game suitable for the average person you know, de-bugging it and sobering it up. Here it is! I hope you like it.

It is summer and the village cricket season is in full swing. A touring team (The Merry Hackers Circus) has been challenging teams from the local pubs. The regulars at the 'Frog and Ferret', 'Pig and Whistle' and even the 'Brahms and Liszt' have hopelessly lost. Can you succeed where others have failed?

The computer displays the field and players, and asks the user to decide between one player or two player game. This is one day cricket so there is a choice of 10, 20 or 40 overs for each side. The team name or names are entered and the scoreboard displayed. Press 'C' to continue.

The visitors' team consists of the computer in the one player game. The instructions for moving the players are shown, and the game is started by pressing 'COPY' for keyboard operation or 'FIRE' if joysticks are being used. The bowler only is controlled as he bowls towards the pavilion end; the fielders are controlled by the computer. The second player, or computer in a one player game, controls only the active batsmen.

Move towards the wicket and press 'SPACE' to bowl. If the ball misses the wicket, the batting side is awarded one extra. If the batsman is bowled out, he starts walking off, the bowler gloats a little and the scoreboard is shown again. If the ball is hit, the batsman can take up to four runs or he may score four or six as in normal cricket.

At the end of each over the scoreboard displays the latest scores and the bowler changes ends. If 'F' is pressed when the ball is out of play, the overall view of the field is shown and the fielders can be re-arranged by the bowling side only (if desired). The bowler may also change his style of bowling at the same time by pressing '5' for slow, '7' for fast and '9' for spin bowling. To move the fielders, move the cursor with the movement keys used in the game until it is over the fielder. Press 'SPACE' to pick up the fielder and move to new position. Place fielder by pressing <COPY>. NOTE : You cannot put a fielder between the wickets. The bowler and wicket keeper are displayed in a different colour and cannot be moved.

The batsman can be caught, bowled or run out. When they are all out, or the innings is finished, the score is displayed again. Hit the stumps at the far end to run out.

The batting side has control of the active batsman. He always has the chance to take runs from one wicket to the other whenever he hits the ball. The other batsman will run with him. Remember always press <SPACE> to hit the ball. The batting side can look at the field but not change it.

The final score is given at the end of the game, and a new game can begin. Either side can end the game at any time by pressing <ESCAPE>.

### Game Controls

M - Music On,    H - Music Off,    S - Display scoreboard  
F - Display field (overhead view),    C - Continue (after scoreboard or field)  
<ESCAPE> - Start new game

### One Player Game

Z - Left,    X - Right,    : - Up,    / - Down,    <SPACE> - Bowl/Bat

### Two Player Game

Visitors :    Z - Left,    X - Right,    Q - Up,    A - Down,    <SPACE> - Bowl/Bat  
Home Team:    : - Left,    ; - Right,    P - Up,    L - Down,    <SPACE> - Bowl/Bat

Or joystick control for 1 or 2 player game.

**Instructions' Source** : CRICKET (Bug-Byte) Inner Inlay

### Review (Electron User) - "It's Just Not Cricket!"

CRICKET is a game which countless programmers have attempted to computerise but failed miserably. This offering from Bug-Byte is yet another such failure.

The game can either be played by two humans or as a man against machine contest. You can also decide whether to play over 10, 20 or 40 overs. The screen displays a view of the cricket pitch along the wicket from the bowler's end. The characters are large, chunky and consist of four fielders, two batsmen, the bowler and a wicket keeper.

When playing against the computer, you will always bowl first. You position the bowler behind the wickets and press the Spacebar. He will then pitch the ball at the batsman who will invariably hit it. You are allowed a choice of three types of bowler - slow, fast and spinner. A spinner will curve in flight as would be expected. However, it also curves when hit by the batsman and when thrown at the wickets by the bowler - odd eh?

When the ball has been struck, it will be fielded by one of your carefully positioned team mates. He then throws the ball back to the bowler. If the opposing batsmen have not finished running you can throw the ball at the far wickets. Should the ball strike the stumps before the batsman has reached the crease then he is out.

One annoying feature of the game is the way that if batsman and ball reach the wickets at the same time he will turn around and hit the ball. It's as though the program thinks you have just bowled a new ball. And while on the subject of irritations, on numerous occasions when the ball was being fielded the display reverted to the scoreboard. Pressing "C to continue" from the scoreboard allows you to carry on from the exact point at which the game was interrupted. Why this happens is a mystery to me.

The next bug came to light on my turn to bat. I struck the first couple of balls that were bowled my way and the bowler seemed to lose interest. My partner and I kept on running and nobody stopped us. Eventually I stopped and waited to face another ball but no amount of key-pressing could coax the bowler back to life.

Without the bugs the game would have been nothing special. With them, it is a complete washout.

# CRIME AND DETECTION QUIZ

*Professional, Originally Released On Cassette Only*

Game Type : Quiz  
Author : Julian Symons  
Standalone Release(s) : 1983: CRIME AND DETECTION QUIZ, Acornsoft/Ivan Berg, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : IVAN BERG, Dunluce House, 4-8 Canfield Gardens, LONDON  
NW6 3QT  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*How does your knowledge of Crime fiction rate against a Grandmaster of the genre? This rewarding and compelling program for your BBC Model B or Acorn Electron computer has been specially adapted from the Weidenfield Quiz book and will provide many hours of edification and amusement for family and friends.*

*Here are Sherlock Holmes, Lord Peter Wimsey and Philip Marlowe, together with James Bond and George Smiley. This fascinating quiz includes questions on crime techniques, television cops, the history of detection and writers such as Raymond Chandler and Agatha Christie.*

*Crime and detection is one of a series of six Grandmaster Quizzes, in which you can pit your knowledge against a grandmaster of the subject. The writer's specialised skill and expert knowledge makes the quiz both challenging and exciting. Each program has thirty sections of ten questions - a massive 300 questions in all - and you can take the quiz alone, in competition with a friend, or in teams. You can choose a timed option too - and if you're getting too many of the answers right, your computer can reduce the time you have to answer!*

*Julian Symons is the author of twenty-one crime novels. He is President of the Detection Club and has written the definitive history of the genre, "Bloody Murder".*

## Introduction By Julian Symons

After trying out some of these questions on friends who said they were absurdly easy, and others who said they were tremendously difficult, it seemed to me that the balance might be about right. Nobody is likely to answer all of them, but intelligent guessing is often possible by consulting the list of names given with several of the questions.

This quiz is meant for all those who read crime fiction, an umbrella phrase which here covers tales of detection, thrillers, spy stories, psychological mysteries, and any other category that occurs to you. It goes back to Edgar Allen Poe, who was the founding father of the crime story, and comes up to date with questions relating to the newly risen stars of the last decade. A few quizzes are for devotees of particular writers, but most are general. Readers with retentive memories will know many of the answers, but I hope everybody will find some surprises along the way. A few tricks are played here and there. You have been warned.

- Julian Symons

## Beginning A Quiz

When the program is loaded, there is a short bleep and the program title appears. Press the SPACE bar as requested and you will be asked:

Do you want to do the quiz:

1. On your own
2. As two competing individuals
3. As two competing teams

Enter choice : ?

Answer the questions as prompted by typing in your response. Press <RETURN> when you have completed each entry.

The main menu will now appear and the thirty quiz titles are displayed on two screens. To move from one screen to another, type 0 and press <RETURN>. Select the quiz you require, type its number and press <RETURN> then remove the program cassette from the deck and insert the data cassette when prompted. Make sure that the correct side of the cassette is uppermost: quizzes 1-16 are recorded on side 1 and 17-30 on side 2. Press SPACE BAR as requested. When your quiz has finished loading, there is a short bleep. You are now ready to begin the quiz.

### **How To Answer The Quizzes**

Most of the quizzes start with a section introduction written by the author. To move on to the second paragraph, or to see the first question press <SPACE>.

If you request a time limit, a clock counts down in seconds in the top right-hand corner of your screen. If you do not enter an answer before it reaches zero, you receive no marks: if two teams are playing, the question is offered to the opposition. However, you are allowed to complete an answer which you started to enter within the allotted time.

To pass a question, press <RETURN>. A passed question will be offered to the opposition, if you are playing in teams.

Some questions may require you to refer back to the section introduction. Do this before you enter your answer by pressing the <ESCAPE> key. Pressing the <SPACE> bar will return you to the Quiz menu and your answers so far will be lost.

Some questions require several separate answers. When a) appears on screen, you enter your first answer, when b) appears, you enter your second answer, etc.

When you have given the answer and pressed <RETURN>, the author's answer is displayed. Compare the answers and decide how many points you should have. You can enter 0 if you are completely wrong, 1 if you are halfway there, and a maximum 2 points for a completely correct answer. Type in your score as requested. When you press <RETURN> the next question appears.

At the end of the quiz, the final scores and the total time taken to answer the questions is given. In the case of a draw, the contestant with the shortest time will win.

If you decide to try another quiz you will be returned to the Main Menu. You can run the same quiz again simply by re-selecting its number: it is still in the computer's memory. If you do not wish to try another quiz, the program will end.

# CROAKER

***Professional, Originally Released On Cassette Only***

Game Type : Arcade Frogger Clone  
Author : Chris Butler  
Standalone Release(s) : 1983: CROAKER, Micro Power, £6.95  
Compilation Release(s) : 1986: 5 COMPUTER HITS, Beau Jolly, £9.95  
1987: PRES GAMES DISC 1, PRES, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron. Electron version plays fast on BBC.  
Supplier : MICRO POWER, 8/8A Regent Street, Chapel Allerton, LEEDS  
LS7 4PE. Tel: 01532 683186.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

The objective in CROAKER is to get your family of frogs safely across the busy motorway and over a polluted river into each of the lairs set in the embankment. To do this you must dodge between the traffic, then leap from logs to turtles without falling in.

When all five lairs have been filled you move onto a higher phase. The roads become busier, some logs turn into crocodiles, and the turtles sometimes dive, making the whole exercise much trickier. You can jump onto a crocodile's back, but beware his jaws!

## Scoring

Every upward jump: 10 points.  
Every frog home: 100 points.

Bonus points are achieved by getting the frog home as quickly as possible. If the Bonus Table reaches zero, you lose a life.

## Game Controls

N - Left, M - Right, A - Up, Z - Down

**Instructions' Source** : CROAKER (Micro Power) Inner Inlay

## Review (Electron User)

CROAKER is another version of that well known game in which suicidal frogs cross busy highways and then hop their way to safety across a river in order to reach a hole in the bank. One day I am going to ask someone how come frogs drown if they fall into a river?

The program loads reliably and screen instructions appear while the main code is being loaded in. The configuration of the keys is a little unusual - A and Z for up and down, while M and N control lateral movement. However, they soon feel natural enough, although I would imagine a joystick would improve matters.

The game's format is fairly standard, with five lanes of traffic travelling in alternate directions and different speeds. After a brief rest on the riverbank, there are then five more lanes of logs and turtles before safety is reached at one of the five holes. When all are occupied bonus points are gained and the screens become more difficult. The cars move more quickly and are more frequent. Things are even worse in the river. Some of the turtles dive, and many logs turn out to be crocodiles with gaping jaws.

The game has little to make it stand out from its clones. But the graphics are quite presentable, with good use of colour. The key response is quick and positive.

I appreciated the first screen starting at a very easy level - my six-year old son was able to do well at this initial level, although the crocodiles made him ditch many frogs into a watery grave. Too often, a game starts with a level of difficulty that doesn't allow the young or inexperienced to achieve any success. Here it is possible to gain practice on the lower levels to help mount an attack on the author's claimed top score of 12,530.

This is a competent and addictive version, but without special features. Probably the most used facility will be that which turns off the awful tune and reverts to the original sound effects.

# CRYSTAL CASTLES™

***Professional, Originally Released On Cassette Only***

Game Type : Arcade 3D Pacman With Cartoony Characters  
Author : Peter Johnson  
Standalone Release(s) : 1986: CRYSTAL CASTLES, US Gold, £9.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : U.S. GOLD, Units 2/3 Holford Way, Holford, BIRMINGHAM B6  
7AX. Tel: 024 356 3388  
Disc compatibility : Unknown

## Instructions

*"Diamond Plateaus in Space. As a Limited Edition, Crystal Castles is a once-in-a-lifetime opportunity to experience a true software legend."*

*"When I first saw Crystal Castles, its shock waves almost knocked me off my feet. That was so long ago. I cannot conceive that you will ever buy it in a shop - I'll believe it when I see it! It's like a state of manic hysteria on diamond plateaus in deep space - some things are beyond description." - Julian Rignall*

## Scenario And Gameplay

You play Bentley, a bear with a passion for collecting gems. The gems are scattered on the floors of a series of eighteen 3D structures packed with lifts, ramps, tunnels and hidden passages. To prevent you completing your task there are various creatures, each with their own characteristics. The MAD MARBLES try to take the shortest route towards you. The TREE-SPIRITS do the same, but are frozen for a while if you jump over them. The SKELETONS move at random, but tend to block your way. The GEM-EATERS (which look like centipedes on their hind-legs) can be seen swallowing the gems inside them; if you attack one in mid-gulp, it will be destroyed. BERTHILDA THE WITCH may only be killed when you are wearing the MAGIC HAT, which makes you invincible for a short time. If you take too long on a screen, the BEES will arrive in a swarm to chase you.

## Hints

The HONEY-POT is worth bonus points if collected, but it and the hat cannot be negotiated by the nasties, so should be used strategically. There is a bonus of 1000 + SCREEN x 100 awarded for clearing the last gem on the screen, so don't let the baddies get it. Watch as the screens are built-up to see where the passageways and tunnels are; remember that you can walk around behind some of the structures.

Some enemies move predictably, and the good player uses this to their advantage to remove gems in awkward places, or to trap the trees etc. out of the way. The last gem is sometimes hidden under the hat, remember that you can pick the hat up by jumping over it as well as walking over it.

There are eighteen different screens in the game; if you can complete these you will start again at fast speed. The tape version uses three short files, each holding the information for six screens of action. When you have completed the first section on the tape version, you will be prompted occasionally to load a new set of screens. You may choose any set here, so you can play or practice in the order you want. The flipside of the tape contains just the data files for the game.

## Scoring

Each gem collected: 10  
Collecting the HONEY-POT or MAGIC HAT: 1000  
Killing a GEM-EATER or BETHILDA: 1000  
Bonus for collecting the last gem on a screen: 1000 + SCREEN x 100.

Lives are displayed at the top of the screen. An extra life is awarded every 10,000 points.

### Game Controls

Z - Left, X - Right, : - Up, / - Down, RETURN - Jump  
COPY - Pause, DELETE - Unpause, ESCAPE - Return to hi-score table  
S - Sound on, Q - Quiet (From hi-score table only)

**Instructions' Source** : CRYSTAL CASTLES (U.S. Gold) Back And Inner Inlay

### Review (Electron User) - "Pacman Revisited"

The original CRYSTAL CASTLES was an Atari arcade game. Now this Pacman variant has found its way on to the Electron - about two years too late.

Pacman, as you will remember, was designed around a maze in which the pathways were covered with dots. CRYSTAL CASTLES uses the same idea, but divides the maze into squares. These are then raised to create ramps and towers. Some of the taller towers can only be reached using lifts; others have tunnels beneath them.

Controlling a small character who looks like a little devil, you run round the maze collecting gems. Clear one maze of gems and you move on to the next. Life is made difficult by the presence of an entourage of evil characters. First come the red balls. There are only two on the first screen, but they are adept at luring you into corners.

Screen two sees the arrival of the trees, which operate in the same way as the balls but in greater numbers. Other nasties include gem-guzzling caterpillars, a skeleton and a wicked witch.

Dawdle too long on any screen and a whirlwind appears to add to your problems. Fortunately, there is a wizard's hat which when collected will provide you with temporary immunity against the nasties.

Having sped through the first six screens I was asked whether I wished to load a new set of nasties. If you want to amass a huge score reply no to this question as you will be returned to screen one and be allowed to run through all six screens again - with no increase in difficulty!

The castle files are only four blocks long and don't take long to load. However, this loading routine every six screens will no doubt become tedious.

The 3D effect may have been clever two years ago but is nothing special now. Animation is smooth, but some of the characters are poorly defined. If you're feeling nostalgic and would like your own copy of CRYSTAL CASTLES then be my guest.

On the other hand, unless you want an old fashioned game that wouldn't keep the average termite amused for more than five minutes, stay well clear.

# CYBERTRON

*Professional, Originally Released On Cassette Only*

Game Alias : CYBERTRON MISSION  
Game Type : Arcade Adventure Style  
Author : Matthew Bates  
Standalone Release(s) : 1984: CYBERTRON, Micro Power, £6.95  
Compilation Release(s) : 1987: MICRO POWER MAGIC 2, Micro Power, £7.95  
1987: PRES GAMES DISC 2, PRES, 1987, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron. Electron version plays fast on BBC.  
Supplier : MICRO POWER, 8/8A Regent Street, Chapel Allerton, LEEDS  
LS7 4PE. Tel: 01532 683186.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

On entering the stronghold of Fort Cybertron, you will be instructed as to which objects to find on each level. Once you have collected all the treasure (only one on level one), run in search of the room containing the safe. Touching the safe advances you to the next level. There are a total of 16 rooms on each level, in the form of a 4x4 grid. You are well advised to draw a map as the layout of the levels is designed to confuse you! The treasure can be in any one of these rooms, and to pick up an item, simply move over it. It will then appear in the bottom right-hand corner of the screen to signify that you are carrying it!

On the first level, your only adversaries are the Spinners. These do not fire back, but later on you will meet the Clones with their rapid firepower, and still later the Cyberdroids which are more intelligent.

Other information is included in the program.

Lastly, a good score would be one of over 32,000.

## Game Controls

< - Left, > - Right, A - Up, Z - Down, M - Fire

You can also fire and move diagonally by holding down two direction keys together.

**Instructions' Source** : MICRO POWER MAGIC (Micro Power) Inner Inlay

## Review (Electron User)

"Absorbing", "Electrifying", "Frustrating", "Addictive" are just a few of the adjectives I would use to describe MICRO POWER's latest space game. Load the program into your Electron and you are immediately conveyed into a danger-strewn world of spinners, cyberdroids and spooks. You may not be sure exactly what they are but you can be certain that they're nasty.

On the first level you are instructed to find a key which can be used to open a safe. Doing this conveys you to higher levels, where more dangers await you. However things are not as straightforward as just wandering round the screen until you find the key. Life in space - or at least in space games - is never that simple.

You'll need every one of your five lives as you battle your way through a series of maze-like rooms. You score points each time you zap a spinner, and gain an extra life when, and if, you reach a pot of gold.

If you survive the first few batches of spinners, you'll find that clones begin to

block your way. And after the clones come the cyberdroids - vacuum cleaner lookalikes with nasty dispositions.

Two points to note. First, watch out for the spooks. These little treasures will come and get you at every possible opportunity. You've got to be quick on the draw. Second, you must have the key in order to open the safe to proceed to higher levels.

The program is a cross between arcade-style action and an elementary adventure, combining the two perfectly. It's exciting with plenty of variety, excellent graphics and interesting sound effects. You'll be a-mazed. And if you are anything like me, you won't be able to put your Electron down. A winner.

Paul West, ELECTRON USER 1. 7

# CYBORG WARRIORS

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Sideways Scrolling Shoot-'Em-Up  
Author : Tony Oakden  
Standalone Release(s) : None  
Compilation Release(s) : 1991: PLAY IT AGAIN SAM 15, Superior/Acornsoft, £12.95  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : CDFS E00, DFS E00

## Instructions

You must shoot the robots and aliens in order to progress through the levels. Most take more than one hit from the Standard Issue Laser. Tokens which float across the screen should be collected. They have the following effects: (1) 200 point bonus, (2) extra life, (3) extra weapon, (4) 800 point bonus. After level 4, the scores for killing aliens and collecting tokens is increased.

Once a weapon is collected, a new icon will appear at the bottom of the screen. Select a weapon by moving to the left of the screen, holding down the Move Left key (or joystick left) and tapping the Fire key (or joystick fire). The cursor under the weapon will move and the weapon will change. The weapons are: SIL (standard issue laser), MDL (multi-directional laser), AMT (anti-matter torpedo) and SBL (smart bomb launcher).

## Game Controls

<SHIFT> - Left, Z - Right, \* - Up, ? - Down, <SPACE> - Fire

## Instructions

A 3D space battle. You are an interceptor pilot on board an earth supply ship, taking vital reinforcements to a beleagured planet. The Cylons have found out all about the mission and are determined to stop your ship at all costs. Aboard the mother ship is earth's latest weapon - if you succeed, it will drive the Cylons back to their planet.

FEATURES: Launch and landing sequences, long range radar, climb and turn instruments, fuel, screens and laser weapons, hall of fame and top score save/load routines. Full instructions are included within the game.

**Instructions' Source** : CYLON ATTACK (A n F) Inner Inlay

## Review (Electron User)

Picture it. You're the only interceptor pilot on board an Earth supply ship. The alarm goes. The Cylons are attacking, wave after relentless wave determined to stop you getting through. You launch into space away from the safety of the mother ship to try and destroy as many of the enemy as you can before your shields give way or your fuel runs out. Your eyes search the long range scanners for a glimpse of the enemy before they stoop to attack, curving and weaving to avoid your defence systems.

That's the scenario for CYLON ATTACK, the compulsive new game from A n F Software. You play the part of the interceptor pilot, struggling to get the Cylon ships in your sights so your lasers can lock on to them. The screen of your micro becomes the view from the cockpit. Ranged around it are the instruments. They show the state of the lasers, your fuel, your rates of turn and spin, and a long range radar scanner.

This scanner is not just decoration, but really helps you to track down and destroy the enemy. The 3D effect has to be seen to be believed: the aliens loom out of deep space, growing larger as they approach to attack distance.

The game is quite simply excellent, with lots more features than can be described here. The graphics leave most other games standing. And, as usual from A n F, the instructions are simple but thorough. The only problem is that I can't find anything about it to criticise. It really is that good, and sets the standard by which action games will be judged. Thoroughly recommended.

Trevor Roberts, ELECTRON USER 1. 4

# CYLON INVASION

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Shoot-'Em-Up  
Author :  
Standalone Release(s) : 1986: CYLON INVASION, Tynesoft, £6.95  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : TYNESOFT, Unit 3 Addison Industrial Estate, Blaydon, TYNE &  
WEAR NE21 4TE. Tel: 091 414 4611

# DALLAS

***Professional, Originally Released On Cassette Only***

Game Type : Strategy; Management of Oil Company  
Author : J. Jiggins  
Standalone Release(s) : 1983: DALLAS, CCS, £6.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : CASES COMPUTER SIMULATIONS, 14 Langton Way, London SE3 7TL  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"DALLAS is a board game of oil exploration and exploitation in Texas. A map of Texas is shown splitting the region into hundreds of plots each with a potential to discover oil. After making seismic surveys you are required to make decisions on purchasing concessions, the movement and use of drilling rigs, and the building of platforms and pipelines. Can you take over the Ewing Empire, or will you be taken over in the attempt?!"*

## 1. Introduction

This is a business simulation of the wheeler-dealer oil rich folk who live in Dallas. The program will appeal to all members of the family. The program starts with setting up a map of Texas, splitting the region into hundreds of plots, each with a potential to discover oil. You are required to make seismic surveys, bid for concessions, drill for oil, build production facilities and lay pipelines. The game is menu-driven and the player is able to direct his corporation along many diverse routes. The object of the game is to accumulate \$200M in net assets and \$80M cash in order to take over Ewing Associates. There are three levels of difficulty.

## 2. The Board

A map of the oil fields is displayed. On the left hills are shown in which drilling and production facilities are more expensive. 'D' at co-ordinate 'A'. 'N' is the city of Dallas.

- a) Drilling rigs need to be moved from Dallas.
- b) Pipelines need to be connected to the Dallas refineries to maximise production.

A flashing cursor will indicate fields for which concessions are offered.

After purchasing a field then progress through the following:

- Concession purchased.
- Drilling rig in place.
- Oil strike.
- Production facilities built.
- Pipeline to Dallas refinery laid.

## 3. Menu

Drill	=	Drilling well.
Fin	=	Request for finance.
Lay	=	Laying pipelines.
Prod	=	Build production facilities.
Rig	=	Move drilling rig.
Seismic	=	Seismic survey.

To effect a command you are required to key underlined capitals.

## 4. Problems Encountered

Blow outs, tornado, drilling accidents, increase in government taxes, crude oil surplus and insufficient funds.

### **5. Hints On Playing**

Start the game by making seismic surveyys to establish plots which have good prospects. You need to bid high for concessions until you have at least three. (A bid of \$8 - \$10 million usually succeeds.)

Concessions east of hills and close to Dallas are worth more because development costs will be less. You must develop a field in the correct order: a) make seismic surveyy (this step is optional), b) purchase concession, c) move Rig, d) Drill for oil, e) build Production facilities, f) Lay pipeline.

You may make seismic surveys either before purchasing a concession where each survey costs \$200,000 or make an appraisal survey with a test well for \$1.2 million after purchasing the concession. However, do not be put off by a 'Poor' report as it is still possible to strike a gusher even in a field with a 'Poor' report.

Fields are at greater risk from disasters, i.e. blow-outs, accidents, etc., the more they are developed.

It is usually best NOT to risk the first field which is producing by laying a pipeline immediately. Consequently, it is usually preferable to develop other fields, the cost of development can then be financed out of the revenue of the producing field.

Loans may be sought to finance the building of production facilities. You will however be charged interest on the loans and risk factors also increase when loans exceed \$20 million. You will not become insolvent because before the company's finances reach that state, you will have fallen prey to being taken over by Ewing Associates.

LS7 4PE. Tel: 01532 683186.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

The object of the game is to defuse the TNT time bombs before their clocks get down to zero. To do this you run from block to block, avoiding the Skulls, and enter the square with the TNT. What makes the game a challenge is that once you have stood on a block, it disappears. To get out of any tight spots, two extra keys allow you to slide the entire row you are on left or right. Points are gained for the number of squares that have been stood on, and the speed with which you defuse each bomb. Extra points are earned for running over flags.

After each phase you will be given the chance to earn bonus points. Press the 'Z' key at the appropriate time to cause your man to land on the flag. If you are successful, the bonus points indicated at the top of the screen will be added to your score.

There are three levels of difficulty. At level one, the ticking bombs start at 60, at level two, 40 and level three you have the added problem of stamping boots which chase you round the grid. Each level has its own separate high score table complete with sample scores and ratings to aim for.

Pressing <ESCAPE> brings back the front page where you can select sound and also the level.

## Game Controls

**Instructions' Source** : DANGER UXB (Micro Power) Inner Inlay

## Review (Electron User)

ONE of the most original games I've come across so far, DANGER UXB from Micro Power, gripped my attention from the start and kept firm hold.

You are placed in the centre of a block of pathways consisting of blue squares, some of which bear a skull and crossbones. The skulls mark the position of lethal TNT bombs. One after another their timers start, counting down from 60 to 0 when, unless you've defused them, they explode taking you with them.

Not only that but once you've used one set of squares to reach a bomb they disappear, so you can't go that way again. You can, however, slide the row of blocks that you are on left and right but you have to be both fast and cunning.

If you manage to survive the first level you're "rewarded" with another screen where

the countdown starts at 40. Complete that and the next level has stamping boots that chase you round the grid. I don't understand that last part, but it's great fun.

With highly impressive graphics and sound, and easy to use keys the game appeals to all ages and is great fun for all the family. A highly original and compelling game.

## Instructions

*"FEATURES:*

- \* FULL SOUND ("interrupt driven music" while loading)*
- \* 100% Machine Code*
- \* High score table*
- \* Original gaming concept*
- \* On screen scoring*
- \* 30 Multi-colour sprites*
- \* 3 Scenarios (land, sea, snow)*
- \* 6 skill levels (novice-Ace)*
- \* Fast smooth mode 2 graphics*
- \* 6 intermediate stages giving 36 skill levels*
- \* Automatically gets harder as you get better."*

So you think you could be a stuntman? Well, test your skills against these hazards and see if you're still game. There are only three different scams in this movie, so you shouldn't find the going too tough! There's no denying that the money's good, but the question you should be asking yourself is will you live to spend it?

If you can ride a motorcycle - and wetbike - two of the frames should be child's play, but for the snow scenes, you'll need to be of Olympic class. Well, as I said, the work isn't easy, but the lifestyle's great (if you have a lot of style, you may get to have a life as well) and the rewards are out of this world...

Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Step up to the ocky and enjoy all the fun of competition darts with this high resolution version by Blue Ribbon. A choice of three popular dart games: 501, Round the Board and Cricket. All available in this package.

## 501

Enter start score - usually 501 or anything up to 1001. Each player has three darts in turn. You must finish on a double.

## Round The Board

Degree of Difficulty - Singles/Doubles/Trebles.

Start at 1 and finish with outer bull followed by inner bull.

## Cricket

Player 1 tries to score as many runs as possible while Player 2 aims for the outer or innre bull. Inner = 2 Wickets, Outer = 1 Wicket.

Player 1 continues to score until Player 2 has scored 10 Wickets. The roles are then [reversed].

## Time Limit

Quick reactions are necessary as time is limited.

## Control Keys

Z - Left, X - Right, : - Up, ? - Down  
<SPACE> - Throw Dart, <ESCAPE> - Change game

**Instructions' Source** : DARTS (Blue Ribbon) Inner Inlay

## Review (Electron User) - "One Hundred And Eighty!"

Judging by the amount of prime time television devoted to darts, it must be one of the most popular sports around - at least with the armchair athlete brigade. I prefer to get up and have a bash rather than sit and watch, so it was with some enthusiasm that I tackled Blue Ribbon's latest budget release, titled simply, DARTS.

The loading screen is plain, but I'm not grumbling as there is nothing more irritating than waiting for a 20k title screen to load from tape. After this comes a short program containing instructions, which is essentially the same as that supplied on the cassette insert. The main game is then loaded.

First comes a menu from which you can choose three different types of game, all played on the dartboard. The first is 501 - the one so popular on television. Both players enter their names followed by the score they wish to start on - there is no

need to start on 501, and anything up to 1001 is possible. All games are two player and I was disappointed to find that there's no option to play against the computer.

In 501 each player takes it in turn to throw his darts and his score is subtracted from his total. The object is to reduce your total until you can throw a double to zero it.

The screen displayed a large dartboard with scores down each side, and you use the Z, X, \* and ? keys to position your erratically moving dart as best you can. Holding down the spacebar releases it.

The second game is Round the Board, involving throwing a dart into each number, followed by the outer then inner bull. You can make it harder by specifying that the doubles or trebles only must be hit.

The third game, my favourite, is cricket. Each player takes it in turn to throw as usual, but this time one is batting and the other bowling. The batter scores as many as possible, while the bowler tries for an outer or inner bull. The outer counts as one wicket, and the inner three.

The innings is over when ten or more wickets have fallen; the players then swap batting and bowling. The winner is the one with the most runs.

The graphics are simple, with a board shown head on with the darts as crosses. The throwing action is again simply executed with a randomly moving dart which you can control to some degree by its four keys. Throwing just fixes the dart at its current position. There's no sound to speak of, just a few notes played when you win the game.

For a budget title it's OK, but nothing to write home about. I found it quite interesting at first, but it soon became tedious, despite the three different games.

Roland Waddilove

### **\*\*\* Second Opinion \*\*\* (Electron User)**

I love pub games like darts, and this offering from Blue Ribbon is a good simulation - though not quite up to the standard of Tynesoft's INDOOR SPORTS. The graphics are good, and the variety of games played on dartboard adds interest to what might otherwise be a dull simulation. At a budget price you can't complain.

## Review (Electron User)

The cassette inlays from Dialsoft do not really attempt to sell the product, which is a pity as the cassette inside contains a fairly good filing system program.

Many people would wish to keep records of the card index type, whether for personal use (addresses, recipes, etc) or for semi-personal applications (club membership, software records). Your micro allows you to keep a file with these details, the data then being loaded into another database program, in this case File Handler. The data can be manipulated to produce lists in alphabetical or numerical order, or to search for a particular entry.

The trouble with all tape-based database programs is speed - a large file takes some considerable time to load, whereas a disc system accesses data far more rapidly. Roll on disc drives for the Electron!

This isn't the best program I have ever seen of its type, although there are areas in which it will stand comparison with others. The speed of sorting is acceptable and the screen displays clear and legible. The program, however, lacks something in the area of user-friendliness, using jargon phrases like "file extent" without further explanation.

However one quickly gets used to these phrases, and it is then relatively easy to enter data or interrogate the file. The size of record which can be catered for varies with the number of fields. For instance, 200 records can be entered across four fields, while only 80 may be input if the number of fields is increased to 10. It is also a simple matter to extend a file (if there is room) or to alter data, although the new data has to be saved to tape once again. A sample file is included in the program, although I did not succeed in loading it.

I also found myself wondering why all serious programs have to be presented in black and white. The program is listable, and it is relatively easy to alter screens to allow colour coding of the various pages. Incidentally, the program is completely compatible with the BBC Micro.

Phil Tayler, ELECTRON USER 1.11

## Review (Electron User)

This cassette and book are totally interactive and neither would make any kind of sense without the other. Well, perhaps the very keen student could work through the book alone but the 55k of programs on the tape are a considerable help.

I use the word student advisedly because the pack is really aimed around 'A' Level Computer Science exams. I confess I have never passed an exam in computing, having learned by doing and teaching myself but there is obviously a growing interest in formal qualifications in computing.

The back cover claims the book and cassette will also be of interest to anyone wishing to write data handling programs. I have my doubts whether the dry approach of this volume will encourage anyone not committed to this area of study by examination.

The programs set out to demonstrate on screen what is happening inside the computer during sorting and related activities. This is done by the user making inputs which are manipulated into their correct places in the data structures while the appropriate Basic lines are highlighted.

In this way, the use of loops is well demonstrated while conditions are met and explained. A few terms new to my vocabulary appear in the book as, for instance, I had never used a hash table before.

I suppose it is a measure of the style of this book that I can now work reasonably well through examples using them. The book is good value for those students meeting data structures meeting data structures in their syllabuses though I cannot imagine it becoming general reading matter among the average micro owners.

## Instructions

You, as the sheriff of Dodge (the bullets) City, must stop the bandits getting away with the bags of money from the City Bank, and freeing their comrades in jail.

But stopping baddies takes it out of you a bit, so you have to keep an eye on your 'Thirst Level'. If it gets too low you can always pop into the Hotel for a quick drink with the lads from the O.K. Corral.

If your ammo gets too low, just walk over the body of a dead bandit, before he disappears and you will get more ammo.

Keep an eye out for Neddie, the bandits' faithful horse. If you get in his way, you will be trampled.

Make sure the bandits do not take all the bags of money. If they do, the people of the town will hang, draw and quarter you (and then whatever's left, they will feed to the vultures).

# DEATHSTAR

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade; SINISTAR Clone; Space Battle  
Author : Peter Johnson  
Standalone Release(s) : 1984: DEATHSTAR, Superior, £7.95  
                          1991: DEATHSTAR, Superior/Blue Ribbon, £2.99  
Compilation Release(s) : 1987: FIVE STAR GAMES, Beau Jolly, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR, Department C, Ground Floor, Regent House, Skinner  
          Lane, LEEDS 7  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### Instructions

You have four basic controls: two to turn your ship clockwise and anticlockwise and the FIRE and STARBOMB controls. The FIRE button will destroy the Workers and Warriors, whereas the STARBOMB is your only defence against the mighty Deathstar.

A collision with either a Worker or a Warrior will cause no damage to your ship, nor will colliding with a Planetoid.

Initially the objective is to fly around each Planetoid, spraying it with bullets until it starts to emit glowing Crystals. Then you should fly over the Crystals to pick them up - each Crystal is worth 200 points and gives you a Starbomb.

Your opponents are the Workers (coloured red) and the Warriors (coloured blue).

The Workers have several tasks to perform:-

- \* waiting near your ship while you mine Crystals,
- \* waiting near Warriors as they mine Crystals,
- \* pursuing free Crystals and transporting them back to the Deathstar.

The Warriors' main jobs are:-

- \* mining Crystals,
- \* guarding the Deathstar,
- \* attacking your ship.

The Deathstar is built in one piece at a time by the Workers. When 20 pieces are in place, the Deathstar is complete and the screen will flash different colours to indicate its attack is imminent.

A good strategy is to collect a full supply of 24 Starbombs, find the Deathstar by releasing a Starbomb and following its path (the Deathstar will appear on the radar screen), wait for it to be completed, and then run away from it releasing Starbombs whenever it is on screen with you. Also ensure that you shoot any Warriors that are on screen with you, as they can shoot you. The Workers which collect the Starbombs may be shot to reclaim them. If you successfully destroy the Deathstar, you progress to the Worker Zone, the Warrior Zone, the Planetoid Zone and the Void Zone (in which there are very few Planetoids present), with a bonus screen between each zone.

### Radar Screen

When viewing the radar screen, which is shown at the top of the game screen, the game characters are shown as coloured blocks as detailed below:-

Your Ship.....White

Warrior.....Blue

Worker.....Red

Deathstar.....White

#### Scoring

15,000 - Destroying the Deathstar  
5,000 - Each Deathstar piece  
500 - Each Warrior  
250 - Each Worker  
200 - Collecting a Crystal

#### Game Controls

Z - Rotate Anticlockwise, X - Rotate Clockwise, RETURN - Fire, SHIFT - Starbomb  
<COPY>/<DELETE> - Pause Off/On, <ESCAPE> - Restart game

**Instructions' Source:** SUPERIOR COLLECTION 3 (Superior) Inner Inlay

#### Review (Electron User)

DEATHSTAR is a super fast, all-action arcade classic. It's the sort of game that you can't put down. You've got to have just one more go. My dinner went cold on more than one occasion.

As the name suggests, the action takes place out in space. Among the asteroids are two types of alien ships - workers and warriors. The workers are a pretty harmless bunch, but the warriors can be nasty at times.

The asteroids contain valuable crystals which can be blasted free and picked up by both you and the aliens. The aliens use them to build a huge battle ship, virtually indestructible. You convert them into starbombs, the only defence against the Deathstar.

If you manage to make it until the Deathstar has been completed, then the only way to survive is to release all your starbombs. If you've managed to collect enough, the Deathstar will be destroyed. If not, it'll catch you up and destroy your ship. Destroying the Deathstar takes you on to the next screen. The warriors harass you more and it's difficult to mine the asteroids for crystals.

If you manage to destroy the Deathstar again, it's into warp drive and off to the next screen.

As you progress, the number of asteroids become fewer and they become more difficult to mine. To make matters worse, the warriors become more aggressive as well.

The graphics are excellent and the scrolling is very smooth in all four directions. The pace is fast and furious even on the starting screen. This action-packed game is recommended for all arcade gamers.

# DESPATCH RIDER

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Scrolling Race Game  
Author : Phil Whitehurst  
Standalone Release(s) : 1987: DESPATCH RIDER, Audiogenic, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : AUDIOGENIC, Winchester House, Canning Road, HARROW HA3 7SJ  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Dick Decker has yet another new job, as a Despatch Rider with the Dorkin Despatch Agency. Darren Dorkin, the owner, has lent Dick his powerful Yamasaki 750, and Dick dare not damage it for fear that he might lose his job.*

*If he loses his job his whole life will be in ruins, since his long-suffering fiancée Debbie has given him just one more chance to get a steady job.*

*Can you help Dick deliver the mail to the Royal Snail offices whilst avoiding the road works, burst water mains and other hazards?*

**DESPATCH RIDER** is a challenging test of your reactions and digital dexterity that will keep you amused for hours on end."

Name - Dick Decker

Occupation - Despatch Rider

Task - To save your job (and your neck!)

Since leaving school with just two CSEs (needlework and tap-dancing), you have been a failure, flitting from job to job without ever discovering where your talents really lie. Now you have once again put away ye olde UB40 to take up an offer of employment from the Darren Dorkin Despatch Agency. As you jump on your supercharged Puch to go to work on the first day your lovely fiancée Debbie waves farewell with these departing words: "If you don't keep this job, then the wedding is off!".

Your arrival at Dorkin Despatch is no less disturbing. The owner - 15 stone of leather and grease - states that you cannot use your trusty Puch for the despatch runs, and until you get a new bike you his have to use his Yamasaki 750 which, considering it is 660cc more than you have ever experienced before makes you feel, uh, a little panicky. Especially when Mr Dorkin warns that if you damage his bike you'd better keep your crash helmet on "'coz you're gonna need it, mate!"

Your task of the day is to collect mail bags and deliver them to the Royal Snail offices. Time is short and the Yamasaki engine is very thirsty, so you must ensure that you don't run out of petrol by refuelling en route. The slower you go, the more petrol you'll need (There must be a leak in the petrol tank!).

There are road works along the route, but you don't have time to use the diversions - use the ramps instead. Make sure you avoid the cones and the deep puddles from the burst water mains, and above all don't forget to pick up the mail. If you do make a mistake you will have to start all over again.

If you do manage to complete the morning's work by delivering all the mail sacks to seven different offices at the end of seven different streets, you'll still have the second post to do! Not only is there likely to be more of it, but the streets will be busier and the mail more difficult to collect.

Mr Dorkin has started a new ratings system to find out who is his best rider (and who gets the sack); for each mailbag safely delivered a bonus of 1000 points will be given. If you can only get to Number 1 your job at Dorkin Despatch will be safe and Debbie will be yours.

### Game Controls

A - Track Up,      Z - Track Down,      < - Slow Down,      > - Speed Up  
P - Pause,      S/Q - Sound/Quiet

**Instructions' Source**    : DESPATCH RIDER (Audiogenic) Back and Inner Inlay

### Review (Electron User) - "Two Wheeled Terror"

Dick Decker is one of life's failures. Veteran of a dozen previous jobs, his fiancée has given him an ultimatum - get a steady job or the wedding is off.

The Derek Dorkin Despatch Agency provides Dick with a 750cc Yamasaki speed machine and a further warning - bend my bike and I'll bend your head! With two such supportive people behind him how can Dick possibly fail?

His job involves delivering mail to the Royal Snail offices in separate streets. The road is divided grid style, giving five lanes along which Dick can ride. Pressing the up or down keys causes the bike to change lanes.

Response is instantaneous, but it is very easy to forget that the keys do not auto-repeat, which often results in the loss of a life, and you have to start all over again from the beginning.

As Dick rides along the street, the screen scrolls from right to left. The faster he rides, the faster it scrolls. This can be rather jerky at times, but considering that it's all done by software (It's a hardware scroll on the BBC Micro version) it is quite good and perfectly acceptable.

Audiogenic provides a generous seven bikes which are lost through collisions and lack of fuel. Across the top of the screen is a fuel gauge and the bike is kept topped up by riding through barrels labelled gas.

The bell rings as you touch a barrel, indicating refuelling. Often you encounter four barrels in a row, but unfortunately the bell only rings once. To make the most of this abundance of fuel you must perform some rapid lane changing.

The Yamasaki has a rather unusual fuel economy characteristic - it uses petrol at a constant rate no matter how fast you are going. Therefore, the faster you do the less likely you are to run out of fuel.

I don't know where this town is, but the roads are an absolute nightmare. Each street is strewn with cones, burst water mains, concrete blocks, tacks and greasy patches. All appear to be positioned in such a way as to cause the most inconvenience.

In many instances the obstacles completely block the road ahead. In such cases there is fortunately a ramp just in front of the roadblock which will send you sailing over the hazard.

Due to a combination of no shadow on the ground below the bike and the length of time spent airborne, you can never be quite sure whether you have landed and moved up the road one lane or are still in flight. This minor niggles aside, I found DESPATCH RIDER a very testing and enjoyable game.

# DIAMOND MINE

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Maze And Patrolling Nasties Game  
Author :  
Standalone Release(s) : 1986: DIAMOND MINE, Blue Ribbon, £2.50  
Compilation Release(s) : 1987: BLUE RIBBON GAMES DISC 1, Blue Ribbon, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : BLUE RIBBON, CDS House, Beckett Road, DONCASTER DN2 4AD  
Tel: 01322 21134  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Guide the pipe through the mine towards the diamonds avoiding walls and bugs.

If you hit a wall or a bug then twice as much pipe is lost. If you reach the diamonds or the pipe is eaten by bugs only that length is used. The pipe start length is decreased for each level.

## Game Controls

Z - Left, X - Right, \* - Up, ? - Down, <RETURN> - Retract Pipe

**Instructions' Source** : DIAMOND MINE (Blue Ribbon) Inner Inlay

## Review (Electron User)

At just two pounds fifty, this program is aimed quite definitely at the "pocket money" market. However, the low cost is well matched by a low interest level, little originality and little in the way of addiction. It's not that the program is particularly bad, but just that I cannot really find very much to get enthusiastic about.

Imagine a mine - which is essentially a vertical maze - and at the top is the beginning of a pipeline. You must guide the pipeline through the mine in search of diamonds. There are a number of rather cute bugs which have a disconcerting habit of eating the pipeline and these must be avoided using the usual Z, X, \*, ? combination of keys.

The walls of the mine must also be negotiated, or else a length of pipeline is lost.

Having said that, there is remarkably little to add. It is not a particularly easy game to play, although naturally success comes with practice.

Sadly, I found that boredom also set in, although the game might keep some younger players interested for a few hours.

The Electron has been around a long time now, and the level of much other software makes this particular program look rather poor in comparison.

Pat Hillery, ELECTRON USER 3. 6

# DIAMOND MINE 2

***Professional, Originally Released On Cassette Only***

Game Type : Arcade Maze And Patrolling Nasties Game  
Author :  
Standalone Release(s) : 1986: DIAMOND MINE 2, Blue Ribbon, £2.50  
Compilation Release(s) : 1987: BLUE RIBBON GAMES DISC 2, Blue Ribbon, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : BLUE RIBBON, CDS House, Beckett Road, DONCASTER DN2 4AD  
Tel: 01322 21134  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Having made it rich from your last DIAMOND MINE, you have invested all your wealth into opening an even bigger mine. Your task is to collect all the diamonds lying in the mine. To help you keep the winch motor going you have a robotic assistant called DIAMO. He keeps the motor going until he runs out of energy or until all the diamonds have been collected on that level.

To collect the diamonds, you must direct the vacuum pipe through the mine shafts using the control keys. Each one collected is sucked up to the top into storage. To complete the level, you must collect all of the diamonds.

If this all sounds too easy, remember that keeping an "eye" on the situation are the mine's inhabitants. If they touch your pipe a life is lost - Attack them from the sides with your pipe! They will then be sucked up, but in time they will re-appear, so watch out!

If you go back on yourself or you try to cross your pipe, a life is lost. To retract your pipe, press <RETURN>. The pipe retracts for as long as you press <RETURN> or until it reaches the top.

Each level gets harder to complete and after level 10, the screens become invisible making the task that much harder. GOOD LUCK!

## Game Controls

Z - Left, X - Right, \* - Up, ? - Down, <RETURN> - Retract Pipe  
f0 - Sound, f1 - Quiet

**Instructions' Source** : DIAMOND MINE 2 (Blue Ribbon) Inner Inlay

## Review (Electron User)

Another budget label game from Blue Ribbon, DIAMOND MINE 2 not surprisingly carries on the scenario set in their earlier game. This is - surprise, surprise - a diamond mine, but one with more to collect, more problems to overcome and quite a bit more "stickability factor".

Actually, I wasn't over-impressed for quite some time, and only came back to load it in again because I found I had a review to write. Then I found I hadn't read the instructions on the cassette inlay properly. I had been trying to guide my vacuum cleaner pipe down through the mine, collecting diamonds, but my lives went quickly because the various monsters kept touching the pipe.

Then I read that <RETURN> would retract the pipe, and the game altered completely!

It was now a frustrating, but possible, assignment to collect all the diamonds from

one level, on occasions having to retract a long length of pipework as a monster appeared near the top of the screen. Still, there was always the revenge of sucking it up in the vacuum for some bonus points.

The direction keys can be used in conjunction, so corners could be negotiated simply and swiftly, but that didn't make the game any easier to win.

Should the pipework clear a screen, a harder mine soon appeared and after ten such, the screens become invisible. However, I will have to take Blue Ribbon's word for that as I've not got there yet. But I'll keep playing until I do!

# DISASSEMBLER

***Professional, Originally Released On Cassette Only***

Game Type : Disassembler; M/Code; Fully Relocatable  
Author : Richard Hanson  
Standalone Release(s) : 1983: DISASSEMBLER, Superior, £7.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR, Department C, Ground Floor, Regent House, Skinner Lane, LEEDS 7  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"A relocatable disassembler which, unlike some similar programs, allows the disassembled source code to be output to memory. It may then be modified and reassembled. Other features: page mode option, output to printer if required, output of ASCII symbols if required."*

The DISASSEMBLER program is written in such a way that it is relocatable. That is, the program may be loaded into memory at any convenient location, and it may therefore be used to disassemble another program already stored in the RAM.

In order to load the program into memory at a specific location, the value of the variable PAGE must be reset to a suitable memory location. For example, to load the DISASSEMBLER into memory at &2000, the user should type in the following:-

```
PAGE=&2000  
CHAIN"DIS"
```

## Using The Program

When the program is run, the user should reply to the prompts as follows:-

Start Address:

Input the start address (from which disassembly is to begin) in hexadecimal. Note that it is not necessary to type a leading "&" before the address.

Finish Address:

Input the finish address (at which the disassembly is to be terminated) in hexadecimal.

Address at which to store the assembler code:

If you want the disassembled code to be stored in memory, then a suitable address should be input in hexadecimal. If this facility is not required, simply type "NO" in response to this prompt. When the disassembled code is stored in memory, each mnemonic is given a label commencing with the letter L. It is therefore easy for the user to subsequently alter the assembler code (adding or removing instructions) without affecting the relative addresses used by the "branch" instructions. For example, to store the disassembled code at &3000, the user should type in 3000 in response to the prompt. After the disassembly has been completed, this code can be accessed by typing PAGE=&3000.

ASCII symbol output required:

It is sometimes useful to look at the machine-code being disassembled as a string of ASCII characters. Input "YES" or "NO" in response to this prompt. Note that all control characters and the DELETE character will be output as full stops.

Page mode on:

Reply "YES" or "NO" in response to this prompt depending upon whether or not you want the display to halt after every sixteen lines output. Press <SHIFT> to restart.

Note that the display can *always* be halted by pressing the S key. Press any other key to restart the display.

Printer option:

If a printer is attached, the disassembler listing may be output on it by replying "YES" to this prompt.

The program will run in 4K of memory. It may therefore be loaded into memory at any location which is at least 4K below the screen RAM location.

# DODGY GEEZERS

***Professional, Originally Released On Cassette Only***

Game Type : Text Adventure In Two Parts  
Authors : Peter Jones and Trevor Lever  
Standalone Release(s) : 1986: DODGY GEEZERS, Melbourne House, £7.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : MELBOURNE HOUSE, 60 High Street, Hampton Wick, Kingston-Upon-Thames, SURREY KT1 4DB  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"its criminal wot they get up to!*

*"Fresh out of gaol after serving a three year stretch for your part in the Long Ditton Spaghetti Caper, you're itching for that one massive caper which will allow you to live on the Costa Brava for the rest of your life.*

*"But what is the caper, and who can you trust to be in your gang? And by the way, who IS that geezer in the white Gucci shoes?*

*"DODGY GEEZERS in the latest 'real life adventure' from Trevor Lever and Peter Jones, authors of HAMPSTEAD and TERRORMOLINOS, and writers and performers of the diabolical DODGY GEEZERS song on the flip side of the tape. At least the lyrics may give you some useful tips..."*

*'Ullo. Do I know you? Just checkin'*

The thing about DODGY GEEZERS is this: there's a caper in the offing. Well, I mean, when isn't there? But this one's a bit special. Let me explain...

You've been, er, away for a while, as we say around here. For those who don't know, that means you've been doing a stretch in one of Her Majesty's establishments for the last three years. It was only going to be two, but they added a year for bad behaviour. That's the sort of person you are, to be honest. Or not.

It was the Long Ditton Spaghetti Caper which caused you to slip up. In fact you were done up like a kipper. Someone grassed. Anyhow, now you're back with us, I expect you'll be on the lookout for a bit of business...?

Course you will.

I can't say too much. But what I want to know is this: who's that geezer with the white Gucci shoes who's been hanging around a lot lately?

Bullet proof George came out the same day as you, I notice. How is he? Not much in the way of grey matter, but a heart of gold. He means well. I expect you're wondering about your other old mates, and all. Well, Little Ken - bless him - he's still around, doing the odd bit of cat burglary. I don't know what he does with all them cats.

Then there's High-Score, or Mr Video, or whatever he calls himself. He's what I call a shady character, and believe me I've known plenty in my time. He's from somewhere in Africa, very well educated. Not like old Cracker. Now there's a bloke who's one of the old school - I don't mean old school tie. Give him a detonator and some cable and he'll blow your own front door off its hinges.

Have you seen Tweedle at all? Old Tweedle Dee? Saw him down the dog track the other day. He put a poodle on the 3.45, split a seven both ways, and the bleeder come back up. I ask you! Tricks wasn't pleased. He's just started working for Soapy. Oh, didn't you hear? Soapy's latest little racket is the Le Mans 24-Hour Car Company. Not one of his better cons. The first thing he does is hire Tricks as a driver - a bloke with so many motoring convictions, he shouldn't be let near a car. I mean, a steering wheel's an offensive weapon in his hands.

Talking of which (and I can't really, but just do you know...) you'll probably need a few tools of the trade. You'll have to find them yourself. I don't know what you might need.

What's that? What's the caper? Blimey O'Reilly, you don't half give me gyp sometimes. You don't think I'd tell you, surely? You'll have to find out for yourself! Let me just put his quiet word in your shell-like: you've got a chance to square it with the geezer what grassed on you. Especially now he's got that highly respectable job...sitting there surrounded by all that dosh. I go faint just thinking about it.

I've said too much already. Must be off.

Come again? Who can you trust? Out of that lot? You must be off your trolley! None of them! But to put it another way, if you put your mind to it, there's the making of a crack team there. It's just a question of keeping your eyes and ears open, putting the right geezers on the slate, and way you go.

Go where? You're a bit previous, aren't you? Not many.

Be lucky!

### **How To Be A Dodgy Person**

When the program is fully loaded, some instructions will appear. Read them carefully. Then...

You will find yourself in a prison cell. It is your day of release, however, and outside the world of crime awaits you. Since you are a professional criminal, it should be quite obvious that you must find yourself a crime to commit, and a gang to help you commit it.

But what is the most brilliant caper you can devise? There are people around who know certain facts, but it's up to you to put all the information together and come up with a plan. The more information you can gather by ducking and diving around the murky streets, the more your fellow villains will respect you, and regard you as their leader.

To get moving, use the usual compass directions N, S, E, W, NE, NW, SE, SW as well as UP and DOWN (U and D).

Apart from movements, most of your commands will be in the form of VERB NOUN. For example, since you will need to pick things up and put them down, you will want to type in such commands as GET MATCHES and DROP MATCHES. If you want to take a closer look around your location, SEARCH WAREHOUSE/BETTING SHOP/JETTY or wherever you happen to be. Similarly with objects, EXAMINE POSTER/PICKAXE/BOOK.

If you want to wait where you are for something to happen, the command is HANG ABOUT. To wait for several turns, add a number to the end of the command, as in HANG ABOUT 3.

Several commands can be typed in on one line by separating them with AND or THEN or a comma.

The computer remembers the last object referred to, and you can call it IT in future commands.

## **Playing The Game**

In DODGY GEEZERS, you can also learn something about the various unsavoury characters you will meet. To help you, the authors have included the criminal record, if any, of each character, which will give you an idea of their particular inclinations and skills.

Other useful commands are I for INVENTORY, ie what you have with you; R for RE-DESCRIBE, in case you've forgotten where you are and what objects are visible; QUIT, when you've done enough lurking, plotting and sneaking about for one day; and SAVE/LOAD to enable you to save the adventure up to the point you've reached and resume later. Check your computer manual for instructions.

## **Two Sides To The Story**

So brilliantly complex is DODGY GEEZERS that the authors have divided it into two. If you can successfully assemble a gang, you will be given a password which will enable you to LOAD the second part of the adventure. Incidentally, this ISN'T the password you will have to use earlier on!

It is impossible to get into Part Two until you have picked your gang. At that point you will be given full instructions on what to do next - at least, as far as LOADING is concerned. As for actually committing your crime, that's up to you...The Part Two program follows directly after the Part One program on side A of the tape.

## **Scoring**

There's no scoring system in DODGY GEEZERS. Either you succeed or you fail. Life's like that, isn't it?

# DOGFIGHT: FOR ACES ONLY

*Professional, Originally Released On Cassette Only*

Game Type : Arcade; 2 Player only  
Author : A. W. Gilbert  
Standalone Release(s) : 1986: DOGFIGHT - FOR ACES ONLY, Slogger, £7.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SLOGGER, 215 Beacon Road, Chatham, KENT  
Tel: (01634) 811634  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

DOGFIGHT is an exciting two player, real time game with eight levels of difficulty.

Your objective is to fire sufficient shots into your enemy to force it to catch fire and explode without running out of bullets, or, by skilful flying, to force your attacker into the hills.

Moving aircraft, rotating propellers, smoke, sun, moving cloud, lightning and ground all provide real combat environment.

Fly out of the sun, hide off the screen (but not too far) or into the cloud - but watch out for the lightning.

For experienced pilots, fly down through the valley in the hills and re-appear behind the sun for a surprise attack.

Variable speeds available for aces only.

Keyboard or joysticks simulate real aircraft movement. i.e. Pull back to climb or push forward to drive.

Can you beat your friends?

## Aircraft Control

	<b>Joystick</b>	<b>Keys 1</b>	<b>Keys 2</b>
Dive	Forwards	Q	`
Climb	Backwards	A	+
Slower	Left	Z	<
Faster	Right	X	>

# DOMINOES

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade; Play Dominoes With Computer  
Author :  
Standalone Release(s) : 1990: DOMINOES, Superior/Blue Ribbon, £2.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : BLUE RIBBON, CDS House, Beckett Road, DONCASTER DN2 4AD  
Tel: 01322 21134  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"EVEN though you play this version of DOMINOES on your own, it won't be long before the 'Oldies' in your family are muscling in on the action!"*

*"Yes, the traditional game which has been superbly translated for the computer, is suitable for all ages and is sure to provide many hours of simple fun!"*

There are twenty eight dominoes in a set, and each is divided in half by a line. Within each half, the surface is either blank or marked by dots, ranging in number from one to six. Seven of the dominoes are doubles, with the same values on either side of the line, ranging from double blank to double six. The rest have different combinations of values, for example, 6-5; 4-1; 3-0.

Of the many variations on the game, all share the same central objective; to get rid of all your hand of dominoes before your opponents can get rid of theirs.

This program contains two of the most popular versions of the game; DOMINO OUT and FIVES AND THREES.

## DOMINO OUT

The computer will shuffle the dominoes and draw seven for itself and seven for you. The leading player places any domino from his hand face up in the centre of the table. The other player then has to follow suit, putting the half of a matching domino against the appropriate half of the lead player's domino, and so on. The dominoes are laid end to end.

If a player cannot follow suit it is called 'knocking' and it allows his opponent to take another turn - until he can follow suit. Play ends when one player has used all his dominoes.

The loser counts the dots on the dominoes he still holds, and the total number is passed to the winner as his score for that hand.

Where both players cannot follow suit, each counts the dots in their hands, the winner being the one with the fewest. He scores the points' difference between the two hands.

A points total of 61 is set as the winning total. After each hand, all the dominoes are shuffled again and each player takes turns to start.

## FIVES AND THREES

The object of the game is the same as in Domino Out. i.e. to clear your hand of dominoes using the normal rules.

However, the scoring is done on a move by move basis. When any piece is placed, the combined value of the dominoes at each end is divided by five or three (or both). This value is added to your score. For example, points scored are calculated as follows:-

<u>Combined value</u>	<u>Points scored</u>
10 .....	Divide by 5 = 2
9 .....	Divide by 3 = 3
8 .....	Not divisible by 5 or 3 = 0
15 .....	Divide by 5 = 3 and Divide by 3 = 5

A bonus point is scored by the first player to get rid of all seven dominoes.

If the domino can be played at either end, the computer will ask which end you prefer. This is selected by A or B.

# DRAIN MANIA

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Platform Game  
Authors : P. A. Morgan and D. J. Morgan  
Standalone Release(s) : 1985: DRAIN MANIA, Icon, £7.95  
Compilation Release(s) : 1987: ELECTRON POWER PACK 2, Audiogenic, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : ICON, 65 High Street, Gosforth, TYNE & WEAR  
Disc compatibility : CDFS E00, DFS E00

## Instructions

DRAIN MANIA is a game where a love of sewers is an advantage! You play the part of Theodore, an athletic young chap who wanders the various tunnels of the system in search of a way out. But the sewers are inhabited by mutant sewer creatures who get washed down the drains at the top and slither down to the bottom. During their dangerous descent, you must either avoid or kill them. This is achieved by head-butting them up through the floor so that they fall over, then kicking them out of the way. If you fail to kick them, they will get back up and pursue you even more viciously than ever!

Any encounter with the creatures will result in death. Each creature has a different resistance to head-butts - some require more than one butt to make them fall over. Butting the Zap block causes all creatures on the screen to die, but this can only be used three times. Occasionally, water or fire balls are ejected from the pipes. These must be avoided.

Coins lost down the gutters are hanging from the ceilings. These can be collected, and if you get a tunnel full of coins, you should try to collect them all before the beasties catch up with you.

You can move left and right or jump, but beware of the slime underfoot. Some tunnels have different slipperiness factors, so tread carefully. You can avoid death by becoming invisible, but only for a short time on each screen. You get a bonus life and extra Zap block at 10,000 and 30,000 points.

## Game Controls

During loading, you can define your own playing keys for Left, Right, Low Jump, High Jump and Invisible.

<DELETE>/<COPY> - Pause/Restart, <ESCAPE> - Quit Game  
S - Sound On/Off, M - Music On/Off

**Instructions' Source** : POWER PACK (Audiogenic) Inner Inlay

## Review (Electron User)

When I first loaded this game into my computer, I wasn't particularly impressed. It appeared to have shades of KILLER GORILLA, although in a novel setting. Since then, however, playing it and getting the hang of it rather better, I have rapidly become hooked on this game.

It has that fatal quality of all super games - it becomes truly addictive, being easy to play yet difficult to master. The rather unusual scenario is a system of underground sewers in which our hero, Theodore, has to counter the attentions of such noxious creatures as Inky, Dinky and Pinky.

There are platforms on to and from which Theo can leap with either a small or a

large leap. Movement is also possible to the left or right, and these keys may be selected once only during the loading of the game.

Moving from the initial platform, which promptly vanishes, Theo has a habit of travelling continuously. But with practice, his speed can be adjusted, and he can even come to rest. As the creatures bounce their way from top to the bottom of the screen, there are two courses of action open to the player.

You can merely avoid them, or gain points and sweet revenge by jumping up and knocking the creature above off its feet. But some need rather more persuasion than others to topple. If Theo can then leap on to that level and kick the stranded creature off, there are bonus points to be had. But too long a delay brings a metamorphosis into an even more deadly beast.

The authors have also kindly included a Zap button which, on being headbutted, has the effect of scoring for all the animals currently on the screen, and also any coins. These tend to appear in the oddest places and bring you further points.

However, this little kindness on their part is countered by the malign fireballs, which bounce strangely around on the more difficult stages.

It's a little strange to begin with, but it will soon become a favourite in your collection.

Phil Tayler, ELECTRON USER 2.12

# DRAUGHTS

## *Professional, Originally Released On Cassette Only*

Game Type : Graphical Draughts Simulation  
Author : Richard Hanson  
Standalone Release(s) : 1983: DRAUGHTS, Superior, £7.95

Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR, Department C, Ground Floor, Regent House, Skinner Lane, LEEDS 7  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### Instructions

The game uses the generally accepted rule that if there is a piece to take then you must take it. You must also take any further piece then takeable from your new square. This rule is enforced by the program, and messages appear to tell you when you must take.

Incidentally, messages are printed in your chosen colour, in case you should forget on which side you are playing!

To leave the program, simply press <BREAK>. Pressing <ESCAPE> will not work at any time.

### 1. Choice Of Colour

After loading, you should get a board, and a "Black or White?" message. Respond B or W and the board will be set up for you. If you selected White, the computer will also have made its random opening move, and the message "Level 1" will be shown (see 3).

### 2. Entering Your Move

At the bottom left there is a cursor. Its movement is controlled by four arrow keys. The keys repeat at intervals of 1/5th second.

Simply position the cursor on the square you want to move **from** and press <SPACE>, then move over the square you want to move **to** and press <SPACE> again. If your move was a legal move, the move will be shown and the computer will start considering its reply. If your move was illegal in any way, the cursor will return to bottom left and you must try again.

### 3. Changing Skill Levels

There are two levels available. Level 1 is fast (a few seconds) and quite difficult to beat without cheating (see 4). Level 2 is much slower - though times vary greatly - and plays a very skilful game. To change between one level and another, press "L" at your turn.

### 4. Move Recall

Pressing "R" withdraws your last move and the computer's last move. You can re-enter any legal move. This feature is very useful if you want the computer to make a more considered reply to your last move. Press "R" then "L" (for Level 2) and re-enter your move.

### 5. Problem Solving

The game has sophisticated problem solving features which are accessed by pressing "P". The message "Set position" is also issued. The following features are now available to you:

Cursor keys behave normally.

Key 0 - Deletes the piece under the cursor.  
Key 1 - Inserts one of your pieces. (No need to press 0 first)  
Key 2 - Inserts one of your kings.  
Key 3 - Inserts a computer piece.  
Key 4 - Inserts a computer king.  
Key C - Clears the board completely.  
Key Q - The computer will reply to the new position and you can continue playing normally as long as you like, but  
Key G - restores the position when you last pressing "P", so you can get back to your game providing you have only pressed "P" once.

#### **6. Re-starting**

If you want to abandon the present game, and start a new one, press "S". This is final, there is no going back to the previous game!

# DRAUGHTS AND REVERSI

*Professional, Originally Released On Cassette Only And ADFS 1D00 Disc*

Game Type : Graphical Draughts And Reversi Simulations  
Author : Nick Pelling  
Standalone Release(s) : 1984: DRAUGHTS AND REVERSI, Acornsoft, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ACORNSOFT, 4A Market Hill, CAMBRIDGE CB2 3NJ.  
Tel: (01223) 316039  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"DRAUGHTS : The traditional game has been faithfully reproduced on screen for you to try your hand at playing the computer. Pieces are promoted to Kings on reaching the opponent's end of the board, and the computer will make sure you follow the rules, insisting that you make all possible jumps or suffer the consequences - the computer has the option of 'huffing' the offending piece.*

*REVERSI : In this board game you play the computer, the aim of the game being to capture as many of your opponent's pieces as possible. (Reversi is also known as Othello.)*

*This game is fully compatible with either keyboard or joysticks."*

## DRAUGHTS

### Rules of the game

Play is on an 8 by 8 grid of squares. Moves can either be made at the keyboard, or you can use joysticks - keyboard and joystick controls are described in the next section.

In this game, each player aims to remove the other's pieces from the board, and the game is won when pieces of only one colour remain.

- a. Draughts can be moved diagonally over the squares of the same colour. In each player's turn one piece can be moved. Normally a piece may only be moved on square at a time.
- b. Initially pieces must only move forwards, but once a piece has reached the opponent's edge of the board that piece becomes a 'King' which can move backwards as well.
- c. If a diagonal move is obstructed by your opponent's piece, but an empty square lies beyond the obstructing piece then you can (in fact, you must!) leapfrog the piece, and thereby 'take' it; ie you move two squares and the piece you jump over is removed from the board.
- d. If you have just taken an opponent's piece but from your new position it is possible to jump over yet another piece, you must do this as well. Hence in a single turn, you could end up moving four squares and removing two pieces or moving six squares and removing three pieces etc.
- e. If you can make a jump, then you must choose to move the piece that can jump, and move it until no further jumps can be made. Otherwise your opponent has the following options:
  - a) insist you make a given jump
  - b) ignore the fact
  - c) 'Huff' a piece that could jump (ie remove it from the board)

### Playing The Game

Once the game is loaded into the computer, you are asked to select a skill level. Input a number between 1 and 8 and then press <RETURN>. Level 1 is the simplest level, in which the computer replies to your moves almost immediately. Playing on level 8, however, the time taken for the computer to respond is far longer ie several minutes.

Next you will be asked whether or not you want to go first. If you say 'Yes' ('Y' will do) followed by <RETURN> then you are automatically 'red' and the computer plays the white pieces. If you choose not to go first then you play white so that whoever goes first plays the red pieces.

### Your Move

*If you are using keyboard controls...*

The computer will prompt you first for the piece to be moved; if you have chosen to move first then you will see the first prompt at the bottom of the screen:

Move from

Here you must specify the square you wish to move from.

Choose a piece that can move forwards (diagonally) and type in its row number followed by its column number: for example in the picture, to move the white piece marked you would type in the row number, and then the column number as the two-digit number:

61

and press <RETURN>.

You are now prompted for the destination square with:

Move to

Enter the row and column number for your destination square as a two-digit number, and then press <RETURN>, and this will complete the move.

```

  1 2 3 4 5 6 7 8
1  _|r|_|r|_|r|_|r|
2  r|_|r|_|r|_|r|_|
3  _|_|_|_|_|r|_|_|
4  w|_|_|_|_|_|_|_|
5  _|_|_|_|_|r|_|_|
6  w|_|_|_|_|_|w|_|
7  _|_|_|_|_|w|_|w|
8  R|_|w|_|w|_|w|_|
```

```

r = Red piece
w = White piece
R = Red King
W = White King
```

My move is from 36 to 45  
and I huff the piece at 67

In the picture, the only possible move for the piece at 61 is to square 52.

If you specify a piece that cannot move (if it is in the back row, for example, since a piece cannot jump over another of the same colour) or if you specify an impossible destination, then it will simply wait for you to try again.

*If you have joystick controls...*

1. move the cursor to the square you wish to move from
2. press the fire button
3. move the cursor to the square you wish to move to
4. press the fire button to complete the move

In both cases, if you are in a situation where you can jump over more than one of your opponent's pieces, enter the co-ordinates for one jump at a time. You will be

prompted to enter the second or subsequent part of the move after the previous part has been displayed on the screen.

### Undoing A Move

If you change your mind half-way through a move or after you have completed a move, and want to 'Undo' the move, type the letter "U". By the time you do this, the computer may have already moved as well; in this case its move is Undone also.

### The Computer's Move

The computer prints its intended move on the screen in the usual notation (ie rown and column numbers) but waits for you to press <RETURN> before entering the move on the board. So, in the picture, the computer is waiting for the player to press <RETURN> before completing its move.

### Ending A Game

If both red and white pieces remain, but neither can 'take' the opponent's piece(s) then you may wish to escape from the game by pressing ESCAPE.

Use the command "Q" to Quit the program.

## **REVERSI**

### Rules of the game

Play is on an 8 by 8 grid of squares. Each player takes it in turn to place a piece on an empty square with the following restrictions:

- Initially, you must fill the centre four squares.
- When these are filled you can only play by making a least one capture, otherwise you must pass.
- Captures are made by placing your piece so that it is at one end of a line (possibly diagonal) of the opponent's pieces, with another piece of yours already at the other end, or in the middle somewhere. The opponent's pieces in the captured line, between your pieces, then become yours and so change colour.
- The game ends when nobody can place a piece (usually when the board is full). The winner is the one who has the most pieces at this point.

1	2	3	4	5	6	7	8			
1	_	_	_	_	_	_	_	_	ME	3
2	_	_	_	_	_	W	_	_	YOU	12
3	_	_	_	_	W	_	_	_		
4	_	_	_	W	B	W	_	_		
5	_	_	_	B	W	_	_	_		
6	_	W	W	W	W	W	_	_		
7	_	_	_	_	B	_	W	_		
8	_	_	_	_	_	_	_	W		

B = Black piece  
W = White piece

My move is 76.

Here, if it is Black's turn to play, and Black plays at square 76, he captures one of White's pieces, in square 65.

### Playing The Game

Once the game loaded, you are asked if you want instructions. These give a summary of how to play the game. Press either "Y" for Yes or "N" for No followed by <RETURN>.

You are then asked to set the 'display delay'. When a move is made, the computer will display the piece on the board as a square so you can see which was the last move made. After a certain length of time this piece will change to a circle like all the other pieces on the board. The time taken is determined by the display delay. A good value to use is 5000. Enter the number you require followed by <RETURN>.

Next the computer asks whether or not you want to go first. Enter "Y" or "N" followed by <RETURN>.

Finally you have to enter the skill level you require. You have the choice of nine levels, one being the simplest and nine the most difficult.

The computer always plays the dark pieces.

#### **Your Move**

If you have chosen to move first you will see the first prompt at the bottom of the screen.

Your move

*If you are using keyboard controls...*

Enter your proposed move as a two-digit number - row first and then column - and then press <RETURN>.

*If you have joystick controls...*

If joysticks are connected use the joystick to move the cursor to the square you wish to fill, and then confirm the move by pressing the fire button.

In either case, if you need to pass, type the letter "P".

#### **Having Selected A Move**

If it is not possible for you to place a piece in the square you have chosen then the computer will wait for you to try again. If your move is allowed then a small coloured square will be shown in the square you have chosen to indicate the current move. This will then turn into a proper piece after a certain length of time which is determined by the value for the 'display delay' entered previously.

Use "U" to Undo a move. If the computer has completed a move since your last move, this will be Undone as well.

#### **The Computer's Move**

The computer prints its intended move on the screen in the usual notation (ie row and column numbers) but waits for you to press <RETURN> before completing the move.

#### **Leaving The Game**

Pressing "Q" will quit the current game. You will then be given the option of starting another game or leaving the program.

If you choose to start a new game then the computer will retain the value of the 'display delay' you selected initially and will just ask if you wish to go first and which skill level you require.

Should you wish to select a new value for the 'display delay' or see the instructions again, press ESCAPE. This will start a new session.

**Instructions' Source** : DRAUGHTS AND REVERSI (Acornsoft) Back Inlay and Booklet

#### **Review (Electron User)**

You get two games for the price of one in this package. The first is DRAUGHTS, where you play the Electron at the age-old game or, if you're like me, the Electron plays with you! You have the choice of eight different levels of play and I can't beat the beast at the easiest level. And it's no use trying to cheat - it won't let me. The Electron knows all the rules and won't allow an illegal move. In fact, if you give it half a chance it will 'huff' you!

It's a lovely version of the game. You play on a tastefully coloured board, using the keyboard or joysticks to make your move. Simple to learn and fun to play, it's

easy to get carried away and forget that you've got another game on the tape...and the other game is even better.

REVERSI is an old logic game played on an eight by eight grid of squares between two opponents. Once again, it's you playing against the Electron. The aim is to trap its pieces between two of yours and so turn them into your colour. The winner is the one with the most pieces when no more moves can be made. It's a classic game, can be learnt in a couple of minutes, but takes a lifetime to master. And your ever-faithful Electron will be there waiting to give you practice.

You have the choice of nine levels of difficulty and can use either the keyboard or joysticks. The display makes full use of the Electron's graphics and you can even "take back" any moves that you regret.

All in all, it's a great little package. Each game by itself is good value. Together they're a bargain.

Nigel Peters, ELECTRON USER 1. 1

# DRAW

***Professional, Originally Released On Cassette Only***

Game Type : Art Package  
Author :  
Standalone Release(s) : 1984: DRAW, Micro Power, £6.99

Instructions currently unavailable.

## Review (Electron User)

The blurb inside the cassette box tells you that DRAW is "an implementation of a sub-section of the LOGO language, principally its turtle graphics". Off-putting, isn't it?

I had two or three programs to review and left this one until last as it sounded as dreadfully dull. This was a mistake, as I soon discovered. I loaded the program and turned to the tutorial section of the excellent little manual that comes with the cassette. This led me through all of the programming techniques available with Draw. Written simply and clearly, it was a pleasure to use, unlike some of the other manuals I've come across.

By the time I'd read and worked through it on my Electron, Draw wasn't off-putting, it was fascinating. At one level, the program allows you to produce pretty patterns on the screen, quickly and easily. At another level, it introduces the beginner to the basics of programming using a simple graphics-orientated language. The fact that it is so much fun to use encourages experiment and learning.

The whole thing is menu-driven, which means that your Electron gives you a series of choices and you can take your pick. This allows you to get any of the commands by one or two keystrokes, making the program very pleasant to use.

It's educational, it's fun and it's easy to use, being one of the nicest programs I've come across in a long while. If you're looking for something that's both out of the usual and entertaining then Draw might just be it.

## Review (Electron User) - "Solve It In Your Sleep"

A year ago I was given copies of Heyley's first two releases, THE ULTIMATE PRIZE and PIRATE'S PERIL. Although the adventures had much to commend them as first offerings, they lacked real thought in their puzzle construction, and the programs were slow to respond to commands. They also took about 80 seconds to load from disc.

DREAMTIME still takes an eon to load, but after ten minutes play which then had me hooked for a further four hours, my above listed criticisms were negated. This adventure is fast - despite constant disc-access - well constructed and above all, addictive.

You are presented with an ingeniously designed loading screens which helps take out some of the tedium while waiting for DREAMTIME to load. You are also given atmospheric background notes which put you in a role, something akin to a cross between Adrian Mole and Alice in Wonderland.

You awake to discover yourself in the entrance of a large motel. A reconnaissance of your immediate surroundings will present you with direct problems which need to be overcome.

How do you book a room at reception when you have no money? What is the purpose of the salt cellar in the dining room? What do you do about the demon alcohol? These problems must be tackled methodically if your dream is to unfold.

That is mainly what I loved about this adventure. Although the scenario is that of dreamland there is a total lack of the hackneyed fire breathing dragons and magical wizards.

The puzzles are all totally logical in retrospect, if a little far-fetched at times. Furthermore, the whole thing can be mapped logically, which makes adventuring more tolerable though no less frustrating.

The atmosphere created is comforting and often humorous but not quite in the league of Robico or Level 9, but this is a fault of the writing utility used rather than that of the design.

This large scale text adventure was composed and written using a modified form of Jonathan Evans' Adventurescape program. As with all adventures which are written using such a utility, design and parser limitations apply. However, DREAMTIME succeeds remarkably well and leaves you wondering what Heyley would be capable of producing if it used pure machine code.

For the more seasoned campaigner, this adventure should keep your drive whirring for many hours and give you a few sleepless nights to boot.

Disc compatibility : Unknown

### **Instructions**

*"BEEB Game of the year! 1-4 players. Amazing all action adventure deep down under, four characters, weapons, treasure, spells, meanies, 25 levels. Fast, furious and funny. By Julian ("It's very deep") Avis."*

Four heroes must recover the Chalice of Binding and save the World. Macks crane the Great Demon has hidden it in the Dunjunz complex. They must battle it out against Bashers, find treasure, magic, adventure and death.

### **The Story So Far...**

To help them on their quest, the Gods have given the four heroes extra powers:

The Ranger uses a bow, and his quiver has the power to produce an unlimited supply of arrows.

The Wizard has been taught how to cast powerful fireballs.

The Barbarian's axe can create clones of itself.

The Warrior can draw an infinite number of swords from her sheath.

Each character can only fire a certain amount of weapons at any one time; you need magic to maintain the weapon's existence.

Each character begins with a different set of fighting attributes. As the game progresses, you will find magical items which boost your character's abilities and so increase your chances of survival.

Four people can play this game at the same time, each person controlling his/her character. Each character has their 'own' quarter of the screen and go round the Dunjunz on their own, getting to treasures first and even hunting each other; the Barbarian is a good one to start with.

### **Progression Through The Levels**

On each level of the Dunjunz, there is an exit, a square 'hole' which leads down deeper into the Dunjunz - the next level. By sliding down these exits, the characters will get nearer and nearer their ultimate goal - the Chalice.

### **The Characters**

THE WIZARD can fire three arrows at a time. They are not that effective. He wears leather armour, which absorbs about a third damage. He does have one advantage over the Barbarian and Warrior - he can use magic; all monsters in the vicinity are killed but it drains his energy badly.

THE RANGER can cast two fireballs at a time, and each one does the same damage as two arrows. A robe protects him and when hit he takes maximum damage. Not a good

fighter, he has one power no one can match - his magic, and he hardly uses any energy - a dangerous character.

THE BARBARIAN is a born fighter with no magic. He begins with one axe which does horrific damage and can kill in one shot! His natural tough skin is better than any leather and nearly matches the Warriors' chain mail!

THE WARRIOR can throw three swords at a time, and each equals a fireball in damage. She wears chainmail, carries a shield - maximum armour! But she has no magic.

### **Making It Through To The Next Level**

As long as one character makes it through to the next level (i.e. reaches the exit) then all dead characters will be brought back to life on the next level with their original attributes. If the Barbarian had gained three axes and then died, on the next level he would be back to 1 axe and scores are reset to 0.

If all die on a level, then new heroes take their place, starting back on level 1.

Whenever a new level is begun, everyone has their health put back to full strength regardless of how weak they were on leaving the last level.

## **Objects In The Game**

### **Exit**

To go deeper, walk over a square hole.

### **Treasure**

Worth 20 points.

### **Food**

Increases health by 10 points. Health cannot exceed 99. Worth 5 points.

### **Teleporter**

Teleport to another room on the same level.

### **Trap Doors**

Where new monsters emerge from replacing dead comrades.

### **Energy Drainer**

Lose 20 health points. They can be destroyed by repeatedly shooting them. BEWARE when a weapon hits an energy drainer, it bounces back. Worth 1 point for every hit.

### **Magic Sword**

Increases the damage a character's weapon does by 1. Worth 10 points.

### **Pile of Weapons**

Allows a character to fire an extra weapon, 3 being maximum. Worth 10 points.

### **Magic Helmet**

Increases armour rating by 1 point. Less damage is taken when hit. Worth 10 points.

### **Boots of Speed**

Moves you about twice the normal speed. A lightning bolt on the display shows the presence of the boots. Bumping into anything apart from walls, doors and keys loses the boot. Worth 10 points.

### **Potion of Healing**

A blessing or a curse. The health of the character changes: Take the last digit (the rightmost digit) of his/her score, duplicate it, and this value is the new health value. Worth 10 points.

### **Door**

Open by walking into it and by carrying the correct key. Some are hidden. Worth 7 points.

### **Key**

For each door there is a key. Only one key may be carried at a time by a character. If you go over another key, then the key lying on the floor is picked up, and the original key being carried is dropped in its place.

### **Screen Display**

Concentrate on the screen that your particular character controls, even if you appear on other character's screens. Your screen will ALWAYS show your character in it.

### **Character Display**

The lighting symbol means the character has double speed.

The key symbol denotes a key is being carried.

The shield bears the character's armour rating (maximum 7)

The number of swords denote the number of weapons a character can fire at any one time.

The numerical displays indicate health, score and the damage each weapon will inflict.

### **Game Controls**

	Ranger	Wizard	Barbarian	Warrior
Up	CAPS LOCK	COPY	J	D
Down	CTRL	RETURN	M	C
Left	SHIFT	CURSOR UP	<	R
Right	Z	CURSOR DOWN	>	T
Fire	1	DELETE	SPACE	Y
Magic	Q	*	-	-

Pause on/off = P

**Instructions' Source** : DUNJUNZ (Bug Byte) Back and Inner Inlay

### **Review (Electron User) - "Super Dungeon"**

Mackscrane, the Great Demon, has stolen the Chalice of Binding and hidden it deep within the Dunjunz. Four fearless adventurers must risk their lives to save the chalice and the world.

This is the arcade/adventure game to top them all. It is based around a dungeons and dragons type scenario in which up to four players compete simultaneously. This is achieved by dividing the screen into four action windows, all looking into the same dungeon and each showing the progress of one particular adventurer.

This system enables groups of players to explore the dungeon as a fighting unit, protecting each other against attack by the guards, increasing their firepower when destroying objects, or even killing each other.

The adventurers come in four guises: The Ranger uses a magic bow, the Wizard is hot stuff with a fireball, the Barbarian is an axe-wielding maniac and the Warrior is a mean swordswoman. The weapons all have different attack values - the higher the value the greater the damage inflicted with each blow.

This value is increased if the adventurer locates the magic sword or a pile of weapons. Similarly each character's armour has different values: The Warrior's chain mail and shield offer great protection from most blows, but not so the Ranger's robe which is of little defence against the guards' attack.

A game such as this would not be complete without a smattering of magic, so both the Wizard and the Ranger are endowed with mystical powers. These manifest themselves in smart bomb fashion, destroying every guard on the screen when a certain key is pressed.

The Wizard expends a great deal of energy in casting a spell, while the Ranger's energy value remains mysteriously unaffected.

As well as the obligatory treasure chests, the dungeon is littered with magical objects and keys. Keys will open doors to new area of the dungeon, and eating food boosts your energy rating by 10 points, up to a maximum of 99.

Not all objects you discover are beneficial. For example, the dungeon is riddled with trapdoors from which new guards appear to replace their dead comrades.

Most dangerous of all are the energy drainers, innocent-looking squares which relieve you of 20 energy points when touched and are sometimes used to bar your way to a new section of dungeon.

Drainers can be destroyed by multiple blows from a weapon but great care must be taken as they have a defence mechanism which reflects a weapon back on the attacker.

When I first played the game I was under the impression that I had to collect all the treasure on a level before I could jump through the trapdoor to level two. This is not so: If you want, you and your three comrades can exit level one in under 30 seconds. However, in doing so you would pass up the opportunity of improving weapon and armour ratings.

DUNJUNZ comes with 25 different levels, each loaded individually from tape as required. This may sound tedious, but each level takes only five seconds to load.

Loading occurs automatically when all surviving characters have jumped through the exit trapdoor. It is only necessary for one adventurer to survive to progress to the next level.

Once loaded, all dead character are reincarnated with a full bill of health but with only the default values for weapons and armour. A surviving character is restored to full strength.

A save game option would have been appreciated, as you are unlikely to fight your way through all 25 levels in a single session.

Ignoring the problem of cramming four people into an area of three square feet, there is no denying that DUNJUNZ is a stunning piece of programming. The action is smooth and fast, and the levels tortuously difficult. This game will sell and sell.

## Instructions

*"Magical Treasures abound in the cavern fortress of the defeated Demon Lord. Can you use them? A sense of humour is essential in this massive, pure text adventure with over 200 locations, 100 puzzles and lots of very weird creatures.*

*Level 9 Computing specialise in adventures. Big adventures. We have developed sophisticated techniques for cramming huge games into 32K and now produce versions for many popular computers.*

*Our games are designed much like novels, with detailed backgrounds and interesting storylines: the result is much more enjoyment for you. And don't worry if you get stuck. Just write to us for a clue sheet that will tell you almost everything you could ever want to know about a game.*

*Jubilation reigns in Minas Tirith! At Sunset yesterday the city was besieged by a sea of orcs and it seemed that the defenders were doomed. But at sunrise, the watch looked out over an empty plain - the attackers had fled when on the point of victory. The first reaction was stunned amazement, but gradually a rumour began to spread: "The Demon Lord is dead!"*

*A two week carnival was announced and the population proceeded to enjoy themselves as you would expect. But you were wiser. Clearly, with the Demon Lord out of the way, there would be rich pickings amongst the ruins of His fortress...*

*Now, eight days later, you stand on a sandbank beside a great river. North of you are the dungeons of the Demon Lord. You are cold and wet, but determined to brave the hidden dangers of the caves. But then a shiver runs down your spine: a brooding presence is watching. Perhaps the demon is still alive, and waiting for you.*

*DUNGEON ADVENTURE completes Level 9's MIDDLE EARTH trilogy, along with (1) COLOSSAL ADVENTURE and (2) ADVENTURE QUEST."*

*Jubilation reigns in minas Tirith! At sunset yesterday the city was besieged by a sea of orcs, with more arriving every hour, and it seemed that the defenders were doomed. But at sunrise, the watch looked out over an empty plain - the attackers had given up the assault when on the point of victory.*

*Initially, the only reaction was stunned amazement. But gradually a rumour began to spread: first whispered in quiet corners, lest the telling should make it untrue. but eventually shouted in every street...*

*"The Demon Lord is dead!"*

When this was confirmed by the Wizard's council, a two week carnival was announced - the provisions hoarded against a long siege were lavishly dispensed and the population proceeded to enjoy themselves as you would expect.

But a few people, yourself included, thought along different lines as follows:

- 1) The Demon Lord must have been very rich;
- 2) If He really is dead, His treasures may be unguarded;
- 3) When the orcs marched south they cut a swathe of destruction through the countryside but they moved too fast to completely loot the area;
- 4) So, if I were to ride swiftly north, I'd have no problem in finding provisions and could probably reach the Black Tower in ten days. The wizards would never have repaired their teleport system by then, so I'd very likely be the first person there; and
- 5) This could make me incredibly rich.

You gather together all the lethal weapons you can get your hands on and leave within the hour.

All goes well. You have taken a team of horses and make very good progress indeed (aided by Horseshoes-of-Speed, a Staff-of-the-Seasons for fodder, night-sight goggles etc 'donated' by a cavalry barracks) and after eight days are nearing the Black Tower, lair of the Demon ex-Lord.

Then, about a mile from the tower itself, you are riding through a seemingly deserted forest when a spell is cast! Your anti-magic defences spring into action but too late...you fall to the ground asleep.

Some time later you wake, cold and wet, on a sandbank north of a wide river. All of your weapons and magic are lost. It seems that you were robbed and then your body thrown into the river but that, rather than drowning you have survived long enough to be washed up on the shore.

The only problem is, what to do now? Can you take on the Dungeons of the Demon Lord unaided? It seems you have little choice as this is where the game starts...

"Good Luck! You'll need it!"

### **The Game**

DUNGEON ADVENTURE is a full scale text adventure game with well over 200 individually described locations, 700 messages, about 100 objects etc, etc. You will have to solve a very large number of puzzles while collecting the treasures left by the Demon Lord!

To play DUNGEON ADVENTURE, load it from cassette and then simply enter English phrases to tell the computer what you want to do (e.g. MOVE NORTH, FILL THE POT, CLIMB THE CLIFF, LOOK AROUND). The program will act as your eyes and ears (and NOSE!) to describe your surroundings.

In fact, DUNGEON ADVENTURE is amazingly easy to play - you don't need to be able to find the cursor keys blindfold or hammer the space-bar for hours. But it will probably take weeks (or months) to complete! Fortunately you can use the SAVE command to store the current state of the game and return to everyday life for a while, resuming play later.

### **How to Load and Start**

DUNGEON ADVENTURE is a 32K program which uses most of the computer's memory. Everything needed is included in one file on cassette. To use it, enter \*RUN and play the tape. The game can't be restarted without loading it again so don't press <BREAK> or <ESCAPE>.

### **Getting Started**

Unlike our other games, Level 9 Adventures contain few instructions within the programs (though there are a lot of hints in room descriptions etc). We feel that

this type of game is very easy to play and that the space is better used for more rooms and puzzles etc.

The program asks "What next?" whenever it expects you to enter another command. Simply type an English phrase to tell it what you want to do and press <RETURN>. The program will act on your request, ask you for the next command, and so on.

The program has an extensive vocabulary of English words (over 200) and looks at your entered command, picking out the words it knows and 'guessing' your meaning from these. It only uses two or three words from each phrase so you are advised to keep instructions simple.

In practice, this works well and you should find it is simple to state what you want to do. If the program goes not understand just rephrase your request.

DUNGEON ADVENTURE provides considerable freedom in possible commands, but to help you get started some possible instructions are summarised below:

INVENTORY	[What am I carrying?]
MOVE EAST	[Move east]
NORTHWEST	[Move northwest]
WALK INTO THE MOUTH	[Move in]
TAKE THE WOOD	[Take something]
DROP THE CORPSE	[Drop something]
GIVE MONEY TO TROLL	[Give a bribe]
SEARCH THE HAYSTACK	[Search for hidden things]
WEAR BELT	[Wear something]
WAVE WAND	[Wave something]
PUSH BUTTON 1	[Push button 1]
NIBBLE THE MUSHROOM	[Eat something]
WALK DOWN THE SLIPPERY SLOPE	[Move down]
WHAT'S MY SCORE?	[How well am I doing?]
EXAMINE SWORD	[Look closely at object]

These are only a small sample of the words known by the program. To save typing, words can be abbreviated (e.g. EAST to E and NORTHEAST to NE).

There are also three special commands that you need to know. These are:

Command	Meaning
QUIT	Abandon the game (you have to answer a Y/N question to check that you mean it, and are given the chance to start over again)
SAVE	Save the current state of play on tape. This is like the ordinary SAVE command.
RESTORE	Restore (restart) a previously saved game so that you can carry on with it. This is similar to the ordinary LOAD command.

### **Scoring**

You score points for collecting treasures and leaving them in the store room. There are also bonuses for getting rid of undesirable beings (though, to discourage massacre, only the worst enemies give you a bonus).

On the debit side, you lose points if you manage to get yourself killed.

### **Hints**

Almost everything in DUNGEON ADVENTURE has a purpose, and you can get an idea as to what this is likely to be by EXAMINing an object.

Resurrection is possible, and uses a machine which is initially situated very close to where you start the game. By default it only works while you remain close to this machine, and you must register your body pattern for it to work at all.

The setting for DUNGEON ADVENTURE is a cave network that was originally the headquarters for the Demon Lord. Some parts are now blocked off by rock falls but it may help you to bear in mind the original functions (if you can guess them) of the accessible parts.

In response to user requests, there are several ways of carrying a lot of objects at once!

### **Implementation**

DUNGEON ADVENTURE is written in Level 9's own super compact language known as 'a-code'. To give you an idea of the compaction possible with this, a typical BASIC statement is equivalent to four bytes of a-code (approximately). A-code is also faster than BASIC.

The text messages are compressed to about half their normal size for storage (and we get further size reduction by only having one copy of messages such as "You are").

Together, these methods of size reduction allow a huge amount of program and text to be squeezed into a small space.

DUNGEON ADVENTURE is based around the D&D magic system as modified and used by the Cambridge University Wargames society in the mid 70s. All items and architectural features can be made under this system (or equivalent ones including extensions for demon-produced items), and if you are a D&D player you might like to work out how this can be done.

Note that knowledge of this magic system will not provide any real help with solving the game, however, as it merely provides a theoretical framework.

# E-TYPE

## ***Professional, Originally Released On Cassette Only***

Game Type : Arcade; 3D Racing Game In OUTRUN Style  
Author : Gordon J. Key  
Standalone Release(s) : 1990: E-TYPE, 4th Dimension, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : THE 4TH DIMENSION, PO Box 444, SHEFFIELD. Tel: 01742 700661  
Disc compatibility : CDFS E00, DFS E00

### **Instructions**

*"Take control of £70,000's worth of gleaming 'E-Type' and head off for the drive of a lifetime. This is your chance to tear along alnes, deserts and motorways at speeds over 150mph. There are hazards galore including other cars, roadworks, pedestrians, trees, rcks, bushes, oil spills and many more. E-TYPE has been programmed by the author of the unanimously acclaimed HOLED OUT - Gordon Key. Gordon has ingeniously converted this superb racing game for BBC and Electron computers. It retains all the best features of the Archimedes version plus a few new features for added enjoyment."*

The objective of the game is to cover as much distance as possible during the different stages of the game. Each stage has its own time limit which will be shown at the beginning of the stage. The stages vary in difficulty and length.

You can select the tracks individually or select the ALL option. If you select the ALL option then to qualify for the next stage you must complete the current stage in the time limit. If you have any remaining, you will have the opportunity to gain extra mileage. Players who achieve the best distances will have the chance to enter their names in the E-TYPE Hall of Fame.

### **Track Lengths**

1) 6 MILES    2) 9 MILES    3) 12 MILES    4) 15 MILES    5) 18 MILES

### **The Car**

Your vehicle is a 5.3 litre 12 cylinder V12 E-Type. It has a 5 speed semi automatic gearbox for slick gearchanging and is capable of over 150mph.

### **Instrumentation**

The E-TYPE dashboard shows six dials. From left to right, these are as follows: 1) Ammeter, 2) Fuel gauge, 3) Oil pressure, 4) Water temperature, 5) Rev counter, and 6) Speedometer.

### **Playing Guidelines**

Almost all objects on the road are to be avoided. Crashes, collisions and even minor bumps will at best slow you down and thereby waste time. Exceptions to this are the warning triangles which gain points and the suicidal boys in blue standing on the road. You receive a time bonus for putting them out of their misery. It may be necessary to hit these unfortunate devils if you are to have enough time to complete the stage.

Once the required miles have been completed, you will no longer be given time bonuses for wanton bobby slaughter.

At the side of the road are various objects such as rocks, trees and bushes. Again, hitting these should be avoided as most of them will cause you to crash. You can use the skill level option to cary the number of crashes that the car can take before it is completely wrecked.

The lower the skill level, the less hits your car will take however you will score more points for the distance covered.

### **Technical Information**

Due to slight differences between monitors, there is the possibility that the interrupt colour switching may not occur in quite the same position on your screen. In E-TYPE, we have included a special routine for you to adjust this. Simply pause the game and use the up/down keys to adjust the boundary.

### **Game Controls**

Z - Steer left,    X - Steer right,    \* - Change up gear,    ? - Change down gear  
<RETURN> - Accelerate,    <SPACE> - Brake,    P - Pause game toggle

You may use a joystick if you prefer. Push left and right to steer. Push up to accelerate, pull down to brake. Hold fire and push up to change gear up. Hold fire and pull down to change down a gear. Pressing fire with joystick centred will also change down a gear.

### **Game Options**

On loading the game, you have the following options:

T	-	Toggle through the tracks
S	-	Toggle through the skill levels
J	-	Select joystick control
K	-	Select keyboard control
Q	-	Toggle sound effects
SPACEBAR	-	Play game

# EARLY READING

## *Professional, Originally Released On Cassette Only*

Game Type : Educational  
Author :  
Standalone Release(s) : 1984: EARLY READING, <Unknown>, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : Unknown  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### Instructions

Instructions currently unavailable.

### Review (Electron User)

This rather smart video-type case includes a useful teacher's or parent's booklet and two cassettes containing a total of four related programs. These are designed to help early readers with their vocabulary. The four topics have been well selected, and include transport and clothes, as well as sections on In My House and Building A House, all of which can lead to much useful activity at home or school to complement these attractively designed programs.

Each of the four sides loads identically, with two small loaders leading to the main file. There is then in each case an identical choice of activities to select from.

Learn Word does precisely that, and offers a menu of words which are involved in a particular topic. The arrow keys move an asterisk until it is opposite the required word, when pressing Space will show a simple but effective drawing of the object with the word written below. This may not be the most stimulating part of the tape, but the initial messages have to be well received first.

More to most children's tastes will be Word Games, in which a series of six well-drawn pictures is drawn on screen in a grid. A word appears below, and the cursor keys again control the movement until the child selects Space to indicate a choice. A correct answer brings a tick, another figure is added to replace the one just guessed, and on goes the child looking for six correct answers. Actually, wrong answers are impossible for the program will only react to a correct input. This is fairly sound in the early stages, as it gives the child greater confidence to try. I was a little concerned at first to see the cursor keys used, but even the five-year-olds I tried this on showed on problems whatsoever.

Big/Little shows a big object, and the same object much smaller, and the child is then asked to say which shapes are big and which are little. The last choice, slightly odd, shows lots of the same object all over the screen. It left me wondering why it was included. However, this minor criticism aside, it is a very useful and attractive program for young readers.

# EDDIE KIDD'S JUMP CHALLENGE

*Professional, Originally Released On Cassette Only*

Game Type : Arcade; Sporting Contest  
Author : David Wainwright  
Standalone Release(s) : 1984: EDDIE KIDD'S JUMP CHALLENGE, Martech, £6.95  
1987: EDDIE KIDD'S JUMP CHALLENGE, Ricochet, £2.99  
Compilation Release(s) : None  
Stated compatibility : BBC Side A, Electron Side B  
Actual compatibility : As stated  
Supplier : MARTECH, Martech House, Bay Terrace, Pevensey Bay,  
EAST SUSSEX BN24 6EE  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"If you've ever wondered how it feels to be Eddie Kidd . . . defying danger and gravity, soaring on a motor-bike over a long line of cars . . . here's your chance to find out! This fabulous new game - Jump Challenge - has been produced for you with a lot of help from Eddie himself."*

## Introduction

Eddie Kidd is, without doubt, the most naturally gifted motor cycle stuntman in the world. His world record-breaking feats have caused millions to hold their breath as he achieves the impossible, defying gravity and fear with his unique blend of courage and skill.

Now Martech, with a lot of help from Eddie himself, have recreated for you the challenge of motor cycle stunt jumping.

For Eddie Kidd, it's for real, but as an official contender in the international jump challenge, you will have a unique chance to put your own courage and skill to the test.

Inside this package you will find your 'Official Jump Challenge Contender' card. Sign this card immediately and keep it in a safe place. Should you win a prize in the 'Official Jump Challenge Competition' you will be required to produce this card. It may also entitle you to further offers to be announced.

You will also find an 'Official Jump Challenge Contender' sticker. When the back of this has been peeled off, it may be stuck onto a bike, bag, book or a hat, for example.

## Jump Challenge

It is Eddie Kidd's instinctive 'feel' for bike jumping which has brought him to the very top of his profession. Without accurately measured run ups or the aid of rev counters or speedometers, Eddie hurtles into the air at speeds in the region of 100mph to cover distances which have included his world record leap when he cleared 190 feet and still retained control of the bike.

In JUMP CHALLENGE, it is this 'feel' for bike jumping that you will need to develop. You will not be able to measure accurately the distance to the take off ramp, or know exactly the speed at which you are travelling. Only if you develop the necessary control and timing will you be able to progress to the more difficult jumps, and only if you have the courage to push yourself to the very limits will you become like Eddie, the best there is. Good luck!

## Game Play

The ultimate aim of JUMP CHALLENGE is to jump as far as you can while still maintaining control of the bike on landing.

Before you can try your hand at jumping a motor cycle over cars, you have to prove your worth jumping a bicycle over oil barrels. In both cases, the general procedure is as follows:

1. Ride away from the ramp (right to left). How far you go is entirely up to you but obviously longer jumps may need a longer run up.
2. Stop the bike and turn to face the take off ramp.
3. Accelerate towards the ramp.  
From here on in - you're on your own. What to do and how to do it is for you to discover, but here are a few more points to help you:
4. How far you jump will depend on three main factors:
  - a) Speed at take off
  - b) Position of bike and rider through the air
  - c) Gusting headwinds
5. The score given to a successful motor cycle ramp depends on where the back wheel hits the landing ramp.
6. It is possible to practice control of the bike by riding up and down the approach road. For example, to do a wheelie, lean back and accelerate, but be careful - this needs practice to control.

### Game Controls

(If using a joystick, this will need to be an analogue or proportional type)

1. Joystick right or left. Keyboard "X" or "Z".  
Depending on which way the bike is travelling on the screen will cause Eddie to lean forwards or backwards.
2. Joystick down increases or decreases throttle.  
Keyboard "?" increases throttle. Keyboard "\*" decreases throttle. If riding a bicycle, the above will increase and decrease the rate at which you pedal.
3. Joystick up increases and decreases brake.  
Keyboard "RETURN" brake on.
4. Number keys (Motor Cycle only)  
These five keys control the gear shift:  
1, 2, 3, 4, 5 - 1st, 2nd, 3rd, 4th, 5th Gear
5. Joystick Fire Button  
Keyboard Space Bar

When the bike is stationary, it will cause it to turn and face the opposite direction. When approaching the ramp, it may be used to abort the jump at the last minute. If you feel the speed is not right for example - but more than a touch and the result could be a serious crash!

**Instructions' Source** : EDDIE KIDD JUMP CHALLENGE (Ricochet) Back and Inner Inlay

### Review (Electron User)

This program takes the story of Eddie Kidd and puts it neatly into a computer game. It is a "jump challenge" for you because each copy of the program enables you to enter your highest score into a national competition.

The game begins with you, the challenging stunt person, proving your ability on a BMX. Before you are let loose trying to jump cars you have first to try oil barrels.

To graduate from the BMX, you have to make two successful jumps over the barrels. The first is easier than the second.

If at any time you crash you are sent back to the BMX to start again. Assuming a little competence, you'll get to the motorbike level. The screen display now includes a speedo, separate rev counter and a gearbox indicator.

It is vital that you use the gearbox and throttle together to gain speed (gears are changed by pressing the corresponding number key). Using the keyboard alone I found no difficulty, but with a joystick, I doubt that I would manage to keep hitting the right key. As you succeed with each jump the length increases and so does the difficulty.

The EDDIE KIDD JUMP CHALLENGE COMPETITION is open to each cassette owner. However, you may only make one entry. If you make a jump that qualifies, the game stops and you are given two options.

One is to continue and take the risk that you may crash on the next round. The other is to enter the competition by inserting a blank cassette and following the screen instructions.

This is a neat games package with the bonus of a free-to-enter competition. It should be very popular.

John Woollard, ELECTRON USER 2. 6

# EDUCATIONAL 2

*Professional, Originally Released On Cassette Only*

Game Type : Educational; Ages 7-12  
Author : Unknown  
Standalone Release(s) : 1982: EDUCATIONAL 2, Golem, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : GOLEM, 77 Qualitas, Bracknell, BERKSHIRE RG12 4QS

Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

To run any program, type CHAIN"program name" and press <RETURN>. E.g. CHAIN"MATH1".

**MATH1** Addition and subtraction up to 1000. Three levels of difficulty. Children race with the computer and try to reach the flag first. For each correct answer, their ship moves forward but for each incorrect answer, the computer ship moves forward.

**MATH2** Multiplication and division. The same as above.

**AREA** Two levels of difficulty. Children find the area of a rectangle or square.

**MEMORY** Three levels of difficulty. Flags, crosses, diamonds in various colours appear on the screen for several seconds. Children are asked to input the number of flags, or the number of crosses, or the number of white objects, or the number of all objects, etc.

**CUBECOU** Three levels of difficulty. Children input the number of cubes displayed.

**SPELL** (Memory Game) Four levels of difficulty. Several words (can be one if desired) appear on the screen for several seconds. Children then type the words in any order. To finish the game press ESCAPE key.

## In all programs:

To go back a stage, press <ESCAPE>.

At any time, to speed up operation, press <SPACE>.

User input is terminated by pressing <RETURN> unless otherwise stated.

# EIFFEL TOWER

*Professional, Originally Released On Cassette Only*

Game Type : Educational  
Author : Unknown  
Standalone Release(s) : 1984: EIFFEL TOWER, Chalksoft, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : CHALKSOFT. No further information.  
Disc compatibility : Unknown

## Instructions

Instructions currently unavailable.

## Review (Electron User)

EIFFEL TOWER is a program designed to help tourists in France or people studying the French language. The basic idea is that you are given a French word and you have to type in its English equivalent.

If you get the correct answer, a small piece of well-known Paris landmark is constructed on your screen. If you're wrong the correct answer is given and you are asked the same question again. The program ends when you have built the Eiffel Tower, which requires 21 correct responses.

Before the program starts you can choose which of twenty different topics you wish to translate. There are ten on each side of the cassette.

One of the options is to put in your own set of words. It's a pity no documentation tells you what the topics are before you load them.

This program is really a disappointment. The graphics are of a fairly mediocre standard. And, as is often the case in educational programs, the noise annoys. Fortunately, there is a silent option.

The words - 420 in all - cover a fair vocabulary in basic French and the arrangement of words in groups should aid revision. The graphic reward of the Eiffel Tower would only keep young children happy. It doesn't really tie up with the questions.

There is nothing wrong with the structure of the program. It runs smoothly without any hitches. However it is not up to Chalksoft's normal high standards. Unless you are really addicted to computer learning, a good phrase book might do just as well.

## Review (EUG)

The number of compilations that actually exist for the Electron is quite surprising, isn't it? PRES, Superior, Database, Headfirst, Blue Ribbon and a few others may be the tip of the iceberg with very creative coding and strong reputations. But a little further down, you brush off a few Acornsoft ones, PCW, Cascade, Argus Publishing and twenty-two ELBUG compilations, not to mention the ELBUG INTRODUCTORY one!

ELBUG mag, available by mail order, is a real rarity eighteen years on but was actually the very first standalone one for the Electron. It appeared November 1983 - a small, A5, dull-looking 36-page monochrome booklet costing £1.00 - two months before ELECTRON USER hit the shelves at the same price and (possibly) numbered its days.

Published by BEEBUGSOFT, a name no stranger to most respecting BBC owners, ELBUG was similar to ELECTRON USER in that, for an additional sum, all listed programs were available on cassette. The ELBUG INTRODUCTORY [media] is a compilation of programs from the first few issues, originally available on tape but transferred to disk without problem when the first disk drive expansions were brought out.

Enough history. For your money here, you get four games and four utilities; everything written in BASIC, fully listable and unprotected. There's a chance the title ELBUG INTRODUCTORY CASSETTE is meant to make it appeal as an alternative to the ELECTRON INTRODUCTORY one [ELBUG and ELECTRON sound pretty similar - Ed] but there's no sign this was BEEBUGSOFT's intention so it's unfair to compare the two. On !BOOTing, or CHAINing the first file, you are presented with the obligatory contents menu on a blue screen to make selecting a program easier. Of course, if you're using tape you can forward it as applicable to save time - or even not use the menu at all as all programs can be CHAINED directly.

Chronologically you will first need to 'defend SPACE CITY' and this choice of vocabulary will have probably given away that this is a shoot-'em-up involving a good few hostile aliens and you as the city's only hope. Despite being written in BASIC, so all the CHR\$ definitions move jerkily and slowly, the screen is livened up by a starry blue backdrop with a V-shaped mothership in the top-centre and a collection of sky-scrappers bottom-centre as well as 'you' and 'them'.

You are equipped with infinite exclamation marks to lob at the little darlings and 'home-in' by firing then steering left and right. Unfortunately, the aliens frequently side-step at the last moment leaving you to cruise aimlessly to the top of the screen (wasting valuable seconds) while their friends go in for the kill. It's hard enough to even get the pixel-perfect targetting required without this frustration. If an alien touches the city, it's all over and they do rain down quite mercilessly, and are much more cunning than you'd expect, so in the end playability is reasonably high. Actually surviving a level is quite an achievement and surviving two, when the aliens start even lower, is a minor miracle!

The next game is MAZE. Oh, brother. This is about as bad as a 'game' can get; typical two colour, wireframe screens with no clues, no variety and no reward at all for getting out. The best that can be said for it is that it's a very difficult game to do on an Electron. Perhaps HEWSON, with its fantastic 3D SOUTHERN BELLE/EVENING STAR train journeys, could have managed to do it well. As it is, even the Acornsoft version is (at least!) mediocre.

The games part of the compilation luckily is saved by title number three 3D OXO. This is Noughts and Crosses with a difference; there are four surfaces to puzzle over and you can choose to place your marks (or even colours) either on the same surface or across all four. It's a bit confusing at first but after the Elk whoops your ass a few times you do get the hang of it. The rules are simple and it's probably the best game in the compilation (even with its intellectual bias).

RACER is that idea of you moving one car on a narrow, scrolling road, birds'-eye view, with lots of stationary cars to overtake, and taking care not to plough into them or the roadside. Admittedly *after* this (firmly average) version, this type of game has been done time and time again with the same dire consequences. Whether road, ski-slope, motor-bike or boat race, it simply isn't interesting to play. (The one time it's well utilised is in SPY HUNTER by U.S.Gold - and for BBC only.)

Games not overly impressive, the four utilities also start off badly. PATCHWORK is a Mode 2 pattern generator that doesn't live up to its promise of amazing displays: in fact, all its displays look identical, they simply get scaled larger or smaller. One big multicoloured cube isn't really going to get looked at very often, is it?

Now the next utility is one of the brightest ideas imaginable. Simply called MEMORY DISPLAY and complete in a function key definition that programs f8, this tool will also anyone needing to view the contents of a number of memory locations to hit f8, type in the location to start and type in the location to finish. It will then display each location in turn. No more FOR NEXT loops during assembly code programming!

CHARACTER DEFINER comes next. There have been a hundred and one versions of this and this only lets you define ONE 8x8 character definition at a time. It might help brand new programmers to understand this function of the BBC series' computers though...

Have they saved the best for last? No. The last program is little more than a space filler. Called KEYSET, this simply assigns commands to the function keys. Phphphphp... One of them simply changes to Mode 6 and LISTS with the scroll inhibitor on!

Overall then, the compilation is simply very, very dated. In its time, it may not have been bad but only three of its contents have stood the test of time. There's an 'irksome'ness over the whole of it as the commands switching off the flashing cursor are Electron-specific - so loading the games on another machine means you need to add VDU23;8202;0;0;0; at particular places - and the CHARACTER DEFINER even refers you to instructions for it in the first ELBUG issue. This simply shouldn't happen in a standalone compilation!

Unless you're a complete beginner, or desperate for any Electron programs you can get your hands on, you really shouldn't bother with it.

Dave Edwards, EUG #51

# ELDORADO GOLD

*Professional, Originally Released On Cassette Only*

*BBC Game Made Compatible With Electron With Jafa Mode 7 Adaptor/Simulator (Mandatory)*

Game Type : Text Adventure With Graphics  
Author :  
Standalone Release(s) : 1983: ELDORADO GOLD, Micro Power, £9.95  
Compilation Release(s) : None  
Stated compatibility : BBC B

## Review (Electron User)

Yet another title produced by the prolific Dave Mendes for Quicksilva, this is a graphics package aimed at those wishing to implement the fine graphics capabilities of the Electron, but not being proficient enough to try it themselves in Basic. I must say straight away that it is not the best of its type, comparing rather badly on several points with the Salamander Graphics System, reviewed in the May issue of Electron User.

This tape can produce extremely detailed results as are shown on the accompanying sample pictures. Actually, I spent several frustrating minutes looking for these, before finding them at the start of the flipside. When found, these files are well worth loading in to show the superb results possible with skill, care and patience.

One major handicap is that Electro-Act only operates in Mode 2, whereas the Salamander package allows the user to select Mode 0, 1 or 2. I also found the controls less easy to remember than the mnemonic-type initials employed by Salamander. For instance, to colour-fill an area uses Key 1 on the Quicksilva tape, but F (for Fill) on the Salamander one. There are a couple of plusses for Dave Mendes though with some predefined triangles at the touch of a number key, as long as you can remember which is triangle one or two or three or four, that is.

Both have the facility to save and load pictures using the cassette system, but Quicksilva score another plus with a built-in joystick facility - obviously an advantage.

Where Quicksilva lose totally though, is the complete absence of either a grid overlay for intricate designs or indeed any system of showing current co-ordinates for future manipulation. No, in an application where user-friendliness has to be a prime consideration, I cannot really recommend this very highly. If I hadn't already seen the other system, perhaps I could, but this does not emerge well in comparison.

Phil Tayler, ELECTRON USER 2. 2

# ELECTRON AID

*Professional, Originally Released On Cassette Only*

Game Type : Utilities; Master The Art of SOUND and GRAPHICS  
Author : Unknown  
Standalone Release(s) : 1983: ELECTRON AID, Dynabyte, £6.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : DYNABYTE, 31 Topcliffe Mews, Wide Lane, Morley, LEEDS  
LS27 8UL  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"The ELECTRON AID package is an extremely useful and powerful two program utility which simplifies some of the more difficult aspects of programming the Acorn Electron. The programs come complete with comprehensive documentation and a user key strip.*

*CHARACTER - Easily defines/edits large **multi** coloured characters.*

*SOUNDLAB - Make full use of your computer's sound and envelope commands."*

## CHARACTER

Enables you to define and edit **multicoloured** characters in blocks of up to 8 x 3 (max. 128 characters) using up to three chosen foreground colours and one background colour. Characters previously loaded into memory can also be recalled and edited. VDU23 statements are automatically generated and can be saved for later use. The program also shows your character as it would actually appear on the screen making it possible to achieve the desired results.

## SOUNDLAB

Clearly displays all parameters for up to 7 envelope and 15 sound commands simultaneously as desired. Envelope pitch parameters can be easily altered EVEN when envelopes are in use allowing changes to be heard as you make them. Envelopes already defined by another program can be read out of RAM and played or fine tuned to your own requirements. Soundlab fully supports all the Electron's sound commands and will help you to achieve just the sound effect you want.

The required program is run from an index by typing CHAIN"INDEX". Alternatively, any one program can be CHAINED individually.

**Instructions' Source** : ELECTRON AID (Dynabyte) Inner Inlay

## **Review (Electron User)**

This super utility program actually contains a suite of two very helpful and easy-to-use facilities for the Electron. The loading program presents the user with the option to select Character or Soundlab. The first allows the user to define up to 128 different characters (if PAGE is reset as appropriate), while the second encourages constructive use of sound ENVELOPES with various SOUND statements. Neither, of course, allows the user to do anything that cannot be done anyway with help from the User Guide, but these utilities are extremely user-friendly.

On selecting Character the user replies to various screen prompts in order to select Mode (all available), and foreground and background colours. Once this is selected the option to start from scratch, or whether to redefine an existing shape, is offered.

One way in which this may be of considerable use is animation. A figure may be defined as one ASCII character and then copied to a second. The second can then be edited to allow the slight changes necessary for smooth animation. Both versions of the shape thus remain available for recall.

Single key entry is provided, with the number keys controlling the various colours, editing and so on. Key 8 will even list on screen the VDU23 lines, which can then be copied for future use.

A similar approach has been used in Soundlab, with a very fun approach to that bewildering world of envelopes. There are pre-set ENVELOPES - up to seven can be programmed - and up to fifteen sound commands may also be accessed. They are easily tested, using single key again, or edited by use of the number keys and cursor control. The sound controls are shown on screen in the format &FC, A, P, D while the ENVELOPE is shown, although not those numbers which are merely there for BBC compatibility.

Any ENVELOPE may be paired with any SOUND statement to gain an insight into the possibilities. In addition the whole range of SOUND commands can be played one after the other, which in my case always sounded pretty ghastly. Again, no more is gained than can be learned from the User Guide, but the program does all the work for you and shows you your current pieces on screen. The listings of any good sounds produced may be obtained for future use.

I found this to be a fascinating program to work with, but I must warn you that it soon becomes almost as addictive as your favourite games.

Phil Tayler, ELECTRON USER 1.11

# ELECTRON E00 DFS

## *Professional, ROM Chip Expansion*

### Instructions

Instructions currently unavailable.

**Instructions' Source** : Instructions currently unavailable.

### Review (Electron User) - "Memory Galore With Disc DFS"

Way back in the February 1986 issue of ELECTRON USER, I reviewed Advanced Computer Products' 1770 DFS. This is a ROM which provides Plus 3 owners with a DFS compatible with that used in the BBC Micro. Both the BBC B+ and Master use 1770 DFS's and these are also designed to be compatible with the old 8271 DFS in the original BBC Model B.

With ACP's 1770 DFS Electron users have the ability to access BBC B, B+ and Master discs, which greatly increases the amount of software available to them. In fact the only stumbling block is that the Plus 3 uses 3.5" discs whereas 5.25" is the standard on the BBC Micro. Still, you can always add a 5.25" second drive.

Now the same DFS is available on disc for Electron owners with ACP's Sideways RAM cartridge. Simply insert the cartridge in one of the Plus 1's sockets, boot up the disc and you've got a 1770 DFS.

If you want to know what ACP's DFS is like take a look at the February issue - the disc version is identical except it runs in sideways RAM and not ROM.

So what are the advantages of having the ROM on disc? After all, it ties up the Sideways RAM preventing it from being used for anything else.

The advantage of the disc DFS is that it disables the ADFS and resets PAGE to &E00. This is the same as on an unexpanded Electron.

Compare this to &1D00 with just ADFS, &1900 with DFS and &1F00 with both ADFS and DFS. With ADFS you lose nearly 4k of memory whereas with ACP's E00 DFS you don't lose any. It avoids memory problems with long programs and the hassle of downloading software.

Programs which need PAGE to be at &E00 can still access the disc as normal. Downloaded software cannot do this and must select the tape filing system. After \*FX200,2 and <CTRL><BREAK> the ADFS is restored, PAGE reset to what it was originally and you've got both ADFS and DFS.

ADFS can be selected with \*ADFS and DFS with \*DISC. This enables you to transfer your files to DFS discs. Simply select ADFS, load the file, select DFS and save it.

I thought the 1770 DFS was superb but the E00 DFS is even better! I can recommend it to all Plus 3 owners.

Roland Waddilove, ELECTRON USER 4. 5

# ELECTRON INVADERS

*Professional, Originally Released On Cassette Only*

Game Alias : INVADERS  
Game Type : Arcade Shoot-'em-up  
Author : David Elliot  
Standalone Release(s) : 1983: INVADERS, Micro Power, £6.95  
Compilation Release(s) : 1987: PRES GAMES DISC 1, PRES, 1987, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : MICRO POWER, 8/8A Regent Street, Chapel Allerton, LEEDS  
LS7 4PE. Tel: 01532 683186.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Emerge from the safety of the bunkers to fire at the alien craft overhead and the occasional orbiting mothership. But watch out for the bombs which explode in mid-air and spray the area with shrapnel.

On successfully completing each phase, the next phalanx of Invaders commences lower down the screen.

A high score table records the top eight scores.

## Game Controls

Z - Left, X - Right, <SHIFT> - Fire  
S/Q - Sound On/Off, P/R - Pause/Resume, <ESCAPE> - Ends the game

Press 1 or 2 to select a one or two player game.

**Instructions' Source** : ELECTRON INVADERS (Micro Power) Inner Inlay

## Review (Electron User)

It's amazing really. Only four years ago Space Invaders machines were the latest thing, original and compulsive. I must have spent a fortune on them and still I never learnt how to get the mothership without being hit myself. Now, however, the alien invaders no longer hold sway. Newer and more colourful arcade games have taken over my affections. Or at least they had until I had a go at Micro Power's Electron Invaders and learnt that the game was as fascinating as ever.

From the moment the familiar rows of aliens started descending from the top of the screen showering destruction I was hooked again. At first they looked slow, but that was my mistake. They're as fast as ever and seem to be a lot more cunning. In an effort to avoid destruction, I spent a long time cowering under the three silos, but even that was no use as the invaders have a new weapon.

Not content with the usual rain of laser bolts, they are dropping fragmentation bombs that can penetrate beneath your silo. This may not be cricket but it certainly adds a new dimension to the game.

The graphics are excellent, the sounds and instructions adequate and the game is as compulsive and frustrating as ever. If you are an arcade game freak and you're looking for a version of invaders for your Electron then you need no look no further. But watch out for those motherships - they're deadly.

Peter Gray, ELECTRON USER 1.10

# ELECTRON POWER PACK

*Professional, Originally Released On Cassette Only*

Game Types : Arcade  
Release Information : 1986: ELECTRON POWER PACK, Audiogenic, £9.95  
Compilation Comprises : 1. SPACE AGENT ZELDA MEETS THE BUG EYES, Audiogenic  
2. BUG EYES 2, Audiogenic  
3. SPACE RANGER, Audiogenic  
4. CAVEMAN CAPERS, Audiogenic  
5. ULTRON, Audiogenic  
6. WIZZY'S MANSION, Audiogenic  
7. WONGO, Audiogenic  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : AUDIOGENIC, PO Box 88, Reading, BERKSHIRE RG7 4AA  
Disc compatibility : 1. CDFS E00, DFS E00  
2. Unknown  
3. CDFS E00, DFS E00  
4. CDFS E00, DFS E00  
5. CDFS E00, DFS E00  
6. Unknown  
7. CDFS E00, DFS E00

## SPACE AGENT ZELDA MEETS THE BUG EYES

The dreaded bug-eyed Xxabaneans are about to attack Earth in their flagship, cunningly disguised as a meteorite. Galactic intelligence needs an agent capable of penetrating the ten booby-trapped levels of the spaceship and destroying its power source. Looks like a job for the beautiful and resourceful Space Agent Zelda - in ten screens full of contagiously addictive arcade action!

## BUG EYES 2 - STARMAN TO THE RESCUE

Space Agent Zelda successfully thwarted the Xxabanean attack that threatened the future of mankind. But she was subsequently captured and held prisoner by these bug-eyed aliens in the depths of a remote and desolate asteroid. Now it is the task of her colleague, Agent Starman, to search the rusting hulk of the Xxabanean flagship to find the 25 keys needed to free Zelda from her intergalactic prison.

## SPACE RANGER

A team of astronauts taking part in lunar exploration are stranded on the moon. Your job is to pilot the lunar module to make a successful landing on the moon, pick up the astronauts and ferry them to safety. You will have to make a number of journeys, because you can only fit in one person at a time. But there are problems - the surface of the moon is riddled with craters so you can only land on certain spots; also a freak asteroid storm is making landing and taking off extremely hazardous!

## CAVEMAN CAPERS

Ogg the caveman has just found some new transport - Kickstart the turtle! But Kickstart doesn't like the idea and Ogg is having trouble controlling him. Help Off ride Kickstart, avoiding snakes, dinosaurs, pterodactyls, toadstools, potholes and other prehistoric hazards. Get him to the phone box safely so that he can phone his wife to tell her he'll be late home for tea. CAVEMAN CAPERS is continuous scrolling multi-screen action with 60 levels.

## ULTRON

The year is 2673 AD and the galaxy is once more under siege by aliens from the planet Gorfia. Your mission is to blast your way through wave upon wave of oncoming aliens, surviving long enough to take on and defeat the nerve centre of the alien attack - the Mothership! To do this you have been given command of the most advanced

space fighter in the universe - the Ultron! But you'll still need lightning reflexes to rise in the ranks from Cadet up to Space Master!

### **WIZZY'S MANSION**

Wizzy the wizard has over fifty rooms in his mansion, but an uninvited monster has taken over his attic. As a wizard, Wizzy is a bit incompetent and he needs your help to search his mansion for the books of spells that are lying around in various rooms. Once he has enough books he ought to be able to concoct a spell to destroy the monster. But it's not very easy to get around as Wizzy's blunderings have made all sorts of objects come to life and hinder his progress!

### **WONGO**

It's early evening in the mysterious Orient. The Great Wall of China is badly in need of repair and, to make matters worse, factions opposing the Emperor have just invented gunpowder and have left bombs at various points along the wall. You are Wongo, the bomb disposal expert, and your job is to travel along the wall by pogo stick, defusing the bombs. But you will be under attack from the opposition who will hurl arrows and rocks at you, and also the crumbling wall has numerous holes that you will have to negotiate. And if you don't defuse a bomb within the time limit, it will explode!

For further instructions, see individual entries.

**Instructions' Source** : ELECTRON POWER PACK (Audiogenic) Back Inlay

### **Review (Electron User) - "Quality Package"**

POWER PACK is a compilation of previously released Audiogenic hits with the occasional new game thrown in for good measure - seven games in all, recorded over both sides of two cassettes.

SPACE AGENT ZELDA is the heroine of a very classy ladders game. Penetrate the ten levels of a space ship and destroy its generator before the ship reaches Earth.

SPACE RANGER is a small screen version of that minor arcade hit LUNAR RESCUE. Teams of astronauts are stranded at five different sites on the moon - your mission is to fly down through an asteroid storm, landing at each site in turn to rescue the men.

BUG EYES 2 is one of my all-time favourites and uses the biggest, brightest sprites you've ever seen. Space agent Zelda has been captured by the bug-eyed aliens and incarcerated in the depths of a desolate asteroid: As agent Starman you search for the 25 keys needed to free her.

CAVEMAN CAPERS follows the exploits of Ogg the caveman as he strives to master a new form of transport - turtle power. Riding an uncooperative turtle you leap over pot holes, avoid low-flying birds, duck beneath snakes hanging from trees and deduce how to jump the toadstools.

ULTRON is a shoot-'em-up space game based loosely on the arcade game GORPH. As pilot of the Ultron space fighter you have to destroy three different waves of aliens before you come face to face with the mothership. Blast that and everything starts again but this time things are a little more hectic.

WIZZY'S MANSION is the tale of woe of a second rate wizard whose attic has been occupied by an unfriendly monster. The pages of his spell book are scattered throughout his mansion's fifty rooms, and without putting them together he can't cast a spell to banish his unwelcome guest. The graphics have received very little thought and the game soon becomes tedious.

WONGO is the bomb disposal expert assigned to defuse terrorist bombs that have been planted along the great wall of China. The game is a crude Hunchback clone in which you leap over cannon balls and avoid low flying arrows while trying to render the bombs harmless.

With the exception of the last two titles, all the software is of high quality and the package is excellent value for money.

## PSYCASTRIA

The Psycastria are alien beings who, having psycastreated themselves into the bodies of world leaders, have been manipulating world events and plunging humanity into terrible conflict and war, with the ultimate aim of the eventual destruction of mankind. But their secret is out and you have been psycastreated into the body of ace flyer, Commander Ronald Boggleswick (or 'Boggles' for short). Only you can carry out the daring surprise raid on the Psycastrian installations on land, on the sea, on the moon and finally in deep space. Superfast scrolling shoot-em-up action in this former BBC/Electron chart topper!

## FROOT RAID

Win a fortune - or gamble it away! You don't need money - just your Electron. FROOT RAID is a highly authentic fruit-machine simulator, with all the features of the latest club and arcade machines. You get three fruit reels and a nudge reel, with Double or Nothing gambling of wins, plus Hold and 2-way Nudge features. A special Swap facility may let you turn a losing spin into a win! And there's always the chance of picking up bonuses, or even the jackpot, on the advancing lights of the authentic Feature Panel. You don't need money, so get spinning now!

## LAST OF THE FREE

Arcade adventure starring our hero Clement the Ordanoid droid! The Ordanoids have been enslaved and destroyed by the Proleoids, a later model of droid with a fundamental design fault that made them too aggressive. All the Ordanoids have gone - all, that is, except Clement - the Last of the Free! Clement's mission is to escape from the Proleoids and make it to the teleport so that he can get to Earth and warn humanity about the defective Proleoids. The road to freedom is full of dangerous Proleoids, and littered with obstacles to avoid and puzzles that must be solved. Apart from his ability to run and jump, Clement has only one advantage - he can pick up and use objects that he finds in order to help him, but he can only carry one at a time. THE LAST OF THE FREE features 55 different and complex screens, 32 different aliens with large animated sprites, music and sound, extending platforms, lifts, doors, lots of puzzles and much more.

## **SARACOID**

The Saracoids are blob-like life forms that float through Outer Space, taking energy from any planet that they come across. For self defence, they group together in long strings that snake down through the atmosphere in various strange formations. The warning is out that the Saracoids may soon be passing by Earth. They will undoubtedly want to stop and replenish their energy supplies. You have been given the job of manning the missile firing hover-launcher, with orders to prevent the Saracoids landing - for if they once touch ground they mutate, taking on a different form, and immediately home in on the nearest living thing - which in this case is you! SARACOID is 24 waves of high speed, shoot-em-up fun that will challenge your dexterity and reactions to the limit!

## **THUNDERSTRUCK**

You are SPRECO (the SPace REfuse Collector) who has been transported by a space/time thunderstorm to an eerie castle. All you want to do is to get back to Myrtle and the kids back on HomeBase 5, but here you are trapped in these strange medieval surroundings with your Assisdroids. They dislike it as much as you do and, because they think it's your fault, are decidedly hostile. There are various objects littered around the castle that you can carry and use, but because of your bulky space shut you can only carry one at a time. The castle is inhabited by eight weird characters from another age. You will meet them in your search for the way out. If you help them by giving them something they need, they may help you by giving you something in return. THUNDERSTRUCK is a brain-straining arcade adventure with 100 screens, large-scale graphics, animated backgrounds, aliens and 32 puzzles that constitute a lasting, logical challenge.

## **DRAIN MANIA**

DRAIN MANIA is a game where a love of sewers is an advantage! You are Theodore, an athletic young chap who accidentally wanders into the sewage system, unaware of the dangers that lurk within. For the sewers are inhabited by deadly mutant sewer creatures who slither around the slippery tunnels. Theodore can jump and jump to avoid them, but his only self-defence is to kill them by head-butting them up through the floor so that they fall over, then kicking them out of the way. To make things worse, water or fire balls are ejected from the pipes. However, coins can be collected, and saved up for spending when you get out. The question is *will* you ever get out?

## **STIX**

The Stix is a bundle of energy that roams the universe destroying everything in its path. However, a freak cosmic storm has trapped the Stix in a warped hypersquare, giving you the opportunity to harness its evil power for the good of mankind. But to keep the Stix under control you must restrict its movement by constructing force fields inside the hypersquare using your field synthesizers. Above all, you must not let the Stix hit an incomplete force field, otherwise neutron fusion will occur! Stix is colourful arcade action, an original theme, a game with a difference!

**Instructions' Source** : ELECTRON POWER PACK 2 (Audiogenic) Back Inlay

## **Review (Electron User) - "Superb Compilation"**

The passion for resurrecting old games continues unabated, this time with a compilation from Audiogenic. It is, however, good to see that not all of the bundled titles are re-released oldies: Two of the games are making their first appearance.

The first of these is SARACOID, a superb shoot-'em-up. The sprites are large and colourful, the controls simple and the action smooth and fast. One point that impressed me is it gets off to such an easy start. So many shoot-'em-ups start hard and just get harder - it's a pleasant change to find one that anyone can play. In all, I cannot fault SARACOID in any way - but POWER PACK II for this game alone.

The other newcomer is FROOT RAID, a fruit machine simulation. I have seen many such programs over the years, but none has really captured the atmosphere of the real thing, simply because there isn't a genuine element of risk.

While this implementation has probably the most comprehensive range of features I've yet seen, it too fails to convey the feel of a real one-armed bandit. Although it represents a technically excellent attempt at computerising an obviously uncooperative subject, without the aspect of real money it doesn't work for me.

STIX is a fast-moving stream of energy darting round the screen in a random fashion. You must fill in areas of the screen in order to trap STIX, but go carefully: One touch is fatal. You can choose either fast or slow fill. Slow gives you a much larger bonus, but is considerably more dangerous.

To make matters worse lethal blobs home in on you from all sides, making the game quite frantic. One maddening problem is the playing keys are located so closely together that it is virtually impossible to play the game with any degree of smooth control. Worse still, you cannot choose your own keys. This unnecessary flaw unfortunately detracts greatly from what is actually quite an enjoyable game.

PSYCASTRIA is an immensely - and deservedly - successful shoot-'em-up featuring the smoothest scrolling ever seen on the Electron. When you flip your ship left and right, the screen scrolls around you.

Although the Electron version is not quite as fast as the one for the BBC Micro, you do at least stand a chance of seeing what's about to hit you. PSYCASTRIA follows the great idea of "even if it doesn't move, shoot it anyway". In spite of what the inlay would have you believe, there doesn't seem to be any particular mission - it's really just kill, kill, kill.

The game features some wonderful special effects, including music, multi-player option and a demonstration mode. The only point I found annoying is that you must clear each level in one go, without losing a life.

This niggle aside, PSYCASTRIA is certainly an impressive piece of programming which has lost none of its addictiveness.

DRAIN MANIA is a fairly standard platform game set in a sewer, of all places. This is, unfortunately, far from deserted: It's populated with a variety of deadly creatures out to do you no good at all.

Luckily they can be killed by a headbutt from below, followed by a swift kick. This can be somewhat hairy, since the platforms are very slippery. As you kill one beastie you will often find yourself sliding helplessly into the jaws of another.

There is recompense, as over the years many coins have been lost down the drains - yours to keep if you can grab them. Although DRAIN MANIA is a game I have played on and off for years, I feel most modern game players would find it too elementary to hold their interest for long.

The last two games in the package come from the hand of talented programmer Peter Scott. Both are multi-screen arcade-adventures featuring brightly coloured graphics, lots of objects and mind bending puzzles.

LAST OF THE FREE is essentially a combination of a platform game such as HUNKIDORY, another Scott offering, and an adventure game. You may run and jump around a number of screens avoiding a variety of moving objects only to find your way blocked by a door. To open it you must find the correct key.

There are many objects to help you on your way, but use them wisely as they can only be used once. Solving the game requires careful manipulation and time, but tread carefully and you will eventually be free.

THUNDERSTRUCK introduces Spreco, a cute little character who has since featured in a number of Peter's more recent releases.

A freak accident has tapped you in a medieval castle with a number of other robots, none of which is proving very friendly.

THUNDERSTRUCK is more complex than LAST OF THE FREE and also far more of an adventure game, since your escape can only be engineered by bartering with the castle's other inhabitants. This frequently involves solving complex adventure-style chaining puzzles.

As with its predecessor, to complete the game you must give the right object to the right character - once again you only get one chance with each object. A better game with better graphics.

POWER PACK II represents many hours of great fun with something to appeal to everyone. Great value.

## Review (Electron User)

Many years ago, when playing with jigsaws was more fun than VDU codes, I used to love painting by numbers. There were two main problems, however. The first was that I was too impatient to wait for the colours to dry so that they ran together. The other drawback was that each picture could only be painted once, so I couldn't experiment with colours as much as I liked. I would have loved a system which allowed me to dabble, change colours as I wanted and where every new day meant a fresh lot of clean pictures.

Well, rather late for me, but still good fun comes this tape which is compatible with both the Electron and BBC Micro. Although only priced at £9.95 - a modest enough figure nowadays - it contains no fewer than 18 pictures waiting for your artistic talents. The first four each have a file which allows the correct colours to be loaded onto the picture by first loading the picture file itself followed by the colour file. The remaining fourteen pictures do not have this facility, but this gives full rein to your imagination.

By the way, how many colours would you expect your Electron to support? Wrong! There is a palette of 35 available, including greys, pinks and so on and an area is easily filled using machine code. A cursor is moved around the screen, and on moving into the palette can select the painting colour. By then moving the colour to an area, it can easily be filled with the P (paint) key. Similarly, it may be re-coloured by D (delete), selecting another palette colour and then painting once more.

The speed of the fill is quite impressive as is the speed of the cursor. The picture as drawn is not final, as a mode may be selected in which it is possible to add lines exactly as required. Thus the picture of the clown might be improved by the addition of some balloons which can be added easily.

Indeed, it is quite possible and fun to go immediately into drawing mode without loading a picture, and thus create a picture from scratch which can then be coloured using the palette. The finished result can be saved to cassette.

An amusing but not over-useful feature is the facility to randomly alter the colours on a displayed picture, or to cycle through the basic colours in order.

The cassette box claims this program will interest those from six to 96. Well, my three and five year olds would like to be added to that list as they both think it's smashing fun.

I don't think they realise there is quite a large educational content to the program, with much evidence of planning, hand-eye co-ordination and discussion

leading to the final polished result. Whether it would be of real practical use in schools on cassette is doubtful. There are so many parts of the program that it cries out to be put on disc for easier access of a particular picture, or for rapid saving of little Johnny's masterpiece. Apart from that reservation, I am most impressed.

Phil Tayler, ELECTRON USER 2. 3

## Review (Electron User)

This cassette of four programs and a single page of documentation comes from Garland's educational series, Learning Maths. The package is aimed at children aged about 9-12 years and is for school or home use on either an Electron or BBC Micro.

Garland has a good reputation for educational software for the BBC Micro but this package doesn't really live up to expectations, failing to make full use of the computer's facilities. Furthermore its title is slightly misleading in that the programs are mainly concerned with data collection and display rather than the computation of statistical parameters.

After chaining the Index program, which displays Garland's logo, the user is asked to pick one of three programs, Barchart, Piechart or Scatter by typing CHAIN "Program name". Unfortunately there is much room for operator error here and the loading sequence could be improved.

Barchart allows the user to label, input, add to and compare up to 10 groups of data in the form of a frequency table or a barchart (not a histogram, as the documentation reminds us). The data entry sequence may be upset by entry of large values, and is also drab as it doesn't utilise colour and sound. The barchart itself is in colour. Negative numbers are also allowed on data entry, but are not properly displayed on the barchart.

Piechart is similar to the previous program and allows the user to enter and compare values for up to six groups of data. The frequency table here also shows the angles (in degrees) used in the piechart. Again, the actual displayed chart is in colour. In this program however, data cannot be altered or added.

Scatter plots the values of two groups of related data on a scattergram. First the axes are labelled and the maximum limits set, then each data item is plotted on the graph as the values are entered. When all data has been entered - up to 100 values - the mean is automatically marked on the display. I like this one with its instant plotting. It would be very easy to fiddle results and enter values which sat along a nice straight line. Unfortunately this program does not allow for the correction or addition of data.

Overall the programs provide good value for money as a simple teaching aid but would be much more valuable for long term use in data collection and display if there were more facilities for error correction, saving of data and printout routines.

All the programs, however, are written entirely in Basic and can be used on either

cassette or disc based systems and could therefore be readily amended to suit individual users.

# ELKMAN

## *Professional, ROM Chip Expansion*

### Instructions

Instructions currently unavailable.

**Instructions' Source** : Instructions currently unavailable.

### Review (Electron User)

ELKMAN is a sideways ROM designed for use with an external ROM expansion board such as Slogger's own ROMBOX (Not the Plus 1), and is identical to the ROMs that BBC owners have been using for years.

ELKMAN is a ROM manager so needs to have priority over all other ROMs present to operate properly. This means that it is best placed so that it appears as ROM 15 to the operating system.

Placing it in the rightmost socket on Slogger's ROMBOX achieves this. You'll have to check the manual on other systems. ELKMAN is a service ROM, which means that all its commands are available while another ROM is in use, using a \* command. These commands can even be used within a Basic program.

While writing this review using View I can test each function without leaving the Word Processor.

\*HELP ELKMAN reveals the ROMs 16 commands and their syntax. One of the simplest is \*PROMS which lists all the ROMs present, their state and size. ROMs can be in one of three states. They are either on, off or killed. \*OFFROM and \*ONROM can be used to enable or disable a ROM.

If it has been disabled it will not respond to any commands and cannot be used. This is useful if two ROMs have the same name for different commands. The offending ROM taking the command can be switched off. Even though a ROM may be off, it can still reserve memory. \*KILLROM is equivalent to physically removing a ROM. I found it useful for disabling the Plus 3 when playing games on tape.

\*PEEK is a memory lister which can be used to display any section of memory, even sideways ROMs. The output is in hexadecimal and ASCII. \*POKE will place a series of bytes or a string anywhere in memory.

ELKMAN contains a complete 6502 disassembler, which again is capable of operating on sideways ROMs. The hex address, object code, mnemonics and ASCII codes are listed.

There are several commands which operate on sideways RAM. These can clear the RAM if fitted, load it with data from memory, tape or disc, and save it to memory tape or disc.

ELKMAN is well written and simple to use. The documentation is excellent. It comes with a very smart 21-page manual which explains fitting and use in a clear and easy-to-read manner.

Even if it's the only ROM you have, you'll still find most of the utilities useful. I can recommend ELKMAN to all serious Electron users.

Roland Waddilove, ELECTRON USER 2.10

# ELITE

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade Strategy Trading Game; Modern Classic

## Review (Electron User)

It would be an understatement to say that this game has aroused a lot of interest in the computer world. It has already become Acornsoft's best-selling game and is fast becoming a cult. So much so that it has left owners of certain other machines wondering when they will get their hands on it!

It comes in the most comprehensive packaging I have ever seen for a piece of software. Apart from the tape itself, there is a 64 page manual giving details of the game keys (there are 47) and a short novella "The Dark Wheel" which is meant to whet your appetite for the game. There is even a ship identification wall chart! All this makes the somewhat expensive price look quite reasonable.

You play the part of a space trader roaming the galaxy selling your wares from planet to planet with the view of making as much money (or credits) as you can. There credits can then be used to equip your Cobra MkIII space ship. Things to buy include an extra large cargo bay, an extra energy unit and docking computers (essential as manual docking is very long and difficult).

You can also gain credits by shooting down pirate ships and the many asteroids that float aimlessly about. Shooting down innocent traders or dealing in illegal items (narcotics and slaves) reaps you large profits. Unfortunately, it also brings you to the attention of the police Viper ships.

The kills contribute to your rating, which ranges from harmless through mostly harmless, poor, average, above average and competent. As your bag grows next comes dangerous, then deadly and finally, after a lot of shooting, you become one of the elite. Fortunately, there is a save game option, enabling you to rest your aching fingers.

You may think that having to use 47 keys in its playing makes the program complex and difficult. This is not so, as many keys are only used on certain occasions. Having said that, I must admit that I found flying my ship quite difficult.

The 3D graphics are stunning and the sound well above average. The game has an addictive quality which keeps you at the keyboard for hours on end in the hope of achieving elite status. No software collection is complete without it.

Ian Critchley, ELECTRON USER 2. 7

## Review (Electron User) - "ELITE Takes Off Again"

HEY! There's a great new game on the market called ELITE. You play the role of an interplanetary trader flying a Cobra Mk3 who spends a great deal of time shooting up pirates - what do you mean, you've already got a copy? As a result of the Acornsoft/Superior Software alliance, ELITE has been relaunched! It is now sold in a sturdy plastic case complete with a revamped manual. Not only that, it is cheaper than before.

ELITE is a game which is best categorised under the heading arcade/strategy. Using shrewd financial wheeling and dealing you earn money which can be used to improve the standard of your spaceship.

You start the game with a Cobra Mk3 Popular, equipped with a pulse laser, a small cargo bay and very little else. Following a few nights of hard graft you should have upgraded her to the Ghia version with beam lasers, large cargo bay, docking computer, energy bomb - the list is endless. You will then be in control of one of the fastest, meanest fighting machines in the galaxy.

Your adventure begins on a space station orbiting the planet Lave. All planets are given a rating as to how far they have developed technically. You can use this to indicate the probable price of goods - on a low-tech planet, furs will be cheap but computers expensive and vice versa for a high-tech planet.

Once you're confident enough you can try your hand at dealing in narcotics when the rewards - and the dangers - are higher.

Even by today's standards, the graphics used in ELITE are excellent. Once out in space you enter a world of three-dimensional line drawings, most of which are out to blow you to pieces. The dogfights are a delight and you'll need every ounce of cunning and skill if you are to survive.

Each kill you make adds to your skill rating. Starting off as "Harmless" you must face many a sleepless night if you are to reach the dizzy heights of the "Elite".

ELITE has been off the market for over a year, so it's likely that there are a number of new Electron users out there who don't own a copy of what is quite simply the best game for the Electron.

# ELIXIR

***Professional, Originally Released On Cassette, ADFS 1D00 And DFS 1D00 Disc***

Game Type : Arcade Adventure In Chemists' Shop  
Authors : Richard Williams, John Llewellyn and Chris Hyde  
Standalone Release(s) : 1985: ELIXIR, Superior/Acornsoft, £9.95 (Tape), £12.95 (5.25" Disc), £14.95 (ADFS Disc)  
1990: ELIXIR, Superior/Blue Ribbon, £2.99  
Compilation Release(s) : 1987: PLAY IT AGAIN SAM 5, Superior/Acornsoft, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH LINCOLNSHIRE DN20 9AX  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## **Instructions**

### **The Scenario**

Poor old Cyril! Alone in his chemist's shop one night, he mistakenly swallowed a powerful reducing agent - leaving him only inches tall. What is he going to do? Sitting down and carefully thinking for almost an hour, it suddenly dawned on him. It wasn't guaranteed to work, but it was his only real hope for returning to his normal size: he must reach the magic elixir - which is stored at the back of the shop on the top shelf.

### **Your Objective**

You play the role of Cyril. Inside his chemist's shop are many shelves - laden with bottles, boxes, pills and potions.

With your ultimate aim being to reach the elixir, you must first consume all 40 red vitamin pills located on the various shelves.

To move between the shelves you must walk, climb and jump. You can jump on, and between, various objects, providing they are not too high, simply by pressing a combination of the directional keys listed below. For example, by pressing the "Z" and "\*" keys simultaneously, you will jump left. To move between shelves the tubes, thread and string can prove to be very useful. To climb up or down these items press "\*" and "?" key and keep holding the key down until you reach your required level.

### **The Pills**

There are six different coloured pills that you will come across:-

RED ..... These are vitamin pills which you need to take  
CYAN ..... These will slow you down  
MAGENTA .... These will also slow you down  
BLUE ..... These will speed you up  
YELLOW ..... These are fatal - instantly  
GREEN ..... These will cause you to fall off the object upon which you are standing

### **The Status Screen**

At any time during the game you can select the Status Screen by pressing the <RETURN> key. The Status Screen shows: your score, the number of lives you have remaining and your current inventory.

### **Problem Solving**

The game involves many problems to be solved; red pills may seem inaccessible or gaps too wide to cross. However, there is a solution to every problem and a number of items are available to aid you in your quest. You do not have to decide when to

use your collected objects; if you have a useful asset, it will be applied when you reach the appropriate position. (A chine normally indicates a change in your list of assets)

### **Getting Started**

Here is a suggested route for getting through the first two screens:-

Jump onto the purple box to the left. Your first objective is to collect the piece of thread on the box above your head. Jump left across the gap. Now, you cannot jump high enough to get onto the jars immediately to your left, so you must walk to the left until you reach a box you can jump onto.

Jump onto this box and then by jumping to the right, you can climb onto increasingly taller boxes and jars. If you continue to go to the right you will reach the thread which you can pick up. You will find this extremely useful later when you come across a hook.

Now you should jump to the left onto the next shelf, and then by jumping up the containers you can reach the red vitamin pill.

Next, you should move to the left onto the adjacent screen. (Overhead you can see the keyhole to the darkroom. However, you are too large to get through this keyhole without a little lubrication). You should now aim to collect the second red pill by jumping across the tops of the bottles, but be careful to avoid the magenta pill - by jumping over it, otherwise it will cause you to slow down.

If you move to the left onto the next screen, you will see the mysterious vanishing cream. Now, you have another 38 red vitamin pills to collect before you reach the elixir - so jump to it!

### **Scoring**

Your objective is to reach the elixir. However, the remedy is only effective when you have collected all 40 red vitamin pills; you will then have amassed 2000 points. 50 points are gained every time you collect a red pill.

### **Game Controls**

Z - Left, X - Right, \* - Jump/Climb Up, ? - Climb Down  
<RETURN> - Select Status Screen, <ESCAPE> - Exit from game

1/2 - Pause On/Off, 3/4 - Sound On/Off

# EMPIRE

*Professional, Originally Released On Cassette Only*

Game Type : Graphical Wargame  
Author :  
Standalone Release(s) : 1984: EMPIRE, Lothlorien, £7.95  
Compilation Release(s) : 1988: THE WAR PACK, Lothlorien/Paxman, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : M.C. LOTHLORIEN, 56A Park Lane, Poynton, STOCKPORT SK12 1RE  
Disc compatibility : CDFS E00, DFS E00

## Instructions

Can you halt the progress of the evil empire as it conquers country after country. Your computer controls the empire's armies with variable strategy and skill. You must conquer the world...but remember, the empire has the same goal and none of human compassion and weakness!

The Elect Empire is a ruthless, aggressive power, intent on conquering the world through an uncompromising strategy of relentless attacking. You control the defending armies and, although you may not be as strong as the Empire, you may win through cunning and tactical thinking. The world is divided up into 39 territories, grouped within 5 continents (North America, South America, Europe, Asia and Australasia). At the start of the game, you and the Elect are given 39 armies each, with 39 neutral armies.

## Game Play

All necessary instructions for the game are displayed in the 'comment line' at the bottom of the screen. All scoring and indicators appear in the 'scoring lines' above.

First, select the difficulty level. You then indicate if a black and white TV set is being used. Level 1 is the Elect Empire at its weakest and level 8 at its strongest. Now follow the instructions on screen paying attention to the 'comment line'.

### Neutral armies :

39 neutral (yellow) armies are assigned, grouped into 13 territories.

### Choose Territories :

The green 'cursor' will skip between territories. The red arrows pinpoint the current position as a further aid. You must select 13 (green) territories by pressing the space bar when the cursor falls on your chosen territory. The Elect Empire will do the same. This carries on until all 39 territories are allocated. Note that the Elect (red) territories flash to cyan to aid identification.

### Allocate Armies :

The right hand column of the scoring lines indicates that there are 26 armies for you and the Elect (ELE) to "ALloCate". To do so, select your territory using the space bar when the blue 'cursor' lands on it. The red arrows will help you to follow the cursor.

### How many armies :

Now you must allocate armies to this territory (any number between 1 and 9). When you have used up all your army allocation it is the Elect's turn to allocate armies.

### Elect armies :

The Elect will now assign armies throughout its occupied territories. If you now look at the 'scoring lines', you will see that you and the Elect have 39 "ARMies"

each within 13 countries. The remaining columns are "C", which tells you how many complete continents are occupied (every complete continent grants 5 extra armies to allocate) and "VIC", which indicates victories (each victory grants an extra army to allocate).

**Elects attack :**

The Elect Empire will now start attacking. A battle is over and a victory won, if either of the status figures drops to zero. If the attack figure drops to zero, the Empire has lost the battle and it is your turn to attack. If the defend figure drops to zero, the Elect Empire moves in armies to occupy the territory and continues attacking. Press Space Bar. It is now your turn. But be warned ... if you don't press the Space Bar for 20 seconds, control passes back to the Elect.

**Allocate armies :**

You are given armies to allocate. The number depends on the number of countries and continents you occupy and the cumulative number of victories to your credit. Allocation of armies is as before.

**Your attack :**

You may attack Empire countries or neutral countries. Press the Space Bar when you have decided which territory to attack from (follow the blue cursor); the cursor will then move around all territories that you have allowed to attack (If there are none, then you must re-select the attacking territory). The top of the screen will also indicate the number of armies in each hostile territory. Press the space bar to attack and watch the 'comment line' to see how you are doing. If you are losing and wish to withdraw your forces before it is too late, press the Space Bar again.

**How many armies :**

If victory is yours you can move between 1 and 9 armies to occupy the territory (press a number key). If you moved 9 armies across, you are asked "MORE Y/N". If you have only one army left, the judge grants you an extra army.

**Attack Y/N :**

Type "Y" to continue attacking. If "N" is typed, control is passed to the Elect Empire.

The winner of Empire is whichever empire (yours or Elect's) completely destroys the other (neutral countries are not included).

# ENGLISH CIVIL WAR

***Professional, Originally Released On Cassette Only***

Game Type : Graphical Wargame  
Authors : Joe Sherwood Taylor & Helmut Watson (Woof)  
Standalone Release(s) : 1984: ENGLISH CIVIL WAR, Red Shift, £7.95  
Compilation Release(s) : 1988: THE WAR PACK, Lothlorien/Paxman, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : RED SHIFT, 12C Manor Road, Stoke Newington, LONDON N16 5SA  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Draw Your Trusty Sword And Lead Your Gallant Cavalrymen Against The Enemy Musketeers... Or will you be hit in the flank by the enemy Pikemen or decimated by his artillery? You make the decisions! Refight the battles of the Civil War in this exciting, highly graphical and absorbing game for two players. Players : 2. Scale : Regiment to Regiment. Playing time : 1 hour +"*

## Introduction

This is a game of strategy for two players. The game is played in turns. Each turn is made up of a MOVEMENT/FIRING phase followed by a HAND-TO-HAND COMBAT phase.

Each player has 11 units and a sconce (fort). The sconce, naturally enough, remains stationary throughout the game, but the 11 units can all be moved. The composition of the 11 units varies depending on which historical period you choose. For all three historical periods, the 11 units are made up of a mixture of Musketeers on Foot, Pikemen on Foot, Cavalrymen and Artillery units.

Before the game actually starts you have to decide how many woods you want. It is best to enter a small number for your first few games. Deployment of your units means putting them in their starting positions. Each player starts off with nearly half of the television screen, either to the right or to the left. It is within this area that you can deploy your units.

Once both sets of units have been deployed, the game can begin. The side that moves first is determined randomly by the computer. Each unit has a pre-determined number of moves and turns. A move is moving the unit from the square it is in to an adjacent square. As you can see, each unit is FACING in a particular direction, as shown by the arrows in the bottom left-hand corner. If you want a unit to move in another direction then you have to turn it first. Musketeer units can fire as well as move and turn. If you move a unit then its permissible number of moves is reduced by one. If you turn a unit, its number of turns is reduced. If you fire a Musketeer or Artillery unit, its number of moves is reduced by one. When these factors are reduced to zero, you can do nothing more with that unit until your next movement phase, when it will receive a new allowance.

When the attacking player (the player whose turn it is) has finished moving, turning and firing his units the computer checks for HAND-TO-HAND COMBAT. This occurs when any attacking unit is FACING and ADJACENT TO a defending unit. If that defending unit is also facing the attacking unit then it fights back inflicting casualties in return. Sometimes the defending unit will be nearly facing the attacking unit. Where this occurs the computer will give the defending player the option of turning his units so that they can fight back against one of their attackers.

## How To Win

The object of the game is to destroy or capture the enemy sconce, or to reduce your opponents will to fight to such an extent as to force him to concede the battle.

### Volume

After you have finished loading the programme, the prompt "VOLUME?" appears. Type in a number from 0 to 15 followed by <RETURN>. 0 will give you no sound at all; 15 will make the sound effects as loud as possible.

### Army Types

When the prompt 'Army Types' appears, press the '1', '2' or '3' key. The key that you decide to press corresponds to the following army types:

'1': This choice represents armies from the early part of the 17th Century, and reflects the armies put into the field at the beginning of the English Civil War. Generals relied heavily on slow pike-armed footmen and fast, manoeuvrable cavalry. Muskets and cannons were expensive and unreliable and were not present in huge numbers. Hand-to-hand combat was the order of the day.

```
ARMY COMPOSITION = MUSKET ..... 2
                   PIKE ..... 5
                   CAVALRY ..... 3
                   ARTILLERY ..... 1
```

'2': This choice represents the majority of English Civil War armies of the mid-17th Century. Large numbers of horses were more difficult to obtain reducing the number of cavalymen. Muskets and cannons became more widely available but the 'push of pike' could still carry the day.

```
ARMY COMPOSITION = MUSKET ..... 3
                   PIKE ..... 3
                   CAVALRY ..... 3
                   ARTILLERY ..... 2
```

'3': This choice represents the armies as they were developing towards the end of the 17th Century and the Age of Marlborough. Muskets were proving their effectiveness when used in large numbers and the pike became very much a defensive weapon.

```
ARMY COMPOSITION = MUSKET ..... 4
                   PIKE ..... 2
                   CAVALRY ..... 3
                   ARTILLERY ..... 2
```

### Woods

When the prompt "How much wood" appears, you should type in a number from 0 to 9. 0 means no wood at all and 9 means you will be fighting in a forest. The computer will adjust the number you type in to make the amount of woods on the battlefield less predictable. So even if you press 0, a small amount of wood may appear. Woods are represented by tree symbols.

Woods are a hindrance to both movement and firing. You cannot move any unit into a square which has a tree symbol on it. You can fire muskets through woods but to little effect. Artillery units can fire at woods and destroy them. This is not very realistic but adds significantly to the game. Units can move into squares which have had all their wood symbols destroyed, and fire through them normally.

### The Battlefield

The battlefield is divided into squares which are staggered like the bricks in a brick wall; any unit can therefore move in any of six directions. If, at most times during the game, you press 'g', a grid will be drawn showing you precisely how the battlefield is divided up. Press any key to remove the grid. At the edge of the TV screen some of the squares are only half on the battlefield. No unit may enter these.

### Deployment

The player who deploys his units first is decided randomly by the computer. The other player should leave the room so that he/she can deploy his/her units secretly. As mentioned above, each player deploys his/her units in either the left or right half of the screen. No player may deploy a unit in a square which contains a wood

symbol or another unit. Remember to be careful in deciding where to place your sponce. At any time during deployment a player may press 'g' to create the grid showing the squares. Press any key to remove the grid.

Deployment is achieved by moving a flashing cursor across the screen using the cursor keys. The computer will not allow you to move the cursor outside your deployment area. If you wish to postpone the unit to be deployed, press the Space Bar. This will flip you on to the next unit. You can keep on flipping through if you wish, until you find the unit that you wish to deploy. When you are satisfied that you wish to deploy the unit indicated in the square indicated by the FLASHING CURSOR, press the <RETURN> key.

When the first player has finished deploying all of his units, the computer will take his/her units off the screen. The other player can now come back into the room and deploy his units. The first player need not leave the room because he has already committed his forces. The second player deploys his/her unit using the same keys as the first player, but in the opposite half of the battlefield.

When the second player has finished deploying his units, the computer will reveal both armies, and play can then commence. The computer decides who goes first. If the writing at the bottom of the screen is on RED it is Parliament's go; if on BLUE it is the turn of the Royalists.

At the bottom of the screen you can see the number of MOVES/SHOTS and the number of TURNS left for the current unit (See Figure 2). The starting values of the different units types are as follows:-

	Moves/shots	Turns
MUSKET	2	2
PIKE	2	2
CAVALRY	4	3
ARTILLERY	2	1

Every time a unit MOVES or FIRES, its MOVES/SHOTS number is reduced by one. When the number reaches 0, that unit may not MOVE or FIRE again until it is your next MOVEMENT/FIRING phase. Every time a unit TURNS left or right, its TURNS number is reduced by one. When the number reaches 0, that unit may not TURN again until it is your next MOVEMENT/FIRING phase. When a unit has zero MOVE/SHOTS left and zero TURNS left the computer will beep at you to tell you that you may do nothing more with this unit until it is your next MOVEMENT/FIRING phase. Press the Space Bar and the unit is ignored for the rest of this MOVEMENT phase, and you will be moved on to your next unit.

Pressing the <RETURN> key will force the computer to ignore the currently selected unit until your next MOVEMENT/FIRING phase. So press this key ONLY when you are sure that you do not want to do anything more with this unit. When you decide that you do not wish to move ANY more units, press the <RETURN> key for each of your units which has any MOVES/SHOTS or TURNS left. The computer will then move you on to HAND-TO-HAND COMBAT.

### **Hand-To-Hand Combat**

In this section the player whose turn it is is referred to as the attacking player and his/her units as the attacking units. The other player is the defending player and his/her units are the defending units.

HAND-TO-HAND combat occurs when any attacking unit is FACING and ADJACENT to any defending unit. More than one attacking unit can attack the same defending unit. If the defending unit is FACING the attacking unit it will automatically be able to fight back. If it is NEARLY facing the attacker (in other words, if it only requires one TURN to make it face the attacking unit), the defending player will be asked "Turn to face?". The defending player should enter Y or N depending on his decision. If the defending player enters Y then his unit will turn to face the attacking unit and will fight back at that unit. If a defending unit is attacked by more than one unit, the defending player may be asked more than once if he wishes to turn his unit

to face. However, the defending player can only enter Y once in respect of any single unit. He/she should remember that it might not always be to his/her advantage to turn to face. For example, to do so might leave another attacking unit attacking that unit in the rear. This gives an extra advantage to attacking units and should be avoided at all cost by the defending player.

The computer scans through all the attacking units to check whether HAND-TO-HAND COMBAT is taking place, and then checks the defending units. However, so that neither side has an unfair advantage, the COMBAT STRENGTHS of all units are calculated simultaneously. So, even if a defending unit is wiped out during HAND-TO-HAND combat, the computer remembers what its previous strength was and allows it to fight back with that strength.

Once the computer has found a valid attack, it point it out by drawing a square around the defending unit and a flashing square around the attacking unit. It will tell you the COMBAT FACTOR that the attack is to be made with, and asks you to press a key. Press any key. The computer then calculates the casualties, removes them, and moves on to the next area of combat. When all combat is resolved, the other player will be able to move and fire his units, and so on.

The way the computer works out the COMBAT FACTOR is quite complicated but here are some important guidelines. The computer looks to see which type of unit if facing which:

- CAVALRY is very effective against MUSKET or ARTILLERY
- PIKE is effective against everything except ARTILLERY
- MUSKET are only any good against ARTILLERY
- ARTILLERY are pathetic in HAND-TO-HAND COMBAT. They should never be thrown into an attack, but kept well defended by other units
- PIKE and CAVALRY units receive a BONUS if they have moved immediately before attacking. This represents the impetus gained from charging home on the victim. You do not get this BONUS for merely turning to face
- ANY unit attacking from behind receive a BONUS
- ANY unit attacking from DIRECTLY behind receives a LARGE BONUS!

The COMBAT FACTOR is multiplied by the number of men in the unit. The larger the COMBAT FACTOR and the larger the number of men you have left in a unit, the better chance you have of inflicting large numbers of casualties. But success is not guaranteed as a random element is also involved.

### **Attacking The Enemy Fort**

This is handled in precisely the same way as attacking any other enemy unit except that the COMBAT FACTOR is always 2 whatever the circumstances.

### **Winning**

To win, you must either force your opponent to concede; wipe out his/her army to the last man; or destroy his/her sconce (only about two-thirds of it need actually be destroyed in order to win).

The VICTOR is then informed of how well he/she did.

Points Scored	Type of Victory
0-25	Pyrrhic victory (go back to APOCALYPSE!)
26-75	A close battle (you had more than your fair share of luck!)
76-125	A tactical victory (could do better)
126-150	A decisive victory (need a new opponent?)
151+	Whitewash (your opponent didn't turn up)

### **Causes Of The War**

James I, the father of Charles I, was brought up as a Presbyterian, and when he came to the throne the people of both England and Scotland welcomed him for the changes they thought he would bring now that the two countries were under one King. They were adly disappointed; James refused to support the Protestant cause in Europe, and even made a point of being nice to Spain, England's traditional Catholic enemy.

Parliament, which was mainly protestant, disapproved but could not do a lot during James' reign.

When Charles came to the throne in 1625, Parliament tried to take some of the control of the country out of his hands. As Charles thought it was God's will that he should rule, this did not go down too well with him, and his solution to the problem was to rule without the help of a Parliament for eleven years.

It was Parliament's job to vote on the amount of taxes that should be paid to the King. During the eleven years when Parliament was not in existence, Charles had no regular source of income, and England's financial situation grew steadily worse, despite that fact that he forced people to lend him money and forcibly sold Crown Offices or Baronetcies to anyone who had enough money to buy one. If you had enough money but didn't want to buy one, you paid the same amount as a fine.

Another method of raising funds was called Ship Money - the Monarch had the right to raise funds with which to build warships, and Charles exercised this right, but did not use the money to build ships!

Eventually Charles' sources of income no longer provided enough money and he was forced to call a Parliament. Before anything else they declared Ship Money illegal, then pressed for religious and monetary reforms. Charles found it impossible to work with Parliament because he believed God meant him to rule alone.

In 1659 Charles forcefully introduced a new prayer-book and the Scots rebelled. Charles raised an army to put down the rebellion - but the men were unwilling to fight and were defeated. Parliament forced Charles to compromise with them more and more, until in 1642 when they raised an army to defeat a rebellion in Ireland, and it was clear that the army might just as well be used to fight the King's men in England.

### **Organisation**

Most of the armies at the beginning of the Civil War were commanded by professional soldiers, English or European, who had learned their trade fighting in wars on the continent. The fighting men were generally volunteers, pressed men or tenants on the land of someone whom the King or Parliament had appointed to raise a Regiment. Some landowners even raised and equipped a regiment at their own expense, to fight for the side they supported.

In theory someone who raised a regiment would be given enough money to equip it with weaponry and clothing (doublet, breeches, shirts, stockings, shoes, some sort of headgear, and frequently armour), and buy food and pay the men, but often men would fight in their own clothes; if they were lucky with a uniform coat and a weapon pillaged from a body, or a cudgel or pitchfork. Cavalrymen tended to be better equipped than foot soldiers, but this was not always the case. Frequently all the men went unpaid for long periods of time, but the pay, when it did come, was better than that of a farm worker, and life, if more hazardous, must have been more interesting.

Rank Structure: Each Regiment had ten companies and consisted of about 1,200 men. Even in the earlier stages of the Civil War it was difficult to keep numbers up to strength. Each Regiment had a Colonel, a Lieutenant Colonel, a Major and seven Captains; each company had a Standard (flag) which was carried by an Ensign, the most junior officer, two drummers, who were equivalent in rank to NCOs and Corporals and Sergeants. Standards were always fairly distinctive and the idea was that every man should be able to recognise his own as a rallying point on the field.

Cavalry Regiments were similar to Regiments of Foot, but had only approximately 800 men. Their flag was known as a Cornet, as was the man who carried it; sergeants were known as Quarter Masters.

Regiments were often amalgamated or disbanded during the Civil War due to casualties fetching numbers down to critical levels; two half-strength regiments might suddenly become one in the interests of putting a decent fighting force on the field.

## **Weaponry**

### **The Pike**

A pike was a 16 plus foot long ash pole with a 1'6" metal spear-like head fastened to the top of it. It was mainly a defensive weapon due to the fact that there was rarely time to teach the troops to use it offensively. Pikemen usually wore basic issue uniform, plus a leather 'buff-coat' if they were lucky: this was strong enough to turn sword cuts. Some would have back and breast plates (armour which covered the chest and back from neck to waist) and a few would have 'tassets' which hung down from the back and breast at the front and protected the thighs. Pikemen also sometimes had crude swords for hand-to-hand combat in case the opposition got past the metal tipped pikes.

### **The Musket**

Muskets were all muzzle loading (i.e. both powder and charge had to be put down the barrel). They were sometimes fired by a flintlock (a flint striking metal produced a spark which ignited the powder) but more often by means of 'match' which was a cord treated with a chemical which made it glow red but not burn. The musket fired when the glowing end came into contact with the powder, which was done by means of a very simple trigger.

17th Century musket drill was hideously slow and long-winded but needed to be so, as unless the sequence was well drilled into the musketeer's head he might accidentally set off his musket whilst loading it.

Musketeers wore the same clothes as pikemen, but no armour. In addition they carried all the equipment needed to clean and maintain their guns, plus powder and shot.

Muskets became steadily more reliable and less prone to exploding as the Civil War proceeded.

### **The Cavalry**

There were several types of cavalry during the English Civil War period, ranging from the lightly armoured dragoons (who more frequently fought on foot) to the cuirassiers who fought in three quarter armour.

The weapons of the cavalryman were generally two pistols, a sword and sometimes a carbine (a short musket). He wore full regimental Uniform, a heavy buff-coat, back and breast armour, helmet, and thigh length leather riding boots.

The main problem the cavalry faced was getting suitable horses.

Gentleman's sons who had learned to ride as they grew up joined both sides, but Parliament's cavalry acquired the advantage when an unknown cavalry captain by the name of Oliver Cromwell started training men who couldn't already ride into very effective disciplined troops who charged knee to knee at the canter, and by sheer force had the advantage over the more skilful but less disciplined Royalists.

### **Artillery**

Artillery in the English Civil War period ranged from a scaled-up musket mounted on a tripod to a siege gun with a range of up to a mile. A gun captain was put in charge of each piece and its effectiveness depended very much on his skill. He was usually a professional in the pay of a particular army, and had civilian status. Early on in the war, most gun captains came from abroad; later English men who had learned their trade during the Civil War took the position.

There are many different small jobs involved in the loading and firing of a gun, and one man did each one: the gun crew was usually of expendable citizens and if one got killed it was easier and quicker to train someone in one aspect of loading than in all the different ones.

The larger guns were difficult to move and required colling between shots otherwise the heat of the barrel could set off the powder prematurely, or the gun might explode when fired, killing the whole crew.

For siege work, guns would fire cannon balls but on the battlefield, guns often fired grape shots that would scatter and were more lethal, particularly if the gun captain was good at calculating range and firing, etc.

# ENIGMA

## ***Professional, Originally Released On Cassette Only***

Game Type : Strategy; Code-breaking puzzles  
Author : Unknown  
Standalone Release(s) : 1983: ENIGMA, Brainbox, £2.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : BRAINBOX, 20 Orange Street, LONDON WC2H 7ED  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### **Instructions**

*"Can you break the code?"*

ENIGMA is a new type of computer game. In most games you have a set of rules. In these games it is the other way round. The game will be over when you discover the rule by which it is being played. The computer will accept or reject cards - your objective is to discover the rules. There are five rules in all - but don't be discouraged - the games can be solved - if you have enough imagination and perseverance.

When you've solved all five enigmas, return the cassette with £4.00 and we'll send you another five by return.

## Review (Electron User)

"Ignoring the angry shouts, from the large, red faced man, charging down the corridor, you stepped through the veil of light, into the gleaming teleport cubicle and slammed your fist into the button! The rings of light, embedded in the floor and ceiling, pulsed energetically, and you braced yourself for the uncomfortable moment when your body would be torn apart, atom by atom, to be reassembled, moments later, on the Flight Deck of an Interplanetary Space Hopper orbiting a small, Earthlike planet called Enthar Seven. Let the adventure begin!"

First the good news: ENTHAR SEVEN is now available for the Electron. Now the bad: Only if you have an AP4 disc interface from Advanced Computer Products or any other DFS compatible with BBC Micro.

I had a slight problem getting started. I happen to like a leisurely beginning to an adventure game, and ENTHAR SEVEN doesn't exactly provide it.

I found myself in a planetary orbiter with a rapidly decaying orbit. The warning lights were flashing and I had some tasks to perform in order to get out intact. I tried to begin preliminary exploration, ignoring the problems, and got killed far too often for my peace of mind.

Just before total paranoia set in I thought of trying STAND, and the situation improved a bit - for a while. After I had finally calmed down I got myself out of that dratted orbiter and into the Command Centre. Then the game began in earnest...

I for one like the sheer complexity that the program presents. It's a game to load and then spend time with a map considering what item in what level will help you with a problem. After far too long I discovered that bats intent on killing me didn't need garlic, but something a lot more scientific and logical (and me with a 98 per cent pass mark in a logic exam in the dim and distant past).

There are the obligatory mazes. Though I hate them I must admit I really enjoyed getting the better of that Securibot and the rubbish heap.

One maze, in the cavern area, had me foxed - it's a twisty affair that normally would be mapped by dropping things. The trouble is that a creature shoots out and gobbles up everything you drop.

The answer to this problem is totally logical, and the clue for how to map the maze is clearly supplied in the location descriptions.

ENTHAR SEVEN really is a big game with over 450 locations. I have been fried,

frustrated, irradiated and thoroughly put into my place. The puzzles are good, the descriptions and atmosphere superb, the backup help is readily available.

If this standard is maintained, Robico is going to be well worth following and I would recommend that you buy all it publishes.

# ESCAPE FROM MOONBASE ALPHA

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Adventure Style  
Author :  
Standalone Release(s) : 1982: ESCAPE FROM MOONBASE ALPHA, Micro Power, £6.95  
Compilation Release(s) : 1987: PRES GAMES DISC 2, PRES, £9.95  
1988: MICRO POWER MAGIC 2, Micro Power, £7.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : MICRO POWER, 8/8A Regent Street, Chapel Allerton, LEEDS  
LS7 4PE. Tel: 01532 683186.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Left for dead on the nightmare planet, your only hope of escape is to find the Doctor deep down on Level 7 and pay him 10 bags of gold to transport you to safety in his time machine.

The monsters get stronger the further you descend into the heart of the Base. A good strategy, therefore, is to build up strength on the upper, easier levels by killing monsters and collecting gold before progressing downwards.

After the instructions have been displayed and the final part of the program has loaded, there will be about a 10 second wait while the game is set up.

## Game Controls

Z - Left, X - Right, \* - Up, / - Down  
T - Take a Hulk Pill, P - Pick up Gold

To pick up the Gold, move into the corner of the room and press P for each bag of Gold. You will not be able to do this if there is a monster in the room.

Taking a Hulk Pill doubles your strength for five seconds and allows you to walk through walls, but when you revert back your strength diminishes to one third of its original value.

For details of the many types of monsters you will encounter, see the instructions included in the program. Good luck!!

# EUROPEAN KNOWLEDGE

*Professional, Originally Released On Cassette Only*

Game Type : Educational; Quiz  
Author :  
Standalone Release(s) : 1984: EUROPEAN KNOWLEDGE, Micro Power, £6.95  
Compilation Release(s) : 1988: MICRO POWER MAGIC, Micro Power, £7.95  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : MICRO POWER, 8/8A Regent Street, Chapel Allerton, LEEDS  
LS7 4PE. Tel: 01532 683186.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

The program first prompts you for your name and then displays the main, full colour map of Europe.

The first question in a set gives you an inset map of one of the countries, with an arrow indicating its position on the main map, and asks you to identify it from a choice of four. Subsequent questions in the set ask about the country. Questions include the population, currency, language, famous people and large towns. Each is again presented as a multiple choice question.

When four questions have been asked on a particular country, the program selects another, at random and asks about that.

At the end of a set, your score is given as a percentage. You can view your score during the test by pressing escape when the program says "Press any key for the next question".

# EVENING STAR

***Professional, Originally Released On Cassette Only***

Game Type : Arcade Wireframe; Train-driving simulation  
Authors : Mike Male and Bob Hillyer  
Standalone Release(s) : 1987: EVENING STAR, Hewson, £9.95  
Compilation Release(s) : 1988: FIVE STAR GAMES III, Beau-Jolly, £9.95  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : HEWSON, 56B Milton Trading Estate, Milton, Abingdon, OXON  
Tel: (0235) 832939  
Disc compatibility : Incompatible. Fills whole program memory.

## Instructions

*"ON the 8th September 1962, the 'Evening Star', one of the most powerful steam locomotives of the British Railways fleet, pulled the 'Pines Express' from Bournemouth to Bath and back. This was the last time this train took the route over the Somerset and Dorset line to Bath, it being subsequently diverted via Reading and Basingstoke. This diversion of traffic from the Somerset and Dorset line sealed the demise of the line which was closed in 1966. This was the end of a picturesque and much loved railway with a long and glorious past. Take the role of both fireman and driver and join with us for a truly authentic journey into steam history."*

## Introduction

Welcome to the EVENING STAR, the second steam locomotive simulation from Hewson. The EVENING STAR was one of the most powerful steam locomotives of the British Railways fleet, one of the legendary BR9F Class, pulling its passenger train over the undulating countryside of the old Somerset and Dorset line between Bath and Bournemouth. You must take the roles of both Fireman and Driver. There are many levels of simulation. We suggest you read the instructions carefully then watch the computer demonstration for a few minutes. Study the control settings and then attempt the Training Run. Gradually you will be able to improve your skill and will eventually be able to take the EVENING STAR to Bournemouth in accordance with the timetable, using the coal and water available to the optimum efficiency.

To load the game follow the instructions below for your make of computer and wait until the main menu appears on the screen. Note that after about one minute the computer will automatically select a high speed run showing the whole of the line. To return to the main menu, press X.

## Getting Started

### Selecting the Demonstration

Load the program in the usual way and press key 0 when the main menu appears and then press the RETURN key when the timetable is displayed. The locomotive will pull slowly away from Bath, accelerating down the line on a local non-stop train to Evercreech Junction. Observe the various controls and study the readings on the gauges. Press CTRL and X to return to the main menu.

### High Speed Run

If RETURN is pressed when the main menu appears, the program executes a High Speed Run along the entire line. You will be able to see all the features along the way pass in quick succession. To exit, press X.

### Starting A Training Run

Press 1 when the main menu appears and 1 again for the locomotive control menu. This will give you control of the Regulator, Cut Off and Brake only. The remainder of the controls will be adjusted by the computer. Read the schedule displayed and then press RETURN.

With the locomotive standing at Bath Station open the Cut Off fully by pressing C four times. Half open the Regulator by pressing R twice. After fifteen seconds or so the locomotive will pull slowly along the platform and out of the station.

Observe your speed display and when you are travelling at four miles per hour or faster, press R twice more to open the regulator fully. The locomotive will then accelerate more rapidly as it moves past the Gasometer and up the steep incline of Devonshire Bank. If you open the regulator too soon, the locomotive driving wheels will slip on the running rails leading to a loss of speed and wasting steam (this is indicated by a sudden increase in the sound speed).

You may have noticed that when the computer has total control on the Demonstration run that it reduces the Cut Off when the train is moving. This uses steam more efficiently and you should do the same to conserve as much steam as possible to enhance your Economy rating at the end of the run.

To exit from a Training Run (or any other run except the high speed) press CTRL and X.

### **Screen Layout**

The main part of the screen is the view of the cab, the controls and the line ahead. Above this is a sign naming the next station or line feature that you will encounter. Below is the message area to relay important information to you, the driver. To the side of the view screen is various control information including your speed, the amount of coal and water remaining, the status of the next signal, the current gradient and the profile for the next one and a half miles, the actual time and the position of the locomotive relative to Bournemouth and to Bath Junction which is half a mile from Bath Station. Historically, it is from this position that all mileages are measured on the Somerset and Dorset line.

### **Game Controls**

#### **Locomotive Control Keys**

CONTROL	INCREASE SETTING	DECREASE SETTING
Regulator .....	R	SHIFT + R
Vacuum Brake .....	V	SHIFT + V
Cut Off .....	C	SHIFT + C
Blower .....	B	SHIFT + B
Injector .....	I	SHIFT + I
Firedoor .....	F	SHIFT + F
Damper .....	D	SHIFT + D
Sound Whistle .....	W	
Stoke Fire .....	RETURN	

#### **Program Control Keys**

FUNCTION	KEY
Toggle between accelerated and real-time .....	A
Toggle between smoke on and off .....	S
Return to main menu .....	CTRL + X
Hold, waiting for RETURN to restart .....	H
Display timetable .....	T
Acknowledge message .....	SPACE BAR
Increase engine noise .....	H
Decrease engine noise .....	SHIFT + N

To enable you to judge whether or not you are burning your coal efficiently the following keys may be pressed to simulate the various states of combustion:

#### **Smoke Demonstration Keys**

SMOKE LEVEL	KEY
Very light smoke - far too much air .....	1
Light smoke - too much air .....	2

Correct smoke level .....	3
Dark smoke - insufficient air .....	4

## Menus, Messages And Speed Limits

### The Main Menu

LEVEL	SUMMARY
RETURN .....	High Speed Run - automatically selected after one minute
0 .....	Computer Demonstration - Computer-controlled non-stop run to Evercreech Junction
1 .....	Training Run - Identical run and schedule to level 0 with you in control
2 .....	Local non-stop run with added complication of speed limits
3 .....	Local stopping train with speed limits and signalling
4 .....	Full line stopping train to Bournemouth with speed limits and signalling
5 .....	Try to break the record for the fastest non-stop run to Bournemouth
6 .....	Drive the prestige "Pines Express" to Bournemouth, time errors are marked severely
7 .....	Any schedule with extra problems

### Speed Limits

HAZARD	LIMIT
Permanent Way Working .....	30 mph
Passing from single to double track or vice versa .....	40 mph
Passing or near Siding, Junction or Loop .....	40 mph
Overall line limit speed .....	70 mph

Note that excessive violation of the 40mph or 70mph limits will result in derailing the Train.

## Fatal Error Messages

ERROR MESSAGE	MEANING
Fusible plugs gone .....	Water level in the boiler too low
Boiler overflow .....	Water level in the boiler too high
Overran stop signal .....	Passing a stop signal in the down position
Unsafe reversing .....	Allowing the train to run backwards
Blowback .....	Failure to open the Blower in a tunnel or when the regulator is shut
Derailed .....	Excessive violation of speed limit
Crashed at B'mouth .....	Hit buffers at too high a speed
Collision .....	Colliding with oncoming train in single line section due to lack of token
Poor stop at .....	Failing to stop close enough to the far end of the platform
Short stop at .....	Failing to stop for the full 60 seconds minimum at a station
Rough stop at .....	Using vacuum brake setting 3 or above when coming to a halt at a scheduled station
No stop at .....	Failing to stop at a scheduled stopping station
No whistle at .....	Failing to blow whistle before starting off, or before a tunnel or permanent way work
Hit buffers at .....	Failing to come to a halt before the buffers when arriving at Bournemouth
Em brakes at .....	Using vacuum brake setting 4 (maximum)
Speeding near .....	Failure to observe speed limit
No token at .....	Failure to pick up token upon entering a single line section, because of excessive speed

## Run Options In Detail

### Option 0 - Computer Demonstration Run

This run demonstrates the various techniques required to drive the locomotive with the computer running all controls on a local non-stop run to Evercreech Junction. You are advised to study the various settings used to help you learn correct driving methods. Should you wish to hold the run at any stage, you can do so by pressing "H" which will stop the run and await the press of RETURN. Also you can accelerate the run so that the time passes four or five times quicker than normal by pressing "A" (note the rapid movement of the clock display). Press "A" again to return to normal. This is useful during some of the longer stretches of the run. You have control over whether or not the smoke is displayed by pressing "S".

### **Option 1 - Training Run**

A practice session for the novice driver/fireman with the same schedule as the computer demonstration. You are expected to adhere to the timetable exactly. Any deviation from the times shown will be penalised at the end of a run in the time score. You can halt the program to consult the timetable at any time by pressing "T". The timetable with any completed times will be displayed. From this part of the program you can also check for any errors by pressing "E" or save the position of the run to date by pressing "S" (see the section on Saving and Loading a run). A short beep is sounded to assist you when the computer records a time for the timetable. Note that the times shown on the timetable are minutes only. It should be apparent from the time displayed to which hour each refers.

When arriving at Evercreech Junction you must bring the train to a halt near to the end of the platform so that all your passengers may alight safely. You must also bring the train to a halt without the use of heavy braking. Emergency braking (maximum braking) should not be used at any time due to the risk to your passengers and will result in a loss of safety score.

You will be penalised for any mismanagement of locomotive controls that you have elected to control yourself. Correct methods of use are detailed in the accompanying notes "How a Steam Locomotive Works" and all such methods are practiced by the computer when it has control.

At the end of a run your performance is assessed with regard to economy, safety and timekeeping. A result of 70 per cent overall is considered acceptable. The economy assessment is based upon the stocks of coal and water remaining. The page of errors and events can, once again, be displayed in place of the timetable by pressing "E".

If by some misfortune you have committed a fatal error and the run has been terminated before the end of the timetabled run, you may resume the run from the point of catastrophe by pressing "R". Timekeeping and economy assessments are unaffected by the premature end, but safety will be zero. Upon resumption of a run, the computer will have taken some action to prevent an immediate recurrence of whatever problem you have encountered. However, you may have to take some more permanent action to prevent further mishap.

### **Option 2 - Short non-stop with Speed Limits**

A train on a non-stop local run, where speed limits are in force at many places down the line. Each one is associated with a line feature, and can be identified visually. The position of each is shown on the gradient profile by the letter S or by the change in track type. The major speed limits are of 40mph and they are associated with positions where the track splits from single to double or vice versa, near junctions where another track can be seen joining the main line, or where there is a siding beside the track or a passing loop (characteristic of some single line stations). Failure to observe these limits will result in a loss of safety marks and in extreme cases derailment.

There is another form of speed limit also of 40mph in that you must enter each section of single track at or below that speed. This is so that a "token transfer" may take place, the "token" being an object which is held by a particular train to ensure that only one train at a time may use a single track section. Failure to achieve token transfer is dangerous as you run the risk of collision with an oncoming train. When successfully held the token is shown at the top right of the cab.

Whilst passing near permanent way work you are expected not to exceed 30mph. Passing at speeds in excess of this will result in a loss of safety marks but there is no derailment risk. Permanent way working affecting the line will be notified at the start of the run.

There is an overall limit of 70mph for the entire line.

### **Option 3 - Short Stopper and Signalling**

In addition to the speed limits of Option 2 you must also obey all signals and make the stops demanded by the timetable.

Signals divide the line into sections so that trains on the same line run at an adequate distance from each other. There are two types of signal used on this line, stop (with a square end) and distant (with a notched end). Each has two positions; up for clear and down (horizontal) for stop or caution. Stop signals may come singly or in groups.

You must not pass a stop signal in the down (stop) position. To give warning of the condition of the stop signal a distant signal is placed a suitable distance before it. It will be down (caution) if the stop signal to which it refers is down i.e. at the stop position.

In order for you to have the maximum time to react, the state of the next signal to be passed is reproduced separately in the signal section of the screen.

The stations at which you are scheduled to stop are shown in capital letters on the timetable. You must attempt to stop close to the far end of the platform once again without excessive braking. Should you pass the end of the platform before the train has come to a halt a beep will sound and you will be assessed as not stopping at a required station and will be penalised as such.

You must arrive at the station in good time to allow at least one minute for your passengers to embark and disembark. If the computer is controlling the whistle, it will sound exactly one minute after arrival. Should you be in control of the whistle you must ensure that it is blown before setting off. The timetable gives the required departure time.

### **Option 4 - Long Stopper**

A train which runs the entire length of the line from Bath to Bournemouth with intermediate stops. All the constraints of previous options apply.

### **Option 5 - Record Run**

This is a full line non-stop train with a timetable that will allow you to complete the journey to Bournemouth in record time. Any run which arrives at Bournemouth on time can be considered good. Arriving early is outstanding.

### **Option 6 - Pines Express**

This is the premier train to run the line. You are expected to maintain the prestige of the Railway company and adhere to the timetable scrupulously. Any errors in this area will be more severely punished than usual.

### **Option 7 - Problem Run**

You will be presented with any timetable, all constraints apply. However, you will also have another serious problem to contend with to make your task a little more difficult. You may be passed a message below the main screen. Once read it can be acknowledged (and therefore wiped) by pressing the space bar.

### **Saving And Loading A Run**

Because a complete run can take in excess of two hours in **real** time, we have given you the facility to save the current position to reload later. This is done from within a run by pressing "T", then "S" when prompted.

Tape users are recommended to ensure that the tape is beyond any leader section at the beginning of a tape before attempting to record a run. Failure to do this may result in the run not being successfully recorded.

### **Machine Notes**

Because of the amount of memory space taken up by EVENING STAR, it has been necessary to use some of the Acorn Electron's memory used by the Plus One interface. Consequently, the save and load feature will not work on the Electron when the Plus One is attached.

### **How a Steam Locomotive Works**

These notes describe the operation of a steam locomotive with a particular reference to the screen display and controls of Evening Star. Understanding how a steam locomotive works will help you to master the controls more quickly.

The driving force of the locomotive comes from the cylinders where a piston is pushed back and forth by the steam pressure raised in the boiler. Hot gasses from the firebox are drawn through the boiler by a system of tubes, which heat the water to boiling point, converting it into steam. The hot gasses drawn through the boiler then enter the smokebox and escape through the chimney. The performance of the locomotive depends upon the pressure in the boiler, which can be controlled by manipulating the fire.

### **Water Gauges**

These are two vertical tubes in the centre of the cab. They are very important as they give a visual indication of the level of water in the boiler. The bottom of the gauge is one inch above the firebox top, which must be kept covered at all times otherwise the fire will heat the firebox top beyond limits causing special plugs (called fusible plugs) to melt allowing steam into the firebox. This action cools the fire and alerts the train crew.

If too much water is carried in the boiler and the gauge reaches the top, water instead of steam will enter the cylinders causing permanent damage.

Ideally you should attempt to maintain a water level in the top half of the gauge. Should a failure occur, the run will be terminated with the consequential loss of marks.

### **Steam Pressure Gauge**

A round dial with a needle pointer, situated in the centre of the cab, graduated from minimum on the left to maximum (200 psi) on the right. The more steam pressure maintained the higher the potential power of the locomotive. However too much pressure will lift the safety valves and release steam thereby reducing pressure to below maximum (shown by two jets of steam issuing from the boiler top). This represents a waste of coal and water and should be avoided to achieve maximum efficiency.

### **Whistle**

The whistle is part of the safety equipment and must always be used before starting away, entering tunnels or approaching sections where permanent way gangs (railway maintenance teams) are working. To conserve steam, the whistle should not be used indiscriminately.

As a guide to correct whistle usage, when the computer is controlling the whistle it is blown at the earliest time in each of the circumstances detailed above.

### **Regulator**

A level situated on the top left of the cab which controls the flow of steam to the cylinders. It has five positions, closed on the right, progressing to fully open on the left. Opening the regulator applies power to the wheels and it must be adjusted when running to suit requirements. Always close the regulator when braking. Open the regulator when starting away as too much power will cause the wheels to slip (especially in adverse weather conditions). Wheel slip will be apparent from the increase in the speed of the steam exhaust.

### **Cut Off**

A wheel control on the bottom left (marked C) which controls the time during the cylinder cycle that steam is allowed into the cylinder. It has five positions, 0% (straight up), 20%, 35%, 55% and 75% (straight down). For example, when the cut off is set to 20%, steam is allowed to enter for just 20% of the cycle. This has the effect that the expansive properties of steam are used more efficiently, by reducing the steam usage significantly for only a small loss of power. You will need to use this control to obtain high efficiency. When starting away, it is normal practice to use 75% cut off.

### **Vacuum Brake**

A wheel control situated between the regulator and the cut off (marked V) which has five positions; off (straight up), light braking, medium braking, heavy braking and emergency braking (straight down). The brakes act upon all the carriages and are held off by maintaining a vacuum in a pipe connecting the carriages, braking being achieved by progressive release of the vacuum via the vacuum brake control.

In the event that the communication cord of the train is pulled, emergency braking is automatically applied and will be released as appropriate. Emergency braking must not be used by the driver except in extreme circumstances, as a poor safety rating will result. Avoid using harsh braking to bring the train to a halt at a station for the comfort of your passengers.

### **Blower**

A wheel control situated centre right of the cab (marked B) which is off when pointing straight up. It is essential that at all times gasflow is maintained drawing the gasses from the firebox out through the chimney ensuring that no flames or gasses are allowed to escape into the cab via the firehole doors. Normally this gasflow is supplied by the exhaust of used steam up the chimney when the regulator is open. This gasflow will be interrupted to closing the regulator or by the confines of a tunnel. In these circumstances, normal gasflow must be maintained by opening the blower which sends a jet of live steam up the chimney. Failure to use the blower when necessary is dangerous and can lead to an "explosive blowback" into the cab. Use of the blower should be limited to only when necessary due to its cost in the loss of steam.

### **Injectors**

A wheel situated top right of the cab (marked I), which controls the device by which water from the tender is forced into the boiler. It has five positions, off (straight up), progressing to full on (straight down). This is the means by which the level of water in the boiler is maintained.

### **Dampers**

A wheel situated on the bottom right of the cab (marked D) which controls the amount of air provided through the base of the fire (called primary air). It has five positions, closed (straight up) progressing to fully open (straight down). By control of the amount of primary air it is possible to vary the temperature of the fire and thereby the amount of water evaporated into steam. To achieve a hot fire a large amount of primary air is required for combustion. Conversely for a cool fire only a small amount of primary air is required. To help you judge the temperature of your fire, a thermometer style temperature gauge is presented in the cab centre. The indication of correct combustion is the colour of your smoke such that black smoke would indicate insufficient air for the temperature of the fire, grey smoke indicates correct air and lighter shades indicate too much air. If too little air is supplied coal combustion will not provide the maximum heat value. If too much air is supplied, heat will be wasted in heating the excess air. To be efficient you must aim to maintain the correct air supply as far as possible. (Whilst manipulating the fire temperature correct combustion is unlikely). The rate at which coal is consumed increases with the temperature of the fire.

### **Firehole Doors**

A pair of steel doors used to confine the fire and to control the flow of air over the fire (secondary air). To achieve optimum performance of the fire, the level of coal must be maintained in the middle third of the firebox. Coal levels outside these parameters cannot achieve maximum temperatures. You must fully open the firedoors whilst coal is being added (indicated by a shovel at the top right hand corner of the display). Failure to do so will waste coal. In all but the highest level of control the computer will do this for you. For perfect combustion a small amount of secondary air may be required.

The firedoors can also be used to assist in the manipulation of fire temperature. For example to raise the temperature. For example to raise the temperature of the fire "quickly" keep the firedoors shut, and to lower the temperature "quickly" open wide.

### **Gradients**

Railway lines are not level and steam railway locomotives are affected by the gradient of the track. The gradient is indicated in the same manner as road gradients, e.g. 1 in 100. This would indicate a slope up or down of one foot for every 100 feet travelled. A cross section of the gradients of the line together with the positions of the stations and tunnels is shown in the gradient profile included. The exact gradient of the track at any particular time may be displayed in the signalling area.

Vacuum brakes must be used to ensure that the train is never allowed to run backwards on an up gradient.

# EXILE

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade Adventure Of Unbelievable Proportions  
Author : Peter Irvin and Jeremy Smith  
Standalone Release(s) : 1989: EXILE, Superior/Acornsoft, £12.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : ADFS 1D00 (*Official Acorn Plus 3 Unit Only*)

## Instructions

*"A Massive Arcade Adventure...featuring Characters with Realistic Movements and Actions."*

*"The planet Phoebus has been taken over by an exiled, evil Genetic Engineer, named Triax. In a complex warren of caves, he has built an evil world inhabited by eccentric robots and strange mutated creatures, such as blue monkeys, giant wasps and sharp-toothed eyeless maggots. On the planet surface and around the caves are scattered the debris of a previous mission, and maybe some of the members of that ill-fated venture still remain."*

*"Have you the skill and cunning to conquer the world of the exile? Are you of elite status? If you take up the challenge, you will have to carefully pick your way through the massive cave system, solving complex puzzles along the way and ruthlessly destroying the alien creatures until finally you face the evil one himself."*

*"'I liked many aspects of the game: its attention to detail; the windtunnel - like dust effects in the windy areas; the water bubbling in the flask; the sparks in the fires; and being able to aim your gun at any angle. It's definitely the best game this year.' ...Acorn User."*

*"'Exile is even more enjoyable to play than Elite or Zarch.'...David Braben (co-author of Elite, author of Zarch)."*

## Introduction

On your return from another mission, you are made to divert to the planet Phoebus by Columbus Force High Command with orders to overpower the psychopathic Triax and eliminate his evil maggot creations lest they are let loose on Earth to wreak havoc on its innocent population.

You arrive alone and weaponless. Your spacesuit is under-equipped; its jetpack weak and its weapon slots empty after the toils of the last mission.

Parking your spaceship in geostationary orbit, the wreck of the Pericles on the planet far below, you are visited.

The blurred image of an emerald spacesuit appears...and disappears. Your Destinator is stolen. Now, as for the Pericles' crew, you are marooned. Your spaceship, no longer able to take you off this planet, floats powerless in orbit.

Only if you retrieve your Destinator can you escape from the planet of the exile.

But you have a mission to do first.

## Summary of Keyboard Controls

### Motion Keys

- P - Thrust up (and jump)
- L - Thrust down
- Q - Thrust left (and walk left)
- W - Thrust right (and walk right)
- Cursor Up - Boost motion (and enhanced jumping)
- <CTRL> - Lie down
- <CAPS LK> - Turn

### Weapon Keys

- <SPACE> - Fire currently selected weapon, or trigger held item
  - f(n) keys - Select weapon n, and sound out its energy (in megajoules (MJ))
  - <SHIFT> + f(n) - transfer energy TO the currently selected weapon taking energy FROM the weapon selected by this f key
- The weapon types are:
- f1 - Pistol (Uses 3kJ of energy per firing)
  - f2 - Icer (8kJ per firing)
  - f3 - Blaster (600kJ per second)
  - f4 - Plasma gun (25kJ per firing)
- Also <ESCAPE> selects the Jetpack  
and f5 the Protection Suit.

(Note: 1000 kilojoules (kJ) = 1 megajoule (MJ)).

### Aiming Keys

- O - Raise aiming angle
- K - Lower aiming angle
- I - Centralise aiming angle

### Holding Keys

- < - Pick up object (push against it while holding key)
- > - Throw object (using aiming direction)
- M - Drop object
- S - Store held object in pocket (up to 4 storable)
- G - Get next object from pocket

### Personal Transporter

- R - Remember current location
- T - Teleport to previous remembered location

### Miscellaneous Keys

- <DELETE> - Freeze/unfreeze toggle
- CURSOR keys - Use in conjunction with <SHIFT> to displace the screen in the direction of the arrow
- U - Whistle 1
- Y - Whistle 2

## Use of the Keys

### Thrusting

Pressing the thrust keys will cause a pressurised jet of air to issue from your jetpack (or water, if you are under water).

You will see this jet as a stream of particles. The jetpack compressor requires energy to operate. The remaining energy in the jetpack is sounded out in megajoules (MJ) when you press <ESCAPE>. See "Energy Management" below for more information.

Sometimes the outlet nozzles of your jetpack get blocked. They will automatically clear themselves with time; meanwhile you are grounded.

### Lying Down

Lying down can sometimes be very useful. Use it to hide behind things, duck missiles and make crawling through cracks easier. You can thrust while pressing the lie-down key. Use this to crawl.

### Walking

When you are standing on the ground if you press the thrust left or thrust right keys you are automatically put into walk mode. Walking uses no energy because the jetpack is not functioning. While in walk mode you can jump.

### Jumping

While you are standing or walking you can jump by pressing the thrust up key. Holding down the boost key when you press the jump key will increase your jumping height.

### Teleporting

Being a special agent of the Columbus Force, you are equipped with a special spacesuit which has the facility for teleportation; the ability to transport to another location by means of dematerialisation and rematerialisation. This process is well documented in other texts so I won't go into the detail of it here, but you can be sure that the crew of the Pericles could have done with these devices.

Your teleport circuitry can only remember five locations. The last of these is always your spaceship so in effect you can only remember four locations. The system works like a "stack". Every time you press the "remember" key, your location is put on top of the stack. Every time you press the "teleport" key (or are automatically teleported due to being near to death) you will appear at the last stored location and THIS LOCATION IS THEN FORGOTTEN by your teleport circuitry.

Usually when you are forced to teleport away from danger you will want to remember your position again immediately after materialisation.

**I will guarantee that you will sometimes forget to re-remember your teleport location after teleporting.**

It is important that you use the personal teleport device properly. **Don't** store your teleport position somewhere unsafe. If you do, you will get hurt, be automatically forced to teleport, and arrive (still hurt) somewhere dangerous, and immediately get hurt again causing you to re-teleport...

What you should **not** do is to fly into a cave with something dangerous in it and press the remember key four times. You will just get very frustrated. Use your brain; there is usually an easy way to do things.

**Do** store your position somewhere safe. This gives your spacesuit protection circuits time to recharge before you are hurt again. You will rarely need to store the same position more than once.

Try to use your own memory. Remember the last four stored positions in your head.

Also know that every time you are automatically teleported due to being hurt, your score is reduced. You will need to press the remember key again if you intend to teleport back to this location.

You can use your teleport strategically too. For instance, to get past a creature that keeps pushing you away, you could remember your teleport location, be pushed back, teleport. You will now be on the other side of the creature.

Note that you cannot teleport while holding something and that when you are very hurt you will sometimes not be able to remember your teleport location.

### Aiming

The aim keys control the direction of throwing and the direction that the projectiles are fired from your guns. For your convenience there is a centralise key which sets the aim direction to horizontal.

Pressing any of these keys produces a stream of particles to show the instantaneous direction of aim.

Pressing the aim up and aim down keys together shows the present aim direction without changing it.

### **Picking up/Throwing/Dropping**

To pick up an item you must move forward onto it whilst pressing the pick up key. Not all items can be picked up: it is a matter of "suck it and see". You can stand on an object and pick it up OR have it on your head and pick it up - as long as its centre is in front of your centre.

If you do manage to hold an object you can drop or throw it. Pressing the drop key just lets the item fall from your hands. Pressing the throw key launches it in the direction defined by your aiming. Realistically, light items can be thrown further than heavy ones.

Also thrusting and walking is slower if you are holding a heavy object.

You may find that you will lose grip of a held object, and drop it if it is knocked hard against the terrain or another object.

Some items (passes, guns, the booster, etc...) are automatically attached and become part of the built-in equipment of your spacesuit when you pick them up. These items cannot be dropped again.

You cannot fire your suit-attached weapons while you are holding something.

(Note: You cannot voluntarily teleport if you are holding something but, if you are automatically teleported just before you are killed, you will drop the object first)

(Note: You can play football and basketball with your RCD if you aim slightly upward and, while holding the throw and pick-up keys together walk against the RCD)

### **Storing Away and Getting Out Objects from Pockets**

There are four equipment pouches (pockets) in your space suit. Into these you can put some of the objects that can be picked up and held. Pressing the "Store" key will put a held object in a free pocket. If this doesn't work it either means the objects is too big to be stored away or that your four pockets are already full. If it is the latter, then you can still exchange it with one of the pocketed items by using the "Get" key...

Pressing the "Get" key will retrieve an item from one of your pockets. Pressing it again will store away the first object and retrieve the next object from your pockets. (If you only have on item then this will be retrieved again). The "Get" key cycles through all four pockets.

Sometimes when you are very weak due to damage you will start to drop items from your hands and pockets.

### **Miscellaneous Keys**

Scrolling the screen with the cursor keys.

EXILE had been designed so that the screen tries to follow the spaceman wherever he goes. Normally it tries to keep the man in the centre of the screen. However a special feature has been included in the game to enable you to offset this position in both the vertical and horizontal directions so that you can view a larger area around you.

Do this using the <SHIFT> and CURSOR keys.

Sometimes the keys won't scroll the screen immediately: you will only notice the change when you move - forcing the screen to follow you.

## **Getting Hurt and your Space Suit**

Like in the real world, when you get hurt you will scream with agony, after all it's not nice, is it? Also like in the real world, when you are badly hurt you get stunned momentarily. Unlike in the real world, when you are near to death you begin to flash - the more unwell you are the more you flash and the less responsive your motion control. You will start to drop things out of your pockets.

Eventually, when you are in deep trouble, the automatic defence circuitry in your spacesuit will intervene and, detecting that you are near to death, will force your personal teleporter to operate - taking you back to your last stored teleport location.

It is best to voluntarily teleport away before you "die" because you won't drop things from your pockets and you won't get a score penalty.

If you rest and remain unhurt, your body is automatically healed by your suit's medication circuits and you will soon stop flashing and later regain full strength.

## **Energy Management**

Some of the equipment that is attached to your spacesuit (jetpack, pistol, icer, blaster, plasma gun, protection suit) requires direct energy input. Each of these six devices has a battery into and from which energy can be transferred. Initially, you only have the jetpack (not to be confused with the jetpack booster).

To select a particular piece of equipment you press the corresponding function key (fn). On the Electron these are the number keys and the jetpack is selected by pressing the <ESCAPE> key instead of f0. This will sound out the remaining energy in short blips. Each blip represents 1MJ of energy (equivalent to a power pod). Apart from the jetpack (which cannot be "fired") the fire key will use the selected weapon.

To transfer 1MJ of energy from another device into the current selected weapon, press <SHIFT> and the fn key for the device from which to take the energy. If less than 1MJ is available, no energy will be transferred.

For example, if you want to charge your icer (which is your currently selected weapon) from the pistol (which has 3MJ remaining in it) press <SHIFT> f1. This can be done up to three times since there are only that many MJ in the pistol.

Note there may also be a hidden residual amount of energy (a fraction of 1 MJ) which is not transferable.

When one of these devices is low on energy, it will function intermittently.

To gain extra energy, you need to pick up and store away energy pods, which get absorbed by the jetpack, giving 1 MJ of energy. These pods are unstable, and burst into flame after a short time, so you should store them away quickly.

## **A Description of Some of the Equipment you will find**

### **Grenades**

These have a countdown period of about four seconds. The countdown starts when the grenade is thrown, dropped or activated by pressing the Space Bar. You can

also stop the countdown by pressing the Space Bar a second time while holding the grenade.

Note: you can pick up primed grenades.

### **Doors**

An unlocked door can be opened by touching it. Some doors close automatically, others require touching again. You can lock or unlock a door using the remote control device (see below), but only if you have picked up a key of the same colour as that door. Sometimes there will be a switch to unlock a door (for example in your ship) or an invisible trigger-cell. Different coloured doors have different strengths; some can be destroyed with grenades, for instance.

### **Transporters**

Transporters are teleport booths. They are machines which can teleport any matter from the booth to the location programmed into its computer circuits. When active you will see the glowing beam scan the volume of the booth. When deactivated this beam is stationary. Some of the transporters have pass control circuits which means they can be deactivated by the RCD if the correct pass has been found.

### **Remote Control Device (RCD)**

The RCD can be used to unlock and open OR lock and close the metal doors that were set up by the crew of the Pericles. It will also activate and deactivate some transporters.

To use it hold and aim it (using the aim keys) at the centre of the door (or at the glowing beam part of the transporter) and activate it by pressing the Space Bar. You will hear a sound and see a particle showing that it is functioning. The target must be in line of sight and within 10 metres range of the RCD.

All the metal doors and the transporters set up by the landing party have pass-activation circuits. You must collect the relevant pass (colour coded to the doors) in order to affect the target.

Note: the RCD will not affect the ancient tile doors that you find scattered around the planet. These have been there for centuries and are of an alien design.

### **Cannon Remote Control Device**

This operates similarly to the other RCD except that it only controls the firing of the cannon. Aim it at the centre of the cannon.

### **Keys/Passes**

Passes are electronic keys that, when fitted to your spacesuit, allow the RCD to activate doors and transporters that are tuned to that particular key. The passes are colour coded to the doors that they open.

### **Power Pods**

The remaining power pods discarded by the ill-fated landing party are your main source on Phoebus. They are small fragile capsules containing a 1 MJ quantity of ionised gas plasma. When knocked, they pulse eight times as their casing decays - eventually burned away by the searing gas within. To absorb the energy into your jetpack power cell you must pick them up and store them away into your pocket before the plasma escapes.

### **Jetpack Booster**

This attachment amplifies the power output from the standard jetpack with which you are equipped when you arrive on the planet Phoebus. It doubles your acceleration when you thrust while holding down the booster key. As you get experienced you will find that you will be using the booster a lot of the time while you thrust.

Note: the booster uses four times as much energy if you thrust while using it.

### **Pistol**

This weapon is a projectile weapon. The bullets cause damage on impact and are quite light. It is attached to your suit on being picked up and is selected to fire the f1 key. It uses 3kJ of energy per shot (which means you get about 333 per shots per MJ (or power pod)).

### **Icer**

This weapon is also a projectile weapon and, unlike the pistol, the bullets have explosive heads and so do more damage. They are also heavier. The projectiles use 8kJ of energy per shot (which means you get about 125 shots per MJ).

### **Blaster**

This weapon causes a blast of energy away from your suit. It is very wasteful of energy, using over 125kJ per blast (which means you get less than eight blasts per MJ).

### **Plasma Gun**

This weapon launches plasma balls (very hot charged gas) at a cost of 25kJ per shot (40 shots per MJ).

### **Protection Suit**

Pick up the red spacesuit which can be found in the cavern beneath the partly dismantled wreckage of the Pericles. With this suit you will have greater protection from all that hurts you. When the protection suit is running low in energy it will flash. When it is completely drained it will revert to the colour and meagre protection of the original spacesuit.

As it absorbs damage it uses up power, so you will sometimes need to recharge it. To do this, select the suit by pressing f5, then transfer energy to it by pressing, for example <SHIFT> f0 (which will take the energy from the jetpack).

### **Radiation Immunity Pill**

Get this and you'll be able to touch the glowing coronium without getting hurt.

### **Whistles**

After obtaining these you can use the whistle keys to control the robot Chatter when he is energised.

### **Other Items**

Various other items and artifacts are to be found on the planet but we will leave the function and purpose of these for you to discover.

### **Indestructible Equipment**

In common with the materials used to build spaceships, most of the solid state equipment that the landing party were equipped with is virtually indestructible.

This equipment includes passes, RCDs, guns, whistles, the cannon, the booster, the protection suit, the Destinator...

so don't be afraid of damaging these items: feel free to shoot at them or blow them up in order to move them.

Some of the attacking creatures and robots may seem indestructible but in fact are just very strong.

## **Game Position Saving and Loading**

EXILE has the facility to let you save and load your game position onto your own cassette. This is done from the Supervisor program.

### **Using the Supervisor Program**

When you first run the Supervisor program, it will print "Default" at the bottom of the menu. This indicates that the game will start from when you first reach Phoebus.

The options in the menu are straightforward. They are:

f0 - **Run the game** (using the game-save file named below the menu)

f1 - **Display the status screen**

This screen shows:

the time you have spent playing,  
your competition entry number,  
your overall score,  
the contents of your pockets,  
the keys (or passes) you have collected,  
and the energy levels of your weapons and other spacesuit equipment.

(A full bar of energy equals 32MJ (= 32 power pods)).

f2 - **See position**

This shows the position you'll arrive at when you run the game.  
Pressing the T key will show your four stored teleport locations.

f3 - **Catalogue** your cassette so you can look for the correct game-save position.

f4 - **Load position**

Type in the filename of the game-save file.

f5 - **Save position**

Type in the filename that you want to call your game-save file position.

f6 - **Score breakdown**

This screen shows how your overall score is calculated as the sum of several components. (See the "Scoring" section below.)

f7 - **Default position**

Pressing this will restore the game data to that of the default state - the game will start from when you first reach Phoebus.

When you wish to exit the game in preparation for running the Supervisor (for example to save your current position) you should:

- (a) Press SHIFT-f9 and wait for a second  
This puts data in a safe place (and fills the screen with rubbish)
- (b) Press CTRL-BREAK (to recover control of the machine)
- (c) Re-run the game (Rewind the tape and type CHAIN")

You'll soon get the hang of this odd process (which is necessary because EXILE uses every last byte of memory there is in your micro, so the game position saving routines and score calculations had to be put in a separate program).

The stages of a typical playing session would be:

- (1) Run the Supervisor  
(Rewind the tape and type CHAIN" then RETURN)
- (2) Load in your last save game position file  
(Press f4, insert cassette with file on, press PLAY on tape)
- (3) Run the main part of the game (by pressing f0)  
(Reinsert the game tape and press PLAY on your tape machine)
- (4) Type in the password from the Novella
- (5) Play the game
- (6) Exit the game by pressing SHIFT-f9.
- (7) Reset the computer by pressing CTRL-BREAK
- (8) Rerun the Supervisor (by repeating instruction (1) above)  
After it loads you will see "Unsaved" at the bottom of the menu
- (9) Save the game position by pressing f5

(Insert a new cassette on which you want to store the file)  
You can catalogue the cassette first by using f3

Cassette users that want to save their game position quickly without having to re-run the large Supervisor program can run the very much smaller file called "QSAVE" which is the last file on the tape. To do this type CHAIN"QSAVE" then press PLAY on your tape player. (You may have to rewind a small way if your tape player hasn't got motor control)

The first time you play the game you will not need to load in a previously stored position (stage 2). The game will run using the default data - the game will start from when you first reach Phoebus.

(Note: Pressing BREAK from the program looks as if it's doing what SHIFT-f9 does but this **will not work** properly)

## Scoring

Your proficiency as one of the Columbus Force special agents is scored in the following way:

You are given an overall score (shown on the status screen of the loader program) which is calculated as the sun of the following five components:

- + Kills (Points awarded for killing most dangerous entities)
- Kills (Points deducted for killing friendly/harmless entities)
- + Bonus (Points awarded for special achievements)
- Time (Points deducted at the rate of one per second)
- Deaths (Points deducted at the rate of 100 per auto-teleport just before your death)

So you see the quicker you are and the less you get "killed" the higher your score.

(Note: the creatures of which there is an infinite supply will not score you anything - for example, wasps out of hives, although you will score for the hive itself).

## Playing Advice

### Playing Philosophy

EXILE has been designed such that there are many ways of solving and resolving each of the various problems and puzzles that you will encounter beneath the barren wind-swept surface of Phoebus.

Just like in real life you will at time be exultant and at others frustrated by the problems set before you in the planet of the exile. Remember, if at any stage you are having great difficulty then STOP and make use of your greatest weapon in your mission to defeat the mad Triax. The one thing you should always wield is ... YOUR BRAIN (It's not just for head butts you know). If you are finding the going rough then you are more than likely doing things wrong. There is always an easy way.

### Using Guns as Tools

Everything in EXILE has mass, varying from the heavy boulders to the light wasps. On all impacts conservation of momentum applies so that you may get the same impulse (and so be knocked back at the same velocity) from a light fast-moving object as from a heavy slow-moving object.

Because of this you can use your guns as tools to move heavy objects around. The second gun (the icer) has heavier properties than the first gun (the pistol) so it will knock things back more effectively. Note, however, that it uses up your energy much faster.

The impulse imparted to the target from these collisions depends on the direction of motion before impact, so for example aim and fire upwards to give the target an impulse upwards.

Notice that impacts with the ground and other objects will be dampened by friction - the stuff that stops tyres slipping on roads. So you might be able to move heavy objects across the ground quicker if you get them off the ground by shooting at them not sideways but slightly upwards.

Note also that heavier objects are less affected by winds than light objects.

### **Enemy Sight**

The creatures and robots on Phoebus tend to aim for the centre of your body and will not "see" you if the terrain crosses a line joining their centre with your centre.

### **Credits**

We, as the authors of EXILE, would like to express our gratitude to the following people for their useful involvement in the EXILE project to date.

Richard and Steve Hanson for their patience and hard work,

Mark Cullen for trying to write us a novel,  
Jon (not to spelt John) Griffiths and THE David Braben for their ridiculous and inane suggestions for improvements,

Mark Lomas (proto-PHD) for putting up with us,

Giles Morgans for having to play-test the game only a few weeks before its release,

Chris Hart and Kevin Edwards for lending their expert skills,

Jacqui Lyons for her incredulity of the elastic completion date and for being our agent,

Greene King for keeping us numb between programming sessions (and sometimes during),

...and many others (especially those that have got nice things to say about the game).

### **EXILE - The Dark Chapters**

Those who need help to read the slippery slopes of the underworld can taste the delights of the Dark Chapters by reading these clues below. They should, out of respect for the Innocent Ones, brand themselves with the words "I have read from the Dark Chapters".

The **bolderised** parts give some indication of the content of the text (so you can choose whether or not to read the whole clue).

### **Chapter One (for mild sinners of those finding the going tough)**

**What would you say if I told you that all the following text is random gibberish?**

**There's still time to turn back you know.**

Only the green/yellow metal **doors** are easily **destroyed** by grenades. (Place the grenade near the door.)

**To get the grenade in the lower space-ship**, stand on the undercarrage beneath the tubes and do a boost-jump and thrust up at full speed flying through the tubes to knock the Cannon with your head.

**Put out fires** with the flask that has been filled with water.

**Transport beams can be shot through.**

**The horizontal cracks** beneath ceilings can be crawled through by running and jumping up and lying down to get your head in the crack. Then just thrust sideways into it. Horizontal cracks on floors can not be crawled through.

**Pink grubs** should not be allowed to be killed unnecessarily: you will need to make use of some of their properties deep to the east, to solve some problems.

## **Chapter Two (for experienced sinners)**

**Grubs and worms** appear from rocky ground (not from the "tile brick" ground). They are attracted by noise and are more abundant deeper down.

**Two grenades** are better than one. (Pretty obvious eh?)

**Feed imps** with their natural food. (What?)

**Fluffy** can be pushed through the horizontal cracks. (So...?)

**Chatter can be fed** with coronium crystals. (Where from?)

**The green frogman can be pushed back** using the block and pink frogman. You will need to help the pink frog to push by...?

## **Chapter Three (for those past hope)**

**The green frogmen can be fed** what?

**Coronium rocks** can be floated on the large block.

**Use the Pink Frog to push** you through mushrooms.

**Get the Radiation Protection Pill** out of the small cavern by using a piranha fish.

**The easy way to push an object through a horizontal crack** (if it is slightly taller than that crack); while hovering vertically, hold the object next to the crack, then press the lie-down key and thrust sideways into the crack throwing the object sideways, then shoot it through the rest of the way.

You're on your own now.

**Instructions' Source** : EXILE (Superior/Acornsoft) Booklet and Helpsheet

## **Review (Electron User) - "The New Masterpiece"**

The Pericles was on her 500th tour of duty, her mission to seek out new planets and boldly go where no man has gone before. Unfortunately it wasn't the first visitor to the planet Phoebus. Fifty years before its arrival Triax, a psychotic genetic engineer, crash landed on this planet inhabited by imps and maggots...and continued his warped experiments.

You play the role of Finn, the Dirty Harry of the Columbus Force, who has been assigned to investigate the mysterious events on Phoebus. Your objectives are to overpower Triax and destroy his mutant maggot production line before they set course for Earth and wreak their revenge on mankind.

A well-written novella graphically depicts the gory demise of each member of the Pericles' crew, but provides no major clues to aid the player as he pits wits and reflexes against this, the arcade/adventure to beat them all.

Due to the size of the game, the vital save options are handled by the initial loader program which provides all of the usual facilities that you would expect from a top notch adventure.

The story begins as you enter geostationary orbit above the planet Phoebus. Behind you a green spectral figure materialises momentarily then vanishes. Minutes later you discover that your ship's Destinator has disappeared and without it your craft is useless.

Donning space suit and jet pack you prepare to jump to the surface below, if only you could unlock the ship's hatch. A brief exploration of the cabin reveals the presence of a switch which, when kicked, unlocks it.

Stepping out into the blackness you fall gently on to a cross-sectional view of the abandoned Pericles. Several useful looking items can be seen inside the ship, but every hatch is locked and there are no handy switches nearby.

Leaping from the ship to the ground you wander towards an opening. But as you approach, a hamburger-shaped device attached to the underside of the ship swivels around and bowls you over with a few well-placed blasts from its stun gun.

At this point you decide that it would probably be safer to explore the planet's surface instead. Heading in an easterly direction you catch a few tantalising glimpses of goodies beneath the ground - courtesy of the cross-sectional viewpoint.

On the surface is a small bush, home of the most irritating canary you've ever encountered. This feathered foe isn't harmful, but it follows you everywhere pushing you down holes and into the firing line of the happy hamburger.

With experience I discovered you could pass the bird undetected by flying at altitude and landing on the far side. Here, hidden in a bush, you discover your first hand grenade.

Returning to the ship you decide to take your chances against the Big Mac blaster. Running towards the pit you suffer several hits, but manage to leap into the abyss and thrust out of range, only to find your way barred by a locked door. Remembering your grenade you drop it on the door, run to one side, and lay flat on the ground - this evasive action is most important as you'll be caught by the blast if you remain standing. The beeps of the primed grenade are followed by a bang and an open gateway to the underworld.

Thanks to the in-built intelligence of your spacesuit, death is an impossible occurrence. Whenever it feels that your life-force is dangerously low it teleports you back to a previously chosen position - if you haven't remembered a position you are returned to your ship. Remembering is something that should be done every time you find a safe, alien-free, area of cave. By pressing <R> you can store up to four separate locations in your suit's memory.

The caverns of Phoebus are home to a wide variety of imps, maggots, wasps, birds and an impressive selection of robots, many of which are armed with homing missiles. In addition there are natural barriers such as strong winds, water and inertia.

EXILE's detailed graphics enhance the game's infuriating puzzles beautifully. Everything is drawn on a small scale, thereby emphasising the vastness of the underground complex. The animation is fast and incredibly realistic - I marvelled at the way Finn was bundled head over heels by a blast from the stun cannon.

Jon Revis

### **\*\*\* Second Opinion \*\*\* (Electron User)**

EXILE is a massive arcade adventure in the CITADEL tradition. You must map out dozens of locations, find objects, use them in the right places and solve mind-bending puzzles.

What spoils the game for me is the very jerky scrolling - at times your character leaps all over the screen. It's a pity as EXILE would otherwise have won ELECTRON USER's coveted "Golden Game" award.<sup>2</sup>

ELECTRON USER 6. 7

---

<sup>2</sup> Janice Murray's last comment saves some face but the EXILE review is infamous as the biggest time ELECTRON USER got it wrong; the final table of scores is an insult to what it universally accepted as being the best game ever for the Electron. Much of the reasoning is given away by Jon Revis' review - they just hadn't gone far enough into it to appreciate what had been done.

# EWGEEBEZ

***Professional, Originally Released On Cassette Only***

Game Type : Arcade Adventure  
Author : Matthew Newman  
Standalone Release(s) : 1984: EWGEEBEZ, Software Projects, £2.99  
Compilation Release(s) : None  
Stated compatibility : BBC  
Actual compatibility : BBC, Electron (Not Master 128)  
Supplier : SOFTWARE PROJECTS, Bearbrand Complex, Allerton Road,  
Woolton, LIVERPOOL L25 7SF. Tel: 051/428 9393  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Zelob the Melkon has been marooned on the space station Ewgeebez. To escape, he must collect twelve power crystals to activate the main teleport which he must find in the mass of corridors which lie before him. Easy enough task you think to yourself but you haven't taken into account the alien creatures which regularly teleport in from a neighbouring foreign planet and of course the space station's own defence mechanisms, the patrolling robots armed with deadly laser beams.

## Control Keys

Z - Left, X - Right, \* - Up, ? - Down, SPACE BAR - Fire

**Instructions' Source** : EWGEEBEZ (Software Projects) Inner Inlay

## Review (EUG)

Frequently questions asked of the Electron regard compatible BBC software. The answer is usually to stick a Master RAM Board, Mode 7 simulator or DFS disk system on your Elk but a small minority of BBC software will work without any of these pricy extensions. Although EWGEEBEZ's front cover states '32k BBC Micro', it requires no jiggery pokery at all so is 100% Electron compatible. You don't even need to disable the Plus 1.

Software Projects' EWGEEBEZ is billed as a space station arcade jaunt and it is similar in some respects to STAR DRIFTER by Firebird. However, in that exploration, you control a spaceman and your surroundings have the distinct look of a space station. Ewgeebez space station is a maze of caves and you control a small 'fish'-looking craft.

The action is viewed from above and the idea is to navigate your craft (using the Z, X, \* and / keys) from screen to screen in search of twelve power crystals. You will also need to make a map and avoid anything that moves in order to complete the game.

Aliens (resembling the Software Projects' logo, a pair of false teeth and a spider) teleport into many of the Mode 1 screens, appearing in random places after you have been on screen a random length of time. Contact with them means instant curtains for one of your three crafts. Fortunately the aliens don't just 'appear' on top of you and lead to an unfair death - as they teleport in, they flash for several seconds giving you time to plan your strategy for avoiding, shooting or ignoring them. If the alien flashes close to you, you can use these seconds to pass through it without harm.

Apart from these foes, there are deadly machines firing bullets and fireballs on selected screens. Once blasted, they disappear but they are sometimes placed so shooting them is more difficult than simply avoiding them. The fireballs are fast and indestructible; they bounce off the walls of the maze and sides of the screen

until they hit something! One way systems also hinder you in your search for power, forcing you to return via a different route.

From the loading screen through the instructions and the code itself, EWGEEBEZ is a colourful and visually pleasing game. The loading time is less than two minutes and the sound, while not wonderful, is very good. The mazes are of different shades as you journey either up or down so you can deduce how near or far you are from the first screen - and the quest before you is reasonably difficult to complete.

The strangest thing about this game though is that your multi-coloured craft moves with a 'flicker' - even though the aliens don't and they're animated! It also slows down *not* when the maximum three aliens are present on a screen but instead when the screen is completely *empty*. Therefore, if no aliens teleport onto the screen, your craft tediously takes five seconds to travel from one side to another!

EWGEEBEZ is neat and well-programmed, and I'm surprised no-one has noted its suitability for the Electron before, but I can't say it's brilliant. It has enough variety to keep it from being boring yet it lacks STAR DRIFTER's crucial atmosphere. The quest, compounded by the lack of action on those screens devoid of aliens, is uninteresting and retracing your tracks takes a lot of time.

Produced in 1983 though, it was probably not only ahead of the Electron but its time too.

Dave Edwards, EUG #47

# FAB FOUR VOLUME 1

*Professional, Originally Released On Cassette Only*

Game Types : Arcade  
Release Information : 1989: FAB FOUR VOLUME 1, Audiogenic, £9.95  
Compilation Comprises : 1. THUNDERSTRUCK 2, Audiogenic  
2. OMEGA ORB, Audiogenic  
3. PSYCASTRIA 2, Audiogenic  
4. SPHERE OF DESTINY 2, Audiogenic  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : AUDIOGENIC, Winchester House, Canning Road, HARROW HA3 7SJ  
Disc compatibility : 1. Unknown  
2. CDFS E00, DFS E00  
3. Unknown  
4. Unknown

## Instructions

Four great games by two of the greatest BBC/Electron programmers of all time.

THUNDERSTRUCK 2 and OMEGA ORB are probably Peter Scott's best arcade adventures. Crammed full of puzzles, they'll give you hours of fun as you explore the enormous map.

Also in this first FAB FOUR collection are two remixed arcade classics from the maverick Gary Partis. The originals were great but PSYCASTRIA 2 and SPHERE OF DESTINY 2 are even more challenging!

*Four Full Price Games...For The Price Of One!*

Please see individual entries for full playing instructions.

## Review (Electron User) - "Arcade Action Revisited"

The packaging for this latest Audiogenic release depicts a Sixties-style record player and a title reminiscent of a certain Radio One Sunday evening programme. Is the FAB FOUR a new game based on those likely lads from Liverpool - Paul, John, George and Ringo? No, it's a compilation of two golden oldies and two spruced up Audiogenic games.

The instructions on the inlay are sufficient to tell you how to find your way around the games, though they could have been better set out.

PSYCASTRIA 2 is, unsurprisingly, the sequel to the original, which was highly rated when first released three or four years ago. For me though, this is the first time I have played it. Controlling a small spaceship aboard a massive spacecraft populated by ten circular energy pods which whizz madly along, it's your mission to destroy each pod before it shoots you.

The ship scrolls horizontally at Ayrton Senna hyperspeed as you try to shoot various bases on the ship. Though sometimes you can zoom along so fast that you crash into a tall building before you know what's hit you.

Between each level there is a bonus section where you have to destroy aliens flying across the screen. Unfortunately, I have yet to see what happens then, as I still haven't quite got the knack.

The graphics are clear, colourful and well-detailed and the scrolling flicker-free. Good sound incorporates a lively tune accompanying the high-score table, a nice special effect as you prepare to play and a jolly tune as you enter your name.

PSYCASTRIA 2 is difficult but infuriatingly addictive as you just have to have another go to achieve a place on the high-score table or see what happens on the next level.

THUNDERSTRUCK 2 is an oldie in which you control an extremely unathletic spacesuited person who lumbers his way around a space complex. All sorts of wicked objects lie in wait to put a stop to your mission which is to find four vital parts of the DeactiUnit. Of course there are many puzzles to be solved on the way, almost all of which involve locked doors and communicating with robots.

The graphics are fairly good with cute but deadly characters moving horizontally or vertically while you jump across the various ledges on the screen. The graphics bear a more than passing resemblance to SPYCAT from Superior. The sound consists of a series of bleeps and a simple end of game tune.

THUNDERSTRUCK 2 is a fairly average arcade adventure which doesn't stand out from the crowd, but it kept me glued to my micro for several hours. The puzzles start off easy and become progressively more difficult.

SPHERE OF DESTINY 2 takes over where the original game left off. Once again you control a small spherical droid called Bruce who has unwisely taken up a mission to go through 64 space highways, all of which are constructed from small tiles, set out on five different rows.

Each tile has its own colour which indicates how Bruce will react to it. A yellow or blue tile will have no effect while red will slow him down, green does the opposite and purple makes him jump, cyan reverses the controls, white gives a special bonus, but black holes bring the time limit much closer.

SPHERE OF DESTINY 2 is initially interesting, but as the levels increment, they don't seem to become any more difficult to complete and become repetitive.

OMEGA ORB is another Peter Scott oldie of 1987 vintage, this time featuring a cute creature which exhibits a beautiful squashy effect when he hits the ground. Moving your Orb around a lunar landscape, through caverns collecting Core Pieces is the basis of the adventure, while evil looking creatures with matching intentions try to hinder your progress.

Large animated sprites, used not only for moving creatures but also for many landscape features, allow you to walk through the scenery. A challenging game, though similar to THUNDERSTRUCK.

As four-game compilations go this is a better than average collection as they all provide a high enjoyment factor. I noticed that the cover bears the legend VOLUME ONE. Will we be seeing a sequel? I hope so.

Cheetah

### \*\*\* Second Opinion \*\*\* (Electron User)

The compilations roll on, and for anyone who hasn't seen these games before it represents excellent value for money as it will provide many hours of enjoyment. Its value is diminished with every title you already possess.

# FACEMAKER

***Professional, Originally Released On Cassette Only***

Game Type : Educational  
Author :  
Standalone Release(s) : 1984: FACEMAKER, Acornsoft/ASK, £9.95  
Compilation Release(s) : 1985: BEST FOUR - LANGUAGE, ASK, £9.95  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : A.S.K., London House, 68 Upper Richmond Road, LONDON SW15  
Disc compatibility : DFS E00

## Instructions

*"Children of all ages are enthralled by Facemaker. Starting with the eyes, you can build up one of over a million possible identikit type faces on the television screen. The program asks you to select features from a series of choices: mouths, ears, noses, hairstyles, even earrings and hats! This teaches children to read the names of the features with their associated quality/adjective, and then later to follow the sentence structures in which they appear. Children have fun drawing each toher, or working together on the program and this helps improve their reading ability and powers of observation."*

## In all A.S.K. programs

<RETURN> Remember: once you have typed in your response a program will  
< icon > deal with it until you press the <RETURN> key.

<ESCAPE> You can always return to the beginning of a program by pressing  
< icon > the <ESCAPE> key.

<DELETE> You can rub out anything typed in, before the <RETURN> key is  
< icon > pressed, by using the <DELETE> key.

<\_Hand\_> Means : Please press the space bar to carry on with the program  
< icon >

< ? > Means : the program did not expect the response it has just re-  
< face > ceived. Perhaps there was a typing error? In any case, to carry  
on, just press the space bar and try again.

<CTRL> All of our programs incorporate sound. There are various volume  
levels - holding down the <CTRL> key and pressing the <S> will  
<S> change the level - keep pressing the keys until you are happy  
with the volume.

Note: The program will not run on computers that have 0.1 operating systems.

## Introduction

FACEMAKER is for children, but adults will also find it both fascinating and enjoyable. Very young children may need help to read the instructions and type in their choices.

You must choose the name and features of the person to be drawn. Step by step the face builds up, appearing on the screen at the touch of a button.

To make FACEMAKER work, you must:  
READ the questions: e.g. WHAT ARE MARY'S EYES LIKE?  
READ the response : e.g. LARGE OR SMALL  
SELECT the response: e.g. LARGE  
CORRECTLY TYPE the word chosen: e.g. L-A-R-G-E

The completed picture prompts questions about the personality behind the face. Does the person look kind, friendly or bad-tempered? Perhaps the face was supposed to look like someone in particular - does it? What is different?

The face can be changed. Try different glasses, "shave off" the beard, let the hair "grow" and the character assumes a disguise. It looks quite different from the one you started with!

The program itself tells you what to do at each stage. At the very beginning, the screen display is:

Hello. What is your name?

and the program waits for you to type in your name. When you have done so, you must press the RETURN key to tell the computer you have finished typing. When the RETURN key has been pressed, the display will change to:

Welcome to FACEMAKER, [your name]. FACEMAKER will help you to draw a person's face. Just type the answers to the questions.

The <finger over space> symbol means "Press the space bar (the longest key) to continue".

Each time the program asks a question, the same procedure is followed - type in your reply and press the <RETURN> key.

If your answer is not understood by the program, the <?> symbol will appear. Perhaps the choice you selected was not available or you made a spelling error. To carry on, just press <SPACE> and try again.

### **Educational Notes**

Nearly everyone begins by trying to make the face of their nearest and dearest (or in one case a projection of the adult face of a yet unborn baby!). This obviously has its limitations. Despite having about a million potential faces in the program, there are more than that in any large city. So the picture is even then statistically unlikely to look just like Mum or Uncle Ron. (E.T? Forget it!)

The program was designed to be as self-contained as possible. It introduces new vocabulary which is actively used to operate the game, especially if group choices are being made, either in the home or at school.

FACEMAKER was never intended to jazz up the weekly spelling test or the Friday vocabulary lesson ("Today we'll learn words about facial features"...?), still less to simply amuse children during wet playtimes. In the classroom, the program can be used as flexibly as any tape recording or video, as and when appropriate to the children's current activities. It can fit in with on-going work or stimulate discussion to inspire further exploration.

Most children draw and paint faces from a very early age. Class portrait galleries feature regularly in all age ranges. Children write about the physical characteristics of people in their stories, describe each other and often have to identify by appearance someone whose name is not known.

Two children could use the program, one questioning the other about the appearance of a third person, prompted by the questions on the screen. A fluent reader could question a slower reader and assist with the typing involved.

The program often prompts discussion about such details as glasses, and may lead to debate about how many children wear glasses and why, at what age most children begin to wear glasses etc. How many other brothers/sisters, parents or grandparents wear glasses? Is weak eyesight hereditary?

Similarly, discussion may arise from attempts to portray an older "version" of a character, e.g. with glasses, beard and less hair. Looking at sizes and shapes of eyes, noses and mouths may lead children to making their own "identikit"-type

illustrations based on cut-out photographs from magazines or class portraits. The "strip-book" technique can be used with different eyes, noses and mouths being matched to make new faces. (How many faces could be made using e.g. 3 pairs of eyes, 3 noses and 3 mouths? How many more can be made if 4 or 5 are used instead of 3?)

This sort of activity may prompt questions about the proportions of the human face - is an eye usually bigger or smaller than a mouth? Does it matter? How high is the average forehead in proportion to the whole head? How big are people's ears?

The character of the person drawn on the screen may be deduced from the features and vice versa. But are all people with "smiling" eyes good-natured, or all people with "mean" mouths bad-tempered and stingy? How could the children find out?

### **ABOUT A.S.K.**

A.S.K. produces a range of educationally sound computer programs designed for use in the home and at school. Use of these programs in the home reinforces work done at school provides a way of introducing educational concepts in an interesting and exciting way. A.S.K.'s authors include distinguished academics, Primary and Secondary school teachers and head-teachers. Many of them have contributed to the teaching materials currently used in schools.

A.S.K.'s aim is to produce a range of programs covering each subject area. The programs now available - in mathematics and literacy - form part of this, and other programs will soon be released to complement them and complete the range.

A.S.K. programs are designed, above all else, to make learning fun. This is done by ensuring that full use is made of each micro's sound and graphics capabilities, and by capitalising on the enormous motivating power of the computer.

If you would like more details about either A.S.K. or our range of programs please do not hesitate to write to: A.S.K., London House, 68 Upper Richmond Road, London SW15.

# FANTASIA DIAMOND

***Professional, Originally Released On Cassette Only***

Game Type : Text Adventure  
Author : Kim Topley  
Standalone Release(s) : 1984: FANTASIA DIAMOND, Hewson, 1984  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : HEWSON CONSULTANTS. No further information available.  
Disc compatibility : Unknown

## Instructions

*The magnificent Fantasia Diamond, a family heirloom, has been stolen and taken to the imposing fortress across the river. Boris the Masterspy, retrieved the Diamond but has been captured and imprisoned. Now it is up to you...*

*Meet many characters - the Guardian, the Toy Robot, the Conductor - each with his own life and personality. Some of them have a strong sense of purpose and should be handled with great care...*

*Features include*

- Over 300 word vocabulary*
- Independent characters with their own personalities*

*What the reviewers said of the top selling ZX Spectrum version:*

*'The vocabulary used in the adventure is a very strong point...Highly recommended...overall value 10/10.'*

*- Crash Micro June 84*

*'A well thought out and well executed adventure.'*

*- C & VG May 84*

*'Fantasia Diamond from Hewson Consultants is ideal.'*

*- Sinclair User June 84*

Many years ago, one of your brave ancestors undertook a daring quest in the Kingdom of Rog. On his quest, he discovered the largest diamond known to man, now known as the Fantasia diamond, and brought it to the safety of his home. News of the discovery spread rapidly, and many times, attempts have been made to steal FANTASIA, which was passed down to you as a family heirloom.

Unfortunately, the latest attempt was successful, the thieves removing the diamond to their lair in a magnificent and imposing fortress across the river. To recover the diamond, you called in one of the world's best-known righters of wrongs. Boris the masterspy, who made his way to the Fortress, only to be captured and imprisoned by the faithful Guardian who patrols the rooms and corridors for intruders.

Now your only recourse is to undertake this dangerous mission yourself - to enter the fortress, recover the fabulous diamond and rescue Boris.

Throughout your mission, you will meet other characters who will either help or hinder you depending on how they feel at the time. All of these characters have their own independent lives. Some of them have a strong sense of purpose and should be handled with great care, while others behave in a fairly random way, as their fancy takes them. Not all of the other characters are hostile, but those that are have only one aim in mind!

When you start your adventure you will be quite weak. You will find that most of the other people are stronger than you, so be careful with whom you pick a fight! You can, of course, increase your strength by eating and drinking. As time passes, you will lose strength, which will ultimately result in death, so it is important that

you eat and drink regularly. Your strength determines how many objects you can carry - the stronger you are, the more weight you can handle. If you let yourself become very weak, you will find that you cannot pick up even the lightest objects - and that can include food!

### **Loading And Playing FANTASIA DIAMOND**

To load FANTASIA DIAMOND, type CHAIN"" and start the tape from the beginning. When loading is complete, the machine will wait for you to press a key before starting the adventure.

The screen is divided into two independent areas. The upper area is used to display the actions of yourself and all the other characters, descriptions of what you see around you and what is happening. The lower area is used for your input and is also used by the computer to provide certain information to you, for example error messages.

During play, every character will undertake some action about once every fifteen seconds, whether or not you yourself do anything. If you start to type, all of the characters stop until you press the <RETURN> key. Each character is then entitled to act after your command has been actioned. If you do not touch the keyboard for fifteen seconds, you will see the message:

You do nothing

and the other characters will go about their business.

You may use the keys <A> to <Z> (which are always capitals), <SPACE>, <.>, <,> and <"> (string quotes) in commands. <DELETE> will delete to the left of cursor. <CTRL> plus <U> will delete everything on the input line, and <ESCAPE> do all commands on the last line again.

Note: The <ESCAPE> key only works if typed as the first character on a line, and its action is immediate - you do not press <RETURN>.

Up to 78 characters may be typed per input. When the input area is full, the cursor will stop. Only the <RETURN> and <DELETE> keys are then effective.

FANTASIA DIAMOND has a vocabulary of over 300 words, all of which may be typed in the input line either in full, or in an abbreviated form. When an abbreviation is used, the computer chooses the first word in its dictionary which looks like a match, so be careful.

For example, the verb EXAMINE can be abbreviated to EXAM or even EX, but not E, which is interpreted as a short form of EAST.

Finding appropriate abbreviations is largely a matter of experiment.

### **The Language**

FANTASIA DIAMOND has a fairly powerful language analyser which allows you to construct quite complex sentences. A sentence may contain several commands; each command starting with a verb. For example, you could type as two separate commands:

OPEN THE DOOR <RETURN>

GO EAST <RETURN>

or you could combine the two:

OPEN THE DOOR AND GO EAST <RETURN>

Punctuation is optional, as is AND.

Most verbs allow you to use a list of objects, for example:

GET THE FOOD AND THE WINE

In a very few cases, you will find that you can omit part of a command and the computer will still understand what you mean, but usually this is not so. As an example, when locking or unlocking things, you must also say which key you want to

use - you cannot just say UNLOCK DOOR - that would be too simple! Sometimes, leaving part of a sentence out changes the effect:

ATTACK THE ELF - means attack with bare hands

ATTACK THE ELF WITH THE ROD - uses the rod as a weapon

Parts of sentences, and even words, can be abbreviated. If you want to open a small wooden door, you could, of course, say

OPEN THE SMALL WOODEN DOOR

but it is quicker to say

OPEN DOOR

Other possibilities are

OPEN WOODEN

OPEN SMALL

and so on. Bear in mind, however, that the computer takes what you say literally and assumes that its meaning is clear. So, if you were in a place with a red door and a brown door and you said OPEN DOOR, the machine chooses one of the doors and tries to open it. This might mean that the wrong door is opened, or it might just mean you see an error message if the chosen door cannot be opened.

Abbreviating words is another way to save typing, but it can cause similar problems. Experiment to see what can be done, but if an abbreviated command does not work, type typing it more fully.

e.g. for OPEN DOOR you could type OP DOO but not OP D because 'D' is interpreted as an abbreviation for 'down'. Errors of this sort can be very misleading so take care!

Another feature which you may find useful is that the computer remembers the last verb you used from line to line. So if you wanted to pick up a key and some wine, you could say

GET KEY <RETURN>

and then just

WINE <RETURN>.

Because you haven't started this line with a verb, the computer assumes that you want it to use the previous one. This applies to any verb like GET which allows you to use repeated objects.

## Errors

Error displays always appear in the lower half of the screen. Once an error is found, the computer stops processing your instructions and comes back to you for more.

The most common error messages and their meanings are as follows:

I DON'T UNDERSTAND THE WORD (word) - When this occurs, none of the commands on the input line will have been executed.

I DON'T UNDERSTAND - This occurs when the computer cannot understand the form of your command. You may have missed some words out or typed them in the wrong order.

I CANNOT DO THAT - The computer understands what you want it to do, but for one reason or another, cannot comply because the action is not sensible or is not legal. E.g. you cannot talk to a dead person.

YOU ARE NOT CAPABLE OF THAT - The command is correct and understood, but you are asking to do something which your character is not capable of.

WHAT? - The computer is unable to make sense of your word order.

## Your Surroundings

As you move from place to place, you will be given a short description of what is around you, and a list of the directions in which you can move. You will also be told of any objects/characters in the vicinity.

If you want to see the description of the current location again, you can type LOOK (or L for short). However, you may want to inspect particular items around you. For example, suppose you type LOOK and are told this:

You are in a small dark room.  
To the west is a wooden door.  
Obvious routes lead north south.  
You can see:  
The brown chest.

It is possible to get a closer look at the chest by typing:

LOOK AT THE CHEST

If you want to see what the chest contains, you can say:

LOOK INTO THE CHEST

Of course, this does not work if the chest is closed. Similarly, if the wooden door is open you could say:

LOOK THROUGH THE WOODEN DOOR

to see what is on the other side. If you know that the place on the other side of the door is called 'the little kitchen' then you may achieve the same by saying:

LOOK INTO THE LITTLE KITCHEN

## Moving Around

In each place, you will be told where you can go. For example, consider this place again:

You are in a small dark room.  
To the west is the wooden door.  
Obvious routes lead north south.

You can easily move either north or south in many ways: GO NORTH, SOUTH, N, S, RUN NORTH, etc.

If you want to go west, you could of course just say

WEST

but if the door is closed, this naturally doesn't work. Assuming that the door leads to the little kitchen, you can try:

GO INTO LITTLE KITCHEN

or ENTER KITCHEN

Another less useful way of moving is to follow another character who is not in an adjacent place:

FOLLOW BORIS

## Getting Others To Work For You

In this adventure it is essential for success that you co-operate with the other characters. There are times when you will be unable to get further without their help, because there are things that you are not capable of doing. At these times, you can ask someone else to help.

Suppose that you are already carrying so much that you cannot pick up a key that you need. Luckily, there is a trustworthy elf nearby who could carry it for you, he may run away with it, give it to someone else, drop it again, or anything he feels like doing!

## Basic Commands

The game recognises all of these commands. There are many others, which you have to discover for yourself:

NORTH etc	GET	ATTACK
N etc	DROP	SAY
GO	PUT	INVENTORY
RUN	GIVE	STATUS
LEAVE	EAT	HELP
ENTER	OPEN	HINT
FOLLOW	CLOSE	LOAD
LOOK	LOCK	SAVE
EXAMINE	UNLOCK	SCORE
QUIT - start a new game	WAIT - do nothing this turn	
PAUSE - suspend until a key is pressed		

## Saving And Loading

You can save your current position at any time by typing SAVE. Follow the prompts on given on the screen.

To load a previously saved game, just type LOAD and start the tape.

If LOAD fails, the current game is lost and a new one is started automatically.

On the Electron version, in order to start a new game it is necessary to reload a small part of the game from the tape. This part is located immediately after the main game. At the end of a game (when you die) or when you QUIT, the computer will prompt you to start the tape to read this part.

## Hints

In some places, it is possible to get some assistance by typing either HELP or HINT. There is no penalty for this. However, some of the clues are not quite straightforward and there are no hints for the easier problems.

If you cannot get the computer to do what you want it to do, either you are on completely the wrong track or you have used language too complex for the program to understand. Firstly, try to keep your commands simple - the fewer words the better. Refer to the section on error messages if in doubt.

The following general points should be kept in mind:

1. If a character refuses to help you, it may be because he is not capable of doing what you ask, or he may not feel like it. In the latter case you could try again.
2. Doing nothing is not always the same as waiting. This is important in some circumstances.
3. Do not give up hope when all seems lost. "Four walls do not a prison make" is true in FANTASIA DIAMOND, even when the obvious means of escape are not available.

Finally, a last hint for music lovers: The leader is more long-sighted than short-sighted and could be regarded as untidy in his ways. If you don't oblige him, you will never escape. Good Luck!

# FELIX AND THE FRUIT MONSTERS

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Pac Man Clone  
Author : John Chayter  
Standalone Release(s) : 1985: FELIX AND THE FRUIT MONSTERS, Micro Power, 1984  
Compilation Release(s) : 1987: PRES GAMES DISC 2, PRES, £9.95  
1988: MICRO POWER MAGIC 2, Micro Power, £7.95  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : MICRO POWER, 8/8A Regent Street, Chapel Allerton, LEEDS  
LS7 4PE. Tel: 01532 683186.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

The object of the game is to protect the fruit from the marauding fruit monsters until the timer (at the top of the screen) reaches zero. There are three ways to do this:

1. Pick up the fruit and move it out of the way of the monsters.
2. Use either pools to put the monsters to sleep temporarily (only two pools are allowed on the screen at once).
3. Trigger the magnetic pad which teleports all the monsters back to their cave (this can only be done three times per game).

Each of these methods uses up different amounts of energy and this is limited (the energy level is displayed beneath the cave). Your energy is replenished by ten units if you pass over the power cells at each corner of the maze. If a monster reaches a piece of fruit it will pause momentarily to absorb its energy and then mutate. After each mutation, the monster will become more aggressive and faster. A life is lost if the player is caught by the monster or runs out of energy. An extra life is awarded at 10,000 points and the time ticks away slower as the player progresses to higher levels.

## Game Controls

P - Left, Cursor Down - Right, A - Up, Z - Down, CAPS LOCK/FUNC - Drop pool

Use the Cursor Up key to pick up and drop the fruit and also to trigger the magnetic pad.

# FELIX IN THE FACTORY

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Shoot-'em-up  
Author : John Chayter  
Standalone Release(s) : 1983: FELIX IN THE FACTORY, Micro Power, £6.95  
Compilation Release(s) : 1987: PRES GAMES DISC 1, PRES, £9.95  
1988: 10 COMPUTER HITS 3, Beau Jolly, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : MICRO POWER, 8/8A Regent Street, Chapel Allerton, LEEDS  
LS7 4PE. Tel: 01532 683186.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

The object of the game is to keep the Generator, situated in the bottom right of the factory, filled with oil. If the oil level, shown at the bottom of the screen, gets too low the lights will start to flicker and eventually the Generator will stop.

To oil the Generator you must guide Felix down the ladder, along the conveyor belt jumping over packages, up past the Gremlins to the oil can and then back to the Generator. To help you past the Gremlins, use the pitchfork which is hanging on the wall somewhere and run at the Gremlins knocking them off the walkway.

Another hazard in the factory is the Giant Rat. This will run across a level from time to time. A bag of rat poison is provided which you can jump up to grab. This can be dropped on any of the walkways, and if the Rat runs into it you get a 1000 point bonus. You can jump over the Rat but you cannot jump over the Gremlins.

You can only carry one object at a time, and you drop the oil can if you can run into a wall or fall over on the conveyor belt. If you trip over the packages on the conveyor, you will be given the chance to get up again, but if you reach the edge of the screen you will lose a life.

An extra life is awarded when you reach a score of 3000 points.

## Game Controls

P - Left, Cursor Down - Right, A - Up, Z - Down, Cursor Up - Jump/Drop

**Instructions' Source** : FELIX IN THE FACTORY (Micro Power) Inner Inlay

## Review (Electron User)

You know what it's like - you go into work for your shift and no one else has turned up so it's all left to you. Again. Well, that's what's facing you as you play the part of Felix, the hero of this game.

Your main job is to keep the generator oiled. Easy enough, but the previous shift has left the oil cans all over the factory and you have to collect them before you can oil it and keep everything running smoothly. This is where the work comes in. The factory is a split level affair; the different levels being joined by ladders. Before you are able to collect the oil cans, you have to negotiate a package-carrying conveyor belt.

It doesn't help that the place is infested with Gremlins and giant mice which attack you without warning or provocation. Of course you can use the pitchfork and the bags of poison that are lying around the place to ward them off but all this takes times

and the generator is running out of oil every second. And when you've succeeded your only reward is a still harder game!

It's not easy but it is fun; a fast game calling for quick reflexes and a sense of humour as you try to keep production flowing. The instructions are clear and adequate, the controls simple and easy to use. The program's sound and graphics use the Electron's capabilities to the full.

All-in-all it's a good version of an old idea, and children love it. If you want an amusing action game for your Electron then FELIX IN THE FACTORY is one to be considered.

Eileen Young, ELECTRON USER 1. 4

# FELIX MEETS THE EVIL WEEVILS

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Platform Game  
Author :  
Standalone Release(s) : 1983: FELIX MEETS THE EVIL WEEVILS, Micro Power, £6.95  
Compilation Release(s) : 1987: PRES GAMES DISC 3, PRES, £9.95  
1988: 10 COMPUTER HITS 3, Beau Jolly, £9.95  
1988: MICRO POWER MAGIC, Micro Power, £7.95  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : MICRO POWER, 8/8A Regent Street, Chapel Allerton, LEEDS  
LS7 4PE. Tel: 01532 683186.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Killer Weevils have overrun the factory. The only way for Felix to kill them is the spray them in the face with pesticide. You will need one aerosol can of "Ubik" to kill each weevil, and you must be quick because if a weevil reaches a pulsating Mutation Chamber, it becomes a Purple Superweevil! Beware also of the ball-bearings which come rolling along the conveyors. These are harmless to the soft-bodied weevils but deadly to you.

To help you along, you will find the following items useful.

1. The belt lever, which enables you to reverse belts at will.
2. Oxygen cylinders, to replenish your ever-decreasing supply.
3. The emergency panic button (only one per life), which makes you immune to weevils and ball-bearings for a while.

You may jump down small distances but you can never jump up.

## Game Controls

Z - Left, X - Right, : - Up, / - Down, <RETURN> - Spray  
<CTRL> - Emergency Panic, <SHIFT> - Reverse Belts  
Q/S - Sound Off/On, <COPY>/<DELETE> - Pause On/Off, <ESCAPE> - Abort Game

If you have a switch type joystick interface fitted (not the Plus 1), key in the relevant information when required. It is provided with your interface. The program will then load.

## Scoring

Bonus Letters .....	100
Normal Weevils .....	500
Superweevils .....	1000
Bonus for all letters .....	500

An extra life is awarded every 10,000 points scored.

# FIGHTER PILOT

*Professional, Originally Released On Cassette Only*

Game Type : Arcade; Wire-Frame Battle  
Author : Julian Charles Bury  
Standalone Release(s) : 1985: FIGHTER PILOT, Kansas, £3.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : KANSAS CITY SYSTEMS, Unit 3, Sutton Springs Wood,  
CHESTERFIELD. Tel: 0246 850357.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

The object of the game is to shoot down other pilots who are unfortunate enough to have intruded into your air-space.

CAPS LOCK - lowers the wheels which are down on take-off and must be down to land.

CTRL - this turns on the RADAR and retracts the wheels. Don't do this until you're airborne.

SHIFT/CAPS LK - these are the air brakes, most important during your crazy landings.

SHIFT - this is the throttle to get you up and away, but it uses fuel so take it easy.

SPACE BAR - this fires your gun and it can't be fired until you're safely away from us poor ground crew.

Z X - Aileron. Roll left/right.

/ : - Elevator. Climb/Drive.

# FIREBUG

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Platform Game  
Author :  
Standalone Release(s) : 1984: FIREBUG, Acornsoft, £9.95  
Compilation Release(s) : 1985: PLUS THREE GAMES DISC, Acornsoft, £12.95  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : ACORNSOFT, Betjeman House, 104 Hills Road, CAMBRIDGE CB2 1LQ  
Tel: (0223) 316039  
Disc compatibility : Unknown

## Instructions

As fireman on duty, you have been called out to a warehouse where a firebug is reported to be attempting to burn it down. Your main concern is to rescue the drums of highly inflammable petrol and take them to the safety of a water tank. You can jump over the fires or put them out with a fire extinguisher, but be careful to avoid the clouds of dense white smoke.

Complete with sound effects, full colour graphics and a table of high scores, FIREBUG is fully compatible with either keyboard or joysticks.

Further instructions currently unavailable.

Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : CDFS E00, DFS E00

## Background Briefing

At the start of this (22nd) century, the 'Pirate Industrials' funded and built the Asteroid Belt colonies, only then to break away from Earth. Negotiations collapsed and the 'Pirate Wars' began - Earth's attacks on the colonies' central trading route still continue. This is the Firetrack, spanning the mining worlds, separated by Commspaces, areas of space filled with discarded communication hardware - space junk.

In principle, each world is of four types - 'Baseworld', 'Dustworld', 'Iceworld' and 'Mallworld' - although there is some variation within each of these individual types.

Worlds are individually driven by nuclear power plants, disguised as 'eyes' within the 'Devil Rock' at the end of each colony. Destroying these plants throws the settlement into darkness. In the BBC Micro version, you must then re-attack in the blackout to prevent the machine-building mechanisms reconstructing everything.

Variable defence levels have been observed throughout the worlds including instances of total abandonment - you need only to fly over these abandoned worlds once to wipe them out.

You are one of the few security-cleared ex-military personnel open for Firetrack pilot selection. You must try to destroy as many of the mining worlds as you can. Your success is indicated by your score (number of creds). In the BBC Micro version you must ultimately try to find the 'White Light' opening somewhere in the Firetrack. Flying the Firetrack has always been difficult enough - it may well be that Earth itself is now at stake.

## Instructions

You start each mission with a team of three Hatchfighters. Fly across the colonies knocking out the major power nodes (+), power junctions (x) and computer centres (?). Finally, destroy the Devil Rocks' eyes to claim your bonus. This starts at 50 creds, adding 50 more for each (+) that you hit, and doubling it for each (x). These are added up in the order they were hit.

(?)s are the computer centres. Earth Council will allocate you an extra team member if you can destroy at least ten of these. Escape from Commspace, and they will again award you an extra Hatchfighter. In the BBC Micro version, if you only have one team-member remaining, this will restore your team-size to three.

In the Electron version, only the first world can be accessed directly. The remaining worlds can only be reached by escaping from that world.

## Playing Tips

Whilst gaining experience, do not try to shoot everything in sight. Hold back to give yourself room to move and fire, and concentrate more on shooting at defences

you need to shoot at in order to escape. Later on, more complex techniques will be needed to tackle the semi-chaos and chaos worlds. Holding the fire key down fast-fires: you won't really need this until later, but you can use it anyway. On empty worlds, stay towards the top of the screen and concentrate on hitting the (+) and (x) formations.

### **Game Controls**

The Electron version of the game can only be played from the keyboard.

Z - Left    X - Right    \* - Up    / - Down    RETURN - Fast-Fire

Start Game ..... SPACE  
Pause On/Off ..... P/SPACE  
Sound On/Off ..... S/Q  
Quit Game ..... ESCAPE

If the screen flickers after the Electron version has loaded, press key 1 to stop this occurring.

# FIRIENWOOD

*Professional, Originally Released On Cassette Only*

Game Type : Text Adventure  
Author :  
Standalone Release(s) : 1984: FIRIENWOOD, MP Software, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : MP, 165 Spital Road, Bromborough, MERSEYSIDE  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*Travel to a land of magic and monsters in this absorbing adventure game. Explore caverns and forest as you search for the Golden Bird Of Paradise. Few People survive to tell the tale so you will need all your wits about you. Written completely in machine code for extra speed.*

An evil wizard has captured the magic Golden Bird Of Paradise and has imprisoned it in a weird castle in the middle of the enchanted FirienWood.

Your quest is to find the bird and set it free, in return for its freedom the bird will give you health, wealth and prosperity. You will need magic to overcome the wizard's powers and before you can enter Firien Wood safely, you will need to find a magic lamp. Beware! Many perils lie before you and every move is fraught with danger!!

## Playing The Game

The computer acts as your eyes and hands as you journey on your quest. It tells you where you are and what is happening, then you must tell it what to do by typing a command of one or two words. For example if you find an object that you want to pick up, type "TAKE" followed by the object name. If you want to move, give the direction you want to go (Directions such as NORTHWEST must be given as NW to distinguish it from NORTH). Entering a dark location without a light source is rather bad for your health!!

Some of the objects are completely useless whilst others may have more than one purpose, that is for you to find out.

## Useful Words

Many of the commands you will have to discover for yourself, but some of the more general ones are given here:

To move, try one of the points on a compass or something like "UP", "DOWN", "LEFT", "RIGHT", "ENTER".

To get or drop a bottle try "GET BOTTLE", "TAKE BOTTLE", "DROP BOTTLE".

If you want the description of a location, type "LOOK".

To list your possessions type "LIST". You may find that some objects can be worn as well as carried.

To kill a Goblin (if you have a weapon) try "KILL GOBLIN".

If you want to save a game and return to it later, insert a suitable tape and type "SAVE". Part of the database will be recorded and the game will then continue. To restart a game, FIRIENWOOD should be loaded and run as usual, the data tape inserted and the command "LOAD" given. The data will be loaded and the game will recommence.

To end the game, type "QUIT".

### **Scoring**

To find out your score at any time, type "SCORE". Ten points are given for each monster you manage to kill.

**Instructions' Source** : FIRIENWOOD (MP Software) Inner Inlay

### **Review (Electron User)**

FIRIENWOOD is a 100 per cent machine code adventure which makes up in presentation and speed what it lacks in difficulty. An evil wizard has stolen the fabled Golden Bird of Paradise. Your task is to search Firienwood in order to find and enter the wizard's castle. If you can then overcome the wizard and free the golden bird, you will receive untold riches and happiness for the rest of your life, plus an invitation to play the adventure again.

The game seems to concentrate more on difficulties than problems. For instance, you have to cross a river, but the boat you wish to use will only hold you and a certain number of objects. There are more objects than you can take with you, so what do you take?

MP tell me there are a few ways of solving the game. I only used one - but, from the number of locations and puzzles that seemed to have no bearing on my solution to the adventure, I think they must be right.

The vocabulary is fairly extensive and most of the GET, DROP and EXAMINE type of verbs are recognised as well as a few you wouldn't expect. The only drawback to this adventure is the market it seems to be aiming at.

I can't see an experienced adventurer taking more than a couple of hours to solve the game - and surely there aren't that many novice adventurers.

However, if you are a novice - better yet, if you have never tried an adventure before and are wondering where to start - then this is the adventure for you! It is free from spelling mistakes that sometimes plague even the more upmarket games.

Also the on-screen display is not off-putting, which novices sometimes find to be the case with the normal black-and-white display that we purists prefer.

Overall, definitely for the beginner, but should not be completely dismissed by the more experienced player.

Merlin, ELECTRON USER 3. 1

# FIRST MOVES

***Professional, Originally Released On Cassette Only***

Game Type : Educational; Learn Chess Utility

## Instructions

*"FIRST MOVES is an introduction to chess for players of 8 years and upwards. Success in chess depends on an understanding and appreciation of the way individual pieces move, and the way they can work together. First Moves initiates the beginner into those basic moves and strategies, by a simple, straightforward process.*

*"The program is split into six main sections, each of which contains three games concentrating on a particular piece or groups of pieces, from the King and Rook through to the pawns. The final section deals with handling the pieces in combination - and the aim of the game, to capture your opponent's King, is kept clearly in mind throughout.*

*"The pack contains a full-colour wall poster reinforcing the lessons and providing back-up information."*

Use this pack to learn the moves and tactics of the game of Chess. Each part of the program is designed so that you can concentrate on the real purpose of the game - CHECKMATE, and learn to use each piece in attack and defence.

Your opponent is the computer and you can harness all its power both to provide an exciting game, and also to see, understand and learn the basic skills of Chess play. You can beat the computer by following the programs carefully, and then using these ideas in later games.

Work through the programs one at a time, mastering each new piece before moving on to the next. After BATTLEFIELD, you will be ready to take on another player or a full Computer Chess program.

### 1. The King

He is the most important man in the army. If he is lost, then all is lost. When an enemy piece attacks your king, this is CHECK. If the king cannot move to a safe square, then it is CHECKMATE, and the end of the game.

### 1. Queen

She is the most valuable fighter. She can move far and fast, reaching any square on the board in a few moves. Protect her well.

### 2. Rooks

These are long-range soldiers. They can defend your men, or attack the enemy from a distance, but are just as powerful in close combat. Rooks are sometimes called CASTLES.

### 2. Knights

They can leap over your men, or over the enemy, to make surprise attacks. Their moves follow a special pattern, so plan carefully to make sure you reach the right square.

## **2. Bishops**

There are long-range fighters, like the rooks, but each bishop must always stay on the same coloured squares. Use them for defence and for lightning raids.

## **8. Pawns**

They are your foot-soldiers, slow and plodding, but giving strong support to your fighters. If a pawn can reach the opposite side safely, it can be exchanged for any fighting piece.

## **The King And His Castle**

Start by selecting your game. You can play Black or White; you can have your rook at the left of your king, or to its right; and the computer's rook can be placed on the left or right.

In all of these games, you have to checkmate the enemy king to win. A king is in CHECK when it is under attack from one of the opponent's pieces. The player must try to get out of check, either by taking the attacking piece, or moving the king, or blocking the attack by putting another piece in the way. CHECKMATE is when the king cannot get out of check.

A lone king can easily be checked by a king and a rook, as long as you use both pieces in the attack. The king cannot attack directly, because no king may stand on a square next to the other. If you did this, your own king would be in check too! However, you can use this 'no-go' area to block your opponent.

Use the rook's long lines of attack to drive the enemy king to the side of the board, where you can pin it down with the help of your own king. Be careful! Don't let your rook get too close to the computer's king. If you put it within reach, it will be taken, unless it is protected by your own king. Watch out for the pawns, too. They will take if they get the chance.

## **The Bishop Joins The Fray**

The Rook's attack covers a solid of squares across or down the board. In this way, it can seal off areas and keep the opponent's king in one corner of the board. The bishop's attack is not as effective. It covers a line of squares, but a diagonal line, and an enemy king can slip through the gaps.

When playing with a full set of pieces, you can use two bishops together to create a more solid barrier, but a single rook would do the job just as well.

The bishops are best used to give long distances backup to other pieces.

They can reach any square on the board (as long as there is nothing in their way) in two moves, and this means that they can cover, or threaten, any square in only one move. With the bishop to back him up, the rook can go in right next to the king, making a very effective attack.

## **The Knight Goes To War**

The knight is the only piece on the chessboard that can jump over other pieces. This gives it a very special advantage, although it also causes problems. The knight has to jump in a 2-1 pattern, whether it is moving, or capturing, and this means that it may well be close to enemy pieces, and yet unable to attack them.

Make the knight's jumps for you. Look out for situations where the knight can threaten two pieces at once, and if one of those is a king, so much the better. Here, black is about to lose either his rook or his bishop.

The knight cannot get checkmate without help from other pieces. In this example, the knight and rook had together pinned the black king, though it was not then in check. Checkmate came when the bishop was brought to bear.

In later games, when the board is more crowded, you will appreciate the knight's jumping ability even more.

### **Her Majesty The Queen**

The Queen is such a powerful piece that you might think the other pieces are not necessary! She has the mobility of the rook and of the bishop, and this gives her eight possible lines of attack. Black, here, had scattered his pieces all over the board, and White has seized the opportunity. The Queen doesn't just check the Black King: she also threatens his Queen, Rook, Bishop and Knight. Don't let this happen to you.

The Queen is powerful, but can be taken just like any other piece. You can get checkmate with the Queen, as long as she is backed up by another piece, and is not in reach of any enemy pieces.

When the board is fairly empty, the Queen and Rook (or two Rooks) can checkmate the opponent's king by driving him to the side of the board. Black is checked by the Queen now, and must move to the right. When White goes, he pushes that Rook to the end file, and the game is over.

### **Pawns**

Pawns are such small and slow pieces, you might be tempted to ignore them. Don't. They have a strength of their own. In the earlier games you should have been using your pawns to shield the main fighting pieces, and to protect their rear. Now use this game to see what the pawns can do by themselves.

Use them in a group. Try to make sure that the pawn at the front is always backed up by at least one other. Use your king as a mobile reserve. He can travel behind and between the pawns giving extra protection where it is needed. In the first diagram, Pawns B and C are both covered and the King is supporting Pawn A. If need be, he could step to the right and protect Pawn D.

If you are playing a game where you and the computer's pawns are on opposite sides of the board, then set your pawns in a defensive formation, and use the King to attack. The King is in an excellent position in the second diagram. Black must lose Pawn D at the next move, and that will leave Pawn C exposed.

The pawn game isn't as simple as it looks. You should be trying to do four things at once: keep your pawns safe, attack the enemy pawns, 'queen' a pawn, and get checkmate!

### **Battlefield**

Use this part of the program to set up your own practice games. These can be evenly balanced, like the other games in the pack, with the same number and types of pieces on each side, or you can set up unequal matches. This is a good way of exploring the relative power of different pieces. Set a Queen against the three other major pieces - Bishop, Knight and Rook.

Try the game both ways, so that you and the computer have played the Queen's side. Try the game with and without pawns. What difference do those foot-soldiers make?

Set up games with a King, Queen and one or two other (different) pieces on each side. Play each game several times until it is clear which of those men - Bishop, Knight and Rook - is the most useful. You must understand their values. If you could take your opponent's Bishop, at the cost of your Knight, would it be worth the swap? Is a Queen worth a Rook and a Knight?

Be bold - experiment and win!

# FIRST NUMBERS

*Professional, Originally Released On Cassette Only*

Game Type : Educational Compilation; Ages 4-6  
Author : P. K. McBride  
Standalone Release(s) : 1983: FIRST NUMBERS, Collins, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier :  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

This pack consists of a workbook and a cassette to run on your home computer.

The computer displays scenes which generate information concerning numbers and counting - one whale swims across the screen, six spiders descend in front of the screen. At each stage, basic counting and numbers are illustrated and highlighted. Basic exercises then follow, with the child guided towards the correct answer.

The programs each deal with an important area of numbers:

**UPTO5** Basic numbers and counting up to five.  
**UPTO10** Numbers and counting up to ten.  
**RACE** A counting game where the player races against CHIP.  
**NUMBERS** Practice and help in writing numbers.  
**11UP** Numbers and counting up to twenty.

The workbook develops the ideas covered in the programs and allows the child to colour in the friendly characters encountered. Other exercises make sure they understand and remember all the important ideas covered.

These programs have been designed for use by children with very little adult assistance. It is important though, especially with younger children, that they should be supervised during their first contacts with the programs. The few written messages that are used are colour-coded, so that the child will be able to recognise and respond to the colour, if not the words, of a message. Almost all the responses to the programs are taken by the direct touch of a key. Where it is necessary for the child to ENTER an answer, this is clearly marked.

**UPTO5** and **UPTO10** display, and give practice in counting, these numbers. The initial displays can be jumped from, wherever you see displays an be jumped from, wherever you see a "Press E for the Exercises" line. The programs can be stopped at the end of any frame by pressing S.

**RACE** is a dice-based counting game, where the child plays against the computer's Chip.

**NUMBERS** shows how to write numbers, using an animated display. The program will normally follow the number sequence, but any number can be selected at the end of any frame, by pressing that number on the keyboard.

**11UP** takes the number sequence, and counting skills up to 20. This program uses block images, rather than pictures, and emphasises that these numbers are made up of a group of ten with additional units.

The program should be first used where indicated in the workbook.

Children can colour, draw and complete the workbook included with this pack - the programs become a constant source of encouragement and learning.

# FIRST STEPS WITH THE MR MEN

***Professional, Originally Released On Cassette Only***

Game Type : Educational Arcade Games (Ages 4-8)  
Author : PrImer Educational Software  
Standalone Release(s) : 1985: FIRST STEPS WITH THE MR MEN, Mirrorsoft, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : MIRRORSOFT, Holborn Circus, LONDON EC1P 1DQ  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"The popular Mr Greedy, Mr Silly and Mr Forgetful feature in these computer games written for children of four years and upwards.*

*"Entertaining and rewarding, the games are designed not only to be fun to play but also to help young children develop the skills they need when starting to read. They are also a friendly and absorbing first introduction for a child to the exciting world of computers.*

*"The programs were designed by two primary school teachers Trevor Dudley and Chris Muncke of PrImer Educational Software. The programs draw on their experience of teaching the early years and of using computers in the classroom.*

*"Included with the programs is a specially written instruction book featuring the Mr Men. Intended to be read with your children, it introduces the games and the simple operations required to play them. Also included is a colour coded key guide featuring Mr Clever."*

Four simple and absorbing games for children of four to eight years old.

In MR GREEDY'S ICE-CREAM HUNT, a giant ice-cream is ready to be found by Mr Greedy but he must be guided there by the player. This simple program helps very young children explore ideas of direction. It progresses through five carefully graded stages each a little more demanding than the last.

Children of four years old can master the four clearly marked and colour-coded keys with a minimum of adult assistance.

In MR SILLY'S HAT GAME, the young player has to help Mr Silly to try on hats arranged on shelves. This program has been written to help children practise left to right scanning, an essential skill needed in learning to read. The game also exercises colour and shape matching skills. The three rounds of the game provide an increasingly difficult task in discrimination as other objects appear on the shelves when the player takes a hat for Mr Silly. Children need to master only three colour coded keys.

MR FORGETFUL'S WARDROBE GAME is a simple memory test for young children which also develops their shape-recognition skills. The young player helps Mr Forgetful to open doors of several wardrobes in which are hidden pairs of familiar objects such as shoes, socks and mittens. Only one of a pair is hidden in each wardrobe and the wardrobes are arranged in two rows. The object of the game is to locate all the pairs.

The last game, MR FORGETFUL'S LETTER GAME, is a variant on the wardrobe game in which a random selection of letters of the alphabet are hidden in the wardrobes rather than objects. The aim of this game is to help develop letter recognition. The option of entering a chosen range of letters enables an adult to adjust the program

so that a child can practice recognising letters which might be confused, such as "b" and "d".

### **A Note To Parents**

I hope you will read these stories with your children as they play the Mr Men computer games for the first time. They are intended to introduce young children to the computer games in an amusing and light-hearted way. Instructions on loading the programs are printed at the back of this book. Do read these carefully to ensure your programs load properly and you know of each program's features.

- Roger Hargreaves

### **First Steps With The Mr Men**

There are four stories in this book. They tell you about the adventures of Mr Greedy, Mr Silly and Mr Forgetful.

These are special stories because with the help of the computer you can see them happening. In fact, by pressing keys on the computer's keyboard, you can make them happen.

That makes these stories more like games - games you can play with the Mr Men. As you play the games on the computer you could make up different stories to go with them.

Anyway, here are my stories to start off with. I hope you enjoy them - and the games.

### **Mr Greedy's Ice-Cream Hunt**

Mr Greedy is always thinking of what to eat. Sometimes he thinks of hot, steaming pies, sometimes he thinks of fresh ripe fruit. Today he is thinking very hard about delicious ice-cream. In fact Mr Greedy is thinking so hard about how good an ice-cream would taste that he falls asleep and starts to dream.

He is dreaming about ice-creams, of course!

In Mr Greedy's dream, he is in a lovely room with a yellow floor. Each wall is different. Can you see a bright blue wall and a dark blue wall? Can you see a bright red wall and a dark red wall?

Mr Greedy dreams that somewhere in this room, a giant ice-cream cornet is hidden. If only he can find it he can eat it. But Mr Greedy dreams he is going round and round and can't ever get near the ice-cream cornet. Can you see where it is hidden?

You can help Mr Greedy get to the cornet when you play this game on the computer. By pressing keys you can tell him whether to go up or down or left or right.

There are pictures above the keys you press telling Mr Greedy which way to go.

Yes, it's Mr Clever pointing the way for you.

When he's pointing up, if you press this key, Mr Greedy will go up.

If you press the key near the picture pointing down, which way do you think Mr Greedy will go?

That's right. He will go down.

One key will make Mr Greedy go to one side, the other will make him go the other way.

Thank you, Mr Clever.

The colours behind Mr Greedy are the same colour as the walls in Mr Greedy's room. So when you press the light blue key, Mr Greedy moves towards the light blue wall.

Now you can tell Mr Greedy how to get to the ice-cream by telling him which way to walk - up or down, and left or right.

Try it on the computer. Can you see what happens when Mr Greedy is walking in one direction and you press a key to tell him to go the other way? He turns round and starts walking in the direction you told him.

What happens when Mr Greedy gets to his giant ice-cream cornet?

You will find that Mr Greedy's dream does not end with just one ice-cream. There are more! Well, Mr Greedy had greedy dreams!

But the second ice-cream is more difficult to reach than the first. You will have to help Mr Greedy get round some walls which have appeared in Mr Greedy's dream room.

In fact the more ice-creams Mr Greedy eats, the more difficult it is for him to reach the next one.

You can play this game until Mr Greedy has found all the ice-creams.

Happy ice-cream hunting!

### **Mr Silly's Hat Game**

Mr Silly is being sensible today. He has gone to a hat shop to buy a hat. He says that the weather is so cold he needs a hat to keep the sun off his head!

Here he is inside the hat shop. There are lots of shelves of hats.

If you look carefully you can see there are three different hat shapes and four different hat colours.

Mr Silly is not sure which hat will suit him best. Here he is asking for a hat so he can try it on. He is saying a picture!

What a funny way to ask for a hat. You can help Mr Silly get the hat he wants when you play this game on the computer. He says which hat he wants and you can find it for him on the shelves.

But wait a moment. Mr Silly is wearing a hat already! Oh well, I expect he will take it off when he gets the hat he wants.

The way you choose the hat Mr Silly wants is by pressing keys on the computer's keyboard.

Each time you press the left key, a marker moves along a shelf pointing at each hat in turn. When the marker reaches the end of a shelf it moves down to the next shelf. Try it on the computer. Press the key and see what happens. Did you see the marker move down to the next shelf when it reached the end?

When you have got the marker pointing at the hat Mr Silly wants you can give that hat to Mr Silly by pressing the key marked with the \*.

Make sure it is the hat Mr Silly asked for. Is it the shape he wants? Is it the colour he wants? If it is not the shape Mr Silly wants and the colour Mr Silly wants he won't take the hat. Mr Silly may be silly, but he knows which hat he wants!

You can see what Mr Silly does with the hats you choose for him when you play the game on the computer. All I will tell you now is that it is very silly! In fact Mr Silly keeps on asking for hats until you have given him every hat in the shop!

Sometimes you will want to choose a hat on a shelf above the one where your marker is. You can make the marker move up one shelf at a time by pressing the up key. Try it on the computer and see if you can move the marker up to a higher shelf.

Jumping up a shelf will help you get the hat Mr Silly wants more quickly.

Well, I have been telling you a lot about finding Mr Silly's hats for him. You better get on and find them before he gets too hot from the wind, or was it too cold from the sun? I forget.

Oh, by the way, if you like finding Mr Silly's hats for him you can go on looking for them after you have emptied the shelf. The shelves fill up all by themselves. But the next time you take a hat from the shelves to give to Mr Silly, there is something left on the shelf.

And if you take all the hats from the shelves for the second time, the shelves fill up again all by themselves. This is the last time the shelves fill up in the game and you can see what is left on the shelf this time when you play it!

### **Mr Forgetful's Wardrobe Game**

Poor Mr Forgetful...he tries very hard to be a tidy person but when he puts something away he usually forgets where he put it. Sometimes he goes out for walks wearing only one sock because he forgot where he put the other one!

Mr Forgetful has thought of a special way to remember where he puts things. He has bought a lot of wardrobes and he has left one thing in each wardrobe.

He has put away a pair of socks, a pair of shoes, a pair of roller skates, a pair of boots, a pair of ice skates, a pair of mittens and a pair of slippers.

But to be extra tidy Mr Forgetful has put one sock in one wardrobe and the other sock in another wardrobe on the other side of the room. He has also done that with his shoes, roller skates, boots, slippers, ice skates and mittens!

It seemed a very good idea when he did it but now Mr Forgetful can't find a pair of anything!

He wants to go out for a walk but he can't find his shoes or his boots or his mittens or his socks or anything! He has forgotten which wardrobe he put them in and now he is trying to remember.

You can help Mr Forgetful find his socks and shoes and all the other things when you play this game on the computer.

Mr Forgetful has lined all his wardrobes up in one room, some on one side and an equal number on the other side.

He can go to a wardrobe and open the door to see what is inside. You can show him which wardrobe to go to by pressing special keys.

They are the same keys which you use for Mr Greedy's Ice-cream Hunt.

By telling Mr Forgetful which way to go you can send him to a wardrobe. When he is touching the wardrobe like this you can open the wardrobe door to look inside by pressing the key marked with a \*.

Let's see what's inside. Press the keys to send Mr Forgetful to a wardrobe and open the door. What can you see?

Is it a roller skate or the a sock? Maybe it's an ice skate or a slipper or even a boot, a shoe or a mitten!

Whichever it is, there's only one of them! Mr Forgetful needs two so you must help him find the other one.

Let's get Mr Forgetful to look inside another wardrobe, but don't forget to choose one over the other side of the room.

What did you find in the second wardrobe? Does it make a pair with what was in the first wardrobe? If it does, you can send Mr Forgetful off to open another wardrobe. The doors on the first two wardrobes will stay open.

If what is in the first two wardrobes does not make a pair the doors will shut when you move Mr Forgetful away to look in another wardrobe.

Make sure you take a good look while the doors are open.

Remember what is in each wardrobe so you can help Mr Forgetful to remember where everything is.

As you look inside more wardrobes with Mr Forgetful you will learn where everything is. But remember you can only open two doors at once. The doors only stay open if you have found two things which are the same.

Once you have got all the doors to stay open Mr Forgetful can see exactly what he is looking for.

If you want to play this game again you will see that all the things Mr Forgetful keeps in his wardrobes have got all muddled up. They are not at all in the same places! You have to help Mr Forgetful all over again.

No wonder Mr Forgetful sometimes goes out wearing only one sock.

### **Mr Forgetful's Letter Game**

My last story is also about Mr Forgetful. He so enjoyed looking for his shoes and socks in his wardrobes that he sat down at his table to think of another game he could play with all his wardrobes.

It was so nice sitting down that after a minute Mr Forgetful couldn't remember why he had sat down! Well, he does forget things so easily.

He saw his box of letters lying on the table. Do you have a box of alphabet letters? In Mr Forgetful's box, there are lots and lots of letters. He laid them out on the table trying to remember if he had got them all. When he counted up he found he had two whole sets of letters.

Suddenly Mr Forgetful remembered why he had sat down. Have you remembered why?

"My wardrobes," he said, "I shall hide my letters in my wardrobes to make a new game."

Mr Forgetful put one letter from one alphabet in one row of wardrobes and the same letter from the other alphabet in one of the wardrobes in one of the wardrobes in the other row. In this way he filled all his wardrobes with letters.

"There, looking for these letters should be a good game; just like looking for my socks," said Mr Forgetful.

Mr Forgetful is right, it is a good game and you can help Mr Forgetful play it on the computer. It is just like looking for his socks in his Wardrobe Game. When you look inside the wardrobes with Mr Forgetful you must remember each letter because he won't remember them.

Saying the sound of the letter out loud is a good way of remembering - for example, for 'a' say 'a' as it sounds in apple. Perhaps a grown-up can help you do this.

There is another way a grown-up can help you in this game. You can make a special request to the computer to hide letters you choose. Ask a grown up to show you how.

Perhaps you might choose some of the letters from your name. But remember, the number of letters Mr Forgetful can hide is only the same as the number of wardrobes in one row.

Have a happy letter game!

### **To Load First Steps with the Mr Men**

On the cassette, each of the four programs is loaded independently.

On SIDE A, the choice is:

- A. Mr Greedy's Ice-cream Hunt (MEN1)
- B. Mr Silly's Hat Game (MEN2)

On SIDE B, the choice is:

- C. Mr Forgetful's Wardrobe Game (MEN3)
- D. Mr Forgetful's Letter Game (MEN4)

To load your choice of game, type CHAIN"MENx" and press RETURN. Press PLAY on your tape recorder.

On the disk version, boot the disk with SHIFT-BREAK and wait for the menu. You can then press RETURN for Mr Greedy's Ice-cream Hunt or B, C, D for the other choices.

### **Keyboard Controls and Special Features**

Please ensure that you have positioned the illustrated key guide featuring Mr Clever, on the flat surface above the number keys. The coloured backgrounds should be in line above the number keys 1, 3, 5, 7 and 9. You can secure the key guide with a temporary fixture such as Blu-Tack to prevent it being displaced.

For all programs, BREAK returns you to the start of the game.

### **Mr Greedy's Ice-cream Hunt**

1 moves Mr Greedy to the LEFT  
3 moves Mr Greedy UP  
7 moves Mr Greedy DOWN  
9 moves Mr Greedy to the RIGHT  
S switches the sound on or off but only at the start of each round

### **Mr Silly's Hat Game**

3 moves the pointer up the shelves  
5 takes the hat and gives it to Mr Silly  
9 moves the pointer to the right  
S switches the sound on or off  
SHIFT changes the background colour

### **Mr Forgetful's Wardrobe Game**

1 moves Mr Forgetful to the LEFT  
3 moves Mr Forgetful UP  
5 opens the wardrobe door  
7 moves Mr Forgetful DOWN  
9 moves Mr Forgetful to the RIGHT  
SHIFT changes the background colour  
CTRL changes the object colour  
S switches the sound on or off but only at the start of each round  
At the end of the game, press 1, 3, 7 or 9 to get going again.

### **Mr Forgetful's Letter Game**

Movement, colour and sound controls are exactly the same as for Mr Forgetful's Wardrobe Game, with the addition that DELETE - when pressed at the start of a new round - allows you to choose different letters to be hidden. They can be entered as either capital letters or small letters (by using CAPS SHIFT).

At the end of the game, press 1, 3, 7 or 9 to get going again.

## **GALAFORCE**

Only the most experienced of the U.C.F. pilots were chosen to embark upon the perilous mission of conquering and overthrowing the Hordes of Magellan - the Galaforce.

## **THRUST**

The number one bestseller. Collect the pods and make your escape but beware the many dangers on the way.

## **KARATE COMBAT**

KARATE COMBAT pairs you in a thrilling realistic battle against sixteen of the Orient's mightiest and most skillful fighters. Can you defeat them?

## **STOCK CAR**

A great car racing game for 1 or 2 players with a choice of six different circuits to race around.

## **PSYCASTRIA**

Only you can carry out the daring surprise raid on the Psycastrian installations. Superfast smooth scrolling shoot-'em-up action.

See individual entries for further instructions.

**Instructions' Source** : FIVE STAR GAMES 2 (Beau Jolly) Back Inlay

## **Review (Electron User) - "Classic Compilation"**

Beau Jolly has been producing compilations almost since the beginning of computer games and FIVE STAR GAMES 2 is without doubt one of its best. Three of the five titles come from the Superior stable, showing this company's remarkable penetration of the Electron software market.

The first is GALAFORCE, a classic shoot-'em-up in the style of ARCADIANS and ZALAGA. Though the idea is not original, it is executed faultlessly.

Unlike its older competitors, GALAFORCE gives up and down controls, as well as the conventional left, right and fire. Now you can go and get 'em, rather than wait to be shot at.

Both First Byte and Plus 1 joysticks are supported and there are facilities for pause/restart, sound on/off and quit game, as well as a nice touch of being able to redefine the playing colours.

The speed of play and the amazing variety of aliens and attack formations is a tribute to the wonders of modern programming.

Next comes another Superior classic, THRUST, a mindbogglingly difficult but frustratingly addictive game. It involves piloting a spaceship around the galaxy in search of power pods.

The game stands out because it follows exactly the laws of physics. As in real life, you move by burning fuel and the amount is limited. Luckily, you can replenish your supply from fuel tanks dotted around the planet surface.

The pods are hidden in increasingly inaccessible nooks and crannies and guarded by hostile gun emplacements. Your troubles really start when you trap a pod - the handling of your ship is now completely different.

To finish a level you must destroy the planet's reactor, before blasting off with your prize into the void. A great game.

PSYCASTRIA from Audiogenic is a sideways scrolling space game, following the pattern of "even if it doesn't move, shoot it anyway".

It features some wonderful special effects: Demo mode, scrolling message, music, multi-player option, high score table - there's even a built-in cheat facility.

Your ship stays centre-stage all the time and when you flip left or right, the screen scrolls around you. This smooth scrolling is one of the most impressive features of the game.

Although the Electron version is not quite as fast as the BBC Micro, you do at least stand a chance of seeing what's about to hit you.

The only feature I found annoying is that you must clear each level in one go. When you die, you go back to the beginning and must destroy everything all over again. This niggle aside, PSYCASTRIA certainly deserves an accolade.

Micro Power's STOCK CAR is the oldest title in the collection, originally released four years ago. Its shows its age painfully, with poor graphics and no joystick option or pause facility but when you play the game it is extremely addictive.

Races are held over distances of up to forty laps against three other computer-controlled cars. You can play by yourself, or against another player and two computer opponents.

There are six different circuits, which require a variety of tactics and driving skills. Matters are made more difficult by oil slicks and a skidding factor, which allows you to vary the responsiveness of the car. With a skidding factor of 0% you can drive around each circuit in top gear. At the opposite extreme, trying to corner in too high a gear does exactly what you'd expect - you're out of control and into the catch-fencing in no time.

STOCK CAR isn't a game to choose if you want to impress people but it will keep parties going for hours.

The last offering, and the third from Superior, is the martial arts game, KARATE COMBAT. The object is simple - hit your opponent before he hits you.

You can play against the computer, a human or a punchbag. This last option allows you to practice the moves with which the computer slaughtered you last time. This is a very useful facility, as there are seventeen manoeuvres to be mastered.

The graphics are good, if somewhat on the small side. Although KARATE COMBAT was very well received on its first showing, it lacks the technical merits of its major competitors, WAY OF THE EXPLODING FIST and YIE AR KUNG FU.

Although compilations are a good idea and a godsend to someone just starting a software compilation, they do seem to be getting a little out of hand. Two of the featured titles - KARATE COMBAT and STOCK CAR - are also available on other compilations. You wonder where it will end. This small point aside, FIVE STAR GAMES II represents excellent value for money.

## Review (Electron User) - "Classic Collection"

This is Beau Jolly's third FIVE STAR compilation and, as expected, the games are yet again classic selections from the list of Electron best-sellers. Altogether there are seven games, making up a twin cassette package.

First on tape one is SOUTHERN BELLE, a realistic simulation of an old King Arthur class steam locomotive hauling a passenger train from London to Brighton during the early 1930s. I missed this title at its first release, so I was anxious to find out what it was really like.

As it turned out, I was going to have to wait a while because my Plus 1 caused no end of problems during loading, and eventually had to be completely disabled - the software should do this automatically.

The idea behind SOUTHERN BELLE is simple enough in theory, if not in practice. You must drive the locomotive from London to Brighton, stopping at each station along the way, while observing the proper conventions such as blowing the whistle before entering a tunnel and stopping at signals.

The cassette insert supplied sufficient explanation of the controls to get me going, and I was soon chugging out of Victoria heading over the Thames and towards Battersea power station.

Several things surprised me about SOUTHERN BELLE. Firstly, each station on the route is represented by detailed line graphics, together with the station's name at the top of the screen.

Secondly, the whole train run is in real-time, which means that each station rolls into view only after the correct mileage has been covered, and it can take over an hour to reach Brighton on a normal run.

The fun begins when you select the Record Run option - this reconstructs the conditions of the famous record-breaking Brighton run in 1903, and you really have to perform well. I regularly managed to either blow the pressure plugs or boil the engine dry after only ten miles or so!

Moving on to the next program, THE WAY OF THE EXPLODING FIST needs no introduction to the vast majority of Electron owners as the original - and some say still the best - martial arts combat game.

I am a FIST fan of long standing, albeit on the BBC Micro. I was pleasantly surprised, therefore, to find the Electron version just as smooth and responsive, and extremely playable.

FIST, although over two years old now, is my favourite out of all the games on the FIVE STAR 3 tapes. Far from being conducive to causing violent acts, it is a great game with which to work off your aggression.

The keyboard arrangement looks a little bewildering at first. However, your fingers will soon find their way around the ten player keys with remarkable ease. To win a round, you must either be the first to have scored two full hits, made up from any combination of full or halfhits, or have the most hits by the time the 30 second round is over.

The computer player falls down with such a satisfying crunch when hit properly, yet displays uncanny intelligence on the harder levels. Each level appears in the form of a more highly qualified opponent, and the reward for vanquishing him is a higher Dan rating. Anyone reaching fourth Dan or higher will have a tough job keeping their status during the ensuing onslaughts.

The third program on the compilation is THUNDERSTRUCK, an arcade adventure. You play the part of Spreco, the space refuse collector, who has been transported to an eerie castle by a space-time thunderstorm.

All you want to do is get back to Myrtle and the kids, but you are trapped here amongst all manner of medieval trappings, and the only company is a bunch of hostile assistdroids.

These used to be your garbage collection droids, but they are convinced that their incarceration is all your doing and in true Frankenstein form turn on their benefactor.

The castle is inhabited by eight characters, all of whom will help you by supplying useful objects in return for something which they in turn can use. Objects are to be found scattered about the dusty corridors of the castle, and some require careful thought if you intend to pick them up.

I enjoyed this game. The large spaceman sprite moves about smoothly, as do the various characters and other objects. The gameplay was a bit frustrating at times due to the fact that I tend to find arcade adventures a strain on the old grey matter.

Nevertheless, THUNDERSTRUCK is a fun game and a worthy inclusion for this compilation tape set.

The next game, STRIKE FORCE HARRIER, marks the start of the second cassette. This is a full-scale flight and battle simulator involving that most famous of jet-aircraft, the Harrier Jump-Jet.

There is a great deal to this game, but briefly you are in control of a Harrier during a large-scale battle. Your objective is to clear the way for ground troops to assault enemy HQ which is 500 miles to the North-East.

In order to enable the troops' forward movement you must prepare landing sites along the way before signalling the troop carriers to move forward. However, the odd

obstacle is ready and waiting to thwart your plans in the shape of SAM surface-to-air missile sites, enemy tanks sporting very accurate artillery, and supersonic jets which are closely modelled on the MIG23.

But all is not lost. You have at your disposal a high-velocity cannon, two Sidewinder infra-red homing missiles and three bombs. The cannon is quite tricky to fire, but effective against tanks. The sidewinders, on the other hand, are a joy to use. Once you hear the steady growling which signals that a sidewinder has locked on a target, just launch the missile, bank off to one side and watch the fun as it disappears into the distance to be followed by a rewarding explosion.

Now for the disappointing part. STRIKE FORCE HARRIER is a brave attempt to bring a successful flight simulator to the Electron, but the view from the cockpit window can become so complex that quite a reduction in speed becomes apparent at these times.

The scrolling movement of the hills is far from smooth for the same reason. One minute you can be flying low, watching the radar and thinking how lovely and flat the horizon looks, when suddenly a 1000 foot mountain appears out of the blue. After a while you learn to give the mountains a very wide margin.

All in all, an excellent battle simulation with all the tactical ingredients necessary for hours of wit-straining fun, let down by slow screen-handling.

Now on to CAVEMAN CAPERS, game number five. You, as Ogg the caveman, have just found a new form of transport - Kickstart the turtle. Needless to say, Kickstart is far from amenable to the idea of giving anyone a ride, and is doing his best to throw you off balance. This is something at which he is rather adept.

The object of the game is to manage to stay aboard Kickstart while controlling his progress past various obstacles. Holes have to be jumped, pterodactyls dodged, and snakes ducked as they fly overhead.

CAVEMAN CAPERS is quite good fun. The characters are large and friendly-looking, especially Ogg, who looks just as if he was taken straight from an animator's table.

I did tire of the whole idea eventually, because although the smoothly scrolling background is always presenting yet more hazards to Ogg in his travels, I just couldn't complete more than the first handful of screens, and there are 60 in all. Still, CAVEMAN CAPERS is a great fun game where humour is definitely the order of the day.

The next game of the set is a text adventure, PROJECT THESIUS: RICK HANSON 2. As such adventures on the Electron go, this has got to be one of the best ever. I simply couldn't believe the amount of detailed, atmospheric description which abounded with every location.

The program was written using a unique text-compression system, and very impressive it is too. The descriptions ranged from 50 to 80 words each, and kept me hooked by the sheer escapism of the game.

PROJECT THESIUS is, as the subtitle suggests, the sequel to the first RICK HANSON adventure from Robico. This time the plot involves an un-named enemy who has secretly made a major breakthrough in particle beam technology, and is currently developing an advanced weapons system, codenamed Project Thesis.

As special agent Rick Hanson you must maintain the balance of power by finding out as much as possible about Project Thesis. You will be taken by submarine to the enemy coastline and left in Fisherman's Cove. The rest is up to you. The submarine will wait offshore until you have completed the mission, whereupon it will take you back to H.Q.

I found PROJECT THESIUS immensely enjoyable. Some of the puzzles are infuriating, but I'm sure that the solution was always within my grasp. At one point I was

greeted by a particularly officious lady guard who insisted that I'd been swimming - which I couldn't deny - whereupon she announced that swimming was strictly illegal and promptly shot me with her rocket launcher.

That brings us to the last game in this classic collection - the famous FRAK! by Aardvark. Again, this program needs no introduction as one of the most original, humorous and playable Electron games of all time.

FRAK! involves a caveman, several large hairy monsters and a yo-yo. Before you close this magazine in disgust, let me assure you that FRAK! is in the best possible taste.

You play the part of the hapless caveman who, armed only with his trusty yo-yo, must find and collect a large key which will allow him to pass on to the next screen.

Each screen is a maze of platforms, ladders and ropes populated by incredibly cute-looking eight foot high hairy monsters which look incredibly gormless. Touching a monster though, is not recommended as you will lose a life and have to start again from the beginning of the level.

What sent FRAK! rocketing to the top of the charts at its original release is probably the funniest idea ever incorporated into a game. To kill the monsters no axe, bow and arrow or club is needed. Instead, with a flick of his powerful wrist the wily caveman shoots out his yo-yo which promptly dislodges any monster careless enough to be sitting in its path.

The title of the game comes from a little cartoon bubble containing the word "Frak!" which appears above your caveman's head when he is unlucky enough to touch a monster or fall off a log.

Add to this game three amazing background tunes - and you can quickly see why it was so successful the first time round. In my opinion, it deserves to do well this time too.

There you have it. Seven games, each one a timeless classic, and all for £8.95. Bear in mind that the marks given below are general averages over all the games, as they differ one from another so widely.

Although I had my doubts about one or two of the games at times, as a package FIVE STAR 3 is pretty unbeatable value.

"Electron User Golden Game"

Chris Nixon, ELECTRON USER 5. 5

# FIVE STONES OF ANADON

*Professional, Originally Released On Cassette Only*

Game Type : Text Adventure  
Authors : David Featley and Mark Cook  
Standalone Release(s) : 1983: FIVE STONES OF ANADON, Softek, £7.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SOFTEK, 12/13 Henrietta Street, Covent Garden, LONDON  
WC2 8LH  
Disc compatibility : CDFS E00, DFS E00

## Instructions

For some time now, the Wizard of Anadon has gradually been growing weaker. Now the time has arrived when he can no longer guarantee that his power is sufficient to protect the land. Reports grow of fire-breathing monsters terrorising hamlets all over the land and carrying off many scores of the land's people to their death.

In order to banish evil once more and restore the Wizard's power, you must gather all five parts of the great stone circle of Anadon. Only if you can transfer all five parts to the place where the magix is powerful can you hope to save the land.

But beware! Whilst the wizard is but weak he can help reveal the five stones to you, but should be weakened further they will be no longer visible! You will then still be able to gather them but your task will be a thousand fold harder.

Remember, if the Wizard should die then you will have failed in your task.

To load this adventure, simply place the cassette in your recorder and ensure that the tape is fully rewound. Now type: CHAIN"" and press <RETURN>. Let the tape run and answer NO (N will suffice) to the question as to whether you wish to load a prior game or not. The adventure will then load as the second file on the tape and start automatically.

Should you wish to save the game so far at any time, then simply type in SAVE as your response to the prompt. Note that many useful words which the game understands are set up for you so that a single press of a function key will produce the full response.

f1 - NORTH	f2 - EAST	f3 - SOUTH	f4 - WEST	f5 - UP
f6 - DOWN	f7 - INVENT	f8 - GET	f9 - DROP	f0 - HELP

Playing this 'adventure classic' is easy, but it may take you many months to solve. The computer will describe locations to you and ask you for instructions. You can move in all the main compass directions for instance, and the program will understand short forms (such as N for NORTH) as well as in fuller form. In general though, the computer will soon tell you if it doesn't understand what you ask of it.

If at any time you should feel at a loss, then typing HELP may lead to the computer supplying you with some useful information of hints and tips. Then again it may not...

Do not think that the task before you is an easy one... Many before you have tried and none have yet returned.

**Instructions' Source** : FIVE STONES OF ANADON (Softek) Back and Inner Inlay

### **Review (Electron User)**

The last Softek adventure I reviewed - EYE OF ZOLTON - was very good. So it was with some interest that I loaded in THE FIVE STONES OF ANADON. I think that if anything, this is a better adventure than the last one.

Your local wizard is dying and it is up to you to recover the ring of five stones that are scattered about the kingdom. You start your quest in the wizard's house surrounded by a plethora of objects - a dust-pan, a broom, a fountain pen, keys, a crowbar and gloves to name but a few.

You discover the wizard, though why anyone should lock him in his own bedroom is a mystery to me. You soon come across a cemetery with grave advice and a cellar with a rather cross ghost. Further explorations lead you to a dragon and a black knight. The solution to the problem posed by the dragon requires knowledge of an old adage about making cakes. The result is invisibility.

An inconsistency here however is that while you are invisible you can get past the dragon, but the knight can somehow still see you.

One other thing that came as a surprise is that as the wizard weakens, the stones become invisible. Luckily though, you can still collect them if you know where they are. You are also limited to a set number of moves after the stones have become invisible because eventually the wizard dies and then the game is over.

One slight niggle I have is that you have to QUIT in order to LOAD a saved position. It is all too easy to load in the wrong data file. It isn't difficult to implement this and I am surprised Softek has not done so.

Aside from that we have an adventure that is a joy to play. Most of the most frequently used word parts are tokenised and thus, although written in Basic, the adventure is fast.

Overall, a very good attractively packaged adventure that is highly recommended.

Merlin, ELECTRON USER 2. 6

## Review (EUG)

In this no-graphic text adventure from Potter, you return for the third time as the "SUPER AGENT" of its clever title. You have been captured by minions of your old adversary, T.E.R.D. Rather than kill you outright though, they strand you on their space station, aim it at a ball of fire and lock it on course. It will burn up in thirty minutes of real time and only by gaining access to the computer and aborting the program will you be able to turn it around and avoid a fiery end.

Although Potter could probably just have about escaped with such a silly plot on the stereotypical "bad guys always engineer a spectacular death for the James Bond-type" line, the scenario rather boggles belief when Flint has been neither tied up nor incapacitated in any way. The first location of the adventure is a corridor and a cursory inspection of its environs reveals a very handy identity 'kard' and a space suit.

It appears T.E.R.D. are not only so stupid as to have left you enough time to escape 'inevitable doom' (sacrificing their own space station into the bargain!), they have also allowed you free run of the station itself and given you infinite inventory space to carry these incredibly convenient items!

The next surprise you find is that there are several guards onboard the Titanician vessel with you! But are they running around, comprehending their imminent destruction, desperately jabbing at computer consoles and screaming "Betrayed by those T.E.R.D.s who were supposed to be our friends!?" No, not a bit of it. They are standing to attention at certain locations demanding passwords - which are just as conveniently scrawled uncoded across walls in other locations!

The plot becomes rather laughable now. Of course this is true in numerous adventures but even filling in such holes with assumptions like "Perhaps the guards really ARE unaware of the situation!" is rendered ridiculous by the fact that, without the fake id card, they immediately blast you to death (Why didn't they just do this beforehand?!) but, with the same appearance and simply carrying it, you are assumed to be a legitimate fellow T.E.R.D!

Progress is frighteningly easy and the only real obstacle you're likely to encounter during your expedition is time running out. There are no cryptic clues, mazes or illogical problems and, in fact, the few objects you discover only have one purpose - to open doors to allow further access to the station. So, for example, the torch is not to see in a dark location, but to operate a light-sensitive door!

The standard directional commands NORTH, SOUTH, EAST and WEST are understood (with their abbreviations) but little else and FSB may be the most limited professional adventure to grace the BBC/Electron series. To use an object, the word USE is

required. Sounds obvious, but generally adventurers will try UNLOCK DOOR or OPEN DOOR and not USE BRONZE KEY as the game demands. INVENTORY, GET and DROP work as expected and, in appropriate locations, if the word PASS is contained in your input, you will be asked to enter the password in an unnecessary inverse video prompt (which makes the screen look messy) but ALL other input brings up the unfeeling message "I don't understand."

Were this not the case, Potter could at least have produced a "beginners'" adventure. But coupled with the crazy plot, their decision not to note the PASS and USE commands in instructions would simply infuriate the amateur. Which brings us to the LOAD and SAVE commands...

There are bugs in the procedures dealing with both in the original code with the result that the saved position file is left open when retrieved. Attempting to re-load it after being killed, or re-saving at a later position results in an error which locks up the game! The commands CLOSE #2 need to be replaced with CLOSE #0 (to close all files)!

The Mode 6 screen is laid out not unlike several other Potter adventures. The location description is laid out at the top of the screen while commands are entered in a smaller window (surrounded by \*s) at the bottom. Once again though, there are errors with text formatting. Whilst words are not cut over lines in the location descriptions, they are subject to strange and varying degrees of justification. In the input box, typing INVENTORY gives a list with no formatting whatsoever! On one occasion, text meant for the input box appeared in the location description too!

The rest of the errors - yes, there are more! - are unfortunate English grammatical fluffs: "You were not wearing a space suit and was instantly sucked out of the ship" is but one example. Many location descriptions are pathetic: "A room with red lights" is south of one "with orange lights" and east of "green lights". Those of the spaceship have an unintentional depressing atmosphere...

Slating over, finally we move onto the 'quest'. The good news is that the quite large number of locations does encourage its adventurer to make a map and locating the two keys and three crystals required to hack into the mainframe is very much assisted by doing so. By using this method I was able to progress to the very last location in only an hour or so. Unfortunately, much hair-pulling is involved in figuring out how to insert them into it! Neither USE CRYSTAL nor USE KEY will work and HELP just brings up the cold "You're on your own."

This is a thoroughly awful adventure. Devoid of atmosphere, humour, plausible script, friendly parser, unique puzzles and entertainment, it must qualify as the worst professional release on the market. ELECTRON USER's "Adventures" column once wrote that the second of the Flint trilogy (RETURN OF FLINT) was so bad that it should never have been released and presumably would've thought the same of these further meanderings! [The real 'super' agent trilogy is that of Robico's RICK HANSON where all this review's negatives become positives - Ed] The verdict on FSB has to be a resounding raspberry fit only to be relegated to the back of your games' collection in record time.

Dave Edwards, EUG #56

# FOOTBALL MANAGER

*Professional, Originally Released On Cassette Only*

Game Type : Strategy; Football Management Simulation; Text Only  
Author : Kevin Toms  
Standalone Release(s) : 1985: FOOTBALL MANAGER, Addictive Games, £9.95  
1988: FOOTBALL MANAGER, Addictive Games, £4.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : ADDICTIVE, 7A Richmond Hill, BOURNEMOUTH BH2 6HE  
Disc compatibility : Unknown

## Instructions

"FOOTBALL MANAGER designed by Kevin Toms. PCW says 'this game is recommended to anyone who has any interest in football'; CRASH an 'amazing engrossing game'. Featuring a transfer market, full league tables, injury problems, a save game feature, promotion and relegation, F.A. Cup Matches, Management rating, four divisions, as many seasons as you like, pick your own team for each match and seven skill levels."

## SECTION 1. Loading The Game

TYPE \*RUN TO LOAD

When the program "MANAGER" has loaded, you will be prompted with the message "Press RETURN to LOAD program data". If this is the first time you are using the program or you are not using a Customised DATA FILE (See section 4), just press RETURN. Otherwise, place your Customised DATA FILE tape in the cassette recorder and then press <RETURN>.

## SECTION 2.1. Starting The Game

A. When FOOTBALL MANAGER has loaded. you will be prompted with the question "Do you want a new game?". Press Y unless you want to continue a previously SAVED game (see IMPORTANT NOTES - RESTORING A SAVED GAME.) If you accidentally press N, pressing RETURN will prompt you with the question again.

B. **Team Choice** - No matter which team you choose to manage, you will start in Division 4. If your favourite isn't in the 48 included, you can change the team and player names by using the Customiser Utility (see Section 4) supplied with this tape.

C. **Skill Level** - Start at the Beginner's level and progress as you become more skilful.

## SECTION 2.2. The Main Game

This consists of five phases.

### Phase 1 - Weekly Options

A. **Sell or List players** - a list of players in your squad is displayed. See IMPORTANT NOTES - PLAYER ATTRIBUTES. If you now select a player to be sold, a team will make you an offer for him. Note that if you refuse the offer, there is a risk that interested clubs will no longer want to buy him. You will see why!

B. **Obtain a Loan** - You may borrow money from the bank (which incurs an interest rate of 1% per week) up to your Credit Limit as follows:

YOUR DIVISION	CREDIT LIMIT
1	£1,000,000
2	£750,000

3	£500,000
4	£250,000

You can repay some or all of your loan at the end of every week.

- C. **Save Game** - You can use this option to save a game to be continued at a later time. Prepare your tape recorder to record on a blank tape and enter the file name (up to 10 letters) you wish to save it as. After the game data has been saved, the program will return to the menu. If you accidentally enter this option, pressing RETURN will cause an escape to the menu.
- D. **View Fixture List** - This gives you details of your fixtures for the season. You play each team in your Division on a home and away basis. This week's fixture will be indicated by "<".
- E. **Display Division** - This displays the current League Table for your Division. Using this in conjunction with the fixture list will enable you to see when you play vital matches which affect your Promotion (or Religation) chances.
- F. **Switch Sound** - This facility enables you to switch on or off the sound effects used in the game.

### **Phase 2 - Playing a Match**

#### **A. Team Attributes**

Energy, Morale, Defence, Midfield and Attack have a minimum value of 1 and a maximum of 20. They are calculated as follows:-

- Energy - is the average energy rating of all the players picked to play in your team.
- Morale - is 10 at the start of the season; it increases when you win and decreases when you lose.
- Defence - is the total skill rating of all the Defenders picked to play in your team.
- Midfield - is the total skill rating of all the Defenders picked to play in your team.
- Attack - is the total skill rating of all the Attackers picked to play in your team.

B. You may select your team - see IMPORTANT NOTES - PLAYER ATTRIBUTES.

C. The match is played with a running commentary of the score. The team with the best attributes will often win but there is always the chance of shock results or Giant-Killings, just like real football.

### **Phase 3 - Results of a Match**

Note: your home gate money increases when you win and decreases when you lose. Your away gate depends on the quality of your opponents.

### **Phase 4 - Weekly Bills**

This gives you details of your income and Expenditure. Followed by the Weekly Balance giving your profit or loss for the week.

### **Phase 5 - Transfer Market**

- A. You are given the option of bidding for a player. The more you bid in relation to his value, the greater your chance of purchasing him. If your bid fails, the value of the player will increase due to your show of interest.
- B. If the NO PLAYERS FOR SALE message appears, you will have to sell one of your players to regain access to the transfer market as you are only allowed a maximum of 16 players in your squad.

The five phases are repeated until 22 League Matches and all your F.A. Cup Matches have been played; then the game moves to Part 3.

## **SECTION 2.3. End of Season**

- A. The final league table is displayed.
- B. Your League, Cup and Financial Success points are displayed. You are also allocated a Financial Bonus which is related to your success in the League.
- C. The top two teams are promoted (except in Division 1), and the bottom two are relegated (except in Division 4) from your division.
- D. A new managerial rating is calculated for you depending on your success so far.
- E. New Skill and Energy ratings are generated for all your players, just as real footballers would improve or deteriorate every season.
- F. The new season starts at Part 2.

### SECTION 3. IMPORTANT NOTES

- A. **Restoring a Saved Game** - Follow the instructions listed under LOADING THE GAME. When prompted with the question: "Do you want a new game?", press N and then type in your Saved Game's file name, making sure the corresponding tape is ready to play in your Cassette Recorder. Press RETURN to read the tape. The game will restart at SECTION 2 Part 2.
- B. **Player Attributes**  
When players are listed, several details are shown:
  1. Defender, Midfield player or Attacker - is indicated by the letters D, M or A respectively in the far left-hand column.
  2. Player's name.
  3. Player's number.
  4. **Skill rating** - highest is 5, lowest is 1.
  5. **Energy** - in the range 1 to 20. The energy rating of each player reduces by one for each match he plays in; it will increase by 10 if he does not play in a match. Part of the skill of the game is in resting the right players to increase their energy without doing too much harm to the Skill rating of the complete team.
  6. **Value in £** - relates directly to the skill rating of the player and the division your team is in.
  7. **Status** - Picked to play, injured or available for selection - indicated by a "P", "I" or a blank space respectively in the far right-hand column. N.B. Injured players cannot be selected to play.

### SECTION 4. Customiser Utility

This Utility allows you to customise the DATA file to include your own favourite teams and players.

To load this program, type \*RUN "CUSTOM" <RETURN>.

The Utility's use is largely self explanatory. Remember to SAVE the new

DATA file on to a blank tape once you have completed your changes.

**Instructions' Source** : FOOTBALL MANAGER (Addictive Games) Back and Inner Inlay

### Review (Electron User)

FOOTBALL MANAGER, by Addictive, has to be one of the best strategy games available for home computers. As the manager of a football club you have to get from league division four to league division one in as few seasons as possible.

The first screen asks your name and allows you to select your team from the whole league. There seems to be little advantage in picking the well known clubs as they are all dependent upon the skill of their manager - you.

The team you inherit is then displayed, together with six pieces of information on each player - playing position, number, skill rating, energy rating, saleable value and status (either picked or injured). From this screen there are a number of other options affecting the game. You can get a display of your performance, beg for a loan from the bank and even pay off loans. You can change your skill level, change the team and player names, save a game or restart a saved game.

Once you have done all the housekeeping from the first menu you have an announcement of your next fixture, which might be in either League or Cup competition.

Following this there is a readout of the comparison of the teams giving ratings for energy, morale, defence, midfield and attack. This is worth careful study as it is here that you can achieve the most valuable changes by modifying your team.

Unlike the BBC version, there is no graphical display of the actual matches, but it's none the worse for that. I doubt that this game will ever be bettered. It is all it claims to be and is very addictive to boot.

# FOOTBALLER OF THE YEAR

*Professional, Originally Released On Cassette Only*

Game Type : Strategy; Manage Football Player  
Author :  
Standalone Release(s) : 1986: FOOTBALLER OF THE YEAR, Gremlin Graphics, £9.95  
1988: FOOTBALLER OF THE YEAR, Kixx, £2.99  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : GREMLIN, Alpha House, 10 Carver Street. SHEFFIELD S1 4FS  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"The football strategy game to answer every boyhood dream - the chance to make it to the very top of football stardom. Starting on your path to glory as a 17-year old apprentice with a Fourth Division team and only `5,000 and 10 goal scoring cards in your pockets, the footballing world is at your feet. Adopt the identity of a professional footballer and develop a career through the ups and downs of match days, transfer deals and injuries etc. Display your talents in Football League, U.E.F.A., F.A. and Littlewoods Cup games and then if you're good enough the ultimate accolade of your sport, the Footballer of the Year Award."*

In this exciting game, you adopt the role of a professional footballer. You start your career at the age of 17 with `5,000 in cash, 10 goal cards and the footballing world at your feet. The aim is to develop your career and be nominated FOOTBALLER OF THE YEAR.

Upon loading the game, you will be asked "LOAD A SAVED GAME (Y/N)?". If you have played the game before, your previous game can be loaded and continued from where you left off.

Follow the prompts on the screen and enter your name and select the starting division. It is recommended that you start in division 4 and develop your skills from this easiest level.

## Control Menu

The on-screen icons correspond to the following:

GLOBE	- This shows the state of affairs for your team
FOOTBALLER'S HEAD	- Player status details
SCROLL	- Transfer cards
CASSETTE	- Load or save a game
INJURED FOOTBALLER	- Quit game
QUESTION MARK	- Incident cards
FOOTBALL BOOT	- Play matches

## State Of Affairs

This section shows your team's league position, the morale of the team, the goals scored in cup matches and league matches.

## Player Status Details

Your rating as a footballer is displayed as bar graphs depicting status points, your current league and your weekly earnings.

## Transfer Cards

These can be purchased at varying prices depending on which division you are in. Upon buying a card you have the chance of being spotted by a 'scout'. If the 'scout' finds that you are a suitable player then you are a suitable player then you will be

transferred to another club either in the same division, or a higher division. If you are successfully transferred, you will receive a player's fee plus the chance of a higher salary.

### **Incident Cards**

An incident card can be purchased for £200. This section is a bit of a gamble, but can prove very lucrative. However, on the other hand you risk losing money.

### **Play Matches**

When this option is selected, you are given the chance to purchase goal cards. Goal cards can then be used in any of the matches which you will play. The value of a goal card will be between one and three. It is up to you to use your skill and judgement as to when the cards are used. For example, if the value of a goal card is two, then you have the chance of scoring two goals in that game.

This is where your skill as a player will be needed when you enter the arcade sequence and attempt to beat the defenders and score a goal or take a penalty.

Results for the matches will then be printed on the screen and from these you will be able to deduce if your goal cards have been played wisely. This will enable you to enable you to alter your strategy for future games if necessary.

**Remember all the time you are aiming for the ultimate accolade, to be awarded the title FOOTBALLER OF THE YEAR.**

### **Game Controls**

Q - Left, W - Right, P - Up, L - Down, SPACE - Fire  
Alternatively a joystick can be used.

**Instructions' Source** : FOOTBALLER OF THE YEAR (Gremlin) Back and Inner Inlay

### **Review (Electron User) - "Golden Boots"**

Being something of an armchair soccer fan, I was curious to see what Gremlin had to offer the Electron market with this intriguing title - FOOTBALLER OF THE YEAR. So while a nicely drawn loading screen was being displayed, I had a quick glance through the English section of the instructions.

The game begins with you adopting the role of a 17-year-old professional footballer who is on the threshold of his career. Now, with £5,000 in the bank and the entire footballing world at your feet, you endeavour to develop your status as a player. Using skill and judgement, you strive to achieve the ultimate accolade of being nominated Footballer of the Year.

With an exploratory trial under my belt, I got the impression that the gremlins had finally taken over and banished the graphics to the broom cupboard. Having recovered from the initial shock of Gremlin without Graphics, and not being one to stand on ceremony, I decided that having been firmly rooted in the fourth division on my first attempt, a more serious approach was necessary.

When you have entered your name and selected the division you wish to start in, you are prompted to choose a team to play for. It is recommended that you start in division four, and develop your skill from there, the easiest level. Division five by the way, is the super league, and apparently not the lowest level, as I first imagined.

From here you enter into the main menu where I would advise you to experiment with the various options. I would also point out that the instructions are somewhat misleading, so you can forget about icons and an arcade section.

Once under way there is a far bit going on; you can buy incident cards, apply for a transfer to another division and, of course, check your current status and league position. I found playing the matches a bit hit and miss. Perhaps I was the way I

was standing as I took my shot? When the Q - left and W - right keys do I can only hazard a guess; perhaps you may be able to find out.

I wasn't impressed with the way the league table shows only your current position. This for me, destroys any real feeling of competition. You never know the strength of the team you are playing against - it could be first or last in the division.

Judging from my own performance, the game must have a hidden strategy. However, after several unsuccessful attempts, I'm afraid I found things rather dull. Gremlin is capable of producing some excellent titles, but this falls below its usual high standards. The Electron market needs and deserves better.

FOOTBALLER OF THE YEAR offers a good challenge at a budget price, though I suspect it may be one for the connoisseur of the sport only.

Steve Bissell

**\*\*\* Second Opinion \*\*\* (Electron User)**

Football simulation games always seem to do well in the software charts, and this offering from Gremlin is competing with some well established games. Like the competition, there aren't any graphics, but this doesn't detract from the gameplay at all, as the fun is in buying and selling, allocating funds and so on. A must for all soccer fans.

# FORTH

## *Professional, Originally Released On Cassette Only*

Game Type : Computer Language  
Author : Richard de Grandis-Harrison  
Standalone Release(s) : 1984: FORTH (Cassette), Acornsoft, £12.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ACORNSOFT, 4A Market Hill, CAMBRIDGE CB2 3NJ  
Tel: (0223) 316039  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*This pack contains the Acornsoft FORTH system on cassette. Acornsoft FORTH is a complete implementation of the FORTH language, to the 1979 standard specification by the FORTH Interest Group in California, for the Acorn Electron. FORTH is a compiled language so programs run very fast (typically five times faster than BASIC). Learners and enthusiasts alike will find it an exciting addition to their software range.*

*The manual FORTH on the BBC Microcomputer (available separately) serves as a general introduction to FORTH and includes a full description of Acornsoft FORTH with a glossary defining the actions of all standard words. The chapters are illustrated by practical examples.*

## Contents

FORTH dictionary and compiler

Editor		
FORTH Assembler	}	These files can be loaded
High-Resolution Graphics Demonstration		from within FORTH

## Loading Instructions

When loading is complete, a copyright message, and the heading:

Acornsoft FORTH

OK

will be displayed on the screen.

The Editor, Assembler and Graphics demonstration are loaded from within FORTH.

In FORTH, 'files' are not recognised as such, but are loaded as 'screens'. The screens are numbered in decimal on this pack - these are the filenames, as listed below - BUT they are identified on the cassette tape by their equivalent hexadecimal number; this means that while the screen(s) are being loaded, the appropriate hex number will be displayed and the user can confirm that the correct file is being loaded.

Editor	Screens 3-10	0003-000A (hex)
Assembler	Screens 12-18	000C-0012
Graphics Demonstration	Screens 21-22	0015-0016

## Examples:

The entire editor is loaded from within FORTH with the command

3 LOAD [RETURN]

Normal cassette operating messages are displayed during loading, and the message OK on the screen confirms that loading is complete. Similarly, the Graphics Demonstration is loaded with the command

21 LOAD [RETURN]

Once loaded, the Graphics Demonstration can be RUN with the command  
PLOT-IT [RETURN]

Refer to the manual FORTH on the BBC Microcomputer (available separately) for full details of programming in Acornsoft FORTH.

**Instructions' Source** : FORTH (Acornsoft) Back and Inner Inlay

### Review (Electron User)

FORTH was invented in 1969 by Charles H. Moore who worked on an IBM 1130 - a third generation computer. He believed his language to be the next step forward and considered it to be a fourth generation computer language. However, the language he was developing for the IBM 1130 only permitted five character identifiers so instead of being called Fourth it became Forth.

It has become the second most popular language on home micros after Basic. So if you have mastered the art of programming the Electron in Basic and are looking for something new then take a look at Acornsoft's Forth.

There are two main versions of this language - Forth-79 set out by the Forth Standards Team, and fig-Forth put forward by the Forth Interest Group in America. Acornsoft's version follows the Forth-79 standard. All the words in the standard word set are present plus a few others added by Acornsoft such as >VDU to send a byte to the VDU drivers.

Forth is neither an interpreted language like Basic nor a true compiled language like Pascal. It's a sort of intermediate language, compiling the definitions to a code close to machine language which is then interpreted when the program is run. Forth is known as an interpretative threaded language - the instructions which make up the application are compiled to give a list of addresses which point to previously defined machine code routines. The result of this is that it runs quite fast as much of the interpretation has already been carried out.

The Electron takes more than 22 seconds to count from 0 to 30,000 in Basic using an ordinary variable and about 7.5 seconds using one of the resident integer variables as the loop counter. The same loop in Forth takes about four seconds, making it nearly twice as fast as Basic. Forth programs are usually, but not always, faster than their Basic equivalents. So if you are interested in fast arcade games and find Basic too slow or machine code incomprehensible, try Forth as an alternative. It might just have that extra bit of speed you are looking for.

The cassette has four programs. These include a Forth dictionary and compiler, an editor, a Forth assembler and a high resolution graphics demonstration. The dictionary and compiler take about 4.5 minutes to load and consist of several files which relocate when finished. A copyright message appears and the heading:

Acornsoft FORTH  
OK

is printed. The OK is not a sort of "Jimmy rules OK" message but is one of the features of Forth - it simply means that the task set has been completed.

Modes 4, 5 and 6 are available and there is more than 6k of memory free for your application. Graphic displays are also possible in Modes 4 and 5.

The manual, which is available separately, shows how to draw triangles, rectangles and how to animate simple characters.

Acornsoft Forth does not support floating point arithmetic but this is not the great handicap it might at first seem. Floating point numbers are not needed all that often but when they are, Forth is such a flexible language that you can define your own words to handle them.

Since Forth applications - programs - are compiled as they are entered, the original form of the definitions are lost and only the compiled form remains. Acornsoft uses the standard Forth method of storing a copy of the source code in a number of screens. There are initially two screens on loading but this number can be increased - with a corresponding decrease in the memory left for the dictionary.

Each screen is divided into 16 lines of 64 characters and is identified by a number. A Forth application can use as many screens as it needs and interpretation continues with the next. Screens can be loaded, saved and edited with the editor supplied. The editor seems a bit complicated and a bit bewildering at first but is quite powerful and becomes easier to use with practice.

There are commands for putting text on to a line, deleting a line, inserting text, spreading lines, deleting text and many more. The manual with the cassette is actually Forth On The BBC Microcomputer but there is no difference between the two versions. The manual is an absolute necessity and pushes the total price of the package to more than £20. The manual is excellent, covering topics such as arithmetic (single and double precision), defining new words and vocabularies, loops, input and output, creating arrays, assembly language, graphics and sound. At the back is a glossary which lists all the Forth words in the dictionary and gives a brief description of their function.

To sum up then, Acornsoft's Forth is an excellent implementation of the language. It is very powerful, encourages structured programming techniques and is faster than Basic for many applications. If you are interested in programming and want something different and are prepared to put a bit of effort in then Forth would be a good investment and would open up a whole new world that you never knew existed.

If, however, you are just interested in fast machine code games and zapping various nasties of assorted sizes and shapes, then I would not recommend it. But you would be missing out on something far more interesting and rewarding.

Roland Waddilove, ELECTRON USER 2. 1

# FRAK!

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade Platform Game  
Author : Orlando  
Standalone Release(s) : 1984: FRAK!, Aardvark, £9.95  
1989: FRAK!, Alternative, £1.99

LINCOLNSHIRE DN20 9AX  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### Instructions

The Scrubblies and their friends have put all the special keys in hard-to-get places. Help Trogg collect all the keys, but watch out for the balloons and daggers!

If you run out of time it becomes night-time. You can continue to play in the darkness, but you can't yo-yo balloons or daggers.

There are a few things that Trogg can do that aren't obvious at first sight. If you hold the yo-yo key down, Trogg yo-yos further. If that still doesn't reach where you're trying to yo-yo, move a step or two closer (if you can) and try again. You will need to do this halfway across the first sheet and again later.

Trogg can walk past one rope and catch the next one along or walk off a platform and grab hold of the rope beside it. This is useful at the start of the fourth sheet (hold the "Down" key down and walk right off the log-end). If you're having jumping across gaps, go to the top of the first bit on sheet one and practise up there. You'll have Trogg leaping around in no time at all!

If you're wondering what everything does: bulbs give you more time before it goes dark, gems boost your score, and all the keys must be collected to finish each screen. Remember that Trogg has a big nose that helps get keys - although it often gets in the way! You start with three lives.

### Game Controls

The game may be played from the keyboard or using a joystick (only First-Byte joysticks on the Electron). To start the game, press RETURN if using keyboard control or Fire if using a joystick. To use a First-Byte joystick, wait until the game has loaded, then press F until it bleeps.

Z - Left, X - Right, \* - Up/Jump, ? - Down, <RETURN> - Yo-yo  
S/Q - Sound/Quiet, N/M - Tune On/Off, <COPY>/<DELETE> - Pause On/Off  
<ESCAPE> - Quit Game

### On-Screen Information

The three figures shown at the top of the screen are:

- The time remaining until darkness.
- The number of lives remaining.
- Your score.

### Screen Designer

If you press <ESCAPE> & <RETURN> you can redesign the current screen.

The shapes are thought of in terms of queues. There's a queue for all the platforms, ladders, gems, keys and bulbs, etc. However, each queue has a maximum size, but this is quite large and you normally fill up any of the big queues. If you cycle between queues until you get the platforms' queue, you'll notice that there are different size platforms. This means that to put down lots of little platforms is a waste of time and space. Similarly with ladders.

### Design Keys

Z - Moves shapes left,    X - Moves shapes right,    \* - Moves shapes up  
? - Moves shapes down,    <RETURN> - Places/deletes a shape  
Q/W - Cycles between queues of shapes,    <SPACE>/A - Cycles within a queue of shapes  
I - 'Remember' the current screen  
<CTRL>-L - Loads a set of screens,    <CTRL>-S - Saves a set of screens  
<CTRL>-C - Clear screen,    <ESCAPE> - Returns to game

You should 'remember' the current screen you're editing by pressing I, before pressing CTRL & S.

### Hints And Tips

You won't be allowed to 'remember' a screen if there isn't at least one key and Trogg on the screen.

Trogg can only be put on or off the screen when you can see the left-hand edge of the playing screen.

Don't put too many platforms too close to the top; it becomes too difficult to play.

Don't worry about designing a screen to the full length of the playfield.

If, when you try to remember the screen, you get a 'No Room' error, either scrap the screen or trim it down to fill the space (trimming is usually a good exercise anyway).

DO NOT ATTEMPT TO SAVE ONTO THE FRAK! CASSETTE. ONLY SAVE ONTO A SEPARATE CASSETTE.

### Extra Features

On the Acorn Electron version only, there are some extra features.

On level 5 and above, pressing SPACE saves your current position provided Trogg is on a platform. If you lose a life, you start again from this position.

When on the high-score table screen, pressing CTRL with keys 1-9 selects levels 1-9; pressing CTRL with keys W, E, R, T, Y, U, I or O selects screens 1-9.

When on the high-score table screen, pressing keys 1, 2, 3 or 4 selects either heavy, medium, light or no cross-hatch; pressing keys 5, 6 or 7 selects the screen colours.

**Instructions' Source** : PLAY IT AGAIN SAM 4 (Superior/Acornsoft) Inner Inlay

### Review (Electron User)

At last FRAK! is here and Electron owners need be envious no longer of their BBC Micro-owning friends.

Basically FRAK! by Orlando is a multi-screen ladders and levels game. However the superb graphics make it stand out from the crowd. The main character, which you control, is a large caveman, complete with animal skin clothing, big belly and stubbly chin. The aim is to collect all the objects - diamonds, keys and light bulbs - scattered about the screen. This involves climbing ropes and ladders and jumping from one platform to another.

The playing area is wider than the screen and when you get near the edge the screen

scrolls rapidly sideways. This is a hardware scroll and since the Electron can only scroll a minimum of 64 bytes at a time it's more like a jump than a scroll. However you get used to it after a few games.

If this were all you had to do it would be an easy game. But as you progress there are three types of monster to be disposed of; Scrubblies, Hooters and Poglets. They don't move but nevertheless they get in your way. Fortunately, this caveman is rather adept with a yo-yo. Don't ask me what a caveman is doing with a yo-yo. I haven't a clue. It's useful for bopping nasties, though.

As well as bashing monsters you have to dodge balloons which float up the screen and daggers which fly diagonally down. With a bit of practise these can also be yo-yoed.

As a bonus there's a screen designer which enables you to edit any of the existing screens or completely design your own from scratch. You can add platforms, crystals, monsters, light bulbs and so on. It can be tested at any stage so if it's not quite right you can easily alter it. The finished screens can be saved to tape and loaded back next time.

The original BBC FRAK! is in Mode 1, the Electron version has been converted to Mode 4. Although it's lost a bit of colour the graphics actually seem better. The game is very slightly faster and less flickery.

FRAK! is one of the classics on the BBC Micro and is destined to be one of the classics on the Electron. No games collection will be complete without it, so start saving up now.

Roland Waddilove, ELECTRON USER 3. 7

# FRANKENSTEIN 2000

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Multi-level  
Authors : David Crofts, Ian Elliott, Jason Sobell & Kevin Blake  
Standalone Release(s) : 1985: FRANKENSTEIN 2000, Audiogenic/ICON, £6.99  
1988: FRANKENSTEIN 2000, Atlantis, £1.99  
Compilation Release(s) : None  
Stated compatibility : BBC B (Although Electron version on Side B)  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : AUDIOGENIC, PO Box 88, Reading, BERKS  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"It is the year 2000 AD. Using all the advanced micro-particle technology now available, Freddy Frankenstein has set about bringing to life the monster created by his great grandfather, the infamous Baron Frankenstein."*

The year is 2000 AD and Freddy Frankenstein has inherited his great grandfather's castle in Bavaria. On taking possession of the estate, he discovers the location of his great grandfather's creation, the monster.

He decides to follow in his ancestor's footsteps and revive the monster by using the advanced 21st century technology that is now available. After many weeks of sleepless nights the experiment is ready. Using a micro-particle reduction field, Freddy is going to shrink an explorer class submarine to the size of a pin head (whilst he is inside it) and inject it into the vast body of the monster in an effort to locate and correct the defects that have caused the experiment to fail in the past.

Trachea - Destroy as many hopping frogs as possible whilst you journey down the throat.  
Lungs - Wipe out the rampaging cigarette packets whilst avoiding the lethal carbon dioxide bubbles.  
Heart - Guide your way carefully through to the implant, avoiding the electrical impulses and pumping heart valves. Launch a torpedo at the impant to activate the heart.  
Stomach - Your motors are now starting to overheat and are in desperate need of some lubricating grease. Within the stomach walls, the deadly fried eggs must be avoided until you have managed to obtain six slices of greasy bacon.  
Brain - Finally, you reach the brain. You must now neutralise the eight mutant electrons by nudging them off the delicately tuned circuit board.

## Game Controls

Z - Left, X - Right, \* - Up, ? - Down (Used in Heart and Brain only)  
<RETURN> - Fire

**Instructions' Source** : FRANKENSTEIN 2000 (Atlantis) Back And Inner Inlay

## Review (Electron User)

In FRANKENSTEIN 2000 your aim is to revive the famous old monster which you have found on inheriting the infamous baron's castle. In the futuristic world of 2000 AD your method is to shrink yourself down to a tiny size and enter the monster's body.

Stage one finds you in the monster's throat which is full of frogs. Your task is to destroy as many of these as possible during your journey downwards. This is best described as a version of Space Invaders. As you travel you will sustain damage from

colliding with frogs or the throat walls. You will also use up oxygen. Too much of the first or too little of the second spells the end of your mission.

Before reaching the lungs, a pellet of oxygen must be shot. If you take a long time to hit it you won't have much oxygen for the next stage.

The activity in the lungs is very similar to the frogs in the throat, but here it is cigarette packets you must shoot. An added hindrance are bubbles of carbon dioxide which float up towards you. After shooting another oxygen pellet you reach the heart where you steer through the various cavities to activate the implant.

It requires careful timing to get past the electrical impulses and to slip through the valves as they open.

A rather unpleasant task faces you in the stomach. You have to shoot the slices of bacon, while avoiding the fried eggs. Finally you reach the brain where, if you've got the oxygen supplies and a minimum of damage, you can knock out the bad neurons. This requires real precision, and I have not yet managed to do it.

Audiogenic has an original idea with this game, but it doesn't quite succeed. Technically it's all fine with neat, fast graphics and it has pleasing sound effects. However the whole program lacks any kind of extra feature to make it stand out from the crowd.

### **Review (Electron User) - "Old Flathead Is Back"**

A few of our more archaic readers may remember FRANKENSTEIN 2000, now receiving a second airing as a budget title. Having missed it first time around, I was eager to compare, dare I say, yet another oldie with the genre of today.

In FRANKENSTEIN 2000 you play Freddy Frankenstein, great grandson of the legendary Baron Frankenstein. The year is 2000 AD. On inheriting the castle of your infamous relative, you soon discover the incarcerated body of the legendary monster.

In the true spirit of your ancestors, the urge to restore life to the hapless creature takes over. You board a nuclear powered Discovery class submarine, and with the aid of modern technology are subsequently reduced to the size of a pin head. Now able to enter the body of the monster - Inner Space-fashion - your task can begin.

You have to reach the brain of the creature and repair the malfunctions that previously turned it into a homicidal killer. You enter the body through the trachea, your progress being monitored on a map of the creature's internal organs.

Here you encounter your first obstacle when bombarded by a host of little green frogs. At an early stage of the game you soon realise the importance of avoiding collisions at all costs. Contact with virtually anything other than legal targets has your damage indicator bleeping towards a critical level.

Also it is essential to scan your oxygen supply. Surprisingly, you only have the one life, and failure to keep both instruments at an acceptable level will result in your untimely end.

You must navigate four organs on your way to the brain, and all adversaries and obstacles must be overcome. There is a mandatory stop after successful completion of each organ, where you are given the opportunity to replenish a rapidly depleting oxygen supply.

By now my first impressions that the game seemed a bit too easy had been well and truly squashed. And just wait until you reach the brain - this is simply murder. In fact, if I don't complete the mission this time, I think I'll leave the poor creature to the mercy of one of my future relatives.

I found the graphics well formed and the sprites large and easy to recognise. There wasn't much in the way of sound, just a few noises here and there. Perhaps this had something to do with the monster being tone deaf.

I was initially disappointed by the screen's sluggish scrolling and readers with a Turbo Driver will benefit here. However, in Turbo mode the submarine may be distorted on a few screens. Having said that, I found playing in normal mode hard enough.

I enjoyed playing FRANKENSTEIN 2000, in which you first imagine that things are going to be easy, only to discover quite early on that you are not going to complete this mission without a great deal of practice and a whole bucketful of patience.

For those who missed this one first time around, enjoy a game that doesn't require the reading of a manual the size of War and Peace. As a budget title, this offers sound value for money.

Steve Bissett

### \*\*\* Second Opinion \*\*\* (Electron User)

I thoroughly enjoyed this game first time round and it is a welcome sight on a budget label. The graphics are good, the gameplay reasonably varied and it is quite addictive. If you haven't seen it before don't miss it second time round - you'll have lots of fun.

## Review (Electron User)

The storyline goes "When the Alphoid battleship attacked Deep Space Station Coriolis and Alphoid lifeforms injected the air supplies with their own cyanide-based morphine, only one crew member managed to don his space suit in time. Unable to reach the armoury, he must face the Alphoid warriors barehanded to defend not only his own life but also the vital computer records which the Space Station contains."

The object of FREE FALL is to control that sole crewman to help him survive as long as possible and to kill as many Alphoids as he can. It sounds easy. However there are a few nasty creatures lurking around bent on getting our lone spaceman - the Craboids, Lobstoids, Batoids and Waspoids.

Craboids are pleasant little creatures that will bite through a space suit and poison the occupant with a nerve toxin. As you might guess, this causes our spaceman to lose all control and to thrash about with convulsions.

As light relief, Lobstoids breathe fire and use up the oxygen supply. They also burn whoever comes in range. The Batoids are nice fellows who fly around catching and throwing bombs. Last, but far from least, the deadliest of them all are the Waspoids. "They have a sting which is worse than the bite of a Craboid, they can breathe fire like the Lobstoid and they can fly as well as the Batoid."

To control the spaceman requires dexterity of three fingers on each hand and a thumb for the space bar. Catching a bomb requires another finger. This might sound a bit difficult, but the keys are well positioned and control is soon gained.

Several features are so good that, hopefully, they'll become standard on all games. There are two panic buttons that can be operated at any time. (I did. Often!) The ESCAPE key causes the game to be aborted and the program restarted, while the COPY key is used to hold the game. This can be for an indefinite time, the DELETE key being used to restart the action. Sound can be switched on or switched off at any stage.

One excellent aspect of this program is the screen display. Not only are the characters and their movement of a high standard but there are also displays showing heart rate, air supply, high score and present score.

I thoroughly enjoyed getting to grips with this value for money package. Recommended.

John Woollard, ELECTRON USER 2. 9

## Instructions

*"The last thing I saw before the prang was a squadron of Jerries swoop down from behind the sun. I ducked, dived and downed one, but there were too many. With a sudden jerk, my tail was shot to blazes; and as the old girl spun to terra firma, I bailed out. As I stumbled across the French countryside, rather shaken I may add, I came across a peasant.*

*"'Parlez-vous Anglais?' I asked.*

*"'Non,' he replied.*

*"I swallowed hard. I'd better learn the lingo quickly. Occupied France - possibly the toughest examination ever, of a British Pilot's nerve. FRENCH ON THE RUN - the most adventurous way to revise French ever invented!"*

## Introduction

WELCOME to FRENCH ON THE RUN - the first in a series of adventures in education from Silversoft.

As an RAF officer forced to bail out over Nazi-occupied France your task is to make your way back to England. To do this, you must escape detection by passing yourself off as a Frenchman, but you will need to make use of the clues and information given by the people encountered in your travels.

We are offering a FREE WEEKEND in Paris as a prize to the first person to return to England alive, having completed the puzzle set near the end of Route 4. Don't worry, the program will tell you about it in good time.

You will begin each route with a small amount of money - not a fortune - but sufficient to get you to your destination. Mistakes along the way will usually result in a penalty of some kind being imposed, either a time penalty, or one that involves unforeseen expenditure, or occasionally, detection and death.

Each of the first three escape routes must be completed by a given deadline, of which you are informed at the beginning of that route.

Once you have begun a route, the status line at the top of the screen will keep you informed of the date and time, and will also tell you how much money you have left.

As each route is geographically accurate, a map of France will be of help in telling you where you are in relation to your destination; and whether or not it is possible to reach it in the time remaining - I suggest that you keep one handy.

O.K. then, off you go. The chaps here wish you the best of luck, and by the way - DO try and remember the details shown on your false papers; interrogations can be pretty swift and to the point if you slip up!

## Loading

There are four programs on the tape/disk. They are of increasing difficulty and must be played in sequence. When you play the game for the first time therefore, you must begin on Route 1.

To enter Routes 2, 3 and 4 you will need a password. You will be given the password for Route 2 when you have successfully completed Route 1, and so on. Later on, when you have obtained the passwords for Routes 2, 3 and 4 you can go straight to them.

## Using The Program

At the beginning of each route, you will have to enter your christian name, and in all but the first route, a password.

You should finish each word with a <RETURN>. Use the <DELETE> key if you make a mistake. If your name contains an accent (as in Andre) you can use the standard French accented characters. For example, e acute is function key f0.

The program will repeatedly ask you to choose a response. The possible responses will be displayed on the screen, each with a number next to it. You select a response by pressing the corresponding number on the keyboard, followed by <RETURN>. You will notice that when a key is pressed, an arrow will appear pointing to the response which you have selected. It is not too late to change your mind at this point - pressing another number will move the number to the desired response. Only when <RETURN> is pressed does your decision become irrevocable. Be particularly careful when a flashing skull appears: a wrong move here could be fatal.

Usually, after your selection has been made, the (linguistically) incorrect responses will be deleted one by one, leaving only the correct response on the screen.

At first sight, this might seem to make the game too easy - it doesn't. It does mean however, that the best way to get through a route is, each time you make a mistake, to remember the correct response.

Before moving on to the next scene (which you do by pressing <SPACE>) you can recover all the possible options by pressing <R>, This can sometimes be of use in sorting out where you went wrong.

## Changing The Colour And Sound

The BASIC program "FOR", which loads the data files, contains some data statements which can be altered in order to vary the screen display and the volume of the introductory music. If you LOAD and LIST this program you will see that there are REMarks which explain how to do this. We have no objection to your altering this program to suit your own tastes.

### Instructions

Deadly sub-atomic particles are running free in a scientific research centre. It is your job to trap the darting Leptons using a robot craft before your time runs out. As you move the craft across the screen, a green ion-trail is dragged along behind. When you reach the edge again, the smaller area confined by this green line, is filled in. A Lepton is captured if it is trapped in this area or if 95% of the screen has been filled. A bar running along the bottom of the screen indicates the percentage of the total area remaining to be filled. Enclosed areas are coloured red, but at any time, you can switch to the faster speed and areas so filled are coloured pink.

Higher levels introduce Chasers which move along the borders. A life is lost if you collide with one of these or if a Lepton hits your trail. The number of Leptons and Chasers increases up to a maximum of 5 of each. An extra craft is obtained on completion of the third, sixth and ninth screens.

A good strategy is to build small, narrow pink blocks up the centre of an unfilled area in fast mode and then to finish off using the slower mode to reach the top of the screen and capture the Lepton.

### Scoring

The base score for a fast-filled screen is 1237 - double for slow-filled areas. By way of example, the maximum score that can be obtained on screen 7 (if 95% area is filled and all Leptons captured on slow-fill) is calculated as follows: Score:  $1237 \times 0.95 \times 2$  (all slow-fill)  $\times 5$  (screen multiplier)  $\times (1 \text{ plus } 3)$  (3 Leptons captured) = 47006. This is excluding the time bonus.

### Game Controls

Z - Left, X - Right, : - Up, / - Down  
<SPACE> sets the robot craft in motion. Pressing this again causes the craft to move faster. S toggles the sound on and off before each game.

**Instructions' Source** : FRENZY (Micro Power) Inner Inlay

### Review (Electron User)

Here Micro Power has chosen a format which is simplicity itself, made it the simplest of games to use, and yet come up with what I think is one of the most amusing and compulsive games on the market today. Combine this with a highly colourful display, high scoring and wide age range appeal, and you have a winner.

What has happened is that a deadly Lepton has broken free inside a laboratory and is

bouncing around inside. Luckily it cannot penetrate the walls or pass through the ion trail that you are about to lay inside.

To enter is certain death, so you employ a robot vehicle to do the work of laying the trail, and you sectionalise the laboratory, thus trapping the Lepton inside a small area.

If you cut off a small part of the laboratory but fail to trap the Lepton, you carry on until 95 per cent of the area has been covered, when the Lepton is eventually caught. This, however, reduces your bonus, which decreases as time passes.

If you do trap the Lepton it is a points bonanza and a big bonus to boot. But if the Lepton hits the robot vehicle or the ion trail before contact is made with another wall or another part of the trail, then it's one life lost.

As the game progresses little refinements are added, like chasers which follow your tracks. Needless to say, they are on the Lepton's side and contact with one costs you a life.

At one stage the Lepton multiplies itself and all are equally deadly. Then again it can move at double speed and you need to be very clever to outsmart it.

Your robot vehicle has two speeds. The higher means the less time spent in the danger area but fewer points.

A cool head, a steady hand and nerves of steel should ensure you a top score in this excellent game.

Adam Young, ELECTRON USER 2. 6

# FROOT RAID

*Professional, Originally Released On Cassette Only*

Game Type : Fruit Machine Simulator  
Author : Alexander Loh  
Standalone Release(s) : 1985: FROOT RAID, Audiogenic (Assumed)  
Compilation Release(s) : 1987: ELECTRON POWER PACK 2, Audiogenic, £9.95  
: 1990: TRIPLE GAME PACK 2, Summit, £2.99  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+, Master 128  
Supplier : AUDIOGENIC, Winchester House, Canning Road, HARROW HA3 7SJ  
Disc compatibility : Unknown

## Instructions

FROOT RAID is an extremely authentic fruit machine simulator, with all the complex features of real arcade machines. There's Hold, Nudge and Swap, plus Sidewinder and Feature Panel.

### Basic Play

There are four Reels. The three on the left are the proper Fruit Reels that determine your win or loss, and the one on the right is the Nudge Reel. You get 10 credits at the start, indicated in the CREDIT box. You spin the reels, and you either win or not. If you get a win (indicated in the WINS box) you get the choice of Collecting it, or Gambling it. If you choose to gamble, the DOUBLE or NOTHING boxes will flash alternately very quickly and you must try to stop the flashing on DOUBLE otherwise you get nothing.

SPACE - SPIN REELS  
G - GAMBLE a WIN for DOUBLE or NOTHING  
C - COLLECT a WIN  
SHIFT - STOP on DOUBLE or NOTHING when gambling

If you don't get a win, all may not be lost - one of the other features may enable you to turn it into a win, or make a win more likely on the next spin.

### Hold

When the HOLD boxes are flashing under the reels, one, two or all three of the reels can be held by pressing the appropriate key. Any reels held will stay in the same position on the next spin.

1, 2 and 3 - HOLD REELS 1, 2 and 3  
DELETE - CANCEL HOLD  
SPACE - SPIN REELS

### Swap

The Swap feature comes into operation when the SELECT box is lit. On the right of the SELECT box is a display of all the symbols arranged in the three columns of three symbols. You have to catch one of the symbols when lit up - this is done in two stages, first by stopping the light when it is on the column that the symbol is in, then by stopping the light on the right symbol as it goes up and down that column. The symbol that it stops on can then be Swapped onto one of the Reels when the SWAP light comes on. In this way you can turn a losing go into a win. If you didn't get the symbol you wanted, you can Cancel it and have another try.

SPACE - STOP FLASHING LIGHT ON COLUMN/SYMBOL  
1, 2 or 3 - SWAP SYMBOL onto 1, 2 or 3  
DELETE - CANCEL SYMBOL and TRY AGAIN

### Nudge

Nudge feature is operational when NUDGE NOW box is flashing. You can Nudge any of the Reels up or down one symbol at a time. However, you are only allowed a certain

number of Nudges according to the number on the Nudge Reel. Occasionally the RESPIN box will light up. This gives you a chance of getting more Nudges.

5, 6 and 7 - NUDGE REELS 1, 2 and 3 UP  
8, 9 and 0 - NUDGE REELS 1, 2 and 3 DOWN  
RETURN - RESPIN NUDGE REEL

### **Sidewinder**

When SIDEWINDER box is flashing you can, if you want, swap the positions of the reels in order to turn a loss into a win. If you don't want to, just press SPACE to spin as normal.

RETURN - SWAP REELS 3 and 2 to 2 and 3  
SHIFT - SWAP REELS 2 and 3 to 1 and 2

### **Feature Panel**

Whenever the EHD or HTS symbol appears on the first reel on the win line, the flashing square on the Feature panel advances a certain number of places according to the number on the Nudge Reel. The FTR light flashes whenever this happens. Certain positions on the Feature Panel will give you bonuses if you land on them. These are...

LUCKY 3 - Reels spin to random win three times. You can gamble or collect each win as normal.  
REVERSE - Reels reverse back to your last win.  
NUMBERS - Pay out the specified amount.  
? - Mystery payout of up to £1.  
DIAMOND - Pays out Feature Jackpot of £1.

The GBL light flashing indicates FEATURE GAMBLE. You can either Gamble your position on the panel in the hope of getting nearer the prize positions, or Collect your position - which means that if you are not on a prize position, you'll go back to the start without getting anything.

But there's always a chance that the FEATURE HELD light will come on. If this happens, it means that you will be able to retain the position on the panel.

G - Gamble Position  
C - Collect Position

### **Other Boxes**

The CREDIT box tells you how much money you have left to play with. The START box tells you when to spin the reels. The long box just above the reels indicates the number of spins you have won (next to the T).

Supplier : CODEMASTERS, PO Box 6, Southam, WARWICKSHIRE CV33 0SH  
Disc compatibility : Incompatible. Fills up all user memory.

## Instructions

*"JUST LIKE THE REAL THING - FANTASTIC FEATURES*

*"The first real Fruit Machine Simulator including: Cash Box, Nudge Box (with Compu-Nudge and Nudge Bank), Skill Climb, Winning Streak, Cash Gamble, Holds and Mega-Holds, Skill Chances and Party Time Meter!"*

The object of the game is to win as much money as possible. You are given 1 pound at the start of the game, the rest is up to you!

Light up the CASHBACK letters, by collecting fruits with numbers on them. A FEATURE HOLD will leave them lit for the next spin. A question mark will give you a SKILL or a CHANCE option, to fill up all the letters. Once the letters are all lit, move onto the following special features.

NUDGES - Press Up or Down arrow together with 1, 2, 3  
CASHPOT - Money in cashpot is transferred to your credit  
WINSPIN - Press "C" when your chosen win appears  
CASHSTOP - Money is dropped in the cashpot. Gamble or Collect  
LASTWIN - Reels with spin onto your previous win

N.B. Not all these features are available on the ELECTRON version.

## Reel Layouts

# FUN WITH NUMBERS

***Professional, Originally Released On Cassette Only***

Game Type : Educational; Ages 4-7  
Author : Unknown  
Standalone Release(s) : 1982: FUN WITH NUMBERS, Golem, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : GOLEM, 77 Qualitas, Bracknell, BERKSHIRE RG12 4QS  
Tel: (0344) 50720  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

These programs will teach and test basic counting, addition and subtraction skills.

**COUNT** An enjoyable way to introduce children to counting. A random number of cars is displayed on the screen to be counted. The correct answer is rewarded with animated graphics. Complete with sound.

**ADD** Designed as a continuation of the previous program this teaches simple addition. Two groups of apples fall from a tree and children add them together. Each correct answer is rewarded with a beautiful butterfly flying in the garden.

**SUBTRACT** This program introduces children to subtraction. Count the green bottles and watch some of them being smashed. Then answer how many are left.

**RMATH** An arcade type game of speed and skill which encourages children to practice addition and subtraction. A laser base displaying either an addition or subtraction is used to select and shoot at one of four rockets, only one of which displays a correct answer. Featuring Hall of Fame.

## In all programs:

To go back a stage, press <ESCAPE>.

*"These are excellent programs which teachers on the project have no hesitation in recommending to other teachers."*

# FUTURE SHOCK

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade Adventure Platform Style  
Author : Kevin Blake and Jason Sobell  
Standalone Release(s) : 1986: FUTURE SHOCK, Tynesoft, £7.95  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : TYNESOFT, Unit 3 Addison Industrial Estate, Blaydon, TYNE & WEAR NE21 4TE. Tel: 091 414 4611  
Disc compatibility : Unknown

### Instructions

Having rather a lot on his hands at the time, the Supreme Being decided to sub-contract the job of human evolution to GALCORPS of the Plant Maltron II.

Well, it was the sixth day and getting towards closing time at the Drog and Palette Ale House, so the contractors decided to celebrate with a few pints of Thargsberg Special Brew.

The following morning they turned up for work in, let's say, an unwell state. Their work obviously suffers, and as a result the Scroll containing the plan for Evolution of human life on Earth is scattered to the four winds.

So, 42 billion years later (Could this be relevant?) whilst exploring the confines of an empty beer bottle, our hero GLOB found himself transported to the presence of the Supreme Being.

"GLOB," said the Mighty One. "I have chosen you to search human memory for the Scroll of Evolution."

"Why me?" said GLOB glumly!

Find the pieces and reassemble them the Scroll using a sliding block method.

### Game Controls

Z - Move GLOB Left,     Z - Move GLOB Right

### **Puzzle Movement (All relevant to position of black square):**

Z - Left,     X - Right,     \* - Up,     ? - Down

### **Pull down menus: form of choice:**

Press key 1 for (i)     put on puzzle  
                      (ii)    put puzzle off  
                      (iii) mix puzzle.

Press key 2 for (i)     sound on/off  
                      (ii)    music on/off  
                      (iii) quit game.

Press key 3 to show how many pieces you have collected.

Press key 4 to show the game author.

Move the choice 'bar' up and down with the \* and ? keys then choose with RETURN.

To exit any pulldown menu, press the relevant number key again.

**Instructions' Source** : FUTURE SHOCK (Tynesoft) Inner Inlay

## Review (Electron User) - "Boding Well For Future"

Even the Supreme Being gets weary at times when it comes to the job of creation. It was on one such occasion that he decided to sub-contract the job to a bunch of cowboys from the Galactic Corporation. Following a night on the town they awoke to discover that they had lost the scroll of evolution - the blueprint for the human race.

You play the role of Glob the blob, a large squat ball with big eyes and a mouth. He has been chosen to locate the sixteen pieces of the scroll and reassemble them.

FUTURE SHOCK uses a novel screen design. At the top are the eyes of the all-seeing Supreme Being and below is a large graphic window in which the action takes place. At the sides are a score board and a large candle. A slowly burning candle is used to depict Glob's life expectancy but the rate of burn increases dramatically if Glob comes into contact with alien beings.

Glob's life span can be increased by collecting the power pills to be found on several of the screens. It wasn't until I'd played the game for some time that I realised these pills were also the segments of scroll for which I was searching.

You can examine the pieces of scroll you collect by using a pull-down menu. Key number one displays a menu which lets you manipulate the puzzle pieces. Other menus give you access to the sound controls and the number of pieces you've found.

The games graphics are identical to those used in BUG EYES 2. All characters are huge, chunky and colourful, putting them fairly into what I would call the cute category. Controls are limited to left and right movement, but you can travel up or down by using the lifts found on most of the screens, or by falling off a ledge.

Also, an anti-gravity shaft runs through the centre of the maze and while floating up through the shaft you can drift to the left or right.

FUTURE SHOCK is an excellent program, a game which overflows with character and humour.

Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

GALACTIC COMMANDER consists of nine phases which must be completed in sequence to pass the test and receive the accolade. You can practice on any level for as long as you need, but you must start from level one for the test.

Each level has an extra feature added to it (increased gravity pull, missiles, mothership, caverns, etc). If you successfully complete a level, you will automatically be moved on to the next.

If you go off the top of the screen, you should take your finger off the thrust key until you reappear. This may take a while if you are travelling fast.

## Game Controls

A - Left, D - Right, <RETURN> - Thrust

## Instructions

*"You are the Commander of a Starfighter in the Galactic Patrol, a hero of the known universe, valiantly transporting colonists to their Starfleet ships. Have you got the courage and skill needed? Keyboard only."*

You are the Commander of a Starfighter in the Galactic patrol, a hero of the known universe, valiantly transporting colonists to their Starfleet ships. Your mission consists of five stages, all of which require great daring.

PHASE 1 : While loading the colonists into the Transporter, aliens swoop over the horizon. You must destroy them with the photonic lance to defend the colonists.

PHASE 2 : Here the aliens hurl themselves onto the Transporter in an attempt to deplete its defence shields. Defend it with your Starfighter!

PHASE 3 : The Transporter runs out of energy and you have to dock with it to transfer your colonists.

PHASE 4 : Your Starfighter has to navigate the Starfleet defences by dodging the force walls and the deadly Red Searcher.

PHASE 5 : Dock with a Starfleet ship to deliver the colonists safely.

## Game Controls

<SPACE> - Begin Game and start new level

**Instructions' Source** : GALACTIC PATROL (Mastertronic) Back And Inner Inlay

## Review (Electron User) - "Transported Into Tedium"

As commander of a starfighter in the galactic patrol your duty is to transport colonists to other planets. Behind this clicked theme lies a truly appalling program.

The action is divided into four sections. In stage one a horde of alien spaceships attack the colonists as they flicker across the screen to the transporter. The aliens initially appear as small red dots on the horizon, but steadily grow into flying saucers. You control a photonic lance with your cursor. While the aliens are still dots the cursor moves slowly, but once they have developed to full size it slows to a snail's pace. The photonic lance uses the DRAW command to connect two points on the screen at which point the alien vanishes - talk about special effects!

Stage two sees the transporter on its journey and the aliens have taken to ramming tactics. You must protect the transporter by shooting the spaceships before they get

too close. Once again we have the growing dot routine and the corresponding decrease in speed. Having spent a predetermined length of time potting aliens and cursing the ship's movement, stage two ends.

In stage three the transporter runs out of energy so you must dock to replenish its energy banks. I spent ages unsuccessfully attempting to delicately balance my starfighter on the nose of the swerving transporter. Finally I decided to abandon subtle strategy and simply ram the starfighter into the belly of the transporter - hey presto I had docked.

Stage four involves avoiding the starfleet force walls which move outwards from the middle of the screen, growing progressively larger. Despite being warned about the deadly red searcher - a block of corrupted graphics which slowly trails you - I flew straight through it twice and the collision detection routine never even spotted me.

GALACTIC PATROL is less than impressive. If it is given away with Cornflakes I suggest you buy another brand.

## Instructions

King Theoden's daughter, the princess Galadriel has been abducted by the evil sorcerer Grima. Unfortunately, Grima was put to death as a member of the king's guard before he could reveal the fate of the princess. As captain of the king's guard, it is up to you to make amends. You have been exiled in the wilds by the king; if you return to the palace without the princess Galadriel, it will mean certain death. Can you find Galadriel and break Grima's evil spell?

**Instructions' Source** : GALADRIEL IN DISTRESS (Potter Programs) Instruction Leaflet

## Review (Electron User) - "An Excess Of Magic"

King Theoden's daughter, the Princess Galadriel, has been abducted by the sorcerer Grima. Unfortunately, Grima was put to death by a member of the king's guard before he could reveal the fate of the princess. As captain of the king's guard, it is up to you to make amends. The Potters inform me that Galadriel is the easiest of their games and as such is a beginner's adventure.

I tend to agree as it has only 33 locations and provides a good introduction to the parlance and nature of text adventures. However, though the program holds some interest, it lacks real atmosphere and has a very limited vocabulary. Room descriptions are usually of only two lines in length and input is restricted to the outdated two word command.

For me the biggest let down is the absence of any subtlety of action - GET and DROP being the most common manoeuvres you make.

On the credit side there are some excellent problems to solve and one superb chaining puzzle. In the Summer house you have to eat something tempting and catch something less tempting to feed to a toad. Then - parodying The Princess and the Frog - you must kiss the toad.

The problem doesn't end there as you must now search for an antidote to toad poisoning!

I must admit that I am not overly fond of magical adventures - I even found Level 9's RED MOON somewhat boring. The random use of so called magical words doesn't call for much use of the old grey matter nor does it constitute real puzzle solving. To that end, I found the over use of magic in such a small adventure more than frustrating.

The Potters seem to have an aptitude for devising excellent puzzles but fall short on text compression and hence atmosphere - surely use of Mode 4 is a loss of valuable memory.

It is a shame, because I feel that Galadriel had the makings of a super little adventure but remains under-developed.

At £2.95, it remains a bargain and may provide some hours of enjoyment for the true novice.

LINCOLNSHIRE DN20 9AX  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

"8-directional movement of the player's spaceship; fast and slow-speed bombs which home in when later zones are reached; keyboard and joystick control; self-play demo mode; high score table and superb atmospheric music."

"In the midst of the 25th century, the United Cosmological Federation declared war on the savage, belligerent aliens inhabiting the Magellanic galaxy. Only the most experienced of the U.C.F. pilots were chosen to embark upon the perilous mission of conquering and overthrowing the hordes of Magelian, the Galaforce."

The Galaforce aliens attack in precise preconceived formations with each zone comprising several such formations. You must pilot your spaceship carefully avoiding the aliens, or shooting them whenever possible. Some aliens have to be hit more than once to destroy them; the score for killing each type of alien and the number of hits required is shown in the Identity Parade of Aliens\*. You have four spaceships and an extra spaceship is awarded if your score reaches 20,000 points.

## Pilot's Briefing

In ZONE 1 (The Perimeter) you will encounter the following formations: (a) Quazars in Zig-Zag formations, (b) Maadis in a Criss-Cross formation (c) a Shower of Diones, (d) Deviants in U-Turn formations. This is a warning zone. If you keep to the edge of the zonal screen these aliens are quite harmless; but you should attack them - the Federation abhors cowardice.

ZONE 2 (The Spearhead) has Pateras and Planitias in Paired Loop formations - harmless if you keep to the centre. Also, Pateras appear with Quazars and Ejnars in a Multiplier formation. To complete this zone you must shoot these aliens.

ZONE 3 (The Offensive) you may find it useful to use vertical as well as horizontal movement. The Staircase and Big Dipper formations are used for the first time. From ZONE 4 onwards the aliens drop bombs towards you. At the end of ZONE 4, the aliens assemble into the inciting Deck of Cards formation. In ZONE 5 (The Annihilator) the aliens use the Switchback, Poisson and Corkscrew formations.

The Federation has not issued any official information about ZONE 6 or later zones. However, it is known that the dreaded snaker formation first occurs at ZONE 11, and it is reported that the aliens start to drop homing bombs in ZONE 14 (The Impossible).

## Identity Parade Of Aliens\*

Name	Points value	Hits Required
QUAZAR	20	1

DIONE	20	1
PATERA	40	1

\* Original inlay includes sketches of the aliens to accompany this data.

### Game Controls

Z - Left, X - Right, \* - Up, ? - Down, <RETURN> - Fire

<ESCAPE> - Exit from game, <SPACE> - Start game

S - Sound on/off, H - Halt on/off

K - Toggle joystick/keyboard, J - Toggle joystick type: D = Digital, P = Plus 1

Standard joystick movements apply. The type of joystick interface is shown at the bottom of the screen. The digital interface recommended is First Byte.

### Title Page Controls

C - Change colours

Press the "C" key on the title pages before restarting the game. You can then change the three foreground colours to any colour except black by pressing the "1", "2" or "3" keys.

**Instructions' Source** : PLAY IT AGAIN SAM 2 (Superior) Inner Inlay

### Review (Electron User) - "Gala Is A Force To Reckon With"

War has been declared upon the aliens of the Megellanic galaxy. As one of the federation's more experienced pilots you have been enlisted to fly with the elite Galaforce. Have you got what it takes to defeat the Magellan hordes single handed?

GALAFORCE is an arcade game which bears a strong resemblance to that classic ZALAGA - swirling clouds of aliens just begging to be zapped. ZALAGA owners should not be put off as the game has much more variety and the animation is fractionally better. Some very impressive music accompanies both the demo screen and the demise of your spacecraft. The graphics are a delight - all spacecraft are represented by huge colourful sprites with the action occurring against a twinkling starscape.

Control of your ship is via keyboard or joystick. Movement is possible horizontally, vertically and diagonally, though you are restricted to the bottom quarter of the screen. In practice only left, right and fire are necessary.

The game is divided into 48 separate zones, each consisting of six waves of aliens. Zone 1 serves to break you in gently - the aliens tend to give in without a fight. The end of zone 2 sees the arrival of the motherships. Close examination of the swarm of attacking aliens reveals that several of the little devils are releasing more fighters into the upper atmosphere! The destruction of these motherships must therefore be your main priority.

Zone 4 brings on the heavy brigade. Taking on a traditional space invaders formation a heavily armed bomber attacks you from behind a moving shield of other ships. Each of the defending ships must be hit five times before it is destroyed and the bomber must be struck ten times!

This seemingly impossible screen can be mastered with more than a little perseverance. You are then given time to recover as the next few screens are similar to those already encountered.

When being sent on such missions I like to know that my ship is capable of tackling anything the enemy can throw at me. The Galaforce spacecraft certainly lack nothing in the fire power department. Just hold down the fire button and admire the volley of electric death which soars skywards!

GALAFORCE is a game to get the adrenaline flowing, the kind of game you continue playing when you close your eyes in bed at night - it should carry a government health warning!

Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : Unknown

## Instructions

If you survived GALAFORCE, then you may have the necessary skill and daring to succeed in GALAFORCE 2.

The aliens attack in precise preconceived formations with each Galaxy comprising several such formations. There are a total of 16 Galaxies. You must pilot your spaceship, carefully avoiding the aliens, or shooting them whenever possible. Some aliens have to be hit more than once to destroy them.

Watch out for the alien Capsules. You collect a Capsule by colliding with it or by shooting it twice. You will then gain a special feature. Some features are helpful, e.g. extra laser power, extra life; others are harmful, e.g. no firepower, slow ship movement. The feature remains effective until another Capsule is collected or until a life is lost.

The Capsules are released in a fixed sequence throughout the game, so keeping a note of their occurrence and features can be very helpful in completing your mission.

You have three spaceships to start with, but can have a maximum of five.

## Game Controls

When on the Header Screen, you can select whether to play the 1-player or the 2-player game by pressing the CTRL key. You can also select the Galaxy you wish to start on, provided that you have already completed that Galaxy. To select a galaxy, press RETURN on the Header Screen, then move up or down the Galaxies using the CURSOR UP and CURSOR DOWN keys.

The game may be played with a joystick or from the keyboard.

```
Z ..... Move Left
X ..... Move Right
* ..... Move Up
? ..... Move Down
RETURN ..... Fire (Keyboard)
K ..... Keyboard/Joystick Selection
J .... First-Byte/Plus 1 Joystick Selection
SPACE ..... Start Game
S ..... Sound On/Off
P ..... Pause On/Off
ESCAPE ..... Quit Game
```

# GALAXY WARS

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Shoot-'Em-Up  
Author : Trevor Hall  
Standalone Release(s) : 1984: GALAXY WARS, Bug Byte, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : BUG-BYTE, Liberty House, 222 Regent Street, LONDON W1R 7DB  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

It seemed a simple mission at first - the alien bombers flying across the screen in formation were easy prey to a warrior of my experience and their fighters were fairly ineffective. But wait a minute - those H-wing fighters are a bit more of a problem, and who said anything about having to dock with the mothership to refuel? Couldn't they have fitted the long range tanks? Oh well, I'll have to live with it, I suppose. Hey! What are those things coming at me now?

A bonus ship is awarded for every 1500 points scored. There is on-screen scoring and the program also keeps track of the ten highest scores. When docking with the mothership, the bonus awarded is higher the nearer to the centre of the ship you are when you dock.

## Game Controls

<FUNC> - Move ship left, Q - Move ship right, <DELETE> - Fire missile  
F - Freeze the game (to feed the cat, answer the phone, etc)

**Instructions' Source** : GALAXY WARS (Bug Byte) Inner Inlay

## Review (Electron User)

Another game from the Space Invaders' camp with a few differences and a couple of surprises. You are the little destroying machine at the bottom of your screen, moving left and right with FUNC and Q keys, firing with the DELETE key. F freezes the game.

The first screen of alien bombers are in an easy to pick off formation lined across the screen. That is, easy if you get your rhythm right. However, watch out for the space pods which land on your level and can blow you to smithereens if you run into them.

But there's no time for complacency - as soon as you've fought them off, the H wing fighters appear on the screen. These are both hard to dodge and at times seemingly impossible to blow up. And, after all this, you have to dock with your mothership to refuel.

All in all, it's an exciting game for the arcade addict with reasonable graphics and good sound effects.

Keith Young, ELECTRON USER 2. 4

# GALILEE

***Professional, Originally Released On Cassette Only***

Game Type : Text Adventure In Two Parts  
Author : Peter Goodlad  
Standalone Release(s) : 1985: GALILEE, Shards, £5.95  
Compilation Release(s) : None

## Review (Electron User)

One mark of the success of a home micro is the improvement in both the quantity and quality of the software produced for it. This program confirms the Electron's place as a micro at the top of its class - a plaudit which can equally be extended to this marvellous program from Holly Computers.

A couple of months ago, I reviewed a fairly similar tape which produced sprites for use in one's own programs. GAMEMAKER 2 sets out to be a far more comprehensive aid to the serious games programmer and it succeeds to a most remarkable degree.

The animation which can now be achieved is almost truly professional in smoothness and speed, while the whole system of writing the game program itself is made into a (comparatively) easy affair.

Do not feel, however, that this tape is a magic carpet to success. The 40 page booklet requires a good deal of thought and much practice will be needed before the process suddenly clicks. However this approach is not only beneficial to programming development, but is also great fun!

A large number of images may be designed and drawn on screen using a technique that soon becomes straight-forward, and it is then possible to assign one or more images to a sprite. Sprites are the miracles of a computer game, allowing figures to be overlapped and to pass each other without one overwriting and therefore obscuring the other.

The point of assigning two images is that they can differ in the minor details which lead to smooth animation on screen. Obviously a whole series of these could be designed around one main character for the really smooth effects seen in commercial games. These sprites could then be saved as a file to tape and \*RUN when the actual game has been written and put onto tape.

A part of the GAMEMAKER 2 program, USER2, remains active at <BREAK>, as it is hidden below the new PAGE and this allows a wide range of new commands to be used during the game. These additional commands rely on simple mnemonics, so that \*GMD 1 would move sprite number 1 down.

The program also allows for one main character to be driven from the keyboard while others may move in paths already described in the program - although there is even scope for random movement here for the adventurous programmer.

All the integer variables needed for updating, movement, collision detection or reply are clearly detailed and many examples are given of their use.

Holly is allowing games developed using this program to be sold commercially provided that a simple acknowledgement clause is included.

Yes, for the Electron owner wishing to push the machine to near its limits, save up - or even mortgage the cat. This is a superb program which I thoroughly recommend.

Phil Tayler, ELECTRON USER 2. 1

# GATECRASHER

***Professional, Originally Released On Cassette Only***

Game Type : Arcade  
Authors : Dave Mendes and Mick O'Neill  
Standalone Release(s) : 1984: GATECRASHER, Quicksilva, £5.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : QUICKSILVA, Palmerston Park House, 13 Palmerston Road,  
Southampton, HANTS SO1 1LL  
Disc compatibility : Unknown

## Instructions

*"GATECRASHER features: Full colour animated graphics; Superb sound; Seven levels of difficulty; Earthquake feature; Full instructions within program."*

Put your mind to the test. Take the ultimate test of Gatecrasher. Do you enjoy being killed by aliens? Has your keyboard melted away under the heavy artillery? Do you have nightmares about swooping birdmen? Well, if so, this is the game for you. It has none of these.

GATECRASHER is a game of skill and strategy that will test your mind to its limits.

## Game Controls

Z - Left, X - Right, : - Up, / - Down, <RETURN> - Drop Barrell  
E - Earthquake

## Competition

On completion of level 7, you will be presented with a code to break. You are required to break the code and disclose the hidden meaning.

Your answer must be in four parts:

1. The sequence of figures that were presented on completion of level 7.
2. The significance of these figures.
3. The method that you used to break the code.
4. Your final score.

Send your answer in an envelope with proof of purchase and your name and address and send it to us marked "GATECRASHER COMPETITION" by December 3rd 1984.

# GATEWAY TO KAROS

*Professional, Originally Released On Cassette Only*

Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Hints & Answers

Here is a list of commonly asked questions about GATEWAY TO KAROS, together with a set of hints and answers.

The wolves get me whenever I venture into the forest.

Hint: Find yourself a weapon as soon as possible.

Ans.: Either buy something in Thwil, search the eastern cliff-tops or make a quick dash for the forest hut and get the axe.

I keep sinking in the swamp.

Ans.: Although it is possible to get out using a fixed sequence of moves it is best to stay out altogether. There's nothing interesting there!

I can't read the ancient book.

Hint: You need to be wearing a certain magical object.

Ans.: Wear the iron circlet.

The book isn't worth any points and I can't drop it.

Hint: So don't pick it up.

Ans.: Like the famous grimoire of Albertus Magnus, once you have it you can't get rid of it.

What happens in the forest clearing?

Hint: What does a patch of disturbed soil suggest, and what can you do about it?

Ans.: Dig, but find the spade first.

I can't open the steel cylinder.

Hint: It has a slotted end.

Ans.: Unscrew the slotted end with the screwdriver.

What do I do at the mound on the tip of Vorkness?

Hint: What would an archeologist do?

Ans.: Dig, but find the spade first.

The card players in the inn won't tell me anything.

Hint: Try to make them more friendly. You're in a tavern, remember.

Ans.: Buy them a drink.

I can't get any useful information out of the witch.

Hint: Take her the things she requests.

Ans.: Drop the green fern and the red-flowered plant in the cottage. (The herbs grow by a spring near the dolmen.)

There doesn't seem to be enough money to buy everything I need.

Hint: There are three separate hoards of coins, and the total is sufficient.

Ans.: You don't actually need every single object that is on sale, but you can buy them all if you wish. There is enough money to do so, but it won't leave enough to soften up the card players.

I die soon after leaving the witch.

Hint: Entirely your own fault! It's dangerous to double-cross a witch!

Ans.: Only honest adventurers can succeed in the quest, and you know what I mean!

Buying a drink seems to cost an awful lot of money. I hardly anything left.

Hint: So take very little in there with you.

Ans.: Make your other purchases first, then visit the inn.

The ladder breaks when I try to ascend/descend the mine.

Hint: Make yourself lighter.

Ans.: Remove your armour.

I can't get up the shaft in the ceiling of the square room.

Hint: Find something to stand on.

Ans.: Bring the anvil into the room, stand on it and climb up.

The kobolds keep stealing my lamp.

Hint: How can you scare them off?

Ans.: Pull the lever on the copper tube as soon as they appear. (The copper tube is a primitive gun. Didn't you pull the lever the first time you picked it up?)

I fall to my death in the kobold room.

Hint: What can you expect when the floor is full of pits and you have the carpet with you?

Ans.: Don't move around in the dark. (It's OK to move into the dark and out again.)

I can't find the entrance to the Hidden Valley.

Hint: The hermit was referring to a place quite close to where he lives

Ans.: Go north from the hermit's cell, then north-west.

I can't get past the undergrowth.

Hint: You'll have to cut it down.

Ans.: You need the axe from the woodcutter's hut.

A great rock falls on me when I try to go north.

Hint: How can you precipitate an avalanche while standing clear of it?

Ans.: Blow the horn loudly.

I can't get a bulky object into the Hidden Valley.

Hint: This is where a rope comes in handy.

Ans.: Tie the rope to the vertical shaft in the Valley.. When you get the object, sail into the Dogshead tunnel and tie the object to the lower end of the rope. When you next visit the Valley, pull up the object.

I can't get a bulky object out of the Hidden Valley.

Hint: The method used for getting it in can't be used for getting it out. Have you brought the carpet with you?

Ans.: You can carry the harp as you fly on the carpet.

Stalactites fall on me in the pool cave.

Hint: You're making too much noise!

Ans.: Make your music with a quiet instrument.

I can't escape from the Black Grove. My strength just drains away and I die.

Hint: Only magic helps here. What have you got that you could wave, rub or manipulate in some other way?

Ans.: Either wave the wooden rod or ring the bell.

I keep wandering around the Stone Web until I die.

Hint: There is a fixed move sequence to take you out. Magic may be used too.

Ans.: Go north from where you found the rod. South-east from here will take you out of the Web, but beware!

I can't unlock the mountain door.

Ans.: Not without the key you can't! Keep looking!

I can see a key in the well, but I can't get it.

Hint: It's an iron key. Does that suggest anything?

Hint: Has there been anything to suggest that one of the objects that you are carrying might be magnetic?

Ans.: Tie the string of the black stone (which is a piece of magnetite) then lower the stone down the well.

I get trapped on Kuklos.

Hint: Magic can only be countered by stronger magic. What have you just found?

Ans.: Wear the iron circlet, then try launching your boat.

Eating and drinking don't seem to renew my strength.

Ans.: They do, but only when your condition falls below 256.

I can't get the treasure out of the dragon's cave without being killed.

Hint: Either poison the creature or trick him with magic.

Ans.: Drop the berries for him to eat, or wear the cap of invisibility.

The dragon is dead but I still can't get the treasure.

Hint: Protect your hands.

Ans.: Wear the gloves.

I keep getting shipwrecked.

Ans.: Read the descriptions of your surroundings with great care and sail parallel to the coast.

I get lost on the open sea.

Hint: Navigate more carefully! But if you do get lost, try the usual things with magical objects (waving, rubbing, ringing, etc).

Ans.: Don't sail directly away from the coast, but if you do get lost, wave the rod or ring the bell!

The Kraken keeps destroying my boat and killing me.

Ans.: He's a large and powerful beast. You need to be very well armoured indeed to fend him off. Furnish yourself with all the weapons and armour you can find.

I come to grief in the Needle Rocks/Whirlpool.

Hint: Stay clear!

Ans.: You are given sufficient warning to stay clear of these hazards if you are alert.

I keep losing my way in the mountains and falling over precipices.

Hint: This is confusing terrain. It all looks the same! How can you make the places look different?

Ans.: Drop objects and map the mountain passes. Be prepared to save and continue a few games before you find all the moves which lead to precepices.

Is the carpet a magic one? I can't get it to fly.

Hint: Yes it is, but you can't use it whilst carrying it, and you must command it explicitly or it can be dangerous!

Ans.: Drop the carpet, stand on it, and command it to fly to a named place.

I can't cross the pit in the passage.

Hint: You need something to act as a bridge.

Ans.: Put the plank across it.

Even with the plank, I can't bridge the pit.

Hint: Put out the fire. You need water; lots of it!

Ans.: Break the big jar. This can only be done with the hammer.

I can't get past the griffen.

Hint: There is a certain missile which will kill him.

Ans.: Throw the metal sphere at him.

I can't get past the serpent.

Hint: He hates loud noises!

Ans.: Blow the horn loudly.

I can't turn the iron wheel.

Hint: How do you free a rusty wheel?

Ans.: Oil it with some of the lamp oil from the flask.

My lamp doesn't last long enough.

Hint: Don't waste it.

Ans.: Turn it off when you're not in the dark.

The lamp won't light.

Hint: If you've already had it lit, then it's probably empty. If not, remember that it isn't an electric lamp that can just be switched on.

Ans.: You need a tinder box to light it with. (You also need exactly the right words LIGHT LAMP).

I can't refill the lamp with oil.

Hint: Is it wise to pour oil onto a lighted lamp?

Ans.: Turn off the lamp, then fill it.

I've explored the lake cavern, but I think I must have missed something

Hint: Very probably. Have you investigated the waterfall?

Ans.: Go behind it. But go south-east to get out safely again!

I get in sight of something interesting then I get electrocuted.

Hint: One of Khoronz's infernal devices! However, there's nothing magical about this one. How can you render it harmless?

Ans.: Short circuit the current by connecting the plates with the wire.

What does the mirror do?

Ans.: Nothing (at least, not in this adventure). But it's a valuable treasure.

I can't get beyond Khoronz's laboratory.

Hint: Buttons numbered 1, 2, 3, 4, 5. Now where have I seen numbers written before?

Ans.: Rub the crystal. The secret combination will then be revealed.

The door of the room east of the laboratory won't open, even though I have the key.

Hint: The key is useless here. The clue you need is the ancient book.

Hint: Words alone unlock the secrets of the dark. What magic words have you seen lately?

Hint: You need a two-word phrase. It was once carved over the gateway at Skarp castle, but some of the lettering has crumbled away. There are two anagrams of the complete inscription to help you piece together what remains. Have you found these yet?

Ans.: The words required are ARCANA TENEBRAE. (EARBENETANACRA also does something)

I can't raise the stone slab in the small room.

Hint: A lever is useful.

Ans.: You need the iron bar.

The volcano erupts and kills me.

Hint: Make adequate preparations before taking the harp.

Ans.: There are several ways of escape. If you leave your boat on the beach at Pykon Bay and acquire the means to deal with the serpent and the griffen before taking the harp, then you will have enough time to be safely at sea when the climax of the eruption occurs. Experienced players will find other (magical) ways of escape which are faster and less error-prone. [I think he means the carpet!]

Sometimes my condition starts dropping very rapidly. It doesn't seem to particularly depend on where I am.

Hint: Certain objects, although precious, are highly inimical until you get them home. What are you carrying?

Ans.: Don't walk around more than you can help with Vork's crown and cup. Use the magic carpet to fly them to the Gate.

I can't find the Gate again. It seems to have vanished!

Ans.: It is a weird object. It can only be approached from the west side. To take two examples: If you go south from the marshy hollow, you will see it on a hill to the east. If you go north from the ore-wahing mill, it will come into view the same way.

I can pass through the Gate but it doesn't take me anywhere.

Ans.: That's right. It will only take you home if you are carrying the Talisman (and that is another hint!).

I don't seem to be able to carry all the valuable objects to take them back through the Gate.

Hint: Are you wearing absolutely everything that is wearable? Have you discarded everything (except the bag) that can't be worn and isn't treasure?

Ans.: There are twelve wearable objects, most of them treasures and some of the others (such as the sword and mail) quite valuable. (Yes, you can wear the sword if you are wearing the belt!) The objects which must be carried rather than worn number 14. All of these (except the essential bag) have a high points value. Objects such as the lamp which are neither valuable nor wearable should now be discarded. [I think he means, there are twelve wearable objects, most of which are treasures and valuables. The sword is a wearable object if you are wearing the belt. The bag is essential, and there are 14 (13?) other objects worth carrying home. The others should be dropped!]

# GAUNTLET

## *Professional, Originally Released On Cassette Only*

Game Alias : THE GAUNTLET  
Game Type : Arcade; Shoot-'em-up; DEFENDER clone  
Author :  
Standalone Release(s) : 1984: GAUNTLET, Micro Power, £6.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : MICRO POWER, 8/8A Regent Street, Chapel Allerton, LEEDS  
LS7 4PE. Tel: 01532 683186.  
Disc compatibility : CDFS E00, DFS E00

### Instructions

From the depth of space come the hostile Reegs. Fly X15 over the desolate landscape to protect the Cannisters from the attacking forces. LANDERS follow the shape of the landcape in search of Cannisters. If a Lander grabs a cannister and succeeds in carrying it to the top of the screen, it turns into a MUTANT.

Shoot the alien ship and catch the cannister as it falls. If it falls a long way, it will disintegrate on impact.

CRUISERS unleash a convoy of BUZZERS when they are hit.

Activating a SMART BOMB will cause everything on the screen to disintegrate. On higher waves, each MINE LAYER will launch three KILLERS unless destroyed beforehand.

If all the cannisters are destroyed then the land disintegrates and you have to contend with a swarm of mutants.

### Scoring

Lander .....	10
Mine Layer .....	20
Crawler .....	30
Mutant .....	40
Killer .....	40
Cruiser .....	40
Buzzer .....	50
Destroying Cannister .....	0
Cannister landing safely .....	60
Cannister caught while falling .....	80
Cannister returned to earth .....	80

A bonus is awarded for each remaining cannister at the end of every wave. An extra life and an additional Smart Bomb is awarded every 1,000 points.

### Game Controls

A - Up, Z - Down, <RETURN> - Fire, <SHIFT> - Thrust  
<SPACE> - Reverse, <CAPS> - Smart Bomb

**Instructions' Source** : 10 COMPUTER HITS (Beau Jolly) Inner Inlay

### Review (Electron User)

For anyone who likes the traditional arcade type games, this is one for you. You're given sole control of an X15 space fighter and as you're zooming along over a

decidedly hostile-looking terrain you find that your airspace isn't exactly friendly either.

Endless battalions of Reegs seem intent on knocking the living daylights out of you as well as stealing the precious canisters of...well, what it is that they're trying to steal is not quite clear, but it must be mighty important as your mission is to rescue as much of it as possible.

Happily, you're not totally defenceless, as you can fire back at the Reegs. I advise you to do this, quickly and smartly. If you see a Reeg making off with a canister shoot him and rescue the canister. Placing it on the ground can be very point-profitable. If the Reeg gets the canister to the top of the screen, it develops into a mutant and they're very hard to shake off.

As you go through waves of attack your problems become more and more frustrating. Mine layers, cruisers, buzzers and crawlers are just some of the nasties you'll meet appearing out of nowhere.

And by the way, don't let all your canisters be destroyed, or everything will disintegrate and you'll have a swarm of mutants on your hands.

Should all else fail your smart bomb blows everything to smithereens. All in all it's an enjoyable game for all the family. Graphics are well up to standard and the keys are simple to handle: A and Z for up and down, <SHIFT> for thrust, <RETURN> for fire and CAPS LK for the smart bomb.

Good stuff. A must for arcade freaks.

Keith Young, ELECTRON USER 2. 8

# GCSE BIOLOGY

***Professional, Originally Released On Cassette Only***

Game Type : Utility; Revision Aid  
Author : Roy Hawkey M. A.  
Standalone Release(s) : 1983: GCSE BIOLOGY, Acornsoft/Ivan Berg, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : IVAN BERG, Dunluce House, 4-8 Canfield Gardens, LONDON  
NW6 3QT  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"This Biology program is a comprehensive O level and C.S.E. revision course.*

*"The first part of the program is the inter-related tutorial/test section. Fully-illustrated tutorials explain the major topics of the syllabus clearly. Each tutorial is followed by a test of 10 questions on the material which has just been covered. If you have difficulties with a particular question, the computer returns to you to the relevant tutorial screen to show you where you went wrong.*

*"When you are scoring at least 75% on the test questions in all 11 tutorials, you are ready to go on to the second part of the program, the examination. This consists of 30 questions (randomly selected by the computer from its store) to be answered within half an hour. Exam conditions are simulated by the computer: a clock displays elapsed time, and when time is up, the exam is automatically ended. Within the time limit, you can review and change your answers.*

*"A special feature of the test and exam sections is the 'scratchpad'. This is a portion of the screen which you can call up for notes and jottings.*

*"Topics covered in this pack: Cells, Photosynthesis, Food cycles and feeding, Digestion, Blood and circulation, Respiration, Growth, Plant biology, The nervous system, Reproduction.*

*"Full instructions are provided."*

## Loading The Program

When the program is loaded, the computer will give a short beep and the title and credits screen will appear. Press SPACE as requested and the Main Menu is displayed:

IVAN BERG SOFTWARE  
REVISE GCE/CSE BIOLOGY

Which section do you wish to load?

1. Life
2. Plants & Parasites
3. Food Cycles
4. Food & Feeding
5. Digestion
6. Blood & Circulation
7. Growth & Movement
8. Osmosis & Transpiration
9. Senses & Nerves
10. Reproduction
11. Genetics & Evolution
12. EXAMINATION

Enter choice: \_

If you are loading from tape, replace the program cassette with the data cassette when prompted by the program. Ensure that it is rewound. Make sure that the correct side of the cassette is uppermost for the section you are loading. Sections 1-6 are on side 1 of the data cassette and sections 7-11 are on side 2.

Select your option and press <RETURN>. If you selected option 1, the screen will display LOADING BIO1, and a changing counter. If your cassette deck does not have motor control, press STOP on tape when prompted.

When the file you selected has loaded, the first screen is displayed. This is the first screen in BIO1:

```
BIOLOGY 1      LIFE

Tutorial       Press _SPACE_BAR_

What is special about living
organisms?
They do all of these:
Take in materials: FEED
RESPOND to changes
Increase in size: GROW
Remove wastes: EXCRETE
Use energy: RESPIRE
Change position: MOVE
Produce new organisms: REPRODUCE
CONTROL their internal conditions.
In simple organisms, the whole 'Body'
does all of these.
```

### **Introduction**

This Biology program is designed to help you revise for your O-level or C.S.E. examination. It is aimed at prospective O-level or C.S.E. students in Biology who are receiving normal school tuition in the subject.

The main part of the program consists of 11 Tutorial sections (outlined below) covering topics found in most Biology syllabuses. The basic information on each topic is presented on screen, together with explanatory diagrams. It is recommended that the student uses his textbook for further reference.

Each Tutorial Section is followed by a Test Section of ten short questions based on the Tutorial material. These questions will enable the student to assess his progress and understanding of each topic. The Test questions contain references to the relevant part of the Tutorial Section, which can be called up on screen at any time for information and guidance.

A portion of the screen is reserved as a 'Scratch Pad' or jotter, built into the program. This allows the student to use the computer itself to check the spelling of words, etc.

The second part of the program is the Examination Section, in which thirty questions must be attempted by the student within half an hour. The computer randomly selects the questions for each exam from its store and so every exam is different. A clock on screen displays elapsed time, and the exam is stopped when time has run out, thus simulating actual exam conditions.

### **Table Of Contents**

#### **A Tutorial/Test Section**

- 1. Biology 1
  - a) Life
  - b) Cells

- 7. Biology 7
  - a) Growth
  - b) Skeletons and support

- |                          |                                    |
|--------------------------|------------------------------------|
| c) Cell division         | c) Muscles and movement            |
| 2. Biology 2             | 8. Biology 8                       |
| a) Photosynthesis        | a) Osmosis and the root            |
| b) Saprophytes           | b) Transpiration and the leaf      |
| c) Parasites             | c) The kidney                      |

| a) Enzymes               | c) Flowers                         |
| b) Digestion             | 11. Biology 11                     |
| c) The digestive system  | a) Sexual and asexual reproduction |
| 6. Biology 6             | b) Genetics                        |
| a) Blood and circulation | c) Evolution                       |
| b) Gas exchange          |                                    |
| c) Respiration           |                                    |

## **B Examination**

### **Using The Program**

Work through each Tutorial Section screen by screen. Read the screens carefully, and make sure you understand them fully. Diagrams illustrate the various sections.

Additional 'overlay' screens may be called up on certain screens by following the instructions which are given on screen. (Press A, B, C etc) When you have looked at all the overlays, press SPACE to continue.

When you come to the end of a Tutorial Section, you are presented with a Test of ten questions. If you have understood the Tutorial Section, you should be able to get the answers correct.

Each question contains a reference to the relevant part of the Tutorial Section. If you cannot answer a question, press f0 to call up the explanatory screen. To return to the question again for a second attempt press SPACE.

In the Test Section, the 'scratchpad' feature is available. This is a portion of the screen which you can call up by pressing ESCAPE. Notes can then be made on screen (see separate note below).

Success or failure in the Test questions will indicate whether you need to do further work on the material covered within the Tutorial. If you are scoring less than 70%, look at the Tutorial again. When you feel confident enough, try the Exam section, by selecting number 12 from the Main Menu.

The Exam consists of thirty questions, to be answered within thirty minutes. All the questions are based on the material covered in the Tutorial Section. The questions do not have to be answered in order; if you wish, you can 'pass' a question by pressing f0. Questions which you miss out can always be attempted later, when you review all your answers. Again, the 'scratchpad' may be called up for notes by pressing ESCAPE.

A clock in the top left-hand corner of the screen counts down from 30 minutes in minutes and seconds. At the end of half an hour, the number of correct answers and the percentage mark are displayed.

### **Using The Scratchpad**

When you have pressed ESCAPE to call up the scratchpad, the cursor will flash, on a highlighted portion of the screen. You can then type in anything you want - a word whose spelling you want to check, for example.

Press ESCAPE to return to the question when you have finished with the scratchpad.

## Instructions

*"This English Language program is a comprehensive O level and C.S.E. revision course.*

*"The first part of the program is the inter-related tutorial/test section. Fully-illustrated tutorials explain the major topics of the syllabus clearly. Each tutorial is followed by a test of 10 questions on the material which has just been covered. If you have difficulties with a particular question, the computer returns to you to the relevant tutorial screen to show you where you went wrong.*

*"When you are scoring at least 75% on the test questions in all nine tutorials, you are ready to go on to the second part of the program, the examination. This consists of 30 questions (randomly selected by the computer from its store) to be answered within half an hour. Exam conditions are simulated by the computer: a clock displays elapsed time, and when time is up, the exam is automatically ended. Within the time limit, you can review and change your answers.*

*"A special feature of the test and exam sections is the 'scratchpad'. This is a portion of the screen which you can call up for notes and jottings.*

*"Topics covered in this pack: Spelling, Grammar, Common mistakes, Letter writing, Comprehension, Summary, The Essay.*

*"Full instructions are provided."*

## Loading The Program

When the program is loaded, the computer will give a short beep and the title and credits screen will appear. Press SPACE as requested and the Main Menu is displayed:

IVAN BERG SOFTWARE  
REVISE GCE/CSE ENGLISH

Which section do you wish to load?

1. Grammar
2. Common confusions
3. Spelling
4. Terminology
5. The essay
6. Style
7. Summary
8. Comprehension
9. Letter writing
10. EXAMINATION

Enter choice: \_

If you are loading from tape, replace the program cassette with the data cassette when prompted by the program. Ensure that it is rewound. Make sure that the correct side of the cassette is uppermost for the section you are loading. Sections 1-5 are on side 1 of the data cassette and sections 6-9 are on side 2.

Select your option and press <RETURN>. If you selected option 1, the screen will display LOADING ENGL1, and a changing counter. If your cassette deck does not have motor control, press STOP on tape when prompted.

When the file you selected has loaded, the first screen is displayed. This is the first screen in ENGL1:

```
GRAMMAR          THE VERB

Tutorial         Press _SPACE_BAR_

Every sentence which you write must
have a verb. A main verb is the only
essential part of a sentence. "I go,"
is a sentence, because it contains a
main verb, from "to go".
Verbs can describe actions - to run,
to eat, to talk - or they can describe
emotions - to love, to want, to
understand - or they can describe
states - to be, to know.
All the above verbs are given in their
INFINITIVE form.
```

### **Introduction**

This program is designed to help you revise for your English Language G.C.E. or C.S.E. examination. It takes you through the basics of spelling and grammar, points out common mistakes to avoid, and gives hints on how to approach the paper. There are sections on writing letters, essays, summary and comprehension.

English Language is the exam that some candidates say they "can't revise for". In the absence of a syllabus of facts and formulae to learn off by heart, they believe that they can muddle through without thinking very hard about the subject. Yet every year, people fail their paper by making the same mistakes: not reading the paper properly, spelling words wrongly and writing ungrammatically.

Spelling and grammar follow certain rules which O level and C.S.E. examiners expect to be observed. A good candidate may end up a grade lower than he or she expects by incorrect sentence formation or spelling. If you are a borderline candidate, any spelling and grammar mistakes could mean the difference between passing and failing.

English Language involves reading, understanding and, most important of all, writing. Remember that your written paper is the only evidence the examiner has to go on. You may read and understand a passage perfectly or know a great deal about your chosen essay, but unless you can express this in writing in your paper, the examiner will be none the wiser, and cannot give you any credit.

When you actually take the exam, remember two things. The first is that your examiner is trying to establish one simple thing - that you understand the English language and can use it competently. No one is trying to catch you out. If you read the paper properly and plan your answers carefully, it should present no problems.

The second is that you can make the exam work for you, by writing only on familiar subjects in your essay or letter, and by using only words and expressions which you know to be correct. If you can't remember how to spell something, use another word that you CAN spell instead. If you have never been to a fairground and can't imagine one, don't choose the essay entitled "The Fair". If you are unsure about how casual your "letter to a friend" should be, write the business letter which observes formal rules.

English Language is one of the most flexible of exams, in that you choose what to write. Make the most of that by showing yourself off to your best advantage, and you will do well.

#### **B Examination**

##### Using The Program

Work through each Tutorial Section screen by screen. Read the screens carefully, and make sure you understand them fully. Diagrams illustrate the various sections.

Additional 'overlay' screens may be called up on certain screens by following the instructions which are given on screen. (Press A, B, C etc) When you have looked at all the overlays, press SPACE to continue.

When you come to the end of a Tutorial Section, you are presented with a Test of ten questions. If you have understood the Tutorial Section, you should be able to get the answers correct.

Each question contains a reference to the relevant part of the Tutorial Section. If you cannot answer a question, press f0 to call up the explanatory screen. To return to the question again for a second attempt press SPACE.

In the Test Section, the 'scratchpad' feature is available. This is a portion of the screen which you can call up by pressing ESCAPE. Notes can then be made on screen (see separate note below).

Success or failure in the Test questions will indicate whether you need to do further work on the material covered within the Tutorial. If you are scoring less than 70%, look at the Tutorial again. When you feel confident enough, try the Exam section, by selecting number 12 from the Main Menu.

The Exam consists of thirty questions, to be answered within thirty minutes. All the questions are based on the material covered in the Tutorial Section. The questions do not have to be answered in order; if you wish, you can 'pass' a question by pressing f0. Questions which you miss out can always be attempted later, when you review all your answers. Again, the 'scratchpad' may be called up for notes by pressing ESCAPE.

A clock in the top left-hand corner of the screen counts down from 30 minutes in minutes and seconds. At the end of half an hour, the number of correct answers and the percentage mark are displayed.

**Using The Scratchpad**

When you have pressed ESCAPE to call up the scratchpad, the cursor will flash, on a highlighted portion of the screen. You can then type in anything you want - a word whose spelling you want to check, for example.

Press ESCAPE to return to the question when you have finished with the scratchpad.

# GEOFF CAPES STRONGMAN

*Professional, Originally Released On Cassette Only*

Game Type : Arcade; Sporting Contest  
Author :  
Standalone Release(s) : 1984: GEOFF CAPES STRONGMAN, Martech, £7.95  
1987: GEOFF CAPES STRONGMAN, Ricochet, £2.99  
Compilation Release(s) : 1987: FIVE STAR GAMES, Beau Jolly, £9.95  
Stated compatibility : BBC Side A, Electron Side B  
Actual compatibility : As stated  
Supplier : MARTECH, Martech House, Bay Terrace, Pevensey Bay,  
EAST SUSSEX BN24 6EE  
Disc compatibility : Unknown

## Instructions

- \* Endorsed by Geoff Capes, Olympic shot putter, World and European Strongman and World Highland Games Champion
- \* On-screen training on weights or iron bars \* Continuous individual muscle fitness display
- \* Skill Levels and Hall of Fame
- \* SIX exciting and demanding challenges to be overcome - TUG OF WAR - CAR ROLLING - BARREL LOADING - FAIRGROUND BELL - LOP CHOPPING - WRESTLING

What are you - man or mouse? This game will help you find out.

To become a real strongman like Geoff Capes is not easy. Muscles that can roll a car onto the roof or hurl barrels onto a waiting truck don't just grow overnight. If you are hoping to match these feats, you are going to have to work hard during the training sections. Even if you manage to build up the sort of body equipped to cope with each of the six very difficult events, you will need skill and quick reactions to be successful.

## Game Play

In STRONGMAN you will have to take control of Geoff's body as he tries to complete each different event. You will also have total responsibility for the general condition and fitness of Geoff's body, trying to make sure that it is able to cope with the high demands each event will make upon it, as well as having the stamina to get right through to the very end.

To help you do this, Geoff's body has been divided into several different areas represented by MUSCLE ICONS. Each muscle area contains a gauge which will help you see how fit that area of muscle is and how much energy is available for use.

Different events will use different muscles to a greater or lesser extent. For example, the arm muscles may be especially important during the log chop.

At the beginning of each game level you will have a TRAINING SESSION. During training you can build up each muscle area ready for the six events to come. As you play the game, you will discover which muscle areas are especially important and can make your training sessions more specialised, building up muscle where you know it is needed most.

If the gauge in any muscle area reaches zero, Geoff will collapse and you will have to start all over again.

The rate at which muscle energy is used up will depend not only on how quick and skillful you are, but also on how much EFFORT you decide to use. During most events, you can adjust the effort being made by Geoff's body to anywhere between 0% and 100%.

The higher the effort, the easier it will become for you to successfully complete an event and move on, *but* everything has its price and that price is paid by Geoff's muscles. The greater the effort, the faster each muscle deteriorates and the faster and more difficult the game becomes.

In each event therefore, you will be hoping to find a good compromise between your skill during game play and how much muscle you can afford to use. Since any muscle not used will be carried forward to the next event, the more efficiently you complete each event, the further Geoff will be able to go.

After each event you will have a limited rest period during which you can try to get Geoff's body ready for the next event.

If you manage to complete all six events, you will have a chance to re-train and then try each of the six events again. However, the further you go the harder each event will become to complete.

Not all the strategy involved has been given to you in these instructions.

## **Training Sessions**

At the start of each game each muscle is zero. Before you can build up these muscles, you must train.

Training is achieved by moving the joystick left and right as many times as you can in ten seconds. As you do this, you will build up muscle which will be represented by a bar gauge on the screen. The further you can move this gauge the more muscle you will have.

To start training, simply move the joystick left or right, then work as hard as you can.

If you are not a real strongman, simply press the fire button and you will automatically receive a default amount of muscle - but you will have no control over this and may be disappointed.

Having obtained some muscle you now have to allocate it to the different muscle areas. To do this, use the joystick to move the arrow to the chosen muscle icon. Muscle will be transferred into that area of the body for as long as the fire button is depressed. Initially it's a good idea to build up each muscle equally, but as you get used to the game, you will hopefully discover which muscles are more important and you can adjust your allocation accordingly. Remember, if any muscle area reaches zero, Geoff will collapse.

## **Rest Period**

In between each event is a small rest period during which you can reallocate a small amount of muscle. The amount you receive may be dependent on your performance during training or previous events. You should try to allocate extra muscle to those areas which you think will be important in the next event.

## **Effort (Important!)**

The effort being put into each event can be increased or decreased at any time simply by pressing the cursor up or cursor down keys respectively.

## **The Events**

### **1. Tug Of War**

In this event Geoff must try and pull his opponent into the pit. Once the event has started, the muscle which you need to use will start to flash. Move the arrow to that muscle as quickly as possible and press the fire button.

Try to keep up with the muscles as they flash.

### **2. Log Chop**

Geoff has to chop through a log inside a qualifying time. The log contains some bits which are harder to chop than others. Soft wood needs only one chop to be cut out, but hard wood need two chops and a knot needs three.

Press the fire button to start the axe moving and also every time you want to cut the wood.

### **3. Barrel Landing**

Geoff must try and load five barrels onto the back of a truck inside a qualifying time.

Move the joystick down to get Geoff to pick up a barrel then move the joystick left and right as quickly as you can to help him raise in onto his shoulder. Once the barrel is on his shoulder move the arrow to the muscle icon that is needed and Geoff will take a step. If you fail to keep up with the muscles being used, Geoff will drop the barrel and will have to pick it up again. When Geoff reaches the truck press the fire button to get him to throw the barrel, if you do this too soon or too late he will drop the barrel and have to pick it up once again.

### **4. Car Roll**

Geoff has to roll the car onto its roof inside a qualifying time.

The game play is similar in its style to that used in the tug of war. If you start to do things wrong the car will start to roll back towards you.

### **5. Fairground Bell**

There are two stages to this event.

Firstly, you must try and manoeuvre the club into the best position for hitting the peg on the base of the fairground bell. To do this, move the arrow to the muscle icons as they flash and hold down the fire button to adjust the position of the club.

Once the clock reaches zero, move the joystick left and right as quickly as possible to build up extra effort in the strike.

### **6. Sumo Wrestling**

Geoff must try and push his opponent out of the ring inside the qualifying time.

To do this involves timing and quick reactions.

Move the joystick left or right to make Geoff move away or towards his opponent. Press the fire button to get Geoff to push his opponent.

### **Game Controls**

Z - Left, X - Right, : - Up, / - Down, <RETURN> - Fire

**Instructions' Source** : GEOFF CAPES STRONGMAN (Martech) Inner Inlay

### **Review (Electron User)**

Can you emulate Geoff Capes by becoming the strongest man in the world? That's the idea in this game from Martech in which you must endure the hardships of a strongman championship.

There are six events, some with the computer as your opponent but others are an individual challenge against the clock. The instructions are well written, but list the events in the wrong order, which proved to be a real irritation until I'd begun to master some of the problems.

Before the games start, you must earn some muscle by hammering two keys as fast as you can. As a keyboard saving alternative, a touch on <RETURN> will grant you a random amount of strength. Having earned your muscle, you then distribute it around Geoff's body by selecting various screen icons.

After this, the first event begins. A car falls on you and you must turn it over. The method is simple: The muscle symbols flash in turn and you move your arrow to that symbol and hit <RETURN>. There is a time limit but with practice the necessary co-ordination can be mastered. Next comes sumo wrestling. Move left and right and then lunge at your opponent to push him out of the ring. It's easy but what a shame it's all over in two seconds.

Event three is the fairground bell-ring. You move the hammer into position and then wallop the keys to bring it down fast on the button. Positioning the hammer is rather chancy. It depends on which muscles flash and in which order. This one proved an annoying stumbling block for me many times.

In the next event you must chop through a log within a qualifying time. As an axe moves along the log you press <RETURN> to chop into the soft parts of the wood. This event requires timing, but little else. The tug o' war proved my undoing. The instructions say that the method is the same as for the car roll. However, each time I played, I was pulled into the river, which meant I have not seen event six, barrel loading.

The instructions make this sound quite fun, with a lot of keyboard hammering and precision timing involved, but it's obviously not for uncoordinated weaklings.

As usual with Martech software, the programming is excellent, the graphics are smooth and fast and the sound is sensible. But something is missing. The World Strongman competitions on television make compelling viewing. By comparison, I found the computer simulation boring and rather frustrating.

My best performance has rated me as Mr Puniverse, but more often I end up at Wimp level. I know lots of people who like this kind of game, but I would invest my money elsewhere.

Sound .....	6
Graphics .....	7
Playability .....	4
Value for money .....	4
Overall .....	5

# GHOSTS OF GRUNLEY GRAMMAR

*Professional, Originally Released On Cassette Only*

Game Type : Text Adventure (Rated Advanced)  
Author :  
Standalone Release(s) : 1984: GHOSTS OF GRUNLEY GRAMMAR, Magic, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : MAGIC. No further information.  
Disc compatibility : Unknown

## Instructions

Instructions currently unavailable.

## Review (Electron User)

Have you ever wondered what became of the grammar schools when the comprehensive came along? Well, I know what happened to one of them, Grunley Grammar. It was shut up, forgotten and left to decay; the only inhabitants the ghosts of its own teachers. These ghosts are doomed to spend all eternity teaching spectral classes the subjects refused to learn in their lifetimes. They would far prefer to teach, test and taunt a living child. And with Magic Software's cassette, THE GHOSTS OF GRUNLEY GRAMMAR, they get the chance.

You take the part of a child who has foolishly entered the ghastly grammar school and fallen into the hands of the ghosts. You go from room to room and in each room, the master asks you three questions on his subject.

Should you fail any of them, he gloatingly tells you the answer and back to the beginning you go. But only after the ghosts have taunted you about your stupidity!

It's amusing and becomes compulsive. All the usual school subjects are covered and there's a fair selection of questions. It's the kind of game that kids love - not just playing it themselves but also watching others make mistakes and get insulted. And they're learning all the time.

The program is fun and original. No doubt educationalists will say that it just teaches facts, not understanding, but that's just a quibble. The program is amusing and addictive. In fact it's magic.

Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Many have tried to rescue the power jewels from the creepy mansion on the top of the hill. None has lived to tell the tale. Now it is up to you to try to wrest the treasure from the mansion's deadly inhabitants.

Run through the Spectres' Lair, Horrid Hall, the Spider's Parlour and Death Tower. Leap over the poison-smeared spikes, scamper along the moving platforms and contracting floorboards, run past bouncing spiders and use the powerful springs to propel you onto overhanging platforms.

Consuming the yellow titbits earns you extra points and eating the stray power jewel causes the ghost (or ghosts on higher levels) to disappear for about fifteen seconds.

A bonus score in the top right hand corner of the screen counts from 50 down to zero. If you don't reach the top of the screen within this time limit, you lose a life. You start with 4 lives. An extra life is awarded every four screens up to a maximum of 6 lives.

## Game Controls

Z - Left, X - Right, <RETURN> - Jump  
<SPACE> - Start Game, P/O - Pause On/Off, <ESCAPE> - Quit Game

**Instructions' Source** : PLAY IT AGAIN SAM 7 (Superior/Acornsoft) Inner Inlay

## Review (Electron User)

Hidden away in the creepy mansion at the top of the hill are a number of power jewels. Many have been to search for them but no one has lived to tell the tale. Have you the courage to succeed where others have failed? This is the challenge issued by GHOULS.

You control the star of the show, a little man with the appearance of a pac-man on two legs. His ever munching mouth continuously snaps up titbits for bonus points as you attempt to reach the various levels in your search for treasure.

You start off in the first of four screens - Spectre's Lair. Here to hinder you in your quest you will find the mansion's frowning ghost who's out to get you. Let him catch you and you'll die and that frown will change to an enormous cheeky grin. This chap follows you through every screen, and at times his appearance is positively painful.

You have a time limit in which to get to the box of jewels at the top of the screen in order to access the next landing. Titbits and the occasional stray jewel munched en route count for bonus points. The jewel has the additional perk in that it makes the ghost disappear for a short while. However, there are other hazards to make life unpleasant.

In order to make progress you must balance on a moving platform and leap to and from it to higher levels. There is also a set of poison-soaked spikes in your way and contact with any one will prove fatal. Should you succeed on the first screen you will progress to the more difficult Horrid Hall. As well as all the other nasties you also have to avoid contracting floorboards.

Succeed on screen two and the Spider's Parlour awaits you. The spider is something to behold but not touch. The fortunate thing is that he stays in one spot bouncing up and down waiting patiently for a tasty morsel - usually me!

The infuriating aspect of the game, as with most multi-level ones, is that as soon as you "die" you start back at the beginning of the screen no matter how far you have progressed. I must confess it is because of this beast that I haven't seen screen four, the Death Tower.

Even so I've seen enough to consider it excellent value. It is extremely addictive as there is always that incentive to "crack it this time". The graphics are well presented and the eerie sounds make the game come to life. We've come to expect high standard games from Micro Power and GHOULS is one of their best!

# GO

## ***Professional, Originally Released On Cassette Only***

Game Type : Mysterious Chinese Board Game Simulation  
Authors : Charles Mathews and Bruno Pryzbyla  
Standalone Release(s) : 1984: GO, Acornsoft, £12.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ACORNSOFT, Betjeman House, 104 Hills Road, CAMBRIDGE  
CB2 1LQ. Tel: (01223) 316039  
Disc compatibility : Unknown

### **Instructions**

GO is a board game for two players, with a tradition in the Far East going back thousands of years, and which is gaining popularity in the western world. Generations of professional players have made studies in Go comparable in depth to those by the chess grandmasters. The game requires strategic insight and intuition as well as a strong calculating mind. The basic object of the game is to occupy areas of the board with 'stones' (either black or white). The player who controls more territory at the end of the game is the winner.

This program provides the ideal companion for anyone learning Go or an interesting opponent for the more experienced player, and the pack includes an introduction to playing Go.

The program has the following features:

- \* Play white or black against the computer, one player against another or in auto-mode the computer against itself
- \* Two levels of difficulty
- \* A handicapping system: the weaker player can be given the benefit of extra stones at the start of the game
- \* Watch the computer think out its next move!
- \* A hint option

This is a version of the program that won the 1984 Acornsoft Go Competition.

### **Keyboard Controls**

To make a move, move the cursor with the arrow keys. RETURN places the stone on the board.

The game normally starts with the player playing black (first move) and then the computer plays white.

### **Other controls**

ESCAPE restarts game: this must be verified by pressing either Y (yes) or N (no)

K keyboard on/off (usually on): the letter K is displayed above the board

J joysticks on/off (usually off): when on, the letter J replaces K above the board

T thinking on/off (usually off): when on, the letter T is displayed above the board. This function enables you to watch the computer thinking

- 1/2      level 1 or 2 (usually 1): the number chosen is then displayed next to the letters Lv above the board
- M      puts the program into manual mode so that two players may play Go on the graphically displayed board. In manual mode the letter M is displayed above the board. Press C to go back to playing the computer
- C      makes the computer play the current move, and then carry on playing that colour. Thus to play white against the computer press C after starting the game
- A      puts program into auto-mode (the letter A is displayed above the board) so that the computer will play against itself. Press M to switch back to manual mode
- B      takes you back one move if you are in manual mode or back to YOUR previous move if you are playing the computer
- ?      hint option: the computer plays your next move and then continues the game. If you don't like the 'hint' press B (see above)
- P      pass your move and let your opponent play again. After three successive passes the program will display the score: to continue playing press the Space Bar
- H      handicap play: to play a handicap game press H followed by the size of the handicap (1-9). You may now place that many black stones on the board (and White will pass). Alternatively, you can then press C to give the computer the handicap with you playing white.

### **Joystick Controls**

Use the joystick to move the cursor around the board. Press the fire button to place a stone on the board.

## **Playing Acornsoft Go**

### **The equipment**

Acornsoft Go is played on a board ruled with 13 horizontal lines and 13 vertical lines. Play takes place on the points of intersection of the lines rather than the squares. The board is initially empty. The game is for two players who play alternately by occupying a vacant intersection with a piece (called 'stone') or their colour (Black or White with Black starting).

### **The object of the game**

The main object of the game is to occupy territory; a second object is to capture enemy stones. A single stone is captured when it is directly surrounded along the lines by opposing stones. Two or more stones of the same colour which are joined together along the lines stand or fall together; the whole group is captured if it is directly surrounded along the lines. A player may pass at any time. The only restrictions are the special 'ko' rule which prevents repetition of a position and the 'suicide' rule. The program enforces these rules and, during a 'ko', the word 'ko' is displayed above the board. Detailed explanations of these words are given later in this booklet.

### **The end of the game**

The game ends when three successive passes have occurred. The program then calculates and displays the score. This program employs the Chinese scoring rules in which no points are scored for captured enemy stones (unlike the Japanese rules) but you score one point for each intersection surrounded and one point for each of your stones left on the board at the end. Make sure that you complete the capture of all 'trapped' stones ('dead groups') before finally passing; if dead groups remain the score will be inaccurate, but you can still play on. If the total of the two final scores is greater than 169, the game isn't finished because there is some territory that the program thinks is occupied by both sides.

Since Acornsoft Go will only allow you to make legal moves, there is nothing to stop you from letting the program teach you how to play.

## A Beginner's Guide To Go

### Background to Go

Go is the Japanese name for an ancient board game with a tradition in the Far East going back thousands of years. Generations of professional players have made studies in Go comparable in depth to those by the chess grandmasters. The game requires strategic insight, intuition as well as a strong calculating mind. Recently Go has been gaining in popularity in the Western World.

### Definitions

**Connections:** Two stones of the same colour are directly connected if they are joined along a line. A collection of stones of the same colour linked by direct connection is called a group.

**Liberties:** The liberties of a group are those intersections adjacent to it along the lines of the ruled grid. For example, a single stone in the centre of the board may have four liberties; stones on the edge of the board have, at most, three liberties and in the corner they have only two.

**Capture:** A group is captured when an enemy stone is played to fill its last liberty. In the Acornsoft program the word 'atari' is displayed at the top of the screen when a group is in imminent danger of being captured. Groups must be captured 'en masse'; individual stones cannot be picked off one by one. In figure 1 there are two groups. It is important to note that connections across the diagonal do not count and therefore the two groups are not connected in any way.

figure 3

In figure 3, the last liberties have been occupied and the groups captured and removed from the board.

### The 'suicide' rule

Playing your own army into a situation without liberties is illegal. However, it is permitted to play into such a position if the stone played completes a capture. For example, in figure 4, the black group can be captured if White plays at E3.

figure 6

### The 'ko' rule

Some common situations in Go could lead to a repetition of position and so require a special rule. Figure 5 shows three simple positions in which a single stone may be captured (by Black), only to be subject to immediate recapture (see figure 6). The rule of 'ko' (a Japanese term) applies to any situation of this kind, where a single stone is captured and a single recapture would restore the initial position. The rule states that after the first capture in such a position, the second player must not recapture immediately. After the second player's turn, this restriction lapses.

In practice, if the recapture is important, the player makes a play in some other part of the board requiring an instant reply ('ko threat') and then recaptures - the boot is then on the other foot. Long sequences of 'ko threats' are a common and exciting part of the game, involving delicate calculations of profit and loss.

### Safe groups

As the game proceeds, the board gradually fills up. The stones sort themselves into collections of armies which are potentially, if not directly, connected - these are called 'groups'. A basic Go skill is to make groups immune from capture by ensuring they enclose enough empty territory. The principle behind every safe group is the same, and is known as 'two eyes' (an 'eye' being a vacant intersection within a group). In figure 7, for example, the Black group is safe (barring Black blunders), because White needs to play at A1 and C1 simultaneously (which is impossible).

```

13  | - | - | - | - | - | - | - | - | - |
12  | - | - | - | - | - | - | - | - | - |

5   | - | - | - | - | - | - | - | - | - |
4   | - | - | - | - | - | - | - | - | - |
3   W-W-W-W | - | - | - | - | - | - | - |
2   B-B-B-B-W | - | - | - | - | - | - |
1   | - | - B-B-W | - | - | - | - | - | - |
      A B C D E F G H I J K L M

```

figure 7

### **The handicap system**

The player with the black stones always has a slight advantage since Black always starts. A larger advantage is given by allowing Black to play up to nine stones before White plays. To discover your handicap against the computer or a human opponent, adjust the number of handicap stones after each game.

### **Hints**

- (a) Armies with one liberty may be captured; armies with two liberties are very vulnerable and may be subject, by a forcing sequence, to capture.
- (b) Saving threatened armies may lead to greater losses - small armies are often sacrificed.
- (c) The connection of armies to form a larger army with more liberties avoids losing stones piecemeal.
- (d) It is normally good practice to prevent the opponent's armies connecting, especially if one army is short of liberties.
- (e) Don't neglect territory formation - you cannot expect to win every game by capturing massive groups of stones.

# GOAL!

## ***Professional, Originally Released On Cassette Only***

Game Type : Arcade Football Match; Viewed From The Side  
Author : Dave Croft and Ian Waugh  
Standalone Release(s) : 1985: GOAL!, Tynesoft, £6.99  
Compilation Release(s) : 1989: MICROVALUE FOUR GAMES 3, Tynesoft, £3.99  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : TYNESOFT, Unit 3 Addison Industrial Estate, Blaydon, TYNE &  
WEAR NE21 4TE. Tel: 091 414 4611  
Disc compatibility : CDFS E00, DFS E00

### **Instructions**

*"A realistic football simulation featuring excellent graphics, music and an intelligent opposition that actually adjusts its skill level during the game depending on current state of play."*

The computer will start the game once the Space Bar is hit. You will control the closest player to the ball which will be selected each time the RETURN key is hit. If you are in possession of the ball, the RETURN key will act as the Kick key, also it will initiate a save attempt by the Goalkeeper if it is hit at the moment the ball reaches him and not before. (To kick diagonally hit relevant Up/Down key at the same time as the RETURN key) At the end of each 45 minutes period, the whistle will blow twice to signal the end of that half.

DIVISION 1 - This utilises all the features of GOAL! The Computer Team plays at various levels of skill dependent on game position.

DIVISION 2 - This is a Beginner's Level. Various Computer Teams' skills are suppressed with the difficulty level remaining at minimum during the duration of the game.

### **Game Controls**

Z - Move Left, X - Move Right, \* - Move Up, ? - Move Down  
<RETURN> - Kick ball/Select Closest player to ball/Goalkeeper save  
<SPACE> - Start game, <COPY>/<DELETE> - Pause/Continue game

**Instructions' Source** : GOAL! (Tynesoft) Back and Inner Inlay

### **Review (Electron User) - "Football For Fanatics"**

Football relies on several individuals working together as a team, which is one of the main reasons why programmers find the game very difficult to reproduce on the computer screen. Every football simulation I have ever played involves the player controlling one footballer and trying to score against a computer that knows exactly where you are going. This program does nothing to break this tradition - it is no worse than the opposition but it isn't any better either.

GOAL! is a five-a-side game which is played over 90 minutes: Fortunately, this isn't in real time. I doubt whether there is anyone out there who could play this game for an hour and a half without suffering permanent brain damage.

The game is played on three separate screens. Kick off occurs in the centre circle and as the ball moves to either side of the screen, the display changes to show one of the two goal areas. This three screen system is one of the game's weak points. You may make a break with the ball and pass all four opposition players while still

in the central screen. As the screen is redrawn to show the goalmouth you will find that the blighters are waiting for you in their own goal area!

You control the player who is closest to the ball. Occasionally he will be tackled and the ball will bounce towards one of your other men. However, this new player will now respond to controls until you press the kick key, so don't forget!

You can tackle a player by getting yourself on the same horizontal plane as the man with the ball and then running at him. If you're lucky you will emerge from this clash with the ball at your feet. Pounding away at the kick key has very little bearing on the outcome of the encounter.

The computer-controlled players all move forwards together supporting the man with the ball. Your players stand there like dummies as you race forwards. At least they reappear when you enter your opponent's goalmouth, not that they're much help.

The cassette inlay says that the computer team will adjust its level of play during the game to match your own. It never got down to my level!

If you are desperate to play football on your computer then this game is as good as any.

# GOLF

## ***Professional, Originally Released On Cassette Only***

Game Alias : BIRDIE BARRAGE  
Game Type : Arcade; Graphical Golf Simulation  
Author :  
Standalone Release(s) : 1990: GOLF, Blue Ribbon, £1.99  
Compilation Release(s) : None  
Stated compatibility : Electron Side A/BBC Side B  
Actual compatibility : As stated  
Supplier : BLUE RIBBON, CDS House, Beckett Road, DONCASTER DN2 4AD  
Tel: 01322 21134  
Disc compatibility : CDFS E00, DFS E00

### **Instructions**

*"Take on the Acorn park old course in this addictive test of your golfing skills and judgement. Select your club, and the strength and direction of shot allowing for wind strength and direction in a consistent and realistic program. A must for all golf fans!"*

Each hole will be graphically presented on the screen. You will first be prompted for a choice of club. The clubs available are as follows: Woods 1-4, enter 1W or 3W etc; Irons 1-9 & S (sand sedge) enter 4 or 8 etc. You will then set a direction indicator on the bottom of the screen. See the direction of the shot by using the Z (anti-clockwise) and X (clockwise) keys, adjust the strength of the shot with the up and down cursor keys, then press <RETURN>. Once you have successfully reached the green, the screen will change to show the green and you will be prompted for direction and strength.

When playing shots, you must take into account wind strength and direction which is shown as an arrow through the tee, the stronger the wind, the higher the number indicated in the tee box (in the range of 1 to 5). The wind will change between holes, but will stay constant during the playing of a hole.

THIS PROGRAM WAS PREVIOUSLY RELEASED AS BIRDIE BARRAGE BY CDS SOFTWARE.

**Instructions' Source** : GOLF (Blue Ribbon) Back and Inner Inlay

### **Review (Electron User) - "Above Par Simulation"**

Golf is another of those popular spectator sports which occupy vast amounts of television time, and it's a game which you either love or hate. This simulation, brought to you by Blue Ribbon, is one of the better attempts I have seen at converting this fascinating game of skill to the micro.

The loading screen is simple, in typical Blue Ribbon fashion. The game loads reasonably soon after and the first thing you see is the leaderboard with the top five rounds.

The current hole is graphically depicted from overhead giving you a bird's eye view of the action. The fairway, rough, green, trees, bunkers and water hazards are all shown. A flag marks the hole and the tee. Additional information provided is the distance to the green, the par for the hole and the wind direction.

First you select your club from a bag containing four woods, nine irons and a sand wedge. There's no indication of how far these will carry the ball, so the first few holes will be down to trial and error.

After selecting your club you are required to enter the direction and power of the shot. The direction is shown as a pointer which you can rotate left and right using Z and X, while the power is increased and decreased with the up and down cursor keys. <RETURN> hits the ball. You are told where it landed - on the fairway, in the rough, water and so on. You are prompted for more shots until you are on the green.

The screen then clears and you are presented with a magnified view of the green showing the hole and your ball. Additionally you are told whether the green is fast or slow so you can adjust the power of your shot accordingly. The club, a putter, is chosen automatically.

When you've finally holed the putt your score card is shown. Here you can see each hole played, how many shots you took, the par for the hole and distance. Also your overall score is displayed. Then it's on to the next hole, and so it continues for the rest of the course.

The graphics are reasonably good and the gameplay is interesting enough to prevent the game from becoming too tedious. The only feature I would have liked to see is a multi-player option, or a two player game at least.

I quite liked this simulation, though if you're not a golf fanatic it may not hold the same appeal. As a budget buy it can't be bad.

Roland Waddilove

### **\*\*\* Second Opinion \*\*\* (Electron User)**

Budding golf stars will love this simulation of that classic game. Everything has been well thought out, including water and sand hazards, trees and bushes and strong cross winds. A multi-player function is sadly missing, but even as a one player game it is quite a challenge, and it's a game that won't break the bank either.

# GRAHAM GOOCH TEST CRICKET

*Professional, Originally Released On Cassette Only*

Game Alias : GRAHAM GOOCH MATCH CRICKET  
Game Type : Arcade; Cricket Match  
Author :  
Standalone Release(s) : 1985: GRAHAM GOOCH TEST CRICKET, Audiogenic, £9.95  
1988: GRAHAM GOOCH MATCH CRICKET, Alternative, £1.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+, Master 128  
Supplier : AUDIOGENIC, Winchester House, Canning Road, HARROW HA3 7SJ  
Disc compatibility : Unknown

## Instructions

GRAHAM GOOCH'S TEST CRICKET is an accurate simulation of the game which allows you to stage test matches in your own living room - with the aid of your home computer.

There are two modes of operation. Simulation mode is like watching a game of cricket - once you've chosen the teams and the game is under way, you can just sit back and watch it if you like. However, you needn't just be a spectator - whether your team is batting or bowling, you can make tactical changes whenever you wish. In arcade mode, you must be alert at all times. A careless stroke or a loose over could cost the match.

The first section of the program allows you to select your teams - just follow the instructions in the program. When you have chosen two teams, the main program will load.

## Game Controls - Home Team

A - Left, S - Right, W - Up, Z - Down

## Game Controls - Away Team

; - Left, : - Right, Cursor Up - Up, / - Down

To help you get your timing perfect, a small coloured square appears in the top left hand corner of the screen. The square changes colour from white to yellow, and finally to black, indicating when it is too early, just right and too late to press <SPACE>. At higher skill levels the indicator is only yellow for an instant - but at lower levels, it stays yellow much longer. However, because the indicator is not there to help you during a game, you should learn to get the timing right by watching the players, not the indicator.

There is no need to alternate the keys when you are practising bowling.

## Other Important Points

- \* Fast bowlers will tire if you bowl them continuously; after ten overs their bowling will start to deteriorate, and after 20 consecutive overs they will be well below their best. Allow them at least ten overs between spells.
- \* To declare an innings before ten wickets have fallen, hold down the ESCAPE key during an over. At the end of the over, you will be asked whether you wish to declare.
- \* In limited over games, the number of overs each player can bowl is limited to 1/5th of the total (i.e. 8 overs in a 40 over game)

- \* In a test match, the follow-on can be enforced if the side which batted first has the lead of 200 runs or more.
- \* After the fall of a wicket, you can choose to see an action replay.
- \* Hold down the TAB key to speed through the scorecard displays.

The Space bar is the equivalent of the fire for both players.

First of all, you must decide whether to play a one day match (one innings per side, limited overs) or a test match (two innings each, unlimited overs). Press SPACE when your choice is highlighted.

Next select a one or two player game (in a one player game, the computer will control the visiting team), then choose between Simulation and Arcade mode. There are nine skill levels ranging from 1 (easy) to 9 (very difficult). Controlling the batsman or bowler in Arcade mode requires skill and concentration, so before the game starts you can practise if you want.

## **Playing In Simulation Mode**

### **Batting**

Before the bowler starts to run up you have the opportunity to change the batsman's tactics. Push the forward key to make him play aggressively, back for defensive batting. Press SPACE only to make the batsman play a normal game.

A bleep will sound to confirm that the computer has accepted your instructions. Remember that the batsman won't be able to hit every shot to the boundary (and he might well get himself out) if you ask him to play aggressively. Playing defensively the batsman is less likely to get out, but he won't score so many runs either.

### **Bowling**

Use LEFT/RIGHT to determine the bowler's tactics; just before he starts his run up, move the joystick left for an offside attack or right for a legside attack. As usual a bleep will sound to confirm that the computer has accepted your instructions.

## **Playing In Arcade Mode**

### **Batting**

In Arcade mode the batsman always plays aggressively and SPACE is used to determine the timing of each stroke. If you don't press the SPACE at all, then the batsman will offer no stroke. Mistime your stroke, and you may hear the wicket tumbling behind you. Time it just right, though, and you may send the ball crashing into the stand for a six, or speeding towards the boundary for a four.

### **Bowling**

Press the key for left to change for an offside attack, or right to change to a legside attack, then press SPACE to start the run-up. In the one player game, you can improve the bowler's performance by pressing left and right during the run-up. The faster you alternate the keys, the more effort he puts into bowling - an indicator at the bottom right shows how much. If you don't press any key at all the bowler may well play below his best.

You must also control when the bowler releases the ball - press the SPACE when you think the time is right. If you press too early he will bowl a full toss - too late (or not at all!), and he will probably bowl a bouncer high above the batsman's head which will count as a wide.

## **Practice Mode**

You can choose to practise either batting or bowling. After every six balls, you can either continue practising, change the skill levels or start the game. Only one player can practise at a time; even if you have selected a two player game (use the Home Team's keys).

**Instructions' Source** : GRAHAM GOOCH TEST CRICKET (Alternative) Inner Inlay

## Review (Electron User) - "Hit For Six"

Cricket is a tactical game of subtlety which makes it interesting to watch and difficult to play. For the same reason, trying to simulate cricket on a computer accurately would appear to be almost impossible. Audiogenic has attempted this and produced GRAHAM GOOCH'S TEST CRICKET.

You play one of three types of limited over games or a full two innings Test. The teams are England and Australia, but you can alter the names and the players, together with their batting and bowling averages.

You select from two squads of players and I think it would help if the lists included information as to whether they are batsmen, bowlers, wicketkeepers or all-rounders.

Once the teams have been selected you decide what type of match to play and whether you require a one or two-player game. Next, decide on your skill level, and who your team's wicketkeeper and slip fielder will be. Be careful here, the first time I played I put Botham in the slips and found later, this prevented him from bowling.

If you win the toss you can bat first or put the opposing side in. Take my advice, if you get the choice, bat second.

Bowling takes a little practice, but it is possible to make some reasonable deliveries. On the other hand, I found batting extremely difficult, even on skill level one.

For some reason the boundary fielders drop nine times out of ten when I'm bowling but never miss when I'm batting.

The colour scheme is predominantly green with white for the players' bodies and crease markings. The screen is extremely bright and it wasn't long before I swapped the colour monitor for a black and white portable television.

The view is from behind and slightly above the bowler. The graphics, while not anything to write home about, are adequate. The sound is pretty awful. As the start of the bowler's run there is an annoying beep. The other sounds are the thwack of the ball hitting the bat or pads, the slightly different thwack when it catches the edge of the bat and a sound like bacon frying to represent applause.

GRAHAM GOOCH'S TEST CRICKET is a fair attempt at a simulation, though it may have a limited appeal. Those who don't like or understand cricket may find the game boring, while the purist will probably think it "just isn't cricket!".

## Review (Electron User)

The Electron is capable of supporting a wide range of graphics and text modes, better in fact than many machines costing much more. Imaginative programming can be carried out in Modes 0, 1 and 2, although many people would find the GCOL, MOVE, DRAW and PLOT statements difficult to plan for an involved drawing.

This program takes the difficulty away, substituting it with a series of simple commands with which complicated, colourful and concise artwork can be designed. Only Modes 0, 1 and 2 can be used, and the available colours are shown on a palette at the bottom of the screen. Should other colours than the default one be required it is simple to alter those available.

A flashing cross-hair cursor is used to position elements, and the co-ordinates are constantly updated on-screen. A number of built-in functions can be used, and each has an easily remembered mnemonic. B draws a box, C sets a circle, F fulfils a FILL function, L produces a line while A initiates an arc. For all these, when the cursor is in the correct position, the Spacebar is the input necessary to start the procedure.

Text can be added at will on the screen, and so many applications spring to mind. Pie charts and histograms may be labelled and coloured to relay information, systems may be designed, and complicated maps and drawings transferred from graph paper. Pictures may be built up in a series of pages and may be stored onto cassette for future use.

One glaring omission, looking to the future, is that there seems to be no facility for a screen dump. A hard copy of the screen display would be a fitting final facility to this useful piece of software. It fulfils a large variety of purposes, and also stands on its own as great fun with which to experiment.

## Review (Electron User)

When I was studying O and A level maths there was only one way to produce a graph of a function. That was to mark sufficient points to elicit the shape of the curve. It was painstaking work and often inaccurate owing to the unsteadiness of my hand.

Micros have now brought about virtual accuracy to this work, plotting and labelling axes or marking out a grid remains very time-consuming. This package, however, allows the function to be input, suitable axis limits to be applied and...there is your graph, perfectly drawn before your very eyes. A quick plot feature is also available which uses pre-set X and Y axes. This allows an approximation to be gained quite easily and quickly.

More advanced graphs make use of parametric expressions, with X and Y both being defined in terms of a third variable. This again is catered for, and the same range of options available. All through the most instructive booklet there is a rich variety of suggestions and questions which will quickly make the potential of this program easily understood.

The second part of the tape provides testing in the shapes of curves, with a multiple-choice format. This again covers an extensive range including trigonometrical functions, straight line curves and quadratic and cubic equations.

Any student from O level to post A level will find this suite of programs an ideal complement to both private study and revision.

Phil Tayler, ELECTRON USER 1.10

# GREMLINS

*Professional, Originally Released On Cassette Only*

Game Type : Text Adventure  
Authors : Brian Howarth  
Standalone Release(s) : 1985: GREMLINS, AInternational, £7.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128

## Instructions

There were three warnings...

- \* "Keep them out of light, especially sunlight."
- \* "Don't ever get them wet. Keep them away from water."
- \* "But the most important thing, the thing you must never forget...  
no matter how much they cry, no matter how much they beg...  
Never, never feed them after midnight."

**Instructions' Source** : GREMLINS (Adventure International) Back Inlay

## Review (Electron User)

I suppose I'm the wrong person to review GREMLINS, for I haven't seen the film and I can't finish the adventure - despite the hint sheet that came with it! The promotional material says the game is based on the film so I suspect that anyone who has seen it will have a decided advantage.

The object of the exercise is to kill all the gremlins. To encourage you, your mission starts in your bedroom with a gremlin throwing darts at you. Unless you are quackers, you make a quick exit into the living room where you'll find a gremlin too, but he soon gets the point.

A quick visit to the kitchen will probably find you as baffled as me, so it's off down the road to explore the town. The cinema is showing GREMLINS (wouldn't you know it!) and the real McCoy are as interested in the ending as you are.

The petrol station is a useful hiding place, and the department store is well worth a look but don't let those new-fangled gizmo's loose you.

I must admit that I felt there was something different about this adventure all the time I was playing it. But somehow the atmosphere just didn't seem to be there, and I was left feeling slightly disappointed.

I haven't finished the game, and to be honest I don't think it generates enough interest to make me want to.

Overall, a capable enough adventure that is not quite up to the standard of the others from Adventure International.

Merlin, ELECTRON USER 3. 4

# GRID IRON

***Professional, Originally Released On Cassette Only***

Game Type : Strategy; American Baseball Simulation  
Author : Unknown  
Standalone Release(s) : 1988: GRID IRON, MIL Top Ten, £2.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : MIL, 12 Chiltern Enterprise Centre, Station Road, Theale,  
BERKS RG7 4AA  
Disc compatibility : CDFS E00, DFS E00

## **Instructions**

*"Nominated for 'Coach of the Year' last year, you are suddenly in big demand. The finest football teams in the USA are clamouring for your services, eager to provide you with the funds you need to take them to the top! But creating and managing the greatest team requires more than the ability to win games. You'll have to pick teams; buy and sell players; keep the gate money rolling in; take out bank loans and make crucial decisions on the road to the Superbowl - all in this great simulation of the grid-iron game - featuring 3D match graphics!"*

## **Playing The Game**

Nominated as 'Coach of the Year' last year, you are set to reap the rewards of your new-found status. The greatest teams are queuing up to provide unlimited resources so that you can guide their destiny for the new season. A cool quarter of a million dollars is your starter - but you'd better be prepared to use it wisely! So play the game, select your squad, beat the transfer market, beat the bank! Field the best team at the best time, make the money work for you, and you may just end up winning the Superbowl!

## **How Good Are You?**

If you think you're that good, just remember that the opposition thinks it's better! If that's not good enough, then your gate money becomes harder to earn in order to pay your higher wage bills.

## **Transfer Market**

Your squad of eleven playres and five reserves is displayed. You can sell one reserve per match, but if you sell a player then you must buy one to replace him.

## **Changing Players'/Teams' Names**

To change the name, simply type the player or team number and enter the replacement name.

## **Obtain/Payback Loan**

Your credit limit is \$1,000,000 but interest is charged at 1% per match. You may pay back any amount up to the outstanding balance of the loan.

## **The Match**

You can opt to move a reserve into your team, play the game, or simply review the vital statistics of your team and its opposition. Should you choose to play the game, then the match is represented in 3D graphics. The outcome of the game is governed by a composite of the morale, skill and energy levels of the two teams. So even if your team looks set to win on paper, just like in real life, you might win - but you might lose...

## **Your Rating**

Your rating as a coach depends on how well you perform and how much money your team earns. Remember, there's more to being a coach than simply winning games!

# GUARDIAN

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Shoot-'Em-Up; DEFENDER style  
Author :  
Standalone Release(s) : 1983: GUARDIAN, Alligata, £6.95  
Compilation Release(s) : 1987: PLAY IT AGAIN SAM 4, Superior/Acornsoft, £9.95  
1989: PRES GAMES DISC 5, PRES, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ALLIGATA, 178 West Street, SHEFFIELD S1 4ET  
Disc compatibility : CDFS E00, DFS E00

## Instructions

Test your skill and reflexes to breaking point in an endless battle to halt the progress of the landers in their mission to capture humanoids from your planet surface. Stop them returning to outer space where they will eventually mutate and take up a deadly pursuit of your space fighter. And in between, look out for the flying pods, swarms, alien bombers and deadly baiters; they're just as dangerous. It's embarrassing to be beaten by an overblown jellyfish, but we're sure you'll eventually go under.

You initially have three lives and three smart bombs (indicated after your score), but gain an extra life and smart bombs after every 10,000 points.

## Scoring

150 points	.....	Lander
200 points	.....	Baiter
200 points	.....	Mutant
250 points	.....	Bomber
250 points	.....	Swarmer
1000 points	.....	Pods

You gain 250 points if you destroy a lander carrying a humanoid and it lands and survives. You gain 500 points if you pick up a falling humanoid and another 500 points if you replace it on the planet surface.

## Game Controls

A - Up, Z - Down, <SHIFT> - Thrust, <RETURN> - Fire, <SPACE> - Reverse  
<CAPS LK/FUNC> - Smart Bomb

**Instructions' Source** : PLAY IT AGAIN SAM 4 (Superior/Acornsoft) Inner Inlay

## Review (Electron User)

Be warned - to play this game you need keen eyesight, quick fingers and lots of luck because here's a program that's determined to bust your ego. Mine went with a bang.

In possession of a fast moving spaceship you've got to stop the alien landers grabbing humans from the planet surface. If they manage to get back into outer space they mutate into pods, swarms and baiters and come for you.

There's wave after wave of the nasties and you need every one of your three lives as well as the three smart bombs to survive for any length of time.

The more aliens you get the more you score - sadly they seem to be on the same bonus scheme.

It's a fast moving space game with striking graphics and excellent sound effects. Kids of all ages will love it.

# GUNFIGHTER

***Professional, Originally Released On Cassette Only***

Game Type : Arcade Adventure Different Scenes Style  
Author :  
Standalone Release(s) : 1990: GUNFIGHTER, Atlantis, £2.99

## Instructions

*"The Wild West is at its wildest! Outlaws have driven the townsfolk out, stolen the deeds to their properties and taken over the town. Only the sheriff is left to recover the deeds. One man against a gang of ruthless outlaws, and that man is you."*

Search out and kill the ruthless gang of outlaws and return the deeds to the honest townsfolk. Earn a bounty for each outlaw killed and a bonus for each deed found. More bullets can be obtained from the sheriff's office, but you can only carry six at a time. Extra lives can be purchased from the "Doc's" at \$500 each. For a little light relief in between shootouts, you can gamble in the local casino.

Watch out for the Red Indians; they are real sneaky and try to avoid the potholes - some of them are ten feet deep.

How long will you survive as a Gunfighter?

## Game Controls

Z - Left, X - Right, \* - Up, ? - Down, <RETURN> - Fire

# GUNSMOKE

***Professional, Originally Released On Cassette Only***

Game Type : Arcade  
Author : Unknown  
Standalone Release(s) : 1984: GUNSMOKE, Software Invasion, £6.95  
1985: GUNSMOKE, Dixons/Software Invasion, Free In 10 Pack  
Compilation Release(s) : 1986: MICROVALUE FOUR GAMES 2, Tynesoft, £3.99  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SOFTWARE INVASION, 50 Elborough Street, Southfields, LONDON  
SW18 5DN  
Disc compatibility : CDFS E00, DFS E00

## Instructions

A realistic 3D simulation of a heated Wild West Street Gun Battle in which you will have to defend yourself against up to sixteen enemy sharp shooters.

This game is compatible with the "First Byte" switched joystick interface.

**Instructions' Source** : GUNSMOKE (Software Invasion) Back Inlay

## Review (Electron User)

Have you ever had one of those days where you feel like picking up a gun and shooting a few dozen people? Well, with GUNSMOKE you can shoot as many as you like. But you have to be fast on the draw and quick on the trigger.

The game starts by setting the scene, a well drawn view of one side of a Western town with a store, saloon and sheriff's office. You play the lawman, controlling an animated figure who walks up and down the street. Suddenly, you're under attack from up to sixteen baddies who appear in the windows of buildings and shoot at you. You have to run to avoid the bullets then fire back.

Even if you get hit you have three lives and, as a special offer, for every sixteen gunmen you kill you get an extra life.

It's a simple game that will mostly appeal to children, The animated man could be a little better but otherwise the graphics are excellent. Not too difficult, it's the kind of game that has spectators looking over your shoulder and yelling, "Saloon top window. Quick!"

Nigel Peters, ELECTRON USER 2. 6

# GYROSCOPE

***Professional, Originally Released On Cassette Only***

Game Type : Arcade  
Authors : John Nixon and David Wainwright  
Standalone Release(s) : 1985: GYROSCOPE, Melbourne House, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron Side A/BBC Side B  
Actual compatibility : As stated  
Supplier : MELBOURNE HOUSE, Castle Yard House, Castle Yard, RICHMOND  
                  TW10 6TF  
Disc compatibility : Unknown

## Instructions

*"GYROSCOPE - the game to send you spinning off your head! Attempt to guide a fast and furiously gyrating gyroscope across twelve separate screens. Make the most of your seven lives in this unique arcade strategy challenge. But we have to tell you - it's not easy! Steep slopes, slippery glass, directional magnets, aliens and narrow ledges are among the many obstacles you will find in this amazing 3D scenario. Hi-resolution graphics and superb synthesiser music combine to create the atmosphere of this compulsively addictive game."*

The player should manoeuvre the gyroscope from the top of each course to the bottom. There are three screens per course to negotiate in order to successfully complete the game. Five types of obstacles stand in the way of your progress:

- \* steep slopes
- \* slippery glass
- \* directional magnet
- \* aliens, and
- \* narrow ledges.

When you reach the end of the course, you must move onto the character square which appears as a diamond across twelve tiles.

Once the game has been successfully completed, there is a real surprise in store!

## Lives System

The player has seven "lives" or gyroscopes with which to complete the course, with an extra life for every 1,000 points. If he falls off the edge or hits an alien, the gyroscope will fall over and the player will lose a "life". At the top of the screen is a clock which ticks down. If this reaches zero, the gyroscope will stop spinning and fall over, with the loss of one "life". Play will continue with a new gyroscope which will appear on the spot at which the previous one fell over.

## Game Controls

Z - Left,    X - Right,    \* - Up,    / - Down  
The cursor keys may also be used.

**Instructions' Source** : GYROSCOPE (Melbourne House) Back and Inner Inlay

## Review (Electron User)

The scenario in this arcade style game is of a gyroscope, spinning and falling down hills. You control it using the usual four keys for left, right, up and down. Your aim is to steer it along narrow causeways and into a little hole.

This may sound easy but most of the slopes are on a diagonal course with precipitous hair-pin bends, which require skilful handling of the control keys.

Magnets are strewn about the place to make your task more complex. These turn your

gyroscope into a whirling dervish, flying hither and thither like a ball on a pin table. As if this weren't enough, there are also aliens, hell-bent on knocking the gyroscope over. They take the form of arm-waving ghosts, sidewinder snakes, rival gyroscopes and fried eggs.

If the gyroscope falls off a path or is knocked over, you lose one of your seven lives. To complete the game you must master four routes, each consisting of four screens vertically. The instructions promise a surprise when the game is completed, but I've only mastered three routes so far.

The graphics are of a very good quality, with pleasing use of colour, except for an unnecessary flashing at the start. Sadly, a couple of problems spoil what could be a very good game. Sometimes, a magnet captures the gyroscope and the game seems to freeze, whilst emitting an irritating noise. It is also possible for an alien to be at the spot where the gyroscope re-starts after falling over, which means all seven lives can be lost. Such bugs should not appear in software priced at £8.95.

*LEVEL : Suitable for BEGINNER to EXPERIENCED Adventurer*

*AVERAGE COMPLETION TIME : Several weeks*

*Written in 100% machine language*

*Loading time : 5 minutes approx."*

## A New Type Of Adventure Game

HAMPSTEAD is an adventure game for would-be social climbers. For those who have never played one before, an adventure game depends on the use of brainpower. Speed of reaction isn't so important. What matters is the ability to solve complex problems, which get harder the further you proceed in the game.

Most computer adventures involve a quest of some sort, usually for hidden treasure. There will often be dragons to kill and nasty goblins to avoid.

HAMPSTEAD is a quest, but not for gold. The aim of it is to reach the pinnacle of social status, and acquiring wealth is only one part of the problem. If you wish to go up in the world, you also have to gain the admiration and respect of your fellow men, and there's more to that than a fat bank balance.

In HAMPSTEAD, it helps to know something about art - or rather, to give the impression you do. You must wear the right clothes, be seen in the right places, live in the right house with the right partner and use the correct mode of transport. You must meet the right sort of people and say the right things to them.

Although the old school tie never does any harm, your most important tool is simply the ruthless and skilful use of your natural cunning. At the start of the game you are a nobody whose aim is to become a somebody. So lie, cheat, steal and defraud. You KNOW it makes sense.

The crucial point to remember at all times is this: you cannot attain HAMPSTEAD just by going there. Your task is not merely to visit the place but to become a Hampstead person. Hampstead people may seem terribly casual, as if anything goes, but frankly you will not be invited into their homes unless you are quite clearly one of them.

As the adventure begins, you are sitting around at home in your dingy little house. You have nothing.

As you go and sign on to the dole, make sure you're decent and have some means of getting around. It is advisable to explore as much of your immediate area as possible since you will find things that later prove useful. Some of the things you find may seem useful, but aren't. And some of the things which at first appear useless may actually turn out to be rather vital.

### Setting Off

When the program is fully loaded, you will find yourself in a dingy flat somewhere in north-west London, watching "3-2-1" on television. This really is a depressing, degrading position to be in, so get moving immediately.

To get mobile, socially and physically, just use the simple compass directions north, south, east, west. Sometimes you can go north-east, north-west, south-east or south-west. You will also occasionally need to go up or down. All of these movements can be abbreviated thus: N, S, E, W, NE, NW, SE, SW, U, D.

This system applies whatever your mode of transport is, be it foot, bicycle, train or car. There are places where transport is essential and where you are better off on foot.

### Language

Apart from movements, most of your commands will be in the form of VERB NOUN. You will frequently wish to pick up things or put them down, e.g GET KEY, DROP KEY. If you want to investigate your surroundings more closely, SEARCH ROOM/OFFICE/SHOP or whatever the location.

Don't forget that doors, gates and the like can be opened and closed, locked and unlocked. Sometimes you may need to get into something locked by unconventional means!

Having found an interesting object, you may wish to look at it more closely, in which case EXAMINE DOGS or READ MAGAZINE. In many cases it will take a while to discover the correct command for what you want to do...but that's part of the fun!

### Other Useful Commands

I for Inventory. This will give you a list of what you have with you and what you are wearing.

R for Re-describe. You will need to do this if the screen is filled with messages and commands, and you want to remind yourself where you are and what objects are visible.

QUIT if you have had enough social climbing for one day. This is how you throw in the towel until next time.

SAVE/LOAD to enable you to save the adventure up to the point you have reached and resume later. Check your computer manual for instructions.

### Some Useful Verbs

ABSTAIN	EXAMINE	LEAVE	REMOVE
ACCEPT	FIND	LOCK	RIDE
BET	FORCE	LOOK	RING
BOARD	FLY	MARRY	SEARCH
BUY	GET	MEET	STEAL
CASH	GIVE	OFFER	TAKE
CLOSE	HELP	OPEN	TRANSLATE
DRIVE	HIDE	PICK	TURN
DROP	JOIN	PRISE	UNLOCK

### **Review (Electron User)**

This is not so much an adventure as a way of life. Superficially, the game seems to be an ordinary text adventure that requires you to get to Hampstead Heath to complete the game. However it is less a case of solving the game and more a case of attaining the solution.

Hampstead Heath is one of the posh parts of London, and since you start the game in a slum your problem is not just finding your way there but becoming the type of person who deserves to be there.

I confess that I didn't get very far and so I'm obviously doomed to remain a total slob forever. Nonetheless I can give you a few tips to get going.

The first thing you have to do after leaving the house is to sign on the dole. You'll obviously need your UB40, but also make sure you have some transport or you're liable to get mugged. Since you start the game naked you will need clothes, unless you want to get arrested for indecent exposure. You'll find the edge of the Heath close by and it pays to sit back and admire the scenery.

A nearby maze is easy to map, though if you manage to use what you find then please let me know how you did it. I used my money to buy another means of transport and thus found my way to another section of the adventure.

Apart from satisfying my appetite - though I must have done a "runner" as I had no money to pay for my meal - I only managed to get my pockets picked in the cinema, so any help from readers would be welcome.

I found it difficult to relate to the game. It took about five minutes before I realised what a UB40 was!

There are some extremely witty thinks in the program and I didn't get most of them first time either. If you manage to solve the game you can send off to Melbourne House for a diploma in social climbing, though I hope you'll also send me the solution.

Overall, I was left feeling somewhat baffled by this game, though I hasten to add that the problem is obviously mine and not the program's. I would suggest, however, that you try before you buy.

Merlin, ELECTRON USER 3. 5

# HAPPY LETTERS

*Professional, Originally Released On Cassette Only*

Game Type : Educational; Graphical Infant School Teaching Aid  
Author :  
Standalone Release(s) : 1983: HAPPY LETTERS, BES/Acornsoft, £6.95

Actual compatibility : Electron  
Supplier : ACORNSOFT, 4A Market Hill, CAMBRIDGE CB2 3NJ.  
Tel: (0223) 316039  
Disc compatibility : Unknown

## Instructions

### The HAPPY Series

The HAPPY Series is a range of programs from BES aimed at children in the age range of 3-5 years. The range covers among others number, letters and writing skills. Further releases in the range will be announced in the press, or contact your local dealer for information.

### This Booklet

BES programs are designed to be largely self explanatory, and follow similar styles (e.g. through the use of the <ESCAPE> key to return at any time to the main menu) so that children rapidly familiarise themselves with new programs, and can use them if required with the minimum of valuable supervision time.

BES programs always include explanatory booklets of this type to satisfy several objectives. Firstly to identify the objectives of the program, and to give guidance as to some possible uses of the program based on experiences during the extensive in-classroom and in-house testing period. Secondly they are designed to give an understanding of the sequences encountered in the programs, since in many situations the time of access to the micro is at a premium.

Thirdly, the booklet will assist in using the substantial content of BES programs to the full, through reference to it before, during and after use of them on the micro.

In the event of any problem with the use of this program, or ideas as to improvements which could be incorporated please do not hesitate to contact BES.

### Introduction

This program has been designed to assist children in the task of recognising letters. It is aimed at a very young audience and consequently is exceptionally easy to use. In the early options the child need use only two keys - <RETURN> and the <SPACE> bar. The motivational aspects of the game are animated fishes and crocodiles, both of which have proved very popular during the extended trials which BES carries out in selected schools.

The program covers both lower case letters and the recognition of the corresponding upper case letters. In order to familiarise children with the keyboard there is also the option to find keys corresponding to letters on the screen. This has been extended to match lower case letters on the screen with the keys. This is designed to help overcome the problem of the keyboard being limited to upper case letters on the keys.

It is recommended for use with children between three and five years old, and in situations where children experience particular difficulties in this area.

### Loading

Having completed loading the program displays the title and copyright screen for a few seconds. This allows time for the recorder to be switched off. No entries are necessary and the program will automatically move on to the main menu screen.

### **The Main Program**

The program is menu-driven and offers the following options:

#### **1. START**

The opening screen lists the options available viz:

1. Matching lower case letters
2. Matching lower case letters/words
3. Matching upper/lower cases
4. Finding upper case keys
5. Finding upper case keys given lower case letters

#### **Option 1. Matching lower case letters**

This option helps develop letter shape recognition and the matching abilities of children at the simplest level, i.e. matching lower case letter to lower case letter. To start, a choice is given of which sequence of letters it to be used through choosing the initial letter of a sequence of six. Thus choice of A leads to practice of A through to F, B to B through to G, U to U through to Z etc.

Having chosen the sequence the program requests the child's name; this can often be entered by the child at an early age. After entry (followed by <RETURN> of course!) the screen appears with the six lower case letters to the right of the centre, and the lower case letter to be matched appears against the top letter for a period of time (as set under the initial menu option 4 as described later). The letter to be matched is randomly chosen from the set of six letters, and the child has to press <RETURN> when opposite the correctly matching letter. The correct entry is rewarded by a 'happy face' and by a tune. The fish then swims out to eat the letter, smiles, turns a different colour to indicate success and swims back. The correctly interpreted letter appears in a box at the left hand side of the screen.

When "SPACE" appears then it is necessary to press <SPACE> bar to start the next cycle.

An incorrectly timed entry is shown by a 'bozz' and the face grimacing. The opportunity is given to try again in the next cycle.

A further incorrect entry is again indicated by a buzz and the face grimacing. However, the correct match is indicated briefly by a box flashing round the correct letter, followed by <SPACE>. A further incorrect entry leads to the letter being moved to a right hand box, but coloured blue. The fish on the right hand side remains green.

The sequence continues until all the letters are transferred to left hand boxes.

Having completed all six letters the child is rewarded by a crocodile appearing, and failing to catch the fishes corresponding to the correctly matched letters. The fishes corresponding to the incorrectly matched letters get eaten!

It should be noted that the time allowed for entry is greater for the top letter, as recognition of a new letter appearing on the screen takes more time than following the movement of an already existing letter. The time period opposite each letter is adjustable, as described in the initial menu section 4.

On completion of the cycle, the option is given to have another go. If this is chosen, the main sequence is repeated, otherwise the user is returned to the main menu.

#### **Option 2. Matching lower case letters/words**

This option takes the child on from the first option and develops at the recognition of a lower case letter at the start of a word by looking for a match with the moving letter. This is visually more complex. The initial choice is of the sequential

letters in the same manner as option 1. In choosing a letter A through to U the screen appears with a series of short words starting with the series of six letters chosen.

On pressing <RETURN> when the given letter is lined up with the same letter at the beginning of the word the child is rewarded by the fish eating both the letter and the word. The word is then moved to a box on the left hand side of the screen. Similar responses are obtained as with Option 1, and the crocodile appears in the same way as in the previous option.

#### Option 3. Matching Upper and Lower Case Letters

This option is similar to option 1 except that the moving letter is upper case. This therefore teaches the child to relate upper and lower case letters.

#### Option 4. Finding Upper Case Keys

This part of the program takes the child on from using the <SPACE> and RETURN keys to matching the given upper case letter on the screen to the upper case letter on the keyboard. The allowable time is set under option 4 of the menu, and in order to achieve the responses of a tune, happy face and the fish eating the letter, the child has to press the matching key within the set time. Failure to do so within the time leads to a grimace and a 'buzz'. The child is given a second try in the next cycle. If an incorrect key is depressed similar responses are obtained. If the child fails the second time to make the correct entry, the letter is transferred in a different colour to the boxes on the left hand side of the screen.

Note that <RETURN> does not have to be pressed after each entry.

On completion of the sequence the crocodile emerges, eating any of the fish representing the incorrectly entered letters.

#### Option 5. Finding Upper Case Keys Given Lower Case Letters

Having developed the skills of matching upper and lower case letters on the screen, this option helps children relate lower case letters on the screen with the upper case letters on the keyboard. This skill is particularly necessary to help children move on to more complex educational programs, when entries in lower case letters are accomplished using the keyboard.

The format of this part of the program is similar to the previous option, with similar responses.

## **2. INSPECT MONITOR RECORDS**

All BES programs contain a performance recording system or MONITOR. Using this, teachers, parents or the child can see how well the child is performing a task. Progress can be quantified as a result. Only then can a child's ability and educational needs be identified.

Each time a new name is entered after starting the program from the main menu, a new monitor record is created. The facility will hold the record of the last five children (after number five, number six will be recorded over number one, seven over two, etc.)

Data available under this option includes:

- a) Individual child's name,
- b) Time taken for the stage - in minutes,
- c) The category used - the menu number and, for example, the upper case letters with upper case keys,
- d) The moving letters and the child's individual entries. Note that a % sign indicates that the child has failed to make an entry within the allowed time. Correctly matched letters appear in green, and incorrect ones in red.

Careful analysis of the information stored in these records can provide a valuable guide to specific letter recognition problems or more general difficulties or successes.

### **3. SET SOUND LEVEL**

Sound can be very distracting in certain situations and as a consequence HAPPY LETTERS has a control allowing the sound to be turned off.

### **4. SET TIME LIMIT**

To cater for different levels of skill and to add interest and stimulus the delay time for the movement of letters on the screen in options 1-3 and the time to find a key in options 4-5 can be adjusted. This is entered as a number between 3 and 20. This is interpreted as tenths of a second in 1-3 (variable between 0.3 and 2 seconds) and whole seconds in 4-5.

It should be noted that it is important to set the time according to the child's ability. Setting too short a time can make the task quite difficult and may completely discourage a young child.

**Instructions' Source** : HAPPY LETTERS (Acornsoft/BES) Booklet

### **Review (Electron User)**

One of the points made by many infant teachers about the use of micros is that the keyboard is composed of capital letters, while infant children are more familiar with lower case. This program has gone a long way towards solving this problem by showing the relationship between the two systems. It contains a suite of five options which cover matching and identifying letters, with a delightful screen presentation which appealed greatly to the children I tried it on.

Five letters are displayed on one side of the screen, each with a fish lying behind it. Another letter moves slowly down the other side of the screen, pausing next to each of the five. When the two match, and if the child correctly signifies this by pressing the <RETURN> key, the little fish swims across and collects the pair of letters. Then it smiles and swims back to its place. When the sequence of attempts is over, a beautifully drawn crocodile appears at the bottom of the screen.

Those fish whose answers were correct can swim away, but wrong answers are gobbled up to shrieks of delight. The child making a wrong answer is given another chance, so hopefully most of the fish escape.

The first three options cover matching either lower case letters, lower case words or matching upper/lower cases. The remaining two options provide necessary practice in finding the letters on the keyboard - a major stumbling block even with 10 or 11 year olds.

The time delay allowed by the program can be varied, so that the child can be tested against his previous results.

Monitoring the children's scores is done very well indeed. The adult can not only see the scores of each child, but also the incorrect responses made so that the problems can be readily identified.

The program is a fine example of a tape which uses the micro as a valuable tool rather than merely as a gimmick. Everything about the program seems to have been well thought out, from variable difficulty levels to an excellent 16 page booklet for parents.

### Review (Electron User)

This is another in the "Happy" series by Bourne, and it maintains the promise of the first title in the series, HAPPY LETTERS. It is aimed at a very young audience, this time between three and six, probably with an adult to help where necessary. Again the sound can be turned off, and I tended to do that rather often.

A large number is drawn filling most of the screen. The child then enters an input by pressing the appropriate number key the correct number of times. As each key press is made, a flower is added to the right hand side. If the correct input is made, the face smiles, and a flower is added to the score.

Should the answer be incorrect however, the flowers change colour and only a stalk is added to the score. A useful extra feature is that on an incorrect input, the same large scale number is drawn so that the child might compare the two.

There is the usual monitor screen, which allows the adult to assess the progress of up to five children. Should particular problems appear, the sequence of numbers given to a child may be set in advance by the adult to strengthen weaknesses.

It is good to see that the <BREAK> key is at least partly protected, returning the user to the main menu. It is also encouraging that such good quality programs are being made available for the Electron, emphasising the fact that it is an ideal machine for education both at school and at home.

This program is good value and will prove useful for any young family.

Phil Tayler, ELECTRON USER 1.12

## Review (Electron User) - "Bounce Into Action"

In these days of ever increasing sophistication it is most refreshing to play a game as simple yet addictive as Audiogenic's HELTER SKELTER.

The storyline goes like this: The world has been overrun by herds of comical looking monsters and your mission is to bounce the little blighters into oblivion. I choose the word bounce specifically, since you are a red rubber sphere of considerable size.

Ball control is achieved by means of three keys - left, right and bounce and your mastery of the bounce button will determine the outcome of the game. Oddly enough the world that you are defending is constructed in platform game fashion - single screens, with several platforms floating in mid-air. Each is inhabited by one or more randomly moving monsters just waiting to be bounced.

Being an ace tactician, my first inclination was to ricochet around the screen as fast as possible, obliterating everything that I touched. After I had doubled the indigenous monster population in five seconds I decided to adopt a more subtle approach - so I sat down and read the instructions.

The accompanying script indicated that the programmers had anticipated my sledgehammer approach by specifying the order in which the monsters must be despatched.

On all occasions, the next one to be blatted is highlighted by a large white arrow hovering above its head. Contact with any other beast induces instant binary fission, the result being two furry fiends scurrying around the screen instead of one.

Don't be put off by the fact that you can literally sprint through the first few screens, as this is a deliberate ploy to boost your confidence. Things soon begin to increase in both complexity and difficulty - don't forget that you have a total of 74 levels to complete before you reach the end!

HELTER SKELTER's monsters are not in any way harmful to the bouncing ball and the game's controlling factor is time. A digital clock counts down the seconds as you race to obliterate the monster masses. Tension is heightened by a rapid ticking sound that starts at the 10 seconds marker.

Scoring is relatively simple. You receive 500 points for every monster you zap, a further 1,000 bonus for every second that remains on the clock, and a final skill bonus which is halved every time you press the bounce button.

This final bonus encourages a player to adopt the most economical approach to completing a screen - this is also probably the quickest.

Variety is introduced by means of various tokens that appear at random throughout the game. Time limit permitting, you may be able to collect the letters E-X-T-R-A and be rewarded with an additional ball.

Alternatively there is a range of symbol tokens that can temporarily paralyse the monsters, interrupt the passage of time, or best of all, teleport you to the next level.

Sound is used sparingly: There is no title tune and the spot effects are simple, but this doesn't really detract from the game's appeal.

Considering the now ageing Electron's capabilities, HELTER SKELTER strikes a good balance between graphic detail and colour use. On the animation front, the characters exhibit flicker-free and fluid movement, with the realistic response of the ball to the apparent gravitational effects being worthy of note.

If you become bored with playing your way through the same old levels time after time and you're not good enough to get any further, try pressing E while you're on the title screen. Once the discrete message Edit mode has disappeared you will be faced with a blank screen - a canvas upon which you can express the more devious side of your personality.

This built-in level designer allows you to create an infinite number of new screens, provided that you save them to disc or tape in groups of 40.

You are given total control over the size and location of all platforms, the number of monsters present, the starting position of your ball, the time allocation and the size of the low bounce bonus.

The only failing of this otherwise powerful editor is that you cannot edit a screen one you have committed it to memory. If you've used game editors in the past you will realise the magnitude of this omission. There is no way that you will ever create a well balanced level at the first attempt - it will always be too easy, too difficult or just downright impossible!

I would rate HELTER SKELTER as one of the better platform games to have hit the market in recent years. Simplicity is the keyword throughout: Simple controls, simple gameplay, simply fun!

## Instructions

*"Directions can be confusing! Learning the different between Right and Left can be a hard task. Some adults never really grasp the idea and begin to panic when asked for directions!"*

*Featuring the ever popular Mr. Men, this set of four games has been specially written for children of four years and upwards.*

*The games are not only fun to play, they are also designed to teach children about giving directions and how to plan simple routes.*

*Designed by two primary school teachers, these programs draw on their experience of teaching the early years and using computers in the classroom.*

*Included with the programs is a specially written instruction book featuring the Mr. Men. Intended to be read with your children, it introduces the games and the simple operations required to play them."*

## A Note To Parents

Directions can be confusing. Learning the difference between Right and Left can be a hard task. Some adults never really grasp the idea, and begin to panic when asked for directions!

The aim of these programs is to lead children in an amusing and stimulating way, from:

"Go that way" (pointing), to:

"Move to your Right" (My Left)

The games are also about simple route planning, and therefore involve thinking ahead.

I hope you will read these stories with your children as they play the Mr. Men computer games for the first time. They are intended to introduce young children to the computer games in an amusing and lighthearted way.

- Roger Hargreaves

## Mr Tickle's Jigsaw Puzzle

Mr Tickle is shattered! Nobody laughed at his last prank. See if you can put him together again and revive his tickling powers - ready for the next game.

The jigsaw pieces outside the box are waiting to make a picture for you. They will move only in straight lines to the centre, either up, down or across the screen.

See the yellow wall? You can line up the doorway with the yellow piece of puzzle by using the arrow keys (cursor left and cursor right for the top and bottom walls, cursor up and cursor down for the side walls).

When the doorway is lined up with the yellow piece of puzzle, press <RETURN>. This wall will turn red and the next wall will turn yellow. Do the same for the next piece of puzzle, and the next, and the next.

Did you line up the doorways properly? If you didn't the puzzle can't be finished.

As soon as all the walls are red, the yellow pieces will try to zoom through the doorways to the centre of the box.

When you have finished the puzzle, watch Mr Tickle flex those tickling muscles! Look out Mr Grumpy, here comes Mr Tickle!

### **Mr Tickle And Mr Grumpy**

Mr Tickle has come to cheer up Mr Grumpy. But Mr Grumpy doesn't want to be cheered up. He has made his doorways so small that Mr Tickle cannot get through.

He thinks he's sage, does he? Well, you and Mr Tickle know better. Mr Tickle's hand can still fit through the doorways. He can make his arm grow longer and longer, and so he can still reach in and tickle Mr Grumpy.

In this game, Mr Tickle lets you choose where to tickle Mr Grumpy - in his ribs, on his head, under his feet, or anywhere.

Before you tickle Mr Grumpy you can move the doorways if you need to, just like you did in the last game, Mr Tickle's Jigsaw Puzzle. You can line up the doorway in the yellow wall with Mr Grumpy by using the arrow keys (left and right for the top and bottom walls, up and down for the side walls). When the doorway is ready, press <RETURN>. This wall will turn red and the next wall will turn yellow. If you are not going to use this doorway, you don't mind where it is, so just press <RETURN>. After pressing <RETURN> four times all the walls will be red and Mr Tickle is ready for you to tell him how to reach Mr Grumpy.

You have to tell Mr Tickle where to stretch his arm to reach Mr Grumpy. He can read <L> for "left", <R> for "right", <U> for "up" and <D> for "down".

If you find it easier to use the arrow keys, you may do so.

If you make a mistake you can rub it out by using the <DELETE> key.

When your list is complete, press <RETURN> and see if you and Mr Tickle have reached Mr Grumpy.

Are you stuck and don't know what to try? Then try to tickle Mr Grumpy's head with this:

- \* Line up the top doorway with Mr Grumpy. Press <RETURN>.
- \* Press <RETURN>, <RETURN>, <RETURN> for the other three doorways which you don't need.
- \* Press arrow up, arrow right, arrow down, <RETURN>.
- \* This will show as u (for up), r (for right), d (for down) at the top of the screen.
- \* Now watch Mr Tickle's arm. It goes:
  - U(!)p to the top
  - R(!)ight to the doorway
  - D(!)own to Mr Grumpy!

Good fun, wasn't it?

An even better place to tickle Mr Grumpy is his feet. Feet are so ticklish, aren't they?

- \* Press <RETURN>, <RETURN> for the first two doorways which you don't need.
- \* Line up the bottom doorway with Mr Grumpy. Press <RETURN>. Press <RETURN> for the last doorway, which you don't need.

\* Press <D>, <D>, <R>, <U>, <RETURN>.

\* Mr Tickle's arm will go:  
D(!)own to the doorway  
D(!)own to the bottom  
R(!)ight to the doorway  
U(!)p to Mr Grumpy!

Now try to tickle Mr Grumpy in other places, but remember, in this game, Mr Tickle's hand cannot go across anything already drawn on the screen.

If you find it too hard to plan a whole list of directions for Mr Tickle, you can do it a step at a time. You do this by pressing the <C> key before you start your list. A boot will appear on the screen to show that you are doing it a step at a time. Now, as you give Mr Tickle each instruction, it will happen straightaway instead of waiting for the <RETURN>.

On the other hand, if you get too good at tickling Mr Grumpy, he will try to block up the doorways with chairs, but there always seems to be a way to tickle him!

When you are good at the game try a double tickle, or even a triple tickle, in one go. You can make Mr Tickle's arm bounce off inside walls, chairs, Mr Grumpy, or even Mr Tickle's own arm. Remember that inside the house Mr Tickle's arm will not stop at the doorways. It will only change direction when his hand bumps into something.

### Mr Lazy

What a lovely afternoon for a snooze! Mr Lazy has found just the place, under a large apple tree. As he stretches out in the soft grass, he notices a juicy red apple up in the tree. As you know, Mr Lazy is far too lazy to climb the tree and pick the apple! He just lies down under the apple, waiting for it to drop.

Suddenly a friendly worm appears. He would like to help Mr Lazy, but being such a small worm, he cannot see that far. He will climb the tree and push the apple off, but you must tell him where to go.

You will need to give the worm a list of things to do. At each fork in the tree he will do the next thing on your list. He can read <M> for "move", and <R> for "turn right". If you find it easier to use the arrow keys, you can use up for "move", left for "turn left", and right for "turn right". If you make a mistake you can rub it out by using the <DELETE> key. When your list is complete, press <RETURN>, as in the last program, Mr Tickle and Mr Grumpy.

Remember, worms don't climb on their backs, so, from the moment the worm starts, he will be looking along the tree-trunk.

If, as an example, you told the worm: "m m r m m m l m"

- 1) m moves the worm forward to the first fork of the tree
- 2) m moves him to the second fork
- 3) r turns him to face the branch on his right
- 4) m makes him move in this direction to the first fork in the branch
- 5) m keeps him going that way!
- 6) m and again!
- 7) l turns him to face the branch on his left
- 8) m moves him along the branch

and, being a playful little worm, he will knock the apple down on to Mr Lazy's sleepy head!

But what is this? It's a magic apple tree. Two more branches have grown, and there is another juicy red apple!

Have another go!

## Mr Men Versus Mr Tickle

The gang of four Mr Men are trying to stop Mr Tickle from moving. He has been such a nuisance rushing around tickling people. Can you help to trap him?

Mr Tickle wants to get past the gang of four. He will usually move forward on the red squares, but if he can't he is allowed to step back.

You are in charge of the gang of four who are trying to trap Mr Tickle. They are only allowed to move forwards on the red squares.

Choose which Mr Man you want to move. Press <RETURN> until he appears in the top right hand window. Then press the left arrow key to tell him to move a step to the left, or the right arrow key to move a step to the right. If you were like Mr Clever, you could tell him to move to HIS left or HIS right by using the <L> and <R> keys. Go on, try it. Try pressing <L> for HIS LEFT, and watch him move to YOUR RIGHT.

Did you see Mr Tickle also move a step? Choose another of your Mr Men to move forward, but be careful. If you leave a gap, Mr Tickle will give a wicked grin and hop right through!

**Instructions' Source** : HERE AND THERE WITH THE MR MEN (Mirrorsoft) Inner Inlay

## Review (Electron User)

Mr Tickle has a problem. He is in little bits all over the screen. Well, that's not too bad. We can soon put him together. Mr Grumpy has problems too. The regenerated Mr Tickle keeps tickling him. Mr Lazy's problems are worst. A long red worm keeps eating through apples which then fall on his head. In the end they all get their own back on Mr Tickle. The gang of four go after him!

That is the storyline behind this set of four programs aimed at 4 to 8-year-olds. It may sound trivial but it certainly is not. The plot stimulates and involves the children in decision making and planning. The educational objectives are well defined and are met by the activities that the programs demand.

The theme of the package is left, right, up and down. In the first program, the user has to move a gate either left and right or up and down to line up with parts of Mr Tickle. The only keys used are the cursor controls and <RETURN>. Graphics are good and produce comprehensive non-verbal cues for the user.

The second program allows the user to control Mr Tickle's long tickling arms and attempt to tickle Mr Grumpy. This time the child has to plan the actions and enter a short list of instructions such as "urd" (up-right-down) to guide Mr Tickle's arms to Mr Grumpy's nether regions. Again the cursor keys can be used or the letters U, D, L, R. If your tickling ability isn't too good then Mr Grumpy tries to place chairs in your way.

Mr Lazy appears in the third program. You control a worm that has to climb a tree and eat a particular apple. If successful, the apple falls onto the head of an unsuspecting Mr Lazy. Again, a set of instructions are entered and then carried out. I feel that this game is easier than the second, but that is a minor criticism as a parent or teacher can decide which order a child follows the programs. I found this program extremely difficult on a black and white monitor but fine in colour.

The final game, similar to Fox and Hounds, is played on a chessboard. The user controls four different Mr Men and attempts to trap Mr Tickle. Mr Tickle does not play the game too well and so it should be possible for most children to succeed in trapping him.

There is a comprehensive manual for an adult to read to the child. The sound cues can be switched off. I really enjoyed going through this package and so did the children I tried it on! This is the type of educational software I would like to see entering the home market.

### Instructions

Whilst on a hiking holiday in Cornwall, you find yourself in Padstow during the Hobby Horse celebrations. These take place on May Day when the hobby horse dances through the crowd grabbing at and bumping into watching spectators.

After the celebrations you become engaged in conversation with a couple of old Cornishmen in one of the taverns. When you inform them of your interest in legends and folklore, they start to mention the local legend of a witch named Vianna who lived by the coast between Padstow and Bude, farther north.

A couple of hundred years ago, the woman Vianna was accused of being a witch and was put to death. The people say, however, that at certain times she returns to stalk the night along with various demons and familiars which she conjures up to help her in whatever diabolical deeds she performs.

Now that King Edward has succeeded to the throne, people are less likely to be alarmed by ghost stories and witchcraft in these modern Edwardian days. However, in recent years there have still been a number of respectable people reporting eerie occurrences. Why, only last year a local doctor reported hearing the sound of voices and the whinnying of horses on the moors whilst there was no sign to be seen of anybody.

These days, however, Vianna is more euphemistically referred to as Vi and many scoff at the mention of witchcraft.

One of the men to whom you are talking mentions that he is driving in the morning to Bude and that he will happily offer you a seat on his carriage so that you can visit the village where Vianna lived.

So it is that the following day, the man drops you off after a journey of about an hour or so and continues on his way Northwards.

"If you should meet the old witch, give her my regards," he laughs as the carriage is driven away.

Now is it my imagination, or is it just a little bit more chilly than it was a moment ago?

**Review (Electron User) - "Atmospheric Adventure"**

He's done it again. Geoff Larsen's last adventure, THE PUPPET MAN, gave rise to an excess of superlatives in my review. Now, I shakily pluck out my thesaurus in an attempt to find more words of praise for his latest QUILLed masterpiece.

While on a hiking holiday in Cornwall way back in 1902 you find yourself in Padstow during the Hobby Horse celebrations. After the celebrations you talk to a couple of local Cornishmen in one of the taverns.

When you tell them of your interest in myth and folklore they recount the legend of Vianna, a witch who lived in the area some 200 years earlier. Thus the scene is set and as you accept a lift in a carriage to Bude the next day, the story you heard the previous evening sends a shiver down your spine.

With no obvious purpose, it will take you some time to realise exactly what your quest is to be. As with previous Larsoft adventures, flags are set as you move, which put into operation important events.

For instance after about thirty moves the trinket shop will be open for business, and thirty moves later a fisherman will appear outside the inn and explain that the tide is turning. Shortly afterwards a means of reaching the island will be uncovered.

That is as much of the plot as I can give away without spoiling the enjoyment for you.

However, I will say that it is essential that you talk to the characters you meet, as they will provide the most important hints to unravelling this mystery.

Once again this Larsoft adventure is only restricted by the utility which Geoff has used to write it. I long ago groaned at having to use two word, verb-noun input. Considering such limitations, the adventure reeks atmosphere and is incredibly addictive.

I won't go so far as to say that HEX surpasses THE PUPPET MAN in quality, as it is constructed and carries a plot in a totally different vein. However, once again THE QUILL has been taken to its limits by the creativity and ingenuity of Geoff Larsen.

This adventure immediately jumps into my all-time Top Ten of personal favourites.

Presentation .....	9
Atmosphere .....	8
Frustration factor .....	9
Value for money .....	10

Pendragon, ELECTRON USER 5. 8

**Solution (Acorn Electron Haven)**

HEX is a pseudo "real-time" adventure where you must wait around at certain locations at certain times. To advance time quickly, simply hit the <RETURN> key without input as it has the same effect as typing WAIT.

From outside the Kingfisher Inn, go E then GO into the village STORE. GET the SACK of flour before LEAVEing then go E again and you will be outside a closed trinket shop. Hit <RETURN> about 25 times to hang about outside then GO SHOP when it opens. Inside the shop, EXAMINE the SHELF and EXAMINE the URN you find there. GET the CLOD of earth only. Taking the other items will result in a beating from the locals.

LEAVE the SHOP and go W, W, S and S to a gateway. GO through the GATE to the grounds of the parsonage and keep LOOKing (Key L then <RETURN>) until the parson gets tired of looking at you (after about twenty such inputs). Go W and LISTEN to soak up the atmosphere. GET the TROWEL and go E, N, N, N, E, E and D onto the pebbled beach. WASH the CLOD in the seawater to reveal a ring. Now go E.

GO onto the revealed TOMBOLO off the shore and follow the path N, U and N to the old house. RING the BELL and a man will appear. TALK to the MAN and, on seeing the ring, he will invite you inside. ENTER and CHOOSE a tarot CARD as requested. You will be told what to do next.

LEAVE and head S, D, S, D, W, U, W and W. ENTER the INN and READ the PLAQUE chronicling the legend of Vianna. Now LEAVE and keep LOOKing (L) until darkness falls and a lit lantern is placed before you. GET the LANTERN then go S, W, W and W. You can now GO into the COTTAGE you passed earlier. TALK to the MAN inside and he will introduce himself as Baines, whom you have been told to seek. SAY TREGARETH sent you and you will have access to the whole of his possessions.

GET the COMPASS before LEAVEing then follow the road W, W and W. Lots of eerie things will be happening around you as you do. Go S into a dense mist and wander W and S through it onto the crest of a hill. Go D and D again into a combe dominated by a large manor house. GO into the MANOR courtyard (which belongs to the parson you saw earlier) and LIFT the WINDOW.

GO through the WINDOW into a library and walk E and E through the house into the study. EMPTY the SACK of flour then retreat W. Hang around by hitting <RETURN> until you hear movement within the study. Go E to investigate and you will find the room empty. EXAMINE the FOOTPRINTS on the floor and EXAMINE the CORNER they lead to. The inspection reveals a loose tile. MOVE the TILE and PULL the ROPE to reveal an opening to a secret passage.

GO OPENING and then go N. EXAMINE the FLOOR and LIFT the TRAPDOOR. By going D, E, E and N, you can return to the churchyard by this new route. Now the crypt will be open so GO into the CRYPT and GO along the TUNNEL littered with keys. Go N and E past the clump of trees to the shore. DIG here with the trowel and OPEN the wooden CHEST you unearth.

GET and LIGHT the FLARE to expose the smugglers' operations and then return W. GO into the CLUMP of trees. In amongst them you can GET a white HORSE and should RIDE the HORSE. Ride S, E and S to Snake Lane where it will throw you off. Walk S and you will be faced by a short man with a gun. EXAMINE the MAN to reveal the real secret of Vianna but do not try to escape else he will shoot. Hit <RETURN> until Tregareth attacks him from behind. Both men will plunge over the cliff edge.

Hit <RETURN> three more times and the church bell will toll. Go E, S and S then ENTER the lychGATE. Go W and GO onto the church PORCH. TALK to the PARSON in the church and he will ask you to return to the Inn where the adventure started. LEAVE and go E, GO GATE, N, N and E. You will then see a Kingfisher proving both that the legend may have been true and that you have completed the adventure.

# HEZARIN

## Instructions

You have been transported to the strange and wondrous land of Hezarin, a world held in the grip of an evil tyrant - the sorcerer Arijith. As a sworn-in member of the Adventurers' Guild, you cannot ignore the inhabitants' plea for help, and although no doubt this will not stop you from acquiring the odd treasure along the way, your ultimate task is to overcome the tyrant and free the peasants from his oppressive reign...

Rumour has it that the Ruling Council of Hezarin, an omniscient body that works in mysterious ways, foresaw the rule of the old tyrant and crafted a magic device, in the form of an old panelled box, which could be used to overcome him; but over the passage of time the box has been lost and the secret of its use forgotten. Other sources say that Arijith himself consigned the box to a secret location deep in the bowels of the earth, and has woven dark spells and set hidden traps so that no ordinary man may chance upon it...

You start your exploration in a large field out of which rises an out-crop of glistening white limestone. To the north lies thick forest, to the west an apparently infinite plain, and to the east a thick hedge. Where next?

The skeleton of HEZARIN was put together in 1981 by Steve Tinney and Alex Ship. The flesh was added in 1990 by Jon Thackray, aided in the later 'testing' stages by Peter Killworth. HEZARIN is a big game, so we cannot guarantee that it is completely bug-free. Should you discover any, please let us know.

## On-Line Help

I get lost in the forest - Hint 1  
What is the point of the forest? - Hint 2  
I get lost in the infinite plain - Hint 3  
I can't get up the hill - Hint 4  
What is the significance of the planks in the trees? - Hint 5  
I can't get up the tree with the planks - Hint 6  
I can't find anywhere apart from the village - Hint 7  
I keep falling in a river - Hint 8  
Whenever I fall in the river I can't escape - Hint 9  
What does "SKCITSHOOP" mean? - Hint 10  
What can I do in the rubble pit? - Hint 11  
I can't find any light for the area beyond the long tunnel - Hint 12  
I can't get near any of the torches in the long tunnel - Hint 13  
I can't get hold of any of the torches in the long tunnel - Hint 14  
I can't find my way out to the marsh - Hint 15  
I always die in the marsh - Hint 16  
What is a marshwibble? - Hint 17  
What is wiffinweed? - Hint 18  
I can't reach the crown - Hint 19

I can't find anything in the cabinet - Hint 20  
What is the significance of the loud >>BANG<< as I leave the small chamber with the cabinet? - Hint 21  
I can't get things out of the cabinet - Hint 22  
How can I decide which passage to take from the Nettle? - Hint 23  
I keep getting killed by orcs - Hint 24  
I can't determine reliably which orc to tackle first - Hint 25  
I can't turn on the valve on the pipe - Hint 26  
Even when I've fixed the pipe I can't turn on the valve - Hint 27  
I can't turn off the valve on the pipe - Hint 28  
What does turning on the valve on the pipe do? - Hint 29  
I can't get into the hole into the damp cave - Hint 30  
I can't get down the hole into the damp cave - Hint 31  
I can't get out of the hole in the damp cave - Hint 32  
Even when I find out which orc to tackle, I still can't kill it or get the crystal - Hint 33  
After getting a crystal I lose my sword - Hint 34  
Can I go down any of the other passages from the Nettle after acquiring a crystal piece? - Hint 35  
What do the grey doors conceal? - Hint 36  
I can't get past the grey doors - Hint 37  
Why does the place where I find the box fill with smoke? - Hint 38  
What is the significance of the black smoke? - Hint 39  
I can't get beyond the smoke filled room near Fountain Cavern - Hint 40  
I can't find my way through the minotaur's lair - Hint 41  
I can't take my possessions away from the area near Poohsticks bridge - Hint 42  
I keep falling down pits when I try to get through the dismal smoke filled passages - Hint 43  
Even when I know where the pits are I still can't cross them - Hint 44  
Having crossed the first pit I still can't cross the second - Hint 45  
When I save the game I get told of earth tremors - Hint 46  
I die when I swing on the rope bridge - Hint 47  
I get lost in the shifting halls - Hint 48  
Why can I reach two different sets of grey doors? - Hint 49  
I get killed by the morlock - Hint 50  
I can't find my way through the wild wood - Hint 51  
Climbing trees in the wild wood doesn't seem to help me - Hint 52  
I can't go in the directions I want to go in the wild wood - Hint 53  
I can't get to the source of the smell in the wild wood - Hint 54  
I can't find anywhere to go in the valley - Hint 55  
Even from within the waterfall pool I still can't get anywhere - Hint 56  
What can I do in the chamber behind the waterfall? - Hint 57  
I always get lost on the moors - Hint 58  
Can I do anything in the quarry? - Hint 59  
I don't know what to do when the big wave comes along - Hint 60  
I die when I try to ride the wave - Hint 61  
How do I get hold of the second crystal piece? - Hint 62  
When I get two crystal pieces they stick together - Hint 63  
I die when invisible items go in the river - Hint 64  
I die when I'm wearing or carrying invisible items and I go in the river - Hint 65  
The crown doesn't seem to be worth anything - Hint 66  
I can't get the crown to the area near Fountain Caven - Hint 67  
I die when I hit the stalactites - Hint 68  
What should I do at the stone circle? - Hint 69  
I can't find anything useful in the zebra room - Hint 70  
I keep getting killed by the tiger - Hint 71  
I can't get past the door with the clay rectangle - Hint 72  
When I've got three crystal pieces I can't find any more sleeping orcs - Hint 73  
When I get my sword for the fourth time I hear another loud >>BANG<< - Hint 74  
Even though I think there's something in the cabinet I can't see it - Hint 75  
Even when I use the correct item I still get killed in the chamber full of stalactites - Hint 76  
I don't know what to do with the metal ring - Hint 77

After finding the secret passage near the tiger's lair I still can't get past the tiger - Hint 78  
The gremlins keep stealing my possessions - Hint 79  
I can't get understand the adventurer in the bar - Hint 80  
I don't know how to use the information I get from the adventurer in the bar - Hint 81  
Even when I've got to the secret cave underneath, I still can't find my way through the minotaur's lair - Hint 82  
I get lost on the moor beyond the standing stone - Hint 83  
The tiger follows me into the secret passage and kills me - Hint 84  
I can't get out of the tiger's lair and past the tiger again - Hint 85  
I can't find anything at the barrow - Hint 86  
I can't find my way out of the peaceful area - Hint 87  
I can't get past the door with the angular pattern on it - Hint 88  
I can't get into the crack in the north wall of the long east-west tunnel - Hint 89  
What can I do with the sarcophagus? - Hint 90  
I don't know what to do with the jar - Hint 91  
I keep getting killed by dragons - Hint 92  
What does "WOZX" mean? - Hint 93  
Saying "WOZX" doesn't help me - Hint 94  
I can't get into the Ivory temple - Hint 95  
I get killed by acolytes, guardians and the high priest - Hint 96  
Even when I'm disguised I still get killed by the high priest - Hint 97  
I get killed by the fourth orc - Hint 98  
I can't open the box - Hint 99  
I can't get hold of the fly - Hint 100  
How do I become human again? - Hint 101  
How do I get out of the secret cave underneath the minotaur's lair? - Hint 102  
When I open the trapdoor under the minotaur's lair something heavy kills me - Hint 103  
Even when I've found the minotaur's den I can't move it - Hint 104  
Even with assistance I still get killed by the dragons - Hint 105  
I can't get past the granite slab in the barrow - Hint 106  
I don't know what to use to get past the granite slab in the barrow - Hint 107  
Even when I know the correct implement I still can't get past the granite slab in the barrow - Hint 108  
I can't get away from the minotaur's lair area - Hint 109  
I can't get down to the ledge near the minotaur's lair - Hint 110  
I think I need a rope but I can't find one - Hint 111  
Once I've got a rope I can't get back to the secret cave - Hint 112  
Even when I've got a rope I can't get down from the secret cave - Hint 113  
I can't get along the narrow ledge - Hint 114  
I can't get all the items from the minotaur's lair out with me - Hint 115  
I keep getting killed by lions and leopards - Hint 116  
After finding my way through the dragons I get killed on the way back - Hint 117  
Even after killing one of the dragons I can't get back past the rest of them - Hint 118  
I always run away when I visit Nightmare Cavern - Hint 119  
What does "Riggins" mean? - Hint 120  
I can't get hold of the carpet - Hint 121  
After killing the lions and leopards I can't get away from the Pooh-sticks bridge area again - Hint 122  
I can't get out of the river - Hint 123  
I get killed by the witches - Hint 124  
I can't get past the bear - Hint 125  
I don't know what the password is - Hint 126  
I can't get hold of the topaz bracelet without being blocked in - Hint 127  
I can't get past the boulder - Hint 128  
When I try to get rid of the boulder I break my hand and die - Hint 129  
I die from being too vigorous - Hint 130  
Even when I'm disguised I still get killed by temple guardians - Hint 131  
I can't get a weapon to the Ivory temple - Hint 132  
I get killed by the scorpion men - Hint 133

I can't carry the seal with me on the carpet - Hint 134  
I don't know how to use the thong - Hint 135  
The scorpion men won't let me enter the Way of Darkness - Hint 136  
I can't find my way through the Way of Darkness - Hint 137  
What does "tar" mean? - Hint 138  
What does "APERIR" mean? - Hint 139  
I can't get past the spores under Mount Mashu - Hint 140  
I can't get at the rubies - Hint 141  
I can't get the metal triangle in the pond - Hint 142  
I don't know how to use the sundial - Hint 143  
What does "AVERNUS" mean? - Hint 144  
I can't get past the flashing sword - Hint 145  
I can't get off the top of the rainbow - Hint 146  
What should I do at the end of the rainbow? - Hint 147  
My feet get hot and I die in the Ivory temple - Hint 148  
I can't get into the sanctum sanctorum - Hint 149  
When I'm wearing a red robe I get killed by the high priest - Hint 150  
I don't know how to get across the snake pit - Hint 151  
When I try to cross the snake pit I get bitten - Hint 152  
I can't wash my feet with my boots on - Hint 153  
I don't know how to get out of the shrine of the panel - Hint 154  
I don't know what to do with my treasure - Hint 155  
I'm not allowed to take the wooden panel - Hint 156  
I can't mend the box even when I've got all four panels - Hint 157  
I can't find my way up to the castle - Hint 158  
I keep getting killed by avalanches - Hint 159  
I can't get away from the tree in the ravine - Hint 160  
The tree breaks and drops me in the ravine - Hint 161  
I can't get up the shaft - Hint 162  
What do the levers do? - Hint 163  
I can't get up the stone staircase without being killed - Hint 164  
When I've challenged the wizard I get killed immediately he appears - Hint 165  
When I've challenged the wizard I don't know how to get away - Hint 166  
I can't succeed in closing the stairs while the wizard is following me - Hint 167  
When I get to the top of the stairs I still die shortly after - Hint 168  
I can't get out of the great laboratory - Hint 169  
I don't know which way to go in the library - Hint 170  
I don't know what to do when I get to the library shelves - Hint 171  
What does "nis" mean? - Hint 172  
Even when I've found the fragment of ancient manuscript with "nis" on it I still get killed by Anjith - Hint 173  
What are the uses of the individual objects? - Hint 174  
I can't find all the valuable items - Hint 175

# HI-Q-QUIZ

## ***Professional, Originally Released On Cassette Only***

Game Type : Quiz; Graphical Trivial-Pursuit Style Game  
Author :  
Standalone Release(s) : 1990: HI-Q-QUIZ, Blue Ribbon, £2.99  
Compilation Release(s) : None  
Stated compatibility : Electron Side A/BBC Side B  
Actual compatibility : As stated  
Supplier : BLUE RIBBON, CDS House, Beckett Road, DONCASTER DN2 4AD  
Tel: 01322 21134  
Disc compatibility : CDFS E00, DFS E00

### **Instructions**

*"Take The Challenge! "Test your knowledge and intellect across a broad range of subjects. Stretch your powers of recall and memory. Can you outwit your friends in each of the four levels of difficulty? Can you beat the clock to answer questions? HI-Q-QUIZ requires skill and judgement, and a little luck, to move around the board in your attempt to be first back to the Hi-Q Base. Answer questions on Sport, Entertainment, Geography, History, Art and Science. Tease your brain and enjoy this exciting and stimulating game!"*

There are four types of questions, each type represented by a symbol on the screen:

Red	Science Questions
Blue	Sport Questions
Orange	History and Geography Questions
Grey	Art and Entertainment Questions

Each player has a marker with the player number on it. The marker "blinks" at each player's turn.

The die at the top of the screen will spin and may be stopped by pressing <SPACE> or FIRE. The marker may then be moved a corresponding number of spaces along the board in any direction using the JOYSTICK or KEYBOARD as above. A question of the category occupying the final position of the marker will be displayed. The player must answer the question out loud to the other players, then press <SPACE> or FIRE to display the correct answer. The computer will then ask if the player was correct or not. Use the JOYSTICK or KEYBOARD as above to select the response and then press <SPACE> or FIRE to confirm.

If the Timer option was set, then a bar of decreasing length is displayed to indicate the time remaining. If time runs out, the question is deemed to have been answered wrongly and play passes to the next player.

To Win a player must correctly answer the required number of questions for each category and then must land back on the centre position in order to answer a final, random question. If this question is wrongly answered then the player's marker is put back onto the board and he must try again.

### **Notes**

No marker may jump over or finish a move on the same position as another marker. If this is attempted then the rest of the available moves are forfeit.

Once movement has begun, the direction of movement cannot be changed for that turn.

The Yellow Symbol on the board is a re-throw square which may only be used once in any turn.

### **Options**

Select number of players using keys 2-4.

Select level of play using keys 1-4.

The level chosen is the number of correct answers required to complete each category.

Select timer ON - Y/N

Select time limit using keys 1-9.

### **Game Controls**

Use CURSOR KEYS and <SPACE> to FIRE.

**Instructions' Source** : HI-Q-QUIZ (Blue Ribbon) Back And Inner Inlay

### **Review (Electron User) - "Trivial Touch"**

Every once in a while a software house produces something that is so out-dated and run-of-the-mill that you wonder why it even bothered. Blue Ribbon has done this with its latest release, HI-Q-QUIZ.

Basically a budget version of Trivial Pursuit, the board consists of a wheel with four spokes, around which each of the two to four players move. Each segment on the wheel and spokes bears a symbol which indicates the type of question that you have to answer when you land on it - sport, sciences, history/art and natural history.

The questions vary in difficulty from easy: What is the name given to a baby cat? To relatively hard: Where were the 1932 Olympics held?

The questions are randomly selected from data files which don't seem large enough to prevent repetition - the same questions keep turning up and the one about the venue of the 1960 Olympics has been asked in every game I've played.

There are four levels of play, the higher you select, the more questions you need to answer to win. Success goes to whoever answers the required number of questions in each category and then returns to the centre and gives the correct answer to a final randomly selected question.

You stop the roll of dice on screen by hitting the spacebar then use the cursor keys to move your marker. You can set a device to limit the time in which the questions have to be answered and there are segments which allow you to roll again if you land on them.

There are a few differences between HI-Q-QUIZ and Trivial Pursuit, but not many. For instance, you can't pass over a segment occupied by another player's marker and you can't pass through into the centre unless you roll the exact number needed. Even then you can go there only if you have answered enough questions to qualify for the final one.

The graphics are a bit squashed to make room for as many segments as possible, and as such the game looks cluttered. Sound is minimal - the rolling dice give a random toned chattering and you get one of two different noises depending on whether or not you answer a question correctly.

There is also a little jingle at the end when the game declares the winner - and that's just about it.

To sum up, the game is fairly cheap, the whole thing takes just a few minutes to load in by tape and occasionally comes out with some tough questions. It is simple to play and contains elements that would make it a fairly nice piece of educational software for the young.

However, it fails badly as a quiz for those with a reasonably high IQ and would only just make a passable magazine listing game. There isn't even a facility for entering the player's names. I can think of much better ways of spending three quid.

Desmond

**\*\*\* Second Opinion \*\*\* (Electron User)**

I was initially confused by this trivia quiz as the correct answer is always displayed on the screen following the question. The idea is that you ask your opponents the question and press Y or N depending on whether he or she answers correctly.

Once I'd got the hang of it, I quite enjoyed it. Not as much fun as the board game but still quite good family entertainment.

# HIDE AND SEEK

*Professional, Originally Released On Cassette Only*

Game Type : Educational; Ages 5-12  
Author : Gloria Callaway  
Standalone Release(s) : 1984: HIDE AND SEEK, Acornsoft/ASK, £9.95  
Compilation Release(s) : 1985: BEST FOUR - LANGUAGE, ASK, £9.95  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : A.S.K., London House, 68 Upper Richmond Road, LONDON SW15  
Disc compatibility : Unknown

## Instructions

HIDE AND SEEK is a lively, colourful set of games designed to encourage and develop skills important for learning to read. Objects are put into boxes and hidden by shutters. The player then has to remember where the objects were hidden! Sounds easy? With just six very different objects young children will succeed quickly, but try it when you have to remember the whereabouts of nine different the whereabouts of nine different flowers. Even adults find the more difficult memory games challenging!

The last two games help improve reading and spelling, as well as memory. Dozens of pictures are used and the player has to remember which one is missing from the set that was shown and either "read it" or "spell the name".

## In all A.S.K. programs

<RETURN> Remember: once you have typed in your response a program will  
< icon > deal with it until you press the <RETURN> key.

<ESCAPE> You can always return to the beginning of a program by pressing  
< icon > the <ESCAPE> key.

<DELETE> You can rub out anything typed in, before the <RETURN> key is  
< icon > pressed, by using the <DELETE> key.

<\_Hand\_> Means : Please press the space bar to carry on with the program  
< icon >

< ? > Means : the program did not expect the response it has just re-  
< face > ceived. Perhaps there was a typing error? In any case, to carry  
on, just press the space bar and try again.

<CTRL> All of our programs incorporate sound. There are various volume  
levels - holding down the <CTRL> key and pressing the <S> will  
<S> change the level - keep pressing the keys until you are happy  
with the volume.

Note: The program will not run on computers that have 0.1 operating systems.

## Introduction

The games in HIDE AND SEEK are variations on Pelmanism and the age old "Kim's Game". They are designed to develop short term memory and other skills important for learning to read.

In "Hide It" and "Seek It", objects are put into boxes, which then close, and you have to remember where the different objects are hidden. There are lots of different objects, making it enjoyable for children of all ages.

In "What's missing?", the objects are again put into the boxes, but this time the boxes open and one object is found to be missing. You have to identify which one, and type in or read its name. To help you, a dictionary is provided later in the booklet.

Pairs or small groups can play, taking turns at guessing and using the keyboard. A reader can help a non-reader to use the dictionary. Parents will often find that their children are better at the games than they are!

### **How To Use It**

HIDE AND SEEK starts by displaying a menu. Decide which game you want to play, press A, B or C and then the <RETURN> key. Bear in mind while choosing that "Find It" is a little easier than "Seek It" because it only has six boxes. "What's missing?" involves reading and spelling as well.

### **Find It**

Six pictures appear one by one in the box at the bottom left hand corner of the screen and are transferred to the block of six boxes. Watch carefully: you have to remember which picture goes in which box.

When all of the boxes are full, their shutters close. Once you have pressed the space bar one of the pictures is then shown in the bottom box, and you have to decide in which of the six boxes it is hidden. Having decided, you can look in that box to see if you are right. Press the space bar to move the cursor (the little blue square) to the chosen box and then the <RETURN> key to open it.

If you're right, the box will stay open and you'll get another object to find. If not, you get another turn at locating the same picture and if you get it wrong again, the correct box is opened for you. When all the boxes are open, those whose contents you remembered correctly are flashed. Count them to see how well you did. After that, press the <SPACE BAR> for another game.

### **Seek It**

In "Seek It" you must now choose one of four different games to play. As for "Find It", you have to remember which picture went into which box, but now there are nine boxes. Type in A, B, C or D for the game you want and then press the <RETURN> key.

Games A and B: Each picture appears in the bottom box one at a time as before. This time, you can choose which box to put it in by using the <SPACE BAR> and pressing the <RETURN> key. Once all the boxes are full, the shutters descend, and the play is the same as for "Find It". When all the shutters are open, press the <SPACE BAR> and you will be shown which pictures you found. Press the <SPACE BAR> again, and you will be shown the time you took on a scorecard.

Game C: Now the pictures are put into the boxes for you. When all the boxes are full, they remain open until you press the <SPACE BAR>. Now the game continues as for A and B.

Game D: This is the hardest of the four games; the shutters close immediately after each box is filled. When all the boxes are full, press the <SPACE BAR> to continue.

The cursor jumps from box to box, eventually settling on one of them. You now have to remember what is in it. The <SPACE BAR> now causes the pictures to appear one by one in the bottom box. When you see the picture that you think is in the chosen box, press the <RETURN> key and it will open. If you were correct, your success will be remembered, the shutter will close again and the cursor will go to another box. The game ends when all the pictures have been found. You are then shown a scorecard as before.

### **What's missing?**

Decide whether you want to try reading or spelling, press A or B, and then the <RETURN> key.

**Read It:** In this game, as the objects appear in the boxes their names appear at the bottom of the screen. Read the names and remember which boxes the objects went into, then when you are ready, press the <SPACE BAR> to continue. When all of the boxes are full, each one then flashes, its name appears and the shutter closes. All the shutters then open again to show that one of the objects is missing. You are asked "What's missing?" and an objects is suggested, e.g. "The elephant?". Pressing the <SPACE BAR> will reveal the other choices. When you think you have found the right one, press the <RETURN> key. If you are right, the missing objects will appear. You get three tries and then the object will be shown to you.

**Spell the Name:** This time you are sked to put the objects into the boxes yourself. Use the <SPACE BAR> to choose a box and press <RETURN> to move the object into it (remembering where it is). When all the boxes are full, the boxes flash and the shutters close. The game continues in a similar fashion to "Read It" except that now when the shutters open, revealing one object missing, you have to type in the object's name. If you spell the name incorrectly or type in a word that is not in the dictionary, the <?> symbol appears.

## Dictionary

SHAPES	CREATURES	PEOPLE	VEHICLES	BUILDINGS	PLANTS
circle	cat	baby	bicycle	castle	fir tree
diamond	elephant	boy	bus	church	geranium
heart	fish	clown	car	house	oak tree
rectangle	owl	girl	caravan	hut	rose
square	parrot	man	lorry	school	tulip
triangle	pig	woman	pram	windmill	violet

## Educational notes

This game is a variation on many old favourites such as pelmanism, Happy Families and Snap, which help children distinguish between visual symbols, either pictorial or graphic. Hide & Seek has a place in school and in the home, alongside these other activities, and can be used at several different levels. For very young children it may be necessary for the parent or teacher to play the game a few times in order to decide which is the best level to start on.

Memory is an area of learning which is still under investigation. Children devise their own strategies for memorising the places of the objects on the screen, and may be able to explain them. Two or three children, or a parent or child, can co-operate in using the program, and this is probably the best way. Children exchange idea and maybe take turns guessing the boxes, or choosing places, possibly explaining to companions why they are choosing a particular position.

In the last game, where the children have to read and respond with the names of objects typed on the keyboard, the dictionary will be useful both to look up and to help correct spellings. (The computer will not 'accept' mis-spellings, so there is an incentive to get it right.)

Many of the objects pictured are shown on the screen in sets: buildings, plants, people, vehicles, etc. When the children are choosing boxes for pictures, "setting" helps the memory in most cases. ("All the PEOPLE were on the top line, so it must be one of these boxes...") Questioning by the parent or teacher may encourage such categorising. This can be extended by activities involving grouping sets of toy cars, animals etc., and using plastic hoops allows the introduction of the concept of Venn diagrams (though one probably wouldn't use the name at this stage).

The game has been tried with a three year old playing with a parent, with a group of very slow learning seven year olds, and with confident adults among others. In each case, providing the level chosen was appropriate, there was a lot of debate, discussion and co-operation in joint attempts to open the boxes.

# HISTORY QUIZ

***Professional, Originally Released On Cassette Only***

Game Type : Quiz  
Author : John Julius Norwich  
Standalone Release(s) : 1983: HISTORY QUIZ, Acornsoft/Ivan Berg, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : IVAN BERG, Dunluce House, 4-8 Canfield Gardens, LONDON  
NW6 3QT  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"How does your knowledge of History rate against a Grandmaster of the genre? This rewarding and compelling program for your BBC model B or Acorn Electron computer has been specially adapted from the Weidenfield Quiz book and will provide hours of edification and amusement for family and friends.*

*"Do you know what was extraordinary about the execution of Anne Boleyn? Or whose horse was awarded campaign medals by special command of Queen Victoria? If you can answer these questions, you are likely to do pretty well with the other 298 included in this quiz. It covers all aspects of British history, from Julius Caesar to Margaret Thatcher: kings and queens, riots and rebellions, mysteries and murders.*

*"History is one of a series of six Grandmaster Quizzes, in which you can pit your knowledge against a grandmaster of the subject. The writer's specialised skill and expert knowledge makes the quiz both challenging and exciting. Each program has thirty sections of ten questions - a massive 300 questions in all - and you can take the quiz alone, in competition with a friend, or in teams. You can choose a timed option too - and if you're getting too many of the answers right, your computer can reduce the time you have to answer!*

*"This pack contains one program cassette, one quiz data cassette and an instruction booklet.*

*"John Julius Norwich is well-known as a historian and author of several books, including a two-volume history of Venice. He regularly appears on television and radio in such old-established favourites as "Face the Music" and "Round Europe Quiz"."*

*"How," asked the authors of '1066 And All That' in one of their Test Papers, "can you be so numb and vague about Arabella Stuart?" The question was unanswerable, the premise all too true. Nor, for most of us, are such feelings confined to the unfortunate Lady Arabella.*

*Yet the history of these islands is meekly illumined, time and time again, by little pools of light - generated by people or events that have for one reason or another become unforgettable and, while remaining firmly implanted in fact, have contrived also to pass into legend. It is with these pools, above all, that the following three hundred questions are concerned - not with the day-to-day fabric of history but with its occasional explosions: of greatness and glory, disgrace or disaster, comedy or crime.*

*This is not, therefore, to be taken too seriously. It's a quiz, remember, not an examination; its purpose is not to instruct, merely to amuse. Of course, you may pick up a few stray (and most certainly useless) pieces of knowledge along the way, but they will be incidental. And I can promise you one thing: about Lady Arabella Stuart, you will remain every bit as numb and vague as you were before.*

## Beginning A Quiz

When the program is loaded, there is a short bleep and the program title appears. Press the SPACE bar as requested and you will be asked:

Do you want to do the quiz:

1. On your own
2. As two competing individuals
3. As two competing teams

Enter choice : ?

Answer the questions as prompted by typing in your response. Press <RETURN> when you have completed each entry.

The main menu will now appear and the thirty quiz titles are displayed on two screens. To move from one screen to another, type 0 and press <RETURN>. Select the quiz you require, type its number and press <RETURN> then remove the program cassette from the deck and insert the data cassette when prompted. Make sure that the correct side of the cassette is uppermost: quizzes 1-16 are recorded on side 1 and 17-30 on side 2. Press SPACE BAR as requested. When your quiz has finished loading, there is a short bleep. You are now ready to begin the quiz.

## How To Answer The Quizzes

Most of the quizzes start with a section introduction written by the author. To move on to the second paragraph, or to see the first question press <SPACE>.

If you request a time limit, a clock counts down in seconds in the top right-hand corner of your screen. If you do not enter an answer before it reaches zero, you receive no marks: if two teams are playing, the question is offered to the opposition. However, you are allowed to complete an answer which you started to enter within the allotted time.

To pass a question, press <RETURN>. A passed question will be offered to the opposition, if you are playing in teams.

Some questions may require you to refer back to the section introduction. Do this before you enter your answer by pressing the <ESCAPE> key. Pressing the <SPACE> bar will return you to the Quiz menu and your answers so far will be lost.

Some questions require several separate answers. When a) appears on screen, you enter your first answer, when b) appears, you enter your second answer, etc.

When you have given the answer and pressed <RETURN>, the author's answer is displayed. Compare the answers and decide how many points you should have. You can enter 0 if you are completely wrong, 1 if you are halfway there, and a maximum 2 points for a completely correct answer. Type in your score as requested. When you press <RETURN> the next question appears.

At the end of the quiz, the final scores and the total time taken to answer the questions is given. In the case of a draw, the contestant with the shortest time will win.

If you decide to try another quiz you will be returned to the Main Menu. You can run the same quiz again simply by re-selecting its number: it is still in the computer's memory. If you do not wish to try another quiz, the program will end.

# HOBGOBLIN

***Professional, Originally Released On Cassette Only***

Game Type : Arcade Platform Game With "Cartoony" Characters  
Author :  
Standalone Release(s) : 1990: HOBGOBLIN, Atlantis, £2.99  
Compilation Release(s) : None  
Stated compatibility : BBC Side A, Electron Side B  
Actual compatibility : As stated  
Supplier : ATLANTIS, 28 Station Road, LONDON SE25 5AG  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Ghosts and Hobgoblins that can kill with a touch, skeletal reincarnations of long dead creatures armed with knives and axes, phantom bowmen with endless supplies of arrows. All these and more must be overcome if you are to recover the Golden Orb of Altoris. 60 screens of all action arcade/adventure."*

## The Story

In the far off land of Altoris, surrounded on all sides by dense woods and foul smelling swamps, there lived a peace-loving people ruled by the good and gracious King Garath. Under constant attack from the Hobgoblins and Ghosts of the Swamp Land, it was only the power of the Golden Orb that kept the people safe. Now the Golden Orb has been stolen and darkness has descended over Altoris. The King summoned his only son, Zanak.

"Go forth my son and recover the Golden Orb that has kept us safe all these years" whispered the King. "Arm yourself well, for your journey will be fraught with danger. You will need all of your skill and cunning if you are to recover the Golden Orb and keep our people safe for evermore."

## Hints

To increase the POWER of your weapon, collect a glowing dagger or five glowing treasures (jewels, coins or treasure chests). To increase the RANGE of your weapon, collect a GLOWING ARROW. An EXTRA LIFE is granted for collecting three GLOWING SKULLS.

## Game Controls

Z - Left, X - Right, <SHIFT> - Jump, <SPACE> - Fire  
P - Pause On/Off, Q - Quiet, S - Sound

**Instructions' Source** : HOBGOBLIN (Atlantis) Inner Inlay

## Review (Electron User) - "Ghosts And Goblins"

Arcade adventures are becoming increasingly popular on the Electron, and this budget priced offering from Atlantis will keep enthusiasts of the genre amused for many an hour as they try to solve its many mysteries.

HOBGOBLIN is set in the far off fantasy world of Altoris. This land that time forgot is surrounded on all sides by dense woods and foul smelling swamps. In it lived a peaceful race of people who were ruled by the good and kindly King Garath.

It was however, under constant attack by the vicious, devilish hobgoblins and ghosts from the Swamp Land kingdom, but fortunately, the power of the Golden Orb kept the people safe with its protective aura.

Catastrophe strikes - the Golden Orb is stolen, and with it, goes its protective power. Doom and gloom descend on the land of Altoris. King Garath summons his son, Zanak, a great warrior, and instructs him to go forth and recover the missing Golden Orb in order to restore peace and tranquillity to the land of Altoris.

You take on the role of Zanak and your quest is to recover the Golden Orb. You travel far and wide in this arcade adventure and you battle with many demons. Ghosts and hobgoblins can kill simply by touching you, and skeletons of long dead creatures are reincarnated to battle with you. And phantom bowmen armed with countless arrows take put shots at you.

The controls are walk left or right, jump and fire. Your firepower can be increased by collecting a glowing dagger or five treasures such as jewels, coins or treasure chests. Your weapon's range is increased by collecting a glowing arrow and an extra life is awarded for collecting three glowing skulls.

HOBGOBLIN isn't up to CITADEL standard, but it is an exciting fantasy trip into the world of the arcade adventure which will keep you glued to your TV screen for many hours.

Julie Boswell

### **\*\*\* Second Opinion \*\*\* (Electron User)**

HOBGOBLIN is firmly set in the arcade adventure tradition and if you've seen - and enjoyed - the likes of CITADEL and PALACE OF MAGIC, then you'll love this offering from Atlantis.

The dozens of screens to map and explore, objects to collect and nasties to zap make this a game that you won't complete quickly. At £2.99 it represents excellent value for money.

If you enjoyed HOBGOBLIN, this game is a must!"*

## The Game

The Land of Altoris is once again under attack from the vicious Hobgoblins and their creations that roam the dense woods and foul smelling swamps that surround you. Since Zanok recovered the Golden Orb fifty years ago, the people of Altoris have lived in relative peace but now that peace is shattered. The Golden Orb is no longer powerful enough to protect against the ravages of the deadly creations brought to life by the evil Lord of the Hobgoblins.

As the son of Zanok and heir to the throne of Altoris you, Toraz, must go forth and do battle with the Lord of the Hobgoblins and his deadly protectors.

Over the years many weapons have been secreted in the woods, for it was written that this day would come. Use them wisely. As the son of Zanok, your courage is not in doubt but all of your skill and cunning will be needed if you are to succeed against this most terrifying foe.

Good Luck!

## Game Controls

# HOLED OUT!!!

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Graphical Golf Game  
Author : Gordon J. Key  
Standalone Release(s) : 1990: HOLED OUT!!!, 4th Dimension, £12.95  
Compilation Release(s) : None  
Stated compatibility : BBC Side A, Electron Side B  
Actual compatibility : As stated  
Supplier : THE 4TH DIMENSION, PO Box 444, SHEFFIELD. Tel: 01742 700661  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*Whether you're young or old, male or female, beginner or professional, HOLED OUT has been designed especially for you. You can play alone or use the varying skill levels to allow up to four players of differing abilities to be more equally matched against each other. The game controls have been carefully selected for simplicity so that even the youngest or inexperienced computer user can play HOLED OUT.*

*Included with the game is a well thought-out instruction manual giving all the information you will require and individual maps of all the 36 holes.*

- 1. TWO CONTRASTING 18 HOLE COURSES** - Once you've mastered the easier first course, you should be ready for the greater challenge ahead.
- 2. FOUR SKILL LEVELS FOR BEGINNER TO PROFESSIONAL** - Learn to play without worrying about the wind, bunkers or rough.
- 3. ONE TO FOUR PLAYERS** - Play alone or with friends. Each player can choose a skill level to suit their ability and thus make the match even more even.
- 4. HIGH RESOLUTION THREE DIMENSIONAL GRAPHICS** - A full three-dimensional view is given for each shot. Watch your player hit the ball into the distance. The shadow of the ball along the ground accurately shows you its progress.
- 5. EXCELLENT SOUND EFFECTS** - Several effects have been added to give extra atmosphere to the game. Hear the ball rattle in as you Hole Out. (An Eagle 'seems' to sound a lot better than a Bogie.)
- 6. FULL INSTRUCTION MANUAL** - This features easy to follow guidelines, general rules of golf and detailed scale maps of all 36 holes.
- 7. REFERENCE CHART** - Gives summarised details of the maximum possible distances obtainable from each club. Also included are tips on how to deal with course hazards.
- 8. REALISTIC BALL FLIGHT PATHS** - A great deal of attention has been paid to making the ball behave how it should in the real world.
- 9. VARIABLE WIND ON EACH HOLE** - Wind varies significantly and can be blowing from any direction. Every round you play will be unique.
- 10. SLICE AND HOOK CAPABILITIES** - You can use slice or hook to swerve your ball around the various hazards that you will be encounter.
- 11. FULL SET OF CLUBS** - You carry 14 clubs. Woods 1, 3 and 5; Irons 1 to 9; Wedge and Putter.

12. **ACCURATELY DEFINED CLUB PERFORMANCES** - Each club's performance has been accurately simulated. You must consider your lie, the distance required, the wind conditions, the height required and the degree to which the ball will bounce and run along the ground.
13. **BUNKERS, TREES, WATER AND VARIABLE ROUGH** - These are best avoided as the consequences of an encounter have been 'lovingly' recreated.
14. **AUTHENTIC GREENS** - Hazards, such as 'protecting' bunkers, will require you to plan your approach to each green carefully. Once made, the greens can be sloped in any direction and the gradients vary greatly. Putting is an art that will need mastering in its own right.
15. **CONSTANTLY UPDATED FULL SCOREBOARD** - You can check your progress with a full record of all the players' performances on each hole.
16. **MATCHPLAY OR STROKEPLAY OPTIONS** - Play to win the most holes or try to get the lowest overall number of shots.
17. **DESIGNED BY A TEAM OF GOLF ENTHUSIASTS FOR MAXIMUM REALISM** - as if you haven't guessed.
18. **ALL VERSIONS PROGRAMMED BY THE HIGHLY ACCLAIMED PROGRAMMER GORDON KEY.**

### **Strokeplay**

The objective of strokeplay is to complete all 18 holes of a course in as few shots as possible. In Holed Out there can be 1 - 4 players and the player who has played the least number of strokes at the end of the round will be the winner. Each hole has a par (the estimated standard score) and the scoreboard will tell you if you are above, below or equal to par.

### **Matchplay**

Matchplay differs from strokeplay in that the objective of a round is to win the most holes. Matchplay in Holed Out is a game for 2 players and the player who has the least number of strokes on a particular hole is deemed to be the winner of that hole. Where both players hole out in the same number of strokes on a hole it is "halved" and the score remains unchanged.

### **Skill Levels**

There are 4 skill levels in Holed Out. Each player can use a different skill level and the effects of each are as follows:

#### **1. Beginner (B)**

- There will be no wind
- Shots played out of the rough or bunkers will be unaffected (i.e. as if they were played on the fairway)

#### **2. Enthusiast (E)**

- There will be no wind
- Balls landing in the rough or in bunkers will always be given a "GOOD LIE"

#### **3. Amateur (A)**

- Balls landing in the rough or in bunkers will always be given a "GOOD LIE"

#### **4. Professional (P)**

- All hazards will affect the professional as described in the playing guidelines.

### **Game Controls**

After a hole has loaded a view of a current shot will be displayed. The information about the hole and the player who is to play is shown on the status panel on the right. The procedure for playing a shot is as follows:

#### **1. Select Club**

Use the Z and X keys to change the currently selected club and then press RETURN when you have decided. (See the reference card for details of maximum distances attainable from each club). If you wish to change your selection you can do so by pressing ESCAPE. You will then be asked to select another club.

## **2. Direction**

A cursor will appear on the screen. This indicates the direction in which the ball will be aimed. Move the cursor with the Z and X keys. Pressing the RETURN key will start the shot so please read the section on power below before you press it.

## **3. Power**

As soon as the direction has been selected by pressing RETURN the bar indicator at the bottom of the screen will start to move from left to the right. Pressing RETURN again will select the power of the shot. The bar indicator will stop moving and the percentage of power obtained will be shown. The shot will then be played.

If the bar indicator reaches maximum without RETURN being pressed it will then start to go down again. It will go right down to 19% unless RETURN is pressed before this is reached.

## **Hook and Slice**

When the bar indicator starts moving you have the option of searching a hooked or a sliced shot (see playing guidelines). Pressing Z instead of RETURN will result in a hooked shot and pressing X instead of RETURN will result in a sliced shot (this will be reversed if you playing left handed).

## **Quitting A Round**

If you wish to end a game without completing it you can do so at the end of a hole. Press CONTROL and Q whilst the scoreboard is displayed.

## **Scoreboard**

The scoreboard will appear on completion of every hole. For strokeplay the scoreboard displays each player's name, his skill level in brackets, his total number of shots and his score related to par. Below this for each player is a breakdown of his performance on each hole. In matchplay the score related to par is replaced by the number of holes that one player is winning by.

## **Club Performances**

There are 14 clubs available in Holed Out. Each club has differing abilities to help you hit the ball the correct distance and also obtain different heights in order to deal with course obstacles. The club performances described below and the figures given on the reference card refer to shots played on the tee or on the fairway. These performances will vary significantly when playing from the rough or bunkers - see later sections in this manual for details on the effects of these hazards.

## **Woods:**

Woods can hit the ball the farthest. Because of the angle that the ball will be hit a relatively large proportion of the overall distance travelled will be along the ground (see the reference card for exact figures).

**Example 1** - A ball hit with a 1 Wood at full power will travel approx. 260 yards altogether. About 170 yards of this will be in the air and about 90 yards will be along the ground.

**Example 2** - A ball hit with a 1 Wood at 50% power will travel approx. 130 yards altogether. About 85 yards of this will be in the air and about 45 yards will be along the ground.

Woods are excellent for long shots along a clear fairway and at full power can hit a ball high enough to clear the trees.

## **Irons:**

There are 10 Irons ranging for the lowest - the 1 Iron - to the highest - the Wedge. Low Irons are more powerful than high Irons in that they can hit the ball further.

As with the Woods, low Iron shots will travel a relatively large proportion of the overall distance along the ground. With higher Irons more of the overall distance travelled will be in the air rather than along the ground.

A Wedge is the highest club and hits the ball right up in the air so that when it lands, it doesn't go very far along the ground. Virtually all the distance travelled will be in the air rather than along the ground.

**Example 1** - A ball hit with a 9 Iron at full power will travel approx. 100 yards. About 85 yards will be in the air and about 15 yards will be along the ground.

**Example 2** - A ball hit with a 2 Iron at 50% power will travel approx. 100 yards. About 75 yards will be in the air and about 25 yards will be along the ground.

#### **Putter:**

##### **On The Fairway**

The putter is really designed for use on the green. It is quite rare to use a putter on the fairway as the results are rather unpredictable due to the fact that the ball is travelling along the ground. Undulations or bumps on the ground, tufts of grass and other imperfections in the surface of the fairway can quickly slow down the shot. Usually the best use for a putter on the fairway is to hit a ball underneath a tree's branches if you are too close to hit the ball over it. If you are lucky you can get a shot of more than 100 yards and sometimes a lot further.

##### **On The Green**

Please read the section on greens later in the manual.

#### **Wind**

Wind can be blowing from any direction and the strength of the wind can vary greatly. The effects of the wind are as you would expect. A headwind will reduce the length of your shot. A tail wind will increase it. Wind from left to right will push your ball over to the right, etc, etc.

More often than not the wind will be blowing from an angle and will affect both the length and the direction of your shot. Judging the effects of the wind is a skill that requires practice and experience. The wind indicator on the control panel shows the direction of the wind and the length of the line indicates the strength of the wind (the longer the line, the stronger the wind).

E.g : No line, no wind

Long line, twelve o' clock, strong backwind

Small line, six o' clock, slight headwind

Long line, ten o' clock, strong backwind blowing right to left

#### **Hooking And Slicing The Ball**

Hook and slice are created by causing the ball to spin when you hit it. When a right-handed player slices a ball it will curve away to the right. When he hooks the ball, it will curve away to the left. The opposite effects for a left-handed player. Hook and slice are commonly used ways of avoiding hazards as they can be used to swerve shots around them - particularly trees. Practice the use of hook and slice on open fairways before trying to use them seriously as you could end up in rather a predicament if you have not mastered them.

#### **Bunkers**

Bunkers are basically large hollows in the ground filled with sand. When a ball enters a bunker, it will slow down and probably stay in the bunker but if not there are two possible outcomes:

**'PLUGGED'** - This means that the ball has sunk into the sand. Plugged balls are quite difficult to hit well and you must choose your club carefully to avoid a disastrous

next shot. Generally the best clubs to use are the highest Irons - 9 Iron or Wedge. Even with these clubs, you will be lucky to hit the ball more than 65 yards.

**'GOOD LIE'** - This means that the ball is sitting on the sand. Some clubs will still be useless but you have a fair chance of hitting the ball over 100 yards if you use the right club. A 7 Iron is about the best but clubs slightly higher or lower than this will still give a reasonable shot. Your choice depends on the amount of height and run on you require.

As you can no doubt see the best advice is to avoid bunkers.

### **Rough**

Rough is an area of uncut grass which surrounds most fairways. Obviously uncut grass will make shots harder to play as you cannot get such a clear swing at the ball. When a ball hits rough grass, it immediately gets slowed down. It may carry on for a short while before gradually coming to rest. The position it finally stops in can vary and it may end up in a very unfavourable position. There are two possible outcomes in Holed Out:

**'BAD LIE'** - This means that the ball has settled amongst long grass and is hard to hit cleanly. It will be necessary to use very high Irons to obtain a reasonable amount of distance from your shot. Generally, you will not be able to hit the ball further than about 50 or 60 yards.

**'GOOD LIE'** - If you are lucky you will get a good lie. The lie of your ball will still be worse than on the fairway but will be more accessible than a bad lie. This will give you the chance to hit the ball with a more powerful club. A 7 or 8 Iron will probably hit it the farthest. However, if you are amongst tress, a lower Iron may stop the ball flying straight up in the air and hitting the branches.

### **Trees**

Trees are major hazards due to their size. You can go over, under or around trees but it is important to know the capabilities of the club you are using in order to avoid a collision. If you are very close to a tree it is probably best to hit the ball under it. To keep the ball down, you can do a gentle shot with a low Iron (or even a Wood provided you are not in the rough) but to avoid any danger you may well be best to use your putter to reach safety (but not if you are in a bad lie or in the rough).

If you are close but think there is a chance of clearing the trees then a very high Iron will give you the best chance of gaining enough height to do so. Do remember that trees' branches extend out from the back as well so you need to be able to clear it fully to avoid problems.

If you are quite a distance from the trees and on the fairway you can use a Wood or low Iron at full power. This may give you enough height to clear them and provided you have judged it correctly will save you wasting shots going around them.

When judging how to deal with trees it is necessary to remember that the overall distance that the ball travels is not all in the air. The ball is at maximum height for only a short part of its flight and if it starts to come down and hits a branch it will lose its power and fall to the ground.

### **Water**

Water is one of the worst hazards on any golf course because if your ball goes in it, you lose it. Fortunately, balls are free in Holed Out but you are penalised should you go into the water. You lose a stroke and are returned to the position from where you hit the ball into the water. The stroke you played into the water is also counted so you lose two strokes in total.

The Golden Rule - don't go into water.

### **Paths**

Paths can often be a help to golfers as your ball will get a firm bounce and thus go further than if it landed on grass. This effect may not always be beneficial if you are trying to play a very accurate shot. However on some holes you may find them helpful and a ball played along a path can go a very long way indeed.

### **Awkward Lie**

From time to time you will see the message 'AWKWARD LIE'. This means that you have been unlucky and your ball has landed in an awkward spot between rough and fairway, path and fairway or a position similar to this. The effect of this will be that you will not be able to get a very clear swing at the ball and it will not go quite as far.

### **Greens**

Once you are on the green, you are only allowed to use a putter. The distance given (i.e. the range) is now in feet. The maximum distance that can be obtained on a flat green is shown on the reference card. A ball hit at 50% of maximum on-green putting power will travel only 50% of the maximum distance etc. Unfortunately most greens are not flat and this makes putting a skill that will need to be acquired by a lot of practice.

The slope indicator on the control panel shows the direction of the slope and the length of the line indicates the steepness of the slope (the longer the line, the steeper the slope). Please note that the effects are obviously different to the wind indicator.

### **Order Of Play**

If there is more than one player in a game, the computer will automatically determine who is to play the next shot. At the start of the game, the players play their first shots in the order in which they typed in their names. After this, the player who is the farthest from the hole always plays next. After the first hole, the players play in the order of completion of the last hole. The player who played the least number of strokes plays first, etc, etc.

### **Golfing Terms**

During the game you may encounter some of the following words. Here is a description of what they mean:

'BOGIE'	-	a score of 1 over par
'BIRDIE'	-	a score of 1 under par
'EAGLE'	-	a score of 2 under par
'ALBATROSS'	-	a score of 3 under par

### **Cone Links [The maps cannot be reproduced here]**

1.	399 Yards	PAR 4	10.	455 Yards	PAR 5
2.	269 Yards	PAR 4	11.	284 Yards	PAR 4
3.	190 Yards	PAR 3	12.	272 Yards	PAR 4
4.	500 Yards	PAR 5	13.	478 Yards	PAR 5
5.	327 Yards	PAR 4	14.	142 Yards	PAR 3
6.	394 Yards	PAR 5	15.	332 Yards	PAR 4
7.	390 Yards	PAR 4	16.	378 Yards	PAR 4
8.	118 Yards	PAR 3	17.	498 Yards	PAR 5
9.	410 Yards	PAR 4	18.	258 Yards	PAR 4

### **Pine Links**

1.	481 Yards	PAR 4	10.	128 Yards	PAR 3
2.	409 Yards	PAR 5	11.	352 Yards	PAR 4
3.	101 Yards	PAR 3	12.	501 Yards	PAR 5
4.	456 Yards	PAR 5	13.	231 Yards	PAR 4
5.	239 Yards	PAR 4	14.	349 Yards	PAR 4
6.	366 Yards	PAR 4	15.	272 Yards	PAR 4
7.	330 Yards	PAR 4	16.	468 Yards	PAR 5
8.	430 Yards	PAR 5	17.	227 Yards	PAR 3

9. 299 Yards PAR 4

18. 468 Yards PAR 5

## Quick Reference Guide

Approximate Maximum Club Performances From Fairway (in yards)

Club	Max. Total Distance	In Air	Along Ground
1 Wood	260	170	90
3 Wood	240	165	75
5 Wood	225	160	65
1 iron	215	155	60
2 Iron	205	150	55
3 Iron	195	145	50
4 Iron	185	140	45
5 Iron	170	135	35
6 Iron	160	130	30
7 Iron	145	115	30
8 Iron	130	105	25
9 Iron	100	85	15
Wedge	80	70	10
Putter (on fairway)	Unpredictable	-	-
Putter (on green)	140 feet	-	140

## HOLED OUT Tips

### BUNKERS

**Plugged** - Best clubs to use are the high Irons (9 iron or Wedge). About 65 yards can be obtained.

**Good Lie** - For maximum distance, try a 7 Iron (over 100 yards can sometimes be obtained).

### ROUGH

**Bad Lie** - Use high Irons. Probably a Wedge will obtain the best result (about 60 yards).

**Good Lie** - A 7 or 8 Iron will usually hit it the farthest (90-100 yards).

If you are amongst trees, a lower Iron will give you less height to stay under the branches.

### AWKWARD LIE

An awkward lie will generally reduce the effectiveness of your shot. Try hitting the ball harder than normal or use a more powerful club to compensate.

### PUTTING (on green)

If you hit the ball too hard, it will bounce off the side of the hole. The ball should drop provided that it is not hit more than 14% too hard. For example - if you are 3 feet from the hole on a flat green, you need about 3% power to reach the hole. You can hit the ball up to 17% of maximum power and it should still drop (as long as you are on target of course).

## Review (Electron User) - "Fairway To Spend Your Time"

The Fourth Dimension is on to a winner here with the best golf simulation I've ever seen on the Electron. It is packed with features: Two superbly designed 3D 18-hole courses and all the hazards you would expect to find on the real thing, like trees, rough, bunkers and water.

The easier course, Cone Links, is quite a challenge and after mastering it, you might just be ready for the second, Pin Isles, which is quite a different ball game altogether.

You can indulge in either strokeplay or matchplay. The idea with the former is to finish all 18 holes in the least number of strokes, while in matchplay the winner is the player who wins most holes.

Up to four players can take part with each selecting one of four skill levels from beginner to professional. The one selected dictates whether the physical hazards or wind strength and direction influence your play.

For instance, as a beginner only the water will affect your shot, whereas as a professional you could be playing from a bad lie in deep rough into a strong headwind.

For all shots up to the green your view is from behind the golfer you control. On the right side of the screen is an information panel displaying details relevant to the hole. You select a club using the Z and X keys from a range of three woods, nine irons, a pitching wedge and a putter.

Next you set the direction to hit the ball by moving a cursor left and right across the course. Here you must also take into account the wind - represented by a circle with a line coming out of it which points in the direction the wind is blowing, while its length represents the wind strength.

When the shot direction is determined you set its power using a meter. As you press <RETURN>, a sliding bar advances from zero towards 100 per cent and hitting it again sets the percentage of power and causes your nicely animated golfer to jump into action and take a swing at the ball. Using Z or X instead of <RETURN> when the meter is advancing will put either a hook or a slice on the ball.

When the ball is hit, its shadow travels along the ground giving an impression of distance. The way it bounces and comes to a stop when it hits the ground is very realistic.

Sometimes the hole you are playing has a path running alongside it and if you are skilful enough you can play the stroke so that the ball bounces on the path, making it travel further.

A ball that lands in water is declared lost and you lose two strokes. Landing in a bunker produces two possible outcomes: It is either plugged or you have a good lie. The latter is still a difficult shot, but a plugged ball is sunk into the sand and is much harder to play.

When you reach the green the screen is redrawn and you view the action from above. The indicator in the panel now represents the slope of the green instead of the wind. The line drawn points downhill and its length shows the steepness of the slope.

Again when you have set the direction of your shot, adjust the power and watch the golfer swing into action. There is good realism here with the ball bouncing up off the edge of the cup if you hit it too hard or running round it if you're a little off centre.

After each hole, the score card is shown displaying everyone's progress. During strokeplay it shows each player's skill level, the number of shots and his score related to par. In matchplay the score is replaced by the number of holes by which a player is winning.

There is a lot more to this game than just whacking the ball down the fairway. Each hole is a puzzle in its own right. You have to plan your shots carefully and take the utmost care in selecting the right club and power.

There are precise maps in the well documented instruction booklet to help you plan your strokes. There's also a very useful quick reference guide to the distances - in the air and along the round - that the ball will travel when using the various clubs.

The graphics are cleverly done using dithered colours to produce pastel shades on a four colour screen. Sound is restricted to the swing of the club and striking the ball plus a few minor noises such as a splash when your ball takes a dive.

I thoroughly enjoyed this simulation. If you're a golfing fan wanting to keep your hand in - buy it. If you're not, still buy it - it will keep you entertained for hours and hours. This is a test of skill not to be missed.

David McLachlan

**\*\*\* Second Opinion \*\*\* (Electron User)**

There have been many golf simulations for the Electron in the past, but none match up to this brilliant game from The Fourth Dimension. The 3D perspective graphics are stunning and the gameplay is interesting and varied.

It doesn't matter whether you're a golf fan or not, you'll still enjoy this challenging and skilful computer version.

# HOPPER

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; FROGGER Clone  
Author : Neil Raine  
Standalone Release(s) : 1984: HOPPER, Acornsoft, £9.95  
Compilation Release(s) : 1986: PLAY IT AGAIN SAM 6, Superior/Acornsoft, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : ACORNSOFT, Betjeman House, 104 Hills Road, CAMBRIDGE  
CB2 1LQ. Te: (0223) 316039  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

The objective of the game is hop the frog across the motorway dodging the cars and lorries. To cross the river use floating logs and turtles' backs as hopping stones, leaping from one to the other before finally hopping into one of the five froggy lairs.

Some turtles occasionally submerge; these must be avoided. Later in the game you may come across a crocodile, a snake and a dragonfly.

Your attempts to cross the river and road are timed, and you have to hurry if you are to complete the course at all! The timer displayed in the corner of the screen counts down from 400. If it reaches 0, you lose your frog.

When five frogs are safely in their lairs you have 'cleared a sheet' and can start on another one. Later sheets include the crocodile and the snake.

## Game Controls

Z - Left, X - Right, : - Up, / - Down, <SPACE> - Start Game  
Q/S/T - Sound Off/On/With Tune, <ESCAPE> - Quit Game

Movement of the frog can also be controlled by joystick. (Only the Plus-1 joystick can be used on the Electron computer.)

Pressing the Fire button selects joystick control and starts the game. Then use the joystick to hop the frog; move the joystick forward to hop one step forward, backward to hop one step backward and sideways to hop one step sideways. You must move the joystick back to the centre between each hop.

# HOROSCOPES

*Professional, Originally Released On Cassette Only*

Game Type : Utility  
Author :  
Standalone Release(s) : 1983: HOROSCOPES, Third Program, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : THIRD PROGRAM. No further information.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Instructions currently unavailable.

## Review (Electron User)

If you're anything like me, you'll realise that all horoscopes are a load of rubbish and that no one in their right mind would read them. This doesn't, however, stop me from reading them avidly, especially when they say nice things about my star sign and promise a rosy future.

From this you'll understand that I was hooked as soon as Horoscopes came into the office. I loaded it up all eager expectation, but sadly I was a little disappointed as I found it rather limited. Despite the title you don't actually get a forecast of the future, just a description of your personality traits.

When you run the program it asks you for your name, date of birth and sex, and then prints out the personality profile of your star sign. All interesting stuff and good fun. The trouble is that the profile for each star sign is the same whichever sex you are and whatever day you were born on.

This means that there are only really twelve profiles, one for each sign. This makes it fairly limited for home use. Having said that, the program looks ideal for fundraising at fetes, jumble sales and school open days. I can see it making a fortune for good causes.

# HORSE RACE

***Professional, Originally Released On Cassette Only***

Game Type : Arcade Platform Game  
Author :  
Standalone Release(s) : 1983: HORSE RACE, Dynabyte, £7.95  
Compilation Release(s) : 1986: SUPERSELLERS: THE DYNABYTE COLLECTION, Dynabyte, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : DYNABYTE, Unit F3 Railway Triangle, Farlington, HANTS  
PO6 1TG  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Ever wanted to play your luck on the horses but were too scared of losing your money? Well, this is your chance to win!

HORSE RACE is a betting game suitable for 1 to 6 players. All betting is entered from the keyboard.

Each player takes turns to bet on as many horses as their money will allow. When it is your turn to bet, study the form, choose the number of the horse you want to bet on and then enter the amount - up £999 (followed by <RETURN>).

When you have completed all your betting, press <SPACE> to allow the next player to bet or for the race to commence. Up to fifty races can be run per meeting. Players losing all their money will not be allowed to bet.

## Review (Electron User)

Are you a betting man? Do you hate losing money? Then there's the perfect answer in a game called HORSE RACE.

Allowing up to six players, it gives all the excitement of a day at the races without risking the cash. A totaliser showing the betting possibilities, plus a betting slip, flash on your screen. All you have to do is choose your horse and state how much money from your £1,000 you wish to place, press the space bar and you're away.

The graphics are particularly striking, with flags, a grandstand, waving crowds and even jockeys tumbling from realistic horses. It's usually your jockey! The first three horses past the post are printed on a tote board near the stand and an all-too-accurate check is also kept on your financial position. But never mind, you can afford to be rash - just this once.

Alan Turner, ELECTRON USER 1. 9

# HOSTAGES

***Professional, Originally Released On Cassette Only***

Game Type : Arcade  
Author : Peter Scott  
Standalone Release(s) : 1989: HOSTAGES, Superior/Acornsoft, £9.95  
Compilation Release(s) : 1991: PLAY IT AGAIN SAM 16, Superior/Acornsoft, £12.95  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated.  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"An urgent phone call from the National Security Minister...an Embassy has been overrun by terrorists. As Head of the Terrorist Combat Squad you are in control of all operations.*

*First, you must place your crack marksmen in nearby buildings, avoiding infrared lights and the terrorists' deadly aim. Secondly, you must get your team of Specialist Paratroopers onto the Embassy roof.*

*Then, after descending by rope, and protected by your marksmen, enter the Embassy through the windows and begin your search in silence. But beware each door, each room, could be a death trap!*

*You must get the hostages, and your men, out of the buildings without any loss of life, and this will depend on the cohesion and co-ordination of your team. NOW IT'S YOUR MOVE!*

*"BRILLIANT GRAPHICS AND GAMEPLAY...SUPERB SOUND EFFECTS AND TUNES. KEYBOARD OR JOYSTICK/MOUSE CONTROL."*

The game consists of three increasingly difficult missions: TRAINING MISSION, QUALIFYING MISSION and ULTIMATE MISSION. Each mission consists of three levels: LEVEL 1 - position snipers, LEVEL 2 - enter Embassy through the windows, LEVEL 3 - search Embassy for Hostages.

To complete a mission, and hence obtain the password for the next mission, you must rescue all the Hostages. To start a new mission, you must reload the game.

If you complete the ULTIMATE MISSION, without repeating any levels on that mission, you will be given a special message. If you write to Superior Software, quoting this message, you will be sent a signed congratulatory certificate.

## Level 1

On loading the game you will automatically start on the TRAINING MISSION, unless you enter the password (after pressing the P key) for the QUALIFYING MISSION or the ULTIMATE MISSION. (The password for the TRAINING MISSION is 'DEADEASY')

## Level Objective

You should try to hide all three of your snipers at the positions marked on the map within the time limit.

You must avoid the terrorists' spotlight, otherwise you will be shot at. Too many shots and your man will be eliminated. If all three men are eliminated. If all three men are eliminated, then you will have to restart the level.

You can select a new man (provided the current man is hidden) by pressing the 1, 2 or 3 keys (corresponding to DELTA, ECHO and MIKE respectively)

Provided at least one man is positioned correctly when the time runs out or when the other men have been eliminated, then you will be able to progress to level 2. However, you are advised to repeat the level until you have all three men correctly positioned, otherwise subsequent levels will be very difficult to complete.

#### **Game Controls**

Z - Walk Left, X - Walk Right, \* - Run In Direction Facing, ? - Crouch  
Z & ? - Crawl Left, X & ? - Crawl Right, ? & RETURN - Roll In Direction Facing  
RETURN - Hide/Re-appear,

Joystick control can also be used. Press the joystick FIRE button instead of SPACE in order to start.

### **Level 2**

#### **Level Objective**

Three new men (designated 4, 5 and 6) have been landed on the Embassy roof. You should now try to get all three of these roof-top combatants into the Embassy by abseiling down and breaking in through the windows. If all three men fall and are eliminated, then you will have to restart the level.

The men who have survived level 1 (designated 1, 2 and 3) now act as snipers, defending the abseiling men. They can shoot any terrorists who appear at the windows and can also shoot out the windows making it easier for the abseilers to get through. But don't shoot your own men!

Select your combatant by pressing keys 4, 5 or 6. You can only reselect when your current man is at the top of the building. If you have a sniper on that side of the building, he can be selected by pressing the appropriate key (1, 2 or 3). Pressing SPACE takes you back to the abseiler.

Provided at least one man has entered the Embassy when the time runs out or when the other men have been eliminated, then you will be able to progress to level 3. However, you are advised to repeat the level until all three men are in the Embassy, otherwise the final level will be very difficult to complete.

#### **Game Controls for Abseilers**

Press the \* key to move *up* the rope and the ? key to move *down*. The Z key initiates a *swing*. A note sounds, rising to a maximum, then starting again. This is proportional to the distance you will swing out. Hold down the X key, to *hold*, when you hit the wall, otherwise you will fall off. To break through a window and enter the Embassy, you must *swing* out the maximum from well above the window, and hold the *down* key as you release the *swing* key. This requires considerable skill and practice.

#### **Game Controls for Snipers**

Control the constantly moving cross-hair by using the Z, X, \* and ? keys for *left*, *right*, *up* and *down* and RETURN for *fire*.

Joystick control can also be used for both abseilers and snipers. Press the joystick *fire* button instead of SPACE in order to start.

### **Level 3**

#### **Level Objective**

You must search the two floors of the Embassy and rescue all the Hostages within the time limit, whilst trying to avoid being shot by the Terrorists. You can only change floors at the lift shaft position. The number of Hostages and Terrorists present varies according to the difficulty level of the mission. You can shoot at the Terrorists until your ammunition runs out.

You start with as many combatants as were successful in breaking through the Embassy windows. They are positioned according to the window they broke through. You cannot swap between men. You start with the lowest numbered combatant who has survived. If

he is eliminated, you move onto the next numbered combatant. The level ends either when you have no combatants left, or, when the time has run out, or, hopefully, when you have rescued all the Hostages.

#### **Movement Controls**

Z - Rotate Left, X - Rotate Right  
\* - Move Forward One Step, RETURN - Change Floors At Lift Shaft

#### **Gun Controls**

? & Z - Gun Aimed Left, ? & X - Gun Aimed Right  
? - Gun Aimed Forwards, RETURN - Fire Gun

Joystick control can also be used. Press the joystick FIRE button instead of SPACE in order to start.

#### **General Controls**

<SHIFT> & <ESCAPE> - Restart Level  
P - Pause On/Off, S - Sound On/Off, T - Tune On/Off

# HOUSE - IT'S QUITE GOOD REALLY

*Public Domain, Originally Released On DFS 1100 Disc*

Game Type : Text Adventure  
Author : Bazza  
Standalone Release(s) : 1991: HOUSE - IQGR, Bazzasoft, PD  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : www.8bs.com  
Disc compatibility : CDFS E00, DFS E00

## Instructions

Supplied without instructions. All instructions on screen.

## Review (EUG)

Besides needing the appropriate kit on an ADFS Electron, this review will also be required if you already have a copy of the adventure game HOUSE - IQGR for the BBC. It is intended not just to give the standardised opinion but so too to document the game plus its conversion from the BBC. AND to show how to patch up the bug hiding in it making it unplayable past a certain location.

The company "Bazzasoft" produced a good few BBC/Electron Public Domain titles in the late Eighties and early Nineties with one of its more noted releases being the Bazzasoft Adventure Programming System (B.A.P.S.). The adventure HOUSE - IQGR was created on this system and runs in Mode 6 with over 45 locations, lots of messages and numerous puzzles.

The scene is London where you seem to have acquired a luxury detached house just a road from Downing Street (occupied by Margaret Thatcher!). However, one day your pride and joy, your BBC Micro, disappears from your bedroom. With a few elements of PD game INSOMNIA, what is to follow as you navigate the house and its environs is a humorous if not a little trippy jaunt featuring screaming wildly, leaping from high locations, visiting the funny farm and exchanging one item for another.

Oh, yes, and don't forget an excess of murder. Each death you sustain by a wrong move brims with sarcasm - yet beating your brother's guinea-pig to a pulp, blowing up a whole location of people and observing a very messy game of politics where Neil Kinnock seems to be doing his 'Hannibal Lecter' are all excesses not for the weak-stomached!

You immediately wonder about several of what could be called the politically incorrect aspects of HOUSE - IQGR. Several of its characters, quite apart from Thatcher and Kinnock, are defamed to an extent by the ensuing events. For example, footballer Terry Fennick is a drink-driver and John Kirenan (IRA member), on request, whips up a DIY bomb. That said, their notorious activities at the time of the game's writing [1992 - Ed] are certainly not celebrated and the black humour associated with their appearance still works today! Some might say that, before the internet took hold, PD was the true place for games that were a little 'risque'. What most will find really incredible though is that this game, less than two years later, was carried by the mainstream Acorn disk of THE MICRO USER Volume 12 Number 6!

There are eight characters in total and, in a more fantastical sense, Dot Cotton, Saddam Hussein and a vampire are all quickly discovered roaming weird locations; almost all of which are readily accessible right from the start. The text describing them, and the locations, is well-written, free from spelling errors, nicely formatted and of a very high standard. Take for example: "You hand the purple

harmless iridescent butterfly to the insectcollectologist, who puts it in a matchbox in an armoured suitcase in a titanium safe which he welds closed and wraps up in clingfilm before heading homewards."

Definitely a big improvement on Scott Adams' "OK"! However, it's as well to note that the parser on HOUSE - IQGR is not developed up to the same grade. I was initially very frustrated to get endless "Sorry, you can't do that..." messages when I tried to GET, TAKE, KILL, EAT, HIT a GUINEA-PIG in one of the early locations. Because the message never changes, the parser seems very limited; in actual fact, GET and GIVE are the only commands (apart from compass directions) you're likely to need so if neither works, it's not a bug; it's just that you haven't found the solution involving that particular object.

There is a bug in this game though, fortunately discovered and 'patched' during the conversion to the Electron. Without wanting to give anything else away (at least not until EUG publishes the solution!), it occurs when you must use the DIY bomb. "That was probably a bad move," says the text as it explodes and you are arrested...

However, instead of transporting you to a locked police cell, the BBC version then prints "<undefined location>" and leaves you no alternative but to QUIT. As it's now impossible to finish the game, it becomes evident that THE MICRO USER probably didn't test this adventure much, if at all! Luckily though, your EUG reviewer's fix has been included on the EUG #53 disk version. On THE MICRO USER's original effort (and possibly other PD versions), add the lines below to "HOUSEGM":

```
120DEFFPROClook:IF (1+R% MODMX)=2 AND (1+R% DIVMX)=7 THEN R%=R%-1
121IF (1+R% MODMX)=1 AND (1+R% DIVMX)=7 THEN R%=R%-7
122PROCform(2,DES$(1+R% MODMX,1+R% DIVMX)):M%=0:FOR S=1 TO OBJ:IF ?(obc-
1+S)=R% AND OBD$(S)<>"<undefined>" M%=M%+1
```

The BBC/Electron version on EUG #53, with this surgery, retains everything (on both machines!) of the original apart from the bug. It also includes a lovely converted Mode 7 to Mode 1 loading screen specifically coded to appear even with the 64K Elk's extra memory enabled. With the game itself, there are just two more little features that require documentation. The first, a relatively minor point, is that when giving an item, you must type GIVE <x> TO <y> <RETURN> as GIVE <x> alone results in "Sorry, you can't do that...". The second is that there are longish pauses between location and location while memory is accessed. They aren't so long as to ruin the adventure though.

With the bug fixed, this documentation by your side and the requisite Acorn kit, you'll soon discover HOUSE - IQGR to be the very creme de la creme of PD adventures. Despite the limited parser, the witty text and simplicity of action will guide you through quite easily. It's of moderate difficulty - its title being an accurate description - and fluidly written. An almost perfect little adventure.

Dave Edwards, EUG #53

# HOUSE OF HORRORS

*Professional, Originally Released On Cassette Only*

Game Type : Educational  
Author :  
Standalone Release(s) : 1983: HOUSE OF HORRORS, Kay Less, £3.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : KAY LESS COMPUTER SYSTEMS. No further information.  
Disc compatibility : CDFS E00, DFS E00

## Instructions

Instructions currently unavailable.

## Review (Electron User)

After climbing a rocky path to the old house you pass through the rusty gates and enter a creepy mansion. Your task is to recover the golden keys which are spread over the five floors.

The house is haunted by a variety of ghosts, zombies, werewolves, vampires and mummies. To make matters worse each floor is like a maze, with rooms, corridors, secret passages and rotten floorboards which collapse when you walk on them.

Each floor is drawn as a plan showing the rooms and corridors, the keys, floorboards, passages and the house's horrors. You start by the staircase and your task is to collect the two keys and return without bumping into any of the inhabitants. There is no time limit, so you can plan your route. If you succeed, you move on to the next level.

The options available at the start are sound on/off, keyboard/joystick and start level. It is also possible to freeze the game at any point.

All the characters are single colour, user defined graphics characters. The monsters all move in fixed patterns and their movement is very jerky - one character position at a time. This gives the game an amateurish look.

I think you will be disappointed with HOUSE OF HORRORS and cannot really recommend it.

Roland Waddilove, ELECTRON USER 2. 8

# HOW TO WRITE ADVENTURE GAMES

# HULK

## *Professional, Originally Released On Cassette Only*

Game Alias : THE INCREDIBLE HULK; QUESTPROBE #1  
Game Type : Text Adventure  
Author : Brian Howarth  
Standalone Release(s) : 1984: HULK, Adventuresoft, £9.95  
1987: THE INCREDIBLE HULK, Americana, £3.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ADVENTURESOF (UK), PO Box 786, Sutton Coldfield,  
WEST MIDLANDS B75 75L  
Disc compatibility : CDFS E00, DFS E00

### Instructions

Listen up, True Believer! The world's premier comics company has joined with the originator of Adventure games to bring you the awesome QUESTPROBE Series : an epic group of home-computer adventures by Marvel Comics and Scott Adams in which you become one of the greatest Marvel TM Superheroes characters.

Much more than an arcade game and recommended by educators around the world, an Adventure allows you to move through a wonderous electronic world by entering English commands. In the HULK TM, you actually control the intellect of Bruce Banner and the savage might of ol' Jade-Jaws himself, the HULK TM. Your objective is two-fold: to unlock the riddle of the Chief Examiner and . . . to survive!

Each installment of the QUESTPROBE Series is a complete Adventure - you need nothing else but your imagination and a compatible computer. And you don't have to be a Marvel Comics fan to enjoy the fun. For all kids aged 8 to 800!

Difficulty level: Moderate.

### How An Adventure Works

Read the standard introduction to Adventure International adventures under SCOTT ADAMS SCOOPS.

### Some Helpful Words

Although the vocabulary accepted by your computer is extensive, you may find the words listed overleaf to be of great help as you set about your Adventure. Remember: These are just a few of the words available.

Climb	Examine	Leave	Move	Quit	Say
Drop	Go	Light	Pull	Read	Take
Enter	Help	Look	Push	Save	Hit

### One-Letter Commands

You may use the following single keys to perform a variety of tasks and to expedite playing time. Type the letter for the function you wish to use and press <RETURN>.

N, S, E, W, U, D	-	Go North, South, East, West, Up or Down
I	-	Display Inventory of items on your person
L	-	Look

### Saving Your Adventure For Later Play

An Adventure will often last far longer than the time available in a single sitting. You may save the game you are playing and return later to take up when you left off. To save a game in progress, type SAVE GAME at any time the WHAT SHALL I DO? message

on your screen. You will be asked to specify A, B, C or D. This will allow you to assign a code letter to your game so that you might restore it at a later time.

To restore a saved game, type LOAD GAME before you wish to begin a new game. The computer will ask: DO WISH TO RESTORE A SAVED GAME? Type YES, and type the correct code letter (A, B, C or D). The Adventure will resume at the point which you saved it.

To end a game in progress, type QUIT. If you intend to continue the game later, be sure to save it before using this command.

## Description of Marvel Characters You May Meet

### HULK - Friend

Real name	: Robert Bruce Banner
Occupation	: Ex-Physicist
Identity	: Publicly known
Legal status	: American citizen with criminal record pardoned
Former aliases	: None
Place of birth	: Dayton, Ohio
Marital status	: Single
Known relatives	: Jennifer Walters (aka She-Hulk), cousin; Morris Walters, uncle
Group affiliation	: Former member of the Avengers and the Defenders
Base operations	: Mobile
First appearance	: HULK #1
Origin	: Robert Bruce Banner was a thin, bespectacled nuclear physicist who worked on a Government research facility in New Mexico. Having designed and overseen the construction of a nuclear weapon that had a high gamma radiation output, Banner was among those present in the instrumentation bunker of the test site of the bomb's first above-ground detonation. Observing that a civilian had breached security and entered the restricted test area, Banner told his partner Igor Starsky to delay the countdown while he tried to get the civilian to safety. Starsky, secretly an enemy agent, did nothing, confident that Banner would die in the explosion and that the project would come to a halt. Reaching the civilian, a teenager named Rick Jones, Banner threw him into a protective trench. Before Banner could get himself to safety, the gamma bomb detonated and, irradiating its inventor with highly charged, radioactive particles. The radiation had a mutigenetic effect on Banner's entire cellular structure, causing him frequently to turn into the vastly powerful, green-skinned superhuman named by the military present at the test site, "The Hulk".
Height	: 7'
Weight	: 1,040 lbs
Hair	: Green
Eyes	: Green
Skin	: Green
Powers	: The Hulk possesses extraordinary superhuman strength, making him perhaps the strongest mortal being ever to walk the Earth. The mutation to his body caused by certain frequencies of gamma radiation fortified his cellular structure and added, in some as yet unknown way, over 800 pounds of bone marrow and tissue to his body. The transformation of Banner into the Hulk is determined by Banner's emotional state, particularly the emotions of rage, fear or stress. Perhaps the most important truism concerning the Hulk: The madder he gets, the stronger he gets.

The Hulk's powerful leg muscles enable him to leap to a height of 3,200 feet and a distance of 1.6 miles. He is

capable of lifting 90 tons. Although the Hulk has never been provoked into demonstrating the maximum output of strength, there may well be no upper limit. He has been known to lift over 100 tons, and leap almost three miles.

In addition to great strength, the Hulk's body possesses a high degree of imperviousness to injury, pain and disease. The Hulk's skin is capable of withstanding great heat without blistering (up to 3,000 degrees Fahrenheit) and great cold without freezing (down to minus 190 degrees Fahrenheit) and great impacts without a puncture wound or laceration. It is possible to injure him; he could not, for example, survive a near-hit with a nuclear warhead. The Hulk's highly efficient physiology renders him immune to all terrestrial disease.

The Hulk's only power apparently not related to his physical attributes is his ability to see astral forms. The nature of this ability is not yet known.

#### **ANT-MAN - Friend**

Real name	: Dr Henry "Hank" Pym
Occupation	: Former adventurer, biochemist
Legal status	: United States' citizen with a conviction for treason that was later overturned
Place of birth	: Elmsford, New York
Known relatives	: Marie (first wife, deceased), Janet Van Dyne (ex-wife)
Group affiliation	: Former member of the Avengers and the Defenders
First appearance	: TALES TO ASTONISH #27
History	: Dr Henry Pym, a biochemist with extensive knowledge in other scientific fields, discovered a rare group of subatomic particles, which have become known as the "Pym particles". Pym was able, through the application of magnetic fields, to entrap the particles within two separate serums. One serum would reduce the size of persons and objects, and the other would restore them to their normal size. Eventually, Pym discovered a way to store the serum in gaseous form, which, when used, allows him to shrink or enlarge at will.
Height	: 6'
Weight	: 185 lbs
Eyes	: Blue
Hair	: Blond
Powers	: As Ant-Man, Pym is able to reduce himself to the size of an ant approximately one-half inch in height. However, his mass remains constant, meaning that a punch delivered by a half-inch-high Ant-Man feels like the blow of a normal sized man.

Among Pym's more dubious accomplishments was the creation of the mad robot Ultron (see below).

Equipment	: Ant-Man wears a cybernetic helmet he designed which permits him rudimentary communication with ants. He can broadcast up to one mile depending upon the materials surrounding him.
-----------	--

#### **DOCTOR STRANGE - Friend**

Real name	: Stephen Strange
Occupation	: Surgeon (retired), occult expert
Legal status	: American citizen with no criminal record
Identity	: Publicly known
Other current titles	: Sorcerer Supreme
Formal aliases	: Stephen Sanders
Place of birth	: Philadelphia, Pennsylvania
Marital status	: Single
Known relatives	: None

Group affiliation : Occasionally associates with the Defenders  
 Base operations : 177A Bleecker Street, New York City  
 First appearance : STRANGE TALES  
 Origin : Stephen Strange was a brilliant, ambitious and somewhat arrogant neurosurgeon whose meteoric career was tragically cut short in an automobile accident. Strange sustained minor nerve damage which prevented him from holding a scalpel steady enough to perform delicate surgery. He invested a fortune in attempted curers and fraudulent doctors and saw it dwindle to nothing. He swiftly degenerated from recluse to drifter to drunken derelict. Then Strange heard of a learned man in Tibet known only as The Ancient One who could supposedly work miracles. Determined to find this miracle man, he made his way across the ocean and then the frozen wastes of the Himalayan Mountains.

Strange finally located The Ancient One. The aged sorcerer told him he would only consider helping Strange if the erstwhile surgeon proved himself worthy. Eventually, Strange proved himself worthy and became The Ancient One's disciple. He learned the arcane secrets of sorcery and, in time, returned to America to set up shop in Greenwich Village in New York City.

Height : 6' 2.5"  
 Weight : 180 lbs  
 Eyes : Grey  
 Hair : Black with white streaks  
 Powers : As Sorcerer Supreme of Earth, Doctor Strange possesses a greater knowledge and mastery of the arts of magic than anyone else on Earth. Strange's magic, like most magicians, is derived from three major sources : personal powers of the soul/mind/body (mesmerism, astral projection, thought casting, etc.), powers gained by tapping this universe's ambient magical energy and employing it for special effects (transportation, illusion, casting, energy projection), and finally, powers gained through the tapping of extra-dimensional energy by invoking entities or objects of power dwelling in mystical dimensions, tangential to our own. Strange also employs a number of occult power-objects which he wields by mental control.

Weapons : Besides his array of magical powers, Strange wields three major occult power-objects. The first of these is his Cloak of Levitation which enables his physical form to fly at moderate speeds (approximately 25 miles per hour) for indeterminate lengths of time. While Strange can levitate without the Cloak, the Cloak enables to fly with no personal expenditure of magical energy. The second power is the Eye of Agomotto, an amulet which grants him certain mystical perceptions such as the ability to divine the truth by gazing into another man's soul. Residing in his Greenwich Village mansion is the Orb of Agomotto, a crystal ball attuned to the mystical forces of the Earth. Through the Orb, Doctor Strange keeps constant vigil against the dark forces of the universe.

#### **ULTRON - Foe**

Ultron is a robot possessing the capacity for creative intelligence and self-repair who has become a menace to humankind. Originally designed by Dr Henry Pym (at that time known as Goliath), the prototype Ultron-1 was non-humanoid, consisting of one large torso/head on tank treads with two slender limbs. Shortly after its completion, the robot developed an irrational hatred of its creator and tried to destroy him. Humbling Pym, Ultron-1 hypnotized him to forget his robotic creation and evicted Pym from his own private laboratory so it could undertake its own re-modification process.

Ultron proceeded to design subsequent bodies. The end result was Ultron-5, a humanoid robot with a body constructed of adamantium, an alloy which, once hardened, can withstand a nuclear blast.

Over the years of its existence, Ultron has augmented his adamantium body with additional offensive weaponry, including an "encephalo beam", high power concussion blasters, tractor and pressor beams, an induction device that was able to absorb energy from Iron Man's armor, and a molecular rearranger able to shape adamantium.

Ultron is physically and mentally far superior to man. Its hatred of humankind and capacity for survival makes it an ever-present threat to human life.

#### **NIGHTMARE - Foe**

Nightmare is a malevolent humanoid entity, whose origins are unknown, who rides a demonic steed and "feeds" upon the dreams of humans for sustenance and power.

Nightmare's ultimate goal is to expand his dimension into the waking world by occult means, perhaps overcoming the spirit of Eternity itself. Nightmare has but one natural enemy in all the dimensions; the creature Gulgol, who never sleeps.

#### **THE CHIEF EXAMINER - ?**

The mysterious overseer of the QUESTPROBE Series, not a lot is known about the Chief Examiner at this time.

#### **Some Playing Tips**

Be sure to examine the items you find during your Adventure. Also, keep in mind that most problems and solutions require no more than common sense to solve; special knowledge and information are rarely required. For example, if an area is too dark to see in, you are going to need a light in order to avoid disaster.

If you get stuck, type HELP and press <RETURN>. You may or may not receive assistance, depending on what you are carrying, where you are at and a number of other factors. Too, be careful about making assumptions - they can be fatal!

Finally, if you are seriously stuck, special Hint books are available from Adventure International (U.K.). Call (021) 643 5102 for ordering information.

Here is a sample to show you how to get started in the game HULK and how the Hint Book can save you hours of frustration while you are having fun solving the adventure.

1. Can not get loose from chair?  
REMEMBER YOUR ALTER EGO AND GET MAD
2. More help for above problem  
GIVE YOUR SELF SOME PAIN
3. Solution to above problem  
BITE LIP

## Instructions (PIAS 6 Release)

You are Quasimodo and your task is to rescue Esmeralda. You have to leap over ramparts, dodge rocks and arrows, swing on ropes, avoid the guards' spears and ring the bells. Finally you reach and rescue Esmeralda.

There are three difficulty levels (1 to 3) and twelve different screens of action (A to L). You can start at any difficulty level and on any screen between A and H. Screens I, J, K and L can only be reached when you have completed the previous screen.

## Game Controls

<CAPS LOCK> - Left, <CTRL> - Right, <RETURN> - Jump  
<SPACE> - Start Game, S/Q - Sound On/Off, <ESCAPE> - Quit Game

# HUNKIDORY

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Platform Game  
Author : Peter Scott  
Standalone Release(s) : 1986: HUNKIDORY, Bug Byte, £1.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : BUG BYTE, Liberty House, 222 Regent Street, LONDON W1R 7DB  
Tel: 01/439 0666  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"20 screens \* lifts \* 21 aliens \* spikes \* music \* demo mode and lots more. Great graphics leap about that is just so neat...By 'Hunky' Peter Scott."*

It's easy really, just collect all the valves on each screen and make your way to the door at the bottom of the screen. You can fall any distance without dying and you can kill the aliens by pressing the 'shield' control. Careful though, this uses up your energy.

To play the game, follow the screen prompts. Select sound on/off and then press space bar. We are told CTRL/C does strange things but we'll leave that up to you.

**Instructions' Source** : HUNKIDORY (Bug Byte) Back and Inner Inlay

## Review (Electron User) - "Challenging Dungeon"

Dave the Dunggroid is trapped in the dungeons of the planet Hunkidory. All you have to do is help him battle his way through 20 different levels to get back to the planet's surface.

This is an early program by the prolific ladders and levels game writer Peter Scott. Unlike LAST OF THE FREE, each level consists of a single screen - you do not wander backwards and forwards from screen to screen collecting objects.

Before you can proceed to the next level you have to collect all ten valves that are scattered about the screen. As is usual with this type of game, your success depends on your spotting the correct route through the screen, as well as split-second timing.

Each screen is constructed from a mixture of walkways, moving platforms and sharp spikes. Whizzing between these structural hazards are numerous alien life forms. Needless to say, contact with such creatures is always fatal.

The graphics are faded, the sprites very simple, and the backgrounds crude and boring. The screens may be a challenge to complete, but they don't have the necessary gloss to make you want to keep trying till you succeed.

One of the most infuriating features of the game is the way that everything is reset when you lose a life. No matter how close you are to completing the screen, back you go to the starting point and all the valves are replaced.

Controls are simple - left, right and jump. Stepping from the edge of the platform causes you to drop vertically, although the left and right keys can provide a controlled sideways drift.

The instructions contain a mysterious message about pressing <CTRL> and C to produce strange effects. On one occasion I tried this combination and exterminated the next alien I encountered. When attempting to reproduce this effect I hung the machine. C'est la vie.

The top two lines of the screen are reserved for a status display. They show the level number, lives left, time remaining before your present droid expires and your score. The program has option that let you play with or without music, or run a demo routine which gives you a second glimpse at every screen you will encounter.

HUNKIDORY is a very average ladders game - you have been warned.

LINCOLNSHIRE DN20 9AX  
Disc compatibility : CDFS E00, DFS E00

## Instructions

# HYPERBALL SCREEN DESIGNER

*Professional, Originally Released On Cassette Only*

Disc compatibility : CDFS E00, DFS E00

The HYPERBALL SCREEN DESIGNER allows you to design screens for the Superior Software game, Hyperball. You may design your own screens from scratch or edit the original game files. Any screens you design yourself you are free to sell, but we would be grateful if HeadFirst had first refusal on doing this. Screens produced from editing the original game screens are copyright Superior Software.

## Loading

To load the screen designer, hold down SHIFT and tap BREAK. Select Load Designer from the menu and follow these instructions.

When the program has loaded, a message "Please Wait.." will be displayed and a few seconds later the screen will clear to reveal the editing area with a white block in the top left corner. This is the cursor. The following keys are used to design screens:

## **Editor Controls**

Z - Left, X - Right, \* - Up, ? - Down (Alternatively, use the arrow keys)  
0 - 6 - Select Block Type, E - Select Screen To Edit  
<RETURN> - Place Block, <DELETE>/<SPACE> - Delete Block  
R - Rename Set Being Edited, L - Load Set, S - Save Set  
<CTRL>-C - Clear Current Screen, <CTRL>-X - Clear Entire Set  
<CTRL>-Q/<ESCAPE> - Quit Program

The current block type, screen, and set are all displayed underneath the editing area, together with a picture of each block type.

If you have a tape copy of Hyperball, you will need to copy any sets of screens you design to tape before you can load them into Hyperball. A program to do this is supplied on the disc. To run it, select Disc to Tape Copier from the main menu.

## Disclaimer

In no circumstances shall the author or HeadFirst PD be liable for any damage, loss of profits, time or data or any indirect or consequential loss arising out of the use of this software or inability to use this software, even if they have been advised of the possibility of such damages. # "...I DO"

## ***Professional, Originally Released On Cassette Only***

Game Type : Quiz  
Author : Hans J. Eysenck  
Standalone Release(s) : 1983: I DO, Acornsoft/Ivan Berg, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : IVAN BERG, Dunluce House, 4-8 Canfield Gardens, LONDON  
NW6 3QT  
Disc compatibility : CDFS E00, DFS E00

### **Instructions**

*"This program is based upon a series of fascinating questionnaires used by Hans Eysenck in his book '...I Do' Your Guide to a Happy Marriage published by Century Books in 1983.*

*The program can provide couples (married or unmarried) with a great deal of useful information about themselves and their relationship.*

*Used honestly "'...I Do' The Program" can help you understand just what psychologists mean by the terms introversion versus extraversion, emotional stability versus instability, high libido versus low libido; and give you a fairly clear idea of how you compare with your partner in these areas of personality and indicate what this could mean for your relationship.*

*"'...I Do' The Program" will provide information on the following:*

*PERSONALITY  
MARITAL SATISFACTION  
SOCIAL ATTITUDES  
FEMINISM AND ANTI-FEMINISM  
MASCULINITY/FEMININITY  
SEXUAL ATTITUDES*

*WARNING : The Author and Publishers accept no responsibility whatsoever for the success or failure of any existing or future relationship examined by this program.*

*This pack contains one program cassette, one question data cassette and an instruction booklet."*

### **Introduction**

Marriage, despite rumours of its imminent demise, remains one of our most popular institutions. Moreover, marriage is good for us. According to all the most recent studies, married people are happier, healthier and have more self-esteem than their single counterparts. They tend to live longer and, in general, have a more positive outlook on life.

If marriage is so good for us, how does it happen that so many marriages are filled with unhappiness? Why do one in three couples get divorced? And how can we reconcile this high rate of divorce with the idea of marriage as a popular institution?

The answers to these questions are far from simple, but I feel that much of the problem springs from inappropriate selection of marriage partners. My research shows that, of all the factors that make for success or failure in marriage, it is the question of personality that is crucial. And the assessment of personality is an area of which most people are, understandably, comparatively ignorant. Many

marriages, then, are doomed - or at least destined for severe growing pains from the start.

What, then, will you gain from answering the questions in this program about happiness in marriage? Certainly there are no quick and easy solutions to the subtle stresses that exist between married couples. But by completing each section honestly, you should be able to get a rough idea of where you stand on the issues of personality, attitudes and happiness. It is in this spirit of 'know thyself' that this program is intended. It can help you understand just what psychologists mean by the terms introversion versus extraversion, emotional stability versus instability, and high libido versus low libido; give you a fairly clear idea of how you compare with your partner when it comes to these qualities; and provide some indication of what this means for your marriage.

Of course, neither the social nor the physical scientists have the answers to all of our questions. The psychologist studying marriage is trying to understand how two very complex entities, a man and a woman, interact, and how much of this interaction is determined by their personality, intelligence, environment, age and experience. Although certain things can be done to make one's life happier, there are no magic formulae, and it would be irresponsible to suggest that there were. The science of human relationships is imperfect at best, but we can gain from it some general guidelines, together with certain assumptions which do tend to hold up over time.

This program has been written from the point of view of empirical science. By 'empirical' I simply mean based on the facts as observed. I do not intend to pass any moral, religious or ethical judgments on the findings of the program. Certainly you are free to view the results from your own religious or ethical perspective; I am presenting my findings as a psychologist and social scientist, not as a philosopher.

Use your results as you will, and, although I make no promises, I sincerely hope that the gain in self knowledge will improve your chances for marital happiness and fulfillment. However, the study of human behaviour, especially as we watch its interaction in marriage, is certainly an imperfect science. Science itself does not know all the answers. So take what you can from what I have to offer, and prosper.

H. J. Eysenck  
Institute of Psychiatry  
University of London 1982

## How To Use The Program

This is the program's Main Menu:

1. RUN QUESTIONNAIRE
2. SAVE RESULTS
3. GET SAVED RESULTS
4. END

Each option is explained in detail below. To choose an option from any menu, type the required number and press RETURN.

### 1. Run Questionnaire

If you wish to answer the questionnaire, type 1 and press <RETURN>. The computer will display this:

IT IS BEST TO DO THE QUESTIONNAIRE IN THE ORDER GIVEN ON THE  
QUESTIONNAIRE MENU. DO NOT REWIND THE TAPE AFTER COMPLETING EACH  
SECTION.

LOAD DATA CASSETTE

MAKE SURE DATA CASSETTE IS REWOUND

DOES YOUR CASSETTE DECK HAVE MOTOR CONTROL? (Y/N)

Remove the program cassette from the cassette deck and replace it with the data cassette. Type Y if you have motor control, N if you do not, and press <RETURN>.

The following will be displayed:

'I DO' QUESTIONNAIRE

YOUR ANSWERS DO NOT APPEAR ON SCREEN MAKING THEM PRIVATE AND  
CONFIDENTIAL.

ONE OR TWO PARTICIPANTS? 1/2?

Answer the questions as they appear on the screen. Remember to press <RETURN> after each entry.

ONE OR TWO PARTICIPANTS? 1/2? 2

NAME OF FEMALE PARTNER? LINDA

NAME OF MALE PARTNER? NICK

DO YOU WISH TO DO THE QUESTIONNAIRES TOGETHER TAKING EACH QUESTION  
ALTERNATELY? Y/N? Y

Press SPACE as requested. This is the Questionnaire menu:

1. EXTRAVERSION/INTROVERSION SCALE
2. EMOTIONAL STABILITY/INSTABILITY SCALE
3. PSYCHOTICISM/SUPEREGO SCALE
4. MARITAL SATISFACTION INVENTORY
5. SOCIAL ATTITUDES QUESTIONNAIRE
6. FEMINIST/ANTI-FEMINIST BELIEFS
7. MASCULINITY/FEMININITY SCALE
8. SEXUAL ATTITUDES INVENTORY
9. EXIT

If you decide to answer questionnaire 1, the following will be displayed:

EXTRAVERSION/INTROVERSION SCALE

LOADING QUESTIONS 50

READY

PRESS SPACE TO CONTINUE

Make sure that the data tape is fully rewound. When the computer has found the questions, it will display LOADING QUESTIONS and count as it loads. When the computer displays READY, press SPACE as requested.

This is the first question on the Extraversion/Introversion scale.

LINDA:

Do you like going out a lot?

- 1 Yes
- 2 No
- 3 Can't decide

The name of the person who is to answer the question appears on screen. Read each question carefully and evaluate it. When you have decided which answer best accords with your personal opinion or behaviour, type in the number next to that answer. Answers are completely confidential and do not appear on screen. The next question will be displayed automatically.

When a questionnaire has been completed, this screen will be presented:

'I DO': YOUR SCORES

LINDA'S SCORE IS INDICATED BY A  
NICK'S SCORE IS INDICATED BY B  
IF YOUR SCORES ARE IDENTICAL THEY ARE INDICATED BY C  
THE DOTTED LINE INDICATES THE MEAN.  
ANY DEVIATION FROM THE MEAN INDICATES THE EXTENT TO WHICH YOU  
SHOW THE GIVEN CHARACTERISTICS

Press SPACE and you will see the scores, indicated on a bar chart.

	B   A	
EXTRAVERSION		INTROVERSION
EMOTIONAL STABILITY		INSTABILITY
PSYCHOTICISM		SUPEREGO
MARITAL SATISFACTION		DISSATISFACTION
RADICALISM		CONSERVATISM
TENDERMINDEDNESS		TOUGHMINDEDNESS
FEMINISM		ANTI-FEMINISM
MASCULININTY (SOCIAL)		FEMININITY
HIGH LIBIDO		LOW LIBIDO
SEXUAL SATISFACTION		DISSATISFACTION
MASCULINITY (SEXUAL)		FEMININITY

On pressing <SPACE> you will be returned to the Questionnaire Menu from which you may select the option of running another questionnaire or of returning to the Main Menu. If you EXIT from this menu by typing 9, please remember to save your results so far.

(Note: If you have a BBC Micro, you have the option to print out your results when you select 9 (EXIT) from the Questionnaire Menu. Follow the instructions given on screen.)

## 2. Save Results

This option allows you to save the results of one or more questionnaires either for future reference or (if you have not yet answered all the questionnaires) for you to add to at a later date. You must save each set of results - that is, for either one or two people - on a different tape, or the new information will erase the old.

If you do not save the information before ENDING the program, you will lose all results so far.

## 3. Get Saved Results

If you select option 2 the following is shown:

DOES YOUR CASSETTE DECK HAVE MOTOR CONTROL? (Y/N) Y

PLACE YOUR PERSONAL RESULTS TAPE IN THE CASSETTE DECK NOW

PRESS PLAY ON TAPE

Follow the instructions on screen and your previously-saved results will be loaded and displayed for you to add to.

WARNING - Using this option will erase all scores already held in the computer.

## **Questionnaire Results**

### **Personality Profile**

There is no ideal score representing the ideal combination of personality traits. No direction your personality takes indicates either superiority or inferiority. An extraverted personality might make you more popular at parties, but being an introvert is likely to get you better exam results. The same holds true for emotional stability versus instability. An excess of instability may be a bad thing, leading to neurosis and unhappiness, but a lesser degree of the same may be related to artistic ability and expressiveness. Likewise, a very stable person may have such a lack of emotion that he or she is unable to appreciate music and other artistic sources of satisfaction. It is all a matter of degree. Women tend to score higher than men on instability.

A typical behaviour pattern for a person achieving high scores in psychoticism would make him or her emotionally cold, egotistical, aggressive, antisocial, lacking in feeling for interpersonal relations and generally hostile. At the opposite end of the psychoticism scale is the 'superego' - the altruistic, emotionally responsive, friendly, helpful and warm personality.

This matter of psychoticism, a dimension independent of extraversion/introversion and stability/instability, has a high degree of difference between men and women, males typically having a higher score than females. Those who score highly on psychoticism tend to be unhappy in marriage no matter who they marry. Studies have shown, however, that there is a higher chance for happiness if it is the man who has the higher score for psychoticism than the woman. Note particularly that even quite high scores on emotional instability may indicate an artistic temperament, a high score on psychoticism originally and creativity. If your answers lead you to the melancholy conclusion that you are not perfect, be reassured: none of us is!

### **Marital Satisfaction Inventory**

Compare your assessment of your happiness with that of the reasonably average marriage. If you score on the mean line, then your marriage is about average. Any score towards the satisfaction end of the scale means you are happier than most married couples, any score towards the dissatisfaction end; less happily married.

### **Social Attitudes**

Studies show that political beliefs and social attitudes do affect the chances of success in marriage. Two aspects are measured in this questionnaire: a political dimension, radicalism versus conservatism, and an attitude dimension, which measures what we call toughmindedness versus tender mindedness.

People do seem to marry others with similar attitudes on these issues, and perhaps this is another variation on the general observation that like prefers like on issues of socioeconomics, education, residence, living habits, and so on.

The degree of similarity on the radicalism/conservatism scale does not seem to matter as far as marital satisfaction goes. But couples in which the man was more toughminded seemed to have happier marriages; tendermindedness in the woman seemed to matter to.

### **Feminism/Anti-Feminism**

If some radicalism in general indicates a tendency towards marital dissatisfaction, it would only stand to reason that feminism, a branch of radicalism, would add to the troubles within marriage. The very nature of feminism, with its tendency towards confrontation as opposed to accommodation, starts the spark, and this means marital difficulties. Let it also be said at this point that the emotional manipulation found in traditional domestic women leads towards marital dissatisfaction as well. Again, extremes seem to cause the problem.

### **Masculinity/Femininity**

This scale is different from the others. It is, in fact, two scales: masculinity on the left and femininity on the right. Again, the centre line represents the average points on the two scales. But SCORES BELOW THE AVERAGE ARE NOT SHOWN. The lowest point that can be seen on each scale, therefore, is the point of average masculinity and average femininity. If you have an average or above average level of masculinity and of femininity, you will receive two scores, one on each scale. If you only receive a score on the masculinity scale, that means that your femininity score is below average, and not shown (and vice versa). If you receive no scores, both your masculinity and femininity scores are below average and therefore undifferentiated.

Remember that these scales are based on our IDEA of what characteristics are 'masculine' and what are 'feminine'. It should be made clear that everyone - both men and women - possesses characteristics from both the male and female scale.

The happiest couples seem to those where both parties have high masculinity scores **and** high femininity scores. The next happiest group contains those couples where the man is very masculine (or high on both scales) and the woman high on the feminine scale. The least happy couples were those where neither partner had a score on either scale.

### **Sexual Attitude Inventory**

This questionnaire measures three different scales: libido, sexual satisfaction and masculinity.

The first measure we deal with is that of libido, which is the psychological term for sex-drive. There are, of course, very strong sex differences, with males in general scoring higher on libido than females but there is also a certain amount of overlap. Some women have a stronger libido than the average male, and some males have a weaker libido than the average female.

The next measure is of sexual satisfaction. I should say at once that sexual satisfaction is completely independent of libido. It is very possible for a person with a low libido to be as satisfied with his or her sex life as a person with a high libido. Study after study has shown this conclusion to be essentially correct.

The third scale is the masculinity scale. This scale weighs those traits which most clearly differentiate between men and women. It is fairly similar to the libido scale, and, just as men score higher on libido, so they will score higher on masculinity than will women. I include this scale simply as a point of interest to the reader who may be curious to see how his or her scores on it compare with others. High or low scores are simply characteristic of a given person. There is absolutely no reason why a man or woman should score near the mean. Any score can be compatible with contentment and marital happiness.

# IAN BOTHAM'S TEST MATCH

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Cricket  
Author : David Crofts  
Standalone Release(s) : 1985: IAN BOTHAM'S TEST MATCH, Tynesoft, £7.95  
Compilation Release(s) : 1988: MICROVALUE GOLD, Tynesoft, £3.99  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : TYNESOFT, Unit 3 Addison Industrial Estate, Blaydon, TYNE & WEAR NE21 4TE. Tel: 091 414 4611  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Experience a thrilling and challenging game of cricket from the comfort of your armchair.*

- \* *Three different Matches available:*
  - \* *Limited Overs*
  - \* *One Day Match*
  - \* *Test Match*
- \* *Full Pitch visible at all times*
- \* *Placement of Fielders and type of ball bowled controlled by the player*

*C.C.I. says, 'A good game; fun even for myself who normally detests cricket.'"*

## Start-Up Options

Note : If no input is entered within approximately 30 seconds, the computer will enter a demonstration mode. To exit this, hold <SPACE> down until screen clears.

### 1. Choose teams : C or Q

Pressing C lets you use the present computer team  
Pressing Q lets you enter your own 22 players

### 2. Number of players : 1 or 2

By pressing the <SPACE> bar, the number of players will alternate between 1 and 2.

A one player game will let you play against the computer.

A two player game means two players using the keyboard at the same time.

Having selected the number of players with the <SPACE> bar, press Q.

### 3. Game Type

There are three types of game available;

LIMITED OVERS - 10 six ball overs

ONE DAY MATCH - 20 six ball overs

FULL TEST MATCH - with two full innings

To select one, press the <SPACE> bar until required game is displayed then press the Q key.

### 3A. Placing The Fielders

When one of the fielders appears at the bottom of the screen, use the directional keys to move the fielder to the desired position.

1. A fielder can only be placed in an orthodox cricket position. Having selected the fielding position of a player, press Q to place him there.

2. A - Up    Z - Down    X - Left    C - Right

Having placed the last player on the field, the match can commence.

### 3B. Batting

To bat, there are four directional keys plus the actual strike key.

These keys are:-

> - Forward left    ? - Forward right

+ - Behind left    \* - Behind right

To strike the ball, hit the <RETURN> key within one-tenth of a second of the ball stopping (This will take time but in time, an 80% success rate should be achieved). Do not attempt to anticipate the ball when it is moving, always wait for the ball to stop before playing your stroke. If a directional key is held down whilst the <RETURN> key is hit, the ball will move in that direction.

### **Bowling**

Choosing bowler type:-

Press <SPACE> to step through the options. These are:-

FAST, MEDIUM, BOUNCER, SPIN

When the desired option is reached, hit the Q key to select that option. This will be used during that over.

To commence bowler's run, hit Q.

### **Fielding**

If the ball is hit, and it runs to a fielder, he will automatically return it when controlled by the computer. However, the <SPACE> bar should be hit when controlling a fielder at the precise moment the ball reaches him. By moving the cursor using the four directional keys over a fielder and hitting <SPACE>, you will take control of the fielder. Moving it to the ball and hitting Q at the moment of contact will cause the fielder to return the ball or catch it. If you miss it, the ball will continue and award the batting team four runs.

### **In General**

Scan scoreboards = <SPACE>

Once committed to running, a player will continue to run until (1) he is run out or (2) the <RETURN> key is released (even if only for a split second) or (3) he achieves four runs. A bowler can be changed at the end of each over by pressing <SPACE> at bowler type and hitting Q as desired option.

**Instructions' Source** : MICROVALUE GOLD (Tynesoft) Inner Inlay

### **Review (Electron User)**

Rain may stop play on a regular basis at the Oval but it should cause few problems if you're playing IAN BOTHAM'S TEST MATCH. The armchair enthusiast can bow put willow to leather all year round. The game allows one or two players to compete over 16 overs, 32 overs, or a full innings test match.

When playing against the computer you are always put in to bat first. A choice of four strokes is available. They are selected by holding down the appropriate key and pressing the <RETURN> key to execute the stroke as the ball approaches.

The timing here is very difficult to judge. Unfortunately no matter what stroke the batsman plays he always performs the same movements. Once your side has bitten the dust - and that won't take long - you position your fielders before bowling. Players are moved using a combination of four keys and set in position by pressing a fifth. On several occasions I found that this positioning key had to be pressed numerous times before a player was released.

You are provided with a choice of four bowlers each having a different pace or style. Having selected fast, medium, spin, or bouncer, just press the Q key and the bowler will make his run up.

When fielding a ball you first move a cursor to the player you wish to move before you can begin to chase the ball. Normally by the time you have made your selection the ball has reached the boundary.

An element of humour is provided by a little duck, complete with bat and cap, which leaves the field with a tear in its eye as your exit for no runs.

The graphics used in the game are quite reasonable, it is just a pity that the game is so awkward to play.

## Instructions

Instructions currently in the following format:

### Hints

- \* Avoid firing continuously as this depletes your charge line
- \* The holder of a door-opening card can get a non-card holder through the door by standing in the doorway to let him pass
- \* Where possible, use the droids to destroy their own lifts
- \* On each deck, check the time it takes before a forcefield comes back on before risking passing through it

### About the creator of Icarus

It has taken Julian Avis at Powerhouse Software three months of coding followed by three months of intensive game testing and fine-tuning to create ICARUS. His first claim to fame was the top-selling DUNJUNZ. He used some of the techniques to develop ICARUS, reducing the number of players from four to two, adding a wide range of exciting new features and concentrating on refining the gameplay. Julian is currently developing a fast-action space shoot-'em-up for the BBC Micro.

**Instructions' Source** : ICARUS (The Power House) Back Inlay

### **Review (Electron User) - "Zap 'N Blast Spectacular"**

While transporting a shipment of battle droids to the Andromeda system, the starship Icarus' master computer suffered a major malfunction. Having lost navigational control, the Icarus is on a collision course with the sun and if its matter drive explodes there will be an almighty bang.

ICARUS is a one or two player game written by Julian Avis, the author of DUNJUNZ. By reducing the number of players from four to two, Julian has been able to double the playing area available to each player - and also reduce the congestion around the keyboard.

To reach the ship's computer you have to fight your way through 20 decks of droid-infested starship. Laser in hand, you blast away at the automation army. More astute players will soon notice that no matter how many metal menaces you destroy, their numbers remain constant. This is because reinforcements are free to enter the deck via the service lifts - your main objective must be the deactivation of these.

Great care should be exercised when blasting a lift as the highly polished doors will reflect your laser bolts. Not until you have de-activated every service lift on a deck will you be allowed access to the emergency lift - and the next level.

The duration of your solitary life is determined by a combination of factors, which are displayed as a series of bar graphs. Each player's damage and armour reflect the degree of injury that can be inflicted and sustained.

Charge affects the rate at which your laser recharges when not in use. The final graph is the one showing the state of your health. Allow this to reach zero and you'll no longer have to worry about the spaceship's appointment with the sun.

Your chances of completing the mission can be greatly increased by collecting tokens. Depending upon the type, they can be used to boost firepower, armour, or recharge rate. Credit tokens can be inserted into vending machines in exchange for health points.

The two-player option prevents ICARUS from becoming a monotonous zap and blast game. Your way will often be barred by security coded force-fields and if two people are playing one can concentrate on cracking the code while his partner fends off the battle droids.

The only let down is the speed. Although it is normally quite fast, the game really slows when there are a lot of aliens on screen. A SLOGGER Turbo makes the world of difference.

As a one-player game ICARUS is superb. Play it with a friend and you'll experience the excitement of true two-player arcade action.

# ICE HOCKEY

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Ice Hockey Match  
Author : Margaret Stanger  
Standalone Release(s) : 1986: ICE HOCKEY, Bug Byte, £1.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : BUG BYTE, Liberty House, 222 Regent Street, LONDON W1R 7DB  
Tel: 01/439 0666  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Ever thought you would be any good with a hockey stick? Can you be the King of Ice Hockey? On the other hand, who gives a flying puck if you don't win? It's only a game - by Michael Stanger. Fast, Furious and Very Slippery! Two Player option."*

## The Game

Each team of six players has a goal minder, two defencemen and three forwards.

Play is commenced and after a goal has been scored, by a face-off. The puck is dropped in the centre of the rink between the sticks of the opposing centremen. At other times, the puck bounces off the sides to come back to play. The two blue lines divide the playing area into three zones, defence, neutral (centre) and attacking zones. Only three players may be in their own defence zones when the puck is outside it.

A player may only enter the attacking zone in line with or behind the puck or puck possessor. He may not take a pass from a team mate who is at the moment of passing, in another zone. To stay on-side, a player can only pass to a colleague in the same zone (also to anyone in his own half if he is in his defence zone).

## The Action

For a one player game, the user controls the red team, and for the two player game the left hand player controls the left red team and the right hand player controls the blue team.

In the red teams' neutral and attacking zones, the centre player can be controlled by the keys on the joystick and will be highlighted in magenta. In the defence zone, the goalkeeper will be user-controlled in the same way. For a two player game, the user-controlled blue team player will be highlighted in green. The other players will be computer-controlled.

When he presses <SPACE> or a fire button, he can hit the puck forwards.

The score-board and time will be shown at all times; when the time reaches 200, the game will be over. A new game will start after a short pause.

## Game Controls

### One Player:

Z - Left, X - Right, \* - Up, ? - Down

### Two Players:

Reds: Z - Left, X - Right, Q - Up, A - Down

Blues: < - Left, > - Right, P - Up, L - Down

M/H - Music On/Off, F/C - Freeze/Continue

<SPACE> - Hit the puck, <SHIFT> - Shoot the puck

**Instructions' Source** : ICE HOCKEY (Bug Byte) Back and Inner Inlay

### **Review (Electron User) - "Sloppy Simulation"**

Fancy skimming over the ice and flicking the puck into the opponents' net? That's what's on offer in this team game simulation for one or two players from Bug-Byte.

The rules are all well explained on the cassette inlay and the keys you need to use are displayed on the screen at the start of the game. In fact, it's a well-packaged budget-priced game.

You start with a face-off in the centre and you can see the central third of the rink. If the puck moves to either end the appropriate third of the pitch is drawn. This redrawing is rather sluggish on the Electron and makes the game seem disjointed. There is a permanent on-screen display of the score and the amount of time played.

Ice hockey lends itself to being a computer game. It is only six-a-side and has strict rules about player positions, so the number of characters moving on the screen is limited and should make for a fast game. Also, a small puck is used rather than a large wall which should help with the speed of drawing.

The playing rules are simple too. There are no throw-ons to cope with as the ball bounces off side walls, and in this well behaved version there are no fouls or sin bins.

With so many advantages over football, it's a pity that this game does not really work. The players do not glide gracefully over the ice, but jerk about in a manner that would cause real players to fall over on the ice.

There seems to be no way of giving the puck a satisfying thwack up to the other end of the rink. Instead, you can only push it a small distance in front of you.

One of your worst problems is making sure that your computer-controlled team-mates do not get the puck. If they do, they run up to the goal and spend the rest of the game not scoring and not passing.

As you try your hardest to wrest the puck away from them, the noises (hardly sound effects) will drive you to distraction. You'll wonder where the music promised on the cassette inlay has got to: the suggested keys for music on and off have no effect.

If the opposition get the puck they will run it up the pitch and spend ages failing to score or pass. Once again the noises are intolerable and the best route out is to quit the game by pressing the <ESCAPE> key.

It will be small consolation to Electron owners to know that if they load the same code into a BBC Micro, all the problems vanish and the game becomes fast, smooth, musical and much more fun.

I really wonder if Bug-Byte checked ICE HOCKEY on the Electron. I feel sure the company can't have intended to let such a poor game tarnish its reputation.

## *Professional, Originally Released On Cassette Only*

Game Type : Utility; Tape Copier; Eessential Utility  
Author : Peter Donn  
Standalone Release(s) : 1984: IMAGE, Peter Donn, £5.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : Peter Donn, 18 Tyrone Road, Thorpe Bay, ESSEX SS1 3HF  
Disc compatibility : Not Applicable

### Instructions

Congratulations on buying the 'Image' V.2 tape copier. Once you have used it a few times, I'm sure you will agree it is the best available on the market. I wish you well to use it. Please use it for strictly legal purposes.

The 'Image' tape back-up system is composed of two programs. The first is the program you use for 99% of software. It can make back-ups when the programs contain CTRL codes in the filename, are locked, contain false addresses, are files, are very long, or are 300 or 1200 BAUD, or any combination of the above. In addition, it can be used to lock or unlock programs. The second is very specialised. It loads in programs not as programs, but simply as binary data. This should be used when the first program does not work. This program seals with programs that are recorded with changing filenames, extremely irregular CTRL blocks, or are composed simply as a continuous stream of binary data. Using this program, you can even back-up a program one block at a time.

Electron Users: If you have a Plus 1 attached to your machine, type:  
?&2AC=0 <RETURN>, before running 'Image'.

### How To Use The First Program

This program is extremely simple to use. To load it enter \*RUN <RETURN>. Select key '1' to load in the program to be copied, and key '2' to record a copy on cassette. The UP and DOWN cursor keys control the 300 or 1200 BAUD rate. The program will record programs up to &73 blocks long (BBC version).

### Locks

On the bottom left hand corner of the screen you will see the message 'Last prog'. To the left of it is a single letter. If this is an 'L' the last program you have just loaded in was locked. If it was a 'U' then it was not locked. Underneath this message is another one - 'Re-lock' and to the left of this is another letter. If it is a 'Y' then the program to be recorded on cassette will be locked, and if an 'N' then it won't.

You can change this status by using the keys 'Y' and 'N'. If the program is locked, ths letter will automatically change to a 'Y' as soon as it has loaded, assuming you wish it to remain locked when you record it on cassette. If you want to unlock it, then press 'N' just before you record it.

Likewise, if a program is initially unlocked, then this letter will change to an 'N' presuming you want it saved unlocked. Press 'N' just before you record it if you wish it to be locked on cassette.

It should be noted that locked programs can only be \*RUN'd, as using CHAIN or LOAD will give a 'Locked' message.

### Locking a BASIC program

As you can only CHAIN a BASIC program, before it can be locked it has to be converted so it can be \*RUN. To do this, follow the procedure below.

Load in or type in the BASIC program that you want converted. LIST the program to check it is there. Now type:

```
P.~PAGE
P.~TOP
```

Each time you do this you will get a number coming on the screen. Let us call the first number X, and the second Y. Type the following:

```
PAGE=&A00
```

and load or type in CAREFULLY the program listed below. RUN the program. The computer will ask you for two values, one after the other. The first time, you enter your value X, the second time your value Y, that you obtained before. After entering both values, the computer will tell you how to SAVE the program onto cassette. To load and RUN this program you may type \*RUN or CHAIN, unless you have locked it (using 'Image') in which case you have to \*RUN the program.

The program follows:

```
10REM *RUN BASIC (C) PETER DONN '84
20MODE7
30BTB$="OLDCRUNC"
40INPUT""ENTER PAGE :&"A$
50INPUT"      TOP :&"B$
60PA%=EVAL("&"A$)
70AD%=EVAL("&"B$)
80P%=AD%:[OPT2
90LDA#PA% DIV 256:STA&18
100OLDX#0:LDA#138:]
110FORSCAN%=1TOLENBTB$
120CH$=MID$(BTB$,SCAN%,1)
130IFCH$<>"C" [OPT2:LDY#ASCCH$:JSR&FFF4:] ELSE [OPT2:LDY#13:JSR&FFF4:]
140NEXT
145P%=P%-3:[OPT2:JMP&FFF4:]
150PRINT""ENTER:"""*SAVE""PROG""";~PA%;" ";~(AD%+&30);" ";~AD%;" ""TO
SAVE."
```

### **How To Use The Second Program**

The second program will not run on the Electron, but is included in the package in case you have access to a BBC Micro, which the program WILL run on.

Only use this program when the first program does not work. To load this program from cassette, type \*RUN <RETURN> and load in the second program (The third file on the Electron tape). Once it has loaded and is running, to load the program or data to be copied in, press the 'A' key. A 'K' will appear in the data window, meaning 'Press a key'. At this point, put your cassette in your cassette recorder (if it isn't already there) and press PLAY. As soon as you hear the high pitch tone at the start of the program, press a key. Once you have done this an 'L' will appear in the data window meaning the computer will accept the program data as soon as it is encountered. As the data is read in, characters will flash by in the data window, showing that the data is being read in successfully. As soon as the last part of the program has been read in (listed to the program playing on the cassette constantly so you know when it has reached the end) you must press the <ESCAPE> key.

To record the program onto a blank cassette, press 'B' or 'C' depending on whether the program was recorded as Blocks (lots of short sections with gaps in between - how normal program are recorded) or as a Continuous stream of data. After choosing an option, a 'K' will appear in the data window meaning 'Press a key'.

Now you must put your blank cassette in your cassette recorder and press PLAY and RECORD. After doing this, press a key, and an 'R' will appear in the data window showing that the program is now being recorded on the cassette. The data window is out of action throughout the duration of recording. The <ESCAPE> key is also out of

action during recording, although you can use it to get back to the menu at the very start of choosing the record option, or, if you've chosen the Block record option, between recording any two blocks.

Another point should be made. Should you accidentally press the 'A' key instead of 'B' or 'C' when you want to record, it will reset some internal pointers and regrettably you will have to load the program again.

This program can only deal with programs up to &60 blocks continuously. If a program is longer than this do half the program at a time (press <ESCAPE) after loading the first &40 blocks for example and save it on cassette. Then load in the rest of the blocks and save them on cassette).

No error checking is done in the program, so before you load in the program please make sure that the cassette controls are in the optimum position. Should the program fail to make a correct copy of your program, try again, as it is probably due to it loading incorrectly.

When loading any of the 'Image' programs in, it is important you use the word \*RUN. Abbreviations are not guaranteed to work.

Should your 'Image' cassette at any time become damaged, please return it together with 1.50, and it will be replaced.

**WARNING:** This tape back-up copier is NOT to be used for illegal purposes. Its use must be confined to making back-up copies of your own personal software, and these copies must be used by you only.

# IMOGEN

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade Adventure Of Intriguing Premise; Monochrome  
Author : Michael St Aubyn  
Standalone Release(s) : None  
Compilation Release(s) : 1988: PLAY IT AGAIN SAM 5, Superior/Acornsoft, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : CDFS E00, DFS E00

## **Instructions**

### **Introduction**

IMOGEN is an animated adventure game in sixteen sections; each loaded into memory as required.

Each section contains a number of puzzles based on a particular theme. It is not possible to be killed off although the number of times you can change character has been limited. The number of permitted changes is given at the top-right of the screen.

### **Background Story**

When the townspeople of Egmain were besieged by a monstrous firebreathing dragon they called for the assistance of Imogen, a local wizard with powers of metamorphosis. Responding to their pleas, he transformed himself into a dragon even more powerful than the real one. The monster was quickly destroyed but the strain of the transformation was so great that when Imogen returned to his normal state, his mind snapped. He forgot his friendship to the townspeople and used his power to destroy their crops, burn their houses and fill the sky with black clouds so that the town was in permanent night. After a few weeks of this, a spokesman set forth to seek the advice of the greatest and wisest wizard in the land.

When the Great Wizard had heard the story he said, "This insanity will pass, but until that time he must be imprisoned. I shall design a cave to hold him and your craftsmen will construct it in the mountain that overlooks the town." "How will we know when to release him?" asked the spokesman. "He will free himself when the time is right. I shall provide the spell for his release and split it in twain four times. The sixteen pieces will then be placed within the cavern and the route to each guarded by a test of stamina and intelligence. Only when he is fully recovered will he be able to retrieve the entire spell and set himself free".

And so the cavern was constructed, and with the Great Wizard's help, Imogen was secured within the first section, ready to begin his quest for freedom.

### **Objective**

The objective is to assemble all sixteen spell fragments by solving the puzzles in each section of the game. The completed spell can then be activated to escape the cavern. As a wizard, you can hold and use objects discovered in the caves, and also transform yourself into different creatures - a monkey to climb ropes and trees, and a cat to leap rocks and wide chasms. It is possible to swap between these characters at any stage in the game.

To enter a new section of the adventure, use the spell fragment in the previous section, which will transport you directly to your destination.

## **Wizard**

Walk left and right using the motion keys. Press the action key at the same time to jump. (The action key on its own will have no effect unless you are holding an object.)

### **Monkey**

Same as the wizard except you can jump on the spot by just pressing the action key. Also the monkey can use the ropes - press the action key alone to climb up, release to slide down. To hold your position press the action key and either or both of the motion keys, and to jump off press only the motion key for the direction you are facing. (You cannot turn around on a rope nor can you jump off backwards.)

### **Cat**

Same as the wizard except the height and range of the leap are greater. The distance covered by the cat while jumping is increased by holding down the motion key during flight. For a short leap release the motion key soon after take-off.

You can walk almost halfway over the edge of a platform before starting to slip. This is useful to know when attempting to cross wide gaps as you can delay the leap until the last moment.

When jumping onto a ledge keep the motion key depressed so that you start walking as soon as you touch ground - this minimises your chances of slipping backwards. If you fail to reach a platform when jumping from a rope, try again from a higher point.

All aspects of the game other than the motion of the main character are controlled via icons at the top of the screen. To use a particular icon move the pointer over the top and press the SPACE.

Musical Note	Exclamation Mark				
Sound On/Off	Game Information	Cat	Monkey	Wizard	Held Object

### **Control Icons**

Sound On/Off - Toggles the sound effects. A dot is present in the top left corner of the icon if the sound is on.

Information - Gives information about your current situation, including the section password (on the BBC Micro version). A second press of the SPACE bar will reveal a list of all sixteen sections indicating those that have already been completed.

### **Character Icons**

The next three icons are used to control the wizard's power of metamorphosis. To change into a cat for example, move the pointer to the cat icon and press SPACE.

### **Object Icons**

During the game you will come across various objects that can be held and used. To pick one up simply touch it - it will vanish and its icon will appear at the top of the screen. It can then be held by changing into the wizard, moving the pointer over the object icon and pressing SPACE. The object will appear in the wizard's hand and can be used by pressing the action key, provided that the wizard is not moving at the time. What happens next depends on the nature of the object. It may fly into the air, make a noise, burst into flames or do something quite different or nothing at all. You can walk and jump as normal while holding an object, but if you need to remove it from the wizard's hand, you can do so by selecting the wizard icon. The spell fragments are objects like any other, except that when you use one you will be transported to the next section of the game.

If you have collected all sixteen fragments, you can activate the entire spell by using any one of them.

## **Game Controls**

### **Controlling The Characters**

Z - Left, X - Right, <SHIFT> - Action

**Using The Icons**

> - Move Pointer Left,    ? - Move Pointer Right,    <SPACE> - Select

# IMPACT

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Bat 'N Ball Style  
Author : Gary Partis  
Standalone Release(s) : None  
Compilation Release(s) : 1988: IMPACT, Acornsoft, £9.95  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : AUDIOGENIC, Winchester House, Canning Road, HARROW HA3 7SJ  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Trapped - in a 1970s arcade game! Every escape route is blocked by a wall of brightly coloured bricks. Powerfully addictive, IMPACT has 80 built in screens, but if you prefer you can design your own - as hard, as simple, as much fun as you like. Hidden on each screen are special tokens - catch them if you can. Use them to buy one of nine powerful weapons, or keep them until the end of the screen to score a bonus. If you thought the fun had gone out of computer games, then IMPACT is the game that'll change your mind!"*

*"Colourful, fast, noisy and addictive...superb...No question that it deserves its Game of the Month status."*

- A & B COMPUTING

## Getting Started

The object is to demolish the wall on each screen - there are 80 in all. When you complete a screen, a password for that screen is displayed - this allows you to start the game on that screen, or to edit it using the designer.

Press RETURN to start the game, then again to launch the ball (after two seconds, the ball will launch automatically). Use the Z and X keys to move the bat left and right to hit the ball against the wall. If you miss the ball, you lose it - you start the game with five. Whenever the ball is caught on the bat, you can adjust its position by pressing the \* key.

Most bricks are destroyed with a single hit from the ball, but some need to be hit more than once, whilst others are not only indestructible but also invisible.

## Aliens

Various alien life forms move about the screen as you play. Although they are not harmful, they can interfere by deflecting the ball. On some screens, the aliens drop small yellow stun bombs - if one of these hits the bat, it is paralysed for about a second. Aliens are destroyed on contact with either the bat or the ball. Each alien destroyed scores 1,000 points.

## Tokens and Weapons

Some bricks contain yellow tokens which can be used to purchase weapons so catch them if you can. Any tokens unspent at the end of a screen score 1,000 points each (maximum 9,000 points). The nine possible weapons are represented by icons, and the weapon currently available for purchase is indicated by an underline. Press \* to buy it.

### Slowdown - 1 token

Halves the speed of the ball. May be selected more than once if you collect more tokens.

### Magnet - 2 tokens

Allows you to catch the ball and hold it (for about two seconds).

**Divide - 3 tokens**

Splits the ball into three.

**Wide - 4 tokens**

Enlarges the bat.

**Torch - 5 tokens**

Lights up invisible bricks.

**Laser - 6 tokens**

When selected, you can fire laser bolts by pressing RETURN.

**Smart bomb - 7 tokens**

All aliens are removed from the screen and do not reappear.

**Missile - 8 tokens**

Up to three missiles can be launched, one at a time, by pressing RETURN. Missiles can destroy multi-hit bricks with a single hit.

**Force field - 9 tokens**

An invisible force-field encircles the ball and allows it to smash through bricks and aliens without being deflected. With the aid of the force-field, the ball can pass through, but not destroy indestructible bricks.

All weapons other than torch are lost when you lose a ball, or at the end of a screen. Some cannot be used together, e.g. laser and missile or magnet and divide - choosing one will cancel the other.

**Bonuses**

An extra ball is awarded after 50,000 points have been scored, and for every 50,000 points thereafter. On some screens you can gain an extra ball by destroying, in order, bricks marked with the letters B-O-N-U-S.

**Stopping the Game**

You can abort the game by pressing ESCAPE. Press P to pause the game, O to restart. The sound can be turned off by pressing Q; press S to re-enable the sound.

**Designing Your Own Screens**

You can redesign any of the 80 screens PROVIDED you know the password for the screen. Press E when the high score table is displayed. When you have designed a screen, press S to save it in memory.

Use the Z, X, \* and ? keys to move around the screen and press RETURN to draw a brick. There are fifteen types of brick - types 01-07 and 09 are standard bricks in various different colours, 08 gives a multi-hit brick and 15 an invisible, indestructible brick. Brick types 10-14 display the bonus letters B-O-N-U-S. To erase bricks already drawn select type 00 and press RETURN. Use < and > to select the required brick type.

The points scored by destroying a brick depend on the colour, and vary between 100 and 400 points.

**Instructions' Source** : IMPACT (Audiogenic) Back and Inner Inlay

**Review (Electron User) - "Feeling Bricked In?"**

IMPACT is a masterpiece of gameplay involving a wall of bricks, a bouncing ball and a bat with which you must keep the ball in play until all of the bricks have been demolished.

IMPACT is a conversion from the Atari ST, but you'd never know it. Unlike most game conversions, which owe their heritage to some super-micro or other, IMPACT exhibits

none of the tell-tale signs. All too often the programmer commissioned to produce a game conversion bites off more than can be chewed.

Gary Partis has come up with a game which looks and feels as if it was designed specifically for the Electron, and yet has stayed very close to the original.

If the game's theme sounds familiar, you're right. IMPACT has its origins way back in the old game of BREAKOUT. However, it is as different from BREAKOUT as a CRAY III mainframe is from a ZX81. For a start, the stars in the smoothly scrolling starfield move at different speeds. Nothing to do with the gameplay, but indicative of things to come.

The multi-coloured bricks - achieved in Mode 5 by the clever use of stippling - are arranged in quite a devious fashion. On the lower levels you simply demolish them, but as you progress past each screen different types of brick start to appear.

First of all come bricks which need to be hit more than once before they vanish, and later on there are some bricks which are not only indestructible, but invisible as well.

Adding to the fun are various aliens floating around the screen. Although harmless, if the ball touches them it can be badly deflected.

On later levels some aliens drop stun bombs, and if one of these hits your bat it will be paralysed for a second or so - lethal if the action is coming thick and fast at the time.

At the bottom right of the screen is a display panel showing nine different weapons which may be brought into play - the difficulty lies in obtaining them.

Some bricks, when destroyed, release yellow U-shaped tokens which float to the bottom of the screen, flipping end over end as they go. Catching one advances an indicator on the weapons panel, showing you which one you are currently entitled to buy - the more tokens collected, the better the weapon.

Pressing the : key selects the currently indicated weapon, which will remain active until either you are killed or you have completed the screen. Some of the weapons are:

Magnet: Allows you to hold the ball against the bat, letting you move to a better position before releasing it.

Torch: Once selected, this will light up invisible bricks for the remainder of the game.

Laser: Allows rapid fire to quickly destroy bricks.

Missile: Three can be launched, one at a time, after selecting this weapon. They can destroy multi-hit bricks in a single go.

Force field: Selecting this causes the ball to be encircled by an invisible force field which enables it to smash through bricks and aliens without being deflected.

Altogether eighty screens are crammed into the impressive game, and this brings us to the most interesting part of the program - the screen designer. Each time you successfully complete a level, a short password is flashed on the screen which, when entered into the screen designer later on, allows you to edit that particular level to your own liking.

The screen designer is selected from the high-score display. You will be asked to enter the password for that level, after which you are presented with the selected screen, which is now yours to do with as you will.

The Z, X, / and : keys move the editing cursor around the screen, and pressing <RETURN> places a brick at the current position. Altogether there are fifteen types of brick to select from, and the < and > keys move up or down through the brick types, displayed each one together with its number at the bottom right of the screen.

Here lies my only complaint. No key delay is built into the screen designer - as soon as one is pressed it begins repeating, and it is sometimes quite hard to stop the cursor exactly where you want without overshooting. The same applies to selecting a brick type; more often than not I found myself having to back-pedal.

These are minor points, however, and certainly don't detract from the delight of finally playing some of your own customised screens. You can save all eighty to tape, which means that you can swap your favourite screens with other IMPACT enthusiasts' creations.

IMPACT is now one of my all-time favourite Electron games, and it will take a rare program indeed to dislodge it from that position.

## Review (Electron User) - "Mission Worth Waiting For"

Professor Elvin Atombender, well known computer genius and psychopath, has hacked into the military computers of the major nations. Within six hours he will have deciphered the launch codes and started World War Three. This is how long you are allocated to penetrate his underground stronghold and find the control centre.

The professor's hideaway is a 32 room complex criss-crossed by a network of lifts and it is in one such lift that your mission begins. Exits to the left and right can be explored or you can press the down key and the lift will descend to the next level.

Your footsteps echo as you leave the lift and run along the screen corridors - running off the screen causes the adjoining room to be displayed. This is made up of a series of catwalks, some of which can be accessed using mini lifts. All the rooms are patrolled by the professor's robots which are sensitive to movement and armed with high voltage electrodes.

Using the lifts in the correct sequence will help you to avoid most confrontations with the metal menaces. When an encounter is unavoidable, you must rely upon your athletic prowess and split second timing to somersault over the approaching robot.

To enter the professor's control room you need a nine digit code, doled out a digit at a time as you complete a series of sub-puzzles. Puzzle sections are hidden in the furniture to be found in each of the rooms, as are passwords which can be entered into any of the professor's security terminals.

You search the furniture by standing in front of it and pressing the down key. A searching indicator is displayed, and you keep your finger on the key until the bar reaches zero. At this point you will be told what you've found but quite often you won't find anything.

All rooms contain at least one security terminal. Accessing this will enable you to immobilise the robots for a while or reset the lifts to their original position. The robots only suffer a temporary paralysis so be prepared to take evasive action at the first sign of their re-awakening.

To help you solve the sub-puzzles you have been provided with a pocket computer which can be used to manipulate the puzzle pieces that you have collected.

It has taken a few years to get here but the wait has been worthwhile. IMPOSSIBLE MISSION is a very good conversion from the Commodore original.

## Instructions

Atahualpa was the last Inca ruler of Peru. In 1532, shortly after he took the throne, Francisco Pizarro and his men landed in Peru and dethroned Atahualpa.

Many valuable artifacts were lost during this period, including an Inca statue made of gold, in the image of Atahualpa.

The location of the statue has been discovered by a Brazilian archaeologist. You have been hired by the National Geographic society to recover Atahualpa, but you are not the only person looking for the statue...

**Instructions' Source** : IN SEARCH OF ATAHUALPA (Lee Software) Inner Inlay

## Review (Electron User) - "Peruvian Adventure"

The rush of new software blood into the Electron continues with this first release from Lee Software. Although IN SEARCH OF ATAHUALPA is written using Gilsoft's Quill utility, I am quite impressed by the breadth of imagination and complexity of puzzles displayed by the author, Anthony Lee.

Atahualpa was the last Inca ruler of Peru. In 1532, shortly after he took the throne, Francisco Pizarro - a Spanish conquistador - and his men landed in Peru, ravaged the countryside and dethroned Atahualpa. Many valuable artefacts were lost during this period, including a gold statue of the Inca king.

The adventure is set in more recent times after the location of the statue has been discovered by a Brazilian archaeologist. Subsequently, you have been hired by the National Geographic Society to recover the statue, but you are not the only person in pursuit of this priceless treasure.

Load the tape and within a minute you are presented with five pages of informative loading screens which set out the scenario and help create atmosphere for the undertaking which follows. After a couple more minutes you begin your quest in earnest as you find yourself standing in a small Inca market town.

A thorough investigation of the area is recommended by using the routine E, W, N and S movement commands. I would also suggest that you try entering some buildings, reading the signs and waiting at significant points. One of the early problems you will face is how to retrieve a book from the library. Try waiting at the librarian's desk until she returns, and keep your eyes open.

Perhaps the most perplexing problem is how to get rid of the swarthy stranger who dogs your footsteps. The answer is linked to the discovery of the book and is by no means simple. Perhaps Jules Verne was right and a spot of ballooning could help.

Later in the game you will have a crevice to enter and a crevasse and river to cross. Each requires logical thought and specific action if you are to succeed and survive. There is also an excellent forest maze which needs mapping in an off-beat manner, and a spider and some vicious ants to avoid.

The creation of atmosphere and a good parser are limited by the usual restrictions of the Quill. However, Anthony has succeeded in presenting us with a real teaser of an adventure - some of the puzzles defy instant solutions - at a real bargain price. Order ATAHUALPA today.

Pendragon

**\*\*\* Second Opinion \*\*\* (Electron User)**

IN SEARCH OF ATAHUALPA is an interesting adventure, and is slightly different from the more usual trolls and goblins scenario. The puzzles are clever and the text is quite atmospheric. For a first attempt, Lee Software has come up with a commendable game.

# INDOOR SOCCER

*Professional, Originally Released On Cassette Only*

Game Type : Arcade; Football Game  
Author :  
Standalone Release(s) : 1988: INDOOR SOCCER, Alternative, £1.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+, Master 128  
Supplier : ALTERNATIVE, Units 3-6 Baileygate Industrial Estate,  
Pontefract, WEST YORKSHIRE WF8 2LN. Tel: 07977 79777  
Disc compatibility : CDFS E00, DFS E00

## Instructions

INDOOR SOCCER is a two player indoor football simulation.

The names of the teams may be altered, as may the controls and the duration of a game.

You control either the black or white player who is filled in yellow. This player is automatically chosen for you by the computer.

Control of the goalkeeper is acquired by pressing the 'Kick' key whilst the ball is in the goal mouth.

The ball will also rebound off the edges of the pitch.

# INDOOR SPORTS

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Sports Compilation; Multi-load  
Author :  
Standalone Release(s) : 1989: INDOOR SPORTS, Tynesoft, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : TYNESOFT, Unit 3 Addison Industrial Estate, Blaydon, TYNE &  
WEAR NE21 4TE. Tel: 091 414 4611  
Disc compatibility : Unknown

## Instructions

*"INDOOR SPORTS contains FOUR excellent simlations: Air Ball, Table Tennis, Darts and 10-Pin Bowling. Each is depicted in stunning graphical details and reflecting all the addictive qualities and required skills of the real thing. Play either against the computer or a partner. For Indoor Sports fans, this is definitely one NOT to be missed."*

When a game has loaded from disc, you are presented with a Menu. This allows you to change the number of players, number of games, etc. To change use the number keys on the Electron. Press Q to return to game menus on all games.

On tape version, press <ESCAPE> to load next game.

## Bowling

Move position indicator with keys : and / to choose your vertical bowling position, press SPACE and hold; this also gives the amount of spin, as shown on the Spin Meter.

Releasing the Space bar will give you the angle at which you throw (shown by the arrow). When the Space bar is pressed for a second time, the 'bowling action' position is recorded. Too late and the player will fall, too early and he'll drop the ball!!

Each player has a maximum of two bowls per frame, unless a strike is scored; this is denoted as an X on the scorecard. If all pins are knocked down on the second bowl then this is deemed as a spare and is denoted as a triangle. You play ten frames to complete the score card.

Scoring: When a 'strike' is scored, the next two bowls are added to the 'strike bowled', effectively counting double for the next throw.

When a 'spare' is scored, the next single bowl only, is added.

## Darts

Position the dart using keys Z and X for left and right. When it is in position, press RETURN and hold. The angle at which you throw will increase/decrease until you release RETURN. On releasing, the power of your shot will increase until a maximum, from which it will reset. To choose your power, press <RETURN> again.

An arrow points at the player's score boxes. This shows who is in play; Player 1 or Player 2. The game progresses until one player has a total of zero, finishing on a double, if the option is chosen.

## Table Tennis

Each game is won by one player reaching 21 points.

### Controls for Player 1

Z - Left, X - Right, C - Reverse Bat, F - Serve/Hit Ball

### Controls for Player 2

< - Left, > - Right, / - Reverse Bat, : - Serve/Hit Ball

Each player serves five times in a row, alternatively. The ball must bounce once on either side of the net when serving, once only on the opponent's side when returning the ball.

When hitting the ball without pressing the 'Hit' key, the ball will be returned either the way it came or 'reflected' depending on the direction of the bat. Actually hitting the 'Hit' key to return the ball will change the 'ball angle' depending on when it is pressed.

Points are scored by forcing the opponent to either hit the net, miss returning the ball or knocking the ball off the table without it first bouncing on the opponent's side.

### **Air Ball**

Ten points are required to win a game; these are scored by moving your 'hitter' to hit the 'puck' into the opponent's goal.

### Controls for Player 1

Z - Left, X - Right, F - Up, C - Down

### Controls for Player 2

< - Left, > - Right, : - Up, / - Down

**Instructions' Source** : INDOOR SOCCER (Tynesoft) Back and Inner Inlay

### **Review (Electron User) - "Leisure Interests"**

When Tynesoft brings out a sports simulation of any type, it's certainly something to sit up and take a look at. So INDOOR SPORTS got the treatment. There are four events on the tape - two less than its recent WINTER OLYMPIAD 88 - so I was anxious to find out whether it justified its top of the range price tag. I was to be pleasantly surprised.

First on the tape is 10-Pin Bowling. This realistic simulation is controlled by three keys, of which two are used to position your figure within the lane. All subsequent action is controlled with the spacebar - which led to some initial confusion.

After setting your position, the computer cycles through all the available levels of spin, as shown by the spin meter at the top of the screen. Pressing the spacebar sets the spin, and the computer will begin cycling through the shot angles - displayed on the lane by an arrow.

As soon as this is fixed - by releasing the spacebar - your figure begins his run-up to the line. At the right moment the spacebar must again be pressed to bowl - or so I thought - but at this point my figure kept either falling flat on his face, or dropping the bowl on his foot.

This continued until I finally understood the cassette inlay: "Press Space and the bowling action is recorded". What this rather unhelpful instruction means is that you must press it during, not after, the run-up, when your figure happens to be in the best posture for bowling. The bowl will then follow automatically when the figure reaches the line, using the previously recorded posture.

Once this sank in, I settled down to enjoy a really great game. As the ball coasts down the lane the view shifts to cover the run, and when the ball approaches the skittles the viewing angle changes to show the action from behind and slightly above the ball.

The hit itself is simulated very realistically, with some skittles teetering for a while before either toppling over or remaining upright. The frustration caused by the ball rolling straight into the gully was balanced by the nerve-wracking anticipation when it actually remained on course.

Darts is next on the tape, and as a mediocre to bad player I thought this would be one to skip over quickly. Not a bit of it. The skills needed are, of course, totally different when playing the real thing, so Tynesoft has added its own skill requirements, making this an addictive game in its own right.

You start off face to face with an accurately drawn dart board. Below is the aiming window, which is the same width as the board. To either side of this window are two meters, one for power and the other for the angle of shot elevation.

Inside the aiming window is a dart, which can be slid left and right. Slid is the operative word, because if it passes over the mid-point, a weird sort of gravity sucks the dart to the other side of the window. Hence aiming requires some concentration.

Pressing <RETURN> when the dart is where you want it sets the angle meter into action, which is in the form of a continuously growing and shrinking circle sector. Releasing <RETURN> fixes the angle and starts the power meter climbing, which is represented by three volume meter type bars. Finally, releasing <RETURN> throws the dart with the selected settings.

The scene then changes to a comfortable-looking pub, where a log fire crackles gently in the corner. In the centre of the screen, poised in front of the dart board - now hanging from the far wall - stands your figure. From behind, which is your only view of him, he could easily pass himself off as Eric Bristow.

Immediately he throws his dart. Well, it's more a flick of the wrist than a throw, but attention is focused on the dart, now flying through the air. This part is quite well done, although there is no inertia on the dart, not is its flight trajectory particularly curved.

I was both surprised and pleased to see that it was possible to hit the metal frame. I was therefore well able to match my real life performance to the Electron, thankfully unwitnessed by any grinning bystanders.

After each throw the enlarged board re-appears, showing the exact spot where the dart hit. Your score is then chalked up, by real chalk - a nice touch - and after three throws it's the Electron's turn.

In actual fact, although very competent and a consistent high-scorer, the Electron tended to hit the frame more often than I did - usually when attempting to show off by going for double-top.

Now on to Table Tennis, my favourite of the four. When the game has loaded, you are presented with a proper perspective view of a ping-pong table, with a bat floating in mid-air at either end. Four keys control your bat, one each moving it left, right, flipping it over for a back-hand stroke and hitting the ball.

Hitting it is not strictly necessary, because as long as the ball hits your bat it'll bounce back up the table. However, you won't win the game by being lazy like this. The real skill in Table Tennis is to press the hit key at the right moment as the ball approaches your bat.

This causes the bat to swing into the screen, and the direction of the rebound depends on which way your bat is facing. The actual angle is determined by the closeness of the ball to the bat when the key is pressed. The further the ball is from your bat when you hit it, the sharper the ball's angle will be as it goes back across the table.

Here lies the way to beat the computer, which seems incapable of producing clever shots for itself. Because the bats can only move at a smooth, slowish pace, you can fool the computer with a sharply-angled shot which just clips the other end of the table and the Electron won't be able to shift its bat across in time to return the shot. But if you swipe too early the ball will shoot straight past your bat's tip to lose you a point.

Pressing the hit key with the ball at varying degrees of closeness results in realistically varying shot angles, and this results in a really satisfying, skilful game.

Table Tennis conforms to the proper rules of the sport, where 21 points wins a game, and service swaps to the other player after every five serves.

Also, this event - like the other three - has several variable playing options, to keep up the interest. You can determine the computer's skill level, and the number of games required to win the match. Most importantly, you can select a two-player option, as Table Tennis really comes into its own when played against someone else.

Finally, and most interesting of all, is Air Ball, a strange hybrid of ice hockey and the old video game, Pong. You and your opponent each control a bat which looks like part of a pin-ball machine, and the object of the exercise is to hit the Smartie-shaped puck into your opponent's goal.

It's quite easy to beat the computer, even on the highest level, but it's no mean feat when there's another person at the controls. The game is fast and furious - by Electron standards - and very addictive, as long as you can find a volunteer to play against you.

Sometimes the game ends in a deadlock, with the puck vibrating furiously between the two bats - but if this is successfully broken it can gain you the advantage of sudden surprise as the puck shoots away up the field.

Air Ball is an unusual game, and it really needs the stimulus of a second player to bring it into its own. The poor old computer opponent seems to get stuck bouncing the puck off a wall more often than not, and isn't really up to much even when playing properly.

INDOOR SPORTS contains a good mixture of entertainment, addictiveness and competitive spirit. If you have WINTER OLYMPIAD, you'll be pleasantly surprised at the different approach of these programs, and I enjoyed all four immensely.

## Review (Electron User) - "Inertia In A Spin"

A new idea in Electron software? Well, not quite, there have been games like it in the past. INERTIA, however, is vastly superior to earlier attempts on a similar theme. The aim is simple. You steer your craft, a kind of spinning top, through a series of three dimensional landscapes, the surfaces of which are covered in tiles and you must collect the shaded ones.

The problem is that this world has edges and it is all too easy to lose control of your vehicle and land up in the nether regions. This involves the loss of a life.

At first the task seems fairly easy: The paths are wide and simple to negotiate. But after a few screens problems crop up. Shaded tiles need to be collected from very narrow passages with no walls to prevent a disaster occurring.

At other points ramps send your vehicle spinning into space with only a hope that it will make a soft landing. It is fortunate that you are equipped with first rate brakes as well as controls to move you up, down, left and right. These have to be used in tandem when diagonal movement is required. When you do have the misfortune to fall off the edge of the world you restart from the point where you last found a shaded tile.

When you feel you have mastered these basic problems other troubles will start to afflict you. Jump tiles throw the spinning top into the air. With luck, you won't land on a direction square which reverses the operation of your control keys.

Ice is another hazard. This causes the craft to skid and it is essential to be heading in the correct direction before attempting to cross this slippery surface.

Other tiles make the brakes fail or the steering defective. Again, great care is needed before these are crossed. One other interesting idea is the transformation tile. This alters your craft from a light, fast mover into a slow, lumbering but more controllable device. This is certainly an aide to crossing awkward surfaces.

INERTIA is an arcade adventure with a difference. Players without superb memories will probably need to produce a map if they hope to find every shaded tile.

You start the quest with three lives, but an extra one is gained for each tile collected. This can easily build up to the maximum of 12, but they are lost all too easily while trying to set a straight course along an ice floe. Each tile also gains you five points while losing a life reduces your score by three.

The graphics are very good. Mode 4 has been chosen which limits the screen to two colours, but rapid scrolling means that the colours change frequently.

The craft can move swiftly - you won't need a turbo board - and it does so smoothly and without flicker. The playing area is a window in the middle of the screen which is surrounded by neat status icons.

Along the top of the display you get an indication of sound status, which of the craft types is in use, whether the keys are normal or reversed and whether the pause option has been selected.

At the bottom is the useful game information - lives left, score and tiles still to be found. The sides of the screen have the time indicators. A tile must be found before the time runs out or a life is lost. Each time you do collect a shaded tile, the timer is reset.

The sound is fairly basic - a few beeps when the craft hits a wall. It can be turned off, although it's not particularly intrusive.

We have come to expect quality software from The Fourth Dimension and the company has not let us down with INERTIA. This is a first rate game with just the right mix of ingredients. It requires close control and thought and has enough of a frustration factor to call for yet another go. Recommended.

Rog Frost

### \*\*\* Second Opinion \*\*\* (Electron User)

From the loading screen onwards you have the impression of quality. And once the game's loaded you won't be disappointed. The 3D effect is excellent with quite realistic movement of the top around the maze and up and down the slopes. The controls are responsive and you're never left in the position of feeling that you pressed a key and it was ignored. The idea is simple but it is well implemented and capable of keeping you hooked for hours. I like it.

## Object Of The Game

The object of the game is to mine asteroids which contain a rare ore. This ore is extremely valuable to a planet called Trionica. Each player starts with one asteroid and 20,000 Yiyons (pronounced ZI-YONS). Each asteroid leased by a player is connected via an enclosed conveyor belt to a central collection point called a Collector. It is at this Collector that the three main types of transporter (Shuttle, Freighter and Transfleet) can dock to pick up units. Units mined at the asteroids are automatically transferred to the Collector. Using one of the three main types of transporter, units are then shipped from the Collector to the Spaceport. The units are then shipped from the Spaceport to Trionica where they are sold for Trigons (the Intergalactic monetary unit). Only Star Ships can be used to carry units from the Spaceport to Trionica.

## Winning The Game

The Trigon Target is the amount of Trigons a player has to earn to become the winner. This Target is normally set to 2,500,000 Trigons but can be changed at the beginning of the game. The only way to earn Trigons is by selling units at Trionica.

## Running The Game

When the program has loaded, you will be asked how many people wish to play. When this has been entered, you will be asked to enter the name of each player. Please not: It does not matter in which order players names are entered as the computer will decide in which order the players will take their turn.

When all the players' names have been entered, you will be asked if all the names are correct. If you answer "Yes" the computer will then ask if you wish to limit the number of transporters available. If you answer "no", the program will display the present Trigon Target (the Trigon Target is described in WINNING THE GAME) and ask if you wish to change it. If you answer "No" the game will begin.

## Disaster Reports

Occasionally, a message will appear at the bottom of the screen like this: "SHUTTLE IS DESTROYED BY KLINGONS". This is one of the Disaster Reports. The Disaster Reports can be thought of as a pack of cards. On each of the cards is a message and the computer will occasionally take one of these cards and display it at the bottom of the screen. The action described on the card will then be taken. Just like a pack of cards, there are 52 of these Reports made up as follows:

- 2 x LEASE RUNS OUT ON HALF PLAYER'S ASTEROIDS  
(If a player has an odd number of asteroids, he keeps the odd one)
- 2 x ALL UNITS BELONGING TO THE PRESENT PLAYER AT THE COLLECTOR ARE LOST  
(Self explanatory)
- 3 x ALL UNITS BELONGING TO ALL PLAYERS AT SPACEPORT ARE:  
(There are three possible responses to this card.  
1. All the units at the Spaceport are DESTROYED,

- 2. All the units at the Spaceport are SOLD for the present Spaceport rate.
- 3. The number of units at the Spaceport are INCREASED by up to 40%
- 3 x SAME AS ABOVE BUT FOR INDIVIDUAL PLAYERS
- 4 x SHUTTLE IS DESTROYED BY KLINGONS  
(Units contained in the Shuttle are also lost)
- 4 x FREIGHTER IS DESTROYED BY KLINGONS  
(Units contained in the Freighter are also lost)
- 4 x TRANSFLEET IS DESTROYED BY KLINGONS  
(Units contained in the Transfleet are also lost)
- 4 x STAR SHIP IS DESTROYED BY KLINGONS  
(Units contained in the Star Ship are also lost)
- 4 x SHUTTLE JUMPS INTO HYPERSPACE: See below
- 5 x FREIGHTER JUMPS INTO HYPERSPACE: See below
- 5 x TRANSFLEET JUMPS INTO HYPERSPACE: See below
- 5 x STAR SHIP JUMPS INTO HYPERSPACE: See below

When space-lanes are clear, transporters may jump into Hyperspace. This, in effect, allows them to reach their destination in one day. The player will also receive a rebate in the form of tax relief:

- 5 x PLAYER'S ACCOUNT RECEIVES INTEREST OF  $\leq 40\%$   
Player's Xiyon account receives interest of between 1% and 40%
- 2 x TAX PAYMENT DUE ON ALL PLAYER'S HOLDINGS  
For the amount of tax payable, the number of asteroids owned is multiplied by the taxation per asteroid for the tax bracket the player is in (See separate guide). Tax should then be added for any transporters in transit. This is all calculated automatically by the computer, but it is useful to know how much tax you will be liable for when the tax card turns up. Note: If a player is in debt, he is exempt from tax.

At the beginning of the game, these reports are shuffled. When the computer gets to the bottom of the pack, it starts again from the top. It is because the cards are never shuffled again that it is possible after a while to anticipate what the next few reports will bring.

PLEASE NOTE: Sometimes you will get reports that DO NOT APPLY to you. For instance "SHUTTLE IS DESTROYED BY KLINGONS" when you do not have a shuttle in flight. This has been done because if only Reports that applied were shown, it would not be possible to see what order the Reports are in!

### Going Into Debt

It is quite possible that some players will go into debt after paying tax. The maximum debt, any player is 10 million Xiyons. If a player is in debt, the computer will sell any units remaining at the Spaceport and Collector and will then give the player tax relief, also during the game any units produced by the asteroids will be sold automatically until the player clears his debt.

### Transportation Of Units

There are four types of transporter:

#### Shuttle

Light haulage vehicle used for carrying cargo from the Collector to the Spaceport. This transporter can carry up to two units. Due to the shuttle's small size and high manoeuvrability this craft can easily steer itself through the asteroid belt. This ability means that a shuttle only has to travel ten sectors to reach the Spaceport. Hire charge for this vehicle is X10,000.

#### Freighter

Medium haulage vehicle used for transporting units from the Collector to the Spaceport; it can carry up to twenty units. Apart from the normal lease of X150,000, this ship also has an additional daily hire charge of X150,000. Increased size has reduced the manoeuvrability of this ship and therefore Freighters must take a slightly longer route of fifteen sectors to reach the Spaceport.

## **Transfleet**

This juggernaut of space works between the Collector and the Spaceport and can carry up to 250 units. Like Freighters, Transfleets have a lease charge plus a daily hire charge both of which are X1250,000. Much to the designer's dismay, the Transfleet has been nicknamed by Space crews "The Slugs", which many believe is a reference to the shape of the craft but which is in fact a reference to its steerability! It is because of this high unmanoeuvrability or "Sluggishness" that Transfleets must avoid the asteroid belt altogether and travel around it. Total travelling distance for this craft is 20 sectors.

## **Star Ship**

This is not so much a ship, more a sort of planet! Nobody knows for certain how much cargo a Star Ship can carry simply because no one has ever mined enough ore to fill one! It can therefore be thought of as having an infinite hold space. The government of Xiyonica has banned this ship from coming within 60,000 of your Earthling kilometres of its surface, not because they fear that it might crash into the planet but because they're frightened that the ship's gravitational pull might dislodge them from their present orbit! It is because of this that Star Ships are only used for interplanetary travel and ship units from the Spaceport to the planet Trionica. Due to advanced engineering this ship is capable of travelling faster than the speed of light (this of course is in direct contradiction to a certain Earthling's theory that nothing can travel faster than the speed of light. However, as any Xiyonican schoolboy will tell you, this theory was proved to be wrong by an Xiyonican scientist) and because of this, Star Ships can travel up to six light years a day.

The distance between Xiyonica and Trionica is 25 light years. Star Ship hire charges vary with the amount of cargo being carried. The cost of leasing a Star Ship is worked out by finding the cost per unit for the amount of units the Star Ship is to carry and then multiplying this figure by the amount of units one is carrying. See separate guide.

## **Leasing Asteroids**

At the start of the game, enough asteroids are made available so that each player can lease one hundred.

The lease price of X125,000 also includes connection to a Collector and the re-housing of miners and their dependants on to the asteroid. Asteroids leased cannot be sold.

## **Sale Of Units**

There are three places at which units can be sold.

### **Selling Units At The Collector**

Units can be sold at the Collector where they will be snapped up immediately by miners wishing to start their own businesses. The miners always offer a fixed rate of X15,000. PLEASE NOTE: The maximum number of units that can be stored at the Collector is 500.

### **Selling Units At The Spaceport**

Passing aliens have always has an interest in the ore mined from the asteroids. However, they have no interest in the asteroids nor in Xiyonica, preferring instead at the Spaceport. Because the market is so buoyant the price offered for units of ore is always changing. It is because of this, sometimes violent, price fluctuation that the Xiyonican Trading Council has fixed the minimum selling price at X110,000 and X1100,000 respectively.

### **Selling Units At Trionica**

Star Ships arriving at the Trionican Space Exchange are forced by the law of Trionica to sell all units immediately on arrival. The units are sold for the current Trionican Exchange Rate which, like the Spaceport Rate, is always changing, so you must judge what the price will be before you send a Star Ship on its journey. All units sold at Trionica are paid for in Trigons. NOTE: Trigons cannot be exchanged for Xiyons nor can Trigons be used for purchasing ships or asteroids.

## **Tax Relief**

If a player is not transporting units because he has no units or he is unable to afford any form of transport then he will receive tax relief according to his tax bracket.

## **Mechanics Of The Game**

On a player's turn, the following will happen.

The player's present holdings will be displayed.

The computer will then wait for a key between 1 and 9 to be pressed.

The keys have the following functions:-

1. SHU. Hire a Shuttle. See hiring transporters.
2. FRE. Hire a Freighter. See hiring transporters.
3. TRA. Hire a Transfleet. See hiring transporters.
4. STR. Hire a Star Ship. See hiring Star Ships.
5. AST. Buy Asteroids. Self explanatory.
6. SPC. Sell all units at Spaceport. Self explanatory.
7. COL. Sell all units at Collector. Self explanatory.
8. FEW. Sell a few units. See selling a few units.
9. CON. Continue to the next player. Self explanatory.

NOTE: If a player makes a mistake such as selling too many units or buying the wrong type of transporter, the player can correct it by pressing the ESCAPE key which restores the display.

## **Hiring Transporters**

Upon hiring a transporter, the vessel chosen will be sent to the Collector where it will be loaded with the maximum number of units it can carry. If there are not enough units to fill the vessel, it will take all the available units. The hire charge of the vessel plus, if applicable, a one day lease charge, will be deducted from the player's account and the transporter will be put into an orbit one sector above the Collector.

The actual purchasing of a transporter will conclude the player's trading for the day and the transporter will now be sent on its journey. The number of sectors the vessel travels on the day it is hired will now be displayed at the bottom of the screen.

## **Hiring Star Ships**

When a Star Ship is hired, it will be sent to the Spaceport. The player will then be asked how many units he wants loaded into it. When the number of units has been entered, the Star Ship will start its journey.

## **Sell A Few Units**

This function allows one to sell a few units at either the Spaceport or the Collector.

After pressing 8, you will be asked where you wish to sell the units. You will then be asked how many units you wish to leave. When this has been entered, the remaining units will be sold and your Xiyon earnings will be increased by the appropriate amount.

NOTE: If a player has units in transit or has no units at the Collector or is in debt the display will wait for a short period before going on to the next player.

## **Costs:**

Asteroids .....	Xi 250,000
Shuttles .....	Xi 10,000
Freighters .....	Xi 50,000 plus Xi 50,000 per day
Transfleets .....	Xi 250,000 plus Xi 250,000 per day
Star Ships .....	Dependant on units carried. See below

## Units carried      Cost per unit per day

1-100	20,000
101-200	18,000
201-400	16,000
401-800	14,000
801-1600	11,000
1601-3200	7,000
3201->	4,000

## Travelling Distances For Transporters

Shuttle from Collector to Spaceport .....	10 sectors
Freighter from Collector to Spaceport .....	15 sectors
Transfleet from Collector to Spaceport .....	20 sectors
Star Ship from Spaceport to Trionica .....	25 light years

## Super Taxation

Xiyon Earnings	Asteroid	Shuttle	Freighter	Transfleet	Starship	Tax Relief
1-5E5	2E4	1E4	-	-	-	4E3
5E5-5E6	1E5	1E5	5E5	-	-	1E4
5E6-5E7	3E5	1E6	4E6	5E6	-	1.25E5
5E7-5E8	5E5	1E7	3E7	4E7	4E7	2.50E5
5E8-5E9	2E6	1E8	2E8	3E8	3E8	5E5
5E9->	1E7	1E9	1E9	2E9	2E9	1E6

# INVISIBLE MAN

*Professional, Originally Released On Cassette Only*

Game Type : Educational  
Author : Unknown  
Standalone Release(s) : 1984: INVISIBLE MAN, Chalksoft, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : CHALKSOFT. No further information.  
Disc compatibility : Unknown

## Instructions

Instructions currently unavailable.

## Review (Electron User)

This is a sort of educational Battleships for eight to 13-year-olds. When you run the game a 10 by 15 grid is displayed and then disappears. Somewhere in the 150 squares on the screen an invisible man is hiding and the aim is to expose him to view by guessing which squares he is hiding under.

The kids enter this into the Electron using a simple co-ordinate system. If they miss with their shot the micro responds with a hint, using the points of the compass. This makes it much of a game of chance than Battleships and allows the children to use and expand their knowledge of simple co-ordinates and compass directions.

The idea is to find the man in fewer tries than your rivals. The whole thing is well explained, simple to use and extremely idiot-proof. It's also a pleasant game in its own right. The only quibble is that it might have been better if the lines of the grid were left on the screen rather than disappearing when the man hides. This, I am sure, would enhance an already useful program.

Peter Gray, ELECTRON USER 1.12

# INVSTAT

## *Professional, Originally Released On Cassette Only*

Game Type : Utility; Business Invoices And Data Handling  
Author :  
Standalone Release(s) : 1983: INVSTAT, Gemini, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : GEMINI, 18A Littleham Road, Exmouth, DEVON EX8 2QG  
Disc compatibility : CDFS E00, DFS E00

## Instructions

### A Summary Of This Program

Your Gemini INVSTAT software will take the drudgery out of compiling invoices and statements and provide you with professionally formatted documents from your own printer. Update your firm's image now!

With this program, you may produce invoices and statements with the minimum of fuss. Also included is a complete customer database system which means that you only have to enter your customer's names and details once as they are then stored and may be recalled for future use or reference.

VAT routines are also included and naturally all calculating and totals are performed automatically. You may also enter your own company details for storage, and these details are automatically used for your invoice header. Remember, you DON'T need pre-printed computer stationery as all formatting is done from within the program.

You may also specify your own 'footers' for your invoice or statement for example "Please pay in 30 days" or "Please remit by return - OVERDUE" etc. These footers may be changed at will or may be stored on the database within. Update your image now!!

### 1. Introduction

The Gemini Invoices and Statements package for the Electron microcomputer is designed for easy entry of invoice or statement information at the keyboard, with a subsequent printout of as many copies as you require. The printout includes a 'header', and is therefore for plain paper only (single sheets or continuous stationery). Any discounts, VAT amounts and running totals are calculated and printed as necessary.

A data file may be used with the program for the storage of the user's company information, and also for storing customer address details - from the program you may update/delete this information as required. Data files may be stored on disk, or on tape.

### 2. Copyright

Gemini Marketing Limited sell this program on the express condition that it will not be resold, copied, for use by any third party or transferred by any means to another machine.

### 3. Printer Types And Paper Length

The system as written is for an Epson MX80FT 111 printer, but the few small differences between printer types may easily be catered for by changing line 10 of the program. The variables on this line are as follows:

- (i) PL=66 - This is the page length to be used. Standard paper lengths are generally either 66 or 72 lines for continuous feed stationary. Once this variable is correct, each invoice or statement will be automatically formatted to the correct size. However, please note that if you enter more

lines on an invoice than may be held in the page length specified, the printing will continue as normal, except that the invoice will 'overflow' onto a second page. You will then have to realign the printer head to the top of the next sheet of paper before printing the next invoice.

- (ii) DB\$=CHR\$(142) - The control character(s) to be used to engage double width print must be assigned to DB\$. If you are unsure what this should be, or your printer does not provide this facility, use DB\$="", which will use ordinary sized print.
- (iii) P%=35 - The character code for a £ sign, as specified in your printer manual.
- (iv) U\$="=" - The underline character. You may prefer to change this to say an asterisk.

Note that your printer must be set for automatic carriage return at the end of a line, which may necessitate setting the appropriate DTP switches in the printer. Alternatively, typing \*FX 6,0 and pressing the RETURN key before running the program will give the correct line feeds on certain printers, e.g. Epson, CP80 etc.

#### **4. Operating Procedure**

Ensure that all leads are properly connected and switch on the printer then the microcomputer. Type LOAD "INVSTAT" and press RETURN. The program should load in a couple of minutes. If you need to change the printer control characters, type LIST 10 to see the line to be altered. It is easier to type in the complete new line (without forgetting to enter a value for any of the variables) e.g.:

```
10 PL=72:DB$=CHR$(10)+CHR$(142):P%=35:U$="-"
```

Now type RUN, and our copyright notice will be displayed. Press any key to continue. Enter the date as e.g. 01.11.82 for the first of November 1982. Next you are asked if you have a data file to load - press Y or N for yes or no.

- (i) Select Y to load either your own file or the demonstration file supplied immediately after the main program. Press T for transfer from tape, or D for load from disk. Now enter the filename and press RETURN, or just press RETURN for the default name of IVDATA. The file will be loaded up and then the program will carry on to the main menu. The demo file supplied is called IVDATA.
- (ii) Select N to start a new data file. You are then asked for the following 'setting up' information:
  - (a) Your company's name, address (seven lines) and VAT registration number (if any) - now press Y or N to the prompt "IS THIS CORRECT?" (pressing N will allow re-entry of any incorrect lines - for each line press either just RETURN to keep the information, or type in the new line followed by RETURN to change the information).
  - (b) Enter three invoice and three statement footer messages - these are printed centrally at the end of every invoice/statement. They may be changed from the main program at any time later if requested.

#### **5. The ESCAPE Key**

Using the ESCAPE key on the Electron microcomputer will normally break into the running of a program. However, as the key is rather unfortunately sited for accidental operation, pressing this key while INVSTAT is running will cause the program to jump straight back to the main menu. You may in an emergency use this key to interrupt the printing of an invoice etc but it is not generally recommended that this key be used as a 'short cut' back to the main menu as data may be corrupted if the program is performing database calculations while interrupted.

#### **6. The Database**

A database is included for the storage of customers' names and addresses and there is a set of routines which may be accessed through Option 7 of the main menu for viewing and/or amending this file. Each set of customer details is allocated a record number for the database - when prompted to enter a customer address etc. for the printing of an invoice or statement, you may type \* followed by a record number to instruct the database routines to search for, retrieve and display the appropriate customer details.

## **7. The Main Menu**

Whether you loaded a data file, or entered a new set of details for your company, you will next be presented with a table of eight options to choose from as follows:-

### **7.1 Option 1 - Print Invoice**

After pressing 1 from the main menu, you may now enter all the information for the printing of an invoice.

- (i) Enter the details of the company to whom the invoice is to be sent (Five lines of up to 22 characters each). Alternatively, you may enter \* followed by a number which refers to a record in the integral database (see Section 6 of this manual), in which case the record details found are listed. Now press Y or N or yes or no to the prompt "IS THIS CORRECT?" - press N to re-enter the details.
- (ii) If a new address has been entered, you are now given the option of storing this record on the database - either the record number to be associated with the new customer will be shown, or if there is insufficient memory space, an error message will be screened.
- (iii) Enter the delivery address - either just press RETURN if the address is the same as in (i), or enter five lines of new information, or use \* and a database record number.
- (iv) Enter the carrier name (if any).
- (v) If a carrier name was entered, type in the carrier charge and VAT rate in percent.
- (vi) Enter the advice note number (if any).
- (vii) Enter the invoice number (if any).
- (viii) Enter the order number (if any).
- (ix) Enter the discount in percent to be subtracted from the total goods (if any).
- (x) Enter the number of items to be included on the invoice, and the VAT rate (in percent) that must be added. Note that if a VAT rate was entered for the carrier charge, then this VAT rate must be either zero, or the same as the carrier VAT.
- (xi) For each item, enter the quantity (1-99999), the description (up to five lines - to be able to enter an extra line, type a HASH sign at the end of the line and then press RETURN, and just press RETURN to end the description), and then enter the unit price (up to £99999.99). Note that with the quantities and amounts permissible, it is possible to give a total (price times quantity) that will not 'fit' into the field allocated on the invoice - this will not display a number greater than £99999.99 accurately. In this case, the figures after the decimal place may be lost, giving an inaccurate total. The writer of this program apologises but at the time it was considered that a total of 1 penny less than 1 million pounds would be sufficient!

After entering all the information, you may print the invoice immediately if you wish (press Y to the prompt ("PRINT INVOICE?") - otherwise press N. The program will return you to the main menu (after printing a copy of the invoice if you selected Y)). If you now require a copy of the same invoice, use only Option 2 from the main menu. Selection of any other option (including option 1) may lose the invoice information just entered.

Note that when calculating VAT amounts, totals, etc, half pence are rounded up.

### **7.2 Option 2 - Reprint An Invoice**

This option may only be selected if you have entered invoice details using Option 1.

### **7.3 Option 3 - Print A Statement**

Enter the following information for the printing of a statement:

- (i) Enter Company address (as for invoice).
- (ii) For each transaction to be included on the statement, enter the transaction date (e.g. 23.11.82), the reference (up to 41 characters), the amount (up to £99999.99), and then press C or D for credit or debit.
- (iii) When you have typed in all the transactions that you require when the program moves on to the next transaction for entry, just press RETURN for transaction date.

You may now print the statement immediately - reprints are carried out as for invoices, but using Option 4 from the main menu.

### **7.4 Option 4 - Reprint Statement**

This option may only be selected if you have just entered statement details using Option 3.

### **7.5 Option 5 - Write File**

This routine saves all company details (your own, and the customer addresses stored on the database) on to disk or tape. The data file may be called any valid filename up to seven characters - just press RETURN for a default filename of IVDATA.

### **7.6 Option 6 - Change Footer Messages**

For each of the three footer messages for invoices and the three messages for statements, you may either change a line by typing the new line followed by RETURN, or press just RETURN to keep a line as it is.

### **7.7 Option 7 - Inspect Customer File**

Selection of this menu will display a sub-menu of five options for changing/viewing of customer records on the integral database, and for changing your company details. The choices are:

1. Add a Record - Enter the five lines of a new customer record. There is a maximum of about 50 records - if you try and enter more, the message "NO ROOM" will appear.
2. List Records - Enter the numbers of the first and last records that you wish to view - each record will be screened one by one, press any key to move on to the next. If you enter invalid numbers (e.g. for records not yet assigned), the program will return straight to the sub-menu.
3. Delete a Record - Type in the number of the record to be deleted, and the record will be displayed. Now press either Y or N to the prompt "IS THIS CORRECT?" - pressing N will return the program to the sub-menu with no action taken. Note that if a record is deleted all records with a number greater than the one removed will be 'shuffled' down one place, and their record numbers will therefore change.
4. Change Set-Up Details - If you change your company address, name, etc then you may use this routine to alter those details without affecting the customer database in any way. For each line displayed, to change the information, type in the new line followed by RETURN, or just press RETURN to keep the line as it is.
5. Exit to Main Menu - Returns the program to the main menu of options.

### **7.8 Option 8 - Exit Program**

Press 8 from the main menu to terminate execution of the program - after selecting this option, press either Y or N to the prompt "ARE YOU SURE?"

## **Important Note**

### **1. Printer Routines**

The Electron does not have an integral printer or disk interface, which means that the command that is necessary to switch the printer on or off has not yet been standardised. Gemini are thus unable to guarantee immediate operation of the software with disk and printer systems, but these routines have been included exactly as they are implemented on the BBC computer. We detail below how the printer routines may be amended as necessary to allow use with the various proprietary interfaces which will no doubt be introduced to the market.

- (i) Enter LOAD "programe" where PROGRAME is the appropriate program.
- (ii) Type 5010 to enter a new program line, and the command necessary to switch the printer on (currently the line reads VDU2), then press RETURN.
- (iii) Type 6010 to enter a second line, and the command required to switch the printer off (currently the line reads VDU3), then press RETURN.
- (iv) Set up your cassette unit for recording with a blank tape, and enter SAVE "programe" - this will save a new copy of the program, with the appropriate alterations included.

### **2. Disk Systems**

The program already includes the option for loading or saving data files on disk. Gemini cannot guarantee the program's immediate operation with disk, but when an Acorn system is released for the Electron, we will supply a printed update free of charge.

# ISLAND OF SECRETS

***Professional, Originally Released On Cassette Only***

Game Type : Text Adventure  
Author :  
Standalone Release(s) : 1986: ISLAND OF SECRETS, Usborne, £1.99  
Compilation Release(s) : None  
Stated compatibility : All 8-bit machines  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : USBORNE, 20 Garrick Street, LONDON WC2E 9BJ  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"The first two books in this series mark the beginning of a completely new kind of adventure game. They each contain an exciting adventure program for you to type into your computer. As you play the game on the computer, the imaginary world of the game is vividly recreated in the colourful pictures in the book and you can find clues hidden in the pictures to help you."*

*"An adventure game takes you into a different world where you have to pit your wits against magical forces, evil creatures and powerful tyrants. The books give thorough instructions on how to play and hints on what to do if you get stuck."*

*"The programs are written in a standard BASIC and there are conversions listed to make them suitable for Commodore 64, expanded VIC 20, TRS-80 Colour Computer (32K), Apple II, BBC (32K), Electron and 48K Spectrum"*

## About this game

The book contains an exciting adventure game program to type into your computer and play. ISLAND OF SECRETS is a text adventure. It doesn't show any pictures on the screen. Unlike most adventure games, the computer will not tell you all you need to know about the world you are travelling through. There are no directions for instance. You will need to create a map and work out for yourself whether you can go North, South, East or West.

The game is also different from a traditional adventure because you play a role. You are Alphan and you must try to decide what he would do in a particular situation (based on the clues in the book) rather than what you would personally do. Other roles are played by the computer and characters sometimes move around or do surprising things which you cannot control. You are given a certain amount of strength and wisdom at the beginning of the game and these vary according to what happens to you in your role of Alphan.

## Alphan's Quest

To find out who Alphan is and what he has to do with the ISLAND OF SECRETS, you must read the story below. His task is to find the objects of power, though he doesn't know what they are, and take them to the ISLAND OF SECRETS. He must then work out what to do with them to restore light, warmth and life to the world.

If you do something wrong you may find you have lost the game. The computer will tell you you have failed and give you a score based on what you have done up to that point. You will then have to start again and try something different. Perhaps you said the wrong thing or didn't pick up something you needed.

## About Adventure programs

You have probably heard about Adventure Games even if you've never played one. They were invented in the U.S.A. in 1976 and first played on huge mainframes with huge memories.

The player wanders round an imaginary world by typing in commands such as GO SOUTH or TAKE SWORD and the computer describes the surroundings and events as the game unfolds. Some more recent Adventure Games draw pictures of the characters and locations on the screen too.

The object of an Adventure Game is usually to collect treasure and escape from a series of dangerous situations. They are difficult to play and can take weeks, or even months, to solve.

### **The Story**

In the dim and distant past, the sky was blue and the grass was green. The Ancients had built The Pyramid and established communication with the Sky People. It was even agreed that one or two specially selected Earthlings should visit Sky Land.

The first (and last, as it turned out) Earthling Sky visitor was Omegan, youngest son of the most influential of the Ancients. He was fascinated by what he saw - the Sky People knew a lot of things Earthlings didn't.

Shortly after Omegan arrived, conflicts began between the Sky People and the Outer Ones. Sky messengers came down to The Pyramid and gave each of the Ancients an object, telling them to hide it carefully.

The Ancients wondered why the Sky People should bother to give them such ordinary looking objects. But, who were they to ask questions? They set off to find hiding places, little knowing they would never meet again.

It became obvious to the Sky People that a great war was inevitable, they sent Omegan back to Earth with a mission. The war would darken the Earth, they said, but when it was over Omegan must collect the secret objects and release the power that had been locked into them, thus restoring the Earth to normal.

Then they gave him the Cloak of Entropy which they said was essential for releasing the power of the objects and, because the task was too long for one person's lifetime, they also gave him the secret for prolonging his life.

The war was more catastrophic than even the Sky People had anticipated. A huge dark cloud enveloped the Earth blocking out light and heat, the ground ripped apart forming the Crimson Canyon, and the lakes were poisoned.

Omegan set out on his task, but it soon became apparent that it was of immense and incredible difficulty. He didn't know what he was looking for or where to look or even how many things he had to find.

He began to realise that the Cloak had enormous power. With its help, he built a castle for himself and assembled the secret equipment for extending his life. So what if the Earth stayed dark? he thought. No-one would find all the objects and, as for the Cloak, that was his now...

That was all a long time ago, but the land is still in darkness and Omegan still lives on his Island of Secrets. No-one found the objects or discovered the secret of Omegan's long life, though there are rumours of some who have tried.

Tales are told, for instance, of a wanderer named Median who entered the Castle of Secrets. He even drew a plan, they say, which he put in a bottle and threw into the Lake.

It could be true - who knows?

No-one thought Alphan would take on the task. Intelligent and wise he certainly is, but surely too slight and gentle to wrestle the will of Omegan. True he has that map left to him by his explorer grandfather.

What if he really could bring the Earth back to normal?!

## **Characters You Will Meet**

### **Canyon Beasts**

You may come across canyon beasts anywhere in the forest, though you won't be able to catch one without help.

### **Dactyl**

She guards something precious. She'll need proof that you are serious about your mission.

### **Median**

A famous scholar of Ancient times, he disappeared under mysterious circumstances.

### **Omegan**

He moves around the castle, so you can't be sure where you will come across him.

### **Sage Of The Lilies**

The Sage has meditated for so long that she has forgotten how to move anything other than her head. She has been vaguely worried for the last 500 years by a slight, but persistent, irritation in her back. The lilies she guards are said to revive old memories.

### **Speaking Stone**

Despite its name, this strange glassy boulder sits in dull silence.

### **Swampman**

He lives in the stumps of the great bluewood trees, which his ancestors planted. He is a sworn enemy of the Logmen but cannot leave the swamp to get revenge or to get the liquor which he believes would restore the trees to their former glory.

### **The Boatman**

Even the intrepid canyon beast won't go near him, so beware. It would be wise to approach him at some stage in your quest though.

### **The Logmen**

These unfriendly characters are always on the look-out for something to entertain them. They are addicted to a lethally strong liquor which they brew themselves. Their logging activities include the destroying the last of the great bluewood trees in the east.

### **The Scavenger**

He appears to have lost his memory. Alphan will need to help him recover it somehow.

## **Places you will visit**

- |                   |  |
|-------------------|--|
| Grandpa's Shack   | - Alphan's grandfather built this shack as a hideaway for himself.   |
| Grandpa's Chest   | - Grandpa kept useful things in here.  |
| The Pyramid       | - The view from here is quite impressive. Watch your step - there's a kind of hard grey stone here.  |
| Well of Weakness  | - Don't approach if you're not feeling strong. Omegan may not be far away.   |
| Clashing Stones   | - If you peer closely at these you can just make out the following inscription: "Stony silence is not the thing Say stony words that you must bring" |
| Petrified Village | - Lava engulfed this village so quickly that everything was preserved in stone. It gives you some idea of what life was life long ago.               |
| Logmen's Cabin    | - Don't hand around too long in here. Stolen goods often end up on the table.  |
| Clone Factory     | - Can this be the secret of Omegan's long life?  |
| Adobe Hut         | - Someone appears to have lived here in recent times, but there's no sign of anyone now.   |
| Snelm's Lair      | - It is said that one of the Ancients left a clue with Snelm. Look for a piece of old "paper".   |

Omegan's Sanctum - The end of your journey, whatever its outcome. You can't escape. Watch your step here too.  
Marble Column - This is all that remains of the University of the Ancients.

## How To Play

When the main screen appears the computer will wait for you to type in what you want to do. It only recognises certain words and so won't understand everything you say. In most cases it needs two-word commands, such as GET WATER.

Sometimes you will be asked a second question, e.g. GIVE THE AXE TO WHOM? You should then answer with one word. There are also special one word commands for save, load and quit as you will see below.

You will notice as you begin to move around that the "time remaining" shown top-right of the screen, constantly decreases. The game is over when the time is up, no matter what else has happened.

You will also see that your strength and wisdom scores vary as the game progresses. You can increase your strength by eating and drinking, providing you have stocks of food and drink. You can only increase your strength by eating or drinking, providing you have stocks of food and drink. You can only increase your wisdom by doing the right things in the game.

Now type INFO and your screen will change to show what you are carrying. You start the game with two units each of food and drink and can add to this by picking up any food and drink you spot on the way.

You can stop at any point in the game and save your progress so far. Do this by typing XSAVE. Make sure you have your cassette recorder linked up and a tape ready first though. You will need to know how to make your computer save on tape too.

When you want to continue the game, load in the game program as usual, then type XLOAD. You can then continue the game from where you left off.

If you feel you are stuck in the middle of the game and want to give up, you can type QUIT at any time and the computer will give you your score. (Though you won't get any time bonus.)

## Hints & Clues

Here is a list of instructions the computer understands. If you type a different instruction, the computer will not understand even if it makes sense to you.

GET	TAKE	GO
GIVE	DROP	LEAVE
EAT	DRINK	RIDE
OPEN	PICK	CHOP
CHIP	TAP	BREAK
FIGHT	STRIKE	ATTACK
HIT	KILL	SWIM
SHELTER	HELP	SCRATCH
CATCH	RUB	POLISH
READ	EXAMINE	FILL
SAY	WAIT	REST
WAVE	INFO	QUIT
APPLE	EGG	FLOWERS
JUG	RAG	PARCHMENT
TORCH	PEBBLE	AXE
ROPE	STAFF	COAL
FLINT	HAMMER	CANYONBEAST
LOAF	MELON	BISCUITS
MUSHROOMS	WATER	WINE
SAP	BOAT	CHEST
COLUMN	STONE	TRAPDOOR
VILLAGER	LIQUOR	SWAMPMAN
SAGE	BOOKS	ROOTS

WRAITHS	CLOAK	OMEGAN
SNAKE	LOGMEN	SCAVENGER
MEDIAN	NORTH	SOUTH
EAST	WEST	UP
DOWN	IN	OUT

Here are clues to specific problems you will encounter.

#### **Snelm's inner chamber**

Notice the scrap of parchment here. You need to have opened grandfather's chest to read it. It must be a clue!

#### **Dactyl's nest**

Dactyl needs proof that you are serious.  
Visit the petrified village first.

#### **The "unclimbable" oath**

The beast can climb up here. Perhaps it will take you. You will need something to catch it with though.

#### **The logmen's settlement**

If the logmen catch you, they will take things from you. You can get them back though. Look on the split log table.

#### **The lilies**

Perhaps you could do something about the Sage's itch. The flowers have memory-restoring powers so take some if you can.

#### **Omegan's sanctum**

Take a good look at the floor. It may help you work out what to do. You need to have found all five objects of power to be successful.

#### **The Scavenger**

There's a very close connection between him and Median. You could try to bring back his memory. Give him two things and say something too.

#### **The Speaking Stone**

A rag will be useful here. Keep trying if nothing much happens first time.

#### **Marble column**

This might job Median's memory. Chip a bit off and see.

#### **The Pyramid**

There's a piece of flint up here.

#### **The blue wood stumps**

There's something here, but you'll need a gift for the swampman to get it.

# IT'S MAGIC

*Professional, Originally Released On Cassette Only*

Game Type : Text Adventure In 3 Parts  
Author : Simon Maren  
Standalone Release(s) : 1990: IT'S MAGIC, <unknown>, £9.95  
Compilation Release(s) : None  
Stated compatibility : BBC B, B+ and Master 128  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : Unknown  
Disc compatibility : CDFS E00, DFS E00 (Assumed)

## Instructions

Instructions currently unavailable.

## Review (Electron User) - "Abracadabra!"

IT'S MAGIC, designed for the BBC Micro but working on an Electron with a SLOGGER 64K RAM board, is a two-part adventure set 200 years in the future.

A career as a showbiz personality or pop singer no longer appeals to school-leavers - they see a more attractive future as magicians. But ones more akin to the legendary Merlin than Paul Daniels.

To accomplish this they must join the International Union of Magicians. However, the Union doesn't want a sudden influx of semi-skilled members, so it decided that all prospective candidates would have to earn their nomination by learning the 14 basic spells.

This puts them on the short-list. The handful of successful candidates would be announced at the annual banquet, and only those present would be admitted to the elite band of magicians.

The first part starts at the school gates where you are assaulted by the leader of the Mob. You are told that you must return later to participate in the ritual book-burning ceremony or the Mob will ensure that you never get to the Magicians' Ball.

Your first task is to find your schoolbooks and return for the bonfire so that the Mob won't bother you again, leaving you free to search for spell plaques hidden around a town that boasts a shopping centre, library, police station, wax museum, bad housing and a park.

Provided you remembered to examine the books you will be on the first rung of the ladder. Your next task is to enlist the help of your girlfriend Diane, who wears a Just Seventeen T-shirt, which is a lie 'cos she's only sixteen.

Now you're ready to do your bit for nature conservation, with just rewards, as Woody will save you several times if necessary. But make too many mistakes and he won't bother.

The spells are in capital letters on plaques and to learn them you must read the plaque. The names of each spell is self-explanatory - for example, BOUNCE allows you to jump higher and ALIEN changes you or something into something else.

The emphasis in part one is on learning the spells, the easier ones being used to discover the more elusive ones. At first you may have to use trial and error tactics.

I thoughtlessly cast GRAV without a roof over my head and soon discovered that aliens can't read plaques - at least in the beginning.

Part two begins with you dreaming about Universal Magic. Poor Woody got the chop, but Diane is still with you. As you are no longer a novice your spells are more effective, allowing you to cast while an alien. Unlike the first section, problems must now be solved in a precise order.

The map can be split into three sections: Up to the wood, the brick building complex and, the countryside and banquet hall. It's easy to find a quick way back to the brick building, but a slightly less obvious method of returning to the asylum.

The loading screen for part one could damage your eyesight, but part two has an animated picture of a wizard. Pressing the Spacebar a few times sends him into manic mode. The programming is very user-friendly and inputs such as ASK DIANE FOR HELP are understood as are multiple commands separated by a full stop or comma.

Perhaps the most useful command to begin each part are words which give a list of verbs used. Don't despair if this isn't enough as a very comprehensive help sheet is available if you send an sae to Central Computing. In part one STATUS reminds you which spells you know and can cast safely, as well as any that are active.

Part two replaces this with an indication of whether the location is inside or outside. Most adventurers are familiar with the save and load to tape facility, but not so recognisable are the store and recall commands.

They're rare on the Electron and BBC Micro, but commonplace on other micros, and allow you to save your current position giving instant recall. It's amazing how audacious this makes your adventuring.

IT'S MAGIC has taken more than three years to write on a BBC Micro using the machine's built-in assembler - which is identical to the Electron's.

Simon Maren has written an absorbing adventure about enterprising youth. Stubbornly refusing to be conformist, his storyline and quirky puzzles are refreshingly original, often with a sideways swipe at more conventional adventures.

Barbara Gibb

### **\*\*\* Second Opinion \*\*\* (Electron User)**

This one is well worth a try. The two parts give you a chance to practise on an easier level, and well thought out puzzles will tax the old grey matter and give you hours of fun.

# JACK ATTACK

***Professional, Originally Released On Cassette Only***

Game Type : Arcade  
Author : John Niblett  
Standalone Release(s) : 1986: JACK ATTACK, Bug Byte, £1.99  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : BUG BYTE, Liberty House, 222 Regent Street, LONDON W1R 7DB  
Tel: 01/439 0666  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Climb the beanstalk, find the keys and rescue your hearthrob Jill and you will have two minutes to reach freedom. A great arcade adventure, 45 screens of action by John Niblett."*

The story so far...your job is to rescue Jill by finding the key to her cell. You will have to explore the beanstalk, the castle and the gardens. Of course, the paths are closed by doors and only the right colour keys will open the way through. You'll have to collect all the fruits and bits and pieces on the way and finally when you've found THE key you will wake up that old meany, the Giant. He's down on you like a ton of bricks and you will only have two minutes to race back through the castle and out to freedom. Some of the bits and pieces are helpful and others are best avoided...the best of luck and don't get in front of the lorry...The author of this brill game is John Niblett so don't blame us, it's his fault!!

## Game Controls

Z - Left, X - Right, : - Up, / - Down, <RETURN> - Jump

**Instructions' Source** : JACK ATTACK (Bug Byte) Back and Inner Inlay

## Review (Electron User)

Once upon a time there was a young man named Jack who had a beautiful girlfriend called Jill - until the local giant incarcerated her in his castle. Being a brave sort of chap, Jack decided to enter the castle to attempt a rescue.

The castle takes the form a 45-screen maze which you must negotiate in order to find the key which will unlock Jill's dungeon. Different areas are sealed off by coloured doors. These are unlocked by coloured keys which are to be found around the castle.

I don't know if the giant is a greengrocer in his spare time but the castle is littered with fruit. Every one must be collected before you are allowed to free Jill.

As soon as you have released your beloved, the giant will awaken. You must therefore escape from the castle within the next two minutes. The 45 screens do not need to be completed in sequence, and you are free to wander from place to place as you seek the next key.

Each screen is big, colourful and normally patrolled by a nicely detailed bad guy. There are also secret passages which can take you from one section to another without the need for a key.

I found JACK ATTACK a well written, fun to play and sensibly priced program.

# JET BOOT JACK

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Platform Game  
Author : David Woodhouse  
Standalone Release(s) : 1983: JET BOOT JACK, English, £7.95  
Compilation Release(s) : 1988: 10 COMPUTER HITS 2, Beau Jolly, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : ENGLISH, PO Box 45, MANCHESTER M60 3AD. Tel: 061 835 1558  
Disc compatibility : CDFS E00, DFS E00

## Instructions

JET BOOT JACK, space-age jogger, zips his way through the Record Processing Plant, collecting musical notes as he goes. Unfortunately, bugs and gremlins are trying to prevent him from achieving his aim - that is, amassing the greatest music collection in the world!

He must eliminate the nasty creatures by travelling above their heads and bouncing on top of them until they fall to their deaths. In his search for musical satisfaction, Jack needs fuel to power his Jet-Boots, which he can collect by colliding with the overhanging vinyl pods - the energy is quickly transformed into fast action Jet-Boot Jack propellant!

So, the scene is set, now commence play and see just what JET BOOT JACK must contend with in the first Ten Screen Adventure undertaken by our intrepid hero of the future!

Note that Jet Boot Jack may only climb on and off the lifts and sliders when they are stationary.

## Skill Levels

SKILL LEVEL P - Practice mode. No bugs. Five refills per vinyl pod and a BONUS of 100 for each vinyl pod collected.  
SKILL LEVEL 1 - Two bugs per screen. Five refills per vinyl pod and 100 BONUS multiplier.  
SKILL LEVEL 2 - Four bugs per screen. Four refills per vinyl pod and 200 BONUS multiplier.  
SKILL LEVEL 3 - Six bugs per screen. Four refills per vinyl pod and 300 BONUS multiplier.  
SKILL LEVEL 4 - Eight bugs per screen. Four refills per vinyl pod and 400 BONUS multiplier.  
SKILL LEVEL 5 - Ten bugs per screen. Four refills per vinyl pod and 500 BONUS multiplier.

## Game Controls

Z - Left, X - Right, / - Jump Up and Down on the spot  
: - Activate (If Jack is on a lift or slider, this key controls its movement)  
<RETURN> - Duck under low ceilings and bugs. He rises again after a while

<SHIFT> - Selects the skill level and determines the number of bugs and gremlins, the number of refills available from each vinyl pod, the initial amount of fuel, and the BONUS multiplier.

<SPACE> - Controls the maximum jump factor. i.e. it lets you bypass the early screens you have already completed, so that you may recommence on the same screen when you play your next game. N.B. When you have completed Screen Ten, the next screen will always be Screen One, irrespective of the jump value.

The <RETURN> key will start the game using the values set on the current options page.

During play, pressing <SPACE> will pause the game, until pressed again.

Pressing <ESCAPE> will return to the title screen if pressed while playing a game.

### Scoring

Each musical note collected = 75 points.

Bugs and gremlins are killed by jumping up and down on them, giving a RANDOM BONUS: 100-300 points.

SCREEN COMPLETION BONUS: x 100 - x 500.

Number of pods left x the BONUS MULTIPLIER.

Each screen is completed by collecting all the notes.

Extra lives are awarded when score reaches 10,000, 30,000, 50,000 and 80,000.

### Fuel

Each pod contains a fixed number of refills - if your reserves are high, duck under the pods to score more points!

WARNING - A siren sounds if Jack has been standing still for too long.

### Bugs And Gremlins

Stators - They remain in one position but descend and rise at regular intervals. They can only be killed in the raised position.

Patrollers - They travel from side to side.

Flappers - They move under the slider supports and cannot be killed - very dangerous!

**Instructions' Source** : 10 COMPUTER HITS 2 (Beau Jolly) Inner Inlay

### Review (Electron User)

A couple of months ago I played this game's BBC version on the big brother machine and found it fascinating. It is one of those annoyingly addictive games that Micro Power have the knack of producing. I was delighted on receiving the Electron version to find that it is identical - no scaled down sound or fewer features, but the full implementation with no perceptible change, not even in speed.

Perhaps I should add that I find the game a little too fast, as I prefer to achieve some degree of success straight away, and my young son also enjoys trying the games out. But we both found the initial action too speedy. I have tried the BBC version on the Electron and found I was able to accumulate a decent score and develop a strategy.

There are five screens, which may be accessed separately from the menu. If screen one is chosen, and you are a better player than I, the other screens are encountered in order. On each the basic format is the same, with a spaceship on the left needing to be refuelled with fuel which is on the right. Shades of JET PAC, perhaps, which I enjoyed greatly in my misspent youth on the Sp\*ctr\*m.

The man is moved across the screen by careful use of the left/right controls, and the hover motor. There are safe platforms to rest on briefly, but nearly everything else is quite lethal to Jack. Each screen has different problems, with elements of other games appearing, such as the vertically moving monsters which have the same effects as the lifts in CORPORATE CLIMBER.

The graphics are good, the smoothness of the movement superb. Sound is fair, and can be turned off if required. The key response is quick, precise and accurate. I just wish my reactions were!

Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Jack the intergalactic Hitch Hiker has been kidnapped by the evil warlord Norgrob the Terrible and imprisoned in a large space garage in the Botch system. He must collect the red fuel pods from the opposite side of the garage and bring them back to refill the waiting starships.

However. Jack's oxygen supply is limited to one minute per trip and some nasty Space Googjies are out to stop him.

He is equipped with a Turbopak which is strapped to his back. By activating the boosters he can negotiate the obstacle-filled garage. The edges of the platforms and also the fittings in the ceiling are 'live' and touching any of these will cause Jack to plummet to his death.

There are five levels in all, with five fuel pods to collect on each vele. The final level features Wilfred the hideous Yugg monster.

HINT: By walking off a ledge and holding down that direction key, Jack will float to the next platform down without any need to use the powerful Turbopak.

## Game Controls

<CTRL> - Left, A - Left, <RETURN> - Thrust

Alternatively, you may use a joystick.

To restart a game, press <ESCAPE>.

The S and Q turn the sound on and off before the game commences.

# JET SET WILLY

***Professional, Originally Released On Cassette Only***

Game Type : Arcade Classic Mansion Jaunt  
Author : Chris Robson  
Standalone Release(s) : 1985: JET SET WILLY, Tynesoft, £7.95  
Compilation Release(s) : 1988: MICROVALUE GOLD, Tynesoft, £3.99  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : TYNESOFT, Unit 3 Addison Industrial Estate, Blaydon, TYNE & WEAR NE21 4TE. Tel: 091 414 4611  
Disc compatibility : CDFS E00

## Instructions

*"This is one of the all-time classics. Miner Willy, having thrown a huge party in his mansion has to clear up the bottles, glasses etc. which are left all over his sixty room house. This is the ultimate platform game with ultra smooth, highly animated graphics. A&B's comments say it all - 'Buy this game NOW!!'"*

Miner Willy, intrepid explorer and nouveau-riche socialite, has been reaping the benefits of his fortunate discovery in surbiton. He has a yacht, a cliff-top mansion, an Italian housekeeper and a French cook and hundreds of new found friends who *really* know how to enjoy themselves at a party.

His housekeeper, Maria, however, takes a very dim view of all his revelry, and finally after a particularly boisterous thrash she puts her foot down. When the last of the louts disappears down the drive in his Aston Martin, all Willy can think about is crashing out in his four-poster. But Maria won't let him into his room until *all* the discarded glasses and bottles have been cleared away. Can you help Willy out of his dilemma? He hasn't explored his mansion properly yet (It IS a large place and he *has* been very busy!) and there are some very strange things going on in the further recesses of the house. (I wonder what the last owner WAS doing in his laboratory the night he disappeared.)

You should manage O.K. though you will probably find some loonies have been up on the roof and I would check down the road and on the beach if I was you.

Good luck and don't worry, all you can lose in this game is sleep.

## Game Controls

Z - Left, X - Right, \* - Jump  
Press <ESCAPE> to end game

**Instructions' Source** : MICROVALUE GOLD (Tynesoft) Inner Inlay

## Review (Electron User)

MANIC MINER was a ladders and levels game which graced just about every home computer on the market. As with most successful games, it was quickly followed by a sequel, in this case JET SET WILLY. Having escaped from the mine, Miner Willy wasted no time at all in spending his new found wealth. After buying a mansion and yacht he decided to throw a party.

The party is a wild success but the housekeeper is rather upset about the aftermath. Willy is given an ultimatum: No sleep until all of the debris has been cleared. When you live in a 100-room mansion, that is some headache.

With Manic Miner, each individual screen had to be completed before starting the

next. With JET SET WILLY, there are no such constraints - you, as Willy, can wander from screen to screen at will. However, you will only be awarded points for collecting the objects from the party.

When you load up the game for the first time you will see that you are provided with eight Willies. This might seem to be very generous but there is a problem. Should you manoeuvre Willy into a position that will mean certain death, he will die. He will then be reincarnated in the very same position. Unless you have lightning reflexes then he will die again, and again, and you will soon be minus several Willies. Once I lost all eight Willies in under three seconds.

On several occasions, I entered the bedroom only to be shown the way out by the irate housekeeper. What I can't understand is if Willy can afford a 100-bedroom mansion, why can't he get decent staff?

## Instructions

Whilst recovering in hospital from a severe fall down some stairs, Willy called in the builders. He thought it odd that they had green skin, but needing the work done in a hurry he asked them to remove the offending edges from his stairs. Trouble was, they did far more work than asked, adding several rooms to his mansion and then refusing to charge him!!

Maria is demanding that Willy clears up all the mess and he hasn't even found all the rooms yet. Who were these strange people?

Much patience and stamina is required to explore the extended house and NASA's "Guide to Simple Space Travel" is recommended reading for those foolhardy enough to help Willy clear up all the mess. Be careful in the sewers. Good Luck!

This game is for all the people who wished that JET SET WILLY was bigger and better; some of the rooms may be familiar and those who played the original JET SET WILLY will have a head start with this very extended over 80-room game.

## Game Controls

Z - Left, X - Right, \* - Jump  
Press <ESCAPE> to end game

**Instructions' Source** : JET SET WILLY II (Tynesoft) Inner Inlay

## Review (Electron User) - "Willy Jets On!"

Willy first appeared on our screens in MANIC MINER, after which he evidently spent his profits on the mansion which featured in JET SET WILLY. It appears that Willy has been having a lot of building alterations, since the mansion now has over 100 new rooms. This doesn't seem to please Maria the housekeeper who is most insistent that Willy should tidy up after the builders.

She is preventing our hero from reaching the master bedroom until her bidding is done, and has also set a time limit of midnight so it's a race against the clock.

Under your control the poor chap will do his best, but you'll encounter the most amazing assortment of nasties, ranging from mutant camels to something that looks like a refugee from a Happy Eater restaurant. The fun starts off in the bathroom where all you have to contend with is a killer bath sponge and some joker who keeps firing arrows across the screen.

The rooms themselves all have names, ranging from the conventional Butler's Pantry to the bizarre Fallout Shelter. And whoever heard of a room called Ethel the Aardvark? So far I've conquered about 25 of these rooms but as in real life, the Wine Cellar is my ruin every time.

Willy is free to wander from room to room but will only score points when objects are collected, usually at great risk. One plus point is that to make Willy jump you use the asterisk key - it's nice to see <RETURN> getting a rest.

A minus point is that although Willy receives a generous number of lives he is reincarnated at exactly the same place he died. So if the noxious nasty is still there, another life is lost immediately, and again, if you're not quick.

Unfortunately, first impressions of this game are not favourable. The title screen is unimaginative, the sound is non-existent and the graphics poor in comparison to recent best-sellers. So why do I find myself still playing it at midnight? The reason is the author, Chris Robson, has made each screen a separate series of puzzles for which a solution is often obscure. The result is a game which is extremely addictive.

I must go now as I think I've just worked out how to get across Willy's Bird Bath.

# JIGSAW

***Public Domain, Originally Released On DFS E00 Disc***

Game Type : Puzzle; Jumbles Up Mode 1 Picture  
Authors : Mike Lea and Dave Edwards  
Standalone Release(s) : 1986: JET SET WILLY II, Tynesoft, £7.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : www.8bs.com  
Disc compatibility : CDFS E00, DFS E00

## **Instructions**

JIGSAW is a visual puzzle for one player in which he/she must rearrange a scrambled picture into its original format.

### **Loading**

IMPORTANT NOTE: JIGSAW requires PAGE to be set at &E00 before loading is commenced. If your disk system cannot support this, you will be unable to play JIGSAW.

To load JIGSAW, boot the disk in the normal way and wait for the blue options screen to appear. Underneath the EUROPRESS and JIGSAW logo, you should see the message 'Press F to load file'. The file required depends upon the picture you intend to divide and reassemble.

You *must* load a file before you can proceed to the game itself. Several pictures are included on this disk, and after pressing F, you will be asked 'Filename?' To load the first picture, type the filename FIRST and press <RETURN>. To load alternative pictures, simply press <RETURN> to catalogue the disk.

The options screen also summarises the keys for use within play and keys which can be used on the options screen to increase/decrease the difficulty level of the JIGSAW puzzle.

These option keys are:-

### **O - See picture before scramble ON/OFF**

When commencing the game, you may view the picture in its unscrambled form for a few seconds if this option is left ON. You also witness the rotating and displacing of pieces when this option is ON. If OFF, the picture appears directly in a scrambled form.

### **Y/N - Jigsaw Pieces Outlined YES/NO**

The JIGSAW pieces can have jigsaw-piece outlined superimposed onto them if you wish. However, it makes the picture more confusing to assemble.

### **\*/? - Change Number Of Pieces : 25**

The default number of pieces which JIGSAW randomly scatters out is set at 25 but it is possible to reduce this number all the way to 1 and increase it to a maximum of 70. The puzzle either decreases or increases in difficulty accordingly.

### **Beginning A Game**

To begin the game, make sure the options screen is not asking for a file and press <SPACE>. If the 'See picture before scramble' option is selected, you will be given the name of the image and its author of the picture before continuing.

The chosen picture will be displayed upon screen and scrambled. N.B. If the O option is set to OFF, there will be a 'black screen' delay. If you are also playing with a high number of pieces displaced, you may need to wait around half a minute before the scrambled picture appears on screen.

### **Playing A Game**

Move the cursor over the individual pieces of the picture, picking up and dropping them in their correct positions or most convenient for the time being. Press E to return to the main menu at any time.

## Instructions

*"Terrorists have kidnapped six world leaders. You, Joe Blade, their only hope, must enter Bloodfinger's base, liberate the hostages, prime the explosives and make your escape. Produced by Richard Paul Jones of Players 1988."*

In an ambitious raid, a gang of vicious terrorists led by the infamous Crax Bloodfinger have kidnapped six world leaders, demanding thirty billion dollars ransom for their safe release.

Of course, the governments concerned have refused to pay and as the deadline draws nigh they decide to take the only course of action left open to them: SEND IN JOE BLADE.

Joe Blade - teenage pin and pop idol, trained in a Tibetan monastery. Mean, tough and fearless, his very name strikes fear into the cold hearts of every gangster, assassin and drug baron.

You are Joe Blade...

Armed with only a light semi-automatic machine gun, you must infiltrate Bloodfinger's massive fortified HQ, situated in an un-named Central American country.

Bloodfinger's base is heavily guarded by his private uniformed army and underworld henchmen, contact with thich will drain your strength.

The stronghold is also protected by six booby-trapped explosive devices, all of which must be activated giving you twenty minutes to find the hostages and reach the exit before they detonate, destroying the fortress.

To activate these explosives, you have to rearrange the access code into alphabetical order using left, right and fire to swap the letters.

Scattered around are various pieces of equipment and supplies that may be used to your advantage.

**Instructions' Source** : JOE BLADE (Players) Back and Inner Inlay

**Review (Electron User) - "Joe To The Rescue"**

In this arcade adventure from Players you take the part of the man of steel of the game's title - JOE BLADE. Brought up in a Tibetan monastery, and a pop idol and teenage pin-up to boot, you are a tough, fearless character whose very name strikes terror in the heart of all gangsters, assassins and terrorists.

With references like these you are the ideal person to take on a rescue mission for the government which is being blackmailed for 30 billion dollars by Crax Bloodfinger. This dastardly character has kidnapped six world leaders and is currently holding them for ransom in his massive fortified HQ somewhere in Central America.

You head for his hideout armed with just a semi-automatic machine gun, and the game starts as you are about to enter. Making your way through the nearest conveniently open door you enter Bloodfinger's HQ to be confronted by an armed guard.

Not surprisingly, it turns out that the place is crawling with them, but they are no match for Joe Blade, and a quick blast with your machine gun soon disposes of anyone who gets in your way.

Quickly dashing from room to room you discover that most of the doors are locked, but fortunately several keys have been left lying around by absent minded guards, and these can be put to good use. You'll find other useful items of equipment too, like food and drink, and a guard's uniform that can be used as a disguise.

Eventually you will discover one of six booby trapped bombs which must be activated before you escape with the hostages in order to destroy Bloodfinger's base. On encountering a bomb the game switches to a puzzle screen which consists of the letters A to E printed in random order. Two letters at a time can be exchanged and the object is to sort them into alphabetical order.

The graphics are superbly detailed and are drawn in glorious Mode 4 monochrome. The lack of colour doesn't spoil the game, and the backgrounds and sprites are very impressive. Joe Blade and the enemy characters walk quite convincingly in front of the background and other objects on the screen giving the display a good feeling of depth.

Only about one third of the screen is used as the playing area and the action is shown side on. You walk left or right, and can enter doors into or out of the screen. You can also jump, but I haven't found a need for this yet as you can't leap on top of any of the objects lying around.

The sound is fairly primitive, merely consisting of a beep when Joe walks or fires his gun. Apart from this I found it a very enjoyable game, and one that I will play for quite some time to come.

Roland Waddilove

### \*\*\* Second Opinion \*\*\* (Electron User)

The graphics are excellent, but I wish Players would improve that appalling sound. Surely it wouldn't be too difficult to add a short tune or a few more sound effects? In spite of this, I still found it an enjoyable escapade and it deserves to do well.

## Instructions

*"JOE BLADE IS BACK - MORE MUSCLE, MORE ACTION! The streets are crawling with punks, thugs and muggers! Only one man can clean up this city. That man is JOE BLADE. Produced by Richard Paul Jones of Players 1988."*

The year is 1995, the setting London. The streets are crawling with punks, thugs and muggers! The ordinary urbanite masses remain prisoners in their crumbling homes, too terrified to venture outside, into the crime-ridden inner-city horrorscape beyond their front doors.

Only one man can clean up this city...that man is Joe Blade.

Joe Blade - teenage pin and pop idol, media celebrity, hero of the people, defender of the flag, helper to those less fortunate than himself. Mean, tough and fearless, his very name strikes fear into the cold hearts of each punk, thug and mugger.

You are Joe Blade... Using only your skills of hand to hand combat, you must clean up the city.

The punks wear armour to protect themselves from each other, so in order to kill a punk, you must kick him in the head. This is achieved by jumping over him. You do not have to kill all the punks. Once you have killed about 60, the remaining punks will get the message and repent of their evil deeds to become decent law-abiding citizens.

Not only must you kill your daily quota of punks, you must also rescue sixteen citizens who have foolishly ventured onto the streets. To rescue a citizen, you must walk into him, then solve one of four subgames.

### Subgame One

You must complete the sequence 1, 2, 3, 4 by pressing FIRE when the correct number appears.

### Subgame Two

As with subgame one, you must complete the sequence 1, 2, 3, 4. However this time by swapping numbers. Press FIRE when the desired pair of numbers are underlined.

### Subgame Three

In this subgame, you are presented with two sets of jumbled numbers. You only have to complete the top 1, 2, 3, 4 sequence, by swapping numbers between the two. When the desired pair of number icons are underlined, press FIRE.

### Subgame Four

In subgame four, you are presented with an ever-changing number icon and four jumbled numbers. The object of this sequence is to swap the changing number with the

flashing number to form the sequence 1, 2, 3, 4. When the desired pair of number icons are underlined, press FIRE.

Scattered around the city you may find items such as bins and clocks which will help you in your mission.

### **Game Controls**

Z - Left, X - Right, : - Through door/jump, / - Through door.  
<RETURN> - Fire

**Instructions' Source** : JOE BLADE 2 (Players) Back and Inner Inlay

### **Review (Electron User) - "Tricky Beat-'Em-Up"**

As you can no doubt guess, JOE BLADE II is the sequel to JOE BLADE - a game which I thoroughly enjoyed when it was released a short while back. This new version is very similar to the original and features that teenage pin-up and pop idol, media celebrity, hero of the people, defender of the flag and helper of those less fortunate than himself - or so the cassette inlay claims - Joe Blade.

In this latest romp you are again in control of this do-gooder and your task is to clean up the streets of London circa 1995. No, you're not a garbage collector, though you'll find several dustbins which can be collected on your travels. You are in fact a one man police force out to reduce the rapidly increasing crime rate.

The city has gone to the dogs since 1989 and the place is crawling with muggers, skinheads, punks and the like. Anyone who ventures out into the backstreets and alleyways is quite likely to be pounced on and given a severe beating, not to mention being robbed to boot.

Your task is to patrol the city keeping a sharp lookout for shady characters and signs of trouble. Any punks you come across on your beat must be disposed of by leaping Kung-Foo style and booting them in the head. They then disappear in a cloud of dust, but there always seem to be more just around the corner.

The object is to kill 60 or so punks and rescue 16 citizens. You'll come across the latter every now and then as you walk around.

Like the original game, the graphics are superbly detailed and the playing window - which occupies the major part of the screen - shows a 3D perspective side on view. You can walk left or right and through alleyways into and out of the screen. As you move on to the next screen it rapidly flicks up - no scrolling here.

Apart from punks, you'll come across clocks which give you extra time to clean up the city - you've got just ten minutes - and dustbins, for which I've yet to find a use. On encountering a citizen the screen clears and up pops one of four types of puzzle. All involve re-ordering a mixed up list of the numbers one to four.

Sounds easy, but you can only swap certain pairs of numbers, and this pair is rapidly changing. To make things even harder the numbers are displayed as strange hieroglyphics, and there's a time limit too. If you don't succeed you're dead meat and you have to start all over again. I found this part extremely difficult, which spoilt the game slightly for me.

JOE BLADE II is a bit too like the original in many respects. If you have the original I would suggest you try this version before you buy it. If however, you haven't seen Joe Blade in action then it's an entertaining - if at time frustrating - game that will keep you amused for many an hour. Well worth a look.

Roland Waddilove

### **\*\*\* Second Opinion \*\*\* (Electron User)**

JOE BLADE II is very similar to the original and it is clearly hoped that players of the first version will be clamouring to buy the second. There's no doubt about it, JOE BLADE II is a superb game - but I wish it differed more from the original.

The graphics are excellent, and the game is very playable. However, I too found the puzzle screens very difficult. If you haven't see Joe Blade before, either version will provide many hours of fun.

# JOHNNY REB

*Professional, Originally Released On Cassette Only*

Game Type : Strategy; War-Game  
Author : M. C. Lothlorien  
Standalone Release(s) : 1984: JOHNNY REB, Lothlorien, £9.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : M.C. LOTHLORIEN, 56A Park Lane, Poynton, STOCKPORT SK12 1RE  
Disc compatibility : CDFS E00, DFS E00

## Instructions

The game is set during the American Civil War and represents skirmish around a river crossing between Union and Confederate forces. The objective of the game is to either capture the enemy's flag or to achieve the more dominant tactical position within the time period which you allow yourself.

## Setting Up

1. The first decision is whether the game is for two different players, using the computer as the impartial umpire, or as a game for one player where the computer will take the role of player 2.
2. Choosing sides - Player 1 must enter which army he wishes to be, either c (confederate) or u (union). In all subsequent actions, player 1 will always move first, and in the one player game you will always be player 1, having the black pieces on the right hand side of the screen.
3. Setting a time limit - if you wish to play the game through to a conclusion, then enter "n" and the battle will continue until one flag has been captured. If you enter "y" a time limit will be imposed of a given number of game turns.
4. Choosing your troops - This is always done first by player 1 who has a maximum limit of twenty pieces of each unit (infantry, cavalry and artillery). You must now either input "y" if you wish to fight with the combination or "n" which will enable you to re-select the force. It is now the turn of either the computer or player 2 to select their forces. He has to construct his force to a value no greater than the points total of player 1.

## Game Play

1. The Battlefield  
marshland (impenetrable)  
forest (impenetrable)  
Your troops will be placed randomly on your own side of the screen.
2. Movement Commands  
In each game turn, player 1 must give commands for all his units, after which the results of any artillery fire are calculated before player 2 is able to make any of his moves. After player 2 has made all his moves, then it is at this stage that the results of any direct attacks on any units are calculated. Your units must be moved in the sequence in which they change colour. The input of "q" enables you to pass over the remaining moves for all your units who have not already received a movement command and therefore passes thw move to the other player. Pressing <RETURN> will enable you to bypass an individual unit.
  - a) Move (m) - You can move in one of 8 directions: n, s, e, w, ne, se, sw, nw. All movement commands must contain three elements, the move command (m), the direction using the above compass points and the number of squares moved.

- b) Fire (f) - A valid input has three elements, the fire command (f), direction using the eight compass points and range (number of squares)
- c) Crossing the river (cross) - To cross the river, your unit must be directly adjacent to it and you must input the command "cross" when a movement is requested.
- d) Limits of moves - Where an invalid request is made for a movement or the unit reaches an impenetrable square then the movement will stop and a message will be reported.
- e) Saving the game (save).

### **Attacking**

- a) Artillery fire - your initial supply of ammunition is limited but you may receive occasional re-supply during the game.
- b) Attacking an enemy unit - More than one unit can attack a single enemy unit.
- c) Unit strength - each unit is shown against a background colour which indicates its strength. (The lighter the colour, the stronger the unit)
- d) Completion of the game - the final action before the start of the next game turn is for the computer to check the new position of each unit and these will flash in turn as the check is made.

### **Game End**

- 1. Expire time period - the higher points total is the victor.
- 2. Capture of enemy flag - to capture a flag, you must order your unit to move onto the square occupied by the enemy flag.
- 3. No result - it is possible to so deplete each other's force that neither side can reach a winning position.

**Instructions' Source** : JOHNNY REB (Lothlorien) Inner Inlay

### **Review (Electron User)**

Having never before tried a war game (is this the right term?) it was with some trepidation and not a little interest that I loaded Johnny Reb. However I think I could quite easily get addicted now!

The object is to select an army of your own devising and, by out-manoeuving a second player, or the Electron, capture the enemy army's flag a predetermined number of times. The scenario is a confrontation at a river crossing during the American Civil War. The program, which is recorded on both sides of the cassette, loads in two parts. The first plays 'Dixie', displays the Confederate flag and loads in the main program.

You are then given various options - one or two player game, whether you want to be the Johnny Rebs or the Bluebellies, what units you want in your army, if you want a time limit and if so, what? You can choose to play a friend or, by choosing the one player option, the computer. Your army can consist of up to twenty units of each of cavalry, infantry or artillery. If you are playing the computer it can choose a force numerically equal to yours but not necessarily consisting of the same number in each unit.

When you have made your choices, the battleground is displayed. This display and the placement of troops on it, is random. But I noticed a tendency for the Electron's army to keep being slightly more favourably placed than mine!

Each army in turn makes a move for each of its pieces. After one complete move by each army, the battleground is scanned and updated. The first army to capture the

enemy army's flag a certain number of times - or alternatively to destroy the enemy - wins.

So what is it like to play? Well, it's like playing a cross between toy soldiers and chess. If it seems that the enemy will get you, you can always give them a blast from a cannon.

I found I liked to play with the maximum number of pieces (60), without a time limit.

If you are called down for tea there is a save-game facility. Enclosed with the program is a cassette-sized leaflet containing seven pages of rules. But I found the program very user-friendly, causing only occasional reference to the instructions.

Some things I didn't like. My major complaint is that the more I played it, the slower it seemed to get. After completely exterminating the enemy army (my one and only time) it took about half a minute while the computer scanned the enemy battlefield for troops and then again for score-checks for it to announce that I had won.

Another thing that I'd like to see changed is the method of calling the save game routine. I found myself calling it up several times by inputting "S" (Save) when I had meant to input "M" (Move), <RETURN>, "S" (South). Perhaps if you had to type in SAVE this problem wouldn't arise. The error-trapping on the BREAK key didn't seem to be quite right, but that probably serves me right for messing about with it.

Overall, a little on the slow side. Nevertheless it's a compulsive game that will keep your interest longer than the average arcade game. And it will still be going strong when you have solved that latest adventure. Good value for money.

Merlin, ELECTRON USER 1. 9

## Review (Electron User)

This is a suite of three programs. The first, called Lander, is designed as a test of multiplication and division. The aim is to answer questions correctly, thereby boosting the lander higher into space. Your turn ends when the lander touches down and you are given a score. There are numerous options - multiply or divide, choice of tables used and speed of lander.

I found the sound obtrusive and the game unexciting, but it all worked smoothly enough. I'd be tempted to use pencil and paper for this kind of task.

Game three, Number Spin, is designed to test addition and subtraction and is based on a fruit machine. These devices with nudges and holds are a mystery to me, and I'm not sure we should encourage youngsters into using them. I would not use this part of the program at home or at school.

The tape's salvation is program two, which is designed to give practice in co-ordinates. The aim is to find objects hidden in a grid. You enter X and Y co-ordinates for your guess, and then an arrow points towards the object. Humour comes into the game, because the object, when located, could be a treasure but might equally be an old bone or an ugly mask. When you have found four objects, you get a score based on the value of your finds.

In 20 minutes on this program, my seven year old son improved his grasp of co-ordinates and also started to use binary chopping to locate his objects. He also got excited if he found a valuable treasure, which kept his interest.

At £6.95, I feel the co-ordinates program is worth it, but Lander and Number Spin are for me a waste of space.

# JUNGLE JIVE

***Professional, Originally Released On Cassette Only***

Game Type : Arcade  
Author : Dennis Ibbotson  
Standalone Release(s) : 1984: JUNGLE JIVE, Virgin Games, £1.99  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : VIRGIN GAMES, 61/63 Portobello Road, LONDON W11 3DD  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"You need skill and speed, just to stay alive!"*

You're strolling through the jungle when you realise that you're *not* alone! Wild animals are closing in from *both sides*.

Fortunately you have a rifle with you (handy that!) and you must aim with speed and precision. But beware of shooting the baboons who must survive so that you can survive - nevertheless they are still as dangerous as all the other animals including the *pink elephants* and *green crocodiles*.

Watch out for the slithering snake though, because he dashes about at random. And the heat can play tricks on your mind and some animals just seem to disappear *or do they?* Apart from the animals, screen after screen of them, getting faster and faster, you must be careful not to shoot yourself! A *careless ricochet* will mean the end of your safari.

## Game Controls

Z - Shoot Left,    X - Shoot Right,    \* - Run Up,    ? - Run Down

**Instructions' Source** : JUNGLE JIVE (Virgin Games) Back and Inner Inlay

## Review (Electron User)

In a time when the big game hunter is thankfully a thing of the past, JUNGLE JIVE lets you release your aggressive instincts without spilling blood. It brings all the excitement of a jungle safari onto your TV screen.

You control a little man who waddles up and down the centre of the screen. The idea is that you blast away at the animals who are closing in on you to your left and right. You get points for each one you hit although I pretend they're just tranquillising darts.

As you're getting yourself a life ban from the RSPCA, avoid the slithering snake who dashes about at random trying to avenge all those departed elephants, crocodiles, lions and birds. Whatever you do, don't shoot the cute little baboons which line your path. They protect you and you'd better protect them or else you're finished. And don't try to shoot the blue hippo. Bullets bounce off him.

You start off with the usual three lives, gaining bonus lives as your point score mounts. You lose them as you bump into things and things bump into you.

It's a nice action game that promises fun for all the family - once you've settled the arguments over who's going next.

Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Fast or slow, skill and speed are needed to beat the enemy aircraft attack determined to destroy your base. Skill and speed are needed to avoid being hit by enemy aircraft.

## Game Controls

Options displayed on screen.

**Instructions' Source** : KAMAKAZI (A n F) Inner Inlay

## Review (Electron User)

If you're one of these shady characters who can go into a pub or amusement arcade and lose yourself for hours in a Space Invaders or Galaxians game, then this should be right up your street. There are fast and slow levels - and you take your pick according to how big-headed you feel. Then launch into the fray.

You are a lone, ground-based, tank-like vehicle fighting squadron of aircraft, all intent on sending you to the big electron cloud in the sky. The skill lies in dodging the bombs and the descending bombers, who have no fear of ramming you. At the same time you are trying to shoot them down. But to add insult to intended injury once you've annihilated one squadron another more challenging one is ready to take its place.

This is not the most original game in the world, but it is certainly well done. The action is fast and furious with more than adequate sound and graphics. If you are looking for a classic game to test your nerve and reactions this is for you.

### **Instructions**

*"An all action, thrill packed arcade game in four episodes where you take the role of the Sheriff in a bid to make peace with the Indians."*

Scene 1: Shoot down birds to trade with the Indians for the peace token. Each piece token will give you an extra life. At least one is needed to progress.

Scene 2: You are ambushed in the town and must gun down the outlaws. To gain more bullets, run off to the right of the screen.

As you progress through the four levels, the action will speed up and up. The screen flips between the two scenes and you must continue to shoot your way through.

### **Game Controls**

Z - Left, X - Right, \* - Up, ? - Down, <RETURN> - Fire/Jump

**Instructions' Source** : KANE (Mastertronic) Inner Inlay

### **Review (Electron User) - "Kane In For A Caning"**

KANE is a man with problems. As sheriff he must make peace with the Indians and pump the town's bandits full of lead.

Stage one involves Kane shooting birds with a bow and arrow. You fire the bow by moving the cursor to the desired impact point and press <RETURN>. The skill lies in judging how far in front of the bird to fire, which depends on the bird's altitude, distance and velocity. A direct hit results in the bird plummeting earthwards.

You begin with ten arrows, and every time you kill a bird you get your arrow back. You also receive an extra life for every three birds shot. The carnage takes place against a pretty mountain scene. Sound effects are very good - the arrows fly with a nice thwap and dead birds hit the deck with a realistic thud.

The instructions say that the next stage involves a race across the desert on horseback, jumping over the bushes. Not in my version it doesn't - the program went straight to scene three.

Standing at one end of the main street you stare at the buildings, scrutinising every doorway for tell-tale signs of movement. A hand appears at the saloon door, you run across the street, move your cursor into position, and Black Jake bites the dust. Before you know what's happening the buildings are buzzing with bandits.

KANE is very difficult to control. I had to press a key three times on numerous occasions just to get him to change direction. Whatever you do, you must keep moving. If you stand still for too long you'll end up an ex-sheriff. You can re-load

your pistol by running off the right hand side of the screen, but you must choose your time to carefully. Everybody knows where you are going to appear, so you need to wait until there are only a few baddies on the screen before returning.

Having shot ten bad guys you can proceed to scene four. What?! No scene four?! Come on, Mastertronic, what are you playing at? The instructions say scene four consists of racing to stop a hijacked train. It's a pity the programmer didn't read them.

The game may only cost £1.99 but I can't help feeling Mastertronic will receive a few letters of complaint about this one.

# KARATE COMBAT

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Beat-'Em-Up  
Author : Martin Sykes  
Standalone Release(s) : 1985: KARATE COMBAT, Superior, £9.95  
Compilation Release(s) : 1987: FIVE STAR GAMES 2, Beau Jolly, £9.95  
1988: 10 COMPUTER HITS 4, Beau Jolly, £9.95  
1988: SUPERIOR COLLECTION 3, Superior/Acornsoft, £9.95  
1989: KARATE COMBAT, Superior/Blue Ribbon, £2.99  
Stated compatibility : Electron  
Actual compatibility : Electron. Electron version also works on BBC.  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : ADFS 1D00

## Instructions

Set in the realm of the mystic Orient, KARATE COMBAT pairs you, in thrillingly realistic battle, against 16 of the mightiest and most skilful exponents of "open-hand" fighting.

Each bout of Karate fighting lasts until one of the fighters has no energy remaining. The indicator on the top-right of the screen shows your energy. Your opponent's energy level is not shown, although at the start of each bout, the fighters' energy levels are equal. The score is shown at the top-left of the screen, and there are different scores for each manoeuvre and for frequent changing of fighting style. Your aim is to defeat each opponent and ultimately battle against the 16th opponent The Master.

Practice Mode allows you to perfect your repertoire of manoeuvres. The 2-player mode allows you to play against a friend rather than competing against the computer.

## Scoring

High punch .....	30	High kick .....	50
Low punch .....	50	Low kick .....	50
Successful block .....	20	Flying kick .....	60
Back sweep .....	100		

If a punch or kick is delivered accurately and is timed correctly, the score is doubled.

If a manoeuvre is repeated too often, the judges will penalise the player by reducing his energy level.

## Game Controls

### Manoeuvres

Walk left .....	<	High punch .....	A S
Walk right .....	>	Low punch .....	A X

## Review (Electron User)

Martial arts games certainly seem to be popular at the moment, with KARATE COMBAT from Superior Software adding to the available range on this theme.

The game follows the usual format, with the scene set against an oriental backdrop and the two players awaiting combat on the floor area. The referee sits on the sidelines, ready to issue commands and keep track of the scores.

The game provides three options - practice, single player and two players. Practice mode gives you the opportunity to knock spots off a stationary punchbag. In this mode it is possible to practise all the available moves - and there are quite a few - without the worry of being smashed to the ground by your opponent.

The single player option lets you play against a computer-controlled opponent. To see your opponent jumping, rolling and kicking with extra-ordinary speed and dexterity is enough to send you scurrying back to the practice mode.

The third option allows two players to compete against each other, which probably gives you more of a fair chance than playing against the computer.

There are sixteen different opponents, and each victory gives you a crack at a new one. If you manage to beat the final opponent, known as The Master, you can enter a draw to win a hundred pounds and a trophy.

The game may be played with either keyboard or joysticks, but using the keyboard is quite tricky due to the number of keys used to cover all the available moves. Joysticks are a much easier option. The graphics are colourful, smooth and flicker-free. Sound effects are also provided, with the option to toggle these on or off.

I can't get very excited about these martial arts games, but nevertheless this version is as good as any I have seen.

## Instructions

The Zyroneans were an advanced, pacifistic civilisation, until the arrival of Kayleth and his obsessional craving for Chromazin, a rare mineral found in small quantities on the planet Zyron.

Now, Kayleth rules the Zyron skies with awesome power, using an Atomic Bisembler system to send down his powerful army of androids to enslave the Zyroneans and force them to claw-out the subterranean rocks to extract the precious one.

What is Kayleth?

Why are particular Zyroneans transported to the orbiting nerve centre of his domain, never to return?

How can this tyrant be eliminated?

Have you got the iron nerve and cunning required to defeath him before he completes the total destruction of your home planet?

You, a loyal Zyronean, have avoided capture long enough to set into motion a plan to liberate your beloved planet. However, as you are about to discover, event have overtaken you well laid schemes!!

## Loading

To load KAYLETH from tape, make sure that PAGE=&E00 and then type CH."" and press RETURN. When the loading is complete, a message will appear asking if you wish to start a new game or load a saved game. To commence play, simply answer the prompt for a new game and you will be at the start of one of the most fascinating computer experiences available. If you wish to continue a Saved game, respond appropriately to the prompt and insert the cassette of your saved game (fully rewind) into your cassette recorder, press PLAY and then press RETURN as instructed on the screen.

Note that the Save and Load Game options will not function on the disk version of KAYLETH due to memory constraints.

## The Nightmare

The Zyroneans were an advanced, pacifistic civilisation, until the arrival of KAYLETH and the ensuing destruction!

Kayleth's craving for chromazin (a rare mineral), found in small qunatities on Zyron) led him to this part of the galaxy. He dominated the Zyronean skies with awesome power. Using Atomic bisemblers, he sent down his androids to enslave the population and force them to claw-out the subterranean rocks to extract the precious ore.

You, a loyal Zyronean, had avoided capture and were planning a way to rid the planet of Kayleth. However, as you are about to discover, events have overtaken your plans!

Your beginning: 340 a.K.

Your mind struggles to free itself for an endless void only to observe the birth of a nightmare world.

You awake to find yourself encircled by metal bands, upon a conveyor belt which is moving ever closer to a pair of cold, steel claws which rhythmically descend and spew out a charge of electric blue light. Desperately you search your memory for a clue to the events that led you to this alien place, but no recollection remains in your brainwashed mind.

Your instinct for survival flares hot in the centre of your mind, urging you to struggle to free yourself from the encroaching claws, for who knows what they will bring, an end to a vague feeling of loss and desolation or the rending apart of your soul?

You *must* survive and search out the reasons behind a life which began but a moment ago. But beware you are *not* what you appear to be!!

In your search you will discover various locations which will stir your memory and begin the process of remembrance - Kayleth's Starship, the ancient city of Zyron, the Zap selection centre, which houses a laboratory complex, bodybanks and mind facsimile apparatus; The chromazin mines and reprocessing plant; The prison town of Zymogg.

You will encounter the dreaded Mokki Ray (who eats bipeds between meals), The Rock Gullet and the vicious Zemps (if you can first survive the Destroyer Droids).

Others you may encounter include Broznak, your host at the Oblivion Inn, Yagmok and the Astechs (Asterion Technicians) and many other peculiar inhabitants of Zyron.

Your challenge is to rid your home planet of the leech who is draining it dry and in so doing, discover yourself!

## **Surviving!**

KAYLETH has an extensive vocabulary of words which can be used to enter player COMMANDS.

To enter a COMMAND, just type in the action you want to perform, as an example, some possible commands are listed below:

```
GET CANNISTER
EXAMINE CLAWS
GO WEST AND NORTH THEN ENTER THE CITADEL
INSERT SERTA
ASK BROZNEK FOR QNUTS
START THE SKIMMER
DROP THE PHOTON CUTTERS
WEAR THE LENSES
REMOVE MASTA
TALK TO YAGMOK
PRESS CONTROL BUTTON
FIRE PLASMA AT DOOR
```

These are a few sample COMMANDS but as you can see they range from simple two word (VERB NOUN) instructions to multiple action COMMANDS.

PHRASES of multiple action nouns should be separated from each other with the use of AND or by a comma:-

```
GET THE PYXIS AND OPEN IT
GET THE LENDS AND WEAR THEM
GET THE CORONA COAT, DROP THE C-EMZS
```

Several separate actions may be included in one COMMAND but actions should be separated by a comma or the word THEN. If a noun is repeated in an action, the noun may be replaced with the word IT or THEM if plural.

```
GET THE FUSE AND INSERT IT
DROP THE TAE AND THE HEADSET THEN GO UP
DROP ALL THEN GO IN
INSERT THE FUSE THEN BOARD SKIMMER
```

The use of the word THE is optional, no full stops are needed to end a COMMAND.

If you are new to playing adventures then stick to two word (VERB NOUN) COMMANDS until you get the feel of the game. You will find that the computer will soon tell you if you type a COMMAND it doesn't understand.

### Special Word Commands

**LOOK** - This will redescribe your current location if you lose your bearings! (For a closer inspection of an object, use the word EXAMINE then the name of the object.)

**I** or **INVENTORY** - This will tell you what you are carrying.

**QSAVE** - This will save your current state of play, to RAM, so that if you should accidentally be killed, you may QLOAD to return to the scene of the crime without reloading a saved game from tape.

**QLOAD** - Loads previously Qsaved game.

**QUIT** - This command will ask you if you want to play again and also ask if you want to RESTORE a saved game.

**SAVE GAME** - This allows you to save the current game position. The saved game can be restored, when you return to the adventure, by answering YES to "Do you want to RESTORE a saved game".

**LOAD GAME** - Does just that, from your saved game on tape.

**WAIT** - There may be times in the game where being able to wait has distinct advantages. This command will let the game move on one move - longer waits can be entered by WAIT 5; WAIT 10; these can be used if you are stranded by the tide whilst investigating the secrets of Yagmoks' Island.

**BOM** - Not as violent as it sounds! Typing BOM (Back One Move) allows you to do just that. Useful if you go momentarily insane and destroy or disguard a useful piece of equipment or find that you've jumped into a cul-de-sac full of snarling beasties!!

If your thoughtless actions result in death, wait for the title page and then type BOM as your first COMMAND, this will give you another chance of survival.

**GET ALL** - Gets all available objects in your present location, but will not, of course get objects you have yet to discover!!

**DROP ALL** - Does that, but be careful with it!!

### Travelling And Exploration

We have already seen examples like GO NORTH AND THEN WEST but to save wear and tear on the digits, abbreviations can also be used for directions - N, S, SW, etc. Also U for up and D for Down.

### Hints On Play

The planet Zyron is suffering under the dictatorship of Kayleth. Everyone you meet is bound to be wary so you may have to prove your good intent before they will have anything to do with you!

Before you begin your quest, you will have to discover exactly what has happened to you in the recent past. There is definitely something not quite right with your head!! Solving this 'small' problem will open many doors and make the going a little less tough.

Finally, examine everything for clues or information on use, etc. The problems you will encounter will be logical and you won't be interfered with by hoardes of goblins, trolls or other illogical creatures who require you to perform obscure tasks to placate them!! (E.g. you won't have to wave the ham on rye in one hand whilst constructing a kitchen sink with the other in order to open a door!)

You would appear to be the only hope for your planet, and at the moment you're in no fit state to perform the task, so for the sake of Zyron, get your act together!

NOTE - A crack team of bug hunters have been in round the clock pursuit of these insidious creatures, only the most cunning and elusive bugs could have eluded their search and destroy tactics!!!

# KEYWORD

**Professional, Originally Released On DFS E00 Disc Only**

Game Type : Utility; Spellchecker  
Author :  
Standalone Release(s) : 1988: KEYWORD, Swift, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron. Electron version also works on BBC.  
Supplier : SWIFT, 347 London Road, Hazel Grove, Stockport, CHESHIRE  
SK7 6AA  
Disc compatibility : CDFS E00, DFS E00

## Instructions

BIBLIOGRAPHY	KEYWORD	SCHEDULE
DICTIONARY	"A WAY WITH WORDS"	ROTOR
GLOSSARY	Swift Software	TABLE
CATALOGUE	The Dyanamic Word Finder for home and business use	THESAURUS
LEXICON	BBC/ELECTRON VERSION USER GUIDE	INDEX
ROSTER		CHECK LIST

*"It's so easy to use. just type in a word and straight away you'll be offered a huge list of alternatives. Then, using just the cursor keys, you can select a word that's nearer to your requirement.*

*Or if it's not quite what you're looking for, just press <RETURN> to see another set, more closely related to the new word - and so on.*

*With KEYWORD you'll be able to quickly and effectively make use of the complete wealth of the English language, and once you've used it you'll wonder how you ever managed without it.*

- \* Over 10,000 synonyms and antonyms
- \* Nearly 1,000 main subject headings
- \* Extra rapid word search
- \* Can select over 70 words at a time
- \* Simple operation
- \* Flexible 'roam' facility
- \* Can be used as a Thesaurus"

## Using KEYWORD Couldn't Be Simpler

To use Keyword, just place the master disk (or a copy) in drive 0 and press <SHIFT>-<BREAK>. Keyword then installs itself and is ready for use

## How It Works

When you enter Keyword, it will prompt you for a key word. This will be the root word from which your search starts. So all you do is enter a word similar to the one you're looking for (or even just vaguely connected to the general subject).

For example, if you have used the word LEARNING a couple of times in a paragraph and now you need a different one, just enter:

LEARNING

and press <RETURN> twice.

You will then be offered the choice of selecting one of the two following categories:

KNOWLEDGE  
LEARNING

Move the cursor using the cursor keys until LEARNING is highlighted and press <RETURN> again.

At this point you will be shown a list of words, among which you'll see the likely contenders:

DISCOVER  
MASTER  
MEMORISE  
TRAINING

and so on.

If any of these words is close to the one you're looking for but not absolutely suitable, just select it with the cursor keys and press <RETURN> to see a new list of words more closely related to it.

### **Free Roaming**

Using the cursor keys and <RETURN>, you can roam indefinitely through KEYWORD, following avenues of thought, tracing words back to their roots or finding words of opposite meaning.

And if at any point you wish to enter a new key word, just type it in and press <RETURN> for the whole process to begin again.

### **Scanning**

A useful feature of KEYWORD is the ability to scan through the entire dictionary. To do this, type a letter when a word is highlighted. Then press <DELETE> to remove the letter and press <RETURN>. The dictionary will be displayed page by page. If you see a word you are interested in, press:

n

at the 'More?' prompt and select it in the usual way using the cursor keys and <RETURN>. Or if you want to carry on scanning you can press either Y or <RETURN> at the 'More?' prompt.

Alternatively, you can scan through smaller areas of the dictionary by entering one of more letters. For example, typing:

th

followed by <RETURN> instructs KEYWORD to display all words beginning with th.

### **That's All There Is To It!**

KEYWORD was written by a professional journalist for his own use, and therefore has been designed to be as simple to use in the shortest time possible - without needing to refer to the manual.

### **Upgrades**

At Swift Software, we have a policy of continual support for our programs. If you have any queries or suggestions for upgrades, please drop us a line. If we use your idea we'll send you a FREE copy of the latest version when it's finished.

### **Copy Protection**

We believe it is essential to be able to back up your software in case of emergency. Therefore KEYWORD is not copy-protected. However, if you wish us to be able to continue supporting your micro please do not abuse this policy.

# KILLA

## *Professional, Originally Released On Cassette Only*

Game Type : Utility; Upgrade to game KILLER GORILLA  
Author :  
Standalone Release(s) : 1984: KILLA, Bit Twiddlers, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : BIT TWIDDLERS. No further information.  
Disc compatibility : Unknown

### Instructions

Instructions not supplied. All instructions on screen.

### Review (Electron User)

Having gone ape over KILLER GORILLA, it was with keen anticipation that I received a copy of Killa, the upgrade produced by Bit Twiddlers. The immediate impact of the upgrade is the ability to do varied jumping, with or without the hammer. The jumps features are double, extended and double extended jumps.

However old habits die hard and it took me some time to familiarise myself with these before I stopped throwing myself off the platforms. Once I had gained some experience of them I found them invaluable in avoiding multiple fire balls. Jumping with the hammer only really comes into play where there are gaps in the platforms.

Climbing with the hammer is also useful and increases the point scoring potential, although I found myself in a dilemma on a few occasions when holding a hammer on a platform where another hammer was available. Should I run with the first or wait and take the second? Initially, hesitation was my only downfall.

While retaining the four stages within each level, the upgrade increases the number of levels of seven, these being basically increases in speed. At level 7, the speed defeated my attempts to complete all the stages and provides a challenge which in the long term will probably prove irresistible.

The extra lives at each of the first three stages, while useful, can also prolong the game beyond the endurance of players wanting to take their turn. My children were delighted while playing but frustrated while waiting.

There is also a practice mode, providing double the number of lives, which allows the selection of any stage within any of the levels. However, on successful completion of a stage, the game moves on to the next stage.

A shortcoming is that the practice mode must be selected before the loading of KILLER GORILLA without any facility to switch between the practice and game modes other than by reloading the programs. Apart from doubting the value of this practice mode, I also felt as if I were cheating by going directly to a stage without first completing previous stages.

Without doubt, the most useful facility of the upgrade is the pause. Which of us, on the way to a good score, hasn't been interrupted by a telephone call or a knock on the door?

Altogether, a welcome addition for the KILLER GORILLA addicts among us with the pause facility being well worth the money.

F. J. Lancaster, ELECTRON USER 2. 1

# KILLAPEDE

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; CENTIPEDE clone  
Author : Philip Blenkinsopp & Richard Paul-Jones  
Standalone Release(s) : 1986: KILLAPEDE, Players, £1.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : PLAYERS, Mercury House, Calleva Park, Aldermastn,  
BERKS RG7 4QW  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"The Killapede and a whole gang of creepy crawlies are out to get you. Dodge the fleas and the spiders from Mars to shoot at the multi-segmented beast. You must be quick though, as a fate of almost certain death awaits you."*

Destroy the Killapede with your deadly laser beam. Hitting a body section splits the Killapede in two, thus there will be two heads. Hitting a head scores 100 points.

The Killapede will make its way down the screen by moving left and right, dropping down a line each time it meets a mushroom or the edge of the screen.

Mushrooms may be shot away by hitting them four times with your laser base.

## Other nasties

Fleas will drop down the screen leaving trails of mushrooms.

Snails and snakes will run across the screen; if these are shot you will be awarded 200 points.

A spider will bounce across the screen and you must be careful to avoid it.

An ant will dash across the screen in pursuit of you. Be careful to avoid it.

All the above may be shot and score extra points.

A bonus life is awarded every 10,000 points scored.

## Game Controls

Z - Left, X - Right, \* - Up, ? - Down, <RETURN> - Fire

Supplier : MICRO POWER, 8/8A Regent Street, Chapel Allerton, LEEDS  
LS7 4PE. Tel: 01532 683186.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

The object of the game is to climb to the top of each level as quickly as possible while avoiding the hazards. There are four levels and if you complete all four, you will go back to the first one, but there will be some extra "nasties"!

You will be given an extra life the first time you complete level 3. Extra points will be awarded if you collect the heiress's belongings on the way up (handbag, umbrella, etc.). It is possible to jump up and grab the hammers and then for a limited length of time you can smash the fireballs, barrels or bowls of custard. You cannot climb ladders or jump gaps with the hammer. You must complete each level before your bonus runs out, or you will die of exhaustion. Good luck, you will need it.

## Game Controls

Z - Left, X - Right, \* - Up, ? - Right, <RETURN> - Jump  
S/Q - Sound On/Off, <ESCAPE> - Quit Game

The game may also be played with a joystick. Use FIRE to jump.

**Instructions' Source** : 10 COMPUTER HITS 2 (Beau Jolly) Inner Inlay

## Review (Electron User)

This is a good old fashioned arcade game containing two vital ingredients for success - it's addictive and it's fun. The aim of the game seems to be to navigate the male cousin past all manner of hazards until he meets his female counterpart.

It all looks very simple. You move the little chap straight across the screen on a road, jumping him over the odd bush and post box. The quality of the background graphics is so good that you may find your mind wandering from the task in hand.

Another problem is the severe shortage of time. You lose a life if you don't cross the screen quickly enough. Not only that, you are being bombed as well.

It won't be long before you manage screen one with confidence and can then tackle screen two. Success here leads you on to the bouncing kangaroos, and by shooting these defenceless beasts you can obtain bonus points.

By now the road has led to the wooded countryside, and you encounter bats and moving mushrooms. These are pretty taxing, and avoiding them requires a lot of practice.

Screen six brings you to some rather cute frogs, but also to a long, dissolving bridge. This one defeats me so I don't know what happens next.

I have two criticisms. Firstly, a multi-screen game like this should give you the option of starting on any screen. Secondly, the game lacks a high score table, merely keeping a record of the highest score.

Those points apart though, this is an entertaining family game. The graphics and the animation are of a superb standard and the sound is adequate.

An extra bonus is that the tape contains both BBC and Electron versions of the game (Make sure you load the right one!) and supports a First Byte joystick interface. Recommended for arcade addicts of all ages.

Rog Frost, ELECTRON USER 3. 6

## Review (EUG)

Downtown and countryside environs of Electron land are weird and very deadly places in this brilliant arcade game from D. Woodhouse and T. Racine. The three sentence instructions on the back cover don't do it justice at all!

Its most impressive feature, although there are many, is its use of colour and graphics. Most of the action happens on just a small level; the width of the screen but only around 32 pixels in height. But above this, and covering the majority of your screen, are intrinsically detailed backdrops of buildings, shops, a zoo, forests and trees. Nicely presented red and white score-, screen- and lives- bars also give a very smart appearance to the whole display making the small playing area virtually unnoticeable.

The gameplay is deceptively simple. You must guide a little boy from left to right over ten hazardous screens and there are always a number of obstacles, stationary and moving, to negotiate (in a pixel-perfect fashion) en route. On reaching the right hand edge, the background neatly scrolls onto the next screen.

Contact with anything and your man disintegrates with a suitable fizz and crackle and each time you jump you are treated to a bounce noise while a quick scale of notes denotes a successful passage from screen x to y. The opening screen plays a short rendition of 'Clemantine' and also introduces you to the little boy's other half who is patiently waiting for a smooch at the end of the tenth screen!

The characters on screen relate to the background in a very clever way. In town (the first few screens), brick walls, post boxes and trash cans (with raising and lowering lids) call for some deft finger or joystick action. As you progress into the forests, the baddies become more territorial bugs, worms and toadstools. There's a "Wonderland" feel to the game too in some respects; the 'Americanised' town has a shop selling two-bit micros, high rise traffic lights and arms borne by your cute hero but the countryside screens feel very 'English'. As if this wasn't enough, and necessitating the gun, you come under attack from overhead planes, an Australian kangaroo and a flying mutant crab!

There are just four keys: Z, X, <SHIFT> to jump and <RETURN> to fire and a First Byte Joystick Interface option can be enabled before loading. The playability is good and the interest level remains even when you manage to complete the screens only to be rewarded with having a chance to do it all over again...

This lastability factor, however, is probably related to a high level of randomness that operates in the game. As mentioned, from the third screen you are under threat from a bouncing kangaroo which comes from either the left or the right of the screen. He bounds over the territory and, surrounded by obstacles (as you invariably are), he can sometimes be impossible to avoid. He and the crab occasionally appear from the right JUST as you touch the right yourself meaning you carefully execute your plan to pass the screen, make it...and the hero disintegrates as you expect to hear the zip of a successful passage! Very frustrating.

This aside though, and it's a feature, not a bug [Where have we heard that one before? - Ed], KISSIN' KOUSINS is one of those games that does the Electron proud. Although loading is lengthy from tape, the speed of the game itself is superb and is improved still further with a Master RAM Board. An undocumented feature, or bug, is that the user can slow the speed down by holding down <SPACE> and playing as normal. <SPACE> is designated as both pause on and off and holding it bizarrely allows you to move your character pixel by pixel, making jumping those prickly bushes just a little bit easier!

KISSIN' KOUSINS is tricky, fast, frustrating, colourful, amusing, entertaining, wonderfully presented and difficult to master - although not impossible. It's everything you could want from an arcade game and is probably still worth every penny of its cover price.

Dave Edwards, EUG #48

# KINGDOM OF KLEIN

*Professional, Originally Released On Cassette Only*

Game Alias : EPIC ADVENTURES #3

Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

EPIC adventures are full-scale machine code adventure games. Sophisticated compression techniques have been used to provide a large number of locations and puzzles in each game. The adventures take place in a fantasy world which you must explore in order to find the solution to each game. You will require a combination of cunning, logic and magic, not only to complete your task but even to remain alive.

Each game is played by typing ordinary English sentences into the computer, which responds by describing your surroundings and telling you what is happening. Full playing instructions are included in each game.

Each adventure has the following features:-

Approximately 230 fully described locations, colour, ultra-fast response, fast save of partially completed game on tape, scoring, disk compatible.

A full-scale adventure through caves, water, tunnels, mountains, etc. to find and restore the Magic Klein Bottle.

An aura of doom surrounds the Klein Kingdom. The Magic Bottle was removed from its pedestal in the King's Palace and stolen by the Wicked Witch of the Mountain. She swore that she would put a hideous curse on anyone who was foolish enough to try and recover it.

Unfortunately, the citizens of Klein have elected you to be the foolish one!

You must destroy the Wicked Witch, find the Magic Bottle and return it to the pedestal in the King's Palace.

## Playing Instructions

Commands may be entered in the form of complete sentences. It is usually only necessary to enter the first two or three letters of most words, but if this doesn't produce the expected result, retype in full.

The program has a vocabulary of approx. 150 words and it is part of the game to discover what these are. However, some words that you will need to know are listed below. Most of them have single letter input.

NORTH, SOUTH, EAST, WEST, UP, DOWN, IN, OUT  
TAKE - To pick up an object  
DROP - To drop an object  
INVENTORY - To list your possessions  
LOOK - To describe your surroundings

SCORE - To obtain your score  
SAVE - To save the current game on tape  
LOAD - To load back a SAVED game  
QUIT - To end the current game

## Helpsheet

This is an alphabetical list of all the locations, objects, characters and items referred to in KINGDOM OF KLEIN. The location and purpose of each item is given, and the information provided in one entry will usually lead you to other items in the list. If you cannot find the word you are looking for, it probably plays no significant part in the game.

It is up to you how to use these clues. You may want to read through them as you play the adventure, or you may prefer to use them only if you get stuck. In this case, a fair amount of will-power will be required to avoid reading entries that you do not wish to see!

Due to our policy of continually improving our products, there may be minor differences in detail between these clues and your version of the game.

## Hints On Playing The Game

During your travels you will encounter various problems which can only be solved by the use of an object from a later stage of the game. When this happens, ignore the problem for the time being, and carry on until you find the object required. You should then be able to return to the problem by means of the transport mechanism provided.

**ADVENTURER SOUP:** A rich delicacy enjoyed by witches everywhere. Made by boiling the juicy bones of tasty adventurers in a big cauldron!

**ALCOVE:** Inside the mysterious cave.

**ANTECHAMBER:** In the palace, south of the courtyard.

**ARCH, STONE:** See Stone Arch.

**ARROW:** At the end of the north side of the chasm. See Chasm for how to get there.  
See also Bow, Scoring.

**BEACH:** On the far side of the pool, at the base of the cliffs. See Cliff. See also Star on Beach, Circle on Beach.

**BIBLE:** In the chapel. Not used, although you may read it. See Scoring.

**BIRDS: GIANT:** In the long corridor. Crack the egg here.  
**SMALL:** Inside the egg.

**BIRD'S EGG:** See Egg.

**BLUE LIGHT:** In the mysterious cave. For atmosphere only, although it does allow you to see in the dark.

**BOAT:** The boatman will let you hire a boat if you give him a gold coin. Take it when he drags it in. Use the boat to cross the lake (Type ROW BOAT or CROSS LAKE, etc). Leave the boat on the east side of the lake for the return journey. If you try to cross the pool (as opposed to the lake) in the boat, you will be left stranded without oars. See Pool. The upturned boat on which the sailor sits is of no use to you.

**BOAT HUT:** See Huts.

**BOATMAN:** In the boatman's hut. You must hire a boat from him, to cross the lake. You will encounter him again near the end of the adventure. See Coin, Boat, Bow, Arrow.

**BONE:** Before the stone arch. Throw this to get rid of the dog. If you merely drop it the dog will eat it and beg for more! See Scoring.

**BOOKS:** In the witch's sitting-room. Not used.

**BOTTLE:** See Klein Bottle.

**BOW:** In the alcove. You can use this to kill the boatman on your return journey. See Arrow, Scoring.

**BOX OF SPELLS:** See Spells and Refill Pack.

**BRASS KEY:** See Keys.

**BREATHING UNDERWATER:** You can't! See Pool.

**BRIGHTLY-LIT CORRIDOR:** See Corridors.

**BROOMSTICK:** See Witch's Broomstick.

**BUCKET AND SPADE:** In the loft. See Sandcastle.

**CARPET:** In the palace. Not used.

**CASTLE:** On the beach. See Sandcastle, Drawbridge.

**CAULDRON:** In the witch's cavern. This is not directly useful but see Voodoo Doll.

**CAVERN, WITCH'S:** See Witch's Cavern.

**CAVES: MYSTERIOUS:** On the south side of the chasm.

**UNDERWATER:** You do not need to enter here. See Squid.

**CEILING:** In the palace. For atmosphere only.

**CHAIR, ROCKING:** See Rocking Chair.

**CHAPEL:** To the north of the courtyard. See Portrait.

**CHASM:** At the end of the dark tunnel. You must fly back over this from the end of the south side to get the arrow. See Witch's Broomstick.

**CIRCLE ON BEACH:** See Sandcastle.

**CLIFFS: OVERHANG:** At the top of the cliffs. You can jump down to the beach from here, but see Umbrella.

**STEPS:** Cut into the east end of the cliffs. You may climb up them but cannot climb back down again. To return from the cliff top to the beach, see Cliff Overhang.

**CLIFFS:** Along the north edge of the beach.

**COIN:** In the safe. Give this to the boatman to hire a boat. See Scoring.

**CORRIDORS: BRIGHTLY-LIT:** You come to rest here just after you fall from the narrow tunnel. It runs east-west, with various rooms off. The pool is at the west end.

**LONG:** Just inside the castle.

**COURTYARD:** In the palace. There are exits north, south, east and west.

**CUBE:** In the loft. One of the Platonic solids. See Platonic Solids. It will float away if you attempt to take it underwater.

**DARK TUNNEL:** See Tunnels.

**DEEP PIT:** See Snake Pit.

**DODECAHEDRON:** At the top of the oak tree. One of the Platonic Solids. See Platonic Solids. It will float away if you attempt to take it underwater.

**DOG:** In the narrow passage. There are two ways to get rid of the dog, using the wand or the bone, but only one is correct. See Bone and Spells.

**DOLL:** See Voodoo Doll.

**DOORS: FRONT:** In the narrow passage. Knock on it.

**HUT:** You will need the brass key to open this.

**MOUNTAIN:** At the end of the mountain road. Read the first half of the scroll to open it, then go in. See Timed Moves.

**TRAP:** In the wooden hut. Open it. See Table.

**DRAWBRIDGE:** This spans the moat of the castle and it must be lowered before you can cross it. See Password.

**EGG:** In the forest. Crack this to release the small bird. See Birds.

**EGGSHELL:** Produced when you crack the egg. Not used.

**ENTRANCES:** **CAVE:** On the south side of the cavern.

**DARK TUNNEL:** See Tunnels.

**PALACE:** See Palace Entrance.

**EQUIPMENT, HORSE-RIDING:** See Horse-Riding Equipment.

**EVIL: PRESENCE:** In the 5-pointed star room. For atmosphere only.

**SPIRIT:** This will emerge if you read the first half of the scroll, unless you are standing outside the mountain door.

**FENCE:** On the palace road. For atmosphere only.

**FORCE, INVISIBLE:** See Invisible Force.

**FOREST:** To the south of the mountain road. See Rocks and Sword.

**G:** On the beach, to the west of the pool. See Letters.

**GEM:** See Luminous Gem.

**GIANT:** He guards the mountain road. See Rocks and Sword.

**GIANT SQUID:** See Squid.

**GOLD COIN:** See Coin.

**HAT:** See Voodoo Doll.

**HAY-LOFT:** Above the stables. Climb the ladder.

**HORSE-RIDING EQUIPMENT:** In the stables. Not used.

**HUTS: BOATMAN'S:** At the west side of the lake. Enter it. See Boatman.

**WOODEN:** At the west of the open plain. See Doors.

**ICICLE ROOM:** There are two entrances to this room, which is to the south of the brightly-lit corridor. There is no escape from here so type Load or Quit.

**ICOSAHEDRON:** In the storeroom. One of the Platonic solids. See Platonic Solids.

**INVISIBLE FORCE:** Just inside the mountain door. You cannot return along here.

**IRON PORTCULLIS:** See Portcullis.

**KEYS: BRASS:** On the beach, south of the sand lizard. Use it to open the door of the wooden hut. See Scoring.

**SMALL:** On the palace road. Use it to open the safe. It will fall into the lake if you are carrying it whilst you are in the boat. You won't need it again anyway. See Scoring.

**KITCHEN:** In the wooden hut.

**KITCHEN TABLE:** See Table.

**KLEIN BOTTLE:** As well as being the subject of the game, it is also a topological curiosity with no edges and only one surface. It cannot actually exist in its perfect form (except in adventure games!) hence the mystical associations. You will find it in the alcove, and must return it to the palace. See Scoring.

**L:** In the brightly-lit corridor. See Letters.

**LADDER:** In the stables. Climb it. The ladder is fixed in position and cannot be moved.

**LAKE:** To the north of the palace road. It separates the palace from the mountain. Do not jump in! See Boat.

**LEDGE:** Overlooking the pool, at the west end of the brightly-lit corridor. From the end of it, jump into the pool.

**LETTERS:** During your travels you will encounter various letters. These are rearranged to form the password.

**LIGHT:** See Luminous Gem, Blue Light.

**LOFT:** In the wooden hut. See also Hay-Loft.

**LONG CORRIDOR:** See Corridors.

**LIZARD:** See Sand Lizard.

**LUMINOUS GEM:** In the brightly-lit corridor. The game can be completed without this. It will break into fragments if dropped in the recess, and fade away if you attempt to take it underwater. See Scoring.

**MAGIC WAND:** See Wand.

**MINDLESS ZOMBIE:** See Zombie.

**MINIATURE HAT:** See Voodoo Doll.

**MOAT:** This surrounds the castle. See Drawbridge.

**MOBIUS RAVINE:** At the end of the long corridor. A mobius strip is a topological curiosity with only one surface and one edge. The ravine is laid out in a similar way, with each apparent edge being a continuation of the other. If you walk along the edge you will eventually emerge on the other side of the ravine.

**MOUNTAIN:** On the east side of the lake. The major part of the adventure takes place inside the mountain. See Mountain Door.

**MOUNTAIN: DOOR:** See Doors.

**PATH:** This winds up the mountainside, from the mountain road. There is a junction about half-way up, one path takes you to the top, the other ends at the pile of rocks. On early versions of the game a wrong move is fatal.

**ROAD:** See Roads.

**MP:** Mary Poppins.

**MYSTERIOUS CAVE:** See Caves.

**NARROW: PASSAGE:** South of the brightly-lit corridor.

**ROAD:** See Roads.

**TUNNELS:** See Tunnels.

**NEEDLE:** In the hay-loft. See Voodoo Doll.

**O:** There are three altogether: In the narrow tunnel, on the open plain, on the oak tree. See Letters.

**OAK TREE:** See Trees.

**OARS:** You cannot retrieve these once they have floated away. See Boat.

**OCTAHEDRON:** In the pool. One of the Platonic solids. See Platonic Solids. You will not have enough oxygen to retrieve this and get across the pool in one go.

**OLD BONE:** See Bone.

**OPEN PLAIN:** At the top of the cliffs. This is an oblong space with a tree in the centre, leading to a hut at the west end. In early versions of the game, north-south movements across the centre of the plain were prohibited.

**OPENINGS:** At the top of the mountain. Enter here. On the south side of the mobius ravine. This leads to the small rooms.

**OVERHANG:** See Cliff Overhang.

**P:** Carved on the weird tree. See Letters.

**PALACE:** The adventure starts and ends here. You must return the Klein Bottle here to finish the game.

**PALACE ENTRANCE:** At the east end of the courtyard.

**PASSAGE, NARROW:** See Narrow Passage.

**PASSWORD:** This is formed from the letters scattered about the adventure. See Letters. The password is Topology.

**PATH, WINDING:** See Winding Path.

**PEDESTALS:** There are two: One in the palace, and one in the alcove. You cannot do anything with these, they are used to rest the Klein Bottle on.

**PEG:** Just beyond the portcullis. See Torus.

**PILE OF ROCKS:** Up the mountainside. See Rocks.

**PIT:** See Snake Pit.

**PLAIN:** See Open Plain.

**PLATONIC SOLIDS:** These are the five solids mentioned in the scroll, they are a mathematical set: Tetrahedron - made from four triangles; Cube - made from six squares; Octahedron - made from eight triangles; Dodecahedron - made from twelve pentagons; Icosahedron - made from twenty triangles. See Small Rooms, Scoring.

**POOL:** This is at the west end of the brightly-lit corridor. You cannot breath whilst you are underwater, but there are enough moves available to enable you to get across it to the beach. After jumping in go south, east, south, west, then up. You can also pass back in the reverse direction. The water has an adverse effect on some of the objects. See Spells, Luminous Gem, Dodecahedron, Tetrahedron, Cube.

**PORTCULLIS:** At the entrance to the castle. See Peg. You cannot raise the portcullis from inside the castle.

**PORTRAIT:** In the chapel. Push or slide this to reveal the safe.

**PUDDLES:** In the loft. For atmosphere only.

**RANGE:** In the kitchen. You cannot do anything with this.

**RAVINE:** See Mobius Ravine.

**RECESS:** There are two of these, one on the ledge overlooking the pool, the other at the bottom of the cliffs. They provide a mechanism for transporting the spells across the pool. Dropping the box of spells in the first recess will cause it to rematerialise in the second one. See also Luminous Gem.

**REFILL PACK:** Behind the zombie. You cannot actually get to this, and you shouldn't need to. You only need five spells to complete the game. See Spells and Dog.

**RESURRECTION:** If you get killed, you can choose to be resurrected up to a maximum of three times. You will lose points for this which you cannot regain, so you are advised to load back a saved position whenever possible, instead of opting for resurrection.

**ROADS:** **MOUNTAIN:** Runs from the lake along the base of the mountain. It is guarded by the giant.

**NARROW:** Leads to the stone arch.

**PALACE:** Runs east-west, north of the palace entrance.

**ROCKING CHAIR:** In the witch's sitting room. Not used.

**ROCKS:** Up the mountainside. You cannot get past these. Push them onto the giant below to flatten him! On early versions of the game this will only work if you have previously encountered the giant.

**ROWING BOAT:** See Boat.

**SAFE:** In the chapel. Open it with the small key. See Portrait.

**SAILOR:** See Boatman.

**SAND LIZARD:** On the beach. You encounter him after jumping from the cliffs. You can prevent him from seeing you by throwing sand at him. See Timed Moves.

**SANDCASTLE:** This must be built where the circle is traced in the sand. You will need the bucket and spade. Waving the wand over the sandcastle will transform it.

**SCORING:** Apart from scoring points by solving the various puzzles etc., you also score points for picking up the following objects: Bible, luminous gem, wand, spells, scroll, sword, broomstick, Klein Bottle, tetrahedron, cube, octahedron, dodecahedron, icosahedron, sphere, torus, coin, both keys, bone, bow and arrow. Note that you do not need all of these objects in order to complete the game.

**SCROLL:** This is in two halves. The first half is at the top of the weird tree. The second half is just inside the mountain door. You cannot possess both halves at the same time, so read the information on each half and piece it together. The wand has an adverse effect on it. See Evil Spirit, Mountain Door, Scoring.

**SIGN OUTSIDE DARK TUNNEL:** This holds the code to the safe route through the tunnel. As suggested, take the initial letter of each word, and repeat three times.

**SIGNPOST:** At the end of the long corridor. For information only.

**SITTING-ROOM:** In the witch's cavern.

**SMALL: KEY:** See Keys.

**OPENING:** See Opening.

**ROOMS:** To the south of the mobius ravine. These rooms each have a geometrical shape and number scratched on the walls. This information relates to the shapes contained in each of the Platonic solids. You must drop each solid in its appropriate room. Note that the circle with a 1, and the hexagon with a 16 do not match up with any of the solids, and you should not put anything in these rooms. For more information see Platonic Solids. One of the rooms has a star in it. See Star Room.

**SNAKE PIT:** In the dark tunnel. See Sign for how to avoid this.

**SOLIDS:** See Platonic Solids.

**SPELL: CHAMBER:** North of the brightly-lit corridor. Waving the wand here takes you back into the corridor. See Stars. See also Witch's Spell Chamber.

**REFILL PACK:** See Refill Pack.

**SPELLS:** In the spell chamber. You will need these for your wand to work. The box initially contains five spells and you will use one each time you wave the wand, so don't waste any. See Refill Pack. The spells will fizzle out if you attempt to carry them underwater. See Recess, Scoring.

**SPHERE:** On the mobius ravine. Not used, but see Scoring. Note: It is not one of the Platonic solids.

**SPIRIT, EVIL:** See Evil Spirit.

**SQUID:** Thus will always attack you. Do not enter the cave.

**STABLES:** At the west end of the courtyard.

**STAR: ON BEACH:** Waving the wand here will return you to the five-pointed star room. See Stars.

**ROOM:** Next to the small rooms. Waving the wand here will return you to the five-pointed star room. See Stars.

**STARS:** You will see a number of stars inscribed at certain locations. These are connected together by a transport mechanism which uses the wand and spells as its source of power. See the entries for the individual locations for more information. See also 5-Pointed Star, Wand.

**STEPS, CLIFF:** See Cliff Steps.

**STONE ARCH:** At the east end of the long corridor.

**STOREROOM:** Behind the door in the narrow passage.

**STRAW:** In the hay-loft. For atmosphere only.

**SWORD:** Dropped by the giant when you kill him. Not used but see Scoring.

**T:** Above the hut door. See Letters.

**TABLE:** In the kitchen. You cannot pick up the table, but you must push it into the next room and stand on it, in order to reach the trap door.

**TETRAHEDRON:** On the mobius ravine. One of the Platonic solids. See Platonic Solids. It will float away if you attempt to take it underwater.

**TIMED MOVES:** There are two moves in the game which are timed: 1) The mountain door only remains open for approximately five seconds before closing again.

You must enter it within this time limit. 2) When you blind the sand lizard he will regain his sight after about five seconds. Go south before this happens.

**TOAD:** What you get turned into if you upset the witch!

**TOPOLOGY:** A branch of mathematics dealing with the distortion of objects and surfaces into curious shapes. Although this theme runs through the adventure, it is not necessary to know anything about the subject in order to play the game. See Password.

**TORN SCROLL:** See Scroll.

**TORUS:** In the narrow tunnel. This is a topological shape which resembles a doughnut. Throw it over the peg beyond the portcullis. See Scoring. Note: It is not one of the Platonic solids.

**TRANSPORT MECHANISM:** See Stars and Wand. See also Recess.

**TRAP DOOR:** See Doors.

**TREES:** In the forest. For atmosphere only.  
At the top of the mountain. Climb this.  
Oak tree, on the plain. Climb this.

**TUNNELS: DARK:** At the end of the winding path. There is no way of bringing light to his tunnel. See Sign.

**NARROW:** Leads into the mountain from the mountain door.

**UMBRELLA:** In the antechamber. You can open and close this. Use it when jumping off the cliff overhang. The wind may blow it away if you walk around with it open.

**UNDERWATER CAVE:** See Caves.

**VOODOO DOLL:** In the five-pointed star room. Initially, the doll resembles you, but you can make it resemble the witch by putting the witch's hat on it. You can stick the needle into it, or throw it onto the flames underneath the cauldron.

**WALL SAFE:** See Safe.

**WAND:** In the brightly-lit corridor. This operates the transport mechanism when waved in a location containing a star. You will need the box of spells for the wand to work. See Stars, Spells, Dog, Sandcastle, Scoring.

**WEIRD TREE:** See Trees.

**WINDING PATH:** Leads from the witch's cavern.

**WITCH:** You will first meet her in the witch's cavern. See Voodoo Doll.

**WITCH'S: BROOMSTICK:** In the witch's sitting-room. If you have this you can fly over the chasm. See Scoring.

**CAVERN:** You will be transported here when you have correctly placed the solids in the small rooms. In early versions of the game the solids had to be dropped in room order, starting with the icosahedron and ending with the dodecahedron, without dropping the sphere or the torus. To leave the cavern you must kill the witch. See Witch.

**HAT:** See Voodoo Doll.

**SITTING-ROOM:** See Sitting-Room.

**SPELL CHAMBER:** In the witch's cavern. Waving the wand here will return you to the weird tree. See Stars.

**WOODEN: BOW:** See Bow.

**FENCE:** See Fence.

**HUT:** See Huts.

**LADDER:** See Ladder.

**PEG:** See Peg.

**Y:** In the bed of the pool. See Letters.

**ZOMBIE:** Underneath the stone arch. You cannot get rid of him. See Refill Pack.

**5-POINTED STAR ROOM:** North of the brightly-lit corridor. See also Star on Beach.

**Instructions' Source** : KINGDOM OF KLEIN (Epic Adventures) Inlay & Helpsheet

### **Review (Electron User)**

This is the latest in a series of text-only adventures for the Electron from Epic. The plot concerns the wicked witch of the mountain who has stolen the Klein bottle from its pedestal in the king's palace. She has sworn to lay a hideous curse on anyone foolish enough to try and recover it. And the hapless citizens of Klein have elected you to be that fool!

Your task is to find and kill the witch and return the bottle to the pedestal. You start at the scene of the crime and after collecting some useful items in the palace, set out on your quest. You have a limited amount of movement before encountering the first puzzle - how to cross the river. But having solved this, off you go to the main body of the adventure.

I won't reveal anything else about the game itself. Suffice it to say you will meet a belligerent giant, learn to fly and end up in an endless maze.

I consider this a fairly hard adventure, and I must confess I decided to cheat. Imagine my surprise, however, when I found a message in the memory to the effect that "peeking won't help, you'll have to do it the hard way!" Thus chastened, I returned to the adventure, got a little further and got stuck...again.

This time I wouldn't be beaten. A slight alteration to the ASCII values in my disassembler produced a keywords listing. Thus armed, I hastened back to the game and promptly got stuck yet again.

As I write this, I am finally near the end - the adventure's and mine. The effort has been worthwhile, even though I now have a few grey hairs.

Overall a definite must for the experienced adventurer, though the beginner would probably do better with the first of the Epic adventures, CASTLE FRANKENSTEIN. The save-game facility and response to keyboard input are both very fast. A lot of mapping is required and although the solutions to the problems are reasonably easy, finding what you need to solve the problem with can be a headache.

An extremely good adventure and excellent value for money. Recommended.

## Instructions

### About The Author...

*Jonathan Partington, in his more serious moments, is a professional Pure Mathematician who teaches Maths in Cambridge college and is, he says, 'a popular and witty speaker'. En route to writing adventure games he achieved a certain notoriety in the field of Computer Poetry, and one of his computer sonnets, "How can the purple yeti be so red?" appeared in several anthologies of comic verse.*

*As is appropriate for a Mathematician, his adventures tend to have an inner logic of their own, although what it is, is not always immediately apparent to the player! There is an eager following for his games amongst the computing fraternity at Cambridge University, and they are rarely disappointed.*

### About The Adventure...

*Night, blackest night. Bones weary after days and nights in the saddle. And always, always, at the back of your mind: Hamil.*

*Hamil: A land of sorcery and romance; of strange but loyal beings; of immense fountains, a castle, a museum filled with bizarre antiquities which only the King can put to use.*

*'Mine', you tell the damp walls of the primitive chapel, a place of temporary refuge from the hostile beings who've been following you for weeks, equally determined to be the new masters of the land you seek. 'All that - and more - should be mine.' For you are the rightful heir to the throne of Hamil. How unfortunate that you were stolen away as a child. And how splendid that you are, at last, setting out to reclaim your throne...*

*Slowly, like a black tide, comes sleep, blissful sleep, and you dream again of the legends that say one day you will return to claim your rightful inheritance...*

*GAME SIZE: Moderate, with many unusual puzzles.    RATING: Medium.*

### Also From Topologika...

*ACHETON by Jon Thackray, David Seal and Jonathan Partington*

*A mysterious body - known only as The Ruling Council of Acheton - has issued a challenge to life-forms everywhere: "We hereby challenge the greatest adventurers in the universe to uncover the dread secrets of our Realm. Deeds of heroic valour will be required, and feats of intellect that Newton and Einstein would have boggled at... The rewards will be great: riches immense, and power supernatural, and the knowledge that you have succeeded where thousands have failed."*

*GAME SIZE: Expansive, with a wide range and very high standard of problems.*

*RATING: A real challenge.*

All your life you'd known there was something special about you, that you were extra-ordinary in some way. When you were young you'd chanced to hear unbelievable rumours, and, sometimes, sinister strangers seemed to be watching you. Finally you found out just what was special about you: you were the rightful heir to the throne of the Kingdom of Hamil. But by then it was too late. You'd been kidnapped...

Years passed, and the rescue you dreamed of failed to materialise. Finally, older and stronger, you escaped and, riding a mighty black stallion, set out to reclaim your throne, travelling for many a day and night; through swamps, jungles and icy wastes; across deserts; knowing that for every step forward you took, your enemies would take two...

But luck was with you and, after many days in the saddle, you reached the neighborhood of your Kingdom, Hamil, and took shelter in a primitive chapel, desperately needing a good night's sleep before the next bizarre stage of your journey...

"Perhaps I was fated to come to this particular place," you told the damp walls of the chapel, as sleep, like a black tide, began to sweep over you, and you dreamed again of the legends that said that one day you would return to Hamil to claim your rightful inheritance...

Hamil - A land of sorcery and romance; of strange but loyal beings; of immense fountains; of castles; and a museum filled with bizarre antiquities which only a King could put to use. A land where the powers of darkness always threaten; of ancient and unusual mazes, constructed by powerful wizards in bygone days, waiting to ensnare even the most ingenious explorer. A land of mysterious beasts eager to exterminate you if you stay in the same place too long. Where a mighty vampire haunts underground caves. Where creatures wait, in deep and dismal pits, ready to grab the unwary passer-by. Where ancient spirits in huge rolling cornfields serve long-forgotten deities. Where something is spoken about only in hushed tones, something known only as the 'snark'...

And so the real adventure begins.

Waking, you find yourself trapped in the chapel. If you leave it, it is at your peril. The decision is yours. Perhaps the chapel is not all it seems, and you are closer to the land of Hamil than you first imagined. It may be worth your while to investigate further. Regaining Hamil will not be easy, and you will certainly have to be able to prove that you are who you say you are...

## Hint Sheet

KINGDOM OF HAMIL comes with on-line help which you get into by typing HELP <RETURN>. The program will halt and wait for you to type in a number so that it knows which 'hint' you want. You therefore need to know which numbers refer to which hints. The following pages of this Hint Sheet contain a series of questions that players typically ask, like 'How do I catch the jackdaw?'

Various 'key words' have been deleted from these questions - making it harder to accidentally see the solutions to other questions - and are reproduced below.

The numbers alongside the words refer to the questions. The number that follows each question is the number to key for that particular hint. Good luck!

BOOJUM	4	GROVE	14	PTERODACTYLES	26
BOOMERANG	5	HEXAPOD	15	PLAIN	2,27
CAVE	6	HOBGOBLIN	16,37	ROCK	2,27
CHAPEL	7	INFORMATION	36	ROOM	3,9,13,36
CORNFIELD	20	JACKDAW	17	SLAB	28
CREATURE	24	LABYRINTH	18	SNARKS	4
DEPARTURE	19	LOUNGE	19	STATUE	29
DOOR	30	MAIZE	20	STEEL	30
DRAGON	8	MAZE	21,35	TAPESTRY	31

DUST	9	MONEY	35	TREASURE	32
ENCHANTRESS	10	MONSTERS	18	TYRANOSAURUS	33
FARE	11	MURALS	22	VAMPIRE	1,34
FIRE	12	OBJECT	23	WALL	12
FISH	3,13,36	PIT	24		
FOREST	6	PORTCULLIS	25		

	Hint
1 How do I kill the *****?	21
2 How do I get back through the ***y *****?	23
3 How can I avoid the **** ***** collapsing on me?	28
4 How do I avoid the *****?	17
5 How do I avoid being killed by the *****?	18
6 How do I get into the **** in the *****?	14
7 How do I get out of the *****?	1
8 How do I drive away the *****?	34
9 What is the **** ***** for?	22
10 How do I avoid being killed by the *****?	31
11 What do I need to pay the *****?	5
12 How do I get past the **** of *****?	29
13 What can I do in the **** *****?	13
14 What do I do in the sporific *****?	10
15 How do I stop the ***** from sobbing?	16
16 How do I avoid being killed by the *****?	25
17 How do I catch the *****?	11
18 How do I get past the ***** in the *****?	12
19 What do I do in the ***** *****?	35
20 How do I survive in the *****?	15
21 How do i get through the **** of Hamil?	4
22 What is the significance of the *****?	9
23 What is a given *****?	36
24 How do I avoid being killed by the ***** in the ***?	33
25 How do I get past the *****?	30
26 How do I avoid being killed by the *****?	8
27 How do I navigate the *****y *****?	19
28 How do I get under the *****?	2
29 How do I move the *****?	32
30 How do I get past the ***** *****?	3
31 How do I move the *****?	24
32 I can't find all the *****!	37
33 How do I escape from the *****?	7
34 How do I avoid being killed by the *****?	20
35 How do I collect all the ***** in the **** of Hamil?	6
36 What use is the ***** I find in the **** *****?	27
37 How do I kill the *****?	26

# KNOW YOUR OWN PERSONALITY

*Professional, Originally Released On Cassette Only*

Game Type : Educational; Personality Quiz  
Authors : Hans Eysenck & Dr Glenn Wilson  
Standalone Release(s) : 1984: KNOW YOUR OWN PERSONALITY, Mirrorsoft, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : MIRRORSOFT, Mirror Group Newspapers, Holborn Circus, LONDON  
EC1P 1DO  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"How well do you know yourself? How do others see you? Are you sensible, balanced, outgoing, likeable, lovable, or are you cool, reserved, calculating and philosophic?*

*Find out with this revealing and fascinating home computer program based on the famous Pelican book "KNOW YOUR OWN PERSONALITY" by Professor Hans Eysenck and Doctor Glenn Wilson. The book's three most important tests and all seven aspects of personality in each test are included in the program. The first test, Personality 1, deals with Extraversion and Introversion. Personality 2 covers Emotional Stability and Adjustment and Personality 3 tests for Toughmindedness and Tendermindedness.*

*A total of 21 individual traits are presented in bar chart form (with illuminating additional comments) and provide a composite and complete picture of your personality. Results may be saved or printed out on a suitable printer."*

## Using The Program

1. Once the program has loaded, the title and credits screen will be displayed. Type in your name when prompted and then the date (in the form DD/MM/YY including /s), making sure to press <RETURN> after each input.

2. The next screen shows the program's Main Menu. Select your option by pressing <RETURN>.

### Option 1

Choose this option for an explanation of the three personality tests and the characteristics they cover. Press SPACE as requested.

### Options 2, 3 and 4

IF you are loading from cassette, please note that the three tests are recorded on side 2 of the cassette in the same order as given on the Main Menu. Therefore, the most efficient way of using the program is to do each test in turn. If loading from disk, simply press SPACE to cycle through the cassette-related messages.

1. Having selected your option, follow the screen instructions to load the data.

There are a total of 210 questions in each personality test and these are loaded in three parts. When the first 70 questions have been loaded, cassette users who do not have motor control must STOP THE TAPE as soon as the screen instructions appear, and then press SPACE.

2. The first question will appear on screen:

Are you happiest when you get involved in some project that calls  
for rapid action?

1 = Yes    2 = No    3 = Can't Decide

(Question 1, Extraversion/Introversion)

\_\_\_\_\_1

All the questions are in the same format with the question number in the bottom right of the screen. Your answers are completely confidential and do not appear on the screen. Choose your answer and type 1, 2 or 3. Between each group of 70 questions, cassette users are prompted to START THE TAPE AND PRESS SPACE in order to load the next section. N.B. Remember, if you do not have motor control, you must stop the tape as soon as each section has loaded or you will miss loading the next section.

If you are loading from disk, each section of 70 questions is loaded automatically.

3. When all 210 questions have been answered, the scores are calculated and you are asked if you wish to see your results with comments. Type Y to this question and each characteristic is displayed individually with relevant comments. Press SPACE as requested. When all your results have been displayed, you can review them again if you wish. Type Y and you will be asked again if you want comments. This time type N and your results are shown in the form of a bar chart.

The mid-point of each bar shows the average score for each characteristic and the red bar shows how much you differ from the average.

4. Once your results have been displayed, you can opt to save them onto a blank cassette or a new formatted disk (if you are a disk user) to review at your leisure. If you wish to do this, type Y and type in the name of the file you wish to save when prompted. Please note that the filename can be a maximum of 10 characters if you are using a cassette, 7 characters if you are using a disk, and no spaces. Make sure you write down the name of your file for future reference.

Now simply follow screen instructions to start the saving process.

If you are saving onto tape, remember to press the PLAY and RECORD keys together on your cassette recorder when starting the tape.

5. After saving, and if you have a suitable printer attached, you are given the option to print out the profile of your results. Type Y if you wish to do so, and follow the screen instructions. After printing, or by typing N, the Main Menu returns.

#### **Option 5**

Use this option to review a previously saved set of results. Type in the name of the file you wish to load spelt exactly the same as when you saved it and press RETURN. Now follow screen instructions to load the data. You can display the results as before, either in full or as a bar chart, and you can print them out if you wish.

#### **Option 6**

This option ends the program. If you want to play again and you choose this option, you will have to reload the program.

#### **Other Uses**

Now you are familiar with the program, you may like to try the suggestions below.

1. Having completed one of the personality tests - honestly of course - get a friend, husband/wife, to do the same. Save your results and print out the profiles, if a printer is available.

Then, each person should do the same tests again, but this time they should answer the questions as if they were the other person. Again, save your tests and print them out.

Now, compare your own test with the one completed for you by your 'partner-in-crime', and see how well he or she REALLY knows you. They can then do the same. You may be pleasantly surprised, or you may be in for some shocks! Of course,

this is only intended to be done for fun - we accept no responsibility for the results!

2. The second suggestion is to use the program as a general guide to check your compatibility with someone you know particularly well, e.g. husband or wife, boyfriend or girlfriend, close friend, flat-mate, parent or child and other relatives.

It is generally accepted that people who share the same personality characteristics get on better together than those who do not. They have more common interests to share, their attitudes and emotions fall into line and are less likely to cause conflict etc.

By comparing personality profiles from the program you may be interested to discover how basically alike you are over all three tests, even if you gave different answers to some of the questions. If you find that there are obvious areas of conflict, it may be useful to bear them in mind when discussing your relationship. It may also help you to understand more fully why you do not get on in certain situations, to acknowledge differences and to accept them.

If you are comparing your profiles with a partner, you may find that your results bear out the theory that 'like marries like'. It has been found to be true that people with similar attributes of height, intelligence, attitude, interests and attractiveness tend to form close relationships. These relationships are also generally found to be more successful in the long term than those that are founded on the principle of 'opposites attract'.

Of course, these are only general principles and this particular use of the program, to check compatibility, is intended for fun. However, even if you do find that your personality appears to be very different to that of your partner and your relationship is still successful, you are living proof that nothing can ever be taken for granted! You can also use whatever you discover constructively and work towards greater understanding and tolerance.

### **Introductory Note By Professor Hans Eysenck and Doctor Glenn Wilson**

The ancient Greek philosophers had a word for it: "know yourself". This is good advice. Because of our limited knowledge, it is difficult to make rational choices in education (What should I study?), in choosing a job (What occupation or profession should I go into?), in love (What sort of woman/man would I be happy with in marriage?), or indeed, whenever we have to make some important decision about our future. Professional psychologists see over and over again people who make the wrong choices, although it is quite obvious to the outsider that the choice is indeed very wrong; only too often this wrong choice is caused by erroneous self-perceptions, that is, a failure of the person concerned to 'know himself'. It is the point of these tests to help you, in a more objective light.

Before we can describe or measure personality, we must have some sort of model to represent it. The ancient Greeks used a type theory; indeed, the four types of the sanguine, the phlegmatic, the choleric and the melancholic man have passed into popular speech. The observations on which these were based were very astute; even now we can recognise particular types falling into these groups. But they were wrong in postulating that everyone would constitute an example of one type or the other; most people in fact combine aspects of two or more types, and thus fall between the four classificatory baskets. The theory of the four types had a long history, lasting for some two thousand years; it was not finally abandoned until the beginning of this century.

Modern psychologists prefer trait theories to type theories. Traits are descriptions of habitual behaviour patterns, like sociability, or persistence, or impulsiveness. Such terms are very widely used in common speech. There are in fact some 4,500 trait names in use in English and although some of these are really synonyms, or sufficiently alike in meaning to refer to much the same sort of behaviour, a pretty large number of traits are left for psychologists to use. Again, many of the

remaining ones are quite specialised, or relatively unimportant; still the task of sorting out the remainder is quite a daunting one.

What psychologists have done, in principle, has been to group trait names according to the similarity of the names themselves or of the behaviour they refer to, and then to construct questionnaires to measure the central core of meaning underlying the groupings. A questionnaire is simply a list of questions relating to personal behaviour, preferences, reactions, attitudes and opinions; after each question is printed a 'Yes' and 'No' (sometimes a '?' is also included for the 'don't know' or 'can't decide') and the person answering the questions responds to the answer which is the right one for him. There is of course no generally right or wrong answer, as there would be for an intelligence test problem. If the question is 'Do you have many headaches?' clearly, different people may give different answers without any implication that one answer is 'right' and the other 'wrong' (although of course it may be more pleasant for a person to be able to say 'No' rather than 'Yes').

Questionnaires come in all sorts and sizes, and it is important to differentiate between the journalistic playthings which are sometimes printed in popular newspapers and weeklies, and scientifically constructed and validated inventories having serious pretensions to measuring aspects of personality. Anyone can string together a series of questions and call the resulting collection a questionnaire; what is it that differentiates the scientific inventory from the popular questionnaire? The simplest answer would be that the journalistic questionnaire is not based on a well-established theory, is made up of subjectively chosen questions without any effort to demonstrate their appropriateness or validity, and is not standardised on an appropriate population. It can be amusing, but should clearly not be taken seriously. In a properly constructed questionnaire, a great deal of work goes into the construction of the underlying theory, the selection and testing of the different questions, and the standardisation on representative samples of the population; much effort may also be expended on trying to demonstrate that the questionnaire actually measures what it is intended to measure.

Having constructed a number of questionnaires, dealing with a number of traits, we must find out if these are independent of each other. We might argue, using sense, or experience, or empathy as our guide, that sociable people might be more impulsive than unsociable people, or that impulsive people might be more likely to take risks. Clearly there is a possibility that different traits might not be entirely independent, and the discovery of correlations between traits is another task that psychologists have set themselves and have pursued with much application over the years. The outcome has been very clear-cut, there are many quite marked correlations between different traits, and these need to be incorporated into the theory. In order to do this, psychologists have used a hierarchical model.

FIGURE 1

This model is shown in Figure 1, in diagrammatic form. We have linked up five traits all of which correlate, in the sense that people who are sociable are also impulsive, active, practical and expressive. This combination of traits rises to a more general, more inclusive trait, that of extraversion; in other words, extraversion is defined in terms of all the traits which can be empirically demonstrated to correlate together. It is possible to call extraversion a type, but this more modern use of the word does not carry any implication that everybody is either an extravert or an introvert. Rather, the term is used in the sense that there is a continuum from one extreme to the other, with the majority of people nearer the centre than the extremes.

Extraversion-introversion is one modern type concept; are there others? There is considerable agreement among the many workers in this field that two other type concepts have been discovered and are well supported by the evidence.

The second type concept we shall be concerned with is called emotionality, or anxiety, or lack of adjustment, or instability, or neuroticism (or indeed any of a number of other terms). It too is based on the fact that various traits are empirically found to correlate together; Figure 2 shows that the type is made up of the traits of low self-esteem, lack of happiness, anxiety, obsessiveness and lack of autonomy. Correlations between these traits are of course not perfect, but there is an undoubted tendency for people who give high scores on one of these traits to give high scores on the others.

FIGURE 2

If we take these two types together, we obtain a model which actually shows some relationship to the old Greek model of the four temperaments. This is shown in Figure 3, where the two dimensions or axes, extraversion - introversion and emotional stability-instability, define four quadrants. These are made up of unstable extraverts, unstable introverts, stable introverts and stable extraverts. Around the rim we have written some of the traits characteristic of each quadrant. Inside the quadrants we have written the names of the Greek types which belong there. Thus the melancholic is the unstable introvert; the choleric is the unstable extravert; the phlegmatic is the stable introvert; and the sanguine is the stable extravert. The two schemes of models differ mainly in that for the Greeks everybody had to fit into one or the other of the four quadrants; on the modern scheme all combinations of scores on the two continua are possible.

If these personality types are of any importance, we would expect that people in the four quadrants would be found with unequal frequency in various groups differentiated on social, or work criteria. This is in fact so. Thus for instance, sportmen, parachutists and commandos in the army are almost entirely found in the sanguine quadrant; they combine emotional stability and extraversion. This connection can be found even among children; those who learn to swim quickly are precisely those children who are in the sanguine quadrant. Criminals tend to be found in the choleric quadrant, neurotics in the melancholic quadrant. These two groups are apparently almost equally emotionally unstable emotionally, but of the most part the criminals are extraverted, the neurotics introverted. Scientists, mathematicians and successful businessmen are frequently found in the phlegmatic quadrant; clearly the phlegmatic behaviour does not extend to their work! None of these connections are absolute of course; they are tendencies, although fairly clear and powerful ones. Nevertheless, not all criminals are 'choleric' nor all choleric criminals. It is important to see these things in perspective; personality is only one among many other determinants which result in a person's becoming a neurotic, or a sportsman, or a criminal, or a parachutist, or a successful businessman. Ability (mental and physical), luck, opportunity and very many other factors enter into the choices involved and the decision made. Personality is important, but it is not all-important.

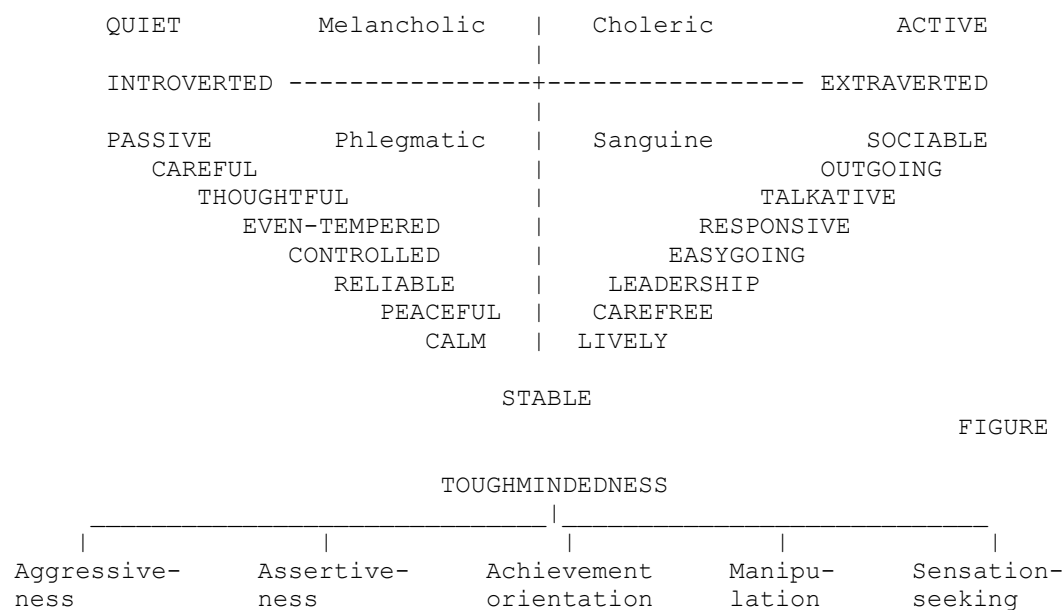

FIGURE 3

FIGURE 4

The third of our types is called toughmindedness as opposed to tendermindedness. The traits entering into toughmindedness are aggressiveness, assertiveness, achievement-orientation, manipulation and sensation-seeking (Figure 4). It will not come as a surprise that men are more toughminded than women! Indeed, there are sex differences on all our typologies and on many individual traits as well; thus women are less extraverted and more unstable emotionally. In comparing their scores with the norms, female and male readers should keep these differences in mind; it would have made scoring much more complex and difficult had we given separate keys for men and women and the differences are not really large enough to make this necessary. There are also age differences; as people get older, they get less extraverted, less toughminded, and more stable. Again, these facts should be kept in mind when considering your own scores; it would have been too complex a task to include separate norms for different age groups.

Toughmindedness, like the other type concepts is neither good nor bad in itself. Unlike intelligence, which is almost wholly 'a good thing', personality qualities are much more difficult to evaluate. Obviously there are many good points about the extravert; he is sociable, cheerful, always on the go; he likes people, and likes being with people. He is good company, tells jokes, often has charm and generally puts life into social occasions. All this makes him a social asset. On the other hand, he is often unreliable, changes friends, and sex partners, frequently, is easily bored and finds it difficult to get on with uninteresting or time-consuming jobs. The introvert is the opposite of all this but there is no way in which we could say that the extravert is superior or inferior in general to the introvert; they are just different. Each has his area of superiority and inferiority; what is important is that he or she should realise this and build on his or her strengths, and try to work round his or her weakness.

It might be thought that what was said above was not true of emotional instability; this might be thought to be wholly undesirable. To say this would be a gross exaggeration. Strong emotions are certainly likely to create difficulties for their possessor; however, they may also be of great help in achieving certain things.

In one study of exceptionally creative visual artists, it was found that, as compared with the average sort of person, or even not so original and creative artists, every one of the successful group scored high on emotionality (and introversion). It also seemed as if the great art these people produced was wrung out of a strongly emotional personality. Emotions can also serve to motivate a person; in this sense it may be very useful to have strong emotions in order to keep you going. After all, to be lacking in emotion is not ideal either, such people may

lack many desirable experiences, and fail to make much of their lives. What is important is to know just where you stand; once you know whether you have strong, unstable emotions, are just an ordinary average sort of person, or lack any emotional urge, you can play your life in the light of this knowledge. 'There is nothing either good or bad, but thinking makes it so' - the saying is particularly apt when we look at different personality traits; almost all can be used to advantage or abused to the harm of others and of the person concerned.

What does seem to come out from much of the research reported, however, is that extremes in personality can cause considerable difficulties. Very high or very low scores on any personality trait or type suggest an imbalance in the person which is not necessarily a problem, but which needs considerable care in handling. This care is more likely to be forthcoming when the person concerned knows about his personality and the lack of balance; it is when this knowledge is missing that damage can be done. And of course the dangers presented by the possession of strong personality traits can also be used to advantage; they are rather like the gifts bestowed on baby princes and princesses in fairy stories by sorcerers and fairy queens. There is a certain ambiguity about these gifts, and great care should be taken about their use.

If we do not like our personality, can we not change it? Admittedly, most people seem to be quite fond of themselves, and think reasonably highly of their personality. This is perhaps just as well; introverts often like and prefer introverts, and extraverts like and prefer extraverts as the ideal sort of person. How terrible if the position were reversed and everyone preferred the opposite type to himself! This would not be so bad if we could really do much about changing our personality in any fundamental sense; alas, this is not so. Personality is determined to a large extent by a person's genes; he is what the accidental arrangement of his parents' genes produces, and while environment can do something to redress the balance, its influence is severely limited. Personality is in the same boat as intelligence; for both, the genetic influence is overwhelmingly strong, and the role of environment in most cases is reduced to effecting slight changes and perhaps a kind of cover-up.

What will you gain from completing these personality tests on the computer? In the first place, you will see graphically on which traits and type-scales you deviate to any marked extent from the average. Differences from the norm in this case do not of course carry pejorative or evaluative meaning; you may be above or below the average numerically but neither indicates that you are in any sense better or worse than the majority - just somewhat different. To be aware of these differences is important; most people project their own personalities on to other people and believe others to be essentially very much like them. This is patently untrue and it is a valuable part of insight to realise that you are different, and in what way you are different, from other people. For some people, the opposite is true; they think that only they are characterised by certain strengths, weaknesses, or excesses, and they are either disappointed or reassured to find that many other people are in fact similar to them.

Recognition of your own position on the Bar charts may alert you to look at other people (including your wife and children, your friends and your enemies) in a different way. It is perhaps not too much to say that contraries on these scales usually simply cannot understand each other; the typical introvert can get very annoyed and frustrated when confronted by the typical extravert - and vice versa. Neither can believe that another person could be so differently constituted, and both prefer to believe that the other behaves as he does 'because he knows it teases'.
