This is of course not so, but for a person who fundamentally believes that all other people are essentially very much like himself it may very well seem so. Going through these tests may teach him to look at other people with a more impartial eye, and recognise their particular personalities more readily and objectively. Once you can identify someone as a typical extravert or a typical introvert, you are less likely to ask him to behave in ways which are contrary to his true personality; your expectations are more realistic, and less likely to be disappointed.

This is a valuable gain, and while personality impressions are never likely to be a hundred percent correct, even a reasonable increase in accuracy may be of importance in interpersonal relations.

The purpose of these tests, then, is to give the user insight into his own personality, and a model into which to fit other people, particularly his friends and enemies, his family and other people whose behaviour may be important to him. The scores are suggestive, rather than definite; they are approximate, rather than precise and accurate. We have indicated roughly how the two sexes are differentiated and in looking at his or her scores, you may like to remember these broad guidelines. We have suggested a few ways in which these tests may be useful but, above all, we hope they will serve to amuse and stimulate you. 'The proper study of mankind is man', and the more we learn about man, the better we will be able to cope with our fellow men.

## Review (Electron User)

As the commander of a deep space fuel dump, you are a vital part of Earth's exploration project. You are also an excellent target for any passing alien who wants a cheap tank of four star. Your constant struggle with these thieving aliens forms the theme of LASER REFLEX.

The fuel dumps' defences take the form of a mobile laser base situated beneath a plasti-steel roof. Through this roof you can observe the descending aliens. But if you tried to shoot at them directly you would make a nasty mess of the roof. The fuel dump designers solved this problem by leaving one end of the dump open. They then built a large curved mirror at this point. By moving your laser base left and right you can alter the angle at which your beam strikes the mirror. By altering this angle of incidence you also alter the angle of reflection - sounds just like school, doesn't it?

So as you move your base closer to the mirror the beam fires higher into the atmosphere and vice versa.

The aliens fall from the sky in no set formation and are therefore quite difficult to hit. To encourage you to move the laser base around, the instructions tell you that bonus points are awarded for hitting the aliens while they are at the top of the screen. It is tempting to sit at the far left of the screen firing laser bolts at a very shallow angle and stand a chance of hitting more aliens.

Basically, this is an attempt to squeeze a little more life out of the Invaders/Galaxian theme. It is a nice idea but it will never be a classic.

## Instructions

Arcade adventure, starring Clement, the Ordanoid droid! Clement is droid no. 490 of the ordanoid class BA2 - a type of droid commonly used by humans to take care of the running fo distant planets. When the Ordanoid design was superceded by the more efficient Proleoid design, batches of Proleoids were sent off to help the Ordanoids run the planets. But due to an unforeseen design fault, the Proleoids started to impose their will on the Ordanoids until all the Ordamoids were destroyed - all, that is, except Clement - the Last of the Free!

Clement's mission, whispered to him in the dying words of the Elder-oid, is to escape from the Proleoids and make it to the teleport so that he can get to Earth and warn his human controllers about the defective Proleoids. The road to freedom is full of dangerous Proleoids, and littered with obstacles to avoid and puzzles that must be solved. Apart from his ability to run and jump, Clement has only one advantage - he can carry and use objects that he finds in order to help him, but he can only carry one at a time.

## Using Objects

The puzzles range from simple to complex. To open a door, just enter the screen with the right key and press \* to use it. You don't need to be right next to the door. However, some puzzles involve standing on or near to obstacles, or dropping objects near obstacles.

## Scoring

The scoring system includes 10 point bonuses for every new screen explored, 150 points for basic puzzle solving with up to 1,000 points for more complex puzzles, and 2,000 for escaping at the end. You get five lives to start with.

## Game Controls

Z - Left, X - Right, <RETURN> - Jump, ? - Pick Up or Drop  
\* - Use Object, Q/S - Sound Off/On, T - Turn Just Tune Off  
<ESCAPE> - Quit Game, <COPY>/<DELETE> - Pause/Restart

## Review (Electron User) - "Ordeal Of The Ordanoids"

For many years the Ordanoid droids toiled to maintain the machinery left on distant planets by colonists from Earth. Then scientists developed a superior design of robot called the Proleoid, but instead of supervising the work of the Ordanoids they started to destroy them. Clement is the sole remaining Ordanoid and he must make a last ditch attempt to find the planet's teleport system and warn Earth of the Proleoid problem. THE LAST OF THE FREE is a ladders and levels game in which you control Clement on his courageous mission.

Control is simple - left, right and jump will get you around quite nicely. The backgrounds used are graphically simple but not complex in construction. As well as the electrified floors and sliding barriers you must also negotiate the numerous Proleoid droids which infect the rooms. These are drawn in more detail than the backgrounds and are well animated.

Some of the droids which move in mid air have flat heads, and these can be used as lifts if you time your jump correctly and then walk at same speed as the droid.

The status display at the bottom of the screen gives information regarding energy level, lives remaining, what you are carrying and scores. I was pleased to find that the design of this display was far superior to that of the version for the BBC Micro.

As you play the game you will notice that you are initially confined to two or three screens as your progress to the higher levels is blocked by various doors. A picture of the necessary key is drawn on each door, a great help as you can only carry one item at a time.

You begin the game with five lives. There are no time bonuses or penalties so you can take as long as you wish to pick a route through a screen. You can fall from any height without incurring any damage, which is very useful as it is easy to lose your footing when attempting a difficult leap between platforms.

THE LAST OF THE FREE is graphically simple but the routes through the screens are cunning. It will never be a blockbuster but it should still keep the kids amused for days.

BACK WITH A VENGEANCE! Born in a time of peace, lived in a time of war, the shadow warrior returns. Leaping the abyss of time he comes to fulfil his destiny!

DATELINE: 1990 THE PLACE: Downtown New York  
THE QUEST: To destroy the eternal evil.....Kunitoki!

If you enjoyed THE LAST NINJA, you'll go crazy over LAST NINJA 2. Lots more fiendish adversaries, more colourful screens with superb graphics, a score-line, a timer...and lots and lots more exciting Ninja action. Are you ready for the thrills and skills of the Ninja in crime-filled Manhattan? Can you survive the six action-packed levels?

You start in the notorious CENTRAL PARK, with thugs, police and bees to get past, and a map, a pick and a hamburger to collect. In desperation you punch the wall! Now to THE STREET, littered with down-and-outs and meths bottles. Take care in THE SEWERS to avoid the darkness and the crocodile. On to the forbidding opium factory in THE CELLAR and then to THE OFFICE and a secret computer code. And finally to KUNITOKI CASTLE with its immortal adversaries and the trickiest puzzle of all!

**Instructions' Source** : THE LAST NINJA 2 (Superior/Acornsoft) Back And Inner Inlay

### **Review (Electron User) - "Chop 'Em Up!"**

Having finally wiped out the evil that destroyed your relatives and friends you - as the Last Ninja - take a boat to the USA and end up in the Big Apple itself. But here you discover the ultimate evil: Kunitoki. So, always ready to fight for the good, you don your black Ninja robes to take on the rotting horrors of New York.

You begin standing on a rooftop near Central Park. Going inside you find a thug - who you can easily dispose of - and by being fairly aggressive at the wall you can open a trapdoor and - dropping down into the next room - you find a key. Going outside you find a rather belligerent policeman - who clearly doesn't think anyone should walk around in broad daylight wearing black robes.

Scattered about are various items to collect and a number of Kunitoki's henchmen - it's best to match them weapon for weapon if you can. The final escape from Central Park involves leaping across a lethal pond, first avoiding a swarm of bees.

You come out on to the street, where more of Kunitoki's hired villains will try to do you in and in an effort to avoid them you take to the sewers where it's very easy to get lost. Unfortunately there's a lot more hoodlums down here and a crocodile that needs an explosive send off.

From there you make it into the lower levels and Kunitoki's drugs factory with more thugs and plenty of climbing and jumping to do. The exit is guarded by another animal which seems to be in desperate need of food. Standing on lines around here can be lethal.

The next level takes place in some offices where you need to fight your way through even more thugs and villains, across the outside of the building and finally to the roof where a helicopter whisks you to the final level within Kunitoki's castle. Unlike earlier levels, on the final one any baddies you dispose of are reincarnated each time you re-enter a screen.

The game has been brilliantly executed by that master programmer Peter Scott. The playing keys are carried forward from THE LAST NINJA as is the overall diagonal movement. Animation is excellent and there's lots of detailed scenery. The puzzles are quite fiendish - and hitting the wall is often beneficial.

It's nice to see that Superior can still come up with high quality, original games.  
Steve Turnbull

### **\*\*\* Second Opinion \*\*\* (Electron User)**

THE LAST NINJA was a hit when it was first released and this sequel is set to enjoy the same success as the original. The gameplay is similar as is the graphics style. However, the new puzzles and adversaries add new interest to a familiar style. Recommended.

# LEAGUE CHALLENGE

***Professional, Originally Released On Cassette Only***

Game Type : Strategy; Manage Football Team; Text Only  
Author :  
Standalone Release(s) : 1988: LEAGUE CHALLENGE, Atlantis, £3.99  
1990: LEAGUE CHALLENGE, Atlantis, £2.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ATLANTIS, 28 Station Road, LONDON SE25 5AG  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Manage your favourite football team YOUR way. No more matches lost because the manager chose the wrong team or played a wrong combination. Now is YOUR chance to go for Division One. Maybe even win the league and cup double. Who knows, you may even find the manager's job is more difficult than you thought."*

SELECT YOUR TEAM from one of the 64 teams listed. (You can if you wish change your team name.) Whichever team you select, you will begin the game at the bottom of Division 4.

There are 15 LEAGUE MATCHES to be played in each division together with 'knock out' CUP MATCHES.

TRAIN YOUR TEAM to combat the strengths of your opponents. Select your defenders (D), mid-field (M) and attackers (A) on the basis of their skill (S) and fitness (F). In your team, a player is either playing (P), injured (I) or available to play (-). Remember that players need to be rested occasionally to improve their fitness. Skill can not be increased. If a player is not good enough for your team, he can be sold on the TRANSFER MARKET. You can have up to FIFTEEN PLAYERS in your squad at any time.

At the end of each match, you will be shown the results of other matches played that day, together with a league table showing your position, goals for and against, points earned and matches played.

Your FINANCIAL POSITION will show your total income and expenditure for the week together with a running total of your capital. You are allowed to go into debt to a maximum of £250,000. Over this, you are bankrupt and must start the game again at the bottom of division 4.

At the end of each season, the top three teams are promoted to the next division and the bottom three are relegated. You keep the same team for the start of the following season, but the player's skill and fitness levels will be changed.

Can you win the double? Can you take your team to the top of Division One? Will you be voted "Manager of the Year"? Or will the crowd jeer as your team is relegated yet again?

Good luck! You will need it.

**Instructions' Source** : LEAGUE CHALLENGE (Atlantis) Back and Inner Inlay

**Review (Electron User) - "Not Championship Material"**

Have you got what it takes to mould a bottom of division four football team into a first division world beater? If you want to find you you'd best practice on LEAGUE CHALLENGE from Atlantis for starters.

First you must decide which of the 64 teams to manage. This decision is not too difficult once you realise that the squad you begin with is always the same, regardless of the team's name. The only variables are the individual players' skill and fitness factors. These are generated randomly each time the program is run.

Having selected your team the mid-week options are displayed. Option one lists players, their skill and fitness, whether they are selected for the team and their position, either defence, mid-field or attack. Option two allows you to sell your players - I sold every one and still managed to put two goals past Reading! Other mid-week options allow you to rename your team and save the game to tape.

It is now time to get down to some training, and the harder the schedule you select the more it costs. Training will only improve a player's fitness, it will never alter his skill level.

You first play either a league or cup match. Both your own and your opponents' skill and fitness levels are indicated. This provides an indication of your chance of success. If things are looking bad you can always select the change team option and make a few last minute replacements in the weaker areas.

Once you are satisfied with your selection you can play the match. This involves sitting back and watching what could loosely be described as goal mouth action. A few little cartoon characters flicker round the screen and the ball appears in the back of the net - hardly nail biting stuff!

The results of all other matches in the division are then displayed followed by the updated league table. The only opportunity available to improve your ailing team is when the transfer market information appears on the screen. You are offered a single player after each match. If he's no good then that's tough and you'll just have to struggle through another match.

LEAGUE CHALLENGE is being sold as a budget game but I would still think twice about paying £2.99 for it.

## Instructions

Mad Marco is on the rampage and has blown the bridge to the mainland. The only escape for the fleeing population is to jump into the shark-infested waters. As Lifeboat Lennie you must try to bounce the panicking people to safety across the water whilst avoiding the marauding sharks and the desperate attempts of Mad Marco to blow up your liferaft with dynamite.

LEMMING SYNDROME is a fast and furious game full of special effects and options designed to make your task harder as you get better. The options page allows you to select the speed and the type of control for your raft. You have only one liferaft and the game ends if more than fifty people are left to drown.

**Instructions' Source** : SUPERSELLERS: THE DYNABYTE COLLECTION Inner Inlay

## Review (Electron User)

A GAME for those with fast reactions and a burning desire to save people from drowning, LEMMING SYNDROME is one of those compulsive games that always has you wanting one more go.

The idea is simple. Mad Marco, the world famous arsonist, has set light to a city between the flames and a deep, dangerous river. As is the way in computer games, none of the people can swim (remember the drowning frog in CROAKER?) Having said that, they would rather chance their arm in the water than in the flames, so, singly or in groups, they hurl themselves over the edge. This is where you come in, you and your little rubber raft.

If you place your raft beneath the plummeting population they bounce. The trouble is that they only bounce as far as the centre of the river. The result is that you have to catch them again and bounce them twice more before they reach dry land at the other side of the river. And you've got to watch out because while you're waiting for the third bounce you notice another group hurling themselves off the edge. Can you get back in time?

To make matters worse, Mad Marco keeps throwing sticks of dynamite (which you avoid) and there's a hungry shark (which you try to avoid). The game ends when you've been blasted, bitten or lost fifty people. You get points for each person you save, the various classes having different scores. For some obscure reason, politicians score more than anybody!

The graphics are excellent, the colours well thought out and the controls simple to use. You have a choice of sound on or off, various levels of skill and different ways of moving your rubber raft. Calling for quick reactions and a sense of humour it's a game that will have you laughing as you press for another go. Great fun.

Trevor Roberts, ELECTRON USER 1.12

# LET'S COUNT

*Professional, Originally Released On Cassette Only*

Game Type : Educational; Ages 5-8  
Author : Michael Holt  
Standalone Release(s) : 1983: LET'S COUNT, Acornsoft/ASK, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : A.S.K., London House, 68 Upper Richmond Road, LONDON SW15  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

LET'S COUNT provides a simple and attractive introduction to the numbers up to nine and the fundamental concepts involved in counting. Designed for the very young child, the games are colourful and easy to follow. The scenes, chosen to capture the child's imagination, include ships visiting islands, rockets flying from the moon, and a fairground stall. In the process of playing the child learns to count objects, match them to numerals, recognise their order and compare their magnitude.

## In all A.S.K. programs

<RETURN> Remember: once you have typed in your response a program will  
< icon > deal with it until you press the <RETURN> key.

<ESCAPE> You can always return to the beginning of a program by pressing  
< icon > the <ESCAPE> key.

<DELETE> You can rub out anything typed in, before the <RETURN> key is  
< icon > pressed, by using the <DELETE> key.

<\_Hand\_> Means : Please press the space bar to carry on with the program  
< icon >

< ? > Means : the program did not expect the response it has just re-  
< face > ceived. Perhaps there was a typing error? In any case, to carry  
on, just press the space bar and try again.

<CTRL> All of our programs incorporate sound. There are various volume  
levels - holding down the <CTRL> key and pressing the <S> will  
<S> change the level - keep pressing the keys until you are happy  
with the volume.

Note: The program will not run on computers that have 0.1 operating systems.

## Introduction

LET'S COUNT is a program which introduces young children to simple counting and the numbers up to nine. An adult or older child is needed to help get the program loaded, to select an appropriate episode for the young learner to work on, and to explain what to do. Thereafter, parent and child can work together, or if the child is confident enough, he or she can be left to get on with it, as long as help is close at hand.

There are four different episodes to choose from: matching numbers of objects; matching numbers of objects to the numerals 1, 2, 3, etc.; ordering numbers; and an introduction to the ideas of more than, less than and equality.

Only two of the keys on the Electron computer are used by the child. They are the space bar, the largest key of all, and the <RETURN> key. The child isn't expected to

be able to read the word <RETURN> which is printed on the key, but, with the help of an adult or other child, will soon remember where it is. As the rest of the keys on the keyboard are ignored, it can do no harm if another key is pressed by accident.

### **How to use it**

Remember that there should be an adult or older child present to help the child select the game to be played. The first menu displayed after loading asks which range of numbers is required, 1-3, 0-4, 5-9 or 0-9. 1-3 is the easiest level as there is only a choice of 1, 2 or 3 objects to match, 0-4 introduces the idea of no objects, and 5-9 introduces larger numbers. At the top end of the scale the numbers 0-9 are all brought into the same game. Select the range using a, b, c or d and press the <RETURN> key.

The game selection menu now appears. Bear in mind while choosing that Treasure Island is easier than Space Stations, Space Stations is easier than Roll-a-Ball and Roll-a-Ball is easier than Which-Way, in terms of the educational concepts being introduced. Once the selection a, b, c or d has been made, and the <RETURN> key has been pressed, the program will go into one of the four games.

Whenever the <hand\_icon> symbol appears during these four games, just press the space bar when you are ready to continue.

### **The Four Games**

#### **A. Treasure Island**

The sea, and then a number of islands (3 for range 1-3, 5 for the other ranges) are displayed. A number of treasure chests then appear on each island, and a ship will appear in the top right hand corner of the screen. The ship has a number of shields on its side, and the child should direct the ship to the island with the corresponding number of treasure chests. This is done by pressing the space bar - each press moves the ship to another island. When the child is satisfied that the number of shields on the ship matches the number of chests on the island, the <RETURN> key should be pressed. If the child is right, there is a suitable reward. When ready, press the space bar for a new ship. If a mismatch has been made then the play continues with the same ship for one more go; another mismatch causes a new ship to appear.

#### **B. Space Stations**

Here, the number shapes - numerals - are introduced. They appear on space stations in the sky. On the moon below, a rocket with dark windows appears. The child has to send the rocket to the space station with the numeral corresponding to the number of windows on the rocket. The play is the same as that for Treasure Island; use the space bar to move the rocket and the <RETURN> key to launch it, ie there were three windows on the rocket the child should point it at the space station with three on it and press the <RETURN> key. A match results in a suitable reward, a mismatch leaves the same rocket for one more go; another mismatch causes a new rocket to appear.

#### **C. Roll-A-Ball**

This game starts by drawing the Roll-a-Ball scene. The aim is to sort the numbers displayed on the plates into ascending order as follows. Select the plate with the lowest number, line the ball up with it using the space bar, and roll the ball by pressing <RETURN>. If it is the lowest, its number is then transferred to the bell score. The game proceeds like this, until all of the plates have been knocked down correctly. If, at any point, a wrong selection is made the bell score returns to zero and all the plates reappear in the same order as before, ready to be sorted again.

#### **D. Which Way**

Before the game starts, another menu is displayed. The choice is for two or three way decision-making. Two way gives the player two unequal sets of objects to compare. The three way choice additionally gives the option of having an equal number of objects. Press 2 or 3 and then the <RETURN> key. The screen now shows a hopper with two or three chutes depending on the decision just made. Each chute is labelled, and the child has to count the numbers of red and blue objects in the

hopper. The space bar should be pressed to make the pointer aim down each of the chutes in turn. When the player has decided which way the objects should go, the <RETURN> key should be pressed. If the decision is correct the objects fall down the chute; if the player makes an incorrect choice then the scene remains the same and the decision has to be made again. After two incorrect decisions the objects will get reordered into lines at the top to help the child decide.

### **Educational Notes**

This program introduces the fundamental ideas of matching, one-to-one correspondence, cardinality and ordering. It should be used as a learning instrument alongside as much practical counting activity as possible. The infant will probably recognise the number symbols (numerals), written and spoken, from television, street signs and so forth, but it helps to implant the meaning of these conventional signs if the infant plays games of counting with toys or household items or with the special apparatus that is available to reception classes and playschools.

When introducing counting it is important to stress that 2 is one more than 1, 3 is one more than 2, and, later, that 1 is one more than 0. In short, one must emphasise the 'nextness' property inherent in the counting numbers. This is what makes numbers harder for infants to handle than might be supposed from their simply learning to count aloud. Nevertheless, infants can gain fluency in saying the number words (whether they understand their meaning or not) from traditional counting rhymes, such as "One, two, buckle my shoe," and so on.

It is also advisable to make evident to the infant that the last number in the sequence 'one, two, three' (for example) gives the 'number' of the set being counted. Once upon a time shepherds, when asked how many sheep they had in their flock, did not answer with a simple number, the total, but counted all the way up from 1 up to the total! Naming the last number in the count, thus avoiding the tiresome process of counting all the way, was an invention of great economy and power. We should not expect the infant to make the same mental leap unaided.

Finally it is essential to make sure that the infant literally touches with its finger the things being counted. This helps avoid the common error of counting things twice or missing things out.

Adults might remind themselves that there is nothing inherently 'fivish' about our numeral '5'! Any more than there is, to our eyes, in the Urdu inverted heart shape, the Latin V, the early Greek E, or the modern arabic. We must also bear with infants who, when they do come to write numerals, often write them back to front. Our strange symbols for numbers have to be learnt!

# LISP

## ***Professional, Originally Released On Cassette Only***

Game Type : Computer Language  
Author : Gillian Cattell and Arthur Norman  
Standalone Release(s) : 1984: LISP (Cassette), Acornsoft, £12.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ACORNSOFT, Betjeman House, 104 Hills Road, CAMBRIDGE CB2 1LQ  
Tel: (0223) 316039  
Disc compatibility : CDFS E00, DFS E00

### **Instructions**

*This pack contains the Acornsoft LISP system on cassette. Acornsoft LISP for the Acorn Electron consists of 5.5K of machine code interpreter, plus 3K of initialised LISP workspace containing utilities and constants which can be deleted to make extra space if not required.*

*The system features a number of extensions to basic LISP including PEEK, POKE, CALL and VDU, to provide easy interface with the Acorn Electron MOS and machine-code programs, improved interactive control structures using LOOP, WHILE and UNTIL functions, and disc input/output control functions.*

*The 200-page manual LISP on the BBC Microcomputer is a complete guide to Acornsoft LISP and is available separately. The manual includes a section on programming for the complete beginner, and contains useful program examples, including one which works out the best route between two towns on a map.*

### **LISP functions**

ADD1, AND, APPLY, ASSOC, ATOM, BLANK, CALL, CAR, CDR, CAAR, CADR, etc, CAAAR, CAADR, etc, CHARP, CHARS, CLOSE, COND, CONS, CR, CHARCOUNT, CHARACTER, DEFUN, DIFFERENCE, DOLLAR, EDIT, EOF, EQ, ERROR, ERRORCOUNT, ERRORSET, VAL, EXPLODE, FSUBRP, GET, GETCHAR, GREATERP, IMplode, LAMBDA, LESSP, LINEWIDTH, LIST, LISTP, LOAD, LOOP, LPAR, MAP, MAPC, MESSOFF, MESSON, MINUS, MINUSP, NIL, NOT, NULL, NUMBERP, OBLIST, ONEP, OPEN, OR, ORDINAL, PEEK, PERIOD, PLIST, PLUS, POKE, PRIN, PRINC, PRINT, PRINTC, PROG, PUT, QUOTE, QUOTIENT, READ, READLINE, RECLAIM, REMAINDER, REMPROP, RPAR, RPLACA, RPLACD, \*, SAVE, SEEK, SET, SETQ, SUB1, SUBRP, SPRINT, T, TIMES, UNDEFINED, UNTIL, VDU, WHILE, WRITE, WRITEO, XTAB, ZEROP.

### **Contents**

LISP

ROUTE-M (This file can only be loaded from within LISP)

### **Loading**

To load the demonstration image, which contains a LISP program to work out the best route between towns on a map, type

(LOAD 'ROUTE-M)

from within LISP. You will now find that entering

(FIND-ROUTE 'CAMBRIDGE 'OXFORD)

will return a list giving the distance between the two cities, and the shortest route between them.

**Instructions' Source** : LISP, Cassette (Acornsoft) Back and Inner Inlay

## **Review (Electron User) - "LISP - The Language That Strikes Like Lightning"**

LISP, developed around 1960 by John McCarthy and others at the Massachusetts Institute of Technology in America, is one of the oldest computer languages still in use. His main objective was to produce a powerful language for defining and transforming functions. LISP was designed to manipulate abstract symbols called atoms and combinations of symbols called lists. It is a LIST Processing language.

Perhaps the most publicised use of LISP has been in the field of artificial intelligence research. The expressive power of the language was recognised by workers who were wrestling with the difficult symbolic manipulation problems involved. Programs have been written that hold conversations, write stories for children and summarise text.

Most mainframe computers support LISP and now a few micros as well. There is no generally accepted standard, so as a result there are many dialects around. However, adapting LISP to run on another machine is usually straightforward, making the language fairly portable.

Acornsoft's variant is available on cassette or ROM cartridge. The cassette version is the one considered here. The ROM cartridge will have all the facilities offered by the cassette version, plus a few extra, and a lot more memory.

The cassette and manual are sold separately, which seems a little strange. Unless you are already an expert LISP programmer - and not many people are - then neither is much use without the other. Price of the package is about £23.

Large scale implementations may contain hundreds or even thousands of built-in functions. Consequentially a small micro such as the Electron cannot hope to provide all of them, so only the bare essentials are built into Acornsoft's LISP. However this should be sufficient. Fortunately, many of the standard utilities can be written in LISP itself and appendix B in the manual lists a few of these.

Since many of the functions not provided would only be used occasionally and may have specialised uses, these can be typed in as and when needed for each application.

Acornsoft LISP has a few extra functions not normally found in other systems. These are to allow the use of the Electron's excellent graphics and sound capabilities. One of the most powerful is the most VDU command which provides an easy interface with the Electron's machine operating system.

LISP takes about four minutes to load. It has 5.5k of machine code interpreter and 3k of initialised LISP workspace containing utilities and constants. These can be deleted, if not required, to gain extra memory. When loading is complete the user is asked to select a mode - either 3, 4, 5 or 6. Once one has been selected it is not possible to change to another using MODE n, so if you want to use graphics or the 80 column mode 3, you must start up in the correct mode.

There are two main questions to be asked of LISP:

- \* What can you do with it?
- \* How easy is it to use?

Chapter 23 of the manual answers the first question - eleven applications are listed demonstrating its use. The programs are not complete, but do provide the building blocks for constructing much larger LISP applications, and the user is encouraged to develop them further. The examples include: Sorting a list into alphabetical order, arbitrary precision arithmetic (how to cope with very large numbers), a LISP pretty-printer (used to display large pieces of LISP structure, spreading its output over many lines and using indentation to make it more legible), an animal guessing game (you think of an animal and the Electron has to try and guess it), a route finding program (also on the cassette), graphic displays (how to create pictures) and mazes and dungeons (an adventure game).

The answer to the second question is entirely subjective and everyone will have

their own opinion. I have to disagree with the manual which states, "It provides a complete introduction to LISP and assumes no previous knowledge of the language", and that "LISP is very easy to learn..."

LISP seems very strange and confusing at first, operating on lists and atoms, recursion being very common. Unlike Basic, you need to know and understand a large proportion of LISP before you can even think of writing your first simple program, and this is the main stumbling block.

LISP operates on the "lightning principle" - the concepts strike you suddenly when you are almost ready to give up. Once you have been struck, everything falls into place. Strength, stamina and perseverance are required.

Acornsoft's LISP is an excellent package for anyone interested in programming and computer languages. It will teach pattern recognition, and recursion will become second nature.

A word of warning though. It is not for the absolute beginner. Be prepared for a struggle, and remember the "lightning principle". One last note: If you are unsure whether to invest in LISP, try to get hold of The Little LISPer by Daniel P. Friedman (I borrowed it from the local library!).

This is not a manual on how to use LISP on the BBC or Electron, but it explains the structure, principles and concepts involved in a very simple and amusing manner. You do not need LISP or even a computer to understand and appreciate it. I think you will find LISP fascinating.

Roland Waddilove, ELECTRON USER 2. 4

# LISP (ROM CARTRIDGE)

*Professional, Originally Released On ROM Cartridge*

Game Type : Computer Language  
Author : Gillian Cattell and Arthur Norman  
Standalone Release(s) : 1984: LISP (ROM Cartridge), Acornsoft, £12.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC Master 128  
Supplier : ACORNSOFT, Betjeman House, 104 Hills Road, CAMBRIDGE CB2 1LQ  
Tel: (0223) 316039  
Disc compatibility : Not Applicable

## Instructions

*This pack contains the Acornsoft LISP system plus ten demonstration programs on ROM Cartridge. The LISP system is provided as a language ROM to give the maximum amount of available memory and allow the use of all graphic modes. It includes full error messages, and features a number of extensions to basic LISP including MODE, SOUND, ENVELOPE, ADVAL, INKEY, TIME, PEEK, POKE, CALL and VDU, to provide easy interface with the Acorn Electron MOS and machine-code programs, improved interactive control structures using LOOP, WHILE and UNTIL functions, and disc input/output control functions.*

*This package also contains a set of LISP programs for use with Acornsoft LISP, taken from the book LISP on the BBC Microcomputer and Acorn Electron. They show how LISP can be used in a variety of applications including artificial intelligence, computer graphics and the compilation of computer languages. The programs are easy to use, and it is a simple task to include them in your own LISP applications. Full loading instructions are included in the pack. Although sold separately, we recommend the use of the manual LISP on the BBC Microcomputer and Acorn Electron with this program.*

*This ROM Cartridge is designed for use with the Electron Plus 1.*

## Contents

ARITH	BIG	ANIMALS	PARSER	ADVENTE
SORT	PRETTY	GRAPH	CODEGEN	UTILS

## Loading Instructions

To load and run LISP:

1. Switch off the computer.
2. Insert the ROM Cartridge into either of the cartridge slots with the label facing you.
3. Connect the printer if required.
4. Switch the computer on.

The LISP prompt will appear on the screen almost immediately:

Evaluate:

While using LISP, keep the ROM Cartridge in the cartridge slot. You can leave LISP and switch to another language by evaluating, for example:

(\* 'BASIC)

or

(\* 'B!.)

To go back to LISP again you can type \*LISP.

NOTE: You may not be able to call LISP if a second cartridge is present. In this case, simply remove the second cartridge. Note also that you should always switch the computer off before inserting or removing any ROM Cartridge.

### Using LISP

The book LISP on the BBC Microcomputer and Acorn Electron is strongly recommended as a User Guide for the Acornsoft LISP ROM Cartridge. It includes a section on programming for the complete beginner, and contains a glossary of all the functions available on this ROM Cartridge plus several demonstration programs. These LISP demonstration programs are included in this package.

### Loading The Programs

The LISP demonstration programs contained in this pack are stored as text files. The operating system command EXEC should be used to load them. This causes the computer to treat the contents of the file as though it was being typed in at the keyboard.

To access the operating system commands from LISP, the \* function is used. Thus to access the demonstration programs in the ROM Cartridge, the expression:

```
(* 'ROM)
```

would be evaluated. To perform a catalogue function, the expression:

```
(* 'CAT)
```

would be evaluated. Notice that the argument of \* is an identifier or quoted atom. Thus, to load one of the demonstration programs, an expression of the form:

```
(* 'EXEC! <program name>)
```

would be evaluated. For example, to load the program PRETTY into the LISP system, evaluate:

```
(* 'EXEC! PRETTY)
```

Notice that the space after EXEC needs to be preceded by an exclamation mark (!). If this is not done, LISP assumes that the space marks at the end of the atom representing the command. An abbreviated version is:

```
(* 'E!.PRETTY)
```

This uses the minimum abbreviation for EXEC, which is E. This time the ! prevents LISP from interpreting the string as a dotted pair.

When the expression is evaluated (i.e. passed to the operating system) the text of the program will be read from the file and displayed on the screen exactly as if it were being typed by you, only much faster.

At the end of the file, control will return to the keyboard and LISP will print the result of the \* function (NIL). At this stage, the presence of the new functions can be confirmed by evaluating:

```
(OBLIST)
```

as usual.

**Instructions' Source** : LISP, ROM Cartridge (Acornsoft) Back and Inner Inlay

### **Review (Electron User) - "LISP Arrives On ROM Cartridge"**

This was one of the first languages to appear on cassette for the Electron, and at last the full implementation is available on ROM Cartridge for the Plus 1.

Priced at £29.95, it may seem expensive, but represents a considerable advance on the tape version reviewed in Electron User, February 1985. The LISP cartridge takes precedence on power-up, and typing VERSION tells us that this is version 5.

Turn on the garbage collector messages and force a collection, and we will find we have 16.6k available in Mode 6. The extra memory available to the ROB based LISP

allows several enhancements - larger programs, graphics, neater recursive functions instead of loops, and less time garbage collecting.

Apart from these benefits of extra memory, how much more do you get for your well-earned money?

I knew that LISP came on a 16k ROM and was surprised to see the cartridge contained ten example programs, including games, educational programs, utilities and graphics. I was even more surprised when I couldn't find these programs in the ROM on disassembly. Efficient packaging? Tokenising? No, the cartridge also contains a 16k serial ROM. The examples are all taken from the Acornsoft book, which must be bought separately, and are loaded by selecting the ROM filing system and \*EXECing the file.

When you need, say, a sort function, this can be read from ROM as if it were typed from the keyboard, thus saving time and energy. In a language where every machine has its own dialect, Acornsoft LISP could well set some form of standard for micro-Lisps.

There's no PROG function but LISP being the friendly, flexible language it is, this can be defined if you simply cannot do without GOTOs. The OBLIST contains 130 identifiers, compared to 114 for the tape. Extra facilities include MODE, USR, binary operators, TIME/CLOCK functions, warm or cold start from a break, and textual error messages.

The lack of a MODE command was the only serious drawback of the cassette, which included lots of functions (ONEP, ZEROP, ADD1, SUB1, CAR/CDR combinations) which are very easily defined in LISP. The VDU22 command can be used to change from one mode to another that use the same amount of RAM, say from 4 to 5, but not from Mode 6 to 3.

Since MODE has a delayed effect - it waits until the next 'Evaluate:' prompt is displayed - there may still be occasions when VDU22 is needed, but in general MODE is a very useful function to have.

There is, however, a serious problem with this LISP - it is extremely difficult to get hold of. This is a great shame, because it is a superb implementation of an exceptionally interesting computer language, and 32k of ROM at this price is a real bargain.

Nick Rhodes, ELECTRON USER 3. 3

# LOOK SHARP

***Professional, Originally Released On Cassette Only***

Game Type : Educational  
Author :  
Standalone Release(s) : 1985: LOOK SHARP, Mirrorsoft, £9.95  
Compilation Release(s) : None  
Stated compatibility : BBC Side A, Electron Side B  
Actual compatibility : As stated  
Supplier : MIRRORSOFT, Hoborn Circus, LONDON EC1P 1DQ  
Disc compatibility : Unknown

## Instructions

*"These two testing and absorbing programs were written by head teacher Gordon Askew. Their aim is to sharpen observational skills and visual memory. With two very different themes, and three games in each program, there is lots of fun and variety for the whole family.*

*"OLD MACDONALD'S FARM features sheep, geese, pigs and cows in three amusing games. The first game, Memory, challenges the player to remember and then recreate a farmyard scene. Odd-one-Out tests observation by presenting three sets of animals which seem the same - but are they? Spot the odd one out and gain points! Snap for one or two players, is an old favourite; this version challenges the player to be quick on the button.*

*"With two levels of difficulty, these games are recommended for 4-7 year olds.*

*"S.O.R.T. - the Space Observer Recruitment Test measures the player's readiness for a space mission. Space age scenes of rockets, space stations and aliens feature in three testing games where quickness of hand and eye ensure success. Playable at practice levels, the ultimate challenge runs all three games one after the other, under test conditions. With a high-score table this is a fun competition for the whole family from seven years upwards."*

On loading OLD MACDONALD'S FARM, you will be presented with a choice of three games; Memory, Odd-one-Out and Snap. Choose your game by pressing the key number indicated.

A second menu page will appear. This offers a choice of two difficulty levels and the option to see instructions. In Snap you can also choose whether to play a one- or a two-player game.

S.O.R.T. starts with an introduction page setting the scene for the tests which follow. The menu which follows offers the choice of practising any of the three S.O.R.T. tests, or taking the full test. Each individual test is preceded by brief on-screen instructions. At the start of the full test, the player must enter his or her name. At the end of the full S.O.R.T., the player's score is recorded on a top-score table, setting a challenge for other family members.

## **S.O.R.T. and MAC**

During play you may leave the game and return to the first menu by pressing <ESCAPE>. The sound may be turned OFF using the <Q> key and turned back on by using the <S> key.

# LOONY LOCO

*Professional, Originally Released On Cassette Only*

Game Type : Arcade; Scrolling M/code  
Author : T. & M. Monkton  
Standalone Release(s) : 1985: MOON BUGGY, Kansas, £3.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : KANSAS CITY SYSTEMS, Unit 3, Sutton Springs Wood,  
CHESTERFIELD. Tel: 0246 850357.  
Disc compatibility : CDFS E00, DFS E00

## Instructions

In this game you must help to save a railway from the Evil Baron Bodneik who uses any methods, foul or foul, to try and destroy the line.

On the first screen you must guide a train to its destination switching lines firing smoke and harpoons and avoiding bombs.

The longer you hold RETURN down the higher the smoke rises, you can have up to three pieces of smoke on the screen at 1 time but once all three have been fired you cannot fire again until all three have left the screen.

On the second screen you are on top of a runaway train and you must get to the buffet car by running along the top of the carriages jumping over the gaps and cannon balls whilst ducking the arrows.

The third screen finds you inside the buffet car where you must catch the spinning cups before they slide off the end of the three serving tables, there are forty to catch and you can only drop three.

The fourth and last screen is set in the main control room of the engine where you are trying to put all the train's eight brakes on.

However the Baron has set up the brake levers in such a way that moving one will result in locking most of the other levers and at the same time releasing one or two.

All eight brakes must be placed in the on position, i.e. all switches up, for the train to stop. To move a switch up or down move under it and press <RETURN>. You have a maximum of 300 moves to solve the puzzle.

## Game Controls

Z - Left, X - Right, \* - Up, ? - Down, <SPACE> - Jump/Shoot Harpoon  
<RETURN> - Duck/Fire Smoke

**Instructions' Source** : LOONY LOCO (Kansas) Opening Screen

## Review (Electron User)

In LOONY LOCO, the evil baron will stop at nothing to destroy the train. You play the part of the hero who must outwit the enemy and apply the brakes. That little story is used by Kansas to link together four activities, all with a railway flavour.

In the first activity you drive an engine along a track with the scenery scrolling in the background. To make life difficult for you, airships and planes keep flying over and dropping bombs. A well directed puff of smoke is required to prevent these

from causing a disaster. Also causing problems are runaway trucks. These can be avoided by firing a harpoon at them or by switching tracks at the numerous points along the way.

When you reach your destination you progress to the next part of the game. In this you are running along on the top of the carriages. Not only do you have to leap smartly from coach to coach, but you must also jump over the balls which are rolling along, and duck under the arrows that are fired at you.

Your aim is to reach the buffet car to gain access to screen three. Once in the buffet car you must catch the cups and saucers that are rolling along conveyors. The kindly railway management will allow you to drop a maximum of three while trying to catch the required forty.

Screen four is quite different from the others in that it is a logic problem, requiring you to set the eight switches to put the train's brakes on. The trouble is that you can only move switch eight if the other seven are correctly set and so on.

You are allowed 300 moves, and at first you'll need them. I think the lowest possible number of moves is 170.

LOONY LOCO is the best program I have seen from Kansas City Systems. Screens one and two are fast and furious arcade action with good smooth graphics and useful sound effects. Screen three is the weakest because the cups come in a soon predictable set pattern. The fourth screen is great fun to crack, but once learned it is no problem.

You can start the game on the screen of your choice. Overall it is a first-rate package and highly recommended.

Sound .....	6
Graphics .....	8
Playability .....	8
Value for money .....	10
Overall .....	8

Rog Frost, ELECTRON USER 3.11

# LOOPZ

## ***Professional, Originally Released On Cassette Only***

Game Type : Strategy; Puzzle-placing arcade game  
Author : Kevin Blake and Ian Upton  
Standalone Release(s) : 1991: LOOPZ, Audiogenic, £7.95  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : AUDIOGENIC, Winchester House, Canning Road, HARROW HA3 7SJ  
Disc compatibility : CDFS E00, DFS E00

## **Instructions**

*"It couldn't be simpler. You get pieces of different sizes and shapes. One by one you put them down on the playing board - soon you've made your first loop. Yeaaaah!*

*Now it's not so easy. This time you didn't get the pieces you wanted. Never mind - just start another loop.*

*All of a sudden the board's getting just a little too crowded. Now you're struggling to find a place to drop the pieces (who cares where they go, you can't afford to let the timer run down because you'll lose a life).*

*Now it's getting really hectic. Did you honestly think this game was simple (and this is just the first level of Game A)?*

*Pretty soon you'll be dreaming about LOOPZ. Wondering if next time you'll be able to make a longer loop than ever before - or more loops than your record. Will LOOPZ drive you crazy? You bet!*

- \* Easy to learn. Dangerously addictive - and incredible fun to play.*
- \* Game A offers ten skill levels - you'll never beat level 9.*
- \* Game B takes you through the levels - with special bonus games if you do really do well!*
- \* Game C is a real puzzle - well 50 of them to be exact!*
- \* One or two can play - so why not go loopy with a friend! Play co-operatively or competitively, the choice is yours.*
- \* Incredible four-channel sampled in game music and sound effects by David Whittaker (Atari ST, Amiga and Macintosh only - IBM version supports Roland and Ad Lib cards) "*

*It couldn't be simpler. You get pieces of different shapes and sizes which you can rotate and move about. One by one you put them down on the playing board to create loopz. Completed loopz score points, then disappear. Bigger loopz score lots more points, but if you're too ambitious you may run out of space - incomplete loopz just get in the way.*

## **How To Play**

The game option screen allows you to choose one of three types of game (A, B or C). Press G to alter the game type, or T to alter the tune. Whichever game you choose, you start with three lives. A life is lost if you fail to place a piece before the timer runs out.

If you choose Game A, then you can play at one of ten different levels; 0 to 9. Level 0 is the easiest, and as the level number increases, the time allowed reduces.

However, at higher levels your loopz score more points. Game B begins at the lowest level, Level 0, but the level increases by one for every ten loopz that you complete. Game C is a puzzle game with 50 screens - each contains a completed loop from which a number of pieces are removed - all you need to do is put the pieces back in the right place - but if you fail, you lose a life. After every five screens, a password is displayed - by entering the passwords, you can start the game at different screens.

### **Bonuses And Bonus Games**

For every 25 loopz that you complete in Game A or B, you receive an extra life (up to a maximum of ten). In Game C, an extra life is awarded for every ten screens that you successfully complete.

In Game A you can earn a bonus by completely clearing the playing area. The bonus ranges from 100 points to 10,000 points depending upon the level number, and the bonus multiplier (shown above the diamond at the bottom right). The bonus multiplier increases as the number of tiles covered increases, and ranges from x1 to x10.

Game B has two bonus games which allow you to increase your score. To reach the first bonus game, you must completely clear the playing area. Although Bonus Game 1 appears at first to play the same as the main game, you'll soon discover that completed loopz are not erased from the playing area - so you must place your pieces very carefully indeed! If you fail to place a piece then the bonus game ends.

Scores for completed loopz in Bonus Game 1 are multiplied by the bonus multiplier. When the bonus game ends, the bonus score is added to the score from the main game, which then continues as normal.

The second bonus game can be reached only by completing a single loop which scores more than the target score displayed above the game timer. To score enough points to qualify for Bonus Game 2 the loop must fill well over half the screen - quite a challenge!

Bonus Game 2 comprises a screen chosen at random from the puzzles in Game C. If you successfully complete the puzzle, then the level number is reduced by one when you return to the main game, and the score awarded for the puzzle is added to your overall score.

### **Gophers**

In Games A and B, every now and then you will be given a special piece called a 'gopher'. If you drop the gopher on an incomplete loop it will be erased - so gophers are very useful for correcting mistakes. There is no penalty for failing to use a gopher.

### **Game Controls**

Use the keys Z, X, :, / to move around the screen. Press SPACE to rotate your piece or RETURN to drop it. Pause the game by pressing P - press SPACE to restart. To abort the current game, press ESCAPE.

### **Hints And Tips**

- Big loopz score more than small loopz. Large complicated loopz score the most.
- At the start of each game, the pieces are simpler. Take the opportunity to make a large loop.
- Straight pieces come in two sizes - one tile or three tiles long. Don't leave two tile gaps!
- You can play LOOPZ in many different ways. Some people aim to create as many loopz as possible - others go for enormous, high-scoring loopz.
- Set yourself a realistic target, then when you reach it, set yourself another target, and so on.

# LUNAR RESCUE

*Professional, Originally Released On Cassette Only*

Game Type : Arcade; Move Spacecraft through meteors  
Author :  
Standalone Release(s) : 1983: LUNAR RESCUE, Alligata, £7.99  
Compilation Release(s) : 1986: BUMPER BUNDLE, Alligata, £6.99  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : ALLIGATA, 178 West Street, SHEFFIELD S1 4ET  
Disc compatibility : Unknown

## Instructions

Your mission is to rescue your six fellow earthmen stranded below on the lunar surface. On your command, the hatch of the mothership opens and you begin the hazardous journey through a storm of moving asteroids. As you land your craft, a survivor will race to his rescue and once boarded the ship will take off automatically. But the danger has not yet ended.

As the asteroids change to hostile alien ships, you need to be even more alert and use your blaster to clear your path. Finally, guide your craft to the mothership and successfully complete the delicate docking manoeuvre and your first survivor is home to safety, but don't forget his friends are still on the planet surface below!

Start with 3 craft.

Points: 1,000 points for rescuing all six men. Bonus points for fuel remaining after each rescue. At 3,000 points, extra craft.

High resolution graphics and imaginative sound effects.

## Game Controls

Z - Left, X - Right  
<RETURN> - Release from mothership/Upward thrust when descending/  
Fire when ascending (Speeds up ascent if held down)

# MACBETH

## *Professional, Originally Released On Cassette Only*

Game Type : Utility Package; Investigate Shakespeare's MACBETH Play  
Authors : John Mahoney, Stewart Martin & Jim Wynn  
Standalone Release(s) : 1985: MACBETH, Penguin Study Software, £5.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : PENGUIN STUDY SOFTWARE. No further information given.  
Disc compatibility : CDFS E00, DFS E00

### Instructions

*"Written by practising teachers who have had many years' experience of successfully preparing students for literature examinations. Penguin Study Software gives you the ability to study an 'O' level or CSE text by means previously impossible. You can:*

- a) investigate major characters, themes and images and the subtle relationships between them,*
- b) research specific essay titles or examination questions,*
- c) thoroughly revise a particular character, theme or image of your choosing - at your own pace,*
- d) work through the entire play or concentrate your study on a particular act or acts.*

*If you are studying for an examination as a full time or part-time student, or are reading purely for interest and pleasure, Penguin Study Software will increase your knowledge of the text and help you to enjoy and profit from the study of literature."*

Once you have loaded the program you will be able to select, under a number of headings, those areas of interest you wish to explore.

In addition, you may restrict your search to particular parts of the play if you so wish - otherwise it will be assumed that you would like to search it in its entirety.

### Getting Started

Start with a simple search for just one item, for example a theme you find interesting.

As the computer comments on what it has found, you will gain a maximum benefit by looking in your copy of the text for the reference given - carefully consider its context by reading a number of lines either side of the exact place indicated.

With experience, you will be able to undertake very sophisticated studies of the text by carefully selecting combinations of characters, themes and images. This type of questioning is likely to reveal important relationships within the play and lead to greater understanding - although highly structured enquiries of this kind require some thought on your part to begin with.

For example, in Shakespeare's 'Macbeth', it is well known that Macbeth is involved in the murdering of several people - it might therefore be tempting to assume that Macbeth and the theme of blood would be a fruitful combination to explore. In fact, a far more revealing insight might be gained if blood, as a theme, were to be considered in its relationship to water, for example.

As appropriate, the computer will suggest other profitable lines of enquiry which you might like to follow up, either on their own or in the combinations it suggests.

To help you get the best out of the program you are limited to choosing a maximum of three items at any one time - this is completely independent of any decisions you may wish to make about concentrating your search on particular parts of the text.

**Have your copy of the text handy**

Act, Scene and Line numbers are referenced to 'The New Penguin Shakespeare' as used and recommended by the Royal Shakespeare Company. If you are using other editions of the play you may find that some of these numbers vary slightly, and you should bear this in mind when looking at your text.

Instructions currently unavailable.

## Review (Electron User)

Three separate packages, Counting, Word Matching and Spelling are designed to help with the first steps in learning to read and count. Each is divided into three or four sections with activities relating to the growing skills of the children using them. All have superb graphics and a most appealing format.

Number recognition, learning to count and an introduction to simple addition are all included in the activities of the first package, Counting. As with the others in the series this program features Sam, a friendly little chap who's very sad, but easily pleased by getting the right answers to his questions.

There are four games in the counting program. The first two require you to match numerals with a number of objects. In Game 1 a random number of croaking frogs, wriggling worms, skipping girls or barking dogs is displayed. I've discovered eighteen different shapes so far.

The numeral cycles through from one to ten. If the number matches then <RETURN> should be pressed. If not, the spacebar should be used. Game two is similar except the numeral stays constant but the number of objects cycles through from one to ten.

Games three and four display two sets of different objects, and the total number has to be matched with the numeral. This activity is a simple introduction to the concept of counting.

It is most important that these programs are carefully introduced to a child by an adult. The various aspects of each game are not really apparent from the screen display and the child needs to be shown what to do.

Changing from one activity to another is achieved by pressing a function key but there is no prompt on the screen to tell you when to do that.

I turned to the Word Matching program next. It has been designed to encourage the child who's just beginning to read. Objects are displayed on the screen and they have to be matched with the correct word. Again, this program only requires the use of the Spacebar to reject a word, and <RETURN> to indicate the correct answer.

The character Sam enters the screen and draws an empty box and a familiar object with the word for the object above it. In Game one words are placed randomly in the box until the correct match is obtained - the child is matched word to word.

Game two requires the child to remember an object word that is flashed on to the screen and match it correctly as the words are shown in turn.

Game three is the same but no dots are displayed after the object word leaves the screen. In all three, incorrect responses cause successive letters of the answer to appear.

The vocabulary is restricted but although the number of words is limited the quality of the graphics is very high. An interesting feature is a caterpillar that crawls along the bottom of the screen. Each correct response causes it to crawl a little further until it reaches a leaf, then a butterfly emerges and flutters back across the screen. That piece of graphics is a real credit to the program.

Finally I tried out the Spelling package. This could not be introduced to a child until the rudiments of word recognition were mastered. The vocabulary is a subset of the Word Matching program and so forms a good follow up exercise.

However, spelling is a far higher level activity than the word matching exercises and care should be taken that the child is ready for this type of work.

John Woollard, ELECTRON USER 3. 6

# MAGIC MUSHROOMS

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Platform Game  
Author :  
Standalone Release(s) : 1985: MAGIC MUSHROOMS, Acornsoft, £9.95  
Compilation Release(s) : 1988: ACORNSOFT HITS 1, Superior/Acornsoft, £9.95  
1989: PRES GAMES DISC 4, PRES, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+, Master 128  
Supplier : ACORNSOFT, 4A Market Hill, CAMBRIDGE CB2 3NJ  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

MAGIC MUSHROOMS isn't only an exciting game of skill and quick thinking - it's also a complete game constructor allowing unlimited scope for ingenuity in designing games for you and your friends to play.

Guide Murphy around the screen leaping from brick to brick, bouncing on trampolines, sliding down slides and gliding up escalators in his quest for mushrooms.

He'll find them all over the place. Even on slippery ice sheets and treacherous ground which wobbles beneath his feet, or disappears as he steps off it.

Collecting mushrooms is a hazardous occupation; Murphy must watch out for marauding monsters as he races against time towards the chequered flag.

The game includes nine screens, ranging in difficulty from easy to extremely hard and showing just a small selection of the many techniques you can use in designing your own screens.

## How To Play Magic Mushrooms

Guide Murphy around the screen to collect all the Magic Mushrooms, while avoiding the monsters that sometimes try to get in his way. Then make your way to the chequered flag to complete the screen. But time is limited, so keep an eye on the clock at the top of the screen.

Murphy starts with three lives, and there are nine screens of increasing difficulty to compete with. Rate yourself as extremely skilful if you have mastered all nine!

## Score

For each mushroom that Murphy collects you score 10 on the first screen, 15 on the next screen, 20 on the third, and so on up to a maximum of 95.

On completing a screen you are awarded a bonus of 50 times the time remaining.

See the glossary at the end of this file for an explanation of what each of the blocks does.

The nine screens supplied with Magic Mushrooms are all possible, but the later ones become increasingly difficult and may take time to master. If they are too hard, and you want to make them easier, read on.

## Game Controls

Z - Left, X - Right, <RETURN> - Jump  
<COPY>/<DELETE> - Pause/Continue, Q - Quiet, S - Sound

## Designing Your Own Screens

MAGIC MUSHROOMS has a built-in Editor which can use either to adapt the screens supplied with the game, or to design your own screens from scratch.

You can save the screens you have designed onto cassette or disc, so that you can play them again or give them as a challenge to your friends.

### E: Editor

Press E to get to the Editor. You will now see the menu entitled : SELECT SCREEN TO EDIT which allows you to choose what you want to edit. You will be given a list of the built-in screens, as well as the option NEW SCREEN.

You have the choice of either editing an existing screen to make it easier (or harder!) for example, designing your own screen.

### 1 to 9: Existing Screen

To edit an existing screen, press one of the number keys 1 to 9 corresponding to the name of the screen you wish to edit; your chosen screen's name will be highlighted.

### N: New Screen

To design a new screen, press N, and NEW SCREEN will be highlighted on the menu.

When you have selected what you want to edit, press RETURN to confirm your decision. Before you press RETURN, you can change your mind by simply by pressing a different key.

## The Editor

You are now in the Editor. You will see the screen you chose to edit, or a blank screen if you pressed the NEW SCREEN option.

### Editor Controls

The arrow keys are used to move the rectangular cursor, which starts at the bottom left-hand corner of the screen.

The sixteen different building blocks which you can use to construct a screen are shown along the top of the picture, each identified by a number 0 to 9 or a letter A to F. Pressing one of these keys will insert the corresponding block at the cursor position.

### Repeating Blocks: SHIFT

To speed up drawing several blocks of the same type, hold down the SHIFT key while moving the cursor with the arrow keys.

### Deleting Blocks: 0 or SPACE BAR

Block 0 is equivalent to a blank space, and so removes the block at the current cursor position.

### Testing A Screen: TAB/T

You can test a screen from the Editor by pressing T. This is just like playing the screen normally with three lives, except that finishing the screen by pressing <ESCAPE> during the game will take you back to the Editor.

### Naming A Screen

When you have designed a screen, it is a good idea to give it a name to identify it later on. To do this, move the cursor to the top line of the Editor screen, where it will change from a rectangle to an underline symbol. You can now type in a suitable name using the normal letter keys. You will have to move off the top line before pressing T to test the screen.

### Finalising A Screen Design: RETURN

When you are happy with a screen you have designed using the Editor, you can exit from the Editor by pressing RETURN. You will now see the menu entitled SELECT SCREEN TO REPLACE which allows you to choose where to put your newly designed screen. You

may replace any one of the nine built in screens with the screen you wish to replace, followed by RETURN to confirm it.

You will be asked ARE YOU SURE? If you are overwriting a different screen, to remind you that the previous screen of that number will be lost forever (unless it is in a set of nine screens already saved, in which case you can load it again. This is also the case with built-in screens). Press Y to confirm.

You are now back at the Main Menu, but the screen you designed has replaced one of the nine original screens, as you will find if you play through them. Of course, if your screen replaced screen number 1, then you can get to it straight from the Main Menu by pressing the Space Bar.

### **Saving And Loading Sets Of Screens**

If you have replaced some of the built-in screens with your own designs, you will want to save the new set of nine screens before switching your computer off. To do this, you will need a blank cassette. The cassette on which MAGIC MUSHROOMS was supplied should not be used, as you may erase the program.

The complete set of nine screens is saved or loaded as a single file; you cannot save or load a single screen.

#### **Saving A Set Of Screens: S**

To save the current set of nine screens, insert the blank cassette and press S from the Main Menu.

In response to the prompt ENTER FILENAME, type a suitable name to identify the particular set of screens.

#### **Loading A Set Of Screens: L**

To load a different set of nine screens, insert the cassette containing the screens, and press L from the Main Menu.

In response to the prompt Enter filename: give the name of the file, press RETURN, and wait for the file to be loaded. The previous set of screens will be lost so if you want to keep it, save it first.

#### **Cataloguing Saved Files: C**

Press C to give a list of the MAGIC MUSHROOMS stored on the disc. Press ESCAPE to return to the Main Menu. The screen files are stored on side 0 of the disc in directory M.

#### **Deleting Saved Files: D**

To delete a set of screens from the disc, press D, and after the prompt ENTER FILENAME: give the name of the set of screens to be deleted followed by RETURN.

### **Other Facilities**

#### **Old Screen**

A copy of the latest screen you have been designed will always be kept as OLD SCREEN, even if you press ESCAPE to get out of the Editor without first selecting a screen to replace.

#### **Transferring A Screen Using Old Screen**

The OLD SCREEN is not affected by saving and loading, and so enables a single screen to be transferred from one set of screens to another.

#### **Short Cuts**

If you already know which screen you wish to edit, without having to look at the list of names, you can go straight into the Editor from the Main Menu by pressing 1 to 9, N or O followed by RETURN.

#### **Design Guidelines**

The nine screens supplied with MAGIC MUSHROOMS should provide plenty of ideas on how the different building blocks can be used to their best effect. The following pages

give a detailed description of the properties of each type of block, together with a few ideas for using them to create challenging screen designs.

### **Jumps And Falls**

Murphy will not survive a fall from a height of more than four blocks unless he lands on a trampoline or a slide.

Murphy can jump off the ground to a height of two blocks. He can jump onto a wall above his head, and land safely on it, provided it is not higher than two blocks above him.

The largest distance Murphy can jump horizontally is a gap two bricks wide.

### **Mushrooms**

Mushrooms grow at random on some of the different types of blocks, provided there is a space above them; these blocks are identified with a mushroom symbol in the glossary.

### **Glossary**

#### Blank Block (0)

The blank block is equivalent to the background, and can be used to remove other blocks from the screen.

#### Conveyor Belts (1) (2) (M)

The conveyor belts carry Murphy along with them, although he can still make headway against them.

**Ideas :** Conveyor belts make it harder to judge jumps accurately. They can be used in combination to make Murphy move at unpredictable speeds.

#### Starting Block (3)

This block will determine where Murphy begins on the screen. In other respects it behaves like a normal block (see block 5).

**Ideas :** If several starting blocks are provided, one of them will be chosen at random as the starting point. This is a useful way of making a screen even less predictable.

#### Chequered Flag (4) (M)

If a chequered flag is provided on the screen, Murphy must land on it after collecting all the mushrooms in order to complete the screen. In other respects, it behaves like a normal brick.

**Ideas :** The chequered flag can add an extra level of difficulty to a screen. It could, for example, be placed next to the starting block to force Murphy to go back along the same route, even when he has collected all the mushrooms.

#### Brick (5) (M)

The normal brick can be used to build stable horizontal platforms for Murphy to run along, and jump from. Bricks can also be stacked vertically to build walls. Murphy can climb up a wall by jumping, and can jump into the middle of a wall from the side.

**Ideas :** Bricks can be used to build alcoves where mushrooms will grow that are hard to reach without some skilful jumping. Vertical walls are an alternative to escalators for linking platforms.

#### Ice (6) (M)

Ice is slippery, so that although Murphy can stand on it safely, once he starts moving in one direction, he will not be able to stop.

**Ideas :** Unless there is something safe to land on at the end, Murphy will not be able to collect mushrooms. If you make the safe landing a once-only (see block F), Murphy will only have one chance to cross the ice.

#### Wobbly (7) (M)

The wobbly is a rather unstable place to stand, and is a difficult place to jump from.

**Ideas :** The combination of wobbles and monsters is particularly daunting one for Murphy!

#### Ninety-nine (8)

The ninety-nine can be used to provide extra time by solving a screen. When Murphy walks over the ninety-nine, the clock is reset to 99, and the block changes colour to show that it has been used. There can be several ninety-nines on a screen, and each one can be used once to gain extra time.

**Ideas :** In complicated screens you may need to include ninety-nines at strategic points in order for Murphy to have time to collect all the mushrooms.

Ninety-nines can be placed so that they are difficult to reach when they are most needed - as time is running out.

#### Trampolines (9) (M)

Murphy can use the trampoline to jump higher, or further, than he normally can; he can also jump safely onto a trampoline from any height.

**Ideas :** A long jump from a trampoline onto a narrow platform can be made quite tricky, especially if another jump is then required.

#### Escalator (A)

These blocks combine vertically to form a moving escalator, which can carry Murphy up from one level to another. Once Murphy is at an escalator, he cannot get off until he reaches the top, but he cannot get onto an escalator at any level.

You can jump past an escalator, without getting onto it, by starting the jump sufficiently close to it.

**Ideas :** As well as providing a way of getting between levels, escalators can be used as traps for the careless. If there is nowhere that Murphy can safely reach from the top of an escalator, he must avoid getting on to it!

#### Slide (B)

Just as an escalator carries Murphy upwards, a slide lets Murphy travel downwards. Once on a slide, there is no way of getting off before reaching the bottom.

Murphy can safely jump onto a slide from any height, so it can be used to break his fall after a large jump.

**Ideas :** A slide can either be used as a route down the screen, or as a trap for the unwary.

#### Monster (C)

Monsters are lethal to Murphy, and he must avoid them while collecting mushrooms. The monster block indicates the starting position for a monster. Once positioned on a platform, the monster will then move to and fro at random within the limits of that platform. Up to five monsters can be created on at screen.

**Ideas :** Monsters left hovering in mid-air will stay put, and can be used to block Murphy's entrance to a particular place.

#### Half Bricks (D) (E)

The half bricks behave just like the normal bricks (see block 5), but are half the width, and so give extra flexibility in building walls and platforms. Murphy can fall through a gap half a brick wide, and stand on a platform of half a brick.

**Ideas :** The half bricks can be used to create gaps which, at first sight, look narrow enough for Murphy to jump across, but which are in fact just too wide.

#### Once-Only (F)

The once-only behaves like a normal brick, except that once Murphy has walked over it the block will disappear, and he will not be able to walk on it.

**Ideas** : The once-only can be used to restrict the route that Murphy can take to collect all the mushrooms; stepping onto a once-only at the wrong time may make it impossible to complete the screen.

## Review (Electron User) - "Mechanic's Adventure"

Many potential text adventure authors who haven't the programming skill to write their own machine code epics can thank Gilsoft's THE QUILL for cutting away their shackles.

Larry Horsfield, the author of MAGNETIC MOON, is a case in point. Electron adventurers would not have been able to savour the delights of his imagination without an aid such as THE QUILL.

Although lacking the text compression - and hence the atmosphere - of the likes of ENTHAR SEVEN, MAGNETIC MOON is a revelation. It is a flight of fantasy with the feel of a Robico masterpiece.

You are Mike Erlin, second lieutenant of the United Planets Survey Service Spaceship, Stellar Queen. While searching for your sister ship, Stellar Princess, you discover an Earth-like planet with three moons. Suddenly, a powerful tractor beam forces you to crash-land on the moon where you are held in a dynamic magnetic force field. As a maverick hero, you have to free your ship, and gripping stuff it is too.

The game loads in three parts and each must be completed to go on to the next phase.

Part one is called Search for Source of Power and you will spend a lot of time and energy collecting much needed artefacts to continue the quest. You will need to escape from the Stellar Queen without the captain or crew noticing, then examine the wreckage of the cabin.

My advice is to LOOK UP and LOOK DOWN continually. Throughout the adventure, careful examination and manipulation of potentially useful objects is essential to success.

The start is one of the trickiest I have come across and the problems don't get easier as the game progresses. It's a bit of a mechanic's game with all the mending and manipulating involved.

All in all a most enjoyable mental exercise which I can recommend to the experienced adventurer. However, the novice should not be daunted as the Elk Adventure Club offers an excellent help service.

## Instructions

After being out of work since you left school, you seized at a job for a park grasscutter. 'Easy money' you thought! You thought wrong. There is a mad mower on the loose in the park and it is out to get you!!

This mower will follow you and try to crash into you, or make you ram some mown grass. If you manage to capture and kill this mower you will be rewarded with a £30 bonus.

Also, while cutting the grass and dodging the mower, you see things in the grass. These things are fireworks, string, cricket balls and rubber bands. All of these things are fatal to your poor mower.

You are *not* allowed to crash into any of the park fences, but can wraparound in the vertical axis via the park path.

However, there are martial arts experts walking on the path, and if you bump into one he will tear you limb from limb!

## Game Controls

Z - Left, X - Right, : - Up, / - Down

**Instructions' Source** : MANIAC MOWER (Kansas) On Screen Instructions

## Review (Electron User)

If you fancy a peaceful job like mowing a lawn, then this is the program designed to put you off. Mind you, the rewards are quite high, with more than a thousand pounds - in points - to be earned by the keen and careful operator.

Your garden is, presumably, right next to Taunton Cricket Ground with Ian Botham in full flow. Quite an amazing number of cricket balls join the elastic bands and other debris lying about. Any contact with these harmless looking bit and pieces means a new mower is required and you've only got three. A further problem is that your mower gets ruined if you venture on to grass that's already cut!

The biggest danger to life and limb is the rival mower. This little beast is hell-bent on colliding with you, or on making you bump into the garden walls or one of the nasty objects. You can do the same and try to trap the maniac mower for additional points.

To complete the misery a karate expert is practising in the garden and he is very keen to give you the chop.

This game ought to be fun to play but it is too slow for real arcade action. There

is a lot of strategy involved in keeping your mower going and trapping your rival, and the game is enjoyable at that level. But one bad feature is that the chosen colours are awful, producing moving diagonal lines on black and white or colour TVs. Needless to say, all is well if you have a monitor.

As seems to be usual with Kansas games, the instructions are excellent and a model for other software houses to copy. A feature of the program which I like is that it is written in Basic and listable, which means you can modify it to your heart's content. I'd also recommend the game to BBC Micro owners where the speed of action is good.

Arcade addicts will unfortunately find this game a disappointment, but if you prefer a little slow action strategy problem and enjoy tinkering with programs then why not consider MANIAC MOWER?

Rog Frost, ELECTRON USER 3. 6

### Review (EUG)

If you fancy a peaceful job like mowing a lawn, then this is the program designed to. It's not often one encounters a professionally released Electron game which is written completely in BASIC, is mind-meltingly boring and, it seems, so improperly programmed. All three are the case with Kansas' MANIAC MOWER, another once-upon-a-time mail order only tape-based game from the software house where quality is very often a mixed bag.

This time the words MICRO COMPUTER SOFTWARE are in light green on the uninspiring white inlay and the game loads in two parts; part one first introducing the dubious premise that you are pushing a lawnmower and trying to outwit a killer lawnmowing neighbour and then drawing a primitive loading screen with BASIC commands.

The few blocks that then comprise "the main game" then load in and, for some odd reason locate themselves at Page &D00, causing all kinds of problems with the Operating System when the game is exited later. On screen, an 8x8 User-Defined "mower" CHR\$ moves from left to right, the game's title and its author being written in a 'trail' behind it. Up to now, and until you choose a skill level, the game remains in monochrome. And don't expect any touches like a joystick option or redefinable keys! Kansas haven't even added a message reserving copyright!

By this stage my hopes were not high and, despite the sudden rush of colour to the screen, they sank even lower as the Mode 1 playing area appeared. The screen is divided vertically into two dark green areas - well, for dark green read dithered black on a light green background - and mid-area-a is a red blob, mid-area-b a blue blob. Across the bottom of the screen in the same font we're used to for text files is the "score line" showing your wages, the highest wages earned that day and the number of mowers remaining. Unfortunately, despite black being available, J. Morle has chosen instead to use red for this line. Red on light green on a TV screen just does not work, which means it is nigh on impossible to monitor how well (or badly!) you're doing. What's even worse though is that between the two areas runs a red path on which a green nasty moves constantly from top to bottom. He is just as difficult to see, meaning this game is only for people who don't mind permanently squinting or who own a good monitor.

A quick jangle of notes later and both User-Defined blobs are on the move. In fact, on a collision course, which you quickly appreciate, is just how the evil mower likes it. So a quick manipulation of keys ZX\*? is in order. The response of your mower, the 8x8 red blob on the left of the screen, is, to say the least, sluggish. Why it is not possible to stop is never explained by the rules [Neither is there any explanation as to why there is no graphic of a man pushing it as per the introductory text! - Ed] and the advice to "surround" the killer mower also takes a good few turns to understand.

Ahem. That is, if the game will let you proceed for any amount of turns. When playing the original cassette with the Plus 1 or any disc system attached, after just a few blips as both mowers move one 8x8 space up/down/left/right, the game comes to an abrupt halt with the message "Arguments at line 1970". On dissecting the

program, I found this bug was caused not by a faulty line but by the unnecessarily low relocation address for the main file. A quick alteration so the game ran at &E00, not &D00, and all was well with any peripherals attached.

By this point, I returned to playing MANIAC MOWER with a really heavy heart; the repetitive blip-blip-blinking that is the game's soundtrack doing nothing to help its cause (and obviously there's no sound on/off option). Now, carefully hammering the necessary key whenever a direction change was needed, I very quickly had the evil mower crashing either into the obstacles littering the garden or the wall surrounding it, even on the most difficult skill level! Also, it seems that both you and the other mower will die if you happen to run over an 8x8 piece of grass you have already mown! Ah, so that's what the instructions meant by "surrounding" the enemy grasscutting machine! Still, a pretty damned stupid rule, isn't it?

Unfortunately there isn't really much more to say. As you will probably have gathered, all the 'graphics' in the game are as bad as one another. Your wages clock up as you mow more and more of the lawn, and you gain a bonus if (or should that be when) you lure the enemy to his doom. It's extremely boring stuff, the 'action' taking place on a non-turboed Elk at only about two moves per second. It regains some dignity by having a high score table, but not much.

Even accepting the relocation 'bug', the slow response to keypresses, the general crapiness of the scenario and the appalling palette, what really does for this game in the end is that it is a lot worse than the average magazine type-in. Kansas' titles were never expensive but neither did they have a sliding scale from good (e.g. DRACULA ISLAND, a 100% machine code adventure) down to this, which must sit at the very, very bottom.

No. Going by the name in the mail order advertisement alone, you could never be sure just what the quality of the game would be and whether your £3.95 would prove value for money. MANIAC MOWER, although indisputedly one of the rarest Electron titles out there, demonstrates this flaw in Kansas' marketing strategy perfectly. It is extremely poor, undeserving of a release by any software company, a perfect rip off at four quid and likely to dissuade any purchaser of it from buying from Kansas again. And so we understand why their titles are so difficult to find.

## Review (Electron User)

Bourne have made many friends amongst primary school teachers (and children!) for their lovely Happy Letters and Happy Numbers programs for young learners. This tape is aimed at a higher age group and combines practice in co-ordinates and compass directions.

There are actually two similar programs on the cassette, the first of which requires little experience of compass bearings, for the necessary prompts are made on screen.

The child takes the part of a rally driver, with the Electron acting as navigator around a course through a grid. This varies from 6 x 6 to 18 x 18, which increases the level of difficulty.

The most popular choice was that of two players competing against each other, one with a red car, the other with blue. The courses set for each car are similar in terms of distance but they are not the same, so nobody can benefit from someone else's successes!

The second program is very similar but the child has to calculate new co-ordinates in order to make their move. This refinement adds a totally different skill from that already acquired in the first game.

Again the graphics are fair and the sound is quite reasonable but the great value of this tape is the superbly child-orientated feel it has. Children love the idea of car rallies and they themselves love to compete. The fact that a considerable amount of information is learnt about compass points and co-ordinates is almost incidental to the child. Yet parents and teachers can feel quite reassured that the educational purpose is fully achieved in this splendid cassette.

Phil Tayler, ELECTRON USER 2. 2

# MANGO

## ***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Overhead Maze Game  
Author :  
Standalone Release(s) : 1988: MANGO, Blue Ribbon, £1.99  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : BLUE RIBBON, CDS House, Beckett Road, DONCASTER DN2 4AD  
Tel: 01322 21134  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### **Instructions**

*"The heat is on for our man Mango. Chased around the refridgerator by the Heat Men, there is no way out. The only option is to stand and fight!"*

*Using the blocks of ice to crush his pursuers and the bonus blocks to set traps, use your skill to help Mango survive."*

Your task is to clear each screen of 'Nasties' by pushing blocks of ice over them. Pressing RETURN enables you to move or melt an ice block. A block is melted if movement forward is obstructed, otherwise the block will move. If you can line up the 3 bonus blocks before all the 'Nasties' are killed you are awarded bonus points.

At each new level more 'Nasties' have to be killed but the number will not exceed four on any screen.

Three levels of Difficulty are available and bonus lives are awarded at 5,000 and 10,000 points.

### **Game Controls**

Z - Left, X - Right, : - Up, / - Down, RETURN - Move/Melt Block  
S/Q - Sound On/Off, COPY/DELETE - Pause On/Off, ESCAPE - Quit Game

# MASTER BREAK

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Quiz Pub Style  
Author : Walter Mansell  
Standalone Release(s) : None  
Compilation Release(s) : 1991: MASTER BREAK, Superior/Acornsoft, £9.95  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"A Snooker-Style Trivia Quiz Game for 1 to 4 Players. Six categories of questions: SCIENCE & NATURE, POP MUSIC, GEOGRAPHY, SPORTS & PASTIMES, ARTS and HISTORY. Over 1,500 questions in the BBC/Electron version. Over 2,000 questions in the A3000/Arcimedes version, including digitised picture and digitised sound questions.*

*In the one player game, try to get the highest break - you might even manage the maximum break of 147. In the 2 to 4 player game, compete against your friends and family for the highest score and highest break.*

*Start your frame with an easy red question, then choose your colour - have you the nerve to choose the black ball question? You've used all your PASSES and the ball is OVER THE POCKET - if you miss it's a FOUL SHOT!*

*"ALL THE FUN AND CHALLENGE OF A TRIVIA QUIZ AND SNOOKER MATCH ROLLED INTO ONE ENTHRALLING GAME."*

## Loading Instructions

During loading, the following message will appear on the screen "Please enter frame code". You should then select a set of questions by pressing any key between A and Z. To minimise repetition of questions, it is recommended that you start from question file A (FRAMEA) and work through to question file Z (FRAMEZ). On completing a frame, subsequent question files will load in automatically.

## Playing Instructions

Select the number of players by pressing the appropriate number key (1, 2, 3 or 4); then enter players' names.

Choose your question answer by pressing the appropriate number key (1, 2, 3 or 4).

Cycle through the colour balls by pressing SPACE and select by pressing <RETURN>. "S" is Science (& Nature); "P" is Pop Music; "G" is Geography; "L" is Leisure (i.e. Sports & Pastimes); "A" is Arts; "H" is History.

Each player is allowed to pass up to three red questions (the number of passes remaining is indicated by stars next to the player's name). When the "YOU MAY PASS" sign appears, press SPACE if you wish to pass.

In the 2 to 4 player game, if the "OVER POCKET" sign appears and you get the answer wrong, this constitutes a FOUL SHOT. Your opponents will be awarded the appropriate foul shot score.

You may pause the game when not answering a question by pressing the P key and restart by pressing the O key.

# MASTER KEY

***Professional, Originally Released On Cassette Only***

Game Type : Educational; Learn Touch Typing  
Author :  
Standalone Release(s) : 1985: MASTER KEY, Longman, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : LONGMAN, Longman House, Burnt Hill, Harlow, ESSEX CM20 2JE  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"MASTER KEY is a simple, stress-free typing course. The increasing use of keyboard-based equipment means that more and more people need to be able to type quickly and accurately. MASTER KEY is a direct, effective typing course which concentrates on keyboard mastery.*

*"In 48 separate lessons, MASTER KEY leads you in simple, straight-forward steps through each of the keys, developing correct fingering technique. In each lesson, you practise the exact copying of lines of words: the computer will then provide a speed/accuracy rating for each line. You can then repeat and recap as your ability increases. Perfect for anyone who wants to type, especially students and professional people."*

## MASTER KEY - The System

MASTER KEY consists of 48 exercises with systematic revision. In each exercise, a line of words to be copied will appear on the screen. When you copy the words, the results of your typing will appear directly underneath. You are therefore provided with an immediate and direct comparison between what you have done and what you should have done.

As each letter is introduced, the correct fingering is illustrated on the screen. In the first exercise, two letters and one finger only are used. Each of the subsequent exercises introduces a new letter or number/symbol, together with the appropriate finger to be used. You may repeat each exercise as many times as you think necessary. This enables you to determine the speed with which you will proceed through the course, and also the standards of speed and accuracy you will finally achieve.

This continual monitoring of speed and accuracy allows you to know exactly how well you are doing at each stage.

Complete words are taught from the beginning. There are no infantile, meaningless letter drills. The words you will be typing consist mainly of the 150 most commonly-used words in the English language. As these words account for about 60 per cent of the words normally used, concentrated drill with these words that mean that you can achieve a relatively high speed fairly quickly.

## How To Begin

1. A menu will appear on the screen from which you will choose the lesson you wish to start. For your first attempt you should choose Exercise 1. A line of words made from the letters D and E appears. They will look like this:  
ed dee deed dee ed deed dee
2. Copy the words, using the correct finger: the diagram on the screen will show which finger to use. (You can use either thumb to make the spaces.) By exercise 3 your work will look like this:  
free defer refer red referee

free defer refer red referee

3. At the end of each line strike the <RETURN> key with the little finger on your right hand. A new line of words will appear. Copy them, and strike <RETURN> again.
4. Continue typing until you have completed six lines. This brings you to the end of the first exercise.

### How To Continue

1. At the end of each exercise a question will appear on the screen:

REPEAT? Y/N/S

Press Y to repeat.  
Press N to proceed.  
Press S to stop.

2. When you start typing, an indication of your speed and accuracy will appear on the screen. Speed is measured in words per minute and accuracy as a percentage.  
Speed 12 wpm Acc 93%
3. In addition, there will be two pictograms giving the same information.
4. These scores represent the cumulative result of all the lines in each exercise. The clock starts when the first letter on the first line is typed and continues until the <RETURN> key is struck at the end of the sixth line.
5. *This means that, once you start, you must keep going until you have completed all six lines if you want to show a good turn of speed.*

### How To Improve

Practice makes perfect...provided that you practise the right thing. Errors practised become errors ingrained. It is prudent, therefore, to eliminate them before they are too deeply rooted.

During the early stages, your aim should be to obtain 100% accuracy. Do not worry about speed. Speed will come with practice. Accuracy will not, if the practice includes the practising of errors.

In these lessons you are free to practise whatever and whenever you choose. Concentrate on those keys where you know you are weak. The menu enables you to those lessons you wish to repeat. Do not go on to a new exercise until you have typed all six lines of the current exercise correctly. As a result, you may have to discipline yourself to type at a relatively slow speed. Only when you are satisfied with your accuracy should you try to increase your speed.

However, it is for you to decide the standards you wish to achieve. But for anyone who needs to type for professional purposes, it might be useful to remember the old adage: An amateur practises until he gets it right. A professional practises until he cannot get it wrong.

# MATHEMATICS 'O' LEVEL

*Professional, Originally Released On Cassette Only*

Game Type : Educational; Revision Aid  
Author :  
Standalone Release(s) : 1983: MATHEMATICS O LEVEL, Paxman Promotions, £3.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : PAXMAN. No further information.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

This package is designed to be of assistance to Mathematics students prior to taking their 'O' Level examinations but may also be of considerable help to CSE students although the content will exceed CSE requirements in some areas.

As a computer controlled revision program it makes use of wide-ranging multiple-choice questions to trigger memory refreshment of previously learnt material. It is aimed at reinforcing ordered recall as a suitable preparation for the examination and to help with conventional revision techniques.

Other packages in this series are available for Chemistry, Biology and Physics.

## Review (Electron User)

This is one of a series being produced for the pre-school or young child. It would be equally suitable for schools or the home Electron and colour television. Like the others in the series, the package contains two cassettes which together contain 16 exercises.

These obviously begin at a very basic level with number recognition and matching, sorting of shapes and adding complements of five, through to matching pairs of objects which would eventually lead to some experience of set theory. The intention is that the child would soon learn to use the program unaided, and I am sure this would be possible. The key inputs are, after all, remarkably clear and easy to learn.

However I would also see a great advantage for a parent in working through these exercises with the child so that the mathematical vocabulary necessary later may be founded at an early stage. There are also a variety of further activities which would present themselves during the operation of these programs, and a wise parent would do well to follow them up while the interest is shown by the child.

Full use is made of colour and sound so that the machine is well used. The graphics are not elaborate, but in a program of this kind they hardly need to be. In a school situation, the child's name is input and full records are maintained of that child's performance.

One slight snag which I found at school was the time taken to load the cassettes - they contain a wealth of programs which need to be accessed quite often during a morning's work. Schools may be interested to know that the programs will also run on a BBC Micro, and with a bit of effort can be stored on disc.

Since schools are well advised to make a backup copy and to keep the original well away from dirty fingers, I wouldn't imagine that AmpalSoft would mind the backup being on disc. It makes the running of a classroom smoother.

# MATHS O LEVEL REVISION PART ONE

*Professional, Originally Released On Cassette Only*

Game Type : Educational  
Author : Unknown  
Standalone Release(s) : 1983: MATHS O LEVEL REVISION PART ONE, Cheshire Cat, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : CHESHIRE CAT, Ampal Computer Services, Knutsford, CHESHIRE  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

A brilliantly designed series of action-packed exercises that skilfully eliminate the traditional drudgery from Maths examination revision.

This totally new and exciting formula - devised by an entire top school Maths department - draws heavily on the graphics, animation and sound facilities of the home computer to intrigue, test and fire the imagination of the user.

A wholly flexible program uses an easily followed, step by step technique to explore the 22 major areas of the current Maths syllabuses of all the Examination Boards for O Level, CSE and Over 16 plus examinations.

CHESHIRE CAT MATHS O LEVEL REVISION PART 1 includes:

Calculus Pt 1: differentiation, basic integration etc.  
Arithmetic Pt 1: simple and compound interest, averages.  
Calculus Pt 2: definite integration, distance, velocity and acceleration.  
Constructions: perpendicular, angles, parallel lines, locus.  
Arithmetic Pt 2: areas, volumes, ratios, percentages.

Examination techniques.

and much, much more...

More than 100 fascinating exercises, carefully illustrated and animated, cover the key examination questions and the program integrates fully with other parts of the syllabus available in the Cheshire Cat range. Cheshire Cat programs cover Maths from 1st School to A Level standard.

A vital additional exercise included in this program at O Level revision is an invaluable insight into examination techniques which are the cornerstone of success.

## Review (Electron User)

Many alleged educational programs are not worth a glance and for good reason: it's doubtful if good educational software can be written without recourse to experienced teachers who can validate and help with development.

MATHS WITH A STORY: 2 is an example of the quality which can be achieved by an experienced writer supported by good field work. This package develops spatial awareness through co-ordinate geometry and pattern recognition combined in four captivating games.

The first game, PIRATE GOLD, is a treasure hunt. An island is superimposed on a grid where hidden gold can be found by moving a cursor using X/Y co-ordinates. A multicoloured barometer and a changing bleep tone shows how "warm" the hunter is. Further help is given by the coloured squares appearing over co-ordinates already visited.

The object is to be the first to fill a chest with gold, and the shorter the route taken the greater amount of gold there is to be found. Turnflex exploits the concepts of reflection and symmetry by presenting the player with two picture tiles, the second being a reflection of the first.

At the first level the picture is composed of numerals, but higher levels allow the user to design the pictures. The game starts by the removal of the reflected picture, and the player has to show an understanding of mirrors and reflections to win it back.

Dice Squares is a game of chance and strategy for one or two players, where rows, or squares, are positioned to fill a grid. The size of the rows and squares you can fill is determined by a simulated dice throw.

The last game, Tile Stretch, introduces the concept of stretching and enlargement using tiles to fill a grid in order to capture as large an area as possible.

In each game there is the option of turning the sound off, a choice of one or two players and a range of difficulties. Simple screen prompts, along with optional demonstration runs, make the comprehensive booklet supplied with the tape superfluous, and good protection from mischievous fingers enables the programs to be used by pupils without supervision. Highly recommended.

John Daddy, ELECTRON USER 3. 5

# MAZE

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade; Wire-frame Walk Through Maze  
Author : Tim Dobson  
Standalone Release(s) : 1983: MAZE, Acornsoft, £9.95  
Compilation Release(s) : 1985: PLUS 3 GAMES DISC, Acornsoft, £12.95  
1988: ACORNSOFT HITS 1, Superior/Acornsoft, £9.95  
1989: PRES GAMES DISC 5, PRES, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+, Master 128  
Supplier : ACORNSOFT, 4A Market Hill, CAMBRIDGE CB2 3NJ  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### Instructions

You have entered the top-secret installation of a rival company with the aim of stealing secret information. Inside the building is a multi-level security system, each level consisting of a maze of corridors patrolled by robot guards who will shoot you on sight.

The robots are armed with guns which they can recharge by running over special power points which are marked by pentangles on the floor of the maze.

Your company's scientists have been able to duplicate the design of these guns so that you too are able to replenish your ammunition by running over the power points. You have a maximum of three bullets at any one time.

The only exit from each level is a computer-controlled lift, programmed to open its doors only when triggered by an electronic security key; a separate key is needed at each level. This key can be found in an indestructible iridium box somewhere in the maze. The box can only be opened when three coloured identity tags have been dropped into it. These three tags; red, blue and green, are randomly positioned in the maze. When you have collected all three, take them to the box and drop them. The box will open automatically and you can take the key.

To help you find your way about, you have an advanced electronic compass. This will remember the layout of all the corridors as you explore them and can automatically detect the positions of the guards. The compass will also remember the positions of power points and the box containing the key once you have found them.

The compass can display a plan view of the maze at any time showing all the features you have so far encountered.

When you have the key, take it to the lift which will open as you approach and carry you to the next level. Higher levels are protected by more guards and have fewer power points.

### Score

Destroying a robot .....	50
Taking an identity tag .....	100
Dropping a tag in the box .....	200
Taking the key .....	300
Reaching a level .....	500

Your current score is shown in the top left hand corner of the screen. The number of bullets you have is indicated by the red markers in the centre and the number of lives you have left by the green arrows on the right. The direction of the arrows

shows the direction in which you are facing in relation to the plan view of the maze.

### **Game Controls**

Z - Turn left, C - Turn right, X - Move forward, F - Fire bullet  
T - Take object, D - Drop object, V - View maze (plan view)  
S/Q - Sound/Quiet, <COPY>/<DELETE> - Pause/Continue, <ESCAPE> - Restart game

### **Joystick Controls**

Maze can also be played using a joystick controller. Move the joystick to the right or left to turn and push it forward to move forward. Press the fire button to fire bullets.

# MEGA FORCE

*Professional, Originally Released On Cassette Only*

Game Type : Arcade; Shoot-'em-up  
Author :  
Standalone Release(s) : 1985: MEGA FORCE, Tynesoft, £7.95  
Compilation Release(s) : 1986: MICROVALUE FOUR GAMES 2, Tynesoft, £3.99  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : TYNESOFT, Unit 3 Addison Industrial Estate, Blaydon, TYNE & WEAR NE21 4TE. Tel: 091 414 4611  
Disc compatibility : CDFS E00, DFS E00

## Instructions

MEGA FORCE is the ultimate Shoot-'Em-Up for the Electron. 24 planets, each inhabited by seven marauding aliens, each sweeping down on you in ten battle waves.

On completing a Planet, a Mothership appears. This must be destroyed to enable you to enter the next Planetary Zone.

During the game, Bonus Ships appear that must be destroyed. Failure to do this will damage your bonus score at the end of each stage.

Extra fire power in the form of super laser cannons can be found by shooting the spherical pods. An additional ship will be awarded on completion of five planet's zones if you have less than three ships.

# METEORS

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Shoot-'Em-Up;  
Author : Neil Raine  
Standalone Release(s) : 1984: METEORS, Acornsoft, £9.95  
Compilation Release(s) : 1988: ACORNSOFT HITS 2, Superior/Acornsoft, £9.95  
1989: PRES GAMES DISC 4, PRES, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+, Master 128  
Supplier : ACORNSOFT, 4A Market Hill, CAMBRIDGE CB2 3NJ  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"Steer your laser-ship through a hall of meteors smashing them with your laser bolts as they hurtle towards you on all sides. Avoid being hit by the missiles from hostile flying saucers which fire at you as they pass. Your ship is equipped with as many laser bolts as you can fire and as a last resort, you can escape through hyperspace.*

*Complete with sound effects and table of high scores."*

Steer the ship to avoid the meteors, firing at them as you go.

Large meteors will split into smaller ones when they are hit, and these will in turn break into four fragments.

Watch out for hostile flying saucers which fire at you as they pass.

When the going gets too rough you try try escaping through hyperspace but you can't be sure where you will re-materialise and so this can be risky!

Clear all the meteors before going on to the next screen. You start off with three ships but can gain an extra one every time you score 10000 points.

## Game Controls

CTRL - Rotate Left, A - Rotate Right, RETURN - Fire, SPACE - Hyperspace  
SHIFT - Thrust

S/Q - Sound On/Off, COPY/DELETE - Pause On/Off, ESCAPE - Quit Game

## Scoring

Shooting a large meteor	=	20
Shooting a small meteor	=	50
Shooting a tiny meteor	=	100
Shooting a large saucer	=	200
Shotting a small saucer	=	1000

**Instructions' Source** : METEORS (Acornsoft) Back and Inner Inlay

## Review (Electron User)

Drifting alone in space, your ship is menaced by a sudden meteor storm. Collision is imminent. All that you have to fight off the huge rocks are your ship's laser bolts. The trouble is that as soon as you hit them the meteors break up into little pieces which are just as deadly. You have to blast away at these until they've all been destroyed or they'll destroy you!

Just to make things more difficult, all the firing has attracted the attention of

some extremely hostile flying saucers. These take the opportunity to snipe at you while you're distracted by meteors, so you've got to shoot at them as well. You do have thrusters to help you dodge, and if it all gets too much you can escape into hyperspace.

It's great fun, a game of quick thinking and fast reactions. Colourful and fast, space flight will never seem the same again.

Nigel Peters, ELECTRON USER 1. 1

# MEXICO '86

***Professional, Originally Released On Cassette Only***

Game Type : Strategy; Soccer Management Simulation  
Author :  
Standalone Release(s) : 1985: MEXICO 86, Quadsoft, Price Unknown  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : QUALSOFT. No further information available.  
Disc compatibility : CDFS E00, DFS E00

## Introduction

In the summer of 1986, in Mexico City, we will see the culmination of two years of the most prestigious soccer competition last held in 1982. Something approaching 100 international football sides will fight it out over those two years so that they can be there, in that cauldron of a stadium, to determine the world champions for the next four years. Mexico will be a festival of football, for many young fans, the first time they have seen the World Cup finals, and for many older English fans the memory of Mexico in 1970, the brilliant match against Brazil and the heart-breaking match against West Germany, will, whet the appetites for Mexico 1986.

For two years now, QUALSOFT have developed the art of soccer management simulation in the field of club football, and, to celebrate the 1985/1986 World Cup year, have applied the many lessons learned from those years to produce a game to stimulate the unique nature of international team management in the context of the World Cup.

The game has been split into two parts: the World Cup qualifiers and the Finals as they will be played out in Mexico. In the qualifiers, we have stuck to England's qualifying group, along with a few friendly matchers which the England team actually played just before the qualifiers began; France in paris, the USSR at Wembley, and the South American tour against Brazil, Uruguay and Chile. We have taken advantage of the unknown aspects of the finals by following their structure, but by providing our own draw which will produce a different path to the final each time you play the game.

It's worth mentioning here that the FA have informed us of changes in the finals that have been written into the game. The preliminary part of the final tournament will be six leagues of four with the top two from each league, and the best four losers, going forward into a 16 team knockout competition. Another important change is that only twenty players will be allowed for each squad but all these players, injuries permitting, will be available for the match. Eleven players will of course take the field, but the two substitutions will be allowed from all remaining nine players, not just five named players as in the past. These changes have been introduced into the "Finals" tape.

Since Alf Ramsey proved the importance of intelligent management in international football, we have, as England manager, had a sequence of successful club managers who have failed to make the grade at international level. There is of course a much more severe demand on the international manager to judge the exact abilities of players and how those abilities will blend to form a successful team. At club level a manger has the opportunity to work with his players six days a week a season and can slowly build up the teamwork so necessary for success. At international level, he will get his players together for perhaps three days befoe a match a dozen times a season. There just isn't the opportunity to FORCE a blend into the side, a successful blend must be visualised by the manager based on his reading of the individual player abilities. It takes judgement and imagination to firstly choose a team, and then an accurate assessment of players and the effectiveness of combinations of players during the match.

In MEXICO 86 we have tried to simulate these requirements. You're looking for a good blend of in-form players; the problem for you as manager, is to QUICKLY determine the form of the players, and as you experiment with your team to constantly keep in mind the blend of abilities of your team selections. Dropping an out of form player from your team will often mean, not just providing a direct replacement, but rearranging the team because the abilities of your replacement player do not match those of the dropped one. A couple of key injuries which force you to replace players can literally send you "back to the drawing board".

MEXICO 86 is a game that simulates international football management, in the setting of the 1986 World Cup. It's a game in which we have tried to combine the fun and pleasure associated with the game of football and with its most important competition, while simultaneously providing a real challenge to your knowledge of the game. You will find a wide (60 in all) variety of "levels" to supply the particular combination that suits you. So find the right combination for you and GOOD LUCK!

### **Setting The Scene**

It's the 22nd of February 1984, and in one week the England team is to visit Paris to play France. England will not be playing in the European Nations Cup this summer, having lost out to Denmark in the qualifiers that have just finished. We have seen a succession of mediocre performances from the England team over several seasons now and once again we will watch a major international competition without any home international team interest. English football is at its lowest ebb.

But there's hope! The current England manager has resigned and YOU have been chosen to lead England into the World Cup qualifiers that will begin this Autumn.

You now have to put together some sort of team to take on France in Paris. No-one will blame you if you scrap the entire squad and begin from scratch with your own choices, your own ideas...at least for the moment they won't. However if you fail to take England to the World Cup finals with your own squad and ideas then you'll quickly find how easily the press and public will allocate blame.

This summer will give you a real opportunity to give your ideas a real trial with a match at Wembley against the USSR followed by a trip to South America to play Brazil, Uruguay and Chile within the space of one week. It will be up to you to put together the beginnings of a World-beating squad during these friendlies, because from now on the pressure is on with the World Cup qualifiers beginning.

You haven't been given a difficult qualification group, and the top two teams will qualify for the finals but in a 5 team League, with only 8 matches to play, you cannot afford to slip up too often. And yet you will need to experiment further if you're to take to Mexico a team which truly stands a chance of beating the best in the World.

Should you succeed in qualifying, and if you don't you're guaranteed of the boot, then you will need to take your best squad of 20 players to Mexico.

Eleven players never made a team, particularly when matches at the finals will sometimes be separated by only 2 days, and when the opposition will put out teams with formations varying from a 5 man-defence/sweeper formation to attacking 4-2-4 combinations. With 2 substitutes allowed from your remaining nine players then the possibility for effective tactical substitutions is enormous. So you will want 20 good players, not 11.

The draw for the "league of four" preliminaries has something of a Wimbledon style "fix" about it, with seeds and qualification group winners being distributed evenly throughout the groups. This means that as a winner of your qualifying group you will have an easier time than as the second place qualifier; a group being made up of a seed, a group winner, a second level qualifier and a minnow (Morocco, Canada, etc...if you're lucky). As a qualifier in second place you will have a seed and a group winner to content with, but as group winner, a seed and only a second level

qualifier. As the top two teams in this league will automatically qualify for the last 16, while the 3rd team will have to sit it out and see if it is a "best loser" it's an obvious advantage to have a less able team along with the seed as your main competition.

From here on it is NO MISTAKES AT ALL! From here on you have to win EVERYTHING. It may take extra time, it may even take a penalty shoot-out, but YOU MUST WIN! Failure to do so means you're out. From here on it's the last 16, the Quarter Finals, the semi Finals and the FINAL. ALL must be won if you're to become CHAMPIONS for 1986-1990.

### **The Remainder Of The Manual**

At this point it is worth commenting that the game can be played without ploughing your way through the rest of the manual. It is probably best to now get some idea of the program by playing the game, and merely to refer to the rest if you meet any particular difficulty. When you come to play the game at the higher levels it will benefit you to go through the remaining pages to obtain best results, but at this first time of reading the full twenty pages will become a little indigestible, for youngsters even intimidating, merely because describing in writing is often much more laborious than actually DOING what is needed. You will find the way the game is laid out is very much self explanatory in terms of the correct operations.

### **Insights Into The Game**

MEXICO 86 is the latest in a long line of soccer management simulations by QUALSOFT. We deliberately use the word "simulation", and we use the word in the way it is defined in any dictionary; in an attempt to imitate the decisions made by a manager in his efforts to produce a winning side. These decisions are obviously about players' skills, their form, and above all the effectiveness of particular combinations of players; the blend of players. The computer will respond to your decisions as manager in a manner owing much to "Artificial Intelligence" techniques, so that the progress of the game will follow the quality of your decision making; punishing bad decisions and rewarding good ones in the way it ought, in the performance of your team on the field of play.

MEXICO 86 is specifically about International soccer management, as against our other games of club management. There are two crucial differences between the two. The first different is in the contact that occurs between manager and players, which, in the case of the club manager is on a day-to-day basis, but for the International manager is very much along the lines of 3 days every two months or so. The second is in the players available to each manager; the club manager having to make the most of his limited choice allowed by his club finances, while the International manager has access, quite literally, to the best his country has to offer. The first is obviously a major disadvantage for the International manager but the second definitely an advantage.

These two differences totally change the actual decisions the two managers have to make. Howard Kendal, following Everton's success this last season, surprised many journalists and media gurus (who shall remain unnamed) by pointing out that his team had not suddenly sprung to prominence in 1984/85 but that this season was the culmination of a building process which began four years earlier. Owners of our SOCCER SUPREMO and DIVISION ONE 85 games will recognise this long-term building process that is necessary to achieve success. Although International sides are not built overnight they are built over 20 or so matches rather than the 200 in four seasons of club football. Weaknesses in the side are more often cured by turning to alternative players rather than prolonged patience with players who can slowly have their rough edges smoothed.

Indeed the International manager is very much dependant on his club colleagues to mature the younger players and prepare them for International honours. His skill is then to recognise the potential of these players and how they can fit into his plans to produce a successful team, and introduce them into the team to help their transition from good club players to Internationals.

Having access to the best players in the country is the saving grace for the International manager, but it's also a trap that many managers easily fall into. Introducing a player because he is showing good club form without any thought as to how he will fit into the team is probably the commonest mistake of the past decade of English football, and responsible for the lack of cohesion that has plagued English teams. Producing an International side that displays teamwork is the greatest problem for the International manager and the commonest form of failure.

This leads us to the essence of MEXICO 86, producing a good blend of in-form players. The two operative terms are "good blend" which refers to a blend that can lead to a group of players that can transcend their individual qualities and produce "teamwork" and "in-form" which expects the manager to recognise players that are not only good Internationals but are on the top of their form.

For blend, you are given complete control over the players you choose, their skills and best positions, but the computer will investigate your combinations of players and create appropriate weaknesses if you fail to match those players intelligently. There are many successful blends of players but there are even more combinations which will lead to nothing more than a ragbag of individuals.

As for form, the computer will allocate form on a controlled basis to the players but in a different way each time you play the game, and the problem that you face is to find the in-form players by experimentation in the qualifying stages. You must use the five friendly matches and the easier of the qualification group matches to determine which players are playing to their potential. The last thing you want is to be experimenting during the finals themselves.

### **The Football Matches**

We have discussed the essence of MEXICO 86 as developing a good blend of in-form players. This is, of course, only the starting point on the way to winning the World Cup as there will be a number of other such teams equally keen to take the coveted title. As a manager you will have to go a little further than a good team to come away with the Jules Rimet trophy. So how do you go about achieving your goal.

The purpose of your managerial decision making is to win football matches, so what better way to determine the success or failure of your decisions than to have the results determined in the form of a football match? No, you needn't get out your boots, because MEXICO 86 will in fact actually simulate the matches for you. By that we don't mean the computer will calculate a result and throw up some pre-programmed graphics to correspond, but actually play out a football match with all the unpredictability and skill weighting of the real game.

A football match is a logical sequence of events but where the outcome of any one event is unpredictable (the outcome of a tackle for example). However the event that follows it is logical (a pass, or an attempt to run the ball forward by the team in possession) but the outcome of that is again unpredictable (is the pass successful, is it intercepted, etc.). And the whole football match is a sequence of these events, each event in itself unpredictable in its outcome, but having been decided the next event is known. Although we have referred to the outcome as "unpredictable" it is, of course, weighted according to the skills of the players involved in that particular event; like a loaded dice. And so the result of the football match will be a combination of the unpredictable superimposed on the tendency for the superior skills to succeed.

This sequence of unpredictable but biased events can be simulated on a computer and the resulting effect will simulate the football match. By tying the "bias" element to the appropriate skills of the two teams, appropriate to the event taking place, then the result of the simulated football match will reflect the various skills of the two teams, with that all important unpredictable element giving the game realism. It is important, of course, that the right balance of form (combined skills) and the unexpected is achieved. After 2 years of simulated football matches, we believe that we have achieved that balance.

If all that sounds very complicated then don't worry, please just accept that the football matches you will see in MEXICO 86 are reasonably accurate simulations of the real thing.

We've talked about the "appropriate bias" which affects the outcome of an event and that this corresponds to a skill of the teams. For the purposes of the simulation we have split up the skills of the team into five areas which also correspond to areas of the field. There is the purely defensive skill of preventing attempts on goal, which means in the end preventing goals. This is obviously associated with the abilities of the team in and around the penalty area. This will mainly be determined by the skills of the goalkeeper and the back four, with a little bit of help from midfield and attack. There is the skill which links defence and midfield which has the dual purpose of preventing opposition attacks being mounted by dispossessing the opposition attack of the ball, and of moving the ball out of defence when you have achieved that dispossession. This involves the back four and the midfield players. There is the skill of winning and retaining the ball in midfield, obviously mainly the job of the midfield, but again with a bit of help from attack and defence.

Then there is the skill of translating midfield possession into attacking possession, the skill provided by midfield and attack (notice this is the opposite of the second skill we mentioned and it is these two skills that will be involved in the outcome of an attempt by a team to move into attack). Finally there is the skill of creating attempts on goal from attacking possession, the skill provided by the strikers with some help from midfield and a little from defence. Five skills of possession and territory which is what all football games (whatever the shape of the ball) are about.

It is obviously possible to change the overall level of these skills and therefore improve the team, but also possible to change the balance of the skills and therefore produce different "styles" of team play. In MEXICO 86 you will be told of the ability of the opposition (not as numbers but as description) and also the "formation" of the side. The ability refers to the overall strength of the side and the "formation" to the balance of skills.

Your own team skills will be calculated by the computer from a combination of the individual skills of the players you select and the blend of players. The second part of this can vary in severity depending on your choice of "dimensional blend" which you choose at the beginning of the game (described later in the manual). The higher the level of sophistication the more severe the computer will be in down-grading your strengths as a result of any poor balance in the side. As the resulting football match with its "biased" event outcome will be determined by the relative skills of the two sides, then your own choice of blend will preferably be a reaction to the description of the opposition. Which is a fancy way of saying that you pick a side to defeat the opposition as described by "strength" and "formation".

Now all we have to do is show you the match, with three things in mind. The result of the match has to be determined. You will need to be shown how your team performs so that you will be able to decide on the strengths and weaknesses of your team in order that you can improve it. You will also reasonably expect to be able to "interfere" with the progress of the match with tactical substitutions or simply by moving players around to alter the balance of your team. It would also be a bonus if the match is entertaining and can generate a little of the excitement of the real thing.

In MEXICO 86 we have taken some of the precious memory of your computer to produce a reasonable graphics representation of a football pitch with 22 players moving the ball around corresponding to the simulated game taking place within the computer. If the above description of how the simulated match actually works was confusing then I hope it will fall into place as you see the football actually displayed. By watching the play you will be able to see how well your team is performing in the five skills we have described as your team wins and loses possession of the ball in different areas of the pitch, and you will certainly be left in no doubt, by sound and sight, when goals are scored. The score and time left to play in any one half is constantly displayed, including extra time (in the knockout part of the finals) and even the

penalty shootouts are recognisable as such, if you come to such a climax. During the game, hitting S key will cause the referee to stop play, admittedly all in his own good time, to allow you to make any substitutions you may think needed. By hitting the T (for Tactics) you will be allowed to move players backwards or forwards as often as you wish, and as many players as you wish (you can move them back again if it doesn't work out, or more likely if it DOES work out).

And what's more we think it's fun.

Following the game you will be given an accurate assessment of each individual's performance during the match. So from the match you will see the effectiveness of the blend you've created and the assessment will complete the picture.

### **Tactics And Strategy**

The football match will thus give you a good insight into the state of your team and what is likely to be necessary to improve it. Early on in the qualifying stages then there will, more than likely, be a number of problems to solve, although it is worth taking one problem at a time. You can then introduce extra players when you believe that certain players are not playing up to their potential. Following a match, you will first be shown the details of the next match and the descriptions of the opposition, and then shown a screen which contains all the descriptions of the opposition, and then shown a screen which contains all the players you have used up to that point. You can now add whatever players you need before moving on to your squad selection. You can use up to a maximum of 36 players, and just 16 players are already chosen. There is nothing sacred about these players, send them back to Italy (or Liverpool) if you choose, but they have been chosen to save you the long-winded process of defining your first sixteen players all at once. A description of these players is given which will inform you, in a round-about way, of how they have been defined to the computer (for its blend calculations). This leaves you 20 players which you can name and define for yourself.

After each game you will probably wish to try out two or three new players in the next match, even if only on the substitutes' bench, until you're happy with the team. Assuming you qualify, remember that you will need 20 players for your final squad, so having eleven good players isn't really enough especially if you have chosen to have the injury feature included. But even without that feature you will meet teams with team formations that vary from 5-3-2, referred to as the "sweeper" formation, to an attacking 4-2-4.

It usually pays to pick different formation teams to oppose such wide variations in style. It's also very useful to have good substitutes available in all positions in case you need to force the match your way. So don't stop experimenting when you have eleven good players, start looking for good backup players.

We've mentioned in the FOOTBALL MATCH section that it is possible to make both substitutions and also to move players around. This isn't just a cosmetic feature, pushing players forward when you're in need of a goal, dropping them back when you want to hang on to a lead or achieve a draw, can work. The computer will recalculate your balance when you do this. If you're a goal down then there's everything to be gained and little to be lost by pushing players forward, despite weakening your defence. Substitutions of course can produce even greater changes in formation and therefore style, substituting a striker for a midfield player with an original 4-3-3 formation will produce a genuine 4-2-4 formation. If you're playing with the "short term form variation" feature and you notice that a particular section of your team is not playing up to expectation then the judicious use of a substitution can rectify that.

In your original choice of team you can put together literally any combination of players that you wish, and with two substitutes from 5 (from 9 in the finals) and as many player movements as you wish, then the number of combinations, and change of combinations, possible is enormous. It pays not to be too outrageous with unusual formations, the 4-4-2, 4-3-3 and 4-2-4 formations, as in the real game, tend to be good starting points. There isn't a lot of room for error in a World Cup competition, you will need the five friendlies to put together a

reasonably good side, and can afford no more than a couple of failures in the qualifying games, and you'll still want to experiment with players during those when you can. By the finals you need to be reasonably sure of the players you will want to use. You're the England manager now, you can't play around.

### **Operating Instructions**

The game has been designed to make the actual operation fairly straight forward. In the main the computer will ask you for instructions in a way which makes it obvious how to give them. The skill of the game is in your decision making, not in your ability to operate the keys. But this section should clear up any problems you may find.

### **Qualifiers**

**Level of Play:** There are five levels of play and their names make it obvious which is the most difficult etc. Level 2 is the "correct" level, the difficulty around which the entire game has been designed. The level of play will determine the overall skill levels of the teams that you play, allowing younger players to have a chance of not only managing the England team but of winning the World Cup. The level of play does not affect the sophistication of the decision making.

**Dimensions:** The computer will interrogate your team selections with a severity set by your choice of dimension. If you choose dimension 1 then the computer will concern itself with your choice purely on the basis of defence, midfield and attack. This is in effect the formation you choose to play. It is not necessary to state your formation as the computer will calculate this from the players you select. Dimension 2 will cause the computer to analyse your selection, not only as above, but also from a left, centre and right point of view. An obvious example: if you fail to play a natural left back then the computer will generate a "weakness" in your defence which could affect the result of a match. The computer will look for balance ACROSS the field as well as ALONG it. Dimension 3 will take into account the individual dominant skills of the players and combine them to judge the balance or blend of your team from a skill point of view. As an example, three goal SCORING strikers will not be as effective as two goal scorers and one goal MAKER. Players able to score without players able to generate chances are going to have problems. In dimension 3 this sort of analysis will take place on your team.

**Injuries:** Injuries can really throw out your strategy very badly, particularly as you try to build up your squad and haven't yet determined natural, in-form replacements. You can choose to omit them, and we advise that you do until you have come to terms with the game.

**Short term form changes:** Even in-form players can have "off days" and by choosing to allow short term changes then two problems arise. The first, that your most skilful players will sometimes let you down, and secondly that your assessment of players can be a little confused if you are too quick to judge. But as you only have a relatively small number of matches on which to base them then your judgements may be suspect. Best to leave this feature until last when you know all about the game.

**With all features chosen:** 3 dimensions, injuries and form variations then decision making becomes head spinning at times.

**Choosing players:** The game starts off with 16 players whom you will recognise as regular English Internationals. You can add up to 20 more players of your own. You will be asked to define them; first their surnames, then initials, then their 1 dimensional position (Goal, Def, Mid, Att). If you go for 2 dimensions then you will be asked for their optimum L/C/R position, and in the third dimension skill characteristics. Surnames should not exceed ten letters; in fact the player will be known to the computer by his initials for ease of team selection later on (Who wants to type in the whole name each time?). This does mean that players with the same initials will not be accepted. The most obvious example of this is Terry Fenwick and Trevor Francis, both TF as far as the computer is concerned. If you try to enter a player whose initials correspond to

a player already chosen then you will be told so. I just change the initial of the new player either to a nickname or just to A. When selecting your team you can always access your players so any loss of memory on a substituted initial can be remedied by looking at the screen of selected players.

**Team selection:** Although numbers from 1 to 16 are used on the team sheet the only rule you HAVE to follow is that 1 to 11 take the field and 12 to 16 are the five substitutes. The use of numbers is your own. If you like Ray Wilkins with No. 4 on his back and Terry Butcher with 6 then go ahead. If you prefer 4 and 5 to be Centre Backs then fine. If you choose 1 goalkeeper, 4 defenders, 3 midfield players and 3 strikers, then the computer will assume a 4-3-3 formation REGARDLESS of your numbering system. It will help you however if you use a sensible system. Incidentally, don't try two (11 perhaps) goalkeepers as the ultimate defensive ploy as the computer will accept only the first and play the other as an outfield player, and not a very good outfield player at that.

You will find that by hitting the key P then you can display all players available at that time, even then adding players if you wish (and haven't used your 36 maximum selections). You can in fact jump back and forth between the teamsheet and your total player selections as often as you wish to help your memory out. With over thirty players it is often very necessary.

**Sound and Colour Selection:** During the football matches, there are sound effects which may get on someone's nerves. Before each match you can turn the sound on or off as you wish.

Colour may seem a peculiar choice, but we have found that the best colour for text on the graphics screen does depend on whether you are using a TV set or a monitor. With a TV set we find that white is more easily read than if we use colour because of the fuzzyness, of red in particular, whereas with a monitor, because of the relatively pale, bright green then white is not easily read. We suggest that you try white and colour on your system and then stick to the one you prefer. It is not necessary to keep choosing it, having set it to one or the other it will remain there unless you choose to change. The default value will be white.

**Tactics and Substitutes:** During the match then changes can be made to your team should you think the way the game is going demands it. By pressing the T key the game will freeze and you can move as many players around as you wish. You will be asked to define the player by his number (hence the advantage in using a sensible numbering system) and then move him (F)orward or (B)ack. Doing this once will move a player by half a position. Thus a midfield player moved forward will be positioned halfway between the midfield and the attack. Move him forward twice and he becomes an attacker.

Any player moved can be returned and there is no limitation to the number of such moves, but keep track or you won't know where you are. A defensive player cannot be moved back (he can but nothing will happen, as is true of the goalkeeper) or an attacking player forward.

Two substitutions are allowed and you have five substitutes on the bench in the qualifiers. Just press S, wait 'til the ref. responds, and then define the player to come off (by number) and the one to go on, again by number. You will find that you cannot substitute a player twice or move around a player who has been taken off, but of course you can move around the player who has gone onto the field.

**Save Game for Finals:** If you successfully qualify for the finals by coming in the first two places in your qualification group, then a prompt is given instructing you to place a blank cassette in your recorder. This is to record the details of your players, choice of levels, etc, and to pass the information on to the FINALS program. Place the tape in the recorder, set it in record mode and run a few seconds to take it off the leader tape then press <RETURN> to record that information.

That just about wraps up the details on operation of the Qualifiers, there are some slight changes in the Finals because of the 2 from 9 substitution rule.

## **Finals**

LOADing the SAVEd game: After loading the FINALS program tape the first prompt will be to load in the information that you saved on the blank tape on qualifying. *If you haven't qualified, load in the qualification tape and play the game as it's intended to be played!*

Finals Squad: In the finals you are only allowed 20 players and you must choose from the players that you used during the qualifiers. Each player is given a Squad Number and from here on they will be referred to either by their initials or by their squad number. The initials are in fact used only in your team selection. On completing your selection all other players will be eliminated from this particular game. The "squad of 20" screen thus created can be used as the "players selected" screen in the qualifiers; you will be able to jump back and forth between this screen and the team-sheet screen to aid your memory.

Team Sheet: All twenty players are available for your matches, but you must define the eleven players that take the field at the start. The team sheet therefore only shows these eleven players. Injured players cannot be used in the team nor put on as substitutes, although you can put their names on the team sheet. The computer will not allow you to continue to the match itself, if you have injured players in your chosen eleven. Again, pressing P from the team-sheet screen will take you to your squad of 20 list.

Substitutions: The game operates as the qualifiers from here on, the one difference being that players are referred to by their squad numbers. To remove a player from the field his squad number must be used, and the substitute also by his. The same is true of tactical movement of players.

## **Players**

Sixteen players have been introduced into the game to save you the laborious task of inputting so many names and descriptions for the first match. They are probably all players you would wish to try out at some time. You have the opportunity to use a further 20 players of your own choosing. A brief description has been given to help you use the players correctly in the game.

Peter Shilton: Peter has been around the England squad for many years now playing second fiddle to Ray Clemence for some time. However he is now one of the few England players who is pencilled into the team without thought.

Gary Stevens: Recently drafted in at right back following Everton's runaway success this season. An aggressive, no-nonsense player that will always give everything. But has he the experience to handle the world's best strikers?

Kenny Sansom: Kenny fills one of the difficult positions for the England manager; the left back position. Reliable, cool and experienced, but definitely lacks height which makes him vulnerable to high balls.

Mark Wright: Has emerged for the moment as one of England's central defenders but there are other pretenders to his position. Has the aerial power to deal with those teams with tall strikers, but suspect on the ground.

Terry Butcher: Another central defender with great strength in the air but a little suspect on the ground. Has the experience perhaps to overcome that flaw, especially with no obvious replacement around.

Ray Wilkins: A play maker of the highest calibre when he isn't in one of his more negative moods. Played very much on the right side before moving to Italy, but now seems to operate more loosely as a forward sweeper (Libero?).

Bryan Robson: For some time the English captain, a player with tremendous determination. A fighter rather than a natural ball player. Showed some fatigue in England's recent trip to S. America. A long club season, the heat, thin air?

Trevor Steven: Another Everton Player that has forced his way into the England squad this season. Seems to prefer the left, a runner with the ball rather than a skilled passer, fights tenaciously like most of the Everton team.

Trevor Francis: Potentially one of England's world class players with the pace to take on any defender. Likes to run onto the ball particularly from the right. On form he can be a match winner, but how often is he on form?

Mark Hateley: Young, aggressive, what is thought of as the typical English striker. His time in Italy seems to have sharpened him and has a good scoring record in his short career. Loves to be in the box mixing it.

John Barnes: For some he can do no wrong since his brilliant goal against Brazil, but hasn't shown consistent form since. Plays mainly on the left where he tends to create goals rather than score them.

Gary Bailey: Three years ago was considered the natural successor to Peter Shilton but hasn't matured as rapidly as he might. Has usually turned in a good performance though when he has replaced Shilton.

Viv Anderson: The right back position has been an unsettled one since Phil Neal lost some of his pace. Viv has played as often as anyone in that position, maybe he's the player for Mexico.

Glenn Hoddle: The most argued about footballer in the British game. Can be the most brilliant playmaker if he's allowed his head and the run of the midfield, but can you allow that? The pace of Mexico may just suit his style.

Chris Waddle: Left sided striker from the not-so-fashionable North East. Could be the player to lend width to the England attack, where he'll be expected to feed the likes of Hateley.

Gary Lineker: A prolific goal scorer for a not-so-successful club, not an easy thing to be. Little experience and it's dangerous to read too much into matches against teams like the USA, but could be the goal scorer England need.

### **Publisher's Comments**

When we published our first soccer management simulation LEAGUE DIVISION ONE in 1983 I would never have believed that MEXICO 86 was a game that could be put, as a tape game, onto the current 8-bit home computers. We've come a long, long way since that first game. I'm particularly pleased by the way in which the game has been made accessible to such a wide audience, by which I mean such a wide age range. The fixed sophistication of our original games, along with the limited graphics meant that most youngsters below 12 or so were excluded from enjoying the game. This, despite the fact that these youngsters are the most enthusiastic of football fans. By the inclusion, in MEXICO 86, of five levels of play and 12 "depths of sophistication", the game can now quite happily be played by the average 8-year old with a reasonable chance of success, while still providing the severest test of understanding of what makes the game tick for the most sophisticated adult. Add to this, not only "fun" graphics, but graphics which recognisably represent a football match, and we are very pleased to offer this program to our own rapidly growing fan club.

QUAL-SOFT have always offered their games by "Direct Sale", which is not strictly Mail Order as some would have, but actually means buying direct from the manufacturer. Customers come up with many questions about our games as they try to solve the problems posed. No dealer, and certainly no High Street multiple wants to be pestered with queries about the games they sell. But we have had many a fascinating chat with our customers about the games and we sincerely hope that MEXICO 86 will generate as much controversy as our club games to even greater

heights. So, please, send us your letters and make your telephone calls; you will get an enthusiastic audience for your views.

Just a point about tape loading. We use the best tapes (AGFA and BASF) and carry out our own quality control checks. There are two recordings of each tape in our package. But nothing anyone can do can avoid the occasional loading problems, particularly considering the range of recorders used, many totally unsuitable for computer use despite what the salesman told you. If you are one of the unlucky ones that receives a bad tape (about 1 in 2000) then please bear with us; we will do our best to supply you with one suitable for your recorder.

**Instructions' Source** : MEXICO '86 (Quadsoft) Booklet

### **Review (Electron User)**

Having played a variety of football management simulations, I eagerly loaded the first of these twin cassettes, which deals with the qualifying stages. Actually it also includes a couple of European friendlies and the South American tour, which give ample opportunity to review your strengths and weaknesses. It also gave me the ideal opportunity to do the same to Qualsoft's program.

In some respects I was a little disappointed, for I began at the easiest skill level where the results seemed just too random and often incredible.

The sound effects are not particularly exciting, but these can be turned off. The most disappointing aspect was that when I actually managed to reach the final where England beat Italy, there wasn't a cup in sight - merely a one word message of congratulations!

The graphics, however, do give the impression of a football match, with 22 little match men rushing up and down the pitch with great effort although poor skill. This is, naturally, computer-controlled so you can just watch the action for a minute or so.

At the higher skill levels the whole idea becomes far more interesting with the players' strengths and weaknesses taken into far greater account. Great skill is needed, as I found it very easy to lose many a critical game.

However, when the England team does eventually qualify it is necessary to save the data on to a blank cassette, which can then be reloaded into the second part, that dealing with the finals in Mexico.

Once there, a squad of 20 is selected from the players used so far. Yes, there is an option to add extra players, so you too can play for your country! The stages here are really very authentic, but when you've won the cup once I would strongly suggest that you try at a more competitive level in order to capture the real challenge the program offers.

Sadly, although the qualifying cassette can obviously be reused, there is no save facility elsewhere, and the whole program is a bit monotonous at one sitting. Still, it is a credit to Qualsoft to see just how complex an idea can be programmed into the Electron.

# MICRO FRENCH

***Professional, Originally Released On Cassette Only***

Game Type : Foreign Language Utility  
Author : Genevieve Greville  
Standalone Release(s) : 1986: MICRO FRENCH, LCL, Price Unknown  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128 (After \*CONVERT)  
Supplier : LCL. No further information available.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Introduction

*MICRO FRENCH is a complete course of 24 programs taking beginners up to GCSE or O Level in French. It covers both spoken and written French and prepares students for the oral and written exam, as the programs include real speech. In common with the new GCSE exam, it emphasises practical French using passages from newspapers and signs found in France.*

*It is written by a team of French teachers and educational programmers headed by Genevieve Greville (an honours graduate) and Francois Aubry and a team of graphic designers headed by Roger Burg.*

*The course covers spoken French vocabulary, verbs and grammar. The verbs and grammar programs are serious and intense with sophisticated error handling, and these are alternated with vocabulary and spoken French programs which are taught by games (including a graphics adventure game), puzzlers and pictures. The programs are usually on two disks or tapes called MICRO FRENCH 1 and MICRO FRENCH 2, and come with a voice tape, a manual and a book of exam papers to test yourself after you have completed the course. The subjects covered are:*

* Pronunciation	* 'Tour de France' graphics
* Colours	adventure game
* Articles	* Oral exam
* -er verbs	* Commands
* Wordsearch in French	* Adjectives
* -ir verbs	* Future tense
* Face vocabulary, learning	* Dictation
by pictures	* Perfect tense
* -re verbs	* Imperfect tense
* Signs and notices found	* Opposites
in France	* Comprehension test from a
* -oir verbs	French newspaper with
* Plurals	questions in English
* Time, as required by the	* Direct object pronouns
oral exam [*]	* Comprehension test from an
	exam paper with questions in
	French

Copyright (C) 1986 LCL.

LCL's 24 program courses (by software) are the original and only complete courses and contain an unlimited number of questions. Many thousands of students in Britain and all around the world have passed 'O' level, 'A' level or equivalent because of these courses, and, if you follow this course, the next one to pass could be you.

LCL MICRO FRENCH is a complete course of 24 programs taking beginners up to GCSE or O-level in French. It covers both spoken and written French and prepares students for the oral and written exams. It is designed to be used as a computer-assisted learning aid in school or colleges or as a self-tuition or revision course for students, holidaymakers or travellers.

You will require a normal (audio) cassette recorder for the voice tape in the Pronunciation, Oral exam and Dictation programs.

To move to a new program after you decide to finish with the one you are using, press the <ESCAPE> key. You may do this at any time during the program run. For the cassette version, this will cause the next program to load. For the disc version, this returns you to the menu.

## **Contents**

The course covers spoken French vocabulary, verbs and grammar. The verbs and grammar programs are serious and intense, and these are alternated with speech and vocabulary programs which are taught by games, puzzles and pictures. The programs are on two discs or tapes, called MICRO FRENCH 1 and MICRO FRENCH 2 and come with a Voice tape and a book of exam papers to test yourself after you have completed the course.

## **Error Handling**

MICRO FRENCH has quite sophisticated error handling to ensure you really learn from the programs. In all programs except Pronunciation, Word Search, Adventure Game and Oral exam, the following are used:

The first question of each screen is often done for you to show you what is required. If you still have no idea of the answer, just press <RETURN>. If you get the answer wrong (or have no idea) then you are told the correct answer. You must then answer that question again, the correct answer will disappear as soon as you start keying in.

If you getting it wrong, you can skip that question by pressing "?". Remember not to put any unnecessary spaces in your answers.

If you get any question wrong, even if you later corrected your answer, it will reappear in the next screen to double-check that you now understand. If you do not understand any answer, you can refer to the course notes by pressing "H" (for help) at the end of a screen.

Almost all the programs are different each time you use them, as the questions are chosen at random from data supplied.

The programs supplied are as follows:

### **MICRO FRENCH 1**

**Menu** - Press the <ESCAPE> key to skip the title page. When the menu is loaded, press A to L depending on the program you require.

**Pronunciation** - When this program is loaded, put side 1 of the Voice tape in a tape recorder and press Play on the recorder. When you hear the word 'la', press <RETURN>. Speak aloud the word you hear and see on the screen, starting with 'la'. When the Voice tape ends you will see words on the screen that you should say aloud. If you forget the pronunciation, press "?" for a hint.

**Colours** - Key in the colour of the shape drawn on the screen. If you do not have colour, the name of the colour in English is given at the lower right hand side of the screen. If you do have colour, it is best not to look at this, as the programs in MICRO FRENCH try to teach you to 'think in French' and not to translate word by word.

**Articles** - All nouns in French have a masculine or feminine gender. There are ways to help identify the gender of a noun and these are taught here. In addition to the error handling previously described, if you press "!" you will be given the meaning of the word.

**-Er verbs** - This covers regular and irregular -er verbs in the present tense.

**Word Search** - This is a word search type puzzle in French to teach you vocabulary in an enjoyable way. The words in the puzzle are first given with their meaning in English. They are all four-letter words. Press <RETURN> when the message is displayed then the puzzle is displayed. Look for those words in the puzzle. They can be displayed horizontally, vertically or diagonally. Type in the words you find and if you are right, the appropriate word in the puzzle will be underlined. When you would like a new puzzle, key in "ENCORE" <RETURN>.

**-Ir verbs** - This covers regular and irregular -ir verbs.

**Face Vocabulary** - A face is drawn on the screen and an arrow points to a part of it. You must key in the word in French for what the arrow is pointing to, such as 'the eye' in French.

**-Re verbs** - This covers regular and irregular -re verbs in the present tense.

**Signs and notices** - This shows the type of signs and notices you will meet in France and asks for the equivalent sign in English. If you think your translation was close enough then you can press "X" when the "Press C..." message is displayed to ensure your score is not unjustly low.

**-Oir verbs** - This covers -oir verbs in the present tense of which most are irregular.

**Plurals** - Key in plurals of the words shown.

**Time** - You are asked questions of the type you might meet in the oral exam, such as "What time do you get up?" in French and are given the answer required in numbers (like 7.30). You must key in the answer in words, using only those described in the course notes displayed.

## **MICRO FRENCH 2**

**Menu** - As before, pressing <ESCAPE> key will remove the title page.

**TOUR DE FRANCE Adventure Game** - This is a graphics, adventure game in French, based on the 'Tour de France' cycle race. You are represented by a yellow-shirted figure on a racing cycle positioned on a map of France. You can move North, South, East or West by keying in au nord, au sud, a(grave) l'est or a(grave) l'ouest after the appropriate question. Possible answers are given in yellow, in brackets, after the statements of questions. The aim of the game is to reach Paris. Your energy and money is shown. If you run out of energy, the game ends. You may run out of money and continue, but if you try to buy a drink and have no money, the waiter calls the police and the game ends. If someone gives you a glass of water or you win a prize, remember to say thank you. (Key in MERCI <RETURN>. A bell sound indicates you made a typing error.)

**Oral exam** - First you must fill in the form about yourself in English words or numbers, then press C. Then put side 2 of the Voice tape in your tape recorder and listen to the first question. Answer it by speaking aloud in French, then select the appropriate answer by pressing 1 to 4. You will then hear all the possible correct answers, depending on your personal details. Words that only you can supply are represented by a bell, the correct answer is 'Je m'appelle' followed by your name. This is displayed on the screen in full. The possible correct answers will not necessarily be in the same order as on the screen, as the program is designed to be different each time you use it, to prevent you cheating by remembering the position of the answer.

**Commands** - This teaches both commands and the simpler form of Future tense ('Je vais aller' type). This and all other verb programs are based on a game to make them more interesting. You are in a lift on the top floor of a department store, and on each floor there is a sign saying what must be done on that floor. You are telling someone what you, or someone else, will do on the next floor. Remember to look for the sign on the next floor (marked by the man in the lift).

**Adjectives** - Key in the noun and adjective together agreeing with each other.

**Future Tense** - This teaches the conventional future tense using the shop game described in the 'Commands' program.

**Dictation** - Place side 1 of the Voice tape in your tape recorder and play and then key in the word you hear. The spelling will depend on the context of the word, so a sentence is given on the screen with a dash to represent the word you hear.

**Perfect tense** - This teaches the perfect tense using the shop game described in the 'Commands' program. Remember to look for the sign on the previous floor above, not on your floor.

**Imperfect tense** - This teaches the imperfect tense using the shop game as above.

**Opposites** - Key in the opposite of the words shown.

**Comprehension test 1** - This involves reading an article from a French newspaper; this is in keeping with practical French as required by GCSE. The important words are given by the first few questions and the rest you must learn to guess from their context. This is an important skill that must be used in both comprehension tests. The questions are in English. You can 'turn the pages of the newspaper' by pressing "N" to go to the next page or "B" to go back to the previous page.

**Object pronouns** - This teaches you the correct order for direct object pronouns in both statements and positive and negative commands. You must put the words shown in the right order. The first word shown is already in the right place to help you, do not move this word. Do not put in any unnecessary spaces, especially after punctuation.

**Comprehension test 2** - This is a comprehension test taken from an exam paper, with the questions, this time, in French. As before, practise guessing the words from their context as any important words are given first. You can change pages, as before, by pressing "N" or "B".

## Dictionary For Words Not Translated On Screen

### Opposites

bas	low		maigre	thin
le bas	bottom		mauvais	bad
beaucoup	much		moitié	half
blanc	white		mort	dead
			mou	soft
chaud	hot		mouillé	wet
court	short		neuf	new
			noir	black
dedans	inside			
dehors	outside		ouvert	open
dernier	last

gaz	gas (m)			

### **Adventure Game (Important phrases)**

Où allez vous?	North/south, east/west
Au nord/sud, à l'est/l'ouest	You go into a cafe
Vous entrez dans un café	Do you want to refill your flask?
Voulez vous remplir votre bidon?	Yes/no
Oui/non	You have won a prize of 200 francs
Vous avez gagné un prix de 200 francs	
Quelqu'un vous donne un verre d'eau	Someone gives you a drink of water
Merci	Thank you

### **Oral Exam**

Bonjour	Hello
Monsieur	Sir
Madame	Madam
Comment vous appelez-vous?	What is your name?
Je m'appelle	I am called
J'appelle	I call
Quel âge avez-vous?	How old are you?
J'ai ? ans	I am ? years old
C'est une question indiscreete	That is an indiscreet question
Vous avez des frères et soeurs?	Have you any brothers or sisters?
Non, je n'en ai pas	No, I haven't any
Non, je suis enfant unique	No, I am an only child
Oui, j'en ai ?	Yes, I have ?
Oui, j'ai ? soeurs et ? frères	Yes, I have ? sisters and ? brothers
Quel est votre passe-temps favori?	What is your favourite hobby?
J'aime regarder la télévision	I like watching television
J'aime écouter des disques	I like listening to records
J'aime jouer au football	I like playing football
Je m'intéresse aux ordinateurs	I am interested in computers
Quel temps fait-il aujourd'hui?	What's the weather like today?
Il fait beau	It is fine
Il pleut	It is raining
Il fait froid	It is cold
Il fait très chaud	It is very hot
Quel temps a-t-il fait hier?	What was the weather like yesterday?
Hier, il a fait beau temps	Yesterday it was fine
Il a plu	It rained
Il a fait très chaud	It was hot
Bon. Merci	Good. Thank you
Au revoir, monsieur et merci	Goodbye, sir, and thanks

## Review (Electron User) - "Best Compilation Bargain"

MICRO POWER MAGIC is a compilation of ten previously released games on two cassettes.

STOCK CAR is a motor racing game for one or two players. Power your car round a choice of six circuits, dodge the computer controlled cars and oil slicks. A variable skid facility lets you slide the car around bends - very realistic.

FELIX MEETS THE EVIL WEEVILS is a ladders and levels game. The factory is infested with killer weevils and you must search the conveyors for the nasty beasts, zapping them with your aerosol. But watch out for the ball bearings on the conveyors! A fun game but lacking in colour.

ESCAPE FROM MOONBASE ALPHA was one of the first ever arcade adventure games. In its time it was a breakthrough but by today's standards it's a bit of a joke.

SWAG is a story of two hillbilly crooks. In the one or two player game, you run around the screen collecting diamonds, avoiding the security droids and police cars. SWAG is an updated version of the classic ZOMBIE.

Micro Power's CHESS is an excellent program. It plays a good game and is brimming with facilities.

BANDITS AT 3 O' CLOCK is a First World War dogfight game. Battle it out with a computerised Red Baron or one of your friends. The characters are simple and the animation jerky, but the game is still very playable.

GALACTIC COMMANDER gives you the opportunity to demonstrate your piloting abilities as you fly a lunar lander through a series of increasingly difficult missions. The game employs some very nice high resolution graphics but as they are drawn in magenta on a blue background they are virtually invisible. Apart from this the game is still very challenging.

ADVENTURE is a text only adventure game. Though not up to Level 9 standards it should still keep you off the streets for a few hours.

Of all the old Micro Power games, CYBERTRON MISSION is one of my authorities. Run through an alien-infested maze searching for treasure. It's a great rapid fire shoot 'em up game.

EUROPEAN CHALLENGE is an educational quiz. How did that get in here? Each round consists of forty multiple choice questions.

For less than 80 pence per program, this must be the bargain of the year!

Sound .....	6
Graphics .....	8
Playability .....	8
Value for money .....	10
Overall .....	8

## Review (EUG)

There aren't many compilations that can boast ten titles of which all ten are pretty classy. MICRO POWER MAGIC 2 is the exception. All of the games that are present on this second double-tape pack are extremely popular and were very well known when released individually. It is not uncommon to find second-hand Micro Power titles still labelled with prices of £5.99 to £7.99 so, at £7.95 for the ten, once upon a time this compilation offered superb value for money too.

The familiar created-on-screen grid of squares background, the little Micro Power logo and the stylish customised graphical title to each game are all there as they load in. And across each you can be assured of colourful graphics, a high standard of gameplay and even a fair amount of sound. The titles will probably come as no surprise.

The first one listed on the inlay is BUMBLE BEE, one of the Elk's variations on the "Pacman" theme - given a new lease of life by huge sprites and revolving walls to effect your escape from nasty pursuing spiders. It's a fast-executing little number with lots of nice features like an arcade-hall style high-score table like no other (Don't want to spoil the surprise!), quadsized text on the title screen, stylish presentation and pollen pods that flash to signal imminent danger. The play is good yet not very demanding, suitable for all ages from 4 up.

Next comes GAUNTLET, a merciless "Defender" clone with all the lovely features you'd expect, done in very high resolution Mode 4/1 (Yes, a mixed Mode feature - Very rare to see!). You patrol a landscape of wire-frame hills, preventing the green meanies from carrying lifeforms from the bottom to the top of the screen by shooting them, catching the lifeform and returning it safely to the ground. The game is a tough one, and one which continues to introduce harder and more impregnable Space Invaders indefinitely.

Then it's onto RUBBLE TROUBLE which contains one of the best pieces of music you're ever likely to hear your Electron jingling. On top of this, the game itself is a blockbuster; an overhead maze of pushing rocks at super-fast moving mutants in a post-apocalyptic maze which is addictive in the truest sense of the word. It's a

super-hard arcade challenge when Turboed! The graphics, again both multi-coloured and high quality, give the game a very professional feel. Shame about the drab options screen though.

THE MINE is the worst of the bunch. Basically this is REPTON without the scrolling and toting a short-range gun. Burrow about in the earth (viewed from the side), link your passage with that of where a monster is trapped then try and lure said baddie into weapon or falling rock range. Do this over and over without any real increase in difficulty.

Next, the "intellectual/arcade" classic FRENZY. For a game which, at one time, had a lot of hype, it hasn't aged too well. The idea, an "interesting" one, is to create rectangles by dividing an arena into ever smaller parts, and attempt to capture a bouncing string of pixels in one of them. Sadly, the winning method is easily mastered and it quickly gets rather repetitive, despite its ever-increasing levels of difficulty. It once hung on me when I reached a particularly high level and, although that was near ten years ago now, I have never forgiven it.

FELIX AND THE FRUIT MONSTERS is "Pacman" territory once again. Here, a "Pacman"-style maze is drawn but there are no pods to collect. Instead, three pieces of fruit float randomly around the maze and your job is to keep them from being eaten by the four monsters. Many of the sprites (also used in the best of the FELIX series, that IN THE FACTORY) are nicely designed but the game lacks any 'oomph' and the keys required leave something to be desired. That said, it's worth a few goes!

You're treated to a strange interlude in DANGER UXB, a maze game where you create the maze and can slide backwards and forwards along its 'walls' to reach timed bombs - and where you're under attack from stomping boots. Again, a nicely presented game with novel features such as a tune that only plays only note by note when you move but, because your scurrying about should be constant, chugs along at quite a pace!

SWOOP is the Micro Power contender to ARCADIAN'S crown, and is just as smooth-scrolling, fast and addictive. Typical Invaders stuff, you are charged with single-handedly blasting a plethora of aliens floating overhead to smithereens. The graphics are nice but they appear a bit 'cheesy' through lack of care and an unnecessary boring scroll routine.

Another Invaders romp is POSITRON, an early work from the celebrated Gary Partis. It's a rather randomised shoot-'em-up, where surviving is often a question of chance and one where you must remember to disconnect the Plus 1 (before loading) to progress beyond level nine.

The final game, KILLER GORILLA, is a "Donkey Kong" style platform and ladders game, displayed in all its colourful Mode 2 glory with some very clever coding. It has a limitation, which can actually be dispensed with creating a much improved gaming experience with the upgrade tape KILLA (from BIT TWIDDLERS), in that you cannot hold a weapon while climbing. This has the effect of forcing you to choose whether to waste lots of time smashing up barrels for no reason (until it disappears!) or whether to just jump over them to reach the captive girl in time. There are also only four levels and a very flickery rampage by the gorilla which makes the game feel quite dated.

You will also find a PLUS 1 JOYSTICK UTILITY on the tape, allowing all the MICRO POWER MAGIC 2 games to be joystick-controlled (apart from FRENZY). As the games were originally coded before joysticks were even available for the Electron (1983), the software company was to be complimented for this effort to make their software compatible later but really the games should have been recoded - and had routines embedded by their original authors. Loading this utility first is clumsy and is a "quick fix" solution that freezes out the keyboard.

In every other respect, the compilation gains a thumbs up. It's of an exceptionally high standard, is very nicely packaged/presented and will provide many hours of Electron gaming pleasure.

Dave Edwards, EUG #58

# MICROBALL

***Professional, Originally Released On Cassette Only***

Game Type : Arcade Pinball  
Author : Steve Evans  
Standalone Release(s) : 1986: MICROBALL, Alternative, £1.99  
Compilation Release(s) : 1990: SPORTS SPECTACULAR, Alternative, £7.95  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ALTERNATIVE, Units 3-6 Baileygate Industrial Estate,  
Pontefract, WEST YORKSHIRE WF8 2LN. Tel: 07977 79777  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"With all the features, speed and nerve shattering excitement of the original, this superb new arcade pinball game is destined to become an all-time great. Five balls per game."*

## Getting Started

Press P to start the game. Pressing P more than once will allow 2, 3 or 4 player games.

## Achieving Bonuses

Hitting various targets on the pintable will increase the bonus and hitting all five drop targets on the left of the table will advance the bonus multiplier. If the bonus multiplier is on '5x' and all five drop targets are hit, then an extra ball will be awarded. Other bonuses include:

Lighting A B C scores 5,000. The right flipper rotates the A B C lights.

Lighting A B C or hitting the centre drop targets advances the bonus.

Landing on a saucer trap advances the bonus, but if the bonus already stands at 20,000, then the bonus, including the multiplier, will be collected.

Lighting 100 causes the bumpers to score 100 instead of 10 when hit. Extra balls can be obtained at 250,000, 480,000 and 720,000.

Only one extra ball, per ball, is allowed. The ball is returned if it is lost without scoring.

## Playing Hints

Try to advance the bonus multiplier. 5x bonus is better than 1x. If you manage to advance the bonus to 20,000, go for the saucer traps to collect the bonus. Make good use of the rotating A B C lights.

Keys:

Left Flipper	-	SHIFT	Start Game	-	P
Right Flipper	-	COPY	Tilt	-	CTRL
Pull Plunger	-	SPACE	Reset Game	-	R

## Review (EUG)

Ever since the advent of home computers, there have been attempts to emulate the arcade hall pinball game on them. Although the prerequisites of flippers, ball, bonuses and (most important) gravity have been present in all of them, there are

many more elements that need to be studied carefully to perfect the experience. The games have something of a specialist audience (presumably pinball addicts who want to achieve the dizzy heights of the Elton John song) and just one rebound inconsistent with reality will send them back to the real thing howling with disbelief at the programmer's incompetence, as was the case with at least two Amiga titles. These had dazzling graphics but corners which ricocheted the ball at an angle of 90 degrees!

But to disprove the adage "size matters", the acclaimed MICROBALL from Alternative Software is not cursed with any bug in its grasp of the law of physics. This budget title (which originally retailed for just £1.99) has few competitors and can confidently claim to be the best of the BBC bunch. It's a smooth and perfectly timed machine code extravaganza, nicely presented on screen, has some fantastic sound effects and a dazzling display of real and virtual Mode 2 colours.

After loading (about three minutes from tape), a fully functional pinball table, complete with three vibrating buzzers, eight drop targets and a lightable A-B-C bonus temptingly jangles away on the right, while simulated rotating LCD displays flick between the current scores for four players (which are 000000 when you begin) and the highest scores so far for the four (likewise 250000) in big displays on the left. Below these are similar big graphics showing the number of the current ball (each player has five) and a reminder of the scores you must achieve to obtain an extra ball.

Pleasingly, the gap between the flippers at the bottom of the pinball table is not of a woefully big size; just six pixels wider than the ball. Also, the compartments on each side of the flippers where the ball will be lost if it bounces into them are quite well protected and even contain bonuses. So, even though you may be unlucky enough to lose the sphere into onto of them, you will gain 2,000 points as a little compensation.

To begin the game, you press P a number of times equivalent to the number of players in an orderly queue behind your machine. The LCD scores on the left disappear and reappear accordingly, "Ball 1" is displayed and the ball sprite appears in the plunger on the extreme right of the table. You power the plunger by pressing and holding space for as long as you desire; this action brings about quite an atmospheric string of notes that really let you know you're in for something special.

As for what happens when you release the ball, it's certainly not dull! The speed of the game is such that the machine is practically "zip"ing, "bonk!"ing (well, a low monotonous note), "vibrating" (a great sound effect that comes about on contact with the buzzers), "tick-tock"-ing as it clocks up points or "beep"ing as targets are hit. With the little Electron, the game is probably one of the best available that manage to make great use of the limited sound - and it gives the experience a real lift. A flaw is that unfortunately it cannot be turned off.

While I am no pinball wizard, with the combination of luck and skill similarly required at a real table, I managed to wipe out successive drop targets, which appear on a board on the left of the table as five little yellow rectangles which disappear when hit, until the Bonus Multiplier hit "\* 5". This gives not only an extra ball but also a feast of special graphic and sound displays. As with the real game though, it is sometimes a matter of pure chance whether or not you will achieve a high score. On subsequent games I wasn't even fortunate to get the Bonus Multiplier to the first stage ("\* 2")!

Great as the arcade quality feel of the game is, there is a bug in there. You may choose up to four players by pressing the P key when prompted to play. However, the option is not disabled whenever a ball is lost and play once again ceases until the pull the plunger to release the subsequent one. Therefore, you may choose a one player game, lose a ball and hit "P" instead of RETURN for the next one - this is not such a silly mistake to make either! Whereupon player two lights up on ball one and you must continue to play (as this player) before you come to the same situation again. If you do hit the right key this time (i.e. RETURN, not "P"), you will

unfortunately see player one's score reset to 000000, losing all of your well-earned points from the previous ball!

It's not a big deal considering if you remember to press RETURN and not "P", it never rears its head, but it is there and it does spoil what is otherwise an error-trapped environment.

MICROBALL was, and still is, a highly recommended pinball simulator with great graphics, fantastic sound and addictive gameplay. Despite the high luck element involved in a game, it doesn't have a high frustration factor, which is no mean feat. The only quibble you will have is the bugged "P" key routine and also, that if you are fortunate enough to be a pinball wizard used to all-singing, all-dancing numbers, you may find it repetitive after a while. A bizarre final point is that I tend to find this game more playable if I stand before the machine to play it. Now who's a perfectionist...?

## Review (EUG)

Towards the end of the Eighties, Tynesoft, like many 'big' software houses, repackaged and rereleased many of its earlier full priced games as compilations. Volume 1 of its FOUR GREAT GAMES series is from a set of three entitled MICROVALUE; each volume packaged in a twin cassette box and costing £3.99.

All the programs contained on each compilation are natty arcade machine code affairs. Considering some of them retailed at up to £7.95 each before, Tynesoft rightly emphasise that you now get WET ZONE, ALPHATRON, RIG ATTACK and VINDALOO for less than a pound each!

Getting stuck in then, WET ZONE really is a spaceship extravaganza like no other invaders-type jaunt. You fall from the top of the screen and before you've even made it to the bottom, are attacked by 'images of childhood in Graemsay'. Whoaboy, is this game hard!

The 'images' are things like submarines, umbrellas and snow flakes that whirlpool down upon you from left to right, firing bullets into the bargain, at the 20 degrees diagonal. This makes them both very hard to blast and to avoid - as by the time bullets reach where the lifeforms were when fired, they've already moved further down!

On hitting them, your bullets take time out to 'ripple' and, as only two bullets/ripples are permitted on screen at once, prepare for frustrating deaths while waiting to be able to fire again. Also, as the 'images' reach the right, they appear again on the left so it's not uncommon to be surrounded by bullets AND avenging aliens.

WET ZONE is pure hardened arcade addicts' action with great sound and swift gameplay. The sprites, done in Mode 4, aren't all that brilliant but there is a funky tune between games to make up for them.

In ALPHATRON, you pilot a Scout Ship assigned to protect a Refinery from missile attacks. The action is viewed from the side and you begin on a launch pad, blasting off when a missile appears screen-left. Cruising off the right in pursuit of the missile, note that there are another four separate screens in which to take care of

it, with the refinery on the far right of the last. A nice backdrop of cyan sky and red hills doesn't distract from this 'action', such as it is, and a radar of the five screens in the bottom left displays both hills, your position and that of any missile. With the title at the top of the Mode 5 screen and a fuel gauge, high score, your score and lives all displayed lower, ALPHATRON is graphically impressive.

Although the instructions note your ship is equipped with a laser, firing is more bullet-like and takes a time to reach the missile. To destroy one, you need to blast off, follow it onto the next screen, aim and fire. You miss more often than you imagine as IF the missile reaches the right of the screen, it disappears onto the next one - but your bullet doesn't follow it any further. Also, your aim needs to be spot on otherwise the bullet causes no damage whatsoever!

The playability of this game is dull and it ploughs on and on until the refinery is destroyed or you blow up enough missiles to move on to the next level, where things speed up a little. Not the best of the bunch as the sound is also pretty poor.

On then to RIG ATTACK, a brilliantly designed helicopter jaunt across BP-owned rigs. This is a simple game where you pilot a multi-coloured helicopter sprite equipped with short range bombs to deal with the "enemy submarines", which are also superbly designed. The playing area fills the whole of a Mode 1 screen and you begin on an intricate oil rig with three submarines to seek out and bomb. As they're underwater, you need to fly down low over it - without hitting it as this is fatal! - while avoiding their LONG range bombs and timing your shot perfectly!

As you reach the left or right of the screen, the whole thing scrolls visibly in the appropriate direction presenting you with new and just as intricately designed oil rig territories. You must also remember which have helicopter pads on as you will need to take some time from hunting to refuel. There are nice noises and explosions to accompany the action and often a frantic slide towards water if you forget!

The only real niggle with this game is that once you've worked out the best strategy for playing, it becomes too easy, never increasing in difficulty as the submarines always only attack one at a time (even when you must destroy more to complete the level).

Finally, you become an Indian Takeaway owner on a quest to find your toilet after a little over-VINDALOO-indulgence. This scenario doesn't suggest it but there is more than a little familiarity about this title. Encased in a stylish border with a nicely styled title between two curry houses, all overlooking the majority of the screen's playing area, Raj (your character) must traverse twenty two rooms of bouncing balls, bugs, wriggling and disappearing platforms, elevators and other nasties using only the Z and X keys.

He begins "Under The Takeaway" in the top left and must be guided to the bottom of the screen by walking along earth and platforms, dropping slowly down through any spaces to the one below. That is, unless he collides with anything moving and disintegrates.

Many elements of the game such as the score increasing in time to sound blips marking the character's descent, the layout of the scores, bonus and room name (and even the font this is typed in!) - not to mention the screens themselves and the standardised five lives - smack of Icon's BUGEYES. Indeed, Jason Sobell was the author of each! [BUGEYES in 1985, VINDALOO in 1986 - Ed]

With just ten screens in BUGEYES, it's unfair to say VINDALOO is the same game with an altered scenario and different sprites! However, the more you compare the two, the bigger are the number of similarities that become apparent. One screen (number six on each: "Squidged Flat" on BUGEYES and "Skull Level Four" on VINDALOO) is almost identical!

Overall, although VINDALOO has some nice touches seen when pausing the game or viewing the ridiculous room names ("Life Is An Orange"?), the palette, sprites and

layout choice distinguish BUGEYES as a classier act. Playability of both is high, especially with a MRB.

With the possible of exception of ALPHATRON, the games on this compilation are of a very high standard. Despite only being available on the tape format, they take very little time to load and are completely bug-free and well thought out. Recommended.

## Review (EUG)

Another double-cassette [Single disk - Ed] pack from Tynesoft, the second "Micro Value" boasting that £3.99 bought you four 'great' games contains the instantly recognisable GUNSMOKE bundled with THE GREAT WALL, MOUSE TRAP and MEGA FORCE. Only the last two games were originally released by Tynesoft but, as with the first compilation, these last three retailed (at least at one time) at almost double the price of the whole package! The exception, GUNSMOKE - ironically as it's the best of the bunch - was given away by Dixons with their Electron starter packs.

Originally a Software Invasion release, you control the large sprite of a gentleman cowboy in the foreground bottom of a Mode 5 screen. The aim of the game is to take out as many cowboys in the higher-up backdrop as possible. This backdrop is a small colourful desert town comprising a store, saloon-cum-hotel, barn and sheriff's office. The idea is to shoot any other cowboy lurking in or around these locations.

It's a simple concept given a unique feel by the gun control method. Your gun can be aimed at either a rough 45 degree or 80 degree angle, so you may take out a bad guy on the far right by shooting from either the far left or just right of centre respectively. As the guy is likely to be shooting back though, it's wise to think in advance and above all do a lot of running around to avoid shots from his friend(s).

The game gets progressively tougher with the number of baddies unloading their five shooters (!?) in your general direction *at the same time* matched by the level number. Every time you've taken out sixteen altogether, both are incremented. It's apparently possible to have all sixteen locations filled with bad 'uns on the last level!

As this is all easy to grasp, the instructions given with the pack are pretty unfathomable wittering on, as they do, about the "Cartwright-controlled town of Tombstone" instead of noting the game keys as one would expect! The game itself though is spotless with a nice layout, signature tune and addictive gameplay. There's even a First Byte joystick option! Though the gunslingers are all in monochrome.

Evidently employing some of Tynesoft's vocabulary a few years before, Artic Computing attempt to sucker potential customers into a HUNCHBACK clone by similarly

describing their (familiar) wall as "great"! It ain't. You are a "runner" with the stomach-churning mission of crossing 512 (Yes, 512!) screens of fireballs, bouncing balls and cannon balls plus the obligatory small holes to leap and larger ones to cross on floating rafts. It's all very familiar and, far from the huge number of screens *attracting* the audience (which it's meant to), considering you frequently get deaded on the second or third one, it's actually very disheartening. Couple this with each screen after three mirroring one of the ones before and you're not even close to how dull this game is.

Playability is very poor. Everything in the game, including your 'running' man, moves slowly but with oddly fast cannon balls shooting over the screen so quickly you die before you mark them! If you clear a hole but land on the edge of the wall, you still meet your maker and, as fireballs travel from right to left, you can be frustratingly picked off by one at head/waist height just as you reach the end of the screen.

Each sprite is very small (8 x 8), dull and unalluring. Each section of wall takes a few seconds to appear. The text characters have been re-defined awkwardly and are less readable. Each time you play you must choose whether to have sound, whether to have music and then what piece of music! If you have a Plus 1 attached, the game then hangs up unless you answered N three times! And loading the game takes an eternity with instructions and loading screens!

It's also interesting that another Artic release, WOKS, contains almost exactly the same flaws, not to mention the same sprites!

The sprites are very much improved in the next piece, MOUSE TRAP; the first 100% machine code game written by Chris Robson. This is a very colourful Mode 5 romp around 22 screens of mousedom. The animation and detail of sprites smacks of quality from the word go, with a bouncing and shimmering title, high score table and slideshow of screens.

Sadly, though this game may look good, its playability (while not in the same division as THE GREAT WALL) also lets it down. Marvin the mouse jumps from platform - and over many deadly household appliances - to platform, and collects Christmas puddings. Unfortunately, the jump left/right key combinations refuse to work unless you are already holding down the appropriate movement key before tapping the jump one. As this is a game where near pixel-perfect negotiation of baddies is required, this flaw's effect renders the whole game near to useless! That said, a lot of perseverance may reward Marvin with the golden cheese he desires!

The last game, MEGA FORCE, describes itself as "the ultimate shoot-'em-up for the Electron". As usual, this interprets as your craft is at the bottom shooting up at baddies at the top. Luckily, while it doesn't really introduce anything new, this is the genre done very well.

Sprites for both your and enemy craft are big, chunky and blow up, when hit, quite fantastically! Your ship has a double-barrelled gun emplacement so it's possible to blast two vertically rows of invaders, the action set on top of very fast parallax stars, simultaneously. Nice touches such as different zones (with different aliens to blast) plus spherical pods that improve your firepower when shot add to the game's professional feel.

Here the graphics and gameplay are tiptop but there are two other (less serious) glitches. First, the loading screen takes a age to appear on the display, as it is not loaded directly but 'floods' on via machine code. Second, author Ian Collinson, for his own reasons, has not turned off the \_ cursor. Thankfully, it doesn't flash around the screen but it can be very distracting, beating away relentlessly in the bottom right.

Should you like good displays and nice sprites, most of these games deliver in such respects. With playability, GUNSMOKE comes first, then MEGA FORCE, then MOUSETRAP and at the bottom THE GREAT WALL. Still, you will probably be left with the

impression that, considering all were on their second release, ironing out the creases before they left the Tynesoft unit again could have been most worthwhile.

Dave Edwards, EUG #53

# MICROVALUE FOUR GAMES 3

## Review (Electron User) - "Cheap Thrills"

Budget games are the bread and butter of the Electron games market at the moment, and the vast majority of products released on budget labels are pretty good value for money.

MICROVALUE FOUR GAMES 3 is a new two-cassette compilation of four Tynesoft games previously released in their own right. At £3.99, it's aimed at the pocket money end of the market and, as the blurb points out, you're paying less than £1.00 per game. However, this rather hides the fact that two of the games as they stand are, in my opinion, not up to the present general standard expected of even budget software.

KASTLE is the first of the four titles, and is one of the exceptions to my criticisms. It's an arcade adventure in which you play the part of a knight, armed with a broadsword, who must negotiate the long-forgotten castle of Keltdown forest to reach your goal.

What this goal is supposed to be is not mentioned, but perhaps that's part of the puzzle - which is quite complex, involving hidden levers, moving portcullises and shifting platforms.

I quite enjoyed the game. There are skeletons to fight and evil black crows will swoop on you from their perches. Both can be dispatched swiftly with your sword, but must be hit before they get past your sword arm.

US DRAG RACING surprised me the most. Apparently it was previously available as a full-price game on its own.

The starting screen looks impressive enough, with two powerful dragsters sitting on the line waiting for the green light. But the fun begins when you start your motor and move off.

Revving the engine is achieved by frantically pumping two keys up and down to a set rhythm. Until now, I had thought that this sort of action was reserved for sports-type simulations - it is totally inappropriate when applied to controlling a racing car of whatever description.

Having mastered accelerating off the starting line, I was in for my second surprise. The only parts of the game which are animated are the back and white edges of the two racing lines. Not even the occasional bit of scenery flies by to give an impression of speed, which, by the way, is incredibly slow anyway, despite the lack of animated action.

GOAL fared rather better. In fact, it was my favourite of the four, achieving by far the best animated sequences and excitement factor. You have the programming talents of Tynesoft's Dave Croft to thank for this soccer simulation.

You can control any of the white players. Depending on which is closest to the ball, control is passed to the nearest player by pressing <RETURN>. This is an unfortunate choice of key, however, because it is also used to kick the ball when you are close to it.

The result of a missed kick can be a sudden switch of control to another player, which can take you a moment or two to realise, leaving you way off the ball by the time the penny drops.

The opposing side is controlled by the Electron, and you can decide between two levels of difficulty. I found the lower level more than hard enough, as the computer-controlled players make fewer mistakes in manoeuvring.

The final game, SPACE CAVERNS, is another let-down. It's based on the popular lunar-landing games of the early eighties, except that you must negotiate your small craft through winding caverns to reach the exit.

The game looked quite promising - the first cavern is very colourful, and leads you to expect more of the same. But after carefully nudging the rocket boosters - full mass and inertia are applied to your ship - and reaching the far wall, disappointment quickly follows.

Screen two is no more than a jumbled array of coloured triangles, with none of the coloured stippling present in the first cavern. It shows that memory must have been tight, preventing more detailed screens from being stored.

But considering what phenomenal scenarios have been squeezed into Electron games, I find this a poor excuse, and felt quite hoodwinked.

In all, I found volume 3 of FOUR GREAT GAMES fairly average. It contains nothing to make it stand out from the crowd in a market which is steadily gaining respect in most quarters for surprisingly high standard games.

# MIKIE

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Run Around A School!  
Authors : Jon Woods and Peter Johnson  
Standalone Release(s) : 1986: MIKIE, Imagine, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : IMAGINE,  
Disc compatibility : Unknown

## Instructions

Move Mikie through school by collecting all the hearts in each section (Classroom, locker room, canteen, gymnasium and finally in the schoolyard). Each heart collected represent a letter in Mikie's message to his girlfriend at the top of the screen and when the message is complete, he can move on to the next area.

There are two types of hearts to collect:

- (1) *Single Hearts* - To be found on the floor and under stools. To collect these you must walk over them. (You can bump your classmates off their seats to obtain the hearts with "hip-zap".)
- (2) *Triple Hearts* - Placed inside lockers and on the top of tables. To collect these, face the fearts and press "shout" three times. N.B. Flashing hearts give bonus points.

When the message is complete and the bell rings, Mikie can move on through the door marked "OUT".

Now you must negotiate the hallway which is full of doors and surprises and find the right entrance marked "IN" to continue. You have three lives to begin, but be careful as you are constantly hassled by those in charge, the Teachers, the Chef and Maniac Janitor who get very annoyed when they can't catch you!

## Game Controls

Z - Left, X - Right, \* - Up, ? - Down  
<RETURN> - Hip-Zap/Unlock Door/Throw Objects, <SHIFT> - Shout/Take Objects

For *hip-zapping* a schoolmate, stand either to the left or right facing the stool and press <RETURN>. Kissing is automatic!

For getting the hearts out of the vending machine or picking up objects stand in front facing the machine or receptacle and press SHIFT.

<COPY>/<DELETE> - Unpause/Pause, S/Q - Unpause With Music/Without Music  
<ESCAPE> - Return To High Scores (When Paused)

## Status And Scoring

On-screen scoring shows current score, lives, message status and High-score.

Hearts .....	200 points
Hip-Zap .....	600 points
Chicken/Ball throw .....	200 points
Bonus hearts .....	1000 points
Kissing .....	100 points
Door-Trap .....	100 points

## Playing Hints

- \* You can stun your pursuer by taking Chickens or Basket Balls and throwing them (in the appropriate screens).
- \* You may become "stunned" by kissing the dancing girls.
- \* Watch out for the teacher. If he gets really mad, he might throw his false teeth at you!
- \* On the fifth screen in the schoolyard, you finally catch up with your girlfriend and deliver the message. OK.
- \* You can pause for breath in the classroom by sitting on a vacant stool...but not for too long!

Good luck!

**Instructions' Source** : MIKIE (Imagine) Back and Inner Inlay

## Review (Electron User)

This game, set in an American high school, stars an all-American schoolboy Mikie who is trying desperately to get a message to his sweetheart. You have just volunteered to help him.

The first screen provides an aerial view of a classroom. There are nine desks with pupils sat at each one, and beneath five of their stools are little red hearts. As you collect each one, they change into letters to form a message to his girlfriend. When you collect the fifth heart, the classroom door opens, allowing you on to the next level.

Collecting the hearts isn't quite as easy as it could be as your fellow pupils won't stand up to let you at them so you have to bump them off their seats using your hip-zap technique. On top of this you receive a great deal of hassle from the teacher who doesn't like you disturbing the class. If things begin to get too hairy you can always find yourself a vacant stool and sit down for a while - but not for too long, otherwise the teacher's false teeth will fly towards you.

Having escaped the classroom you must negotiate the hallway to reach the next room. The hall is patrolled by a teacher and a mad janitor, so nimble footwork is required.

Screen two is set in the locker room with several lockers containing three hearts. You stand in front of the locker and press the "shout" key three times to release the hearts. This time you are being chased by the teacher, janitor and chef. The same sort of thing is repeated in the canteen, gymnasium and schoolyard.

I found survival has a high random factor. Sometimes the teacher will plod around in a corner and you sail through the screen. On other occasions he will be hot on your heels and you will lose all three lives on the first screen.

The graphics are crude and the animation not much better. MIKIE was never destined to be a blockbuster, but a little more care on the graphics side would have been greatly appreciated.

# MILLIONAIRE

***Professional, Originally Released On Cassette Only***

Game Type : Simulation; Make A Million Selling Computer Games  
Authors : John Hunt and Steve Benfield  
Standalone Release(s) : 1984: MILLIONAIRE, Incentive, £7.95  
Compilation Release(s) : 1985: 5 COMPUTER HITS, Beau Jolly, £6.95  
Stated compatibility : BBC Side A, Electron Side B  
Actual compatibility : As stated  
Supplier : INCENTIVE, 54 London Street, READING RG1 4SQ  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"MILLIONAIRE is a new experience in getting rich!! From a small humble home to a magnificent estate? Take on one of life's little challenges and become a millionaire! Start up a Software Co, Buy, Sell, Advertise and Wheel and Deal with Honest Harry. Full Screen Graphic Representation of your current residence and many other features. Who wants to be a MILLIONAIRE?!!"*

You own a home computer and have written a program which you consider to be of sufficient quality to market. You are willing to put £500 of your own money into the project. The decisions are up to you and these will directly influence whether or not you make it to the top and become a MILLIONAIRE.

First, you must choose whether or not you wish to specialise, and if so, in what area. Your first program can be sold if required to boost your initial capital.

The section entitled "What makes a good Program?" occurs at the start of the game and periodically thereafter. This section is very important as regards sales.

You will be presented with a graphic illustration of the offices belonging to your company, Software Inc. The buildings will become more impressive as your assets grow. However, at the start of the game, you will be working in a mid-terraced house. The game rotates in monthly cycles. First will appear a display of the company's programs, sales, tapes in stock, rates, assets and money borrowed. Next will appear a graph showing the monthly progress (only sales of 100+ will appear), followed by the news sheet. Often these pieces of news have a direct effect on the company and its sales. When news is beneficial, sales should be boosted and vice-versa.

You must decide on which main area you are going to work.

The following options are open to you...

1. Programming. This will add one new program to your sales.
2. See Honest Harry. If you want to get rich quick, or money is short then H.H. can provide very cheap programs and cassettes but there is always the risk of finding yourself on the wrong side of the law.
3. Try to sell products to retailers. This will, of course, help to boost sales.
4. Convert existing programs to other machines. This will increase the number of programs by one.
5. Try to obtain a loan. Loans of £1,000 can be obtained each month, with an interest repayment of 10% per month. If your loans exceed your assets by £10,000 then you will be considered to be bankrupt.
6. Sell out. If you've had enough and want to see how well you've done then you can sell out. A score sheet will be revealed showing assets, sale price, popularity rating and a score 0-100.

In order to boost sales, you have five ideas, but be careful how you use these because each can be used only once. Some are free and others will cost you. However all will, to a certain extent, boost sales.

When you have programs on the market you will be asked how much you wish to spend on advertising; how much you wish to spend on duplicating per cassette (if you choose the cheapest option then you may find that programs are faulty and this will adversely affect sales) and how many cassettes you are duplicating for the next month.

**Points to note:**

If assets reach -£100 or lower then you will be considered bankrupt.

When a fair number of cassettes are on the market, occasionally one will disappear. The idea behind this is that the programs have a limited lifespan and may well be taken off the market if they are not selling well.

The profit margins for the first 18 months are quite high. After that period, there will be a cut in profits to compete with others. After 30 months, selling will become gradually more difficult, but the effect of this is only slight.

Prove you can reach £250,000+ for a few months and then relax. The hard work of getting the company off the ground and becoming a stable organisation has been done. From here on, the computer will assume that you have the capability to make a MILLION and will assess the time taken to reach your goal based on your performance so far.

The Program starts fairly easily for all to gain some measure of success, but as your assets grow - so do all the problems!!

WILL YOU BECOME A MILLIONAIRE? Good Luck.

**Instructions' Source** : MILLIONAIRE (Incentive) Back and Inner Inlay

**Review (Electron User)**

Here you play a home computer programmer who has decided to go into business selling your own products. Since the program typifies the decisions that have to be made in real life you'll soon be wishing you hadn't bothered!

You start by deciding what kind of programs you want to write - arcade games, adventures, educational programs and so on. Naturally I decided on adventures. You then have to decide what aspects of your programming you want to highlight. To do this you have twenty points that have to be allocated to different features, quality of programming, addictiveness, packaging and such like.

Since I had chosen adventures, I gave the maximum eight points to programming, five to packaging and seven to addictiveness. I can definitely say that judging from my performance this is not the right way to allocate your points.

You are then given an option to sell your program to raise money to add to your original investment of five hundred pounds. The decision made, you enter into the game.

The game is cycled monthly until you are either bankrupt or have made a quarter of a million pounds profit. If this figure is reached, the Electron assumes you have the financial acumen to be a millionaire and ends the game.

At least I assume it does. I couldn't get that far. Each month you make decisions which are totalled to give a monthly run down on the state of your business.

This shows the number of programs you have on the market, your sales, stock, rates payable, assets and any outstanding loans. You are then given the options for the month. You can write a program, sell your products to retailers, convert your

existing programs to other computers, try to obtain a loan, sell out - which will give you your score - or see Honest Harry, who will undoubtedly try to sell you a load of cheap cassettes at a bargain price.

To increase your profit, you are asked how much you wish to spend on advertising, how much you wish to spend on duplicating cassettes and how many you want duplicated. Your decisions are evaluated and the program then gives you a news sheet - which in my case always seemed to mean bad news.

Then you are shown a graph displaying your sales figures for the year, and finally the run down of your business again.

It generally took me between one and two years to need a bank loan. This is where I discovered the only bug in an otherwise professional program. You are allowed to borrow a thousand pounds each month.

Once you take out a loan you are charged ten per cent interest each month. I borrowed £1,000 and six months later owed £7,600! I've heard of inflation but this is ridiculous! It appears that if you borrow money one month and do not pay it off the next you are treated as if you borrow money EACH month, though you don't, at least, pay interest on all of it.

This program has been available on at least one other computer for a while. Although a truly professional job it is not that different from other similar games already available.

Overall, somewhat marred by that bug discussed earlier. The rest of the program is superior, though similar, to other strategy games currently available.

# MINED OUT

***Professional, Originally Released On Cassette Only***

Game Type : Arcade  
Authors : Ian Andrews and Ian Rowlings  
Standalone Release(s) : 1984: MINED OUT, Quicksilva, £5.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : QUICKSILVA, Palmerston Park House, 13 Palmerston Road,  
Southampton, HANTS SO1 1LL  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"Save Bill the Worm from certain death amongst the mines!"*

That star of stage and silver screen Bill the Worm is trapped. Who can forget his outstanding performances in "Worm without a cause", "Worm Kong", "The Worm of Dracula", "The Worm with the Golden Gun", "Gardeners' World".

The very famous Bill the Worm is trapped in the Mine Fields and harvest time is still three months away. The very famous Bill the Worm is dormant, sleeping away the hours, waiting to be rescued; surrounded by death dealing mines which are poised ready to explode.

"Oh no, poor Bill, oh Bill, we're coming!" cry the Damsels. The Damsels, a host of starlets all cloned from Bill's favourite leading lady; the glorious Nora Mudroe; have leapt forward into the hearts of a million cinema-goers and also unfortunately into the heart of the Mine Fields and now are as trapped as Bill the Worm.

The Minefields lay before you, ominous, quiet, expectant. A cloud passes in front of the sun and a shadow races across the fields like a shroud. The mines wait for your final fatal footstep to fall, chuckling to themselves. The tension mounts indeed it is this very suspense which drives the mines insane, poor creatures.

Your mission lies before you: A worm to rescue and maybe a handful of damsels along the way. You edge nervously forward with sweat pricking your forehead... Bill snores on regardless dreaming of the famous cabbage scene from "Snow White and the Seven Worms" where Snow White (played by Nora) and he fell into the heart of a cabbage and the image faded to soft focus replaced by waves falling on a rocky shore, except in Bill's dream, there are no waves or soft focus...

Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Your aim is to collect all the lumps of coal in the twenty rooms of the Mineshaft. You have to be quick, daring and sometimes near suicidal to accomplish your task, and beware - you only have a limited air supply! The game should be compatible with all joysticks.

To collect the lumps of coal you will have to move and jump around the screen. Sometimes you must jump whilst also moving sideways. Watch out for the disintegrating sludge which disappears as you walk over it. (Hint: It disintegrates more slowly if you bounce along it!) Watch out for the obstacles that may kill you!

After completing each screen you may move to the next through the door, or if you get stuck you can press <ESCAPE> to make your exit. It's up to you to work out how to collect all the lumps of coal - sorry!

## Points

Disintegrating sludge - 1 point per step  
Lumps of Coal - 100 points per heap  
Bonus points - 1 point per unit of air left after each screen

## The Screens

- |                      |                        |
|----------------------|------------------------|
| 1 The Derelict Place | 11 Chamber of Horrors  |
| 2 Crumbs - Conveyors | 12 The Resting Place   |
| 3 The Ice Box        | 13 Impossible Jump?    |
| 4 The Hotel          | 14 Impossible Screen?  |
| 5 Stinking Hotel     | 15 The Water Works     |
| 6 Complex Cavern     | 16 The Pink Grotto     |
| 7 Mutant Matches     | 17 The Junkhouse       |
| 8 Elevator Shaft     | 18 The Furnace         |
| 9 Ghosties' Revenge  | 19 The Junkhouse Mk II |
| 10 The Minefield     | 20 La Fin              |

## Game Controls

Z - Left, X - Right, SHIFT - Jump (NB. You can jump while moving)  
Q - Quiet, S - Sound, <ESCAPE> - Move To Next Screen  
Press <SPACE> or FIRE BUTTON to start the game.

**Instructions' Source** : MINESHAFT (Durell) Inner Inlay

## Review (Electron User)

We've all heard about a manic character who has been very popular on other micros and many people have wondered whether such a game was available for the Electron. The search is now over because Durell have come up with MINESHAFT.

Your job is to collect the coal that has been left scattered about in each of twenty different rooms and then make your way to the next room. The controls are simple - just left, right and jump - which makes the game easy to learn.

Like all good games though, it's a tough one to master. There are many problems to overcome. These range from water drops to furnaces and from mutant matches to mine trucks. To make matters worse, you're running out of air and some of the jumps you have to perform are, to say the least, near suicidal.

As you learn the game you'll probably need the three lives you are given for each level but with practice some screens become possible without losing any of them. Having said that, "The Impossible Screen" still beats me but my son, aged eight, says it's easy. All the rooms have interesting names such as "The Pink Grotto" or "Ghosties' Revenge".

Should you manage to complete all twenty screens, you start again but due to your state of exhaustion you use your air more quickly. Technically the game is excellent, with smooth flicker-free graphics which make good use of Mode 5 colour but are also quite clear in monochrome.

A very pleasant rendition of Greensleeves is available as an option but there is no other sound. A particular plus with MINESHAFT is that by pressing <ESCAPE> you move on to the next screen with a full set of lives again.

Just occasionally though, the program is seized by a little devil who covers the screen with blobs. Pressing ESCAPE seems to sort out this problem however.

In short, MINESHAFT is a quality game which is simple in concept but absolutely addictive. Strongly recommended.

Disc compatibility : Unknown

## Instructions

### Word Processor

A word processor is ideal for writing letters and reports instead of using a typewriter or pen and paper. When you make a typing error or change your mind, the word processor enables you to exit the text with ease. No longer will you need to use unsightly crossing out, rubbers or Tippex - and find you need to start again because it's such a mess after all the changes.

To load and run the word processor, simply type:  
CH. "WORD" and press <RETURN>.

When loading has been completed, the various options available are displayed.

An option is chosen is chosen by pressing the appropriate function key as indicated. Pressing ESCAPE at any time will bring you back to the display of options.

### Getting Started

Suppose you want to type a short letter to your about your recent holiday. Begin by pressing the function key f0.

In the middle of the screen you will see START and END displayed. These mark the beginning and end of the letter. However since you haven't written anything yet there is no text in between.

At the top of the screen is displayed the time that has elapsed since you started using the program, the number of words you have entered so far, and the number of characters you can key in before the computer's memory is full.

Start typing your letter exactly as in this sample, mistakes and all:  
i have just had a supper holiday in blackpool.

If you didn't manage to type that in successfully, press function key f8 and then in answer to the question "Are you sure?" press Y. Then start again by pressing f0. If you still have difficulty, read on.

Now to start correcting the letter.

By using the cursor control keys the flashing cursor can be made to move about the text to any position you want. First correct the word 'blackpool' to read 'Blackpool' with a capital B by moving the cursor onto the l after the b. Now press DELETE and the b is rubbed out. Next press B while holding down the SHIFT key and the word "Blackpool" should now be corrected. The first word i can be changed to I in a similar way. (Note that upper and lower case letters and symbols are obtained in the normal way with the SHIFT and CAPS LOCK keys.)

Now correct "supper" to read "super" by moving the cursor onto the e and pressing DELETE.

All letters should start with Dear Eric, or something similar. To insert this into the letter, move the cursor to the start of the first line and type:

Dear Eric,

followed by <RETURN>.

Similarly a letter would end with Yours sincerely, Carol. So move the cursor to the end of the last line and press <RETURN>. If you want a blank line before Yours sincerely press <RETURN> again. Then type:

Yours sincerely,

(RETURN RETURN)

Carol

You should now have a complete and perfectly laid out short letter. If you want to add to it, change it or put more spaces or blank lines in, just move the cursor to the appropriate place and type what you want to say.

While you have been typing you may have noticed that the figures adjoining WORDS and FREE displayed at the top of the screen have changed. These indicate how many words are contained in your letter and how much space you have left if you wish to extend your letter.

If you now press ESCAPE, the options that are available to you will be displayed again. So far you have only been using the large letter editing mode. Pressing f1 will now show your letter in normal sized characters. You could have written your letter in this mode if you had preferred.

If you now press f2 your typing speed in words per minute is displayed at the top of the screen for a few seconds. (Note that this does not happen if f2 is pressed while not in an editing mode.)

Having written your letter, you might like to save it for later - or even to send it to Eric on tape or disc. If you now press f6 you will be asked to enter the filename. Make sure you have a tape with nothing useful on it, or a disc, and enter:  
letter1 <RETURN>

and your letter to Eric is saved as a file called "letter1".

Suppose you now want to write the same letter to Chris. Press f1 so that Eric's letter is shown. Then edit the letter by replacing the word Eric with the word Chris. You have now written two letters that are almost the same with the minimum of effort. The second letter can now be saved in the same way, using a different filename.

To start a completely new file, press f8 followed by Y. Pressing f0 or f1 shows that there is no file there any more.

To load Eric's letter back in, press f7 followed by Y to the first question. Then type:

letter1 <RETURN>

making sure the correct tape or disc is ready. Pressing f0 or f1 will show that Eric's letter is back.

If you have a printer, you might like to print the letter so that you can post it to Eric. To do this, press f3.

If you reply to all the questions like this:

20 <RETURN>

10 <RETURN>

N

N  
Y or N  
N  
N  
(Space bar)

the letter should be printed out.

A more detailed description of the various options follows.

### **Options**

Esc This always terminates the present option and returns to the option display page.

f0 This selects the editing mode with double size characters and 20 characters per line.

f1 This selects the editing mode with normal size characters and 40 characters per line

f2 This displays the typing speed in words per minute for the present text file. This option only operates when in an editing mode. When a file is loaded or saved, this information is loaded or saved with it. This makes it possible for typing speeds to be correctly shown for a particular file, even though it may have been started and saved the previous day. Typing speed is calculated from the number of words in the file and the total time spent in an editing mode and not the time spent at the keyboard.

f3 This selects the printer option. You have the choice of selecting the maximum number of characters per line (any number of from five to 80), as well as the width of the left margin in character widths and the size of the characters both vertically and horizontally. The double size characters may cause a peculiar output to the printer unless the printer is Epson compatible with a bit image mode. The maximum number of characters per line depends on the character size and the margin chosen. Some printers have an automatic line feed, some do not.

If you normally have to type \*FX 6,0 when using your printer does not have automatic line feed. If paged mode is chosen then printing should start with the print head just below a perforation. Each new sheet of paper will then have a page number printed at the top and printing will not occur across the perforation. Paged mode will also take account the end of page markers. When one of these is encountered, the next line is printed on the next sheet. Paged mode is designed to work with a form length of 11 inches. If paged mode is not selected, then page end markers are ignored and printing will occur across the perforations unless your printer has an automatic skip over perforation built in.

The preview of text enables the printing format chosen to be viewed before actual printing. When two thirds of a screen has been previewed, the next two thirds can be viewed by pressing SHIFT. If the number of characters per line exceeds 40, a true preview is not possible due to the line length on the screen being limited to 40. No margin is shown in the preview, even if a margin has been selected.

f4 This option enables a section of text to be copied to the cursor position. To use, first position the cursor at the destination point for the copied text. Then press f4. Next move the cursor to the start of the text to be copied and press COPY. The screen display will then revert to the situation that existed when f4 was pressed, except that the top line of the screen will show the line of text being copied. Each press of the COPY key copies another character. The left and right cursor keys move the line of text being copied, rather than the cursor. The up and down cursor keys are not used. The rest of the keys behave normally, inserting text at the cursor point. To exit this copy mode, press f4 again.

- f5 This enables the TAB key to be set. There are four tab values, which must be chosen in ascending order. The maximum tab value is 40. If less than four tab values are required, give the last few the same value. The effect of TAB when in the editing mode is to move the cursor to the column position indicated by the next tab value, which it does by inserting spaces.

The next tab value is the lowest tab value that is greater than or equal to the present cursor position. For example, suppose the tab values are 5, 10, 15 and 19, and the cursor is present at the beginning of the line in Column 0. If the tab key is pressed at this stage, the effect would be the same as pressing SPACE five times, so moving the cursor to Column 5. If xyz is now typed, so that the cursor is now in Column 8, and TAB is again pressed, the next tab value is 10. So the effect is that SPACE has been pressed twice to move the cursor to Column 10. If abcdefg is now typed, taking the cursor to Column 17, and TAB is pressed again, since the cursor is beyond the third tab value this value is ignored and the fourth tab value of 19 is used. So effectively the cursor moves to Column 19 by the insertion of two spaces.

Pressing TAB when the cursor is beyond the largest tab value has no effect. A tab value larger than the number of characters per line is also ignored. (Note that the Electron does not have a TAB key. However, pressing I while holding down CTRL has the same effect.)

- f6 This enables the text at present in memory to be saved. Simply enter the name of the file followed by <RETURN>. The filename must follow the same rules as for program filenames.

If the word processor program is on tape then the files are saved to tape, so ensure that there is nothing on the tape you are going to use.

If the word processor program is on disc then the files are saved to disc, so ensure that the filename you use is different from any already on the disc.

- f7 This enables a file to be loaded from disc if the word processor program is on disc, or from tape if the program is on tape. Simply press Y if you are sure you do not want the program at present in memory, and enter the filename followed by <RETURN>. The file already in memory will be destroyed by loading in another file, so be sure this has been saved if you wish to keep it. If "Bad file" is displayed after loading, it means that either the file has been corrupted or it wasn't a text file.

- f8 This simply erases the file in memory. Only press Y if you are sure you do not want the present file in memory.

- f9 This inserts an end of page marker at the cursor point. These markers are used in the paged mode when printing.

### **Further Advice**

If large files are likely, it may be advisable to make available as much memory space as possible, particularly if the system is disc-based.

Before loading the word processor, PAGE should still be set to the lowest value possible which still allows normal load and save operations though not below &D00. For a tape system, PAGE can usually be set to &D00 successfully. For many disc systems, PAGE can be successfully set as low as &1100.

It is always a good idea to save sections of long text at regular intervals. By doing this, you can ensure most of the text has been safely saved should you experience a power failure or similar mishap.

### **Database**

A database is an ideal way of storing information such as names, addresses, telephone numbers and ages. Each of these four pieces of information is called a

field. Together they make a record. So a database is really like an electronic filing cabinet containing a lot of individual records.

You will find that your micro can manipulate information in the database very easily and very quickly. In no time at all it can search for one particular item and display it for you on the screen. It can also carry out a multiple sort and provide you - for example - with a list of all the people in your file who live in Liverpool and whose ages range from 15 to 25.

There are two types of field - numeric and string. The former is used for numbers (such as ages). String fields are used for words. But it should be noted that entries such as telephone numbers are also regarded as strings because they may include characters like spaces and hyphens. The main difference between the two becomes apparent when they are sorted. When treated as a number, "2" comes before "11". But when it is a string, "11" comes before "2" - just as aa comes before b in a telephone directory.

To load and run the database program, simply type:  
CH. "DBASE"

and press <RETURN>.

When loading has been completed, the various options are displayed.

Choose the one you want by pressing the appropriate key as indicated. Pressing ESCAPE at any time will usually bring you back to the display of options.

### Getting started

To set up a file of records we must tell the computer what type of information we wish to keep in each record. As an example we shall set up a file of records to hold the names and addresses of a group of friends. A typical record would be:

```
SURNAME:      JONES
FIRST NAME:    SIMON
ADDRESS1:      6 BROAD LANE
ADDRESS2:      LIVERPOOL
TELEPHONE:     051-633 8000
```

Each line of information in the record is known as a FIELD, so this record has six fields, with the address being split over two fields.

Selecting Option B from the menu will allow you to start setting up the file. The first piece of information that you will need to tell the computer is the number of fields you need for each record. We have decided to have six fields, so in answer to the question: "How many fields per record?" key in 6 and press <RETURN>.

The next step is to give a name to each of the fields so that from now on we will be able to refer to them by name rather than number. The computer will also need to know whether to treat the information stored in each field as a number or as a string, as well as the maximum number of characters to expect for each field.

For the field title, enter SURNAME. The computer will then ask for the field type to be entered. Since this field will contain only alphabetic characters and we will not want to perform arithmetic operations on them, enter S for string. Finally we need to tell the computer the maximum number of characters to expect for the field. The maximum allowed for any field is 23, so we will enter 23.

Now repeat this for fields 2 to 4, using this table as a guide:

Field No.	Title	Type	Length
1	SURNAME:	String	23
2	FIRST NAME:	String	20
3	ADDRESS1:	String	23
4	ADDRESS2:	String	20

In field 5 we are going to store the telephone numbers. But although this information is numeric we are going to tell the computer to treat it as a string. If we were to use a numeric field that telephone numbers starting with a zero would lose the leading zero.

5	TEL:	String	15
6	AGE:	Numeric	3

After entering the details for field 6, you will find the screen displays a summary of all the fields. You are then given the opportunity to make changes to any of the details entered. As an example we shall change the title of field 5 to TELEPHONE. Answer N to the question: "Is this correct?" and then enter 5. Row 5 of the field summary should now be flashing. All you need do is retype the information for this field and enter TELEPHONE instead of TEL. for the title. Once you are satisfied with the field definitions press Y and you will be returned to the menu.

#### **Adding records (Option C)**

Now that we have set up a file we can start to add records to the database. The number of the record being entered is always displayed at the top of the screen. The title of the field for which the computer is expecting an input is printed on the left. So the first field title to be displayed for our file will be SURNAME. To enter the first record, type:

SURNAME:	JONES
FIRST NAME:	SIMON
ADDRESS1:	6 BROAD LANE
ADDRESS2:	LIVERPOOL
TELEPHONE:	051-633 8000
AGE:	42

When you have finished entering the record a list of possible options will appear at the bottom of the screen.

If you wish to modify the record, press A. Each field is then displayed in turn, along with the prompt: "Is this correct?". If you wish to change your entry for the field then press N and key in the new information. Pressing Y will allow you to go on to the next field. If you want to add another record press N. Otherwise press M to return to the menu.

#### **Loading a file (Option A)**

A demonstration file has been provided on the program. This will give you an opportunity to experiment with the features outlined below without having to enter your own set of records.

Select the load option by pressing A. Loading a new file will erase any records already stored. So as a precaution the computer will ask you if you are certain you want to load a new file. Now enter the filename of the file you want to load. The demonstration file is called DFILE. Cassette users must ensure that the tape is in the correct position. (The file follows the Database program.)

Once the file has been loaded you can perform various operations on the records by selecting the appropriate option from the menu.

#### **List records (Option F)**

This option allows you to examine the records that have already been entered. After selecting this option you will be asked if you want to print out the records. If you do, press B. If not, press A. You must now tell the computer which records you wish to see. For example, if you would like to look at records 3, 4, 5 and 6 you should enter 3 (<RETURN>), followed by 6 (<RETURN>). The first record you requested will then be displayed, and at the bottom of the screen you will see a list of the possible options available to you.

Pressing N will allow you to move to the next record. If you wish to delete the record displayed on the screen press D. Pressing A will allow you to alter the record. This operates in the same way as if you had selected Option E from the main

menu or when adding records (Option C) and has already been described. To return to the menu press M.

### **Field search (Option G)**

This option allows you to find any record quickly without having to go through each record in turn. After selecting the option, you must state which field you wish to search through. The options available then depend on whether the field is a string or a numeric one.

If you have selected a string field you can choose to search for a specific string or for part of a string. The difference is that if, for example, you reach for "row" as a specific string, the word "rows" would not be found. But it would have been had you asked for a part string search.

For a numeric field, you have four options:

- A. Search for a specific value X (ie the number you entered)
- B. Search for values >X (ie any numbers greater than the one you entered)
- C. Search for values <X (ie any numbers less than the one you entered)
- D. Search for a<X<b (ie a number between two limits that you enter)

### **Replace string (Option H)**

This powerful option allows you to replace any information stored in a field without having to go through all the records making the amendments yourself. You can replace a number, string or part string. The method of operation is similar to the field search already described, except that the fields are replaced by your new entry, rather than just displayed.

### **Multi-field sort (Option I)**

You can sort your records into numerical or alphabetical order with this option. It is usual - and quickest - to sort on just one field (such as names), but if you want to take account of other factors, you can select other fields. For example, Smith (age 24) could be listed before Smith (age 28).

You must select at least one field for the sort. Pressing <RETURN> or entering zero for sort fields 2 to 4 will terminate the field selection. You will then be asked if you wish to sort into Ascending or Descending order. Press the first letter of your choice and the computer will sort your records. When all the records have been sorted, you may examine them in their new order using Option F.

### **Field summary (Option D)**

This option lists the titles of the field, their length and type.

### **Save current file (Option J)**

This option allows you to save all the records that you have entered. You should use it frequently so that the chance of losing your work, such as in the event of a power failure or similar mishap, is minimised.

### **End program (Option K)**

This option terminates the program. Before doing so you will be asked: "Do you wish to SAVE the data file?" If you answer Y you will be asked to input your filename and the file will be saved. If you answer N, your file will be lost.

## **Spreadsheet**

A spreadsheet consists of rows and columns of "boxes" in which you can place numbers, labels or mathematical formula. Used for home finance, for instance, it is an ideal and easy to use means of keeping tabs on your income and expenditure. Setting up a spreadsheet is quite simple but can be time consuming. However, once it has been prepared to your specifications, it can be amended quickly and effortlessly.

To illustrate how it is created these instructions show you how to set up an imaginary household budget spreadsheet. You should then have no trouble devising your own for any application you may think of.

To load and run the spreadsheet program simply type:  
CH. "SPREAD"

and press <RETURN>.

When the program has loaded, you are asked the question: "Create file?" Answer Y.

Next select 15 columns and 20 rows. When asked if you require continuous updating answer N. The reason for this is that each update takes a short time, and when you are initially setting up the spreadsheet it is best to avoid this delay.

The spreadsheet should now be on the screen. You will find a list of the function keys and their uses at the end of this section. Note that on the Electron, the function keys are obtained by holding down the CAPS LK/FUNC key while you press the appropriate key. Holding SHIFT while you press the key results in the shifted function being activated.

The first thing to do is to enter a label in the top left hand corner. This is done by pressing f4 and then typing MONEY, two spaces, and then <RETURN>. Note the use of spaces to centre the label. It will be assumed that you will remember to press <RETURN> after all future entries, so it will not keep appearing in the text.

Now you need column headings. Ensure that the cursor is under column 2, press f3 and enter JANUARY. Move the cursor right and repeat the process for the other months. Convert column N to a line by pressing f6 with the cursor in that column. Note that the prompt: "Are you sure?" appears. This is so that if any formulae had been set in column N they would not be accidentally erased by the unintentional pressing of f6. Obviously in this case you enter Y. The final column - O - should be given the heading TOTAL.

The row labels are entered in a similar way. You must use f2 to label rows and f5 to put lines across the rows. Use these keys to set up rows like this:

```
ROW 2: Label MORTGAGE
ROW 3: Label FOOD
ROW 4: Label FUEL
ROW 5: Label LEISURE
ROW 6: Label OTHER
ROW 7: Convert to a line
ROW 8: Label TOTAL OUT
ROW 9 & 10: Convert to lines
ROW 11: Label EARNINGS
ROW 12: Label B.FWD
ROW 13: Convert to a line
ROW 14: Label TOTAL IN
ROW 15: Label TOTAL OUT
ROW 16: Convert to a line
ROW 17: Label REMAINING
ROW 18: Convert to a line
ROW 19: Label SAVE
ROW 20: Label C.FWD
```

Now press f8 to move the cursor to its home position - that is, to display the top left hand corner of the spreadsheet. You can now enter some formulae.

Box B8 will contain the sum of all the boxes above it. The formula for this is:

B8 = B2 + B3 + B4 + B5 + B6

To enter this, move the cursor to box B8, press f0 and type the rest of the formula after the "B8=" that will appear on the screen.

Similar formulae are required along the rest of row 8. This is achieved by pressing SHIFT f1 with the cursor still on B8. Then move the cursor right to C8 and press COPY. You should now see that the formula for C8 is now set. Repeat this procedure

for the other columns. This means keep pressing SHIFT f1, cursor right and COPY in that order. Remember to copy M8 into O8, not into N8 which is just lines.

You can check what functions you have entered at any time by pressing SHIFT f4. If there are too many to list on the screen, press SHIFT to see more.

Enter the row formulae in a similar way. Move the cursor to box O2, and use f0 to enter the formula:

$$O2 = B2 + C2 + D2 + E2 + F2 + G2 + H2 + I2 + J2 + K2 + L2 + M2$$

Use the copy facility again to enter similar formulae in boxes O3, O4, O5 and O6.

Now row 12 needs the formulae inserting. The formulae required are C12 = B20, D12 = C20, etc. These are entered using f0 with the cursor at the appropriate box. Remember O12 = M20. The boxes on row 14 are the sum of the boxes on rows 11 and 12. Use f0 to set up B14 and the copy facility to copy the formula to the other boxes. (B14 = B12 + B11, C14 = C12 + C11, etc).

Row 15 is the same as row 8, so the copy facility can be used to enter formulae such as B15 = B8 along the row. Row 17 is row 14 - row 15 and is set up in exactly the same way.

Enter the formulae for total earnings in box O11. That is:

$$O11 = B11 + C11 + D11 + E11 + F11 + G11 + H11 \\ + I11 + J11 + K11 + L11 + M11$$

We will assume that 75 per cent of the money remaining is saved and the rest is carried forward to the next month. This leaves two more rows of formulae to set. Set up box B19 with this formula:

$$B19 = B17 * 0.75$$

and copy it to the rest of the row. Row 20 will be row 17 - row 19, and is set up as before. If you wish, you can enter formulae for other boxes such as earnings (for example, C11 = B11, etc) or allow for inflation (such as C5 = B5 \* 1.01).

You are now ready to start entering numbers, but it is a good idea to save your work first. Do this by pressing SHIFT f6 and answering the questions as they appear. To enter numbers, move the cursor to the relevant box, and type the number. At the start, you answered NO to the question "Continuous updating?". This saves time if you have a lot of entering to do. Any time you wish to update the spreadsheet, just press f7.

On the tape (after the graphics program), or on the disc, you will find a sample file called MONEY for you to load. It was set up following these instructions. Load it first by chaining the program or press SHIFT f7 if it is already loaded. Answer N to the "Create file?" question, MONEY to the old filename and NO to the extend question. If ever you want to add more rows or columns to an existing file you should answer YES to this question.

Although you have now set up a spreadsheet, there are still some function keys that you have not yet tried. You have already used SHIFT f4 to display all the formulae on the spreadsheet. If you want to see a particular one, move the cursor to that box and press SHIFT f0. If you want to completely clear a formula, press SHIFT f2 (again with the cursor on the box). If you wrongly enter a number, pressing f1 will return the previous number.

SHIFT f3 and SHIFT f7 are used when you wish to enter a new file. The first only clears the numbers, but leaves labels and formulae intact, while the latter allows you to start a new spreadsheet without reloading the program.

The print option - SHIFT f5 - allows you to print out the spreadsheet. Eight of the spreadsheet columns fit on a standard 80 column printer. If the width of your spreadsheet exceeds this, the rest of the columns are printed on a new sheet so that you can join them up side by side.

What the function keys do

	UNSHIFTED:	SHIFTED:
f0	Enter new formula	Display the formula in the box indicated
f1	Return last number	Copy a function (use in conjunction with COPY key - see instructions)
f2	Insert new row label	Clear a formula from a box
f3	Insert new column label	Clear all values from the spreadsheet
f4	Insert new corner label	List all values from the spreadsheet
f5	Put a line along a row	Obtain a printout
f6	Put a line down a column	Save the file
f7	Update (if you are not continuously updating)	Quit current file and restart
f8	Send cursor home	Load the graphics program
f9	End	End

### The Graphics Program

The graphics program requires you first to set up a file using the spreadsheet. So that you can try out the graphics, a file called MONEY has been included after the graphics program on the tape, and is also on the disc.

To load the graphics program, type:

CH. "GRAPH"

and press <RETURN>. When it has loaded and you are asked for the old filename, enter: MONEY.

Once this file has loaded, you will be asked for the row that you require. If you cannot remember the number, press <RETURN> to see a list. To try out the program, enter 4 and press <RETURN>. Then answer Y to any columns that you want to appear in your graph, and N to any that you don't. In this case, answer Y to the 12 months, and N to the total.

The menu will then appear on the screen. Pressing f0, f1, f2 or f3 will give the display of your choice. When you have seen it, press f7 to print it out on an Epson compatible printer, or any other key to return to the menu.

If you wish to draw graphs from a different area of the spreadsheet, use f4, and if you want to load a new file, use f5. Use f6 to load the spreadsheet program, but note that to do this the tape will have to be rewound.

# MISSILE COMMAND

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Shoot-'Em-Up  
Author :  
Standalone Release(s) : 1983: MISSILE COMMAND, Gemini, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : GEMINI, 18A Littleham Road, Exmouth, DEVON EX8 2QG  
Disc compatibility : CDFS E00, DFS E00

## Instructions

In this game, you must protect your cities from incoming missiles by shooting them down with your own. To do this, you must position your cross beneath an enemy missile and fire. A shot from one of your three missile bases will then detonate and, hopefully, destroy the enemy. At the end of a wave, your bonuses are counted up and a new wave starts. On the second wave, planes and satellites fly across, dropping more missiles unless destroyed.

From wave six onwards, look out for diamond shaped "Smart" missiles, which avoid your explosions.

You can fire from either individual bases, or from the nearest base to your cross. The game can be played with either a joystick or using the Electron keyboard.

# MISSING SIGNS

*Professional, Originally Released On Cassette Only*

Game Type : Educational  
Authors : Ann and Russel Wills  
Standalone Release(s) : 1984: MISSING SIGNS, Acornsoft/ESM, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ACORNSOFT, Betjeman House, 104 Hills Road, CAMBRIDGE CB2 1LQ  
Disc compatibility : CDFS E00, DFS E00

## Instructions

This pack contains three programs on cassette. Select the number of the program you want to load, and press <RETURN>. All instructions are shown on the screen. PUT IN THE SIGNS provides practice in addition, subtraction, multiplication and division. Each exercise presents the pupil with incomplete sums into which they must insert the sign which will make the calculation correct. If two incorrect attempts are made, the program provides the correct answer.

The two Missing Signs programs present addition and subtraction, or multiplication and division equations which have the balancing sign missing. The child must calculate both sides of the equation and decide whether the missing sign is greater than (ie >) or less than (ie <) or equal to (ie =). The equations contain one or two digit numbers. All three programs offer a high degree of user control over the exercises presented to the child. The "Teachers' Notes" give the user the opportunity to set the layout, difficulty, content and timing of the exercise before the child begins. Once these parameters are set, the program can be used by up to 20 children and their results will be stored for later recall.

## About The Authors

Russel Wills began his career in computing in 1966 when he joined IBM as a lecturer. He then worked in Africa for five years as a systems analyst returning to the UK in 1972 to take up his present post as lecturer in computer education in Dundee. Ann Wills is head Teacher of a primary school.

# MODE 7 EMULATION DISC

*Public Domain, Originally Released On ADFS 1D00 Disc*

Game Type : Utilities For Programming/Converting To/From BBC Mode 7  
Authors : Gareth Babb and James Treadwell  
Standalone Release(s) : 1993: MODE 7 EMULATION DISC, Headfirst PD, PD  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : HEADFIRST PD, 97 Chester Road, SOUTHPORT PR9 7HH  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

These programs came from Headfirst PD, 97 Chester Road, SOUTHPORT, PR9 7HH. If you wish to send us some PD to include in our library, or order a disk, please write to use at the above address.

## Mode 7 Screen Displayer

This allows you to display screens saved in the right format (by either KeySaver or Converter) and print them as MODE2 screen files.

When you first run the program, the disk drive will whirr for a short time and then you will be asked to:

Enter file to display:

This is the filename of the screen you want to display as you originally saved it on the disk. The program will then pause for a while for calculation and the next part of the program will load. The prompt:

Print or Save Screen (P/S)

will appear and you must press P or S according to what you want to do. The screen will be saved under the filename SCR so if you have a file of this name on your disk already you should rename it or it will be overwritten. The screen will then go blank for above five minutes while the program converts the MODE 7 screen to MODE 2. If you are using a Turbo Driver you can see the screen being built up. After the screen has been converted, the display will return and the screen will be saved or printed according to the choice you made earlier (ensure the printer is ON LINE and fed with paper). The screen has now been converted and if saved can be loaded in again by entering MODE 2 and typing:

\*L. SCR

A sample screen is supplied called "CrazySc".

## Converter

This utility is designed to convert a screen saved on a BBC as a screen file in MODE 7 to a format understandable by the Displayer.

When you load the program from the menu the prompts:

Enter filename to load:

Enter filename to save:

will appear in succession. For this, enter the name of the screen file and the name you want the file to be saved under. Next you should press a key to initiate loading. There will be a short pause while calculations are made and then the disk drive will whirr for about a minute and the screen file will be loaded and converted. You should then press a key to begin saving the screen.

## KeySaver

This utility allows screens to be saved in a form understandable by Displayer from within the program that generates them.

When you run the program, you will be prompted for a filename to save the screen under. Then there will be a short pause and you will be returned to control of the computer. The characters will appear as a "mushy" pattern but this is essential to the program, and if <BREAK> is pressed or the characters altered, the routine is rendered ineffective. You should still be able to see when the screen you want is shown and press <CTRL> to save it to disk under the filename you chose earlier.

### **ElkFax**

This is a message display system based on the routines used in the Mode 7 Screen Displayer. It allows a sequence of screens to be created and displayed from disk, rather like a ViewData or teletext system. Using the built-in editor you can define well over 100 pages of text and graphics in 16 colours (8 still, 8 flashing). Then using the display routine you can show the pages in sequence or choose a page directly to display. There are a dozen uses for this system eg shop window advertising, information services, school "electronic magazine", etc.

The graphics are characters on a 2 x 2 matrix. They seem rather chunky and crude, but a glance at teletext will show how effective the results can be.

Load the program and you will be asked for the name of an ElkFax file. Enter the filename and insert the disk with the file on for editing or display. If there is no file of that name on the disk one will be created with blank pages. If a file is to be created, the program will warn you by giving a message saying how much space is needed on the disk for the file. Insert a disk with enough space and press a key. It is advisable to use blank disks for creating new files on to make sure there is enough room.

After this you will be asked whether you want to edit or display the file. Press E to edit or D to display.

### **Editing**

The first page (0) will be loaded ready for you. Your controls are detailed below:

C ..... Change foreground colour  
B ..... Change background colour  
T ..... Input text  
S ..... Save page  
L ..... Load page  
RETURN ..... Move cursor down to start of next line  
Cursor keys ... Move cursor around the screen. The flashing block shows where the next character you place on the screen will appear.

To input text, tap T and enter your text. Take care to enter one line of text only.

The current page is shown at the top left of the screen, and the current colour at the top right (left hand digit = foreground; right hand digit = background). A list of colours is shown below:

0 - black	8 - flashing black/white
1 - red	9 - flashing red/cyan
2 - green	A - flashing green/magenta
3 - yellow	B - flashing yellow/blue
4 - blue	C - flashing blue/yellow
5 - magenta	D - flashing magenta/green
6 - cyan	E - flashing cyan/red
7 - white	F - flashing white/black

When saving a page, you will be asked for the page number. This allows the same page to be copied to several different numbers and each copy altered separately. This is useful if each page requires a particular graphic heading at the top.

### **Displaying**

When displaying an ElkFax file, you will be asked for start and end pages. Enter these and press RETURN. You will also be asked if you want to display the pages in a carousel. This means that the pages will automatically step through in sequence (e.g. in a window display). Once the display is going, you can type a page number to go to, or press any other key to step to the next page. If the carousel option is on, the page will move to the next one after a certain length of time (about 30 seconds) has passed.

A sample file (filename faxE) is supplied which allows you to get an idea of what ElkFax can do. To see it, load ElkFax and press D for display. Enter the first page as 0, the last as 3 and Y to the Carousel? prompt.

### **Mode 7 Emulator**

This program, for 64k Electrons only, allows MODE 7 displays to be shown in real time on an Electron. It will work with most correctly written BASIC or machine code programs and provides a complete emulation of all standard teletext control codes. Fantabulous!

# MONKEY NUTS

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Overhead Maze Game  
Author :  
Standalone Release(s) : 1988: MONKEY NUTS, Bug Byte, £1.99  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : BUG BYTE, Liberty House, 222 Regent Street, LONDON W1R 7DB  
Tel: 01/439 0666  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"Collect the fruit, find your way around the maze and watch out for those arrows. A fast and addictive game that'll drive you bananas!!"*

Koney the Monkey is very greedy and wants to store up his house with fruit. However, he discovers, much to his dismay that it is not as easy as it seems and there are many obstacles that stand in his way.

Koney must first collect a banana, carrot, grape and a pineapple from each corner of the screen. This is done standing either side to the left or the right of the piece of fruit. Once all four pieces of fruit have been picked up, the door of the house opens and Koney can enter and place the fruit on one of the green tables.

To make things difficult there is a maze which can take one of four configurations, chosen at random and also arrows that fly around. If Koney is hit by an arrow or if the timer reaches zero, he will die. A timer counts down from 999 to zero and when Koney collects or places fruit in his house then the timer reading is added to the score and the timer is reset to 999.

When fruit has been placed on all four tables in the house (a 'Full House') then a bonus of 1,000 is added to the score and the player gains an extra life (but only if one life has already been lost).

# MONSTERS

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Platform Game  
Author : Tim Dobson  
Standalone Release(s) : 1983: MONSTERS, Acornsoft, £9.95  
Compilation Release(s) : 1988: ACORNSOFT HITS 1, Superior/Acornsoft, £9.95  
1990: PLAY IT AGAIN SAM 11, Superior/Acornsoft, £9.95  
1990: PRES GAMES DISC 4, PRES, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+, Master 128  
Supplier : ACORNSOFT, 4A Market Hill, CAMBRIDGE CB2 3NJ  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Pursued by monsters along walls and up and down ladders, your only hope of survival is to trap them in holes which you dig in their path. If a monster falls in, the hole must be filled in completely or the monster will crawl out.

Monsters can be killed in one of two ways: either by falling through holes which you dig and fill, or by being hit by monsters from above. If a monster is hit by a falling monster, both die. If you manage to kill all the monsters, you graduate to another screen.

The longer you survive, the more you can score as the monsters vary and become more devious. Whereas RED monsters only need to fall through one level, GREEN monsters must fall through two levels and WHITE monsters must fall through three levels before they actually die. If they fall through more than the minimum number of levels, then your score will be even higher.

From the second screen onwards, any RED or GREEN monster that is allowed to crawl out of a hole, mutates into a GREEN or WHITE monster respectively.

Quite an exhausting business, so keep an eye on the oxygen level which drops during each screen and eventually runs out, whereupon you will die. You have three lives, however, and can earn another one by scoring 3,000 points.

Sounds can be turned on and off with S (Sound) and Q (Quiet). ESCAPE escapes from a game.

## Game Controls

Z - Left, X - Right, : - Up, / - Down, D - Dig, F - Fill

Standard joystick movements apply. To dig, hold joystick in down position and press fire button. To fill, hold joystick in up position and press fire button.

## Scoring

Monster	Monster Falls Through				
	One level	Two levels	Three levels	Four levels	Five levels
RED	100	200	300	400	800
GREEN	-	300	500	700	1,500
WHITE	-	-	700	1,000	2,000

If you score 3,000 you earn an extra life.

**Instructions' Source** : ACORNSOFT HITS 2 (Superior/Acornsoft) Inner Inlay

### **Review (Electron User)**

In MONSTERS the screen becomes a pattern of walls and ladders, along which you, in the guise of a little animated man, are chased by a series of colourful monsters. You've only got three lives and every time they catch you, you lose a life. To make things more difficult, while you're dashing along the tops of the walls and running up and down the ladders your oxygen supply is running out.

You have to destroy the monsters before that happens, and the only way to do this is to dig a hole in a wall, lure the monsters into it and fill it in quickly before they climb out. However, as soon as you get rid of one set of monsters, they're replaced by another lot of a different colour.

It gets faster and faster and more and more fun. The graphics are excellent and the instructions easy to follow. It's also compulsive, making you ask for the notorious "one more go". You could say MONSTERS grows on you.

Peter Gray, ELECTRON USER 1. 1

EUG #48 (PRES GAMES DISC 4)

# MOON BUGGY

*Professional, Originally Released On Cassette Only*

Game Type : Arcade; Scrolling M/code  
Author : T. & M. Monkton  
Standalone Release(s) : 1985: MOON BUGGY, Kansas, £3.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : KANSAS CITY SYSTEMS, Unit 3, Sutton Springs Wood,  
CHESTERFIELD. Tel: 0246 850357.  
Disc compatibility : CDFS E00, DFS E00

## Instructions

Extra Moon Buggy for every 10,000 points scored.  
Bonus awarded for every completed mission.  
Jump or shoot rocks or tanks.  
Watch out for rocket silos, tanks and UFOs.

## Game Controls

Z - Left, X - Right, <RETURN> - Fire, <SHIFT> - Jump, Q - Music On/Off

**Instructions' Source** : MOON BUGGY (Kansas) Opening Screen

## Review (EUG)

The boxes and inlays to all of KANSAS CITY SOFTWARE's games (being simply a filled-in coloured box, the words "Micro Computer Software" and the title of the game only on the spine and cassette itself) would certainly not sweep the board at the Fashion Awards. Plus, contrary to some ELECTRON USER reviews complimenting them on their "model" instructions, each of the KANSAS titles at EUG HQ contains none at all; frequently they merely flash up on screen during loading. As all were mail-order only though, it's not difficult to see why they remain so few in number and are now so collectable. With such little effort made to explain what to do, if you'd originally bought one and not been able to figure it out, would you have bought another?

MOON BUGGY is one of KANSAS' most famous titles and is a Mode 2 "navigate the landscape and shoot away the obstructions and overhead flying nasties" scroller. After two loading screens, explaining the keys required and brief instructions, the very top of the screen shows a row of zeros and a number representing your lives in a customised font. The rest of the screen, from the side-on, shows a blue mountain range reaching halfway up the screen, your green multi-coloured Buggy in the foreground and the red terra firma it sits upon.

In the Electron's high resolution Mode, graphics can appear 'chunky' unless a lot of care has been taken with them. MOON BUGGY is by no means the worst offender but some of its elements do suffer from this appearance and the yellow surface of the red moon (?) is bumpy in a strangely 'squarey' fashion. But the Buggy and backdrop sprites are of a higher quality and rendered in an attractive number of colours.

To get started you must "hit a key" and doing so begins a very slow trundle accompanied by a horrendous series of blips that are quite evidently meant to be a backing tune. Although it is the background and red foreground that, by its "shifting" from right to left, gives the most impression of movement, you can move within the confines of the present screenful with the Z and X keys, jump with SHIFT and fire with RETURN. Unfortunately all of these actions are equally as slow.

The aim of the game is apparently to get as far across the Moon as possible. This is about as boring as it sounds - with the obstacles hindering your progress for the most part being holes of various sizes on its surface. On starting the game, you will trundle along for almost a half minute before even meeting the Entering Stage A sign. Ho hum!

Your next exasperation comes with the leaping of the holes themselves - it is nigh on impossible to gauge when to jump correctly and even the last pixel of your Buggy coming down over empty space results in the destruction sequence. One would assume from the mechanics of the vehicle that this should not be the case.

One also feels that the creators of this game have wanted to make a very professional-looking title. The backdrop mountains, for example, are not merely stationary but occasionally scroll at a different speed to that of the constantly moving foreground. By colour switching, as you complete each stage, more of the backdrop is lit up, illuminating a very nice scrolling picture. Such techniques with a 6502 processor were quite ahead of their time when this game was released [1985, fact fans - Ed] and it's notable that the game packs the whole Electron full of code. The constantly fluxating 'music' and speed of scroll when keys are pressed however show that playability has been sacrificed in order to achieve such presentation.

It should be explained however that, with SLOGGER's Turbo Board installed, worries on both the blippy music and fluxation factor can be virtually ignored, much improving the game. What is irksome even taking this into account though is that there is no saved high score facility! If the objective is to get as far as possible across the surface of the planet, the only way to measure how well you did is by the score you've racked up. But as soon as you lose your last life, the screen blanks and the game re-runs. Not only do you not get to enter your name but the machine simply forgets you'd been playing at all!

As the game continues, you have flying saucers above you to contend with as well as obstructions in your path to blast away. Pressing RETURN fires one bullet straight up and the other horizontally before you. But concentrating on the landscape, obstructions and baddies overhead is too big a job and, bearing in mind that it is quite common to see the Buggy explode when it seems it completely cleared the hole, the temptation is to reach for that BREAK key before too long.

The destruction of the Buggy is an interesting one. Should you make a fatal mistake, it changes into three red balls which bounce up and down several times and then disappear. Why? Well, it's just another attempt to throw out an impressive graphics routine, and another which fails due to slow speed of execution and fluxation of gameplay.

MOON BUGGY is not a good game on either the standard or the Turbo Electron because it is just too much damned hard work for no reward other than getting to see the background picture. The dubious pauses and collision detection employed make it a real nightmare on the lesser machine, giving it more the feel of a bad BASIC type-in SPROG clone than a professional release, despite all of its pretty graphics. It also takes a long time to load from tape and loads some sections in Mode 2, which causes real problems for the unexpanded machine loading from cassette. At a pinch, if you have a Turbo Elk with CDFS or DFS, you may like to give it a whirl. However, considering it was released before any of these hardware extensions were available, it has to receive a less than enthusiastic reception.

## Instructions

Your mission is to raid an Alien base to destroy its Central Nucleus. Firstly, however, there are several stages to overcome. You command a highly manoeuvrable assault ship equipped with a rapid-fire laser cannon plus a limitless supply of Tyrex bombs. Keep an eyes on your fuel level which is constantly decreasing. This can be replenished by blowing up the enemy fuel dumps.

Points are scored for destroying the radar scanners, rockets, ack-ack batteries and bouncing space-mines.

The mission, i.e. the level of difficulty, can be selected by pressing keys A to D. Also, you can jump to any stage in a mission by pressing keys 1 to 5.

## Game Controls

< - Left, > - Right, S - Up, X - Down, M - Laser, A - Drop Bomb  
2/1 - Sound On/Off, <ESCAPE>/<SPACE> - Pause On/Off

The move, laser and drop bomb keys can be redefined before the game starts by pressing <RETURN>. Press <SPACE> to start game.

**Instructions' Source** : MOONRAIDER (Micro Power) Inner Inlay

## Review (Electron User)

You are the commander of a squadron of three fast and highly manoeuvrable space attack craft, ordered to raid an alien base on the Moon. The aliens, understandably miffed at this, set up a series of defensive zones, each more difficult than before, which you must negotiate.

The first three screens depict hilly landscapes, thickly populated by radar stations, anti-aircraft batteries and missile silos. Also dotted about are enemy tankers - vital to your mission, for by hitting them with your bombs you gain a much needed boost to your fuel reserves. This is necessary to enable you to reach your own tanker, which is sited between stages.

Beware of the space mines that surround your tanker - these aliens don't miss a trick. Stages two and three have flying bombs and fireballs just to keep things interesting.

Stage four takes you over the highlands, sown with missiles and not an enemy in sight until the very end. If you miss this, it's curtains!

Refuel once more and you're through to the final obstacle - a long winding cavern

with sharp bends and vertical shafts. No problem with fuel here, because flocks of enemy tankers block your path. Having said that, none but the very skilled will make it through the cavern. The enemy base lies tantalisingly beyond, though some may never see it.

Good graphics, a limitless supply of laser bolts, bombs and poachable fuel make this a satisfying and compulsive game. Skilful use of the faster/slower key makes evasive action easier. Use of this key while refuelling means that you can take on more fuel and its use is vital while flying through the caverns.

One of the nice features of the program is you can skip stages by selecting games one to five and set the difficulty by selecting A to D.

A good value game, crammed with action and needing skill to test the most ardent arcade fanatic. A recommended version of the old classic.

Press 1 to commit suicide

**Instructions' Source** : MOUSE TRAP (Tynesoft) Inner Inlay

## Review (Electron User)

It is often said that there are only three or four types of computer game - mazes, ladders and levels, invaders and adventures, and that the majority of software fits into one of these categories. Tynesoft's MOUSE TRAP is nothing new and slots neatly into the second category.

Although the format is familiar and holds no surprises, it is, nevertheless, very well written, enjoyable to play and quite addictive. You take the part of Marvin the mouse, an athletic little rodent capable of leaping round the screen from platform to platform in his quest for cheese.

There are 22 different screens to master. On each, there are several different objects to collect, some looking remarkably like Christmas puddings. Somewhere on the screen there is a closed door, usually in the most inaccessible corner. Collect all the puddings and the door will open. If you can make it in time you can walk through to the next screen.

The difficulty lies in the placing of the levels and the various nasty objects which fly around the screen. There are teapots, cups and saucers, bottles of poison, witches on broomsticks, fireballs, bombs, fried eggs and many more. To make matters worse there's also a time limit, so if you hang about too long wondering which way to do you'll run out of time and lose a life. You have eight lives, but they disappear all too quickly.

MOUSE TRAP is an excellent multi-screen levels type of game. It is difficult so I wouldn't recommend it to beginners. But if you're looking for something more challenging than the usual run of the mill game look no further. MOUSE TRAP will keep you occupied for weeks.

## Review (Electron User)

I have found all the Mr Men programs to high quality and of real educational value, and MR MEN MAGIC STORYMAKER is no exception. This package, comprising two programs, is a real delight to use. It is designed to enable 3 to 6-year-olds to create their own stories on the screen. I must admit that I've only used it with very young children. However their enthusiasm was astounding.

The first program is picture and word based with six carefully staged levels. The second introduces the concept of sentences and is definitely for the older children. The first program can be used without words - the scenes are created using icons. Both programs enable stories to be created with six different settings and a choice of eight different Mr Men.

They can do eighteen different things and have six different moods. In addition the weather can be set to one of six choices. The graphics are very good and appear on the screen instantaneously. The different weather conditions are not particularly inspiring - the snow is very disappointing.

The package includes an attractive booklet which can be used by older children to help them enter words and design scenes.

Facilities that are available in the software include the ability to reduce the volume level of the sound or to switch it off completely. Thankfully, pressing <BREAK> does not destroy the program but simply returns you to the start.

I can thoroughly recommend this software to any parent wishing to introduce young children to computers. It can also be used by early readers as a source of reading material and the focus of written work. Full marks to the Mr Men!

### **Review (Electron User - Double Review Of MR WIZ and PERCY PENGUIN) - "Wizard Of A Game"**

The software company currently dominating the charts is Blue Ribbon with its budget priced re-runs of Superior Software's old titles. Two of the most popular are MR WIZ and PERCY PENGUIN.

The first is an arcade game in which you play the part of Mr Wiz, wandering about your garden eating cherries while avoiding evil gremlins. These nasty little critters can be flattened by dropping enormous apples on their heads. To do this you dig the earth away below the apples just as a gremlin walks underneath.

Extra bonus points can be gained by eating a magic mushroom, but watch out for the gremlins, as this makes them furious.

PERCY PENGUIN takes you to the frozen wastes of the North Pole where you battle the dangerous snobees. Blocks of ice form a maze on screen and you - controlling Percy Penguin - must try to line up three special diamond blocks by kicking them into position.

Ordinary ice blocks can be melted by pushing against them, or kicked away if there is nothing on the other side stopping them from moving. This enables you to rearrange the maze to your advantage.

Preventing you from lining up the diamond blocks are the snobees, evil weevils that track you down and gobble you up. Fortunately, a well timed kick will send an ice block to squash them flat.

The action isn't particularly fast, but it's quite difficult. The graphics are fairly ordinary compared with recent releases and there isn't much depth to the game. If you're looking for two simple, fun offerings at budget prices you won't go far wrong with these two from Blue Ribbon.

Roland Waddilove

**\*\*\* Second Opinion \*\*\* (Electron User)**

PERCY PENGUIN and MR WIZ are two typical budget releases. Once classic games, they are now considered to be quite simple both in gameplay and graphics. However, they are cheap and will provide several house of fun for all the family.

## Instructions

My Darling Jocasta,

How I miss you! It must be more than thirty years since we spent more than a couple of days apart. I woke up this morning longing to see you again, though its less than a week since we said our farewells. The flight was relatively uneventful; a little bumpy and I confess that I had to seek solace from a teeny glass of whisky. I do hope you'll forgive me.

I hope you'll find it in your heart to forgive me something else too. The tale that I was flying to Kashmir was a little - in these days I dare hardly say white - a little lie. I flew to Murdac. I know that both the fact that I have deceived you and that I have returned to the land of my birth will strike horror in your veins, but I beg you to understand that I had to come back. I just have to find out the truth about Murdac before it's too late.

Duessa met me at the airport. I still don't know how she got there, although for a fragile woman of indeterminate years, probably more than ninety, she is amazingly agile. I hired a car and together we drove to her cottage on the edge of the forest of Murdac for my first visit since childhood.

It was exactly as I remembered it: dark, mysterious, broody, even more isolated now that I'm old enough to appreciate it. We passed a few people on the road; drab, grey people who turned their eyes away yet still, from inside, watched us.

Duessa, on the other hand, always uses her eyes to look one straight in the eye. My fater, rest his soul, used to say she could read the runes at the back of one's brain on the blackest of nights, that she knew secrets that nobody else in the village did - like what it meant if you saw a rabbit hiccupping the night of the full moon. My mother told me that the reason he only lived to be 101 (when his father had reached 112) was because he had tripped over Duessa's cat when drunk. "She's a woman to be wary of," she had told me, "especially if you want to come home without growing an extra ear on the way. She can turn milk sour just by scratching the end of her nose."

This woman whom I'd grown up to think of as a witch lit the log fire while I perched on the end of her rank, rickety bed. Flakes of snow began to scour the window, like ice-cold eyes come to see who had dared step foot in Duessa's cottage. It was full of strange and interesting objects: glass apparatus billowing noxious vapours; a stuffed platypus; icosohedral prisms; many other curios. A cockroach would have scurried between my toes had I not been warming them above the now blazing fire.

Duessa was muttering incoherently to herself, busily looking for something. The only sign of her immense age, I observed, was this tendency to talk to one as if she was talking to herself. "This one looks brighter than the last," is what I thought her mumble. "It is time that the quest were done. The wizard needs help. But as for the manticore..."

These were the fragments that I heard, my darling Jocasta, as the old woman returned with a teapot. I'm telling you this exactly as it happened, like a story, for even though this is only the beginning, and even though it is happening to me, I don't really want to believe it.

"So you think I'm a witch?" she said. It wasn't a question, just something she said to the fire, to the teapot, perhaps to me. Just as I was wondering what to say in reply, and whether or not it was safe to accept what I thought was her gestured offer of a cuppa, she flooded the hearth with the contents of the pot and gazed at them raptly.

"If you want to find out the secrets of Murdac," she began, gazing at the two leaves swarming in the hearth, giving them a loose-toothed smile as if she'd said something and seen something that pleased her after all these years. She began to utter instructions, which I repeat here in case anything should happen to me. If it should, I want you to ask Jonathan to continue the quest. He's a good lad, despite the clothes he wears, with an adventurous soul and a warm, brave heart. I hope he's enjoying England.

"You go down a certain path at midnight on Halloween," she said. "You go down it until you come to a clearing. You draw a pentacle, and stand within it. You should PANGORY PANTHRODULAN -" She repeated these words thrice, as if they had some powerful significance. I repeated them to her, struggling to get the same intonation, images coming into my mind that getting it wrong might mean death by rotting in some gloomy dungeon for ten thousand aeons, tormented by creatures from the lower planes.

"It be fearful," she went on, her rasping, ancient voice only just audible above the cackling fire. "Ye certainly tremble. The trees move around you. You see a path that stretches for miles. You take it and the trees link arms behind you. There be hours of tireless trudging until you come across a beautifully laid-out garden and a small stone hut."

For some reason, mention of that hut made me sit up straight, cold sweat descending from my brow. Duessa continued to ignore me, dipping a skeletal finger into the tea leaves. She shoved some into the corner of her dribbling mouth.

"Ogres," Duessa added, her voice fading, drifting up the chimney like a spirit leaving a dying man. "And the cannibals," she mumbled. "And the Old Man of the Sea..." I hoped that she was just falling asleep, for there was one last thing I wanted her to do.

She was. With that Duessa began to snore, her near-transparent, bony skull resting on her flat, heaving chest.

She's been asleep for over an hour, my darling Jocasta, while I've been composing this letter to you. I'm leaving now to explore Murdac in the way she described. I shall leave a note beside Duessa, asking her to post this letter to you. I hope you'll find it in your heart to forgive me for misleading you about my destination.

Give my love to Jonathan. And don't worry. We'll be together again soon. My fondest Love and Deep Affection.

Your Ever-loving husband,

George

## Review (Electron User - Covering All Versions Of MUSIC MAESTRO)

Practising on musical instruments can be a bit of a bore. You sit alone in front of your music stand and listen to your own squeaks, scapes and bad notes. The aim of MICRO MAESTRO is to put some of the fun back into the business.

Three different packages are available and you can choose between the version for keyboard instruments, concert pitch instruments such as recorder, trombone or stringed instruments or the version for B flat instruments. These include trumpet, clarinet and French horn. Whichever version you opt for, you will get two cassettes plus a small booklet which tells you how to use the program. One cassette contains the software and the others has soundtracks of the music used. The tunes are Ghostbusters, Happy Xmas (War is Over), Chariots of Fire, Superman, Dress You Up and Hello.

Loading the software will put the first tune into memory. You can then select from a number of options. Firstly you may display the music on the screen one page full at a time. Next, the computer can play the music for you so that you can play along it. The musical notation is printed on the screen as you do this in a big, bold and clear form. It has its own way of scrolling which you soon get used to.

You can adjust the tempo so that it suits your stage of learning. You can also add a visual beat counter and a bouncing ball which marks the note currently to be played. With growing confidence you can turn the computer sound off and play the music yourself with or without the beat counter and bouncing ball. As a final touch you can play along with the audio cassette which has two versions of each tune, one being just the backing.

Pressing BREAK returns you to the main menu from which you can select a different piece of music in either treble, alto or bass clef. This is a worthwhile package. However, it is limited to the tunes supplied with it and the poor quality of the audio recordings rather spoiled the effect.

I would suggest these packages, which run on the BBC B and Electron, are more suited to the school music department, where many pupils could use them, rather than to the individual.

# MUSIC QUIZ

## ***Professional, Originally Released On Cassette Only***

Game Type : Quiz  
Author : Steve Race  
Standalone Release(s) : 1983: MUSIC QUIZ, Acornsoft/Ivan Berg, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : IVAN BERG, Dunluce House, 4-8 Canfield Gardens, LONDON  
NW6 3QT  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### **Instructions**

*"How does your knowledge of Music rate against a Grandmaster of the genre? This rewarding and compelling program for your BBC model B or Acorn Electron computer has been specially adapted from the Weidenfield Quiz book and will provide hours of edification and amusement for family and friends.*

*"Do you know who said 'My music is best understood by children and animals?' Or which love song mentions Woolworths? This amusing and fascinating quiz will challenge any music lover, whether your tastes are for Bach, Bizet, Beiderbecke or the Bee Gees.*

*"Music is one of a series of six Grandmaster Quizzes, in which you can pit your knowledge against a grandmaster of the subject. The writer's specialised skill and expert knowledge makes the quiz both challenging and exciting. Each program has thirty sections of ten questions - a massive 300 questions in all - and you can take the quiz alone, in competition with a friend, or in teams. You can choose a timed option too - and if you're getting too many of the answers right, your computer can reduce the time you have to answer!*

*"This pack contains one program cassette, one quiz data cassette and an instruction booklet.*

*"Steve Race, well-known British broadcaster, writer and musician, is the question-master and compiler of the popular television and radio quiz series 'My Music'. He is the author of 'Musician at Large: An Autobiography', 'Dear Music Lover' and 'My Music'."*

*'Questioning is not the mode of conversation among gentlemen,'*

*- Samuel Johnson*

### **Beginning A Quiz**

When the program is loaded, there is a short bleep and the program title appears. Press the SPACE bar as requested and you will be asked:

Do you want to do the quiz:

1. On your own
2. As two competing individuals
3. As two competing teams

Enter choice : ?

Answer the questions as prompted by typing in your response. Press <RETURN> when you have completed each entry.

The main menu will now appear and the thirty quiz titles are displayed on two screens. To move from one screen to another, type 0 and press <RETURN>. Select the quiz you require, type its number and press <RETURN> then remove the program cassette from the deck and insert the data cassette when prompted. Make sure that the coorect side of the cassette is uppermost: quizzes 1-16 are recorded on side 1

and 17-30 on side 2. Press SPACE BAR as requested. When your quiz has finished loading, there is a short bleep. You are now ready to begin the quiz.

### **How To Answer The Quizzes**

Most of the quizzes start with a section introduction written by the author. To move on to the second paragraph, or to see the first question press <SPACE>.

If you request a time limit, a clock counts down in seconds in the top right-hand corner of your screen. If you do not enter an answer before it reaches zero, you receive no marks: if two teams are playing, the question is offered to the opposition. However, you are allowed to complete an answer which you started to enter within the allotted time.

To pass a question, press <RETURN>. A passed question will be offered to the opposition, if you are playing in teams.

Some questions may require you to refer back to the section introduction. Do this before you enter your answer by pressing the <ESCAPE> key. Pressing the <SPACE> bar will return you to the Quiz menu and your answers so far will be lost.

Some questions require several separate answers. When a) appears on screen, you enter your first answer, when b) appears, you enter your second answer, etc.

When you have given the answer and pressed <RETURN>, the author's answer is displayed. Compare the answers and decide how many points you should have. You can enter 0 if you are completely wrong, 1 if you are halfway there, and a maximum 2 points for a completely correct answer. Type in your score as requested. When you press <RETURN> the next question appears.

At the end of the quiz, the final scores and the total time taken to answer the questions is given. In the case of a draw, the contestant with the shortest time will win.

If you decide to try another quiz you will be returned to the Main Menu. You can run the same quiz again simply by re-selecting its number: it is still in the computer's memory. If you do not wish to try another quiz, the program will end.

# MYOREM

*Professional, Originally Released On Cassette Only*

Game Alias : RICK HANSON 3  
Game Type : Text Adventure  
Author :  
Standalone Release(s) : 1985: MYOREM, Robico, £9.95  
Compilation Release(s) : 1986: SAGA OF A SPY, Robico, £24.95  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : ROBICO, 3 Fairland Close, Llantrisant, MID GLAMORGAN CF7 8QH  
Disc compatibility : Unknown

## Instructions

Instructions currently unavailable.

## Review (Electron User)

During the past fifteen months, WHEEL OF FORTUNE, WOODBURY END and RICK HANSON have been battling it out for the honour of being the number one adventure program available for the Electron. Now there is a new pretender to that crown.

You begin the adventure in the now familiar role of super spy Rick Hanson and in a strange predicament: "Gazing around, you see that you are in the south-east corner of a large dusty arena, bound to a study post by thick ropes. Smooth stone walls, ancient and yellowing, surround you, reflecting the sunlight into your eyes. You are choked by the gag pushed into your mouth minutes before. You can say nothing. You only have your thoughts."

You can't move, shout, twitch or even smoke a last cigarette - all you can do is think. That is the crux of your success or failure. "You close your eyes and the memories come streaming back to you...your mission to lead a coup against a South American junta...that abhorrent prison...your evasion of the soldiers and eventually your leap for cover into the gaping blackness of the ditch."

The atmosphere created by these memories is such that it will transport you into Rick's psyche. I won't give away any more of the plot as Robico is offering a hundred pounds cash prize to the first person to complete this adventure. So if you want that prize, you will have to earn it.

The program accepts multiple statements such as: "Get all the pens except the red one and write with the black one." This is a welcome relief from the all too common "Get pen" maximum allowed by most adventures.

As with all Robico adventures, MYOREM is packaged in a professional manner with full game details, an Adventurer's Notebook, and an envelope for obtaining limited hints from Robico for the less intrepid adventurer.

MYOREM is definitely the best text adventure I have yet seen for the Electron. Its evocative descriptions and superb plot must make it a classic addition to any discerning collection - and you don't need to have played its predecessors to enjoy its richness. Buy it - you won't find better.

# MYSTERY OF THE JAVA STAR

*Professional, Originally Released On Cassette Only*

Game Type : Text Adventure With Wire Frame Graphics  
Author :  
Standalone Release(s) : 1985: MYSTERY OF THE JAVA STAR, Shards, £8.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SHARDS, 189 Eton Road, Ilford, ESSEX IG1 2UG  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Comprehensive four part educational adventure. Ideal fun for all the family. In high resolution graphics and text."*

100K adventure packed with puzzles, challenges and interesting facts. With three levels of difficulty and a score table at the end.

You have discovered an old map and a ship's log book indicating the existence of magnificent treasures (including a mysterious Java Star) aboard an 18th century sailing ship that sank in the Caribbean. You must organise an expedition, gathering resources and information, before making your perilous journey across the Atlantic...

## The Mystery Of The Java Star

This is an adventure in four parts, each of which loads separately. You may only progress to Part 2 when Part 1 has been successfully completed, and similarly with subsequent parts. You may, however, save the completion of Part 1 and/or Part 2, and start the adventure again from either of these positions on a later occasion. To do this you will need a spare blank cassette to act as the 'save tape'.

There are three levels of difficulty for the adventure, from which you choose one at the outset, and there are three different locations one of which is chosen at random, so that you are likely to undertake different adventures on each occasion you play.

The purpose of the adventure is to find the wreck of a ship which sank in 1767 in an unknown location, to search the wreck and recover a quantity of gold and a mysterious ruby called the Java Star, which has some strange properties. You finance your expedition with a sum of money at the outset and, as you spend money as you go along, more if you need a lot of help and less if you are more skilful and independent. In Parts 1 and 2 you have to gather together information and a map, and a notepad is useful to record the information as you assemble it. In Part 3 you have to use this information to locate the part of the world in which the ship was sailing, and then find the island near which it sank. In Part 4 you must find the location of the wreck, and then, using diving equipment which gives you enough air for ten minutes per dive, make a real time search of the wreck. You must take care not to run out of air before getting back to the surface for a new tank or to let yourself be trapped below decks by the hatches closing behind you.

If you find the ruby, you then have to make some decisions to solve the mystery. At the end of the game, scores for your performance in the skills used at various stages of the adventure are given.

The action codes used for playing each part are set out below.

## Action Codes

### Part 1

### **Bristol**

Sections 1 and 2

PRESS Letter (A to F) followed by  
Number (1 to 7) for each pair of sections to be exchanged  
H for Help

### **Part 2**

#### **London**

PRESS SPACE to identify location and stop the running menu.  
Also to restart the menu.

### **Part 3**

#### **Map**

PRESS Letter (A to K) followed by  
Number (1 to 9) to identify area to be searched.

### **Islands**

PRESS C - to continue.  
R - to change orientation,  
D will appear alongside R.  
N, S, W or E for direction towards which you want to fly.  
Z - to enlarge - followed by Number of Island (1 to 4).  
F - to signify FOUND.  
M - to examine map.  
R - to return from map.

### **Part 4**

#### **The Island**

PRESS ARROW KEYS - to move boat.  
SPACE - to identify close objects.

#### **The Wreck**

PRESS ARROW KEYS - to move diver (red cursor).  
SPACE - to identify close objects - ? - requests an action.  
U or D - for up or down steps.  
U - if on top deck, return to surface.  
O - open (Most objects have to be opened before contents can be shown).  
C - continue.

#### **If the diver is at the surface,**

PRESS S - to stay.  
D - to dive again.

**Instructions' Source** : MYSTERY OF THE JAVA STAR (Shards) Inner Inlay

### **Review (Electron User)**

This is an educational adventure in four parts. The purpose of the game is to find the wreck of a ship which sank in 1767. You then have to search the wreck and recover its cargo of gold. You are also seeking a ruby called the Java Star which is reputed to have strange properties.

You take the part of an adventurer in Bristol who buys an old chest and finds the torn pieces of an ancient map and a page from a ship's log. Your first task is to rearrange the pieces into something recognisable. When you have done this you find that you have a map of the island where the ship sank. There is also information on the approximate position of the ship in relation to the island at the time it sank.

You then load in the next program and find yourself in London seeking more information, such as ship's destination, weather conditions at the time and cargo manifest.

On completing this stage you jet off to the Caribbean to continue your search. There you check various islands until you find one nearest the map outline.

Now comes the final part of the game, where you have to use the page from the ship's log to locate the wreck. I failed dismally. Whatever I did, I couldn't find that wreck. I suppose that adage about teaching old dogs new tricks applies to sea dogs as well!

As I said, this is an educational program but, above all, it's fun! There are three skill levels and despite the fact that I stayed on the easiest one that map was different every time. An excellent educational program with something of interest to kids of all ages, including big ones.

Merlin, ELECTRON USER 2. 5

## Review (EUG)

With its title, accompanied by a box illustration of a model ship in water, one would assume the Java Star to be the vessel of the name. Not so. In fact, the adventure reveals that Java Star is a precious ruby the "size of a pheasant egg" that was lost en route from Cayenne, South America to Kingston on 16th September 1767. Its new home is a sunken wreck, the Sea Witch, beneath the Atlantic Sea. Intriguingly, you are invited to investigate all the elements of this last voyage then finance a one man mission to get your greasy hands on its secrets.

As in Shards' PETTIGREW'S DIARY, you are presented with a self-described epic adventure written in BASIC which loads in a number of parts; in JAVA STAR, this is four. "Epic" connotes in both that locations in separate countries must be traversed to complete them and the Elk versions are all fully compatible with the rest of the 32K BBC series.

If you were around schools in the mid-Eighties, you'll remember a variety of BBC only Mode 7 'adventure' games constructed in such a way as to be educational (eg. LITTLE RED RIDING HOOD, MAGIC GARDEN, WAGONS WEST) which loaded from 5.25" disk(s) - which only one teacher knew how to <SHIFT><BREAK> up! All such games usually had factors in common: The <BREAK> and <ESCAPE> keys were well protected so hands unaccustomed to the keyboard didn't ruin a session tapping them, games were simple and had all instructions on screen, lots of use was made of colour and sound and it was not possible to 'die' but only to fail by not noting or remembering info from ONE part of the game in a subsequent part.

Generally, this meant these games were intended for a young audience equipped with official photocopied log-books, or at the least a paper and pen. The relevance of all this history is that JAVA STAR is somewhat of a game of this age but set in Modes 1 and 5 instead of 7. You must equip yourself with a notebook and biro and be prepared to complete a series of puzzles before progressing on the search.

Earlier, the word adventure was used to describe this but it has **none** of the traditional elements (Unlike PETTIGREW where section two needed commands like NORTH, EAST, etc). You progress from location to location via reassembling graphical maps, answering questions correctly, buying an aeroplane ticket and choosing to cruise around the map's island. It all takes time; typically on tape over two hours. Half this with disk.

Although this all sounds complicated, it isn't because in all of the first three parts of JAVA STAR, the player is prevented from making any heinous mistakes by the program itself. In Bristol, which is where you discover the map indicating where the Sea Witch floundered - although what it's doing there is anybody's guess - you must simply piece it together to move onto London (and you can see the solution by pressing H).

In London, the nicest part of the game, you can visit many places of historical interest and, as well as discovering a lot about the weather and course of the ill-fated craft to transcribe, visit places such as the Old Bailey, the Stock Exchange and Buckingham Palace. After a set number of excursions, you need to gain a high grade on a quiz and buy a ticket to Jamaica to proceed.

A map of South America begins part three, presenting one relevant and many

irrelevant locations where you can begin to search. The correct co-ordinates are obvious if you've studied the earlier parts and "that seems like a good place" confirms them when entered. Unfortunately, trying elsewhere isn't accepted and the map remains until said grid coords are entered so, although the map detail is accurate and nicely drawn, it is otherwise a pointless scene. Fortunately, the bulk of the scene involves selecting an island to investigate. The screen shows four at a time, tilted through 90 degrees to make comparison with the map more difficult. The instructions for this part are meagre and it is not nearly as hard as it at first seems.

First, you need an isle with both a town and lake so discount any without. Then survey any island looking vaguely like the map by pressing F. I spent ages surveying different islands and discrediting any that even had one discrepancy such as "The bays are not opposite" fearing landing there would waste funds. Eventually I decided enough was enough and replied Y to the "Land?" prompt only to find that as there were less than SEVEN faults, I had probably chosen the correct one, and, when the island loaded, it was suddenly IDENTICAL to the map!

However, just when you're thinking JAVA STAR must be ridiculously easy, you come to the search of the island which is simultaneously very difficult and mindnumbingly snoozeworthy. The movement routine from PETTIGREW (that everyone hoped never to see again) is back! The area around the island is huge and moving the boat through it takes far, far too long pixel by pixel. Now with a confusing map and yrds scale to complicate the search further, selecting a location is pure guesswork and after a few unsuccessful dives, which again take too long, all your dosh will disappear. The tape version is bugged here too and locks up without displaying your score due to a combination of a CHAIN" " command and ON ERROR RUN statement.

Make the wreck and the added factor of a time limit and stupid controls worsen the affair still! Only with a lot of patience, and repeated dives is it possible to get the ruby and gold out. More players will tire of the slow movement long before they even find them.

JAVA STAR is a very early game, released in 1984, and is one on its own with an idea that is quite sound. Indeed, elementary mistakes like not clearing the keyboard buffer properly can be forgiven compared with its inventive and experimental content. It's also clever that a player's finances are limited, and shopping around in London can both deplete and increase them. But counter-balancing this are some irritating touches like the map which changes depending on the screen Mode - and senseless repetition of the "We Are Sailing" music in each part.

Were part four not so out of sync, slow, bugged and boring, this would be a viable educational title with which children (as it does protect the <BREAK> key) and adults could while away an hour or two. Its score breakdown on the disk version also makes for an interesting read. But, ruined by part four, it still falls into the same league as PETTIGREW. Hence, it is not recommended and will probably very rarely be completed.

Dave Edwards, EUG #52

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade; Platform Style  
Author : Peter Scott  
Standalone Release(s) : None  
Compilation Release(s) : 1991: PLAY IT AGAIN SAM 15, Superior/Acornsoft, £12.95  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : CDFS E00, DFS E00

### Instructions

The objective of the game is to construct the Flynche machine by collecting all 20 parts (light blue in colour), whilst avoiding or shooting aliens.

There are springs to bounce on, lifts and extending platforms to stand on and teleport machines (marked with a T) to transport you from location to location. When using a teleport machine, you must enter the number of the teleport machine to be transported to - so you must have been there before (try 21151 to get you started).

The red bar at the top of the screen indicates your energy; the yellow bar your laser gun energy. You start with 5 lives. If you score above 1000 points you will enter the high score table; enter your name when prompted.

### Game Controls

Z - Left, X - Right, <RETURN> - Jump, <SHIFT> - Fire Laser Gun  
? - Teleport, <SPACE> - Pause, Q - Quit Game (When Paused)

N.B. When using a BBC Master computer, always switch off the computer after playing the game before loading any other program.

## Instructions

You are Sleepy Joe trying to collect enough keys to escape NIGHTMARE MAZE.

When you have the correct number of keys you must then get to the door. Trying to prevent you from completing your task are the monsters of the Maze...and a time limit of 60 seconds. If you drink the cup of black coffee, you wake up for a few seconds making the monsters disappear, but they'll be back!

## Game Controls

A - Up/Left, Z - Down/Right, \* - Up/Right, ? - Down/Left  
<COPY>/<DELETE> - Pause/Restart, Q/S - Quiet/Sound

**Instructions' Source** : NIGHTMARE MAZE (Blue Ribbon) Inner Inlay

## Review (Electron User)

NIGHTMARE MAZE, written by Mike Williams, is a descendant of Pac Man, which was popular ages ago in the arcades. Although it is easy to see the origins, the game is completely different to play. Instead of running around the maze in between the walls, you actually run on top of them. They are drawn in perspective, as if you were looking down at an angle.

There are four screens, each with a different maze and monsters. The first is inhabited by springy things, the second by bouncing balls, the third by deadly frogs, followed by hungry hoppers. I can't confirm the last two as I always got bounced on the second screen.

The object of the game is to collect a number of keys which appear around the maze. On acquiring the last you can unlock the door which leads to the next screen.

The inhabitants of the maze don't chase you, they move in fixed patterns. The routes taken are sufficiently complex as to make it very difficult to remember more than the first few.

Help is at hand in the form of a cup of black coffee. Drinking this awakens you from your nightmare and the nasties disappear. You soon start to dream again so you must rush round collecting the keys as fast as possible before they reappear.

The graphics are excellent and the animation very smooth with good sound to accompany the springy/bouncy hoppers. Having said that though, I honestly didn't enjoy playing this game, the reason being that it is just too frustrating, Maybe I'm just too old! Not one in three weeks have I made the high score table, not even the bottom position.

The man is difficult to control when the monsters disappear, often running straight

past the path you wish to turn and run along, and when you are caught, all the keys you have so painstakingly collected are lost and you must start again.

This game is for advanced arcadians only, providing an exciting new challenge to their skill. Us ordinary mortals haven't a chance, it really is a nightmare!

Roland Waddilove, ELECTRON USER 2. 3

# NIGHTWORLD

***Professional, Originally Released On Cassette Only***

Game Type : Graphical Adventure; Very Weird  
Author :  
Standalone Release(s) : 1984: NIGHTWORLD, Alligata, £8.95  
1989: NIGHTWORLD, Alligata, £2.99

## Game Features

Time Clock :Sun \* Lee Lance the human \* Moon \* Lee Lance the gargoyle \* Energy Level  
\* Secret Passages \* Secret Rooms \* Flying Harpies \* Mysterious Objects \* Deadly  
nasties \* Wall Climbing Abilities

## Instructions

You are Lee Lance the explorer. Find your way through the many vaults of this cavernous underworld collecting the objects that will lead to the final escape route and the magical golden fence. Beware the flying harpies as they drain your energy level. It can be replenished. How? That's for you to work out.

As the day passes to night your body transforms from human to creature and you take on the mysterious powers of a mutant gargoyle.

## Scoring

A percentage of how far you've gone is shown when your energy runs out.

## Game Controls

Z - Left, X - Right, <SHIFT> - Jump, <ESCAPE> - Re-run  
P/R - Pause/Restart, Q - Start Game  
Joystick Compatible

**Instructions' Source** :10 COMPUTER HITS (Beau Jolly) Inner Inlay

## Review (Electron User)

NIGHTWORLD is an arcade style adventure game where you guide explorer Lee Lance around the different screens by jumping on to platforms and avoiding the nasties flying around at random. Exits are at first quite obvious but as the game progresses you have to find hidden passages which take you on to further screens. The solid triangles help you increase your score, but beware, greed is often fatal.

The format is not new but there are some unusual additions. After a set amount of time you are changed into a gargoyle. This gives you super powers, immunity to the nasties, and the ability to jump twice the normal height.

Instructions are brief and concise. I think a few hints and tips on where to look and what to look for would have been an advantage. As it is I have not yet been able to find out how to replenish my energy.

I was not addicted to this game, but if you like arcade adventures you will find it interesting and different.

# NUMBER BALANCE

*Professional, Originally Released On Cassette Only*

**Disc compatibility** : ADFS 1D00, CDFS 1D00, DFS 1D00

NUMBER BALANCE

Two Educational Programs on cassette for the Acorn Electron

Copyright (C) E.S.M. 1984

ACORNSOFT Limited, Betjeman House, 104 Hills Road, Cambridge CB2 1LQ.

Telephone: (01223) 316039.

ESM, Duke Street, Wisbech, Cambs PE13 2AE, England. ES111E SLE08

Authors: Ann and Russel Wills

This pack contains two programs on cassette. All instructions are contained in the programs and are shown on the screen. These are pictorial programs for practising simple mathematical operations for numbers 1 to 99. The object of the exercise is to make a balance level by inputting the correct missing number into one side of a simple equation. Incorrect answers will tilt the balance in the appropriate direction; after two incorrect attempts the program responds with the correct answer.

The programs offer a high degree of user control over the exercises presented to the child. "Teachers' Notes" which appear at the beginning of each program give the user the opportunity to set the layout, difficulty, content and timing of the exercise before the child begins. Once these parameters are set, the program can be used by up to 20 children and their results will be stored for later recall.

## About The Authors

Russel Wills began his career in computing in 1966 when he joined IBM as a lecturer. He then worked in Africa for five years as a systems analyst returning to the UK in 1972 to take up his present post as lecturer in computer education in Dundee.

Ann Wills is head Teacher of a primary school.

# NUMBER CHASER

***Professional, Originally Released On Cassette Only***

Game Type : Educational; Ages 5-12  
Author : Dan Walton  
Standalone Release(s) : 1984: NUMBER CHASER, Acornsoft/ASK, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : A.S.K., London House, 68 Upper Richmond Road, LONDON SW15  
Disc compatibility : Unknown

## Instructions

*Since calculators have become such common household objects, fewer people now resort to mental arithmetic. Children brought up on calculators may never acquire a feel for numbers. When multiplying using the calculator, they have no idea what size answer to expect, and may well make a mistake, arriving at a value that is much too large or too small without even realising.*

*Number Chaser is a race game, featuring advanced graphics and a choice of four different vehicles, corresponding to four levels of difficulty. You race against the computer's car, all the time estimating the answers to a series of multiplication sums. You may be able to win the race, but can you make it to world champion? Ages 5-12.*

## Introduction

Calculators are no inexpensive items and most households will have at least one. As a result, fewer people now resort to pen and paper, or do arithmetic in their heads. This means that children are less likely to develop a "feel" for numbers. There are particular problems with multiplication, in that the child may have no idea of what size the result is going to be. An extra nought inadvertently introduced may mean the answer is ten times larger or smaller than the correct one, and this may pass unnoticed.

Number Chaser is designed to develop those skills of estimation that children may not acquire when frequently using a calculator.

The game is a race between the player's vehicle and an opponent's vehicle (which pursues the former). In fact both vehicles are controlled by the player's performance: Enough correct answers, and the player wins the race, too many wrong answers and the vehicle behind will crash into yours.

## In all A.S.K. programs

<RETURN> Remember: once you have typed in your response a program will  
< icon > deal with it until you press the <RETURN> key.

<ESCAPE> You can always return to the beginning of a program by pressing  
< icon > the <ESCAPE> key.

<DELETE> You can rub out anything typed in, before the <RETURN> key is  
< icon > pressed, by using the <DELETE> key.

<\_Hand\_> Means : Please press the space bar to carry on with the program  
< icon >

< ? > Means : the program did not expect the response it has just received. Perhaps there was a typing error? In any case, to carry on, just press the space bar and try again.

<CTRL> All of our programs incorporate sound. There are various volume levels - holding down the <CTRL> key and pressing the <S> will change the level - keep pressing the keys until you are happy with the volume.

Note: The program will not run on computers that have 0.1 operating systems.

### How to use the program

When you have loaded NUMBER CHASER, the program will start by asking you to choose what sort of vehicle you want to race with. The bicycle will give you the easiest problems and the racing car will give you the hardest. If you haven't played before, then it's best to start off on a bicycle. Choose the vehicle you want by pressing a, b, c or d and then the <RETURN> key.

You are now asked if you want to play using the keyboard or a joystick. Decide which you want to use, press 1 or 2 and then the <RETURN> key. if you are using the joystick, remember that it must be plugged into the "analogue in" socket in the back of your BBC.

The screen now shows a four lane race track. There are two vehicles on the track, one behind the other. The spacebar symbol appears. Press it, and you will see a multiplication sum at the top of the screen. Just below it are four numbers, one above each lane on the race track. These are the choices you've got as possible answers to the sum at the top. None of them are the correct answer, but one is closer to the correct answer than the other three. Estimate the answer, and decide which of the four numbers is closest to it. Now you must move your vehicle into the correct lane. If you are using the joystick move your vehicle by going left or right. If you are using the keyboard, just use the Z and X keys (left and right) to move the vehicle from lane to lane. As you move across the track, you will notice that the other vehicle is following you.

After a pause, the correct answer will flash. If your choice of the nearest answer was right, the speed of your vehicle will increase, and you will get further ahead of the other vehicle. You will now see another sum appear. Estimate the answer and choose the number closest to it, as before.

If your answer was not the nearest one to the sum's solution then the spacebar symbol appears; this will give you a chance to see what the nearest number to the sum's solution was. Check what it was that you did wrong. When you are ready, press the spacebar and you will be given a new sum. Watch out though, because your vehicle will have slowed down, and the computer's vehicle will be catching up with you!

The race can end in one of two ways: either you win by getting your vehicle right to the top of the screen, at top speed, or the computer's vehicle crashes into you - if you have let it catch up with you. If you win, the crowd come up to you, clapping their hands. The spacebar symbol will then appear. Press it when you are ready, and you will see the scorecard. This will show you your average speed and the level you reached. Can you become a world champion on your class of vehicle?

After the race has finished, press the spacebar to return to the beginning of the game.

### Educational notes

Most work in school 'paper and pencil' mathematics schemes reward the child who can plod meticulously through the mechanics of number manipulation, without any real idea of what the final answer should be like. Estimation, on the other hand, requires a quick grasp of the essentials of the problem, and the ability to round off numbers correctly in order to calculate an answer which gives the child a 'picture' of the kind of number which is a viable solution. This is a very important, but neglected skill, as it is very difficult to implement in the classroom using traditional teaching methods. Number Chaser is a game which is designed to try and fill this gap and which is fun both at home and at school.

In the classroom Number Chaser should be used alongside traditional or computer aided methods of learning tables, as a valuable extension of the work. It will be found that many children will select this program as an enjoyable game to play in their free time, acting as an incentive for them to develop their tables knowledge and estimation skills outside of the classroom situation.

# NUMBER PUZZLER

*Professional, Originally Released On Cassette Only*

Game Type : Educational; Ages 5-12  
Author : Mike Thorne  
Standalone Release(s) : 1984: NUMBER PUZZLER, Acornsoft/ASK, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : A.S.K., London House, 68 Upper Richmond Road, LONDON SW15  
Disc compatibility : Unknown

## Instructions

The four games in NUMBER PUZZLER are an exciting way of improving your ability at addition and subtraction. Three of the games are like noughts and crosses, but with the numbers up to 9 or 99, depending on the level chosen. You can play against a friend or the computer; the skill comes in developing a winning strategy. In the fourth game, Magic Square, you have to fill a square with numbers so that the rows, columns and diagonals add up to the same number. A self test is also provided as a means of checking how much you've improved.

## In all A.S.K. programs

<RETURN> Remember: once you have typed in your response a program will  
< icon > deal with it until you press the <RETURN> key.

<ESCAPE> You can always return to the beginning of a program by pressing  
< icon > the <ESCAPE> key.

<DELETE> You can rub out anything typed in, before the <RETURN> key is  
< icon > pressed, by using the <DELETE> key.

<\_Hand\_> Means : Please press the space bar to carry on with the program  
< icon >

< ? > Means : the program did not expect the response it has just re-  
< face > ceived. Perhaps there was a typing error? In any case, to carry  
on, just press the space bar and try again.

<CTRL> All of our programs incorporate sound. There are various volume  
levels - holding down the <CTRL> key and pressing the <S> will  
<S> change the level - keep pressing the keys until you are happy  
with the volume.

Note: The program will not run on computers that have 0.1 operating systems.

## Introduction

The four games in NUMBER PUZZLER are an exciting way of improving your ability to do mental arithmetic. Starting with easy one digit sums like  $7 + 2$ , right up to monsters like  $47 + 35$ , you play against the computer or a human friend if one is around. The winner is the one whose moves have been planned the most carefully.

Three of the games involve a sort of combined bingo and numerical noughts and crosses, where you can decide whether you want to do either you want to do either addition or subtraction, or both at the same time. You can also decide whether to play with numbers just up to 9 or up to 99. The fourth game involves building magic squares, given a board and one or two starting numbers, by making all the rows, columns and diagonals add up to the same total.

Test Yourself. One of the options in Number Puzzler is a self test. You can use it to see how you're improving.

### **How to use it**

The program starts by asking you to choose which of five different games you want to play.

ADDITION, SUBTRACTION and ADDS AND SUBS are all games based on numerical noughts and crosses.

In MAGIC SQUARE you have to complete a grid of numbers by making the rows, columns and diagonals add up to the same total.

In SELF TEST you can set yourself a test in addition, subtraction or both.

Select the game you'd like to play and then read on:

### **ADDITION, SUBTRACTION and ADDS AND SUBS**

For each of these games you must now decide who is going to play and which board size you would like to play with.

If there is only one player, he or she plays against the computer (called Me on the screen).

The board, made up of squares, can be 3 \* 3 or 6 \* 6. On a 3 \* 3 board, the numbers you play with range between 1 and 9. On the 6 \* 6 board the numbers go up to 99 and the game involves playing four separate 3 \* 3 boards at the same time.

Having decided all that, you are now ready to start, and your board appears on the screen.

The aim: In each game, whether you are using a 3 \* 3 or a 6 \* 6 board, you have to get three numbers in a horizontal, vertical or diagonal line to win. The first player to win five games is the overall winner and the game score is shown opposite the players' names.

### **The rules:**

ADDITION. Press the <SPACE> bar to start. In the two boxes in the bottom left hand corner, two numbers appear. You can either use these two numbers as they stand, or the sum of the two numbers. For example, if 5 and 2 appear then the player can either enter the two numbers (5 and 2), or the number '7', in the boxes on the right hand side.

SUBTRACTION: Press the <SPACE> bar to start. A number will appear in the box in the bottom left hand corner of the screen. This number can be used as it stands, or can be split up into two numbers that add up to it. Thus 7 could be split into 6 and 1, 5 and 2, or 4 and 3, or could be used on its own.

ADDS AND SUBS. Press the <SPACE> bar to start. Two numbers appear in the boxes in the bottom left hand corner. In this game, both numbers can be used as they are, or they can be added together (as in Addition), or EITHER number can be split up (as in Subtraction).

### **How to play:**

There are two boxes below the board on the right hand side. The colour of these boxes shows whose turn it is. If Player 1's name is in yellow and the boxes are yellow, it is that player's turn; if the boxes are green, it is Player 2's turn.

Select your first number, type it in, and press the <RETURN> key. It will now appear in the first box. If you are selecting another number, type it into the next box and press the <RETURN> key. These numbers are entered on the board and it is then the other player's (or the computer's) turn.

If your addition or subtraction is incorrect, the ? sign appears. Press the <SPACE> bar and you have one more chance to get it right. If you get it wrong again then the space bar symbol appears, after which you lose your turn.

If you try and select a number already taken by the other player, the space bar symbol appears and you lose your turn when you press <SPACE>. (You can however select a number that you have already taken.)

### **Magic Square**

First, choose a number between 3 and 20. A 3 \* 3 board then appears on the display with a few numbers on it.

The aim is to fill all the other squares so that the total of each column, row and diagonal is the same - or as many as you can. When the square is completed the lines you got correct will flash and "Your Score" is increased for every line you got right.

The "High Score" shows how many points you have got so far in the series of three games - the aim is to make this score exceed 100 points.

At any time you can press the S key and the computer will show you a solution (but you won't get any points for it!)

### **How to play:**

Use the space bar to move the flashing cursor to the box you want to fill. Type in the number and press the <RETURN> key. Continue to do this until all the boxes are complete.

When you have finished, your score is shown on the screen. Press <SPACE> to return to the main menu.

### **Self Test:**

Type in the answers to the various questions you are asked and then, when you are ready to start, press <SPACE>.

### **Educational notes**

With NUMBER PUZZLER, children have to form a winning strategy and pursue this strategy using skills in addition and subtraction.

Because of the two - and very distinct - levels at which the first three games in Number Puzzler can be played, we have found the program to be of use with both infants and juniors. We have found it ideal to have two people working on Number Puzzler at any one time. They could be two children, or a parent and child. In the early stages they give each other confidence in using the program. Later the pairing can lead to conversation about addition and subtraction, and general strategy, and thus mathematical vocabulary gets exercised in a natural way.

The fourth game is Number Puzzler - Magic Square - involves decomposing a given number into three parts under varying constraints. All children will be able to experience some success with this game, but even the most able will be taxed by this program if large "magic numbers" are used.

Self test is included to allow children working on their own with the program to get some feedback about their addition and subtraction skills. Generally, schools have available more subtle and reliable tests than this. However, like all of the options, it is available for teachers to use within their own teaching styles.

# NUMBERFUN

***Professional, Originally Released On Cassette Only***

Game Type : Educational; Ages 5 And Up  
Author :  
Standalone Release(s) : 1983: NUMBERFUN, Griffin, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : GRIFFIN, Ealing Road, Alperton, Wembley, MIDDLESEX HA0 1HJ  
Disc compatibility : Unknown

## Instructions

*"Your children need as much help as they can get when learning basic arithmetic. NUMBERFUN is a cassette containing two computer programs, NUMBERFUN 1 and 2, designed to aid in teaching the concepts of addition and subtraction in a lively and motivating way.*

*Both programs allow you to choose the size of numbers you want to work with, up to 99, and whether you wish to practice addition, subtraction or a mixture of both. A running score total is displayed with correct answers rewarded and wrong answers penalised.*

*After 20 goes your final total is shown on the screen in a novel way and you may play again. Simply follow the instructions given in the booklet included and let NUMBERFUN provide hours of educational activity in an entertaining way."*

## NUMBERFUN 1

Press (and if necessary hold) <SPACE> to start. You will first be asked if you want sound; you should press Y for yes or N for no, followed by <RETURN>.

You will now have to enter the type of questions that you want to be asked. If you press +, the questions will be on addition only. If you press -, the questions will be on subtraction only. If you press M, the questions will be a mixture of both addition and subtraction chosen at random by the computer.

You will then be asked to enter the size of numbers you want to deal with. You must choose a number between 5 and 99 inclusive, type it in and press <RETURN>. Any attempt to enter a number less than 5 or greater than 99 will be ignored.

If you choose 20, for example, then all the numbers you have to deal with in the game will be in the range 0-20 inclusive.

You will then see (for a moment) a summary of what you have typed (e.g. Mixed, numbers up to 20).

## Playing The Game

A sum will be displayed using numbers within the limits you have chosen. The object of the game is to bomb the correct answer. Press <SPACE> to drop the bomb. If you hit the right answer you receive a reward, but if you miss or hit the wrong answer you get a penalty.

You have 20 bombs altogether. Throughout the game, the number of bombs you have left is shown at the top of the screen.

When you have had your 20 goes, your score is displayed. If you have gained 100 stars, which is quite a good score, 100 stars will be printed on the screen.

You may then choose to play again by pressing <SPACE>.

## **NUMBERFUN 2**

The operation of the program is similar in almost all respects to NUMBERFUN1. The difference is that instead of dropping bombs from a plane onto tanks, NUMBERFUN2 involves shooting firework rockets from a milk bottle to hit clouds.

Supplier : AUDIOGENIC, Winchester House, Canning Road, HARROW HA3 7SJ  
Disc compatibility : CDFS E00, DFS E00

## Instructions (Original Version)

*"OMEGA ORB - new improved brain-straining arcade adventure - with added shoot-em-up Blast and Zap! And brought to you in glorious BLIPVISION!"*

*BLIP, the bouncing Omega Salesdroid, has been transported to the high-tech mining complex of Mynix. Help him find pieces of core material with which to repower his crippled cruise ship. The lives of a thousand space holidaymakers are in your hands!*

*Omega Orb has everything! An orgy of exploration and mapping; Code-doors; barriers; lifts and mind-warping puzzles to solve; mindless zapping of hostile droids; 146 Blipvision screens of brilliant graphic detail; 32 objects; Interactive communication with computer network; Buying and selling of lives; And guest appearances by Head Maxroom - and SPRECO, star of the Thunderstruck series."*

## Prologue

Advertising has an unsavoury public image. Most people simply don't like salespeople harassing them to 'buy this' or 'try that'. So by the 23rd century, humankind had delegated that thankless task to droids - friendly, cute, bouncing droids. It was found that the public responded better to these droids than they ever did to the dubious looking characters in loud suits that we know so well.

The Omega 'BLIP' class droid was a successful class of salesdroid (BLIP stood for nothing in particular, but sounded nice to those who decided such things). In an effort to make these as nice as possible, some grain of personality was programmed into them. In certain circumstances this could lead to something approaching 'soul' developing.

BLIP-QE-875523 was a case in point. In his job of enticing holidaymakers to part with their hard-earned credits he was well liked by those aboard the interplanetary cruise ship, Cyplex. The seeds of personality had led over the years into this BLIP evolving from his hard-selling, blandly cute beginnings into a genuine, caring chap - so much that his bosses, the UniStrad Corporation, were seriously considering replacing him!

But one day while undergoing a routine recharge, images of death and destruction started flying through BLIP's internals. And, sure enough, these premonitions began to come true. One by one the vital computer systems of the Cyplex began to fail. The EnviroPuter struggled to keep functioning, and with a last surge of power, BLIP was told that it was up to him to save the crippled liner. The teleport system functioned just long enough for BLIP to be transported to the nearby planet Mynix.

## Game Overview

Our hero, BLIP, the bouncing Omega salesdroid, finds himself on the planet Mynix, a planet consisting largely of a high-tech, computer controlled mining complex run by droids. BLIP is armed with a defence laser, charged up with a finite amount of energy, and carries 500 credits. His task is to find twelve vital pieces of a

special material that can be used to replace the energy core of his stricken cruise ship and save the doomed holidaymakers on board. There are other objects that he can pick up which can then be USED via computer terminals to solve puzzles or get by obstacles. Only one object can be carried at a time, so they must be USED (including core pieces) or dropped before you can pick up another. Pick up an object by bouncing on it. (If you don't want the object, the next bounce will drop it.)

### Computers

The computer network of the complex still functions, so BLIP can use it to help him. To activate the network, bounce on the floor of the computer cubicle or pod, pressing SPACE. The first number shown is the number of the terminal you are currently accessing. It costs 100 credits to access a computer - if you don't have enough, you can't use it!

You can interact with the computer network by entering the following commands...

CORE	-	tells you how many piece of core material you have. If the readout is 100% then you have completed the game and saved the Cyplex!
INFO	-	gives percentage of game explored.
HELP	-	well...try it out a few times!
BUY	-	buy an extra life for 1000C.
SELL	-	sell one of your lives for 900C.
MAP	-	gives a grid of the complex - solid blocks indicate screens you have explored, or non-existent screens.
CODE	-	used at terminals 0 to 3 - gives a code which will open doors at terminals 16 to 19.
INPUT	-	used at terminals 16 to 19 to enter the codes given at terminals 0 to 3.
USE	-	will use the object you are currently carrying. 250C and score will result from correct use.
PORT	-	some terminals, 20 to 27, some marked with a T, will allow you to teleport to others. You must have previously enabled the teleport grid.
QUIT	-	to leave the network.

Incorrect instructions are simply ignored, as you are supposed to be a Class A computer literate reboundoid!

### More Vital Information

You start with five lives. Lives can be bought and sold. The droids that run the complex don't like outsiders plundering their energy sources. You can shoot them with your defence laser (gaining 5C for each hit). Some emerge from generators - you can stop this by shooting the generator itself. Some generators are impregnable - simply get by as quickly as possible!

Don't hit the magnetised generators - your energy will rapidly drain. Some of the floors and walls are also magnetised - watch out for them! Some of these can also be shot - this will be necessary to progress in certain areas of the game.

There are lifts which can be used - press SPACE when on lift to activate. Two of the lifts need to be enabled by USING special objects.

When the title screen appears, press any key to load the rest of the program.

### Control Keys

Z - Left, X - Right, <RETURN> - Fire (Uses a little energy)  
<SHIFT> - Hyperbounce (Bounces higher and faster)  
<SPACE> - Activate computer or lift  
S - Sound, Q - Quiet, <COPY>/<DELETE> - Pause/Restart  
R - Restart Entire Game

**Instructions' Source** : OMEGA ORB (Audiogenic) Back And Inner Inlay

## Instructions (Budget Version)

*"A GREAT arcade adventure from Peter Scott, one of the best BBC/Electron programmers of all time. Crammed full of puzzles and arcade action, OMEGA ORB will give you hours of fun as you explore its numerous locations in an attempt to replace the energy core of your stricken space ship."*

BLIP the bouncing droid, is on the Mynix which has been turned into a vast high-tech mining complex run by droids. He must find twelve vital pieces of a special material to replace the energy core of his stricken ship. Other objects can also be found, many of which can be used to further the quest, but only one object can be carried at a time. Pick up an object by bouncing on it!

Mynix operates a strict capitalist system where almost everything is for sale - even lives can be bought and sold! The droids that run the complex will be out to get you - get them first with your laser and you'll earn five credits for each. Some droids emerge from generators - shoot the generators to stop them. Unfortunately some generators are impregnable - get out quick!

Generators and some floors and walls are highly magnetised - touch them and your resources will rapidly drain away. Some floors and walls can be shot - this will be necessary if you are to progress in certain areas. To use a lift will cost you 75 credits; press SPACE to activate the lift but get on first! Two of the lifts will only work if you find certain objects.

Blip can use the computer system in the complex. Activate it by bouncing on the floor of the computer cubicle or pod and pressing SPACE. The first number shown is the number of the terminal you are using; it costs 100 credits to access the computer. The computer uses a simple language:

CORE tells you how many pieces of core you have collected, INFO tells you what percentage of the game you have explored, HELP well...try it a few times, BUY buys an extra life for 1,000 credits, SELL sells one of your lives for 900 credits, MAP displays a grid-map of the complex - solid blocks indicate screens that you have explored, or which don't exist, CODE is used at terminals 0 to 3; it gives a code to open doors at terminals 16 to 19, INPUT allows you to input a code at terminals 16 to 19, USE uses the object you are carrying; correct use awards 250 credits and a score bonus. PORT terminals 20 to 27, marked with a T, allow you to teleport to others (you must have previously enabled the teleport grid), QUIT closes down the computer network. Incorrect instructions are simply ignored.

## Control Keys

Z - Left, X - Right, <RETURN> - Fire (Uses a little energy)  
<SHIFT> - Hyperbounce (Bounces higher and faster)  
<SPACE> - Activate computer or lift  
S - Sound, Q - Quiet, <COPY>/<DELETE> - Pause/Restart  
R - Restart Entire Game

## Review (Electron User) - "Challenging Adventure"

The latest arcade adventure from the prolific Peter Scott, author of THUNDERSTRUCK II and the recently re-released HUNKIDORY, is OMEGA ORB.

Peter's games always have a distinctive appearance and feel. This one is certainly from the same stable, although featuring a number of refinements on previous offerings.

You control the OMEGA ORB, a beautifully animated bouncing ball which is the cutest creature I've seen in a long time. I particularly liked the delightful squashy effect produced when the Orb hits the ground.

The object of the game seems similar to that of its predecessor, THUNDERSTRUCK II: Move the Orb through a variety of multi-coloured locations collecting core pieces - presumably to rebuild the core, although I have yet to find it. A number of other objects litter the landscape and it's up to you to work out what to do with them.

OMEGA ORB is however considerably more hectic than THUNDERSTRUCK II because each new location produces a number of evil-looking creatures with intentions to match.

Contact with any of them reduces them to a cloud of dust, but severely drains your energy.

Furthermore, the game has a nasty habit of leaving the dead creature's dust behind, which again reduces your energy to death level in seconds. Luckily you can rely on your trusty laser gun.

You can only carry one object at a time and collecting or dropping is automatic - you simply jump on it. If you haven't got an object you take it, but if you are already carrying one it will be exchanged for the new one.

If you pause more than about a second the new acquisition will be dropped again.

It is therefore very easy, and annoying, to bounce off with the wrong object, or even empty-handed.

I haven't managed to get very far into the game yet. However, the screens I have seen have been superb with large animated sprites, used for moving creatures and for many landscape features, allowing you to walk behind the scenery. The plot is a challenge to both mental and physical reflexes.

I found OMEGA ORB a little too similar to THUNDERSTRUCK II, but nevertheless it is a game well worth looking out for.

Sound .....	8
Graphics .....	10
Playability .....	9
Value for money .....	9
Overall .....	9

## **Review (Electron User)**

Tired of solving adventure games? Fed up with educational programs and glutted with amazingly boring utilities? Well why not go back to where it all began and zap aggressive aliens from a far off galaxy? And when you do, make sure that you have a go at Optima Software's latest Electron game, OMEGA PROBE.

The scenario is fairly familiar. You are in command of a drone ship investigating the Omega sector, the last great space frontier. The local aliens look on you as a hostile force and launch a mass unprovoked attack. You have to defend yourself as best you can.

What is unfamiliar is the speed. It's the fastest game yet for the Electron that I've come across so far. The aliens come at you thick and fast, sliding across the screen. Waster, Ouchers, Pursuit and Interceptor Drones hurtle at you as you do your best to fight them off. The graphics have to be seen to be believed.

The controls are well designed and easy to use. You even get the choice of using joysticks, both the Signpoint Joyport and the First Byte joystick interface work with the game. This adds a whole new dimension to the game (if that's possible).

It is engrossing and compulsive, the kind of game that you see someone playing and immediately want a go yourself. And if it's you that's playing you don't want to let anyone else have a go. Recommended.

Alan Coombes, ELECTRON USER 1. 9

# ONE LAST GAME

***Professional, Originally Released On Cassette Only***

Disc compatibility : CDFS E00, DFS E00

## **Review (Electron User)**

This is probably best described as a cross between Scramble and Galaxians. The ground below you scrolls smoothly from right to left, while the aliens line up on the right hand side. They peel off, in ones at first, then in groups later on, and blast your ship on the left.

You can move your ship up and down, dodging aliens and missiles as they swarm in from the right, and blast them with your laser, more points being scored if they are on the move rather than in the main formation.

There are 20 different screens with increasing difficulty - on the later ones the aliens can only be destroyed when they leave the main formation for their attack. There is the option to start on any screen.

There are a couple of unusual features. The game can be speeded up or slowed down with the joystick (plugged into the Plus 1), so you can whizz through the first few easy screen then slow down when it gets tough.

The second extra is the way it plays a tune to the accompaniment of a drum. The tune is played in the normal way, but as the Electron can only use one channel at once, how can it also play the drums? Have you noticed the click of the cassette relay when loading or saving programs? The author has very cleverly utilised this as a makeshift drum. By rapidly switching it off and on a drum solo is played. Ingenious. I hate to think what it's doing to the relay though.

I loved this game right from the start and have played it for hours. If you, like me, like the sort of games where you just blast everything in sight, then you will love this one.

Roland Waddilove, ELECTRON USER 2. 5

# OPERATION SAFRAS

*Professional, Originally Released On Cassette Only*

Disc compatibility : CDFS E00, DFS E00

## Review (Electron User) - "Licensed To Confuse"

It's always difficult to follow an outstanding success and with WOODBURY END Shards almost made a noose for its own neck - it really was that good. Hence I have to admit that I am a little disappointed - perhaps expectedly - with OPERATION SAFRAS.

"Your name is Rupert James Pettigrew. Your occupation, chartered accountant in the City of London. No particular vices or discernible marks. Single, aged 31, avid stamp collector ... in fact, a totally boring individual." Yet, as many readers will be award, Pettigrew is of course a secret agent extraordinaire!

You begin the adventure standing by a disused lift and a quick sortie EAST reveals a fiver. Keep this lucky find as it provides a means of bribing information from a tramp later in the game. Meanwhile, you soon discover a man standing in the shadows, but he's not there to make small talk. Questioning him elicits the response, "You can trust the triplets but beware of the one they call Iron Fist." One word of warning - the clues in this adventures are as cryptic as we have come to expect from Steve Maltz, but are totally logical in retrospect.

The aim of the adventure is to rescue five fellow agents who have been secreted in various corners of Great Britain. Then you must use the information gathered to find the Safras sword. An interesting transport system operates in this adventure, which I hope is expanded upon in future offerings. By pressing T you are presented with a map of this glorious country of ours, and using an unlimited rail ticket you are able to visit such tempting places as Carlisle or even Stockport!

In your travels you pick up various clues and hopefully unravel an intriguing mystery. If you succeed and register your name with Shards you could find that you are immortalised in their next blockbuster adventure.

I must admit that I found the wood in Newport a bit of a puzzle, but as usual X marked the spot. There was also an odd piece of head-banging to overcome in Dundee!

However, it was pleasant to be re-united with old friends like Annie Gramm again, even if I was more than frustrated on occasions.

The adventure claims to be a sequel to PETTIGREW'S DIARY but bears little similarity to that other Shards classic, either in make-up or plot. Don't get me wrong - I enjoyed OPERATION SAFRAS as a very professional and at times thrilling adventure. Perhaps I'm really waiting for RETURN TO WOODBURY END!

# ORBITAL

***Professional, Originally Released On Cassette Only***

Game Type : 3D Arcade; 'Marble Madness' clone  
Authors : Jonathan Temple & Miles Burton  
Standalone Release(s) : 1988: ORBITAL, Impact, £4.95  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : IMPACT, Neepsend House, 1 Percy Street, SHEFFIELD S3 8AU.  
Tel: 01742 769950  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Poor old Ozzy the Orbital. He always gets the tough jobs. His latest mission has landed him in the weird worlds of the Octopodes and they are far from pleased to see him. Ozzy's mission is to collect the plutonium marbles that the Octopodes produce with their deadly tentacles. But why...? Because the Octopodes are hell-bent on annihilating the whole Orbital race by polluting their planet with the lethal marbles.*

*"Ozzy is going to need your help. There are twelve Octopode worlds to visit and Ozzy will have to work fast on each of them before the Plutonium dissolves him. The worlds have been designed to make capture of the marbles increasingly difficult and there are transporters with unknown destinations to both help and hinder him. Further problems are created by the patrolling Octopodes which are fatal on contact.*

*"The worlds are split into groups of four and once a group has been completed you can jump straight to another by using security passwords. Unfortunately for Ozzy he has not been told about the Octopodes contingency plan in the event of successful capture of all the marbles. They have a spare set of marbles and can make all the worlds invisible! The madness has just begun."*

You start the game with three lives. The worlds are in groups of four and after completing a group you are given a security password allowing you to skip a completed group. However, to complete the first part of the mission you must complete all twelve worlds from start to finish without using any passwords.

If you manage this feat then you will start with three lives again (if you lost any) and then will come the real challenge. You must now complete all twelve worlds again, only this time they will all be invisible and you will only see the marbles and the patrolling Octopodes!

The survival of the Orbital race is in your hands.

## Playing Guidelines

### Getting Started

When you first arrive on an Octopode world you should first of all try to work out a safe route to collect all the marbles. There are several ways to complete any world. However as there is only a limited amount of time it may be necessary to experiment to find a different route that is fast enough.

Ozzy can only fall a short distance without breaking into a thousand pieces. He cannot climb or fly so he should be careful about descending to lower levels.

### Octopodes

Octopodes are fatal on contact. They will always follow a set patrol route and you will need to remember their routes in order to avoid them on certain worlds.

### **Transporters**

On any world there will be one or more transporters. The destination of any transporter is fixed to the appropriate destination pad. If there is more than one transporter then the only way to find out its destination is to try it!

Transporters can be used as often as you wish and in fact it will be necessary to use certain transporters more than once.

When you transport it will take a little time to fully materialise at your destination. During this time you will be immune to the Octopodes.

### **The Orbital Snatch**

Some marbles may seem to be placed so that if they were collected you would not be able to continue. The solution is The Orbital Snatch.

The exact use of this is for you to discover but requires you to grab a marble from a lower level without actually moving down to that level.

### **Invisible Worlds**

The layout of the invisible worlds is identical to the visible worlds. Probably the best way to complete them is to draw maps of the visible worlds as you progress. Use the PAUSE key to give yourself time to do this.

### **Game Controls**

#### **Movement Controls**

A ..... Move Up Left  
K ..... Move Up Right  
Z ..... Move Down Left  
M ..... Move Down Right

#### **Other Controls**

S ..... Sound On  
Q ..... Sound Off  
COPY ..... Pause Game  
SPACE ..... Continue Game  
  
ESCAPE ..... Kill Yourself  
SHIFT/R ..... Restart Game  
  
P ..... Enter Password  
                    (Hi-score Table Only)

#### **Redefining Keys**

You can redefine the about keys at the start of the game by pressing R

N.B. The password for the first group of worlds is ORBITAL.

**Instructions' Source** : ORBITAL (Impact) Back and Inner Inlay

### **Review (Electron User) - "Antidote To Poison"**

Following the great success of CLOGGER and ZENON, Impact has produced a neat little game called ORBITAL and, while it is by no means a future classic, it does have quite a lot going for it.

It's simple to play but is difficult enough to keep you interested and entertained. The idea is that you move Ozzy the Orbital around the twelve tiny worlds that make up the home of the deadly Octopodes.

The fact that these worlds appear to be made up of building blocks is a bit disconcerting at first. But you don't really worry about that as you only have a limited amount of time to move around, collecting the plutonium marbles which are liberally sprinkled about. The marbles have been created by the Octopodes in order to poison the Orbital race. Also patrolling the world are some of the Octopodes, and they will kill Ozzy if they catch him.

As Ozzy, you move around the world and when you touch a marble, it vanishes. The problem is that you can only move along flat surfaces or drop down to a surface one layer below - fall too far and you shatter. The only way of regaining the higher ground is by moving on to a teleporter which transports you to a fixed point. It can be used as many times as you wish.

The twelve worlds are divided into groups of four. When you complete a group, you acquire a password which gains you entry into the next four.

Once all the worlds have been emptied of all their marbles - a task I have so far failed to perform - the Octopodes have a contingency plan. This involves them placing a replacement set of marbles and making the world invisible.

The game has neat graphics which look good in colour. There is the usual high score table which, when you start playing, is filled with the normal selection of witty names like J. T. Kirk and Old Reptonian.

If you like games which need a little bit of thought, this is one for you. It isn't complicated, but it contains a few interesting problems which should keep you amused for a few hours.

Llewellyn

### **\*\*\* Second Opinion \*\*\* (Electron User)**

Here's fun in the traditional arcade style. It reminds me of CRYSTAL CASTLES, and has its roots in that old chestnut, Pac Man. You race round a maze collecting marbles while avoiding the monsters. Special transporter squares must be used in the right order and working this out is a bit of a brain teaser.

# OSPREY!

***Professional, Originally Released On Cassette Only***

Disc compatibility : CDFS E00, DFS E00

## **Review (Electron User)**

I was lucky enough to be able to spend two weeks in Scotland this summer and the highlight of the trip was my visit to see the nesting Ospreys at Loch Garten. So when OSPREY! arrived in the office, I grabbed it with enthusiasm. Produced in conjunction with the RSPB, and with an excellent 32 page colour booklet to complement the program, it's a fascinating simulation of the problems faced by the osprey as a Scottish breeding bird.

You take the part of the manager of a nature reserve where ospreys are nesting. The booklet has given you an outline of the history of the osprey and you have to pick which year you want the simulation to start. The earlier the year, the harder the game is. Your aim is to make sure that the birds successfully breed and rear their chicks. To do this, you have to decide what your limited number of wardens is going to do during the vital spring and summer seasons. Some are needed to chase away the egg stealers, while others have to manage the site and keep disturbance to a minimum. Also wardens have to be spared to make people aware of the ospreys and to encourage the public support.

And, just like real life, when you've made your choices and allocated your resources you have to sit back and watch what happens. The graphics are beautiful, painting a picture of the reserve and the nest site. You can watch the ospreys as they swoop down to fish and take them to the nest.

Sadly, if you haven't allocated enough wardens to guard duty, you can also watch the egg thieves at work. Even the visitors can be a nuisance, their cars disturbing the birds if you haven't picked the right number of site wardens.

And to make it worse, factors totally out of your control such as the weather affect the final result.

Your success or failure at one reserve is taken as representative of the whole of Scotland and after the spring season you're shown how the osprey population has fared under your protection. You continue until you reach the year 1981 or you've run out of ospreys - a horrible thought. You can then compare your efforts with the magnificent results the RSPB achieved in reality which are shown in the booklet.

It's a smashing program. The instructions, both in the booklet and on the screen are excellent. The graphics and animation are more than adequate and the whole package has the quality that we've come to expect from Bourne.

Even the fact that it's educational - the well-illustrated booklet has a history of the Osprey and a things-to-do section - doesn't spoil the fun. So if you haven't been to Loch Garten yet, you can console yourself playing OSPREY! until you get the chance.

## Instructions

A multi-stage 3D race for the World Drivers' Championship! There are five different stages including night, snow, desert and riverside scenes. To qualify for the next stage, you must finish in the top twelve - this is indicated by the bonus going into the blue region on the indicator.

## Game Controls

Z - Left, X - Right, \* - Accelerate, ? - Decelerate

**Instructions' Source** : OVERDRIVE (Superior) Inner Inlay

## Review (Electron User)

Here's a game for all you budding world champions out there, just itching to climb into the seat of a fast, powerful car and drive to victory! In this motor racing simulation from Superior Software, you are in control of a potential race-winning car weaving through a seemingly endless field of cars through five different stages - rolling fields, night, snow, desert and riverside scenes.

Sounds easy? Well, believe me it isn't. To qualify for each stage you must finish within the top twelve, which is signified by the bonus going into the blue region of the indicator at the top of the screen.

This is no easy task. To qualify, you will have to compromise between speed and avoiding crashes which will reset your speed to zero, leaving you to start once more the steady acceleration up to a stomach-churning 225 miles an hour to reach the elusive goal.

To add to this the stages get progressively harder with the realistic effect of skidding on the snow and riverside scenes. The 3D graphic effects are superbly executed with sharply drawn mountains and pyramids staying elusively in the distance as your car eats up the miles.

The animation of the cars' movement is smooth and the good use of colours greatly enhances the effect, making your red car easy to pick out amongst your blue opponents.

The screen display is also very neatly set out with various indicators showing your speed, score and bonus. However, despite this I do have a few minor criticisms to make. The fact that I was given no option to turn the sound off proved to quite an annoyance, as when you accelerate and decelerate there are sounds moving accordingly in a chromatic scale. If you leave your speed constant the sound too remains constant, leaving an often piercing noise ringing constantly in your ears while you drive.

This is my main criticism although I would have also liked to have seen a few bends to negotiate and would have preferred a name input in the five-place high score table.

Nevertheless these criticisms do not detract from the enjoyment of the game. Although obviously it does not provide the realism of a steering wheel, the game controls are very simple. There are four keys - Z for left, X for right, \* and ? for acceleration and deceleration.

This ease of use and the smooth, well-executed graphics, together with it being, to my knowledge, the only motor-racing simulation on the Electron market, make OVERDRIVE well worth a look.

Ian Critchley, ELECTRON USER 3. 2

# OXBRIDGE

## *Professional, Originally Released On Cassette Only*

Game Type : Text Adventure With Graphics  
Author :  
Standalone Release(s) : 1986: OXBRIDGE, Tynesoft, £7.95  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : TYNESOFT, Unit 3 Addison Industrial Estate, Blaydon, TYNE & WEAR NE21 4TE. Tel: 091 414 4611  
Disc compatibility : Unknown

### Instructions

*"AT LAST!! A FULLY ILLUSTRATED ADVENTURE FOR THE ELECTRON (200 LOCATIONS)*

*OXBRIDGE takes a light-hearted look at the world of higher education. The Cursor Keys move you about a beautifully illustrated landscape to meet various brain-teaser type problems. If you like puzzle books, you'll love this game. This is no marathon science-fiction epic taking hours to get into. You may progress within minutes and, as you play, you absorb the atmosphere and folklore of the world's most famous University.*

*Can you escape from the College, get served in the Pub, learn how to Punt, get cash from your Bank, locate an obscure book, find your way through the "Botanical Garden" Maze? The challenge of student life awaits you!!*

*Features include HELP facility, mobile talking characters (some famous personalities), single operation load, fully integrated graphics.*

*Nothing like it has ever been produced for a 32K machine!"*

The Loader program contains full instructions - 'HELP' lists the available commands at any time.

### OXBRIDGE - Hint Sheet Questions

1. I can't get out of the tower
2. The bees sting me
3. I can't capture the butterfly
4. I can't find a use for the picklock
5. I can't make the punt work
6. The barman in The Punter's Arms won't serve me
7. I can't catch the mouse
8. What use is the bulb?
9. What use is the box with the trefoil?
10. I get killed when I open the fume cupboard
11. I can't get through the college main gates
12. I can't work the service till in the bank
13. I get arrested in the museum
14. I don't get anywhere in the library
15. I get arrested for shoplifting in Harrods
16. I can't get into the Master's lodge
17. I can't get the furniture sorted out
18. I get stuck in the garden maze
19. I have scored maximum points but can't find the endgame

### OXBRIDGE - Hint Sheet Answers

1. You need the key to the back door, which is initially in the cellar. Take the ladder with you.

2. To collect the royal jelly you must first drop the marmalade in the vicinity to distract the bees.
3. There is a butterfly net somewhere.
4. It opens the front door in the tower.
5. You need a punt pole.
6. There is a hint in there somewhere. Remember to drink your beer.
7. There is a cat on a roof somewhere.
8. You must plant it in a suitable patch of earth.
9. It is valuable. Just resist the temptation to open it.
10. Leave the vicinity temporarily.
11. The barman in the pub knows something useful.
12. You need the card from the dining hall. The numbers on the blackboard in the maths room should give you a clue to the ID number.
13. The statue is on a weighbridge which rings an alarm when there is no weight on it. To avoid the guard, try the fire exit.
14. You must reach the end of the alphabet.
15. You must smuggle both items out in the lift. You must work out how to move the lift without being in it yourself.
16. Ring the doorbell.
17. You are advised to draw a diagram and try it with counters first.
18. The easy way to work out a route is with a chessboard, a knight and 64 numbered pieces of cardboard.
19. It's a place punters are normally barred from. Blowing your own trumpet a bit might help.

**Instructions' Source** : OXBRIDGE (Tynesoft) Back and Inner Inlay

### **Review (Electron User) - "Adventure Student"**

This adventure landed on my desk for review way back in July. It's not that I'm slow, but it has taken me a long time to complete the game and even longer to make decisions as to its merit. The adventure is an oddity as it is presented with simplistic, if sometimes crude, graphics. However, the adventure is ingenious and more about puzzle solving than true adventuring.

The cover instructions do give some warning concerning the contents: "OXBRIDGE takes a light-hearted look at the world of higher education. If you like puzzle books, you'll love this game!"

Those of you who have played Colin Jack's previous adventure, PROGRAMMER'S REVENGE, will have gained some insight into the sardonic wit and ingenuity which is present in this game.

Your object, as the hero is to escape from the college, get served in a pub, learn how to punt, get cash from your bank, solve numerous puzzles and generally cope with student life. My favourite part of the adventure involved the deviation on the old Chinese sliding-block puzzle. In this case, however, you need to sort out furniture into appropriate rooms. This is difficult to say the least but you are rewarded with a Rubik's cube.

I also loved the garden maze, which is solved using the Knight's Tour chess problem. Needless to say, chess players will find this easier than others.

Obtaining the manuscript from the library also involves a clever maze and requires very careful mapping. Look at the colours and lettering. I found the higher letters very difficult to locate.

Having played the 300 location BBC Micro version of this game, I found the watered-down Electron version which has 200 locations a little disappointing. I also found it more difficult, as a result of the paring of the game's structure.

The cassette inlay offers some help in solving the puzzles and if you really do feel like tearing your hair out, Tynesoft provides an excellent four page Puzzle and Solution leaflet.

As someone who loves mathematics and puzzle solving, I like this game though it does not follow that you will. Try before you buy is perhaps the best advice I can give.

# PADDINGTON AND THE DISAPPEARING INK

*Professional, Originally Released On Cassette Only*

Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

Age 7 to 9 years

*"This pack consists of a Paddington illustrated storybook and a cassette to run on your home computer.*

*"One morning Paddington was in the garden testing some tricks from his conjuring outfit when he came across one he hadn't noticed before. It was called magic disappearing ink and it looked very interesting indeed.*

*"So starts Paddington's encounter with the magic ink. Join him and help Paddington write his postcard.*

*"The programs continue Paddington's adventure and provide practice in basic letter writing skills and activities.*

*"The programs are: LETTER\* TYPEWRITER\* POSTHASTE\* WORKCHECK\* PERU"*

One morning Paddington was in the garden testing some tricks from his conjuring outfit when he came across one he hadn't noticed before.

It was called MAGIC DISAPPEARING INK and it looked very interesting indeed.

There were three bottles inside the box.

There was a black bottle which was full of everlasting ink that never disappeared; a red one containing some special ink which vanished soon after you had put it on; and a green bottle full of liquid which you brushed on to bring the words back again.

It sounded very good value indeed.

Paddington was very keen on trying anything new and he decided he would write a postcard to his Aunt Lucy telling her all about it.

Paddington's Aunt Lucy lived in the Home for Retired Bears in Lima and she liked getting postcards, although he wasn't able to send her one very often because the stamps were expensive and he didn't always have enough bun money left at the end of the week.

All the same, he felt sure she would like a 'magic' postcard.

First of all he wrote her address on the front of the card. He did it with the special everlasting ink in case the postman had trouble delivering it. It cost a lot of money to send even a postcard to Peru and Paddington didn't want to risk losing it.

Then he wrote what he wanted to say on the other side of the card. Most of the words he wrote in everlasting ink, but some he wrote with the magic disappearing ink, and sure enough, after a few minutes in the sun they had completely vanished.

'Dear Aunt Lucy,

'I am sitting in the garden writing this postcard with magic disappearing ink. The sun is shining. The flowers are out. I am well. I hope you are well 2.

'Love Padingtun.

'P.S. I have a jar of marmalade in case I get hungry.'

"Bear!" barked Mr Curry. "What are you doing, bear?"

Paddington nearly fell off his chair with alarm at the sound of Mr Curry's voice. The Browns' neighbour was well known for poking his nose into other people's affairs, and it usually meant trouble.

"I didn't know you were spying on me, Mr Curry," he began. "I mean..."

"SPYING?!" bellowed Mr Curry. "How dare you, bear!"

He glared at the bottle in Paddington's paw. "What have you got there?"

"It's some special 'magic' ink, Mr Curry," said Paddington.

"MAGIC ink, eh?" said Mr Curry. A crafty look came into his eyes. "That sounds just what I need for my garden labels. I've been planting some seeds and I don't trust the birds.

"I always tie the empty packets onto sticks to show where they are," continued Mr Curry. "But I'm sure they look at the picutres. There's one at it already. What I need is some ink that won't come off. Even birds can't read," he added with a chuckle.

"Oh, they won't be able to read this ink, Mr Curry," said Paddington truthfully. He was about to add that Mr Curry wouldn't be able to read it either, but before he had a chance to, the Browns' neighbour had grabbed the bottle.

"If all my seeds come up," said Mr Curry, as he let Paddington back into his own garden, "I MAY give you five pence, but THAT won't be for several weeks."

Paddington had a nasty feeling he would be hearing from the Browns' neighbour long before then, but he didn't stop to argue.

Once inside the safety of his own garden, Paddington consulted the book belonging to his conjuring outfit.

He was rather hoping there might be some instructions on how to make bears disappear, but he was out of luck.

In any case, he had hardly reached the end of the first chapter when Mr Curry's head reappeared over the top of the fence.

"Bear!" he bellowed for the umpteenth time that morning. "What trickery have you been up to now? All the writing on my lables has vanished! AND I've thrown the seed packets away. I shan't know where anything is now."

Paddington took a deep breath. "Well, Mr Curry," he said. "I've got some special liquid that will make it come back again. But I'm afraid it's expensive."

"Expensive?" repeated Mr Curry. "How expensive?"

"Very," said Paddington firmly. "But you can pay me for it in stamps if you like."

Mr Curry gave Paddington a long hard look and then took out his purse. He knew when he was beaten.

"If you like," said Paddington generously, "you can keep the bottle until the seeds start to come up before you use it. Then no-one will know which seeds are where."

Paddington had suddenly realised Mr Curry had done him a good turn. Unless he'd send the bottle to his Aunt Lucy, she wouldn't have been able to make the words reappear anyway.

He was about to fill in the missing spaces on his postcard with the everlasting ink when he had an even better idea.

He made lots of drawings instead.

'Deer Aunt Lucy,

'(Eye) am sitting in the garden writing this (Postcard) with magic disa(Paddington PEERING through a fence) ink. The (Sun) is shining. The (Flowers) are out. I am (Well). I hope you are (Well) 2.

'Love Padingtun.

'(Pea).S. (Eye) have a (Jar) of marmalade in (Case) (Eye) get hungry.'

Before he posted his card, Paddington added another postscript.

'(Pea).(Pea).S. Mr Curry very kindly paid for the (Stamp). I will tell you all about it one day.'

# PADDINGTON'S EARLY VISIT

**Professional, Originally Released On Cassette Only**

Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

PADDINGTON'S EARLY VISIT

Age 4 to 6 years

*"This pack consists of a Paddington illustrated storybook and a cassette to run on your home computer.*

*"One day Jonathan and Judy gave Paddington a bedside clock as a present. "It's got special hands that shine in the dark," said Judy. "If you wake up in the night, you won't need a torch to see what the time is."*

*""Be careful, though," warned Jonathan. "It's very modern. It has lines instead of figures. But you'll soon get used to it."*

*"So starts Paddington's encounter with his new clock. Join him and help Paddington sort out the muddle.*

*"The programs continue Paddington's adventure and provide practice in telling the time and reading clocks.*

*"The programs are: WAYUP \* FIGURES \* DIGITAL \* CLOCK \* STOPWATCH"*

One day, Jonathan and Judy gave Paddington a bedside clock as a present.

"It's got special hands that shine in the dark, said Judy. "If you wake up in the night, you won't need a torch to see what the time is."

"Be careful, though," warned Jonathan. "It's very modern. It has lines instead of figures. But you'll soon get used to it."

Paddington thought it was the nicest clock he had ever seen and he went to bed extra early so that he could test it under the bedclothes. The only trouble was that being summer it was hot beneath the blankets, he soon fell asleep.

He dreamed he was shipwrecked on a desert island. It was very rocky and not at all comfortable.

When he woke he found to his surprise that he hadn't been shipwrecked at all. He had been lying on his new clock. It was little wonder that it had felt uncomfortable.

It was as he took a closer look at the clock in order to make sure it was all right that he had his second shock, for the hands said ten minutes to eleven. He must have overslept!

Paddington jumped out of bed and after a quick wash, hurried out of the house as fast as his legs would carry him. Every morning he had his elevenses' with his friend, Mr Gruber, and he didn't want to risk being late and finding his cocoa had got cold.

On the way to Mr Gruber's shop, he decided he wasn't the only one to have overslept that morning. There wasn't a sign of anyone else about.

Even Mr Gruber's antique shop still had its shutters up, which was most unusual, for Mr Gruber was an early riser.

Paddington tried throwing some old bottle tops up at the window to waken him.

When Mr Gruber finally appeared he looked most surprised to see Paddington.

"Is anything the matter, Mr Brown?" he asked.

Paddington held up his clock. "I think everyone must have overslept this morning," he exclaimed. "I'm just going to the baker's to fetch our buns!"

Mr Gruber looked at his watch. "I don't think you will be very popular if you do," he said. "I've heard of the early bird catching the worm but I doubt if the early bear will get many buns. It isn't even six o' clock yet!"

"I don't think you have overslept, Mr Brown. I think you have *underslept*. You had better come inside and have some breakfast."

Paddington settled himself on the horsehair sofa at the back of the shop and watched while his friend prepared some bacon and eggs, sausages, tomato and baked beans; not to mention a large plateful of toast and marmalade.

He licked his lips. "I think I might *undersleep* every morning, Mr Gruber," he announced.

Mr Gruber coughed slightly as he poured out some cocoa. He was a kindly man at heart and he didn't wish to sound unwelcoming. On the other hand, he didn't fancy the idea of getting up quite so early every day of the week.

"I think we had better solve your problem first, Mr Brown," he said. "May I see your new clock?"

As Mr Gruber examined Paddington's clock his face cleared. "I think I can see the answer," he said.

"You see...if I hold it this way it says seven o' clock. But you try turning it round the other way."

Paddington did as he was told, and then nearly fell off the sofa with astonishment, for his clock now said five minutes past six.

"That's the correct time," said Mr Gruber. "You see, Mr Brown, things aren't exactly what they seem - especially when it comes to telling the time. It depends which way you look at it. When you thought your clock said ten minutes to eleven it was really twenty past five."

"I think I shall use a sun dial in future, Mr Gruber," said Paddington. "They never go wrong."

"But not much good under the bedclothes," said Mr Gruber. "I have an even better idea." And he gave Paddington a special label to stick on the back of his clock. It showed a picture of a wine glass.

"It shows when things are the right way up," he explained. "It means the same thing all over the world, so you need never go wrong again - wherever you are."

Paddington thanked Mr Gruber for his help.

"I think I may stick one on my hat as well," he announced. "Just to be on the safe side. You never know - I may go to Australia one day!"

Age 4 to 6 years

*"This pack consists of a Paddington illustrated storybook and a cassette to run on your home computer.*

*"One morning Paddington's friend Mr Gruber left him in charge of his antique shop while he went out to do some shopping. Paddington felt very important as he stood in the doorway waiting for his very first customer.*

*"So starts Paddington's adventure in the antique shop. Join him and help Paddington make things work out in the end.*

*"The programs continue Paddington's adventure and provide practice in basic shapes and colour skills as well as a TV paint box.*

*"The programs are: MATCH \* WORDS \* COLOURS \* MOSAICS \* SORTING"*

One morning, Paddington's friend Mr Gruber left him in charge of his antique shop while he went out to do some shopping.

Paddington felt very important as he stood in the doorway waiting for the first customer of the day.

He hadn't long to wait. Mr Gruber had only been gone a few minutes when a man stopped to look in the window.

"How much is that?" he enquired, pointing with his cane at a large picture of an old sailing ship.

Paddington peered at the price tag on the back of the picture, and as he did so he nearly fell over backwards with astonishment.

"It SAYS twenty pounds," he began. "But..."

"Good," said the man. "I'll take it, Have it wrapped for me when I get back in about half an hour."

Paddington could hardly believe his ears. Taking a closer look at the picture, he wouldn't have given twenty pence for it, let alone twenty pounds.

It wasn't even a proper paint. In fact, it seemed to be a collection of old bits of china stuck together with cement. He couldn't wait for Mr Gruber to get back so that he could tell him the news.

Paddington decided he had better wrap the picture quickly in case the man came back and changed his mind.

But as he carried it across the shop disaster struck. The picture was so large he couldn't see where he was going and he stepped straight into Mr Gruber's oddments tray.

It felt as though the whole world had turned upside down and was collapsing about his ears.

When he sat up again, Paddington found to his dismay that the picture had broken into thousands of tiny pieces. They were all different shapes, sizes and colours; round ones, square ones, triangular and oval; reds, greens, yellows and blues. It was like sitting in the middle of a gigantic jigsaw puzzle.

Doing jigsaws wasn't Paddington's strong suit. Although in the past he had tried his paw at one or two small ones, he had never come across quite such a big one before. There wasn't even a box with a picture on its lid to help him out.

Apart from that the pieces didn't fit together like they did with a normal puzzle. Even sticking them down with marmalade didn't help.

Paddington had to admit that he was in a bit of a mess.

In the end he decided to make some smaller pictures in some old frames he found at the back of the shop.

He made a railway engine, a lorry, two motor cars and a windmill.

He fully expected to be in trouble when the customer came back, but to his surprise the man seemed more pleased than ever at what he saw.

"I'll give you five pounds for each one," he said, shaking Paddington by the paw. "It isn't every day you have the chance to buy a young bear's originals. Especially ones that taste of marmalade."

Paddington thanked the man very much and then added his special paw print to the corner of each of the pictures - just to show they were genuine.

"I think I had better go out and leave you in charge of my shop more often," said Mr Gruber when he returned and heard the news.

"Perhaps I could drop some more of your pictures, Mr Gruber," said Paddington hopefully. "Bears are good at that sort of thing."

"No thank you, Mr Brown," said Mr Gruber hastily. "Besides, it wouldn't happen with a normal picture. That was what we in the trade call a 'mosaic'. It's meant to be made of hundreds of tiny pieces like these."

And to show how pleased he was, Mr Gruber gave Paddington the extra money he had earned on the sale as a reward.

And in return, to show Mr Gruber how grateful he was, Paddington made him a special picture reading 'Thank You VERY Much' with the pieces that were left over.

*"The programs continue Paddington's adventure and provide practice in simple addition, subtraction, multiplication and division.*

*"The programs are: GROCER \* WHICH \* DOUBLES \* SUMS \* LABELS."*

One day, Paddington set out from number 32 Windsor Gardens as usual to do the morning shopping.

And, as usual, he had a label round his neck with his name and address on it in case he got lost on the way.

With his blue duffle coat, his old hat, his shopping basket on wheels and the label, he was a well known figure in the Portobello Road and all the traders waved to him as he went past.

His first stop was at the greengrocer's barrow. There he bought four apples, five oranges and a lemon, making ten items in all.

Next, he went to the baker's for some buns. Paddington always had his 'elevenses' with his friend, Mr. Gruber, and he bought four buns - two for himself and two for Mr. Gruber.

Paddington was a very careful shopper and once outside the baker's shop he checked all the things he'd bought so far against his list in order to make sure he had the right number - fourteen.

His next stop was at the grocery shop where he bought a packet of coffee, making fifteen items in all.

Finally, he stopped outside the Supermarket where he always bought his marmalade. They had a special offer of two jars for the price of one, which sounded very good value indeed.

While he was reading the notice he ate an apple. All the shopping had made him feel hungry.

Paddington stayed chatting in the Supermarket rather longer than he had meant to, and when he came outside again he nearly fell over backwards with surprise. Instead

of there being one shopping basket on wheels parked on the pavement, there were four. Worse still, he couldn't remember which was his and they all looked alike.

Paddington looked at his list again. He felt sure Mrs. Bird wouldn't be at all pleased if he arrived home with the wrong shopping.

Then he had an idea. Counting his two jars of marmalade he should have seventeen items altogether. It would be a simple matter to add up the number of items in each basket in order to find out which was his.

But the first basket he tried only had fourteen items, making sixteen in all; and the second one had twenty three...

...whereas the third basket contained twenty-two and the fourth thirty. None of them made up a total of seventeen. It was all very strange.

Then he remembered. Before he went into the Supermarket he had eaten an apple, so he only had sixteen items. His basket must have been the one he tried first of all.

Out of the corner of his eye he could see people watching him.

"Oh, dear!" he said to the world in general. "I'm in trouble again!"

Paddington was very late reaching Mr. Gruber for 'eleveneses' that morning.

"I'm afraid it will be more like 'twelveses', Mr. Gruber," he said sadly, as he told his friend of all the things that had gone wrong.

"We mustn't let that happen again," said Mr. Gruber. "I think I know what to do. You have a label around your neck to show where you live. Why not put one on your shopping basket to show who it belongs to?"

Paddington thought that was a very good idea. And because Mr. Gruber had a packet of twelve labels, that meant there were eleven left over, so - taking away the four buns they had just eaten for their 'twelveses' - it would leave just enough to put one on each of the things he'd bought that morning.

But Paddington found he had made a mistake with his adding up. There was one apple left without a label.

So on the way home he ate it - just to put things right!

## Review (Electron User)

BEEBUGSOFT have steadily gained a good reputation among owners of the BBC and Electron micros, and so I was pleased to receive this cassette for review.

There have been other drawing packages for the Electron, and it is perhaps important to look for enhancements and original features. One telling point for this program is that there are too many options to fit into the main menu, and so there are some placed in a secondary menu which has to be accessed from the first.

The options are "acquired" in a rather IKON-like style, with the cursor being moved by the keyboard or joystick to the symbol. Certain "dangerous" options have to be acquired twice by the Space bar, thus providing a safety net for unwary users.

Working in Mode 0, 1 or 2, there is a wide range of colours available with the most colourful screens being of course in Mode 2. Shapes can be drawn using a continuous row of dots, using any colour, with colour changes easily being made at any point. The dot can be replaced by a brush of variable width, and also variable shape, including a very powerful option to define your own shape of brush.

Just these few options kept me occupied for quite a while as I explored their potential by drawing variations of triangles, rectangles, circles and more complex shapes. As is almost standard now, there's a rubber band facility. This allows for accurate placement of shapes by showing what is about to appear on-screen just before the final selection is made.

Indeed, another colour may still be chosen while in this mode, thus increasing the possibilities. Shapes can be infilled, although complex shapes tend to need several attempts. Text can easily be interspersed with the graphics, and this is just one of the range of features whose use is clearly displayed in the accompanying 48-page booklet. This is essential reading if the true potential of this system is to be fully exploited and explored.

With GCOL options available, and the colour palette changeable, there is enough to bewilder or excite any user. I have used other drawing packages on the Electron, but I haven't found a better one yet.

## Instructions

*"Over 100 Screens full of Challenging Puzzles and Awesome Foes!"*

*By practising acts of benevolence and goodwill, you have offended the evil wizard Caldeti. Summoning forth his satanic powers in order to extract retribution, he has cast two powerful spells upon you: (1) you have been reduced to the size of a dwarf; (2) Caldeti has banished you to one of his old homes, the 'Palace of Magic'.*

*The palace and its surrounding land is littered with magical objects and mysterious creatures. It is rumoured that there is also a hidden transporter - your only means of escape from this enchanted place.*

*After exploring the rooms of the palace, you should venture forth through the enclosing woodland: towards the ancient church and the eerie dungeons, or over the river to the princess's house.*

*On your journeys, you will encounter many strange animals and people including rock monsters, gremlins, imps and guards. Some are good and some are evil. You will need to decide who you can trust to help you in this arduous quest."*

## The Objective

You have unwisely offended the evil wizard Caldeti and he has cast two powerful spells upon you:

- (1) You have reduced to the size of a dwarf;
- (2) Caldeti has banished you to one of his old homes, the "Palace of Magic".

## The Adventure

You start your adventure in the main hall of the palace. An energy bar is shown at the top-left of the game screen; if your energy reduces to zero you will soon die. Your percentage score, a counter, the room name and co-ordinates are also shown at the top of the screen. You can carry at most two objects at any time.

## Keys

Keys open doors of the same type as the key. When a door is opened, both the door and the key disappear.

## Objects

Only those objects found on coloured bases may be picked up. These include: keys, treasure chests and gold bars. Some of these will disappear when they are used. In some situations you may need to put down one object in order to pick up another object. Objects may only be put down onto coloured bases.

## Energy

Energy is gained by collecting the magical top hats. Energy is lost by colliding with adversaries, going through fire and by spending too long under water. Energy is also gradually lost as you wander around.

If you are losing energy quickly you will be magically transported back to the point at which you entered the current room. Almost all of the screens can be traversed without losing any energy. If you collect all of the top hats, you will have ample energy to complete the entire adventure.

### **Hints**

Draw a map and work out the most efficient routes. Try to find alternative routes which bypass aggressive adversaries.

Collect all of the top hats, but try to plan your routes so that you collect each top hat when your energy is getting quite low - in this way, none of the top hat's magic will be wasted. Take your time and use the "pause" key to plan your next moves.

Remember, no object is useless! With patience and careful thought, you should be able to logically solve all of the problems and puzzles that you encounter.

### **Game Controls**

Z - Left, X - Right, \* - Up, ? - Down, <RETURN> - Jump  
<SPACE> - Pick Up/Drop Object

S/Q - Sound/Quiet, <COPY>/<DELETE> - Pause On/Off, <ESCAPE> - Quit Game

### **Review (Electron User) - "Palace Of Puzzles"**

PALACE OF MAGIC is the latest in a long line of arcade adventures from Superior Software. It's similar in many respects to an earlier release - CITADEL.

The scenario is quite simple: You have offended an evil wizard called Caldeti (an anagram of Citadel) and he has turned you into a dwarf and banished you to one of his old homes - The Palace Of Magic.

A transporter is your only means of escape. This is hidden somewhere in the palace and grounds which cover a total of 100 screens. You can move left and right and jump to twice your height to climb over obstacles. In addition, you can also shin up ropes and climb ladders to reach otherwise inaccessible levels.

Scattered about the palace are lots of coloured bases, some of which have keys, ropes, gold bars and other useful objects standing on them. You can pick up or drop objects while standing on one of these bases and you can carry two at a time.

The keys are letter coded and are used to open similarly coded gates which block your route through the palace. Your task is made a lot harder by the fact that you are not the only living creature - the palace is crammed full of all sorts of unusual and nasty monsters who are out to get you.

If you bump into any of these, you don't die immediately, but they drain your energy and when this reaches zero you perish and the game is over.

The maze is complicated and the puzzles are challenging, but not impossible. Some of the solutions are so obvious once you've discovered them you'll kick yourself for not working them out sooner.

The Mode 5 graphics are quite good and most of the objects look like what they are supposed to be, which is a big help when it comes to figuring out where they should be used.

One or two things are difficult to distinguish and I was stumped by a funny looking blob on the balcony outside the church - it turned out to be a Bishop.

There isn't a lot of sound in the game, but then it doesn't require much and I didn't miss it. The only real criticism I can make is that it doesn't have a save game facility.

I have to admit to being an avid arcade adventure fan. I haven't yet fathomed all the mysteries of CITADEL and I know there are a lot of people in the same boat.

Now with PALACE OF MAGIC to escape from as well, I foresee many more late nights of problem solving for a lot of adventurers.

"Electron User Golden Game"

Desmond, ELECTRON USER 5. 2

# PANDEMONIUM

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Platform Game  
Authors : Peter Scott  
Standalone Release(s) : None  
Compilation Release(s) : 1990: PLAY IT AGAIN SAM 13, Superior/Acornsoft, £9.95  
Stated compatibility : Electron Side A/BBC Side B  
Actual compatibility : As stated. Electron version does work on BBC.  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : CDFS E00, DFS E00

## Instructions

The objective of the game is to construct the core by collecting the 12 core parts (light blue in colour), whilst avoiding or shooting aliens.

There are springs to bounce on, lifts and extending platforms to stand on and teleporters (which look like telephone boxes) to transport you from one location to another. When using a teleporter, you must enter the number of the teleporter to be transported to - so you must have been there before. You collect objects simply by passing over them. There are extra lives, food, laser energy and exploration points to be collected (all light blue in colour). The traces at the top right of the screen indicate the laser energy and your energy. You start with four lives.

If you score above 1000 points, you will enter the high score table. Enter your name (maximum of nine characters including spaces (when prompted).

## Game Controls

## Game Features

- Game Of The Year
- Sold over 100,000 worldwide
- Held a Gall-up chart position for over a year
- Arcade action at its best from ATARI
- One of the biggest selling games of all time
- Officially licenced Arcade Game

Pick up your old Push Bike, put on your peaked cap and imagine yourself braving the streets of an American suburb. Only superb riding skills and a steady throwing arm can get you through your seven day week of hilarious action. Avoid cars, workmen, drunkards and lawnmowers all out to obstruct you in your pursuit of excellence. Score points by delivering to all your usual customers, but you can get sneaky bonuses by breaking the windows of non-subscribers.

It's a difficult task but your employer believes that practice makes perfect and generously provides a practice track where you can score valuable extra points. Get ready for the ride of your life.

## Game Controls

Z - Left, X - Right, \* - Accelerate, ? - Brake, <RETURN> - Throw Paper

**Instructions' Source** : PAPERBOY (Elite Systems) Back and Inner Inlay

## Review (Electron User) - "Not Such Good News"

PAPERBOY is a conversion of the arcade game of the same name. In your new job as local paperboy you must deliver your wares to all the regular customers, while at the same time creating as much damage as possible to the homes of non-customers.

The title screen - a highly detailed front page of a newspaper, embellished with several different typefaces - promises a graphical feast.

Press the spacebar to begin the game and you are faced with a two-colour, high-resolution stick man. Not only that, he flickers as he cycles up the street.

The game controls consist of left/right, accelerate/brake, turbo speed and throw. As play begins you are pedalling at full speed, which isn't particularly breathtaking. The only way to go faster is to press both the accelerate and turbo keys. After a short delay you will experience a startling increase in speed - and flicker! The delay may be due to turbo lag, but whatever the cause, it is responsible for many a tumble.

You begin your new job on the Monday. Cycling up the street you must throw a newspaper into mailboxes positioned outside some of the houses. Those without

mailboxes are fair fame for vandalism, so smash as many windows as possible while cycling past.

Each dirty deed is totted up as a bonus score and awarded at the end of the round. Be careful not to damage a customer's property or you'll lose every bonus point you have accrued.

So keen is your employer to improve your cycling skills he has constructed a BMX park, so at the end of each day's work, you go to the park and race against the clock for bonus points.

Life is not as simple as at first appears, because footpaths and roads are alive with obstacles. You can easily come to grief by hitting dogs, balls, workmen, radio-controlled cars, drunks and Sinclair C5s.

One annoying feature about losing a life is the fact that you are returned to the screen in turbo mode and the brakes don't work. It is not unusual to hit a second object before you have regained control of the bike.

If you feel that you need to have a copy be my guest, but please ask to see a demo before you part with your cash.

Sound .....	5
Graphics .....	6
Playability .....	5
Value for money .....	5

# PARAS

## *Professional, Originally Released On Cassette Only*

Game Type : Strategy; War-Game  
Author : M. C. Lothlorien  
Standalone Release(s) : 1984: PARAS, Lothlorien, £9.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : M.C. LOTHLORIEN, 56A Park Lane, Poynton, STOCKPORT SK12 1RE  
Disc compatibility : CDFS E00, DFS E00

### **Instructions**

PARAS is a simulation of small unit actions in which a force of 15 men are under your direct control. You must decide what action each of these men will take each turn - there is a choice of up to 10 different activities. At the start of the game, your force has already been dropped by parachute.

The game comprises of two separate scenarios. In the first, you must eliminate all enemy forces in order to secure a safe route for your retreat. The objective for the second part is simply to destroy the bridge.

Note: All enemy need not be eliminated in this part, just the bridge.

### **Initial Set Up**

Each of your men must be placed in 'squares' in the bottom three rows, only having 1 man per square. At the start of Part 1, all the enemy are concealed in cover. In Part 2, some are concealed whilst others in full view.

### **Playing The Game**

PARAS is played in a series of same turns. Each turn has three separate phases:

- i) Choose actions for each man and carry out movement.
- ii) Carry out all attacks on the enemy.
- iii) Enemy action and fire.

#### **i) Player Action and Movement**

Each man must elect to perform one action per turn. These actions are selected by depressing the appropriate function keys.

- f0 **NOTHING** - Man does nothing
- f1 **MOVE** - Give the location of the intended move. In part 1 and 2, a man may not move to a 'square' occupied by either a friend or foe. In part 2 only, certain areas of the map may not be entered.
- f2 **FIRE** - Once chosen, this action is performed in the fire phase. Maximum weapon range is 7.
- f3 **MOVE AND FIRE** - Combines 1 and 2. A prone wounded man may not move and fire.
- f4 **FALL PRONE** - Standing men may fall to the ground thus presenting a more difficult target for the enemy.
- f5 **STAND** - Prone men may stand up.
- f6 **PREPARE GRENADE** - Before a hand grenade can be thrown, the normal weapon must first be shouldered and the grenade prepared for throwing.
- f7 **THROW GRENADE** - Only available to men with prepared grenades.
- f8 **LAY EXPLOSIVES** - Only used at the bridge demolition stage, and only if the man is actually standing on square H19. Once laid, the explosives may be detonated by any man at that location.
- f9 **DETONATE** - Any man on square H19 may detonate explosives, providing they have been laid previously. Detonation will destroy the bridge and your mission will be accomplished.

## **ii) Player Fire**

Beneath the map firing units, together with their locations are displayed. Colour coding is as follows:-

White - Fire

Yellow - Move and Fire

Black - Throw Grenade

**Opportunity fire** - At the start of the game, a number of enemy are hidden in cover and their locations are unknown to you. Their positions will only be revealed once they have fired. From then on, the man will be considered to have been spotted and his position will be constantly displayed until he is either killed or the game ended.

**Scatter** - Due to the nature of these weapons, they are subject to scatter - that is, the missile may not necessarily land at its intended target as it is liable to roll of fall short before exploding. Despite these drawbacks, grenades and bazookas are particularly useful in the end game, as they are capable of destroying the bridge at long range.

## **iii) Enemy Action and Fire**

During this phase, the enemy will perform its actions and attacks on your men.

## **Winning The Game**

For levels 6-10 all the enemy must be killed in part 1, and the bridge destroyed in part 2.

For levels 1-5, the mission is simply to destroy the bridge.

The portion of the bridge that must be destroyed is located at H19 and may be accomplished by one of three methods:-

a) explosives,

b) grenade attacks, or

c) bazooka attacks.

# PAUL DANIELS' MAGIC SHOW

*Professional, Originally Released On Cassette Only*

Disc compatibility : CDFS E00, DFS E00

PAUL DANIELS' MAGIC SHOW  
A Home Interest Package on cassette for the Acorn Electron

Author: Peter Killworth

## Instructions

The pack contains ten magic tricks and some simple props for you, the conjurer, to use. Ideal as a party piece or simply to baffle your friends, here are mind-reading, birthday-guessing, card-divining, money-making tricks, and more besides - all designed for the high-tech conjurer of tomorrow's world to challenge the credibility of what is possible and what your audience sees before it.

Let Britain's top showman magician lead you on a spectacular tour of computer magic, and let Britain's top micros take a bow. Together they prove an unbeatable duo.

## Introduction

This pack contains ten magic tricks performed by or with the Acorn Electron. To present these tricks, you will need, in addition to the things provided in the pack, some money (a £1 note or coin and the following coins 50p, 20p, 10p, 5p and 1p), a pack of playing cards, some paper and a pencil. You will also need your Acorn Electron User Guide.

Some of these tricks are self-working. In other words, the computer will perform them itself with no help from you; merely running the program will ensure that the trick works. Some require a little (secret) help from you to make them work. One trick will take a little patience to make it work - but the practice will be worth it! Another, just to be different, needs you to perform the trick with the computer helping.

An important rule to remember is that a good magician never repeats his tricks before the same audience. There are two different reasons for this: first, nobody really likes to see the same play ten times, and magic is no different; second, many people enjoy figuring out how magicians go their tricks and repeated presentation will enable them to figure out how the tricks are done.

## Loading Instructions

The cassette contains the files listed below. For more information about the file called ARRANGE, see 'Preparing your own Magic Show'.

MAGIC \* BIRTH \* BOOK \* CARD1 \* CARD2 \* MONEY \* NAME \* CLUE \* LIAR \*  
LETTER \* WORD \* ARRANGE

To load and run the program, place the cassette (fully rewound) in the cassette recorder, and type:

CHAIN "MAGIC"

and press <RETURN>; the 'Searching' message should appear on the screen as you do this. Now press the PLAY button on the cassette recorder and wait for the index to load; this will take approximately 30 seconds.

Once the correct position is reached, the first program takes one or two minutes to load. To go on to the next program, press the function key f0. This will automatically CHAIN in the next program providing you have run through the previous trick and it has finished.

NOTE: Programs can also be loaded and run in the usual way with the CHAIN command; to load and run the program CLUE for example, type:

```
CHAIN "CLUE"
```

and press <RETURN>.

### **Preparing Your Own Magic Show**

You probably won't want to perform all ten tricks in a single show, as they would take rather a long time. Three or four tricks, however, make up quite a reasonable show. You can design such a show in two ways on a cassette filing system.

The easiest way is to jot down where each trick you wish to perform is on the cassette, and simply CHAIN each program as you need it, winding the cassette as necessary between tricks.

You may prefer to prepare your own cassette with the tricks in a specific order, to avoid cassette winding. All but one of the programs can be copied by LOADING from the program cassette and SAVEing to your own cassette. WORD needs more care, as it possesses a directory stored after the program.

The ARRANGE program provided at the end of the cassette enables you to produce a new cassette of up to ten tricks in any order you specify. To run it, you should have both the original Acornsoft program cassette and your new cassette. Type:

```
CHAIN "ARRANGE"
```

which merely sets PAGE and CHAINs the main program, ARRANG1, immediately. You will then be prompted for the name of each trick in the sequence you desire (but you must have MAGIC as your first program), and instructed how and when to insert your cassettes.

### **Tricks**

BIRTH	(A birthday trick)	*
BOOK	(A book trick)	*
CARD1	(A card trick)	***
CARD2	(Another card trick)	**
MONEY	(A trick with money)	**
NAME	(A trick using names)	*
CLUE	(A murder mystery)	**
LIAR	(A test of lying ability)	**
LETTER	(A letter card trick)	*
WORD	(A trick with words)	*

\* Easy      \*\* Fairly Easy      \*\*\* More Tricky

### **Birth**

This trick is totally self-working. The program will divine the name of a playing card that someone is thinking of, together with that person's date of birth (which can be fictitious in the case of ladies!). Unlike some of the tricks, it may safely be repeated - but remember the boredom factor. The 'year of birth' may be entered as '1946' for example, or just '46' if you prefer.

### **Book**

This trick allows someone a free choice of a page, a line, and finally a word, in a book. The computer then reveals that it knows the word chosen. To guarantee that everybody has access to the same book, we're using the User Guide for the book, so have this available when you run the program. This trick, too, is totally self-working, but should not be repeated (or, if you do repeat it, not more than once at the most).

### **Card1**

This trick, a card trick, features the computer reading someone's mind and divining a card that they are thinking of. It needs a pack of playing cards, plus some practice. The plot is that the computer asks a person to shuffle a pack of cards, remove any five and place them in front of him. The person is asked to pick up just

one card and hold it. Next, the person types in the names of the four other cards. The computer, after a delay loop to heighten the drama, reveals which card the person is holding!

This sounds - and looks - quite impossible, and that's why the computer needs your help. Basically, you - without touching the computer - will tell it what the name of the chosen card is. Here's how.

First remove the Kings from the pack that you are using and put them away somewhere (we simply won't let the person use a King; this is done to make life simpler for you). Now run the program and take out five cards.

For example, let these be:

10 of Clubs, 4 of Hearts, Jack of Clubs, Two of Diamonds, 6 of Clubs.

Now choose one of these. Suppose, for the sake of explaining the trick to you, this is the 6 of Clubs. Next, the program needs to be told the names of the other four cards. and this is where you will signal the computer when you perform the trick. When, in the game itself, the cards are chosen by a person in the audience, they will all be put out in front of him and one card will be taken up and help by the person. When he or she has picked up that card (the 6 of Clubs in our example) you quietly pick up the other four. The order you pick these up will signal most of what the computer needs to know. Here's what you do.

The first thing you think about as you go to pick up the cards is the value of the chosen card. You immediately visualise the following diagram (which is why we're practising).

		SECOND CARD		
		1	2	3
FIRST CARD	1	A	2	3
	2	4	5	6
	3	7	8	9
	4	10	J	Q

This looks complicated but isn't. It's a four-by-three rectangle containing the card values Ace (A) to Queen (Q) in numerical order. After a few practices you'll have it committed to memory (and you must, as you can't look at it during the performance!).

The chosen card was the 6 of Clubs. Looking at the table, we see that it corresponds to the 'first card 2' and the 'second card 3'. What this means is the first card you pick up of the four left will be the second highest face value in numerical order (this is because it corresponds to the number 2 on the chart), in this case it will be the 4 of Hearts. Pick this card up and place it in your left hand (assuming you are right handed). Now going back to the chart, we want the 'second card 3' (which will be the third highest face value card of the three cards left). In our case it is the Jack of Clubs, place this in front of the 4 of Hearts (face up) in your left hand.

This will shortly signal to the computer the value of the card (a 6). But there are still two cards left. The card you pick up next depends on the suit of the chosen card, in this cases Clubs. There is a standard 'order of suits' used in many card games like Bridge, which is easy to remember as it's in alphabetical order! The order is Clubs, Diamonds, Hearts and Spades, with Clubs the lowest and Spades the highest. As you reach for the third card, as yourself whether the suit of the chosen card is one of the LOWER two (Clubs and Diamonds) or one of the HIGHER two (Hearts and Spades). In our example it's the lower. So you pick up the LOWER of the two cards left, which is the 2 of Diamonds and put it face up in front of the two in your left hand. Follow this with the only other card left (the 10 of Spades). Turn the four cards over, so they are face down and put them in front of the person.

It is most important that this is done absolutely casually. You know that you are doing something vital, but the onlookers must think that you are simply being

helpful and tidying up the other four cards. With ten minutes practice, you will be able to do the job in five seconds. Don't look worried, tense, etc, as you will convey the feeling that all is not well.

The computer will then ask for the names of the cards, and carefully fails to explain how they are to be typed in. So you explain - casually. And what you say will inform the computer of the colour of their suits. The key phrase is 'Black Suit'. (Think of a posh party to remember the phrase.) If the chosen card is black, the names of the four cards must be typed in SUIT first. If the chosen card is red, the VALUE of the cards must be typed first. Actually, the program only checks the first card entered, so if you or the first person forgets after the first card, it doesn't matter.

In our case the card is black (a Club). So tell the person to type in his four cards (casually point to the pile in front of him or her) the letter to be typed first for the suit and a number or a letter for the value (it doesn't matter about spaces in between, before, or after, but don't mention it unless asked). You can turn over the first card (being helpful) which should be the 4 of Hearts - which is typed in as 'H4' (rather than '4H'). Remind the person to press <RETURN> if they are unused to computers.

The person will then type in the cards, in this order, H4, CJ, D2 and S10. If the computer fails to understand, it'll ask for a repeat. Don't forget that after typing in the first card the suit-value order is not significant.

You have now done all the work and can sit back to watch the result. Try it now with those five cards.

For example, suppose the 10 of Spades had been chosen. Let's repeat the selection. First, the value. The 10 in the table corresponds to the 'first card 4, second card 1'. So we pick up the first card, the Jack which is the last highest card of the four left, then the 2 which is the first highest card of the three left. Spades is a high suit, so the third card is the 6 (the higher of the 6 and the 4), which leaves the 4 for the last card. Since Spades are black ('Black Suit') the cards go in suit first: CJ, D2, C6, H4. Now suppose, from the same five, that the chosen card was the 2 of Diamonds. The table gives 2 as 'first card 1, second card 2'. So pick up the 4, then the 10 (the 10 wasn't the second to start with, but became so after the 4 was picked up). It's a low suit so take the 6 next and the Jack last. The person should key in the cards values first as Diamonds are red.

One final time, suppose the cards are - an unlikely event - the four Aces and the 2 of Clubs, and that the 2 is chosen. How do we choose on the basis of numerical value when all the cards are worth 1 (ie Aces)? In such cases, the suit order determines the order; the Ace of Clubs is the lowest, the Ace of Spades the highest. The table then gives 'first card 1, second card 2' so we take the Ace of Clubs, then the Ace of Hearts. Clubs are low, so next the Ace of Diamonds, which leaves the Ace of Spades till last. Key them in suit first.

Please take some cards and the program and try out various combinations until you are happy with everything. Then try it on somebody and watch their reaction!

### **Card2**

This is another think-of-a-card trick, but much simpler for you. The person will be asked to name a card out loud. When he does so, you say, as if you'd just thought of it, either 'Oh, hit <RETURN> to continue' or 'Oh, hit the Space Bar to continue'. And here again you do the dirty work. If the card thought of is an 'odd red' or 'even black' (where again Aces are 1, Jacks 11, Queens 12 and Kings 13) you tell him to hit the <RETURN> key. If the card was an 'even red' or 'odd black' you tell him to hit the Space Bar. The rest is up to the computer. When it asks for the card to be typed in, use the same method (either order) as in CARD1, eg H4 or 4H, CJ or JC.

### **Money**

This trick involves a person moving money around according to the computer's orders, which have been dictated to it beforehand. No matter how this is done, the person ends up losing money - the computer knows best!

Provided with this pack is a strip of paper about one foot by five inches, marked with six equally spaced circles, each about two inches in diameter. These are labelled from left to right with bold letters A, B, C, D, E and F. The program will draw this for you as well. You will need the following cash: a £1 note or coin, 50p, 20p, 10p, 5p and 1p, and you're ready to proceed.

You have to help the computer just once here. When the program tells the person to set out five pieces of money, it will ask 'Have you done that?' You glance at the layout and see where the 50p coin was placed. If it was placed in an odd position (A, C or E) tell the person to type "Y" and <RETURN> (to remember this, "Y" has one letter and thus is rather odd!). If it was placed in an even position, tell the person to type in "YES" and <RETURN>. The trick will then work itself.

### **Name**

In this trick, the computer divines the one dead or imaginary name out of a list of nine names, all the others of which are alive, thought of by the person. The computer works the trick by itself. It is suggested that imaginary names should be used if children are taking part, and dead names for an adult audience.

### **Clue**

This trick, although it makes great use of the computer, gives you a chance to be the magician. During the trick, you will be sent out of the room while your audience decides, in a miniature graphics adventure game (a) which of six people they will be; (b) which murder weapon they will use; and (c) which room they will commit a murder in. You are then re-called, and demonstrate that somehow you know everything which has occurred in your absence!

Just as the computer has to work hard when it performs its tricks, you will have to do a little work during this one. First, you need to memorise three 'mnemonics' which are easy ways to remember complicated information. These mnemonics are:

ROOMS : 'BRISKLY CHOPPED'

WEAPONS : 'GRUMPY'

NAMES : 'BRUSH DOG'

These are all sufficiently silly phrases to be easy to remember. If you try running the program, you will notice that the initial letters of the nine rooms spell 'BRSKLCHPD' ('Bedroom', 'Reception', 'Study' and so on). With the addition of some vowels, the phrase 'BRISKLY CHOPPED' can be made, if one ignores the double 'P'! You should make sure that you can recall each of the nine room names from their initial letters - also that you can spell them, since the program is unforgiving.

Similarly, the names of the four weapons: 'Gun', 'Rope', 'Mallet' and 'Poison', form the consonants in 'GRUMPY' and the six names (Brown, Robinson, etc.) form the consonants in 'BRUSH DOG'. Again, make sure that you can recall the names from their first letters.

When you have practised remembering the rooms, weapons and names from their first letters you can try out the trick by yourself. Run the program, and choose for your practice the name 'Hughes'. Walk through the mansion and take the rope, and commit the murder in the lounge.

The computer will now be asking you the following question:

Where was the crime committed ?

Look very carefully at the layout of this question, as it is secretly telling you the answer (rather like you secretly told the computer things in previous tricks). You'll notice that there is a single space before the beginning of the question (this is easy to see, as the program uses a coloured background). There is also a double space before the question mark. How does this help you?

To determine which room is correct, you need your three times table. Take the number of spaces before the question (one in our example, but it may be zero, one, two or even three when you perform the trick) and multiply this value by three. Now add the number of spaces before the question mark (two in our example, but it may be zero, one or two when you perform the trick). This will give you a number from one to nine; in our case the answer is  $1 \times 3 + 2 = 5$ .

This means that the crime was committed in room 5. You now have to go through your mnemonic and count to room 5 to find out which it was. So you recite 'B.R.iS.K.L' to yourself. 'L' stands for lounge - which was indeed where the crime was committed!

This may sound a bit complicated: mental arithmetic to be performed while your audience is watching you! In fact, it isn't, because you have to sit down at the computer to type the answer to its question into it. So you have a perfect excuse for staring at the screen while counting and doing your sums.

The full list of nine possibilities is then:

Where was the crime committed ?	$0 \times 3 + 1 = 1$	(Bathroom)
Where was the crime committed ?	$0 \times 3 + 2 = 2$	(Reception)
Where was the crime committed?	$1 \times 3 + 0 = 3$	(Study)
Where was the crime committed ?	$1 \times 3 + 1 = 4$	(Kitchen)
Where was the crime committed ?	$1 \times 3 + 2 = 5$	(Lounge)
Where was the crime committed?	$2 \times 3 + 0 = 6$	(Cellar)
Where was the crime committed ?	$2 \times 3 + 1 = 7$	(Hall)
Where was the crime committed ?	$2 \times 3 + 2 = 8$	(Pantry)
Where was the crime committed?	$3 \times 3 + 0 = 9$	(Diner)

Type in the answer - in this case LOUNGE - in upper case. If you were correct, the computer will reply:

CORRECT!!

What was the murder weapon ?

(If you were wrong, it will also tell you!!). The layout for the second question is identical to the first, to avoid any suspicion from your audience. But the layout of the 'correct' (or 'wrong') statement again tells you the remaining information: in this case, the name and weapon. There will be between one and six spaces before the word 'correct', and these will tell you the name as follows: one space before the word 'correct' corresponds to the first name on the list (Brown), two spaces corresponds to the second name on the list (Robinson) and so on. In this case, there are four spaces, for Hughes. Finally, the number of exclamation marks tells you which weapon it was; in this case, two for the rope.

All you have to do is type in 'ROPE'. There will be another identical 'correct' and the final question, again using the same layout, 'Who was the murderer?' to which you can reply 'HUGHES' to a well-earned round of applause.

Of course, you should practise this trick before performing it in public. Let's take another example: Grimes, using the mallet, kills in the pantry. The first question is then:

Where was the crime committed ?

(Two spaces before, times three, is six; plus two after for a total of eight. 'B..R..is..K..Ly..C..H..oP' gives 'P' for Pantry.) The computer replies:

CORRECT!!!

(six spaces before 'correct' gives 'B..R..uS..H..D..oG' for Grimes, and three exclamation marks gives 'G..R..uM' or 'M' for Mallet). You now type in 'MALLET' and 'GRIMES' at the right times.

Remember again that you have to be staring at the terminal to answer the questions; you have plenty of time to think out the answers. Occasionally, you'll have to look carefully when there are a lot of spaces before 'correct', though they're easy to estimate, especially since lettering appears above them. This is a trick that can safely be repeated (once), as it is very difficult for the audience to notice the slight differences in layout between the two performances.

### Liar

In this trick, two members of the audience find out how good each of them is at telling lies to the other. Then they both try telling lies to the computer, but always get caught out at it!

The trick uses the ESP cards provided with the pack. These are cards which have been used since the 1940s to test whether extra-sensory perception exists. There are 40 cards altogether: 20 with red designs and 20 with black. There are five different designs, and four of each design in each colour to make up the 40.

To prepare, shuffle up the cards thoroughly and then arrange 20 of them so that the top card is red and the rest run black - red - black, etc, down to the twentieth card which will be black.

Take the other 20 and arrange them in exactly the opposite way, ie begin with a black card, then red, and so on until the last card (the twentieth) which should be red.

Put this second heap under the first to make a complete pack of 40 and the preparation is complete. To recap: the order should be red - black - red - black ... - red - black (end of first 20) - black - red - black - red ... - black - red; the only two cards of the same colour which are together being the two black cards in the middle of the pack.

To perform the trick, follow the computer's instructions. It will tell you to shuffle the cards. You should spread the cards face up in your hands, just to show that they are well mixed (as they are). While you do this, look for the pair of black cards together, and cut the pack between them ready for a shuffle. (So the two piles are back where they were when you were ordering them.)

Now perform a single rifle shuffle. It doesn't have to be neat. If you don't know how to rifle shuffle, you can hold one packet face down in each hand and then spread each packet across the table in a line towards you, making two wiggly parallel lines of cards. Then, using both hands, push the two lines into each other, and then scoop the (now single) line of cards towards you and square up the pack.

With either shuffle, the cards should now appear randomly mixed. And so they are, except for what is known as the Gilbraith principle. Each pair of cards, starting from the top, consists of a red and a black card. What they are, and which order they come in, is indeed random; but there will always be a red and a black together in the top two cards; a red and a black as the third and fourth cards, and so on throughout the pack. If you haven't come across this principle before, you should mix up the cards as instructed above and try it out.

Back to the performance: the computer will tell you to deal the cards into two equal heaps. Since the cards are arranged in red-black pairs, dealing them out ensures that the colour order of one pile is precisely the opposite colour of the colour order of the other pile. In other words, if pile 1 starts, say, red - red - black - red, then pile 2 starts black - black - red - black. Again, try this out for yourself.

Now let the audience follow the computer's instructions. Your sole job, apparently, is to act as scorekeeper with the computer. One person will be guessing whether the other is telling the truth or telling a lie (which involves telling the wrong colour and design). Each time the computer will ask whether he or she was correct, and ask for a Y/N response.

All they see - if indeed they are looking, as much amusement will be generated by people trying to tell lies and succeed! - will be you typing "Y" and "N" followed by <RETURN>. In fact, you're using this to tell the computer what colour the card actually was. If it was RED, after typing "Y" or "N" accordingly, press <RETURN> (RED RETURN will help you remember). In other words, just like a normal response to INPUT. If the card was actually BLACK, after typing "Y" or "N", you apparently press <RETURN> but really press the key above it (the <COPY> key). The computer will act just as if you'd hit <RETURN>, but will notice that you had pressed <COPY> and take action accordingly.

Having done this for each of the 20 cards in the first pile, the computer knows their colour, and therefore knows what each colour the cards in the other pile are. The computer will now use this knowledge to finish the trick; your work is over and you can enjoy the rest of the trick!

TO RECAP: If the first card was red, and guessed wrong, you would type "N" <RETURN>; if the next was black and guessed right, you would type "Y" <COPY>; and so on.

### **Letter**

The plot of the trick is simple. Out of the packet of letter cards provided with this pack, one is selected, the packet is then shuffled and cut, and the order of the letters typed into the computer, which instantly divines the selected card. The computer will offer to repeat this trick, because (a) it is possible for it to make a mistake, and (b) the mystery grows as the packet becomes more and more mixed up!

Almost no work is needed except to ensure that the fifteen cards spell out the 'PAUL'S DEMON TRICK' phrase from top to bottom, before the trick starts. The trick then works by itself. The method is to compare the order after mixing with the order before, 'scoring' each letter by how far it is from its two neighbours before the mixing. The card identified by the computer has the letter with the highest 'score'.

When the computer requests a rifle shuffle, you can use the table shuffle described in 'LIAR' if you find that simpler.

### **Word**

In this trick, a four-letter word held in memory and a freely selected longer word, are both divined by the computer. The trick needs no work on your part, and may be safely repeated.

# PCW GAMES COLLECTION

*Professional, Originally Released On Cassette Only*

Game Type : Arcade  
Author :  
Standalone Release(s) : 1984: PCW GAMES COLLECTION, Artic, £4.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : CENTURY. No further information available.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"If you are a games addict continuously on the prowl for more and better games or looking for your first collection of BASIC listings - look no further. This sparkling collection will keep you busy for a long time. Some of the best programs that have ever appeared in the well-known magazine Personal Computer World have been converted for YOUR computer and put together here in this prize collection. Each game has been thoroughly tested and comes with full instructions. Test your reflexes on arcade-style games or test your wits on strategy games - there is something here for everyone.*

*Listings of these games are also available in a companion book which includes a useful description of the programmer's technique to help you pick up some hints as you go."*

**ROBOTANK** - use LOGO-style commands to program your tank to move and shoot on a battlefield

**GOLDEN FLEECE** - an adventure game with graphics and a surprise guest star!

**PURSUIT SHIP** - flying through the galaxy, shooting down enemy flying saucers, you have to conserve your fuel and dodge the enemy's fire

**MARTIAN ATTACK** - you have two missions: to shoot down the aliens with your plane and land your helicopter on the special pad

**HUNCHBACK** - save Esmerelda by leaping over the spears, avoiding the soldiers and boiling oil and ringing the bells...the bells.

**HUNGER ALLEY** - gobble up food pills, and killer skulls - but only after eating an energy pill

**DOGFIGHT** - a two player fight in the sky; choose to be a jet or a bi-place

**EULER'S TOURING KNIGHT** - visit every square on the board with your knight, but only once each

**MISSILE DEFENDER** - you have lasers to defend your five cities which are being bombarded by missiles

**BLACK HOLES** - catch the aliens and trap them in a grid of black holes

**MAP QUIZ** - guess the names of the towns from the computer-generated dots on a map

**TRANK** - steer your tank to chase a moving target and avoid the obstacles

**CITY SMASHER** - raze a city to the ground with your bombs and avoid the defending missiles

**BABY MONTY** - can you steer the mole out of the flooding caves and avoid the tumbling barrels?

**FLAPPA CATCHA** - save Ethel from the cannibal which, by catching birds in your hat

**FOUR IN A LINE** - get four of your counters in a row to win this game

**COLOUR CODE** - a Mastermind-type game where the computer thinks up colours and you have to guess that and where they are

**HELICOPTER RESCUE** - fly a helicopter into the gale, along a canyon, with a victim dangling beneath you

**ACE HIGH** - a Patience-like game where you shuffle the cards to put the aces at the top of the stacks

**SIMON** - the computer flashes a sequence of colours and sounds which you have to memorize, and copy.

**Instructions' Source** : PCW GAMES COLLECTION (Century) Back and Inner Inlay

### **Review (Electron User)**

This is a sparkling collection of 20 strategy and arcade type games, all written in Basic for the Electron. An accompanying book gives full instructions and detailed descriptions explaining how the programs work. However, although there is a great variety of arcade games their speed is generally slow. Their appeal is not great compared with the more sophisticated machine code games available, but they do provide a good insight into programming games in Basic.

It is an intention of the publishers that users would use the listings to pick up expert hints on programming their Electrons. The variety makes up for any loss in quality.

The strategy games are not affected detrimentally by the fact that they are programmed in Basic and not machine code. Speed of presentation and response is not important. The programs are available elsewhere in various forms; the ideas are not new. This collection enables users to find out how the programs work so I would seriously recommend it for budding programmers.

EULER'S TOURING KNIGHT is a particular favourite of mine. The problem is to move a knight about a chess board calling in at each and every possible square. The computer is programmed to demonstrate a solution then the user can try it out.

One of the other programs, ROBOTANK, requires Logo-type commands. ACE HIGH is a patience card game. Instead of manipulating your own pack you press a letter to deal and another to move the cards. I think I prefer to use real cards, but the simulation is a good one.

I can recommend this collection for those people who wish to increase their powers of programming by seeing how others do it.

John Woollard, ELECTRON USER 2.10

### Instructions

There'll be no siesta for Pedro, he's the busiest gardener South of the Border.

After many years of hard work and loving care, Pedro now has the most beautiful flower garden in Old Mexico. The trouble is all the animals for miles around have acquired a taste for Pedro's succulent blooms and are always looking for ways to break into his garden and eat them.

From dawn till dusk as Pedro slaves away, the animals never give him a moment's peace. He tries everything to stop them getting to his prize blooms, from blocking the garden paths with compost and bricks, to chasing them away and even jumping on them; but even so, some manage to get through.

Every time an animal gets into the garden and eats his flowers, Pedro has to plant more seeds. It's problem after problem, and as if things aren't bad enough, the village tramp keeps sneaking in to steal Pedro's seeds - so he has to be chased off as well!

What with marauding animals and thieving tramps, it doesn't look like you're going to get much of a siesta either. So look lively, you can't put things off till manana.

### Aim Of The Game

To stop the animals from eating his plants, Pedro must collect bricks or compost from the bottom corners of the screen and block the maze exits. He may not carry or place more than one object at a time.

Any animals getting into the garden will make for the plants and start eating them. You must decide on whether to block up the maze or stamp out the animals, then you must re-seed the gaps in the garden at every available opportunity.

ANIMALS : Appear on the screen at frequent intervals. They make their way through the maze at the top of the screen and then home in on the flower beds, where they consume plants. As the end of the game is the demise of all the plants in the garden, it is most important that you protect and replace the plants by planting seeds.

TRAMP : He appears on the screen at random intervals. He enters the garden from the side and immediately homes in on the seed box. You must run toward him and frighten him away, otherwise he will steal all your remaining seed.

### Pedro Play Notes

LEVELS : At the end of each level, a bonus is calculated on the number of plants left.

At the start of the next level, the number of seeds in the box will be increased by one seed for every plant left.

### **Game Controls**

The play keys have been laid out in a way so as to offer the player a wide variety of combination of keys to make the play as comfortable as possible.

MOVE LEFT : The keys to move left are all on the bottom row, beginning with SIFT, then every alternate key from theon. i.e. SHIFT, X, V, N, etc.

MOVE RIGHT : The remaining keys on the bottom row enable you to move right. i.e. Z, C, B, M, etc.

MOVE DOWN : Any of the keys on the second row up may be used to move downwards. i.e. A, S, D, F, G, etc.

MOVE UP : Any of the keys on the third row up may be used to move upwards. i.e. Q, W, E, R, T, etc.

JUMP/PICK & PUT : Any key on the top row or the space bar will enable you to jump on the invading creatures, also if you are standing close to either the compost heap, pile of bricks or the seedbox depressing any of the top row or space bar will enable you to pick up one of the items.

If you pick up either a brick or compost and wish to block one of the maze exits, take what you are carrying to the exit of your choice then press any key on the top row. Your brick or compost will be put down.

If you pick up a seed, take it to an appropriate gap in your flower bed and press any key on the top row. Your seed will then be planted and a flower will 'grow' to replace the one that has been eaten.

# PEG LEG

***Professional, Originally Released On Cassette Only***

Game Type : Arcade  
Author :  
Standalone Release(s) : 1984: PEG LEG, IJK, £2.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : IJK, Unit 5 Moorfields, Moorpark Avenue, Bispham, BLACKPOOL  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Ahoy there, me Hearties! Travel around the seven seas collecting pieces of eight and cannon balls for your pirate galleon. This highly colourful machine code arcade game will even have your parrot squawking for a turn."*

Your faithful pirate PEG has the task of collecting as many gold bars as he can. He must get these from the harbour and take them to the smugglers' cave.

However, there are many obstacles in his path. These include falling barrels and large cannon balls which must be avoided using the facilities provided.

These are as follows:

Use of a pirate ship to move from locations such as the harbour, ammunition dump and smugglers' cave.

Peg must avoid dangers by running and jumping but can also attack navy ships by firing cannon balls from his own ship. These are located at the ammunition dump.

## Scoring

Gold bar/cannon ball on ship .....	10 points
Gold bar at smugglers' cave .....	100 points
Hitting another ship .....	30 points

# PENGI

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Overhead Maze Game  
Author : F. Knock  
Standalone Release(s) : 1984: PENG1, Visions, £1.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : VISIONS, 1 Felgate Mews, Studland Street, LONDON W6 9JT  
Disc compatibility : CDFS E00, DFS E00

## Instructions

Poor old PENG1 is locked up in the freezer again! Your job is to try and line up the three special "ice-diamond" blocks without being killed by the "snow bees" waiting for you at every turn.

One way to kill them is to kick the blue ice blocks at them, or alternatively you can entice them on to the fence - now you can electrify the fence by giving it a hefty kick - any bees on the fence will now be stunned, long enough for you to run over them and finish them off!

If you can avoid the bees long enough to try and line up the special "ice diamond" blocks (the white ones) then you are rewarded with bonus points; 10,000 for the blocks in the middle of the field, 5,000 points if on the fence.

## Game Features

1. Increasing difficulty with each screen (possible up to 20 screens)
2. Bonus points for lining up the white "ice diamond" blocks; 10,000 points bonus if aligned in mid-field, or 5,000 if lined up along the fence
3. Points gained for killing the "snow bees" (400 points each) (more bees to kill on each screen)
4. A time bonus is also given (bonus screen)  
1,000 pts if under 1 minute  
3,000 pts if under 40 seconds  
5,000 pts if under 20 seconds
5. Extra Life at 30,000 points
6. Bonus screens for lining up "ice diamond" blocks.

## Other Features

100% In/Code Arcade Action, Full Colour & Sound, High Score Table, On Screen Scoring: High Score, Constantly Updated, 20 Multicolour Sprites, Practice Mode - You Don't Get Killed!, On Screen Instructions, Sound Can Be Turned On Or Off

## Game Controls

Z - Left, X - Right, \* - Up, ? - Down, <SPACE> - Kick  
Note that the keys can be redefined.

**Instructions' Source** : PENG1 (Visions) Back and Inner Inlay

## Review (Electron User)

PENG1-type games have become quite popular lately with two or three software houses having their own versions on the market. The game is derived from Pac Man, but Visions' PENG1 is far superior to any Pac Man program.

You are in control of a cute little penguin who is trapped in a maze made up of large ice blocks inhabited by snow bees. The object of the game is to line up three

special white ice diamond blocks without being caught by the snow bees. Fortunately, these can be killed by squashing them with an ice block which slides along if you push it.

The graphics are excellent as is the sound, and I found it to be difficult enough just avoiding the snow bees, never mind lining up the ice diamond blocks. There is a high score table of famous penguins, on-screen scoring, re-definable keys and a practice mode in which you can't be killed. If you're into arcade games, you will love this one.

Roland Waddilove, ELECTRON USER 2. 4

# PENGWYN

*Professional, Originally Released On Cassette Only*

Game Type : Arcade  
Author :  
Standalone Release(s) : 1984: PENGWYN, Postern, £6.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : POSTERN, PO Box 2, Andoversford, CHELTENHAM GL54 5SW  
Disc compatibility : Unknown

## Instructions

*"As temperatures rise, strange happenings begin in PENGWYN's frozen world. An exceptional game of skill needing lightning fast reaction!"*

## Playing The Game

The object of the game is to position the flashing blocks, which are placed randomly, in a straight line anywhere on the screen. To do this PENGWYN can move in any direction by pressing the appropriate keys. If his path is barred by ice blocks, he can melt these by pressing RETURN or move them if there is a space available.

Unfortunately however, whilst PENGWYN is attempting to manoeuvre the flashing blocks into line, the temperature is rising as the 'NASTIES' melt the ice, behind which they are hiding before setting off in pursuit of our hero. His only defence is to outwit them or crush them with a block of ice.

If he succeeds in his task, he will earn a few moments respite, whilst his score, based on elapsed time, is calculated, before he is faced with a fresh phase to conquer.

Remember speed is essential as the number of 'NASTIES' will increase and the potential score decrease as time passes.

## Game Controls

Z - Left, X - Right, : - Up, / - Down, <RETURN> - Move/melt block

**Instructions' Source** : PENGWYN (Postern) Back And Inner Inlay

## Review (Electron User)

When I first tried Pengwyn I wondered why the game was so ponderous. Then I spotted that the cassette is printed in identical fashion on both sides, but each side is dedicated to a different computer! While one side is indeed for the Electron I had mistakenly loaded the BBC version. Still, the slower speed enabled me to develop some tactics so that when I loaded the correct side I had managed to stay alive for a while.

Many of the best games are simple in concept, and one of my all time favourites has been Jet Pac, which I enjoyed when I had my S\*e\*t\*u\*. In Pengwyn, the storyline is equally simple. The feathered friend stands surrounded by blocks of ice and three vibrantly shining eggs. By melting and/or sliding the blocks, the Pengwyn has to get the three eggs in a straight line anywhere on the screen.

Sounds simple, doesn't it? The trouble is that a couple of yellow monsters melt out of the blocks and pursue the little bird, although their movements are predictable.

It's a lovely feeling when your Pengwyn slides a block which then crushes a monster flat - although another monster is always waiting to melt out.

What makes the program good value? I can't say it's the sound, which is barely adequate. But the animation is superb, with some delightful touches - like the bird's feet dancing around on the cold ice. When the poor creature is trapped, its look of total bewilderment and dejection is a masterpiece of comic pathos. With a high score table to keep tabs on your progress, it's the kind of program you will go back to again and again...and again.

Phil Tayler, ELECTRON USER 1.12

LINCOLNSHIRE DN20 9AX  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Percy is trapped in an ice maze which is populated by deadly Snobeese. His only hope of survival is to squash them by hurling ice cubes at them. Unfortunately, whenever it seems that he was won, a deadlier breed appears.

To hurl an ice cube, press SPACE and a direction key simultaneously. Each snobee you squash gives you 100 points. If there is more than one ice cube in line, then the first ice cube will be melted (scoring 10 points), rather than hurled. You can also gain time bonus points.

## Game Controls

LINCOLNSHIRE DN20 9AX  
Disc compatibility : CDFS E00, DFS E00

## Instructions

The objective of the game is to complete all sixteen screens in sequence without using passwords. To complete a screen, you must collect all the diamonds on that screen. Some diamonds are available immediately, but most are obtained by pushing two boulders together.

Some boulders have question marks on them. These convert into one of the four mystery objects below. An HOURGLASS increases the time remaining by 50 seconds. Four MAGIC POTIONS give an extra life. A BONUS SCORE gives 500 extra points. A KEY SWAP reverses two or all of the movement keys. These mystery objects do not have to be collected to complete a screen.

There are also black boulders, which cannot be converted into diamonds, but are obstructive. Keys are pushed into doors to open them, but they must be facing in the correct direction (either left or right). Monsters prowl around some screens. Contact with a monster leads to loss of life. You start with four lives and with 500 seconds to complete each screen.

Each of the sixteen screens has a password, which is displayed at the start of the screen. To start a new game at a screen which has been previously reached, press the P key on the title screen, and enter the password.

MYSTERY OBJECTS: Hourglass, Magic Potion, Bonus Score, Key Swap

## Game Controls

Z .....	Move Left	X .....	Move Right
? .....	Move Down	* .....	Move Up

## Review (Electron User) - "Stand Aside, Repton"

How could the ever-popular REPTON series, with its combined puzzle and arcade action elements, be improved upon? The answer is PERPLEXITY, which could be described as a 3D version of REPTON.

When I first saw the cassette inlay I thought of Pacmania on an Archimedes. That's just a 3D version of SNAPPER, and while that's fast and colourful, PERPLEXITY shows that good games can be produced on the Electron and 32 bits are only an advantage, not a necessity.

In PERPLEXITY you wander around sixteen screens collecting diamonds, some of which are visible while others are formed by pushing two boulders together. Collect all the jewels on one screen and you move on to the next.

It sounds easy, but accidentally pushing one rock against a wall could mean going back to the start. On several occasions I wished I'd had a pull option as well as the push one! To add to your problems, a few monsters are lurking around.

Most of the boulders form diamonds when pushed against another but some, identified with a question mark, are mystery ones and form four other objects. They are positioned at different places in each game, so even if you know a particular screen well, you could still run into trouble.

While you must collect all the diamonds to complete a level it's up to you whether you collect the mystery objects which are created. Three of the four are useful but the other should, wherever possible, be avoided.

One certainly worth collecting is an hour glass which gives you extra time. With only 500 seconds to complete each screen, this is a welcome bonus.

Extra lives - always useful - can be obtained by collecting four bottles of the magic potion which are sometimes formed when the mystery boulders touch.

Don't collect the key swap object unless it's blocking your way and you have no option. Sometimes they swap the actions of all four keys, at other times they only swap two.

If you're forced to collect one you can look for another and, if you're lucky, it may reverse the original swap. I found that in the majority of cases all four directions were changed, so this method often, but not always, worked.

However, once one is collected, you may be doomed to pressing the right key for left and the left key for right. In this situation it's very easy to accidentally push a key or boulder against a wall.

The final mystery object is a 500 point bonus - always useful and produces a satisfying ping as it is collected. As well as the boulders, mystery boulders and monsters scattered around the maze you'll find a few other items.

Some of the passages are locked and you'll find keys scattered in the maze. Only ones facing the correct way will open a lock, so find it and push it round. Once it touches the lock the way will be cleared and you can proceed. There are only enough keys for the number of locks, so careful thinking about how to get the locks to the keys is essential.

If you block a key you may as well give up on a screen or use the remaining time to explore the maze and think of a strategy ready for your next game.

As well as the coloured boulders there are also black ones. They are just obstacles and can be pushed out of the way, but be careful not to push any into a position that will block you later.

Only the lower portion of the screen is used for the game, the top being used by the program as a workspace. The graphics are good and flicker free.

On the right hand side of the screen a lot of useful information is displayed, probably the most important being a scanner map which is constantly updating.

This shows your position in the maze together with all the diamonds and green boulders. Unfortunately it doesn't show things like the black boulders, keys or monsters. Nevertheless, it's very useful.

Also displayed are the number of diamonds and boulders, but I didn't find any use for this information because, once the number is low enough to concern you, you can clearly see the number and position of the few remaining on the scanner.

Of more use if the time - 500 seconds seems a fair old ration, but as you near the end of a screen they seem to tick away rather quickly.

The number of bottles of magic potion you've collected is also displayed and, once you have collected four, it shows zero again and your number of lives - also noted on the screen - will be increased by one.

PERPLEXITY is a superb game and will keep you glued to your keyboard for hours. There's only one real let-down - the sound. While it's adequate, it's nothing like as good as other games have shown the micro to be capable of.

It's good to see Superior still supporting the Electron market, especially with games of this quality.

Louise Colinson

### **\*\*\* Second Opinion \*\*\* (Electron User)**

PERPLEXITY is compulsive fun at its best. The first few screens alone are enough to keep you going for hours - the sixteen will keep you going for weeks.

The password system lets you practise the levels individually, but the object is to start on the first and work your way right through to the sixteenth. In an adventure where one false move can spell disaster - quite a challenge.

It's not a budget game, but well worth every penny.

## Review (ELBUG)

This is a useful money management package. The program initially assumes that you are an average person with a Current and Deposit account with the following expenses:

Car/travelling costs, electricity, gas/oil, insurance, mortgages, rates, subscriptions, telephone, standing orders and miscellaneous expenses.

You can then add or delete articles as you wish to tailor the package to your own requirements. This program handles the data for a whole year in monthly units and can give information displays of current savings, budgets, next month's spending, annual budgets and spending over the last twelve months. All entered data may be saved onto tape and re-entered at any time. Rating: \*\*\*\*

## Review (Electron User) - "Ghost Buster?"

When I heard that Tynesoft had released PHANTOM, described as one of "the new breed of arcade games". I expected an Electron version of the classic game THE GAUNTLET. As usual I was wrong.

The cassette inlay shows two players blasting a rather unpleasant looking, multi-limbed astral misfit and looks quite smart. The scenario is the present with the player taking the role of an absent minded professor of astrophysics with more than a passing interest in psychic phenomena.

He has long expected the impending catastrophe that is about to befall us - why else would he just happen to have a nuclear powered particle accelerator lying in his back yard?

The game loads and presents you with a start screen reminiscent of FUTURE SHOCK and just as beautifully designed. Score, reactor level, heart rate in beats per minute (BPM) and electro-cardiograph (ECG) displays are in a window at the bottom of the screen.

In PHANTOM, as in life, you only get one chance. Each time you bump into one of the ghouls and spectres of the game they give you a terrible fright which increases your heart rate. Being a bit of an old codger with one foot in the grave already, 100 BPM is a little too much for his old ticker and it'll give up the ghost.

Press S to start and after nerve shattering music enter Ye Olde Inn viewed from above, as in THE GAUNTLET. It all seems very quiet and peaceful, until you discover that the ale must have been like liquid dynamite as deceased customers are very fond of the old place. Needless to say, they're not too keen on strangers and as soon as you put your head round the door they descend like rampant bluebottles.

No problem: Just whip out your new iron cannon and start blasting. Zap! The spooks vanish in little clouds of ectoplasm. Neat little gadget this, since the beam can knock out several of them in one shot.

There is a snag though, and if like a good shoot-'em-up then you'd better think again. The backpack has a limited amount of power and once that's gone you'll have to wait until you find another isotope pack - it's the one with the coloured top: No other pack looks or lasts quite like it. A few are scattered throughout the game, but remember they don't last long.

To make matters worse your heart rate doesn't settle down from one level to the next. It does add to the fun and doesn't let you relax.

After battling through the four levels of the inn and cleaning up the ghouls you find yourself transported into the dungeon where a completely new set of nasties appear.

Luckily the journey between each new set of screens, which involves some loading from tape, gives your heart time to get back to normal. In all there are 64 rooms between the four houses, the ultimate being the castle, with the difficulty of maze and puzzle quality increasing throughout.

The graphics are superb: The characters are clear and well drawn and four colours of the Mode 5 display have been used to excellent effect. The animation is smooth and fast, and gets even faster as more spooks appear.

Soundwise the game is nothing to write home about, but this is a limitation of the Electron that has yet to be overcome.

Unlike most other games of this type, PHANTOM has another surprise up its sleeve. Whereas in THE GAUNTLET your objective was to hack through dozens of screens, in PHANTOM you have to figure how best to survive to the next level. Evasion seems to be the best tactic, shooting only when you have to. This adds greatly to the game's addictive quality.

There are only two very minor faults. First, the spooks can sometimes strike without you being able to shoot back, though this is not as bad as it sounds, and second the game is a bit slow to restart after you've been killed. This is annoying in such an addictive game.

Those minor criticisms apart, PHANTOM is without doubt one of the finest games I have ever played on the Electron and anyone, Tynesoft included, would be doing very well to better it.

**Instructions' Source** : PHANTOM COMBAT SIMULATOR (Doctorsoft) Back and Inner Inlay

## Review (Electron User)

Doctorsoft's PHANTOM is not one of your run of the mill flight simulator programs. The cassette carries two versions, one running in two colour Mode 4 and the other in four colour Mode 1. The former is slightly faster.

The game loads quickly, building up to comprehensive cockpit display of instruments, unique in that some information is given in analogue form as well as digital readouts.

I found that once the short but comprehensive instructions had been read and noted, flying the aircraft was a comparatively easy task. In the training mode the scoring is inhibited and crashes at supersonic speeds into the runway are allowed. You can have two or one joystick operation plus keyboard. I found that one joystick plus keyboard for the other controls was the best choice.

In the Form mode, which is automatically entered above 12,000 feet, the enemy aircraft are controllable from the keyboard should you desire, and can be shot down in combat or used to practise formation flying. The combat mode does not allow target control, but the scoring is enabled and kills are logged. Should you get to the stage where your own aircraft is so badly damaged that it can no longer be flown, the <ESCAPE> key allows you to eject, preserving your score.

The aircraft flies true and is very manoeuvrable and the enemy a real threat, as I found to my cost shortly after starting. Full marks to Doctorsoft. PHANTOM is better than I expected and well worth the money, whether you are a computer flier or an RAF pilot of the future.

## Review (Electron User) - "Phantom Of The Skies"

This is the single computer version of a program demonstrated on BBC Television's Micro Live. You may have heard of Doctor Soft's now famous Double-Phantom flight simulator, where two BBC Micros are linked together via their RS423 ports.

Each computer controls a separate jet, but both occupy the same air space and each is visible out of the cockpit window to the other player.

PHANTOM COMBAT is the single player version of the same game - or should I say, single computer version, because PHANTOM COMBAT does support a kind of two-player option.

The instrument panel at the bottom of the screen is superbly drawn in full colour with analogue dials and digital readouts. I have never seen as good an instrument display on the Electron. There is also a black and white version of PHANTOM COMBAT further on the tape, in Mode 4 for extra speed.

Flying is easier said than done. Although the manual lists all the keys, I kept fumbling because of the illogical and confusing choice for pitch and roll. However, all the other keys were sensible enough.

The handling characteristics of the Phantom feel good and Mach II flight can be achieved very quickly. When in combat mode, your adversary appears a delta-wing shape.

The enemy planes are based on two real life jets - the Soviet Mig 21 and Su 15 - and supposedly mimic their big brothers' accurately. I couldn't really tell, but they are certainly deadly enough and quite intelligent.

The cassette inlay takes great pains to stress the fact that this is a proper simulation and doesn't rely on arcade sprites to depict the objects. Everything, we are assured is calculated and drawn on the screen at 15 frames a second.

I must agree that I wouldn't consider a game to be a true simulator either if the landscape and objects were drawn as sprites. But no flight simulator does this, so I can't see why Doctor Soft makes such a big thing of it.

And I must take issue with the claim of 15 frames a second animation. The flicker is dreadful. The techniques rather than the Electron's slow speed are at fault here - the display is constantly being drawn and wiped again, resulting in it being blank for 50 per cent of the time.

PHANTOM COMBAT is a good simulator, marred only by a flickering screen display and a brief manual. This is a program which probably only comes into its own as the dual computer BBC Micro version, but as a stand-alone Electron simulator it is a good buy.

Sound .....	2
Graphics .....	8

# PHAROAH'S TOMB

*Professional, Originally Released On Cassette Only*

Game Type : Graphic Adventure  
Authors : Marian Clark & Brian Clark  
Standalone Release(s) : 1984: PHAROAH'S TOMB, A n F, £7.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+, Master 128  
Supplier : A 'N' F, Unit 8 Canal Side Industrial Estate, Woodbine St  
East, Rochdale, LANCASHIRE OL16 5LB. Tel: (01706) 341111  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

A desperate race against time to solve the anagrams and master-minded puzzles. You must find the pharaoh's mask and 500 pieces of gold before you can escape by returning to the start. Beware of the mummies and the spiders which will leap at you if you are too slow to open the various doors.

## Control Keys

After you have collected coins you may buy weapons and food for use on the journey. To use the items, or move around the pyramid use these keys:-

A - Use bow and arrows	I - Inventory
B - Go backwards	L - Use Lance
C - Use cross	S - Use Sword
F - Go forwards	T - Take Mask
G - Buy items (GET)	

CURSOR KEYS - Use these to collect gold or silver.

L/R - These keys may be used at the 'Goods for Sale' location to enter the pyramid.

**Instructions' Source** : PHAROAH'S TOMB (A 'N' F) Inner Inlay

## Review (Electron User)

I'M not much of an adventure game freak, having spent too many hours lost on the London Underground for caverns to hold much fascination. So it was with a distinct air of foreboding that I decided to have a go at PHAROAH'S TOMB, the "adventure style game" from A 'N' F.

I was entranced from the first moment. The game isn't really a true adventure. It's more a cross between a series of anagrams, mastermind-type puzzles and an arcade action game. A race against the clock is thrown in as well.

The idea is that you enter the Pharaoh's tomb in order to get hold of his mask and 500 pieces of gold. When you've got them you can return to the start (if you can find your way) and escape.

At least that's what the instructions say. I must admit that I haven't got that far. I usually starve to death.

On your way through the tomb, you are attacked by spiders and mummies, have to solve riddles to open doors and rush around collecting silver and gold coins. With the coins you can buy useful items like lances, swords and bows and arrows as well as food. Sadly, you can't bribe anyone to tell you how to get out.

I could tell you more about this game, but why should I give away my hard won secrets? Find you for yourself!

It's great fun. The instructions are straightforward, though the game seldom is. It's the type of program that has people looking over your shoulder giving 'helpful' hints. If you are tired of all-action games but are a bit wary of a full blown adventure, then PHAROAH'S TOMB may just suit your needs. And if you do manage to escape, let me know how.

Trevor Roberts, ELECTRON USER 1. 6

# PHILOSOPHER'S QUEST

*Professional, Originally Released On Cassette Only*

Game Type : Text Adventure  
Author : Peter Killworth  
Standalone Release(s) : 1985: PHILOSOPHER'S QUEST, Acornsoft, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ACORNSOFT, Betjeman House, 104 Hills Road, CAMBRIDGE CB2 1LQ  
Tel: (0223) 316039  
Disc compatibility : CDFS E00, DFS E00

## Instructions

Welcome to the adventure! This pack contains programs on cassette plus instructions for *Philosopher's Quest*, an 'intelligent' adventure where the player explores a strange land full of weird and unlikely things, some dangerous, some even magical.

In this new and authentic game, the concept of the adventure is exploited to the full, and extended to include abstract thought as a means to progress and survival. However, wild speculation will get you nowhere - you have to use your wits!

The objective is to find all the treasures and bring them back to where you began, but in the meantime you have to sift clues, weigh up risks, spot magic words and remember which way you came!

## Loading Instructions

Once the adventure has loaded, you will be prompted to 'Position the database file'. This refers to the dynamic part of the database which attends to the general housekeeping (where you are, where the objects are etc). This file is called INIT and the starting version is provided just after QUEST on the cassette. So to load INIT, simply leave the cassette running. Once INIT is loaded in (loading takes about 15 seconds) the game will start.

Should you decide to SAVE a game, with the intention of returning to it later, you will be prompted to find a suitable area on one of your cassettes followed by the usual 'RECORD then RETURN' message. This will put the dynamic part of the database on to cassette, called INIT again, so you'll need to keep track of which SAVE is where. If you restart on one of these (separately saved) games, you should load this instead of the original INIT file.

Should you QUIT or die, you'll be asked if you want another game. 'Y' will require you to reload whichever INIT you wish to supply. 'N' will simply end.

## Game Play

The game starts with a description of your immediate surroundings, and a choice of objects which you can take with you (use TAKE followed by the name of the object) on your quest. Choose carefully, before setting off with a command such as WEST if you want to try going west, or NE to go to the northeast.

The computer becomes your eyes and hands. It will tell you what you can see and what is happening around you. You must tell it, in return, what to do (it prompts you with a colon). Use commands of one or two words.

The computer only looks at the first four letters of any word you type so that the command NORTHEAST must be typed in as NE to distinguish it from NORTH (or N - there are various abbreviations you will pick up as you go).

## Some General Advice

Tunnels bend sometimes, so going north from one room doesn't necessarily involve entering the next room from the south.

Most areas are not lit, and moving in the dark is rather dangerous, so you'll need a light source. Some objects (and treasures!) can have special priorities, as you'll find out: some of them are a help and some a hindrance. Nothing in the game is a red herring so read all the text carefully for clues to other puzzles.

Eating and drinking are not allowed by order. EH? means the computer doesn't understand and you should try saying something else.

### **Useful Words**

Part of the fun is finding out what words are understood! However, a short list of those you might not guess is given here:

To move in some direction, try something like MOVE UP, CLIMB, SOUTH, RUN.

To get or drop a book, for example, try GET BOOK, TAKE BOOK, DROP BOOK, etc. GET, TAKE and DROP alone pick up or drop the first object the computer sees.

To get a full description of the room you are in, use LOOK.

To get a list of your possessions use INV (inventory).

ON and OFF may be useful (hint).

To stop altogether use Q, QUIT or STOP.

To SAVE a game for later, use SAVE. (See above)

### **Scoring**

During the game, you can display your score at any time by entering SCORE and pressing RETURN. Finding treasures will earn you points as will depositing them in the shop, and you will gradually discover other ways of gaining points - there may be some surprises here!

The maximum score is 250; consider yourself a philosopher if you score over 200!

# PHILOSOPHER'S QUEST

*Professional, Originally Released On DFS 1900 Disc*

Game Type : Text Adventure; Disc-based; Revamp Of Earlier Title  
Authors : Peter Killworth  
Standalone Release(s) : 1987: PHILOSOPHER'S QUEST, Topologika, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : TOPOLOGIKA, 1 South Harbour, Harbour Village, Penryn,  
CORNWALL TR10 8LR  
Disc compatibility : CDFS E00, DFS E00

## Instructions

### About The Author...

By profession a theoretical research oceanographer - and an occasional anthropologist and magician - PETER KILLWORTH fell in love with adventures when he discovered 'Colossal Cave'. His own first attempt at this new art form ('Philosopher's Quest', originally published by ACORNSOFT) sold 25,000 copies.

'The programming,' he recalls, 'was totally functional, and fairly crude by my current standards. But the plot and puzzles were good. It's very easy to write a bad adventure (it just needs hard work); but a good one needs plotting like a novel, the appropriate writing skills, and the ability to create new puzzle types instead of just repeating old patterns'.

His family occasionally see him away from his computer terminal at home. They do NOT play adventure games.

### About The Adventure...

Magic wands can be dangerous things.

The one you found in the junk shop off Market Street was no exception. It was a mistake to wave it at all, let alone while the old shopkeeper's back was turned...

Instantly the atmosphere turned inside out, taking you with it.

Then it swirled back again, dumping you back inside the shop - but a strangely altered shop indeed... No windows, precious little stock - and no shopkeeper either! You were in part of a cave system...

"Go and seek the treasure, mortal, and bring it back here in payment for the misuse of my wand..."

GAME SIZE: Compact, but with unexpected twists.

RATING: Difficult.

### Also From TOPOLOGIKA...

'ACHETON' by Jon Thackray, David Seal and Jonathan Partington

A mysterious body - known only as The Ruling Council of Acheton - has issued a challenge to life-forms everywhere: "We hereby challenge the greatest adventurers in the universe to uncover the dread secrets of our Realm. Deeds of heroic valour will be required, and feats of intellect that Newton and Einstein would have boggled at... The rewards will be great: riches immense, and power supernatural, and the knowledge that you have succeeded where thousands have failed."

GAME SIZE: Expansive, with a wide range and very high standard of problems.

RATING: A real challenge.

Magic wands can be dangerous things. The one you found in the junk shop off Market Street was no exception. It was a mistake to wave it while the cranky old shopkeeper's back was turned... Instantly the atmosphere turned inside out, taking you with it. Then it twisted back again, dumping you back inside the shop - but a strangely altered shop indeed... No windows, precious little stock - and no shopkeeper either! You were in part of a cave system, to judge from the granite-grey walls, ceiling and floor.

As you paused, uncertain what to do, a voice seemed to weasel its way into your mind, crawling between the wet layers of flesh and skull:

"Go and see the treasure, mortal, and bring it back here in payment for the misuse of my wand. You will need every ounce of cunning to deal with the serpent in the Garden of Eden, the ancient mariner, the invalid old lady, the whale, and myriad other problems too difficult to mention.

"A word of warning - it is dangerous to travel in the dark!

"One final thing - READ MY NOTICE!"

As the words began to fade from your conscious mind, the temporary paralysis that had gripped your limbs since you waved the wand eased, and you began to realise that what happened now was up to you...

## Help Sheet

PHILOSOPHER'S QUEST comes with on-line help which you get into by typing HELP <RETURN>. The program will halt and wait for you to type in a number so that it knows which 'hint' you want. You therefore need to know which numbers refer to which hints.

The following pages of this Hint Sheet contain a series of questions that players typically ask, like 'How do I find anything underwater?'

Various 'key words' have been deleted from these questions - making it harder to accidentally see the solutions to other questions - and are reproduced below.

The numbers alongside the words refer to the questions. The number that follows each question is the number to key for that particular hint. Good luck!

=====  
 "PHILOSOPHER'S QUEST" (C) Peter Killworth. Published by TOPOLOGIKA 1987

**Instructions' Source** : PHILOSOPHER'S QUEST (Topologika) Back and Inner Inlay

**Review (Electron User) - "Old Favourite Revamped"**

This adventure was originally published by Acornsoft in 1982 and sold 25,000 copies on tape and disc. You would imagine therefore, that there seemed little point in another company re-releasing it, as most respectable adventurers would already have a copy of the original.

However, it has been totally rewritten by its author, Peter Killworth, and in many respects is a different game from its predecessor.

PHILOSOPHER'S QUEST is now in disc form only, which means it is much larger with extra locations and a thicker layer of atmosphere, thanks to more detailed room descriptions.

The constant disc access slows down responses, but that gives you more time to think. PHILOSOPHER'S QUEST is not a difficult adventure by the standards of, say, ACHETON, but you will need to do a lot of head-scratching.

Magic wands can be dangerous things. The one you found in the junk shop off Market Street was no exception. It was a mistake to wave it while the cranky old shopkeeper's back was turned. One wave of that wand and you have been transported into a parallel existence in the same shop on another plane in a complex of caves.

A voice echoes in your mind: "Go and seek the treasure, mortal, and bring it back here in payment for the misuse of my wand. You will need every ounce of cunning to deal with the serpent in the Garden of Eden, the ancient mariner, and myriad other problems too difficult to mention".

So the scenario is set, leaving you as the hero to think, and, having thought, to act and think again.

All the familiar characters are still in the adventure - the old lady who has lost her dogs, the albatross and the whale - but the order in which you solve the game has changed quite dramatically. The M. E. passages are still bound to fox you and the solicitor's office will require a visit or two.

A novel and intelligent addition to this game is the facility to construct your own database disc and thus save wear and tear on the original copy. The game also comes with an excellent hint booklet, a leaflet all about playing adventure games and marvellous packaging.

PHILOSOPHER'S QUEST should appeal to a wide adventure-buying public. Whether or not you have played the original Acornsoft version of this game, I recommend this revamped escapade without reservation.

# PHYSICS

*Professional, Originally Released On Cassette Only*

## **Review (Electron User)**

Each year a crop of 16-year-old students get into a panic over O-level or CSE exams. The aim of this package is to assist pupils taking any exam in physics at age 16+. Its content has taken into account the new GCSE courses as well as the more traditional ones.

I was sent this package to review because I am a teacher of physics. The obvious course of action was to try it out on my present fifth year students. I was very pleased that the programs run on both the BBC Micro and Electron. Virtually every school, of course, has the faithful BBC Micro.

With two whole tapes full of programs on both sides, my pupils could not cover much of it in school time. We concentrated on the first program, called the diagnostic test.

This consists of forty multiple choice questions covering the full spectrum of physics work. It certainly seemed appropriate to the O level syllabus which I teach. If a pupil gets a question wrong, a hint is given. If the question still can't be solved, the answer is given.

At the end of the test, the pupil's performance is analysed. Areas of weakness are highlighted and a revision program is suggested. The verdict of my students was that this program was rather dull and needed a degree of dedication to work through. The analysis of their performance, however, was rated useful.

The next program on the first tape deals with relationships. If you think that sounds physical rather than physics, it really means equations.

In this section a number of graphs are drawn to show how one thing depends on another, such as volume and temperature. You then have to pick the correct relationship from a choice of four (volume is proportional to temperature).

A student who was really involved in revision would find this section useful but rather limited in approach.

The motion programs on side two of the first tape are very hard to understand, in fact I don't understand them myself. They are meant to cover velocity, speed, acceleration, force, energy, work, power and momentum. I can only recommend O level or CSE students to leave them well alone.

The program on ray optics is a good, tidy revision program. There is nothing startling about it though. It presents some information on reflection, refraction and eye defects. The problems which follow are neatly constructed, and even suggest that you should draw out ray diagrams on paper.

Turning to the second tape we come to the best program of the lot, on radio-activity. This topic is usually covered poorly in schools and little real practical work can be done. It simulates an experiment to detect the various forms of radiation. You have a source of unknown radiation and a Geiger counter.

These can be moved around the screen along with various blocking materials (paper, aluminium and lead) and a magnet. By reading the counter, with or without sound, it is possible to work out whether the source is emitting alpha, beta or gamma radiation. As an enhancement, you can use the information gained to work out decay products.

This particular program makes the user adopt investigative methods and is suitable for use in schools as well as by revising pupils. A multiple choice test on waves follows.

The help and hints are well put together and our revising pupil may well find them useful. The same could also be said of the two programs on electricity and magnetism. One is a multiple choice test, the other a lesson comparing the flow of electricity with that of water.

The last program is about heat. It is poor and the screen display is muddled - quite the weakest program in the package.

One criticism I have of the entire package is that the programs drive the operator. It would all be better if users could have some peace while thinking. The system of entering responses is distinctly poor. My pupils complained that they got answers wrong because the text cursor moved on to the next possible response as they pressed <RETURN>.

There's a lot of program here to summarise. The first point is that you get your money's worth as far as the quantity is concerned. It's a pity that a couple of the programs are very poor, but the package as a whole is worthwhile for 16-year-old physics students. Certainly a number of mine are going to buy it now they've seen it.

Rog Frost, ELECTRON USER 3. 5

# PHYSICS 'O'/'A' LEVEL

*Professional, Originally Released On Cassette Only*

Game Type : Educational; Revision Aid  
Author :  
Standalone Release(s) : 1983: PHYSICS O/A LEVEL, Paxman Promotions, £3.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : PAXMAN. No further information.  
Disc compatibility : CDFS E00, DFS E00

## Instructions

This package is designed to be of assistance to Physics students prior to taking their 'A' Level examinations but may also be of considerable help to CSE students although the content will exceed CSE requirements in some areas.

As a computer controlled revision program it makes use of wide-ranging multiple-choice questions to trigger memory refreshment of previously learnt material. It is aimed at reinforcing ordered recall as a suitable preparation for the examination and to help with conventional revision techniques.

Other packages in this series are available for Chemistry, Biology and Mathematics at 'O' level.

Supplier : ACORNSOFT, 4A Market Hill, CAMBRIDGE CB2 3NJ  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Instructions currently unavailable.

## Review (ELBUG)

The PICTURE MAKER, from Acornsoft, is a utility that enables the creation of complex screen displays. The pictures and designs possible are very impressive as proved by the demonstration files supplied. It is supplied in the usual Acorn card box with a comprehensive manual.

The PICTURE MAKER operates at two levels, Catalogue and Picture. The former takes care of housekeeping tasks including filing, naming, free memory and asterisk commands. The latter is concerned with actual creation of the 'units' around which the program is based. A unit can be anything from a single line up to a full screen picture. The program enables the user to draw and then manipulate units into other pictures, as each unit can be saved in its own right. This removes the need present in most graphics packages to save pictures as a whole. Now, the user can select elements as required from cassette and combine them to create new designs.

The Picture level includes a wide range of facilities including single points, full and dotted lines, triangles, arcs, sectors, circles, fill and text. These are all well implemented with the possibility to correct any mistakes. Although the delete command again fails to ask for confirmation, the effect here is to delete only the last element drawn, not the whole picture. It is only possible to draw in either Mode 4 or 5 due to the size of the program. This limits the colours provided for drawing but by using another supplied program, described later, all sixteen colours are available.

Shapes can be drawn and then filled with relative ease. Some very impressive shapes can be built up and then shrunk, expanded and distorted at will. The potential is enormous, limited only by the creative skills of the user. Text can be drawn at any size, angle or shape and slanted to give italic characters. The standard of text is not brilliant, as the larger shapes tend to emphasise the jagged edges of the normal fonts. Nevertheless, the scope is there.

PICTURE MAKER does not stop at creating units and pictures. Further programs are supplied to enable the units to be displayed in different modes and colours and to use the units in your own programs. The Showpic program enables a picture saved from Drawpic to be displayed in higher resolution or with more colours. Full instructions are provided for this, the only restriction being that large units from Drawpic may not fit into the 20K graphics modes. Datapic and Picdata deal with transferring pictures into data for incorporating in BASIC programs and then producing pictures from such data.

The documentation is very well written and gives a comprehensive guide to all the facilities available. It also has a clear tutorial section for each feature which makes this package, which is complex in places, easy to learn and use.

PICTURE MAKER is a fine piece of work, providing some very complex and sophisticated features with the minimum of fuss. This program is certainly worth the money and recommended.

# PINBALL

***Professional, Originally Released On Cassette Only***

Disc compatibility : CDFS E00, DFS E00

## **Review (Electron User)**

You don't have to be a wizard to play the latest pinball. This is a simulation of the classic pre-electronic arcade game known to millions. I dimly remember spending my school lunch hours battling forth, pitting my wits against the machine. The ring of bells and beep of buzzers...oh memories! Since then I've grown old on Bar Billiards, then Space Invaders, and lately the dreaded adventure game - but mention pinball and my eyes mist over.

If you don't remember pinball or if you're of the Space Invader generation, then here's the problem. A silver ball bounces its way around obstacles on the top of a tilted table. Using two flippers, you have to stop the silver ball falling out of play at the bottom of the table.

By skilfully controlling them you can guide it towards the high-scoring areas. Lights, buzzers and bells show when and where the points are made.

This program has excellent graphics that bring the alive the thrill of the game. The ball moves realistically from buffer to buffer with that element of randomness always present in the original machines. Unfortunately, the sounds don't reflect the true pinball. I suppose that is the price of progress.

Gone are the solenoids and bells, buzzers and bumpers, and in return we have electronic noise.

My great enthusiasm for this game was slightly marred by the apparent slowness of its response. However, I feel that the computer is truly reflecting the pinball machine.

I regret to say that the first pinball was slow compared to our electronic entertainers. I guess it must have been the endurance of our concentration over spans of inactive observation that made it a challenge. There's no tilt to the game, so key-bashing won't be penalised.

There's no need for joysticks but it would've been better if the two fire buttons were used to operate the flippers. Generally this is a good game, certainly different from the usual arcade action. Disappointing to my sensitive memories, but entertaining all the same.

John Woollard, ELECTRON USER 2.11

# PINBALL ARCADE

*Professional, Originally Released On Cassette Only*

Game Type : Arcade; Pinball Table Simulation; Built-in Screen Editor  
Author :  
Standalone Release(s) : 1985: PINBALL ARCADE, Kansas, £3.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : KANSAS CITY SYSTEMS, Unit 3, Sutton Springs Wood,  
CHESTERFIELD. Tel: 0246 850357.  
Disc compatibility : Unknown

## Instructions

Everything in PINBALL ARCADE is achieved by moving the white cross with the Z, X, : and / keys and the space bar.

There is a specimen board on the tape after the main program. Select LOAD and follow instructions to load.

Select PLAY to operate the game using Z and / keys for flippers and space bar to compress the spring. Press P for next ball. ESCAPE returns to the control menu.

Select build to either alter or build a board. Any of the six pages of shapes can be used by selecting the PAGE option. Simply manipulate the cross over the shape required, press the space bar the move to the position at which the shape is required. Press the space bar again to 'drop' the shape into position. To remove a shape, 'drop' into right-hand box.

Select SCORE or BOUNCE to change value, moving cursor to shape and 'fixing' with space bar. Press U or D to change and space bar to release.

Select TILT to alter the tilt of the table, using U or D.

Select FLIP to alter the flippers using U or D to alter the response.

Select SAVE to save your current board to tape, following instructions.

## Board Shapes

Page 1 and 2 are Bumpers. Bounce and score can be altered.

Page 3 are Wires.

Page 4 are Slings. Speed of release and score can be changed with bounce and score options.

Page 5 and 6 are Targets. Bumpers in this section light up when all numbers/letters are hit, giving a bonus. Both the score and bounce can be altered for the bumpers. The score of the numbers and the letters can also be altered.

**Instructions' Source** : PINBALL ARCADE (Kansas City) Inner Inlay

## **Review (Electron User)**

A computer version of a pinball machine might sound a little boring, but PINBALL ARCADE from Kansas is quite enjoyable, and makes a welcome change from blasting nasties out in space or being chased round a maze.

The interesting part is designing your own pinball machine from the five pages of bumpers, wires, slings and targets provided. When you are satisfied with the board

it can be saved on tape, to be loaded and used again. Quite a number of options are available - you can even alter the tilt of the bounce of the ball.

When playing, the only keys are Z and / for the left and right flippers and the space bar to compress the spring.

There are a couple of annoying faults however. Firstly, it will not run with the Plus 1 attached, and I am not going through all the bother of unplugging everything and unscrewing the Plus 1 every time I want to use the program.<sup>3</sup> The reason is simple - part of the code placed in page &D is being overwritten by the operating system, causing a whopping great crash when it is called by the program.

The second fault is the fantastic amount of flicker when the ball moves. Hasn't the author ever heard of \*FX 19? The addition of this command would make a world of difference. If Kansas cure these bugs and brighten up the loader a bit then it will be better value.

Roland Waddilove, ELECTRON USER 2. 5

---

<sup>3</sup> It is probably unfair to cite the lack of compatibility with the Plus 1 as a disadvantage of the game, especially when many titles ELECTRON USER reviews are also incompatible but pass without it being mentioned.

## Instructions

### Review (Electron User) - "Lo, Lo, It's Off To Work We Go"

PIPELINE is set in the far future where in an effort to supplement the Earth's dwindling supplies of sulphur, a mining operation was established on lo - one of Jupiter's moons. However, recent volcanic activity has surrounded the robot-controlled mining platform with a sea of burning sulphur.

So desperate is Earth's need for the precious element that you have been despatched to lo to collect every single drum of sulphur and close down all four mining platforms.

Arcade adventure games have become something of a trademark for Superior Software - classics such as RAVENSKULL and the REPTON series have proved popular with many Electron and BBC Micro users.

The dimensions of Pipeline make Repton look like a screen from Pacman. If you were impressed when you first examined the map of REPTON 3, prepare to be amazed by the PIPELINE layout - each of the four levels is twice the size of a REPTON scenario.

Ever conscious of the value for money that is offered by the budget software houses, Superior has beefed-up the PIPELINE program into a top notch all singing, all dancing software package. Not only do you receive the best arcade adventure game on the market, you also get character and level designers and a mission generator. Superior is even offering to market the best original game created with these utilities.

At first glance, PIPELINE very much resembles RAVENSKULL - the action is viewed from above while a space-suited hero scuttles around a beautifully drawn, yet frequently deadly, maze.

As you appear at the start of level one it doesn't take long for you to realise that you have materialised inside a completely sealed compound. Ignoring this fact for the moment you begin rounding up sulphur drums.

By the time you have collected all the available sulphur you have also found a remote control unit and a set of blueprints. The remote control has little effect, but the blueprints teleport you to the inner reaches of the mining platform.

The "inner reaches" in which you appear just happens to be a room with two exits - the first guarded by a control robot, the second blocked with a locked manhole cover. It is at this point that you are expected to discover the significance of the remote control unit - it moves manhole covers.

Examination of your immediate surroundings reveals a distinct lack of sulphur drums - it is now time to enter the pipeline. This is a complex network of pipes through which the sulphur is normally pumped. Since the platform is no longer active it can be used as a means of getting from A to B - unfortunately you have no idea where position B is located.

Grasping your courage with both hands you step into the pipeline. Using multi-directional scrolling of breakneck speed the display traces your passage through the twisted network of pipes. If you are lucky the terminus will not consist of a bubbling sulphur pit or an oncoming fireball.

There are 16 different objects to be found in a maze, including mallets, space burgers, spanners, magnets, lasers, explosives, detonators and one control robot. As you might expect, Superior is very cagey as to the function of these objects, but I managed to find a use for a couple of them.

My initial guess at the use of the space burger was that it would reset the countdown timer - it didn't. In actual fact it gives you the ability to manhandle the large wooden crates. Using your new found strength you can access previously blocked pipelines, or trap moving fireballs within alcoves.

Following a 10 minute session of bashing everything in sight with the mallet, it was the crates that proved susceptible to its subtle persuasion. The explosives/detonator combination proved singularly ineffective in every location that I tried - except one. And even then I couldn't see what I had achieved by blasting the wall concerned.

PIPELINE is a masterpiece of brain twisting entertainment. If Rubik ever turned his hand to computer programming he would produce something like this.

Sound .....	10

C & VG HIT

## Instructions

PIPEMANIA starts on a playing grid that is empty except for the starting piece. The object is to score as many points as possible by constructing a continuous pipeline from the starting piece.

As you play, pipe sections appear in a dispenser to the left of the grid. You can place a pipe section anywhere you like, whether or not it connects with other pipe sections. In fact, you'll learn to place pieces in a pattern that anticipates connections five or ten moves in advance.

You can "bomb" any previously placed pipe section by placing a new section on top of it. The old pipe will spin and the new pipe appear in its place. There is a short delay for replacing pipes and a 50 point penalty.

Once a pipe piece fills with flooz, you can no longer replace it. At the start of higher levels, advanced pipe sections and obstacles will appear randomly on the grid. These pieces cannot be replaced by other pieces.

With each level you have a set amount of time in which to connect as many pipe sections as possible before the flooz starts to flow. This time decreases as you progress up through the levels. When the flooz reaches the end of your pipeline the round is over.

Once you've placed all the pipe pieces you can (or want to) press CTRL and COPY and the flooz will speed up and end the round quickly. You will score double points for each additional pipe section the flooz passes through.

## Advancing To The Next Level

In order to advance to the next level, the flooz must flow through a certain number of pipes. A counter in the upper right corner of the screen indicates the minimum number of sections that must be connected within that level. The countdown starts the moment the flooz starts flowing through the pipeline allowing you to keep track of how many sections still need to be connected. When the counter reaches zero, you qualify.

On higher levels, things change:-

- \* The flooz flows at a faster rate.
- \* Obstacles appear on the grid which you can't "bomb".
- \* Bonus pieces : Earn you extra points if the flooz goes through them.
- \* One-way pieces : Through which the flooz can only flow in one direction.
- \* End pieces : In addition to achieving the required pipeline length, the flooz must terminate in an end piece in order to advance to the next level.
- \* Reservoir pieces : Slow down the flooz giving you valuable extra time.
- \* There are sections of the grid that allow the flooz to exit one side of the screen and reappear on the opposite side.

## Playing Modes

PIPEMANIA has three playing modes: basic one-player, expert one-player and competitive two-player. There is also a training mode that allows you to play any of these modes at a slower rate of flow. In training mode it is not possible to enter your score onto the high score table.

**Basic One Player** : Pipe sections appear in a single dispenser on the left of the screen. You can always see the next five sections in the dispenser.

**Expert One Player** : Pipe sections appear in two dispensers on the left side of the screen, one above the other. The pipe sections nearest the middle of the screen are available to be placed on the grid. You can always see the next three sections in each dispenser.

**Competitive Two Player** : As in expert mode, pipe sections appear in two dispensers on the left side of the screen. Player one uses the pieces from the top dispenser and player two uses the pieces from the bottom one.

## **Pipe Sections**

You'll encounter a variety of pipe sections, obstacles and speciality pieces as you progress through the levels of Pipe Mania.

Basic Sections. The seven basic pieces conduct the flooz straight, around corners and back through itself in a loop. Remember, the flooz flows in a straight line unless it has no other choice.

Player Two Sections. They are just like player one's pieces, except for the identifying dots and/or colour differences, depending upon your computer system.

One Way Sections. The flooz can only flow in the direction of the arrow on the one way pipes. So be careful how you use them.

Start Sections. Soon after the round begins, the flooz oozes out of the starting section, identified by the letter "S", or an arrow.

End Sections. On some levels, you'll find an end piece identified by the letter "E" or an arrow. Try to build a pipeline that exceeds the minimum distance required and terminates in the end piece. When the flooz enters the end piece, you'll earn a 1,000 point bonus. If you don't finish in the end piece you lose that level.

Obstacles. You can't "bomb" them or go through them, so you'll have to go around them. Try to construct loops with the obstacles in the centre.

Reservoirs. These are very useful because they buy you a little extra time. The flooz has to fill the entire reservoir before it will flow out the other side. Use a reservoir before your pipeline reaches the minimum distance and earn 500 bonus points. After that, you'll earn 1,000 points.

Bonus Sections. Build a higher score by directing the flooz into a bonus piece. Before the minimum distance required, each bonus piece is worth 500 points. After the minimum distance requirement, each bonus piece is worth 1,000 points.

## **Scoring**

### **Basic Game Scoring**

- \* 50 points for each section the flooz flows through until the minimum is reached.
- \* 100 points for each extra section the flooz flows through.
- \* 500 points for each time the flooz crosses itself in a pipe section.
- \* 500 points for each bonus or reservoir section the flooz flows through.
- \* 1000 points for using the end piece.
- \* 100 point penalty at the end of each round for each unused piece left.
- \* 50 point penalty for each replacement made.
- \* After pressing the "Fast Flooz" keys, every pipe the flooz flows through earns you double the usual point value.

### **Expert One Player**

The basic scoring as above, plus:

- \* 100 bonus points are given away every time the flooz flows through pipe pieces selected from alternating (top and bottom) dispensers.

### **Competitive Two Player**

The basic scoring as above, plus:

- \* Points from the flooz flow, including the 500 bonus point for crossovers, are scored only by the player who placed that section.
- \* The 100 point penalty is taken only from the player who placed the pipe.
- \* The bonus piece points go to the player who placed the previous piece and connected it to the bonus piece.

## **Playing Tips**

- \* Use the training mode to become a good Pipe Mania strategist. Learn how to visualise the completed pipeline and place pieces accordingly.
- \* If you want a big score, don't be too eager to advance quickly to the next level. Earn as many points as you can on each level.

- \* Think ahead. If you don't need a piece right away, put it where you can connect it later. Blowing up pipes wastes time and valuable points.
- \* Use cross pipes wisely. You only get a limited number of them, and each one can earn you bonus points. Make sure you place them where there's room to loop back through.
- \* Even if you're way ahead of the flow, work fast. That way, you'll have time to figure out how to fill as much of the grid as possible; alternatively, you can press the CTRL and COPY keys to score bonus points.

# PIRATE ADVENTURE

*Professional, Originally Released On Cassette Only*

Game Alias : SCOTT ADAMS ADVENTURE 2  
Game Type : Text Adventure (Rated Beginner)  
Author : Scott Adams  
Standalone Release(s) : 1983: PIRATE ADVENTURE, Adventure International, £7.99  
Compilation Release(s) : 1988: SCOTT ADAMS SCOOPS, Adventure International, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ADVENTURE INTERNATIONAL, 85 Summer Street, BIRMINGHAM  
B19 3TE  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Only by exploring this strange island will you be able to uncover the clues necessary to lead you to your elusive goal - recovering the lost treasures of Long John Silver.

Difficulty Level: Beginner

## How An Adventure Works

Read the standard introduction to Adventure International adventures under SCOTT ADAMS SCOOPS.

**Instructions' Source** : PIRATE ADVENTURE (Adventure International) Back Inlay

## Review (Electron User)

In this, the second in the Scott Adams series of adventures, your task is to collect and store treasures, though there are only two in this game.

You begin your quest in an apartment in London and an immediate search of the premises should be your first task. Strangely, there seems to be only one room though the stairs do lead to an alcove. The bookcase has only one book - well worth a read and then a second look.

The duffel bag is soon found and a window is very interesting. Don't try any magic yet unless you've realised that the ledge is very slippery.

Several things will be confusing you, but if you remember the sea shanty you may realise that the pirate runs true to form. That rug will have to be left until later and provides a key to the solution of a later problem.

By now you should be fully equipped to visit the desert island and so you go off to the main body of the adventure.

This is a beginners' adventure and classed thus by Scott Adams himself. Although it has only about twenty locations it has its full share of problems. This was one of the first adventures available for a home computer, and still manages to compare favourably with later ones.

An ideal adventure for the novice and one worth having on anyone's shelf. Recommended.

Merlin, ELECTRON USER 3. 5

### Review (Electron User) - "Robotic Blockbuster"

Now and again a game appears on the scene that has that something special. This is one of those times and this is most definitely one of those games. The object is to guide your little robot on a mission through 54 screens which represent the different rooms of a Togrian Computer Complex, destroying the numerous parts of the computer as you go.

The golden rule to observe as you make your way from screen to screen, is that if it moves it must be an enemy, so you should either avoid it or instruct your little Rambo to blast it out of existence.

For a start it's a little difficult to classify what type of a game it actually is, but I suppose PLAN B qualifies as a multi-screen, shoot-'em-up, arcade adventure maze game. Each screen shows a room with many different puzzles to solve and nasties to blast. The nasties are different types of security guard that attack your drone. Each one causes a varying amount of damage, shown as a drain on your energy level.

Another problem is that the security robots are transported to the current room and the longer you spend there the more robots are beamed in as reinforcements. In fact

if you hang around too long in certain rooms they start to resemble Piccadilly Circus in the rush hour.

You are able to fight back but you'll need to top up your ammunition from time to time, when the chance arises. The energy level of your robot can be restored by maintenance, achieved by collecting the spanners and cans of oil you'll find on your travels.

Your passage from room to room is not always as straightforward as it appears. You will need to collect numerous keys and use them to get through locked doors in certain rooms. However, you will soon find that a door will not open if the correct key has not yet been collected.

In addition to the obvious routes through the screens, many of the walls conceal passages which will only be revealed when the wall is shot away. Similarly many of the passages contain barriers which can be destroyed only from a particular position on the screen.

A further complication to those bent on charging through and blasting everything in sight is that stray shots have a nasty habit of always hitting an ammunition dump or oil drum. While that does not do you any immediate harm it can be very frustrating to battle through a pack of security robots then find yourself without the means to reload.

The game appears to have something for everyone, from those who enjoy painstakingly producing those complicated maps and diagrams, showing us how to get from A to B in the easiest and most efficient manner, to those who just wish to work off a head of steam and spend an hour or so nasty-blasting.

The only minus point is that all the graphics are in black and white, but the quality more than compensates for this. They are extremely detailed and each screen seems to offer another example of superb design which is almost an artform.

Character movement is super-smooth and at times the action is not just fast, it's lightning fast. Sound effects are fairly good. A neat little tune is played between games, although this can be switched off if it becomes annoying.

Movement is with the Z and X keys for left and right with the <SHIFT> key producing lift up the screen. It's nice to see the <RETURN> key being given a rest and this is only used to open a door. The nasties are blasted with the spacebar. There is also a pause facility which can be used to examine a screen without being zapped.

The only criticisms are that you only get one life - you then have to restart - and the lack of colour. But ELITE proved it's not essential for a first-class game and that's certainly what you have here.

Bug-Byte has given us some very good games for the Electron in the past but this one is a real blockbuster. At the price it has to become a best-seller.

### Review (Electron User) - "Red-hot Sequel"

Seven months after ELECTRON USER awarded PLAN B the title of Golden Game, Bug-Byte has released its red-hot sequel called, surprise, surprise, PLAN B2. So what novelties are in store for hardened fans of the original game?

Well, at first sight not a lot seems to have changed. To my disappointment there is still no use of colour, but I hadn't really expected Bug-Byte to have been able to do this and keep all the different characters moving around at the same incredible speed.

The plot in the inlay card looked familiar - which wasn't surprising, as it is identical to that of its predecessor. As plots go, it still holds up as a fairly decent scenario.

You are in control of a single war drone. Your job is to explore the Togrian Computer Complex, find and destroy all of the computer's parts, and escape intact. The objective is complicated by the fierce and persistent security robots which patrol the complex's many rooms. Nasty beasts, these - they can fire two dozen rounds of laser bolts quicker than you can say micro-processor.

Your drone is fully equipped with a rapid-fire laser, but your ammo is limited. Replacement stocks can be found in various locations, usually guarded by more security guards.

You have a shield too. This will absorb quite a number of enemy laser bolts, and you can even ram the security robots, causing them to disintegrate in a most undignified manner. Be careful, though, as repair kits for your shield are difficult to find.

In your search through the complex's many rooms careful thought is required to reach your objective. Some walls block your targets, making them appear seemingly unreachable. That is, until you realise that they will disintegrate under fire.

Not all walls are this obliging. Some have hidden weak spots which you must find quickly while the robot guards are going their level best to vaporise your shields.

There are sliding doors which can't be opened by anything short of a key. The keys are found dotted about, usually in the most awkward places, and come in four different types. It is most frustrating to battle your way up to a strategic door only to find the wrong key is in your sweaty clutches.

Oilcans and spanners sprinkled around the complex will replenish your shields, although more than once I was needlessly obliterated while trying for an unnecessary top-up.

The security robots are the bane of your life. No sooner has a whole batch been satisfactorily polished off - to the accompaniment of some very good sound effects - than an even larger horde materialises, drenching your drone in shield-depleting rocket fire.

This makes your quest to destroy the complex become almost secondary to hunting down the elusive cans of re-vitalising oil and searching out the odd pain-relieving spanner.

Upon being vaporised at the end of a fruitless game, you may object to the message that "You appear to have snuffed it", which is painfully obvious. But it's fun, all the way through.

The controls are identical to the original PLAN B, as has been everything described so far. So now to the differences:

Firstly, in the original game your drone could only wander over black backgrounds. In B2 a most amazing scenery-masking technique is employed, allowing you to drift over pillars, up walls and through certain floors.

PLAN B had fairly nice-looking large sprites which were not animated. The sequel features extremely detailed lovingly-crafted beasties, all of which are animated in some fashion. They tend to be smaller though, to allow for more speed.

One annoying feature of PLAN B was the bullets. These flickered at times. In PLAN B2 however, not only is every single object 100 per cent flicker-free, but the whole game is faster than the original.

Although in black and white, PLAN B2 exudes quality and craftsmanship from the high-resolution metallic-looking sprites to the textured background of the computer complex. Nothing seems to have been wasted here - every ounce of speed has been wrung out of the game, and at the expense of nothing whatsoever. I ran PLAN B2 on both a BBC Micro and a Master 128, with neither being any faster at all than my Electron.

Generally, all sprite movement has been improved immensely. You can have no real idea of just what this means until you see the game in action. It is probably the best showcase of what your Electron can achieve that I have ever seen.

# PLANE CRASH

*Professional, Originally Released On Cassette Only*

Disc compatibility : CDFS E00, DFS E00

## **Review (Electron User) - "Jungle Struggle"**

PLANE CRASH is the first release from this new software house dedicated to producing top rate adventures for the Electron and BBC Micro. In this three-part undertaking you have the misfortune to play the only survivor of a plane which crashed in the jungle. Your task is to first escape from the wreckage and then survive the rigours of your environment.

The brutal beginning may have a few adventurers squirming - you find yourself trapped in your seat viewing the severed head of the air stewardess. You have to extricate yourself from your jammed seat belt before flames and smoke engulf you.

At this point a move counter is operating, so actions must be decisive. Life is never easy and you will need to have a knowledge of schoolboy Latin or a good English dictionary if you are to be successful.

Once free you must explore the cabin thoroughly and act quickly to avoid suffocation. The fire extinguisher must be saved as it will prove invaluable on more than one other occasion.

I have come across few adventures with as difficult a beginning as PLANE CRASH. Any mistake seems to result in an early transportation from the game to that great silicon paradise in the sky. Such difficulties may deter some beginners to adventuring, especially as Labyrinth discourages the user from asking for help.

As the game progresses you should LOOK at every opportunity and examine all you come across. In turn, open and look inside any artefacts such as the box and the survival kit. Do not sky away from looting corpses - there are some weird studies in bad taste. The program does not recognise the word SEARCH, which I found irritating.

There are a few other annoyances which should have been ironed out by a team of playtesters. On occasions flags are poorly set within the game and this leads to unnecessary frustration. For example, try taking the bag before you have Looked.

I have long groaned at having to type GO DOOR in order to progress in an adventure. I also found the absence of the facility to GET or DROP EVERYTHING hampered progress unnecessarily. However, the storyline is well constructed, the problems are difficult but logical and screen response is very fast.

I loved the clever addition of having to monitor your blood sugar count, which was essential to survival. Eat and drink at every opportunity, don't relax, and providing you can endure the blackness of the jungle night you will be well on the way to success.

Despite my reservations, I enjoyed this adventure and will await the next Labyrinth game with interest.

Pendragon

## **\*\*\* Second Opinion \*\*\* (Electron User)**

Adventure games aren't really my cup of tea. However, fans will find this an interesting fantasy. There are puzzles galore designed to give the old grey matter a thorough workout, and lots of atmospheric descriptions. The one or two minor bugs don't really spoil that adventure, so it's worth a try.

Actual compatibility : Electron, BBC B, B+, Master 128  
Supplier : ACORNSOFT, 4A Market Hill, CAMBRIDGE CB2 3NJ  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"Action stations! The Aliens are landing! Flying over the planetoid surface your laser-ship speeds to the rescue, firing laser missiles and dodging the enemy and their shell-fire. Save the life-forms while fending off raiders, mutants, bombers, cruisers, spores and megacytes. Lightning reflexes are required to play this game - the fastest ever seen on a micro!"*

*Complete with sound effects, full colour graphics and table of high scores."*

Your laser-ship is patrolling the surface of the planetoid. The scanner in the top section of the screeb shows the whole planet's surface, and can be used for long-range reconnaissance. The lower part of the screen displays the section over which the laser-ship is flying.

The raiders can be seen hovering around the surface on the look-out for life-forms, which they can drag off into space. As a raider ascends with a life-form, you can destroy it with your lasers, or with the 'smart bombs' which disintegrate everything hostile within sight. Having annihilated the raider, you can intercept the plummeting life-form and set him safely back down on the surface.

If you don't rescue a life-form before the raider carrying him reaches the top of the screen, the raider will mutate. You will then have to contend with a mutant, while also being attacked by bombers, spores and megacytes; all of which are to be avoided at all costs and killed before going on to the next wave. Cruisers are also dangerous, but don't have to be destroyed before you move on to the next wave.

When megacytes are destroyed, they release a cloud of spores - use the smart bombs wisely, as you only have three to begin with.

Look out when only one life-form remains, since if the raider abducting him reaches the top of the screen the planetoid explodes, and all the raiders become mutants. However, after every five attack waves, you get a new planetoid, and a new set of life-forms to defend.

You start off with three ships, but for every 10,000 points you score, you gain a ship plus a smart bomb.

## Scoring

Score 500 for each life-form caught in flight and 500 for each one safely returned to the planetoid surface.

xxx	XXX	BBBBBB			
xxxxx	XX XX	BBBBBBB	CCCCCCC		MM
xx x xx	XX X XX	BB BB	C C	SS	MMMMMM
xxxxx	XXXXX	BB B BB	CCC CCC CCC	SSSSSSSS	MMMMMMMM
xxx	XXX	BB BB	CCCCCCCC	SSSSSS	MMMMMM

x x x	X X X	BBBBBBB			MM
x x x	X X X	BBBBBB			
RAIDER	MUTANT	BOMBER	CRUISER	SPORE	MEGACYTE
150	150	150	150	250	1000

Bonuses for each surviving life-form at the end of each wave are as follows:

First wave	100	Fourth wave	400
Second wave	200	Fifth wave	500
Third wave	300	Subsequent waves	500

Three numbers are displayed at the top of the screen: the first shows your score and the second and third show the numbers of remaining laser ships and smart bombs respectively.

### Game Controls

To manoeuvre the laser-ship, use the following controls:

	A (up)	X		X	A (up)
		XXXX		XXXX	
		XXXX		XXXX	
		XXXXX	SPACE BAR	XXXXX	
SHIFT	XXXXXXXXXXXXX	(reverse)	XXXXXXXXXXXXX		SHIFT
(thrust)	XXXXXXXXXXXXX		XXXXXXXXXXXXX		(thrust)
	Z (down)			Z (down)	
	RETURN	- laser bolt	CAPS LK/FUNC	- smart bomb	

H - hyperspace (ship dematerialises, and materialises in another position)

**Instructions' Source** : ACORNSOFT HITS 1 (Acornsoft) Back and Inner Inlay

### Review (Electron User)

PLANETOID was one of the original BBC Micro games from Acornsoft and proved to be extremely popular. I must admit that I viewed the Electron version with some suspicion thinking that it may be slower in action or response. I was pleased to find that it is neither. The game performs to expectations and in addition has some facilities the BBC version lacked.

The objective is to patrol the surface of a planetoid and protect its lifeforms from the raiders. The raiders attempt to capture the life forms and carry them into space.

By use of lasers and smart bombs the raiders must be prevented from reaching outer space (the top of the screen). Failure causes the raider to mutate. Be warned. A mutated raider makes a normal raider look passive and harmless.

As if that wasn't enough, in addition to the raiders and mutants come the bombers, cruisers and megacytes. The latter are particularly nasty because they burst into a cloud of spores, each spore being extremely dangerous.

At the start you have three laser ships and three smart bombs, which kill all alien forms on screen at the moment of detonation.

The screen display is excellent. In addition to the surface of the planetoid, it also includes a long range view of the activities of the raiders, score updates and symbols representing the number of laser ships and smart bombs left.

Unlike my BBC version, this one has the ability to pause and restart - or to press <ESCAPE> and return to the start. The sound can be switched on or off at any stage.

It's fast and fun, annoying and addictive. In fact, it's one of the classic micro arcade games no Electron owner should be without.

Rog Frost, ELECTRON USER 2. 8

# PLANKWALK

***Professional, Originally Released On Cassette Only***

**Disc compatibility** : CDFS E00, DFS E00

Neil Cannon

*"You control SCAFFOLDING SID, our intrepid scaffolder. Unfortunately, the planks that Sid has erected around the building he is working on have gone BERSERK! Can you help Sid to jump from plank to plank without endangering his life? As if Sid hadn't got enough problems, he has to contend with sloping planks, fake planks, building blocks and monsters!(?)...But on the plus side there's always the cherries!"*

You control Scaffolding Sid who is fighting an endless succession of upward-moving planks. Survive by staying on the screen and avoiding the monsters, score points by falling through the building blocks and eating cherries.

You die if you are carried off the top of the screen by the planks, if you run off the side, or fall off the bottom of the screen. The MONSTER appears a few seconds after the start and chases you. Normally if he catches you, you will be killed. However, if you run into him at high speed, HE will be killed. He also dies if he leaves the screen for any reason.

If you land ON TOP of a block, you will pass through it, scoring points as you go. If you fall out of the side of a block instead of out of the bottom, you will fall all the way down the screen and die, so stay central as you fall through a block! Cherries are always on a plank and to eat them you simply move into them slowly.

SPECIAL PLANKS: Fake planks - these flash. If you hit one you will fall straight through. Sloping planks - black planks slope to the left. Magenta (light) planks slope to the right.

## **Game Controls**

Z - Left, X - Right, <SHIFT> - Jump, <RETURN> - Fast Move

The Direction keys move you in the stated directions and, if held down, your speed will build up. To decelerate, use the other direction key. The Jump key moves you to a plank immediately above you (if there is one).

The Fast Movement key accelerates you at great speed when one of the Z or X keys is held down. It needs to be pressed repeatedly and the faster it is pressed, the faster the acceleration. This feature uses power - the right-hand number on the screen shows the power level. The acceleration depends on the power level. Landing on a power tower refuels you slowly.

## **Scoring**

The score is the left-hand number on the screen. The scores at Level 1 are as follows: Block = 80, Monster = 100, Cherries = 200

The level advances automatically to level 10.

## Instructions

Sam, an ardent fan of Superior Software's games, is always ready for a challenge ...and the tougher, the better! Here's four games that, as time goes by, he returns to again and again.

CITADEL, a fascinating arcade-adventure, features over 100 beautifully detailed screens of action. Computer Games reported : "The game is extremely good. Well worth the cash."

THRUST is simple and fun to play, yet incredibly realistic and highly addictive. "This game has class...try it!" urged Computer & Video Games

STRYKER'S RUN is a challenging action-packed combat game. "This game will impress you...the graphics are stunning...this should be in every collection," A & B Computing remarked.

RAVENSKULL is a massive arcade-adventure game, full of puzzles and problems to be solved. Acorn User commented "RAVENSKULL is a very good game and is destined to become another Superior classic."

Please see individual entries for each standalone title for complete playing instructions.

## Review (Electron User) - Superb Quartet"

Despite what many people think, Bogey never uttered the words "Play it again, Sam". However, I suspect that if he'd been around to see Superior Software's latest compilation he'd have been sorely tempted to say "Let me play them again, Sam!"

The problem with compilations is that all too often they seem to be a vehicle to make money from useless games that didn't sell well the first time round, embellishing them with pretty packaging and offering them at bargain basement prices.

Superior Software's latest release escapes all of these criticisms because it really does contain what amounts to four of the best arcade games available for the Electron. And what's more, they are now available on disc too.

CITADEL starts this excellent collection of classics with a bang. The scenario casts you as an intrepid adventurer charged with destroying the teleport system created by Marduk the Dictator. He has established a base in a deserted castle and will soon be using his teleport system to bring his invasion force to Earth.

Your task is to prevent the impending invasion and you will have to do battle with the guardians of the castle. Some you can avoid, but the strange wandering monks can only be destroyed by a well-aimed magic spell between the yes. They soon reappear, however, so you mustn't hang around too long in any one room.

The castle itself consists of over 100 individually illustrated locations and the Mode 2 graphics are detailed and very colourful. Each room is complete with its own set of bad guys and useful objects to be collected.

Much of the game involves plodding around, collecting things and carefully planning your next move. For those of us whose fingers are not quite what they used to be, I have to admit this is a welcome respite. Fear not though, lightning reflexes do not go unnoticed.

The sound employed is a little basic and the graphics are starting to show their age slightly compared to others on this release.

This is most evident in the garbage that appears at the top and bottom of the screen - the game is so big it won't fit in the memory. This is something you'll just have to live with and you soon get used to it.

Despite that criticism though, the game still stands up remarkably well and is guaranteed to provide hours of fun and entertainment.

Second in the collection is THRUST. Not one for the faint of heart or slow of pinkies, it's a game of subtle control and careful manoeuvring.

Your job is to plunge into the depths of a high gravity asteroid and recover an energy pod vital to the resistance movement.

Pitted against you are the nuclear-powered automatic Limpet guns forming the asteroid's defence. By careful shooting you can either disable the reactor for a while or destroy the guns.

Too much energy punched into the reactor will cause it to explode and destroy the entire asteroid. This results in a loss of bonus - but it's a nice way of skipping screens.

There are 24 different asteroids and over seventy levels, some with increased gravity, reversed gravity and even invisible landscapes.

On the face of things, the graphics appear to be quite simple: This in fact disguises their real elegance. The scrolling is faultless as you manoeuvre your little spaceship around the tightest of corners.

This is one of those games which always seems to have just one more challenge lying in wait around the next corner and no matter how many times you get killed you always want that one last go.

Next in the line-up is STRYKER'S RUN, the game that took the charts by storm. You are Commander John Stryker. Your mission is to return top secret information to the allied forces' HQ.

While Stryker comes equipped with just a laser pistol and grenades, the Volgon enemy have mortars, mines, rocket launchers and SAM missiles so your task is going to be tough.

Stryker can run, jump and duck and you'll need these abilities to avoid the barrage of enemy fire, though along the way you may utilise the enemy's helicopters to complete your mission.

The scenery is breathtaking and what it lacks in playability is made up for by sheer fun. If you missed this one on its first release, don't miss it now.

Bringing up the rear is my old favourite RAVENSKULL - an arcade adventure of the highest calibre. You haven't lived until you've been killed in Castle Ravenskull.

At the start of the game you can choose to be a Wizard, Adventurer, Elf or Warrior. Your choice doesn't affect the way the game plays, it merely selects the graphics for treasure.

The object of the game is to collect and assemble the pieces of a silver crucifix. You start outside the castle, faced with the first puzzle of how to get in. This can take some time, not least because of the sheer size of the map.

Each level is no less than 64 times the size of the screen. Needless to say, with a map this large, getting from one place to another can take quite some time.

The inside of the castle is filled with a variety of objects and obstacles. Some - the pickaxes for instance - are helpful, but others are either a nuisance or just downright lethal.

The puzzles in RAVENSKULL are nothing less than complex: Make one mistake and you'll have to start again. There is only one solution to each level.

The overhead view graphics used are beyond belief and the four colours of the Mode 5 display used to excellent effect.

In conclusion I have to say that since every one of these games achieved number one in the software charts at the time of their release, this package represents unequalled value for money.

Although most people probably have at least one of the four, this is a stocking filler that everybody should have.

4. ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Sam, an ardent fan of Superior Software's games, has been absolutely delighted by the success of his first selection of chart-topping Superior Software games. Now here's four more games that will keep you enthralled day after day - on that you can rely!

REPTON 3 is probably the best-loved of all Superior's games. Our endearing lizard, Repton, is trapped in a netherworld amidst falling rocks, fearsome monsters and haunting spirits. A superb strategic game which includes character and screen designers enabling you to create your own scenarios. A & B Computing reported: "This is top quality; arcade action at its very best."

CRAZEE RIDER is a fascinating motorcycle-racing game featuring seven international racetracks. "It's fast, challenging and there's plenty to keep you entertained. Thoroughly recommended" remarked The Micro User.

GALAFORCE is the thinking-man's alien-zapping game; fast and furious yet full of strategy. Oracle enthused: "You haven't lived until you've played this game. Buy it! - It's the ultimate in shoot-em-up. RATING 20 [out of 20]."

CODENAME: DROID is a challenging arcade-adventure. The quality of the graphics and animation must be seen to be appreciated. Electron User summed up the game by saying: "CODENAME: DROID is brilliant...it's worth every penny!"

Please see individual entries for each standalone title for complete playing instructions.

## Review (Electron User) - "Quality Compendium"

This is Superior's follow-on to PLAY IT AGAIN SAM, and once more we have four classic hits packaged together for the price of one. First on the twin-cassette pack is REPTON 3, the sequel of the original smash hit REPTON, which helped make Superior what it is today.

REPTON is a great little game and probably needs little introduction to Electron owners other than to say that it is based on the original diamond digging arcade adventure BOULDERDASH - also reviewed this month.

REPTON 3 features the now famous little character who loves digging for diamonds. The object is to defuse a timebomb present in each of the 24 screens, but first every diamond in the screen has to be collected, as well as a fabulous golden crown.

The puzzles are many and varied, and there is also a deadly fungus to avoid. This grows and grows until you are eventually swallowed up and the only way to halt its progress is to surround it with rocks.

On the flip side of cassette one is CODENAME: DROID - STRYKER'S RUN PART 2 - there's a map to this in this month's Arcade Corner. STRYKER'S RUN was one of my favourite games, but until now I hadn't played its sequel - and I was impressed with what I saw.

For a start, Commander Stryker's animated figure moves even more realistically, if that is possible, and he can even crawl on his belly to negotiate low objects.

The plot behind CODENAME: DROID is, yet again, to foil the evil Volgans in their plot for world supremacy. This time your mission is to secretly land on the planet Volga and steal their revolutionary new spacecraft - Codename Z11 - from under their green noses.

To aid you, jet packs are to be found in various places to enable you to fly over obstacles and chasms. You also have a very sophisticated wrist terminal from which you can obtain lots of information about your current whereabouts.

To reach the enemy spacecraft, twelve levels of the complex must be descended. There are lifts, but you must first collect a security pass - which is only valid for transport either down or up one level.

Volgan guards abound and will shoot as you approach them. To keep you on your toes, the further into the complex you descend, the tougher their armour becomes, requiring more blasts from your laser to turn them into nicely animated skeletons.

This game is much more complex than its predecessor and so much is involved that I can do no more than recommend you buy this compilation and find out more.

The second cassette is devoted to games by Kevin Edwards, who first hit the charts with his excellent GALAFORCE, nearly two years ago (Doesn't time fly?) and it is now doing the rounds on this compilation.

If you didn't buy GALAFORCE the first time round, you must not miss this opportunity to play what is, in my opinion, the best shoot-'em-up for ever for the Electron and BBC Micro.

This praise is unqualified by any niggling moans. The game is sheer excellent programming, totally addictive and graphically stunning - you'll never see sprites this big move so fast on your Electron again.

Wave after wave of different aliens sweep down upon you in set patterns and the art of playing GALAFORCE is to memorise as many alien attack formation types as possible - if you don't, you won't last more than a few seconds in each zone.

I noticed that even the soundtrack has been faithfully copied from the BBC Micro version. Even though the Electron can't support more than one channel sound, the three-part harmony has been broken down, each part played in succession so you don't miss out on the full effect.

What surprised me was the scrolling star backdrop. I had assumed that its inclusion in the Electron version would slow things down. Nothing could be further from the truth. The action, while not quite as blindingly fast as on the BBC Micro, still comes thick and furious. I think the compilation is worth the cash for this game alone.

Moving on to the final offering on the reverse of the cassette two, CRAZEE RIDER, I was slightly disappointed. This is Kevin Edwards' second game for Superior, but it is - pardon the pun - streets behind GALAFORCE.

Faced with a motorcycle racing game, I was all settled in for an exciting session. The credits looked promising, fading in and out nicely and with mounting anticipation I pressed Space to start the race.

Well, try as I may I could only hit one or two other bikes, because my acceleration was so lousy compared to everyone else's that I couldn't match speeds with any other riders until the race was well underway.

I dare say that devotees of this game will just say hard cheddar for being a useless player, but as someone who could consistently win the race in REVS on the BBC Micro with a lap time in the top three best, I couldn't help but feel that there was something missing with CRAZEE RIDER.

Perhaps it isn't fair to compare a full racing simulation like REVS with that is obviously a knock-'em-off fun game, but it really lacked that satisfying feeling - for me, at any rate.

## **COMMANDO, The Smash No. 1 Hit From Elite**

Super Joe - Crack Combat Soldier - fights a lone battle against overwhelming odds. All the action and tension of the World's Number One Arcade Game.

"Non-stop Commando action"

... The Micro User

## **PALACE OF MAGIC, A Superior Software Chart Topper**

Over 100 screens of challenging puzzles and awesome foes. Even better than CITADEL.

"This is excellent...I can't wait to get back to solving it!"

... A & B Computing

## **KILLER GORILLA, A Classic from Micro Power**

Scale the ironwork tower to answer the maiden's cries for help. Race along the girders, career along conveyors and jump on to moving elevators.

"KILLER GORILLA is an excellent version of the arcade game"

... A & B Computing

"A classic game"

... Acorn User

## **KILLER GORILLA 2, Superior's Authentic Sequel**

Climb the vines, chains and laser beams, avoiding the electric spikes and vicious aardvark birds. When first released, it was awarded a maximum \*\*\*\*\* by Home Computer Weekly.

"You need a lot of skill...the interest level remains high"

... Popular Computing Weekly

## **Instructions**

Please see individual entries for each standalone title for complete playing instructions.

## **Review (Electron User) - "Blast From The Past"**

The SAM 3 compilation includes two games that did not originate in the Superior stable - Elite's COMMANDO and Micro Power's KILLER GORILLA. COMMANDO is the officially licensed home computer version of the arcade machine of the same name. For the information of anyone who has not been in an amusement arcade in the last few years, or who missed the game on its initial release for the Electron, COMMANDO is another of the one-man -against-the-odds combat games that have become so popular in recent years.

You are Super Joe, the commando of the title. Armed only with a submachine gun and half a dozen grenades, you must penetrate the enemy defences and destroy the fortress. Easy to describe, but of course, much less easy to do.

COMMANDO features a number of different screens. Once you have fought your way from the bottom of one screen to the top it scrolls down to reveal new hazards. You thus get the impression of fighting one continuous battle.

Every new screen brings a fresh horde of enemy soldiers streaming from all quarters. Your machine gun makes short work of them, and your grenades come in handy when their numbers become too great, but remember that they are equipped with similar weapons. One stray bullet or grenade can prove fatal, so keep a sharp eye about you.

This re-released COMMANDO incorporates one key improvement. When playing the original game you sometimes could not determine from the screen display when you have been killed. Now there is no doubt. A blinding white flash heralds your call-up to the ranks of the ex-commandos.

I have never been particularly impressed by COMMANDO. Its main drawback is that it comes off very badly from the dilemma that faces every programmer - weighing up the pros and cons of each screen mode and the conflicting features of screen resolution, screen size and available colours.

COMMANDO runs in Mode 5 which allows only four colours on screen at any one time. I found that many graphic features tended to merge into one another. Nevertheless, if you're a fan of shoot anything that moves' games you could do worse than pick this one.

KILLER GORILLA will need little introduction to the majority of Electron owners. It is an excellent implementation of the ever-popular arcade machine game Donkey Kong. Although it was released in the relatively early days of the Electron, I have never seen another version that surpasses it in quality and playability. When an officially licensed version did the rounds of the popular home computers a few years ago I was interested to see that no Electron version ever appeared - KILLER GORILLA got it right first time.

The game was inspired by the 1933 film King Kong. You play the part of Mario, a humble carpenter whose girlfriend the evil Kong has carried off the top of an unsteady tower of scaffolding. You have to climb it to rescue her.

You scale each section of scaffolding, avoiding the barrels that Kong throws in an attempt to dislodge you. Unfortunately, these barrels are by no means your only problems - fireballs and custard pies also threaten to send you to a sticky end.

However, help is at hand. Large hammers hang above your head at intervals. Jump up and grab one and you can destroy any moving hazard that comes within reach. However, their effectiveness quickly wears off, often at fatally inconvenient moments. Moreover, Kong will not willingly surrender your lady; just as you catch up with him at the top of one section he whisks her up to the next.

The game features four screens, each more difficult than the last. The first is a straight climb from the bottom to the top of the screen, the second introduces conveyer belts that keep changing direction. The third features lifts made of pieces of girder, and bouncing girders that can quickly cut down an inattentive carpenter.

The fourth and last screen looks perfectly straightforward, but is rapidly overrun with deadly fireballs. However, the screen also includes two hammers, and if you can reach them in time they will make short work of your fiery adversaries.

After you have completed this level and defeated the gorilla, you return to the first screen to find that things have changed, for the worse. The first screen now features gaps in the framework of girders - and you have to jump for your life. The conveyers on screen two move more quickly than before, as do the lifts on screen three. In all, the game has fifteen increasing difficult levels, enough to test even the most ardent hero. KILLER GORILLA is a classic game that still provides hours of amusement.

Just as KILLER GORILLA is an implementation of the arcade machine game Donkey Kong, KILLER GORILLA II is a version of the arcade follow-up Donkey Kong Junior. Older players may remember the game's original release, under the name of ZANY KONG JUNIOR. Unfortunately, that release had to be withdrawn for copyright reasons - I suspect that it was too good a copy of the arcade original.

In KILLER GORILLA II the roles have been reversed. Mario - now called Morris - has defeated Kong and rescued his girlfriend; however, in an act of revenge he has captured Kong. You, Kong Junior, must rescue your elder.

As in KILLER GORILLA Mark 1, you must make your way from the bottom to the top of successive screens, but there the similarity ends. You start off in the jungle, and manoeuvre yourself around a network of platforms, vines and creepers, to the top of the screen where your caged parent sits helplessly. However, no sooner do you reach the brutal Morris and the cage than they are gone. The chase is on.

Like its predecessor, KILLER GORILLA II features four different screens that repeat with increased difficulty. Unlike the original, the four screens don't follow a consistent theme. The first requires you to swing around a network of vines bridged by brick platforms.

Unfortunately, as usual, the screen is far from deserted. You soon discover that a number of disembodied snapping heads are travelling up and down the vines at great speed and doing their best to find out what baby gorilla tastes like. A single bite is fatal.

Pieces of fruit hand from the vines at regular intervals. You can buy time for yourself and your cause by dislodging them at opportune moments and crushing any hapless creature that may be underneath.

The second screen is totally different: the only way to reach the trailing chains way out of reach above your head is to bounce on a spring just in front of you. That obstacle cleared, you must now contend with a stream of giant parrots that home in on you relentlessly. Luckily there are a couple of usefully placed pieces of fruit to hand.

The third screen depicts the generator room where you scramble along electrical cables, avoiding the high voltage sparks that race around the circuit. This screen can be very difficult for so many sparks are speeding in different directions that even a small gorilla cannot evade them for long.

When you reach the fourth screen you long up to see Kong Senior's cage sitting on a girder high above your head where it is held in place by six ropes locked to the girder. The six keys are attached to chains hanging from the girder. Collect all six to release your parent.

You must now contend with both the snapping heads from the first screen and the giant parrots from screen two. As in KILLER GORILLA 1, once you have completed this screen, you are returned to a more difficult screen one to perform your feats of heroism all over again.

I found KILLER GORILLA II much more difficult than its namesake, but it certainly adds a bit of variety to a well-established formula.

The last title in the collection is PALACE OF MAGIC, an arcade adventure with more than 100 screens; it is very similar in appearance to Superior Software's classic CITADEL. PALACE OF MAGIC does not attempt to disguise the source of its inspiration - quite the reverse in fact. The plot of the game is that you have offended the evil wizard Caldeti - try rearranging the letters and see what comes out - who has shrunk you to the size of a dwarf and imprisoned you in the Palace of Magic. Your escape will not be easy.

As in CITADEL, you have but one life and only a limited amount of energy. This is depleted whenever you spend too long under water or when you come into contact with any flames or any of the Palace's animated inhabitants. You can, however, replenish your energy by collecting magical top hats dotted around and about.

I have heard that the more awkwardly-placed hats give greater rewards but this may be nothing more than a rumour. One point worth noting is that your energy level cannot be increased beyond its initial level. Do not pick up a top hat until you really need it, or you will waste some of its magic.

Like CITADEL, PALACE OF MAGIC features a number of adventure-style puzzles to be solved in the correct order before you can get into some of the more remote areas of the Palace and surrounding landscape.

For example, you may find that your path is blocked by a blue and cyan door<sup>4</sup>. Before you can progress any further you will need to find a blue and cyan key. Of course, you may need to solve other puzzles before you can get to the key. What must you give to the vicar before he will let you into the chapel? Who can you bribe with the gold bar? It is essential to plan ahead. As with any adventure, drawing a map will help.

If you like games that require a combination of logical thought and manual dexterity, PALACE OF MAGIC will provide a considerable test of both skills.

Martin Reed

### \*\*\* Second Opinion \*\*\* (Electron User)

The SAM series of compilations are simply superb value for money. The games were rated very highly when originally released and the quality is top notch. They provide endless hours of enjoyment for all the family.

The only problem with it (and this goes for all compilations) is that you may already have one or more of the games. However, even if you have two originals, the other two games still work out at under a fiver each which can't be bad.

## **FRAK!, The Unique No. 1 Hit from Aardvark**

One of the most original computer games ever devised. Propel our caveman Trogg about the weird world of Frak!

"Go out and see it as soon as possible."

...A & B Computing

"A superb game that will take you hours to master."

...The Micro User

## **SPELLBINDER, Superior's Bewitching Adventure**

A captivating 3D arcade-adventure full of problems to be solved by magical means.

"What is more impressive than the detailed graphics, is the sheer number of rooms comprising the two floor, three citadels, catacomb and dungeon."

...Electron User

## **COSMIC CAMOUFLAGE, A New Release From Superior Software**

An exciting, new sequel to Meteors, with many novel, advanced features including gravity levels. Steer your laser-ship through a hall of meteors and flying saucers, smashing them with your laser bolts. When the pace gets desperate, use your Radiation Bombs or go into Warp Drive. As a last resort, install your Camouflage Cover and become invisible to the cosmic debris.

## **GUARDIAN, An Alligata Software Hit**

A fast-moving spectacular. Test your skill and reflexes to breaking point.

"It's a classic defender game...and it's very good"

...A & B Computing

"A fast-moving space game, with striking graphics and excellent sound effects."

...Electron User

## **Instructions**

Please see individual entries for each standalone title for complete playing instructions.

## **Review (Electron User) - "Compilation Capers"**

Like its immediate predecessor, SAM 4 departs from the standard set by SAMs 1 and 2 - that of re-releasing games from Superior's back catalogue. Two of the titles on offer were originally released by another software house and the third is a brand new game, never before available in any form.

This idea of including a previously unreleased game extends the compilation's appeal to a number of software buyers who may not otherwise consider the package if they already had some of the featured titles separately.

The term cartoon quality graphics has been much abused when applied to computer games, but any Electron arcade addict who was around in the heady days of 1986 will still remember the first game to which that overused phrase could justly be applied. At that time platform games were just starting to become a bit stale, and something a little different was needed. The first game on the compilation - FRAK! - went the whole way and provided something very different indeed.

What made it so, apart from its amazing graphics, was the way that so many totally incompatible concepts, creatures and objects were combined with wild abandon to produce a game that bore no resemblance to the platform genre of the time, or indeed to anything else.

The star of FRAK! is a delightful little caveman by the name of Trogg, one of the unlikeliest celebrities ever to grace the Electron. The aim of the game is simple: You, as Trogg, must jump and climb around the screen collecting the many keys dotted around. Sounds easy, but there are many hazards to overcome.

The game features 72 levels, plus a built-in competition section, each about three screens wide. As you approach the edges of the screen the backdrop scrolls to the left or right so you can always see what is in front of you. This feature comes in very useful for spotting distant hazards. As you make your way up the first ladder and on to the rock platform above, you set eyes on your first Scrubbly. These are large and furry, have long teeth and a permanent happy stupid smile. But don't be fooled - they are quite deadly.

The Scubblys don't move, but sit awkwardly in your way - no problem for a heavily armed caveman. Unlike your Neanderthal predecessors, however, your secret weapon is not a wooden club or stone axe, but a yoyo. With a quick flick of the wrist you despatch the offending beastie and your path is now clear.

Clear, that is, of Scrubblys - you still have to contend with daggers that rain down from the sky and balloons that fly up from the bottom of the screen. Both have a nasty habit of appearing at inopportune moments, but fortunately your yoyo works just as well against them as it does against your ground adversaries.

Each level features a time limit, and unlike most games you don't lose a life if you run out of time - you suddenly find that night has fallen and your yoyo no longer works. At this point all the daggers and balloons seem to gang up on you, and if you fall foul of any of the monsters or flying objects, or simply miss your footing on a jump, you swiftly go to your maker with a cry of "Frak!"

When you have collected all the keys from the first level you are promoted to the second, where the rock platforms, ladders and Scrubblys are replaced by logs, hanging ropes and small monkey-like creatures with the same fatal properties as the guardians of the first level. On the third level you make your way along a series of girders and up and down chains that hang from them. Your adversaries are now small squat creatures with bulbous noses.

After you have completed the first nine levels you are returned to level one to find that the screen has turned upside-down. Levels 10 to 18 are, in fact, levels on to nine upside-down. Levels 19 to 27 are further variations, levels 28-36 are levels 19-27 upside-down, and so on.

Level 73 is the first screen of Championship FRAK!, a very fast, difficult and thoroughly dagger and balloon-ridden version of the normal game. The competition associated with it has long since closed, but see how far you get anyway.

The game also includes a screen designer so you can dream up and save your own screens. It allows almost unlimited scope for producing difficult screens and nasty problems, and I think it is a pity no add-on screens were ever published.

The newcomer is an interesting variation on Asteroids and goes by the name of COSMIC CAMOUFLAGE. It is a sequel to Acornsoft's classic game, METEORS. Certainly first impressions of the game - a small triangular ship surrounded by asteroids - might make you think that it was unchanged.

COSMIC CAMOUFLAGE uses the same rotate, thrust and fire keys as METEORS, so any devotee of that game will feel immediately at home. However, the new version incorporates a number of 1988-style improvements over its predecessor.

Missing from METEORS, but features that have become standard in recent years, such as pause/restart, sound on/off and quit game, are present. Also, every hit has been spruced up with the addition of a four-pointed flash.

The game itself has also been radically improved. In COSMIC CAMOUFLAGE, a direct hit on a large asteroid does not always produce two smaller asteroids, it can produce an asterite and a Hermit Craft or occasionally two Hermit Craft. These bounce around the screen at high speed causing fatal damage if hit.

They are worth destroying - self-preservation apart - so you can claim their valuable cargo. A vaporised Hermit Craft leaves behind a small canister which increases your supply of radiation bombs, warp drives or camouflage devices.

A radiation bomb is in effect a smart bomb, and acts like a panic button, splitting all the asteroids and destroying all asterites and alien ships. If the asteroids and aliens are closing in too quickly you can jump to another part of the screen. However, you reappear at a random position, sometimes with fatal consequences.

The Camouflage Cover feature which gives the game its name is very similar to the shield option in the original Atari Asteroids. When selected, your ship disappears and aliens no longer home in. However, you are not invulnerable to asterites. Later attack waves introduce Octanoids, Starcraft and Decanoids which home in on you, but are fairly easy to blast. Starcraft and Decanoids produce spores when blown up which also home in.

COSMIC CAMOUFLAGE is a novel implementation of a classic, and if you enjoyed METEORS you'll love this upgrade.

The remaining games in the compilation are GUARDIAN - originally released by Alligata, but now re-released on the Superior label - and Superior's own SPELLBINDER. The latter is another Superior offering that falls into the popular arcade-adventure category. It is, however, rather different from the other games of this type in that it puts less emphasis on the arcade aspect and more on adventure.

You play Eldon the Spellbinder, one of the Magelords, a brotherhood of wizards who rule the land of Lorraine. For many years peace and prosperity reigned over the land, but now that tranquillity is being threatened by one of your own number, the renegade Zorn.

Naturally, as protectors of the land, the Magelords must act to thwart Zorn's evil plans before it is too late. Guess which one drew the short straw? You start on the drawbridge of Zorn's castle, and once you have ventured over the threshold there is no turning back.

The game features no material weapons, but a good wizard does not need any - you must fight Zorn using your own magical powers. However, before you can cast spells, you have to make them by mixing certain substances.

You start off with three spells in your armoury, but a good wizard does not need any - you must fight Zorn using your own magical powers. However, before you can cast spells, you have to make them by mixing certain substances.

You start off with three spells in your armoury, but you will learn others along the way. Burned ashes, sulphur, toad's legs and the other substances all have magical properties that, correctly combined, will aid you in your quest.

The graphic features have been very well designed, with suits of armour, wooden tables and dusty bookcases all lending authenticity to your surroundings. My only complaint is that the animation of the monsters is rather jerky.

The layout of the castle seems to have designed to confuse, and a map will come in handy. No medieval castle would be complete without secret passages and hidden doors, and the Castle of Lorraine is no exception.

As might be expected, Zorn is by no means the castle's only inhabitant. You will encounter a variety of deadly creatures, all of which deplete your precious energy by varying amounts if you don't protect yourself or avoid them.

These adversaries include zombies, flying eyes and winged skulls. You can cast a spell to immobilise or ward off some of them, but the supply of raw materials is not limitless.

The game is completely icon-driven. Press the appropriate function key to search an object, mix ingredients, cast a spell, and so on. Your surroundings are displayed in 3D, not using isometric projection, but viewed from the front.

SPELLBINDER runs in Mode 4, so only two colours are displayed on the screen at any one time. However, I found that this led to only a small reduction in visual clarity and I found no difficulty in keeping track of my surroundings.

SPELLBINDER is not quite my cup of tea, but it is certainly very different, and if you like mapping and solving puzzles it is worth a close look.

Alligata is one of the longest established names in the software world, but one that has been dormant of late. This is set to change with the signing of a contract that allows Superior access to Alligata's back catalogue. The first title to come from this union is GUARDIAN - an implementation of the coin-op classic Defender.

For the benefit of anyone who is not familiar with Defender - or its Electron clones, Acornsoft's PLANETOID and Micro Power's GAUNTLET - you are charged with the task of defending your planet against swarms of alien invaders who are intent on kidnapping its inhabitants.

Same old scenario certainly, but it was original at the time. Defender was different from all the other games of the period because it featured sideways screen scrolling. Along the bottom of the screen is a jagged line representing the surface of your home planet. Dotted at intervals along it are a number of blips which represent the planet's inhabitants stranded helplessly on the surface.

Even as you start, wave upon wave of aliens are appearing in the skies above you, intent on capturing the humanoids in your care. The aliens will attempt to swoop down, capture a humanoid and take him off to the top of the screen. If one manages this successfully it becomes a mutant and chases your ship at high speed.

You must either shoot it or use one of your precious smart bombs. This will destroy every alien ship on the screen in one fell swoop and can be used as a panic button.

You start off with three lives, but are awarded an extra one after every 10,000 points. Ideally you should shoot the alien before it manages to make off with its prisoner. When you have destroyed a complete wave of aliens you are awarded a bonus

according to the number of humanoids remaining, so you must learn to hit the aliens without damaging their captives.

If the alien is still near the surface of the planet, the humanoid will simply drop back to the ground unharmed. However, if the alien has managed to reach a considerable height above the planet, the humanoid will be killed on impact. Therefore, you must also learn the worthwhile skill of catching falling humanoids in mid-air and returning them to safety.

The displayed screen acts like a small window on the entire surface of the planet. Move left and right to cover the areas that are currently out of range. Fortunately, you have a long range scanner at the top of the screen to show where you are needed most. This shows the positions of all the humanoids and aliens.

On later levels when the screen can be overrun with many different types of alien, a smart bomb can clear the area - and amass a considerable number of points - in no time. GUARDIAN is an excellent implementation of a classic no Electron owner should miss.

Overall this is another impressive compilation from Superior. The oldies are classics, and the newcomer is a variation on a classic so it's a compilation not to be missed.

Martin Reed

### **\*\*\* Second Opinion \*\*\* (Electron User)**

Superior has come up trumps again and produced another hit compilation to add to your collection. The only cloud on the horizon is the fact that as these games were so popular when originally released you may already have one or two of them as singles. However, I still think the package is worth every penny. Recommended.

4. ADFS 1D00, CDFS 1D00, DFS 1D00

## **IMOGEN, Micro Power's Recent Hit**

This superbly animated adventure game, playing the part of Imogen the wizard with powers of metamorphosis, was highly praised when recently released for the BBC Micro. It is now also available for the first time for the Electron, having been specially prepared for this compilation. Both versions combine highly addictive and frustrating game-play with highly detailed graphics.

## **ELIXIR, Superior's Humorous Strategy Game**

Help poor Cyril to return to his normal size by finding the elixir. Keep clear of the lipstick missiles, dodge the acid and watch out for the "circulasaurus" creature.

"The logical puzzles are well thought out..and give players something to get their teeth into."

...Acorn User

## **BUG BLASTER, A Classic Hit From Alligata**

The best implementation of the "Centipede" game. (Even better than Superior's own version) Fast moving with very detailed graphics. Features include mushrooms, spiders and a mushroom-poisoning scorpion known as Brian. Nerve tingling excitement...the better you get the faster the action.

## **MOONRAIDER, A fast-moving and compulsive space spectacular from Micro Power**

"A good value game, crammed with action and needing skill to test the most ardent arcade fanatic."

...Electron User

## **Instructions**

Please see individual entries for each standalone title for complete playing instructions.

## **Review (Electron User) - "Continuing Compilations"**

Superior Software's policy of buying up other companies or their software is having a noticeable effect upon the quality of its PLAY IT AGAIN SAM compilations. Its already impressive games portfolio has been swollen with top titles from Alligata and Micro Power - some of which are in evidence in this volume.

On receiving this package I was overjoyed to see that Micro Power's IMOGEN had been included. It was not originally released on the Electron and is an excellent game.

IMOGEN is a wizard who lost a few of his marbles as a result of a disagreement with a dragon. For his own safety, and that of the local community, he was incarcerated in a dungeon by the great wizard. He must earn his freedom by solving the dungeon's many puzzles and collecting the sixteen pieces of the Spell of Release.

One of Imogen's party pieces is transformation - he can change from a wizard to a monkey to a cat at will. Each form has a different ability - the wizard can use objects, the monkey is an expert climber and the cat can leap great distances. Your desired form is selected using a series of icons at the top of the screen.

There is no time limit on the game and the only stipulation is that the sixteen sections must be completed using no more than 150 transformations - if this seems generous let me assure you that it isn't. A few wasted changes as a result of badly-timed leaps can easily mean the difference between success and failure.

Puzzles range from traditional adventure game brain strainer to obvious, but difficult to execute, tests of manual dexterity. I would also add that a warped sense of humour is a distinct advantage.

Having got itself the basis of a superb game, Micro Power blended these puzzles with graphics of a quality that had never before been seen on the Electron. High resolution monochrome characters are animated with a grace and realism that brings them to life. IMOGEN is in a class of its own in the arcade adventure field.

ELIXIR is an arcade adventure that originates from the opposite end of the quality spectrum. This is most surprising as it is the only one of the four programs on the compilation to come from the Superior stable. It revolves around the exploits of Cyril the shrunken chemist as he strives to locate the elixir that will restore him to his former stature.

Cyril clammers about shelves on which stand bottles and jars of pills potions. The colour of a pill indicates the effect it will have upon him. His meanderings are interspersed with fatal falls, killer flash bulbs, acid drips and a runaway circular saw. This probably the weakest game in the package.

Leaving the arcade adventure field, we take a stroll down memory lane to an arcade game of yesteryear. BUG BLASTER from Alligata was, and still is, a first rate version of the insect extermination game, CENTIPEDE. Winding its way through a field of mushrooms is a giant centipede, and your task is to blast this megamyriapod before it gets you.

The rate of the beast's descent is determined by how many mushrooms it collides with. Each collision is followed by a change in horizontal direction and one step down the screen. The mushroom population increases with each new level.

Other hazards are supplied in the shape of falling fleas, bouncing spiders and an assortment of other members of the insect family who traverse the screen at regular intervals. BUG BLASTER is a rave from the grave that is still capable of setting the pulse racing as you fight for survival against mother nature's rejects.

The final game, MOONRAIDER, is a cracker. In this fast-paced horizontally scrolling shoot-'em-up you control a fighter plane raiding a heavily defended enemy base. Equipped with an assault ship and a full complement of bombs, you and your trusty laser cannon set out for the centre.

The hills scroll below as you fly over them straffing rocket bases, buildings, radar towers and so on. Bombing fuel dumps adds to your rapidly dwindling fuel supply - your ship is a real gas guzzler. Any rockets you miss launch as you approach. They must either be shot down or avoided.

On later levels you enter a large cavern which must be negotiated with considerable care. Fireballs must be dodged and bouncing aliens either shot or avoided. An option which pleased me was that you can jump to any stage of the mission.

PLAY IT AGAIN SAM 5 is yet another top quality Superior Software release that is destined for the charts, especially with the inclusion of IMOGEN.

Carol Barrow

**\*\*\* Second Opinion \*\*\* (Electron User)**

Another great compilation from Superior Software. Newcomers to the Electron games scene are having a field day with these top quality titles which work out at under £2.50 each. If you've had your Electron right from the beginning you probably already have two or three of these games, which would make it less of a bargain.

## **GALAFORCE 2, New Release From Superior Software**

Everything that GALAFORCE was, and more - more aliens, more patterns, much more speed, more features (including collectable capsules - some help, some hinder), excellent sound effects and music.

"A wonderful shoot-'em-up - fast, furious, beautifully designed and stunningly compulsive. This will be one of the top three BBC games of the year - I promise."

...A & B Computing

## **HUNCHBACK, Superior's Authentic Arcade Conversion**

This superbly addictive and amusing arcade conversion is now available again for the BBC Micro and is available for the first time ever for the Electron.

"This game has excellent graphics and sound...a good addiction factor and is fun into the bargain."

...Micro User

## **HOPPER, Acornsoft's Classic Hit**

The best implementation of the "Frogger" game. (Even better than Superior's own version). Fast-moving with detailed, colourful graphics. Features include diving turtles, crocodiles, snakes and dragonflies.

"It's great fun...an excellent version of the arcade favourite. Highly recommended."

...Micro User

## **VIDEO'S REVENGE, An Action-Packed Alien Blaster from Budgie Software**

"If you can imagine Defender twisted on its side with the mentality of Rambo in a bad mood, then you are getting close to the destruction possible in Video's Revenge. Sprites are fast and furious...sound is wonderful."

...Micro User

## **Instructions**

Please see individual entries for each standalone title for complete playing instructions.

## **Review (Electron User) - "All Arcade Action"**

This is the sixth package in the very popular PLAY IT AGAIN SAM series. Superior seems to be turning out these polished compilations at a rate of about one a month. The pack contains four great arcade games, two golden oldies and two newcomers.

The first title is HUNCHBACK, a classic from the early years of arcade machines. In it you take the part of Quasimodo and you must scale the battlements of a castle to rescue your beloved Esmeralda.

You start off on a flat wall and as you run across from one side of the screen to the other a boulder flies towards you. A quick tap on the <RETURN> key and you safely leap over it. As you reach the other side, the screen flicks to reveal the next.

Here a pit bars your way and you must run, jump and grab a swinging rope in order to cross it Tarzan-style. On to the next screen. Now there are small pits that can be jumped with a single bound. However a boulder flying towards you must also be dodged.

The next screen features guards with spears who stand in pits and attempt to jab you where it hurts as you leap over them. And so it goes on. There are three levels and eight screens to negotiate and you practise by opting to start on any particular screen.

The graphics are excellent, but the sound is sparse. I found it to be highly entertaining and frustrating, having that "just one more go" addictiveness.

HOPPER dates back to the earliest days of the Electron. The idea is to guide a frog across a busy road, over a dangerous river to your home pond, all within a time limit. As you progress through the levels the amount of traffic on the road increases and dodging the vehicles becomes more difficult.

You must be the only frog that can't swim, for when you cross the river you mustn't fall into the water. Floating logs can be used to step safely across, and you can ride on the backs of swimming turtles - watch out as they occasionally dive and you fall into the water and drown. Crocodiles patrol the river and their favourite snack is frog.

There is little depth to the game compared to many recent arcade adventures, but in spite of this it's fun to load up and play every now and then.

GALAFORCE 2 is the sequel to one of the best shoot-'em-up Galaxians type games ever seen on the Electron. The action is fast and furious as aliens stream on to the screen, swirl round and let loose showers of missiles.

Armed with your trusty laser base you wipe out wave after wave. Movement is mainly left and right, but some up and down leeway is permitted, allowing you to get 'em rather than waiting for them to come to you.

Capsules drop down the screen every now and then and these can be collected to provide you with extra firepower and more lives. The graphics are superb.

Finally in this compilation comes VIDEO'S REVENGE, a sort of PLANETOID set on its side. You are in control of a ship flying through space and hordes of aliens fly down the vertically scrolling screen. Needless to say, all are hostile and shoot carefully aimed missiles in your direction as they approach.

You can see what's coming by taking quick peeks at the long range scanner which runs down the right hand side of the screen. On this each alien is represented by a blob so you can't tell the type of enemy craft.

Some aliens are like seed pods which crack open when shot releasing half a dozen tiny craft. These little blighters can be quite a handful as they require a perfectly aimed missile to dispose of them.

Extra features are available in the form of an invisibility cloak and smart bombs. By blasting an enemy balloon twelve times and catching the energy pod released your firepower increases threefold.

Overall, PLAY IT AGAIN SAM 6 is yet another winner. The games work out at just under £2.50 each, which can't be bad. The quality is excellent, and though two of the games are re-releases of old titles, they are still fun to play. Recommended.

Roland Waddilove

**\*\*\* Second Opinion \*\*\* (Electron User)**

Another superb compilation from the Superior stable. Every game is addictive and fun to play. The only problem is that I've already got the two re-releases. However, even discounting these, the other two still work out at under a fiver each, which can't be bad. I like it - and think you will too.

Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : 1. CDFS E00, DFS E00  
2. CDFS E00, DFS E00  
3. ADFS 1D00, CDFS 1D00, DFS 1D00  
4. ADFS 1D00, CDFS 1D00, DFS 1D00

## **FIRETRACK, Electric Dreams' Smash Hit**

Micro User gave Firetrack a maximum \*\*\*\*\* rating and enthused that "Firetrack is for the player who thrives on danger, a pilot with nerves of steel and lightning reflexes".

This superbly addictive game, with beautifully detailed graphics, is now available again for the BBC Micro and is available for the first time ever for the Electron.

## **BONECRUNCHER, Superior's Humorous Soap Opera**

Play the part of Bono, a green dragon, who collects skeletons to make soap...but watch out for the spiders, monsters and glooks!

"With smooth four-directional scrolling and often fiendish puzzles...BONCECRUNCHER will delight game players of all ages. Another sure-fire hit"

...Micro User

## **SNAPPER, Acornsoft's Arcade Classic**

"SNAPPER is an excellent reproduction of the popular arcade game. Acornsoft have really excelled themselves yet again with SNAPPER. The maze is clear and the fruit are all very realistic. Summary: Totally excellent, classic game. Brilliant!"

...A & B Computing

## **GHOULS, Micro Power's Ghostly Hit**

"GHOULS is a delightful game set in a mansion on top of a creepy hill. The graphic quality of GHOULS is impressive. The sound in GHOULS is superb. Some of the noises are creepy, and would be well-placed in a horror film! GHOULS is a great game!"

...Acorn User

## **Instructions**

Please see individual entries for each standalone title for complete playing instructions.

## **Review (Electron User) - "Hallmarked Golden Oldies"**

PLAY IT AGAIN SAM 7 is the latest in an ever-increasing line of highly successful compilations from the Superior stable. The package features three cracking games from the past plus a superb brand new offering.

Starting with the newcomer first, FIRETRACK is probably the ultimate shoot-'em-up. It features amazingly smooth vertical-scrolling arcade action that starts gently and speeds up at just the right pace until only the best stand a chance of surviving for more than a few moments.

You fly a space fighter low over alien worlds blasting the locals' power nodes, junctions and computer centres, finally destroying the Devil Rock's eyes for a bonus. The action is fast and furious.

The graphics are stunning and give an amazingly realistic 3D effect that I wouldn't have thought was possible on the Electron. What's more, for anyone who can spare the concentration, a number of familiar shapes can be seen in the landscapes - a Pac-Man chasing power pills, the number 42 and many more. However, I had to be told about their existence - I was too busy trying to avoid the squadrons of enemy ships swirling around me in weird and wonderful formations.

FIRETRACK takes the ever-popular concept of a shoot-'em-up, transfigures it and implements it faultlessly.

In BONECRUNCHER you play Bono, a little green dragon which lives in a castle by the sea. You have set up Bono's Bathing Company making skeleton soap, a commodity much prized by the giant sea monsters which bathe nearby. It's made from the bones of skeletons that can be collected from around the castle and boiled in your cauldron.

The castle is anything but a safe place. Not only are there trapdoors through which you can disappear without trace, but some skeletons haven't stopped moving yet and they're deadly. And giant spiders rush around the walls biting anyone who gets in their way. They will also eat any bones, so it's often a race to collect the skeletons before they do.

Finally, there are Glooks - large round ball-like creatures which love the smell of soap. When you have climbed up a stairway to supply another customer they - after a short delay - all move in the direction of the stairs.

Although a Glook is not in itself harmful, it will crush you if you get in its way when it's moving. They may also block your route. However, you can push one, or take advantage of its movement, to suffocate monsters and turn them into skeletons.

Fortunately Bono's Bathing Company is not a one-man show. Your partner Fozzy is strong enough to hold two monsters and spiders at bay, but he's not very bright. Always keep an eye on him to make sure he is not trapped or wandering around in circles.

BONECRUNCHER will delight game players of all ages.

SNAPPER, Acornsoft's implementation of the ever-popular Pac Man, was one of the first games ever released for the Electron. As the ever-hungry Snapper, you must make your way around a maze chomping all the dots. Pursuing you are four bug-eyed baddies that initially follow pre-programmed paths, but before very long begin to converge on you.

Fortunately, there are four power pills, one at each corner of the maze, which you can munch to give yourself a limited period of invulnerability. The baddies now turn blue with fear and you can eat them for bonus points. But strike quickly, because the effect of the power pills soon wears off.

SNAPPER's gameplay does not offer great variety, but it's still very addictive.

GHOULS is, to my mind, the only disappointment. Although popular in its heyday, it falls well short of the other offerings' standard. It is a very basic platform game, similar in design to Manic Miner, but features none of its finer touches. The graphics are simpler, the keyboard is over-responsive and the gameplay could be better.

Like Manic Miner, GHOULS features a number of different levels, but the only real difference between them is the layout - the graphic features seem identical from one screen to the next.

The sound effects are quite good, particularly when you lose a life and it also features a lively piece of music that plays when you complete a level and a haunting melody while waiting for you to enter your name on the high score table.

GHOULS may appeal to dedicated fans of platform games, but so many better examples are available that it must be considered a makeweight for the real stars of this compilation.

Martin Reed

### \*\*\* Second Opinion \*\*\* (Electron User)

Like its predecessors, SAM 7 is a superb compilation that is excellent value for money - even if you have already got one or two of the titles. The real gem is the previously unreleased FIRETRACK. This technically brilliant piece of programming makes a fine game which proves to be very fast and addictive. The other titles can be considered bonuses thrown in for free.

## **Review (Electron User) - "Sam Plays Doggedly On"**

Good old SAM is playing it for the eighth time on Superior Software's latest arcade game compilation. The first of the four titles is Tynesoft's blockbuster, WINTER OLYMPIAD '88, which was a big hit with it was released for the Electron last year.

It's a strange game to include in a compilation, because it comprises six events - separate games - in itself. A maximum of four players can take part, or the micro can control up to three opponents, the object being to win as many medals as possible.

In each of the winter sport simulations you take part in three heats with your best result being compared against those of the other three competitors.

In Bob Sled you drive a two-man sled down a twisting course. The faster you speed through the bends, the further up the side of the run your sled is forced and, if you don't use your brakes enough, you're in for a tumble. If you go to the other extreme and use the brakes too much your time will be slow. A bird's-eye-view of the course showing your current position on it, is displayed in a window on the right of the screen.

Next event is Speed Skating where you provide the energy to drive your skater round a large rink by hitting two keys alternately to make him pick up speed. Unlike other keyhitting exercises, timing is just as important as speed. If you've got a good sense of rhythm you'll easily win this one.

Ski Jump brings out the Eddie the Eagle in you. The event starts off with a rear view of your man waiting at the top of the hill. Once the tone indicates it is time to start your jump, hit Z and X alternately to get up a good speed. Once that is achieved a side-on view of the jump is displayed and you continue hammering the keys to increase speed.

Finally, there is a close-up view of your jumper as he leaps from the end of the ramp and flies gracefully through the air. Using the C and F keys you must keep his skis aligned in order to gain style points and be rewarded with a perfect landing, otherwise it's an ignominious rear-ender.

The Giant Slalom gives a 3D diagonal view of a skier speeding downhill, and you use Z and X to make him weave in and out of suspended poles. It's not too taxing but I've never managed a clear descent.

For me, Ski Slalom is one of the better events. You're given a view from behind the skier as he descends the mountain you guide him between pairs of poles. Sounds easy? Well, some of them are off the screen and an arrow shows which way you must head.

The best is saved until last. Biathlon is a fascinating sport involving long distance skiing interspersed with rifle marksmanship. Moving your skier between target ranges involves rhythmic key pounding. If you get out of synchronisation you rapidly lose momentum.

The shooting is simple, the cassette interface clicks to indicate the rifle being cocked - a neat trick - then a cross descends from the top of the target down through its middle. You hit the spacebar at the right moment to score a bull. Failing to hit the target centrally results in a time penalty. There are five targets to hit in each group.

In all but two events - Bob Sled and Ski Jump - you can abort the second and/or third heats. After each event is completed, the medals are awarded and a medals league table is displayed before you go on.

The graphics in all six events are excellent. They move smoothly and are usually accompanied by simple but effective sound effects. Between events you are treated to a fairly pleasant version of the theme music to the BBC Television programme Ski Sunday.

The second full game in the SAM 8 collection is QUEST, an arcade adventure following in the footsteps of PALACE OF MAGIC. You guide the hero, Walter Cobra, around a maze of rooms looking for 12 power crystals and the Golden Dragon. Your most useful item of equipment is a pair of jet boots which are automatically activated in rooms with triangular objects in them, allowing you to fly across the screen.

Other compilations involve force fields and their power plants which need to be deactivated with stun grenades, and computer terminals which have messages that can

only be accessed if you have the correct password. If you like tough adventures, this is one for you.

If you don't know who Repton is by now, where have you been? In AROUND THE WORLD IN 40 SCREENS you have to guide our little green friend around Africa, across the Arctic, America, the Orient and beneath the oceans.

Having wandered around these screens a little in the past I know they're competently designed and quite fun. The Oceans in particular has been put together by someone with a devious mind - the safe sprites are invisible. You've got the usual tune, of course, and the quality graphics.

The oldest game in SAM 8 this time is the Superior title MR WIZ which dates back to 1984. The scenario is simple, if a little bizarre. You must guide Mr Wiz around the orchard eating up cherries. Three nasties on the first level appear from beneath a mushroom and give chase. Normally they won't move through the earth, but will do so if they get annoyed.

Annoying them seems easy to do - just eat the cherries, or worse, their mushroom. You are not entirely defenceless, because you do have a crystal ball to throw at them. Overall it's a pleasant, smoothly programmed little game and, while the poor relation to the other blockbusters, it doesn't compare too badly.

SAM 8 is a reasonable collection although I've had enough of Repton. As usual if you lack just one of the games it's a good buy - if you're missing two or more it's a bargain.

Llewellyn

### \*\*\* Second Opinion \*\*\* (Electron User)

SAM compilations are superb and can't be bettered for quality of graphics, gameplay or value for money. For newcomers to the Electron scene they must be considered an essential buy, but old hands like myself have seen it all before. Yawn...

### **CAMELOT, A New Release From Superior**

Sixty action-packed screens...battling with fireballs against demons, witches and the Knights of the Round Table. Can you find Excalibur and defeat the fiery dragon? CAMELOT takes over where CITADEL and QUEST left off.

### **STEVE DAVIS SNOOKER, The No. 1 Hit From CDS**

Play a friend or Steve Davis (i.e. your computer). Choose direction, speed, spin and power, then watch the balls slip in the pockets.

"There have been snooker simulations before...but this is the best."

...A & B Computing

### **SPYCAT, The Spycatching Smash Hit**

All the thrills and intrigue of the world of espionage...which even "the book" couldn't reveal!

"One hundred screens of fiendish puzzles and unusual adversaries...SPYCAT is a very amusing game."

...Acorn User

### **THE LIFE OF REPTON, Superior's No. 1 Hit**

Repton returns to star in 40 screens depicting his life-story, from baby to old-age pensioner. Also includes screen and character editors.

"A super game which will keep you busy for days - probably weeks."

...Micro User

### **Instructions**

Please see individual entries for each standalone title for complete playing instructions.

### **Review (Electron User) - "Cool Hand Sam"**

PLAY IT AGAIN SAM 9 could probably be best described as the Superior collection for the more sedentary gamer. Consisting of three arcade adventure games and a snooker simulation, it is hardly the most exhilarating of compilations.

First is SPYCAT, a tongue-in-cheek tale of espionage and intrigue in the corridors of power. After fifty years of loyal service, Spycat hears rumours concerning his forthcoming retirement - due to government cutbacks his comfortable pension is to be slashed. Angered by the thought of impending poverty, Spycat decides to take out a little insurance in the form of three top secret research documents.

Your mission is to help Spycat to locate the documents, copy them to microfilm, obtain all of the relevant travel papers to escape to Greenland, fly there and write his memoirs and probably have them banned by the government.

Despite limiting himself to four colour Mode 5, the programmer has managed to create an impressive series of cartoon-like characters and backgrounds - Spycat is a superb Paddington Bear lookalike with a penchant for flashing when ignored for a few minutes. The game was a most enjoyable romp the first time around, and now constitutes a worthy addition to the ever expanding SAM series.

Snooker is a game that has yet to be realistically implemented on the computer screen and STEVE DAVIS' SNOOKER is the epitome of all that is wrong with this type of simulation. The balls are too small to allow for the accurate judgement of angles. Also, the micro is unable to keep track of such a large number of moving balls and as a result the speed varies according to the amount of on-screen activities.

It is played in complete silence and the micro-operated opponent manages the most impossible of shots with uncanny accuracy. Why anyone would want Sam to play it again I don't know.

The third game involves that mainstay of the Superior stable, Repton. No compilation seems complete without it these days. Starring in his autobiography - THE LIFE OF REPTON - our green-skinned reptilian buddy must negotiate 40 testing screens of fiendish action.

Based around the classic REPTON 3 program, the new collection of screens calls upon the different stages of Repton's life as a source of inspiration. The traumas of infancy form the basis of the first eight. In his search for missing teddy bears baby Repton is hounded by monster dogs and is likely to be crushed by the tumbling Humpty Dumpties.

Many lives will be lost in your first few attempts due to a lack of familiarity with the new game characters. To assist you Superior has thoughtfully provided a character comparison chart, with which you can determine which of the new characters corresponds to the eggs, diamonds, boulders and so on before you do something silly.

The subsequent stages of Repton's life story include school days, teenage traumas, work and his twilight years as an ageing reptile. The game's strength has always been its strategic content: Each screen conceals unknown terrors for the player. You are always aware that a single misplaced boulder can render a screen completely unplayable.

THE LIFE OF REPTON is by far the best program in this latest compilation - it even includes the screen designer utility.

SAM's final offering is the classy, colourful and previously unknown arcade adventure called CAMELOT. Your quest as King Arthur in this mythological tale is to search for Excalibur and use it to defeat a fiery dragon. You are hampered by the imposition of a time limit and the fact that nobody appears to respect you any more, the castle being overrun with witches, devils and enemy knights.

You have a single life, the duration of which is determined by the state of your energy level. Physical hazards such as fire, water and banks of vicious pointed spears place a tremendous strain on your well-being.

You are able to wipe out most of your enemies with your trusty zapper until, that is, you run out of zap. The meagre 50 rounds you begin with are soon expended and

new supplies are hard to locate. On the positive side your rapidly diminishing energy reserves can be replenished by opening one of the strategically placed treasure chests. First rate graphics and difficult gameplay make CAMELOT a suitable challenge for even the most accomplished arcade adventurers.

If you are looking for a compilation that gets away from the frenetic keyboard bashing of the FIRETRACK and GALAFORCE variety then get yourself a copy of SAM Volume 9. With the exception of Mr Davis' contribution, good old Sam's done it again.

Jon Revis

**\*\*\* Second Opinion \*\*\* (Electron User)**

Sam's now playing it for the ninth time in this excellent compilation of hit games. The weakest is STEVE DAVIS' SNOOKER, and the most outstanding CAMELOT - a new and challenging arcade adventure that's sure to have you hooked.

Forget the other games - they can be considered freebies - the main attraction is CAMELOT. I loved it.

## **ZALAGA, Aardvark's Arcade Classic**

The award-winning, classic shoot-em-up from Orlando, the author of FIRETRACK and Frak! Fast, furious and graphically superb.

"Technically excellent...very addictive...one always feels compelled to play again to discover what the next sheet is like"

...Acorn User

## **QWAK, A New Release from Superior**

An action-packed game with 24 entirely different and very amusing levels of play. Collect the keys and fruit, shoot bubbles at the monsters and avoid the spikes...if you can! QWAK the duck takes over where the CHUCKIE EGGS left off.

## **3D DOTTY, The Smash Hit from CDS**

A very colourful and addictive 3-dimensional version of the arcade classic.

"Great fun...the practice option for all 8 screens gives you a chance to fine tune, before dazzling an audience with your skills. Recommended."

...A & B Computing

## **REPTON THRU TIME, Superior's No. 1 Hit**

Repton's greatest adventure, travelling through 40 screens from prehistory to the future. Also includes screen and character editors.

"Very brightly designed characters...it certainly grabs your attention. ELECTRON USER GOLDEN GAME"

...Electron User

## **Instructions**

Please see individual entries for each standalone title for complete playing instructions.

## **Review (Electron User) - "Gaggle Of Games"**

Sam finally reaches double figures with a compilation consisting of ZALAGA from Aardvark, 3D DOTTY by Blue Ribbon, the ubiquitous REPTON with his time travels and a new arcade game called QWAK.

ZALAGA, a typical classic shoot-'em-up, is an early work from the keyboard of the acclaimed Orlando and is best described as an update of the old Galaxians arcade game. You start each level with a blank screen on to which aliens pour at incredible speed. By positioning your laser base correctly you can dispose of quite a few of them.

Once on screen they form a traditional space invader pattern, moving back and forth then diving down towards you in groups dropping bombs. Between every second screen there's a challenge where aliens stream on without dropping bombs - you must shoot as many of them as possible. You get a bonus depending on your success rate.

While ZALAGA is fast, colourful and furious the good-sized sprites tend to flicker, and although I've made it to level three, you'll need to be a really dedicated keyboard basher to want to play it a lot.

Next up is 3D DOTTY. I'd never seen it before and was pleasantly surprised. You are presented with a three dimensional view of three floors of a sort of multi-storey car park with the floor missing. Small white dots fill the narrow pathways and your little figure - a sort of pac-man with legs - has to go round and chomp them.

Three highly mobile fungi stream across the floor, and contact with them drains your energy. So you run across the floor surfaces avoiding the fungus - which chases you - trying to get every dot, some of which are hidden behind pillars. For your defence you have three blocks that will prevent the fungus following you.

The game is fairly simple, the graphics small but adequate, the sound uninspired and irritating but can be turned off. It makes a refreshing change after the stresses of ZALAGA.

REPTON THRU TIME hardly deserves a mention - you get the game, the 40 screens and the editor. Apart from that it's just more REPTON 3 fun, but we've seen it all before too many times. Sound and graphics are what you've come to expect from this game.

I'm in two minds about the final offering, a new release called QWAK. By itself it's not worth the price of the compilation so if you've got the other three games you're paying over the odds. Then again, it is very smoothly programmed and has a sense of humour.

You control Qwak, a little duck, in a simple levels game in which you collect all the keys on screen and make your way through a door to the next. You can move left, right and jump plus send out a bubble to dispose of baddies. However, completing a screen peacefully - without bubbling a baddie - earns you a nice bonus.

You also get points for various other objects picked up and collecting seven flowers gives you an extra life. The graphics are detailed and the sprites' movement is quite smooth. Unusually for an Electron game, it is in Mode 2 and the extra colours make it very colourful.

As with the other SAM compilations, its value for money depends on how many of the other re-releases you've got. If you're missing two or three of these games then SAM 10 is recommended.

Lazarus

### \*\*\* Second Opinion \*\*\* (Electron User)

The only new game for me is QWAK, an entertaining and addictive, if old fashioned, levels game. I liked the gameplay and the colourful Mode 2 graphics. The other re-releases were all excellent titles in their day, but I'm now bored with Repton. Let's see something a little different on the next SAM compilation, Superior.

## BARBARIAN

The brilliant No. 1 hit game from Superior. A very realistic and exciting sword-fighting game, with one and two player options and keyboard or joystick control.

"Very enjoyable and sometimes frustrating"

... Acorn User

## PIPELINE

The widely acclaimed arcade adventure from Superior, with a games designer included.

"PIPELINE is a masterpiece of brain-twisting entertainment. 10/10"

... Micro User

## BARON

A brand-new, mind-boggling arcade adventure from Superior, set in the Baron's forbidding castle. BARON has 133 action-packed screens with 49 different objects to collect and use. Shoot the Guards, but how do you get past the Bear, Mouse, Dog, Rabbit and Wolf?

## MONSTERS

The highly amusing, classic game from Acornsoft. Pursued by monsters along walls and up and down ladders, your only hope of survival is to outwit them by trapping them in holes you dig in their paths.

"This game will drive you up the wall!"

... Acorn User

## Instructions

Please see individual entries for each standalone title for complete playing instructions.

## Review (Electron User) - "Baron The Bore"

Good Old Sam is playing them yet again in his eleventh compilation of golden oldies, plus a newcomer not seen before. The latest addition to the Superior stable is an arcade adventure in the CITADEL mould called BARON.

In it, your father, the king, has heard that his best friend, the wizard, has been kidnapped by an evil baron. Your father fathers his army and marches towards the baron's castle to rescue his friend. You, the prince, have taken a short cut and sneaked into the baron's castle to rescue the wizard by yourself.

This is the scenario for a rather poor follow-up to the very successful CITADEL and PALACE OF MAGIC. You wander from screen to screen climbing ladders, jumping from level to level and zapping a variety of dangerous creatures.

There are many objects to be collected and some to be avoided, as they sap your strength. Lose too much energy on a screen and you are sent back to the point at which you entered.

Some creatures bounce up and down or sideways, while others, like the guards follow you closely, depleting your energy. Fortunately, they can be shot, but this is difficult as you have to hit them right between the eyes and as they are sometimes taller than you this has to be done while jumping.

The Mode 5 graphics are quite poor by current standards and are shown up by the other games in this compilation. The characters are exclusively ORed on to the screen and whenever they pass in front of an object you just see garbage on the screen. Surely a proper sprite routine could have been used?

There isn't much sound to speak of. Again, another let down, and running in Mode 5 where there should be memory to spare, so there's no excuse.

If you are addicted to this type of arcade adventure BARON is worth a look. However, it's not the best of its type and I think many will give it a miss.

Best of this compilation is the outstanding PIPELINE. Released over a year ago, it never made much of an impression on the software chart. It deserved to do much better.

PIPELINE is set in the far future at a sulphur mining station on Jupiter's moon, Io. Volcanic activity as surrounded the robot-controlled mining platform with a sea of burning sulphur. So desperate is Earth's need for it that you have been despatched to Io to collect every single drum of sulphur and close down all four mining operations.

The dimensions of PIPELINE make REPTON look like a screen from Pacman. If you were impressed when you first saw the map to REPTON 3, prepare to be amazed by the PIPELINE layout. Each of the four levels is twice the size of a Repton scenario.

The action is viewed from above as you control the hero who scuttles around a beautifully drawn, complex and often deadly maze. The screen scrolls in four directions - like REPTON - as you move about. Not only do you receive a top-quality arcade adventure, you also get character and level designers, and a mission generator.

Sam slays it again with the highly controversial BARBARIAN, notorious for featuring the ample assets of model Maria Whittaker. In this one or two player game you fight the ten minions of the sorcerer Drax, and finally, Drax himself.

You have a choice of either combat practise or the game itself, which is a fight to the death. The former allows you to perfect your attacking and defensive moves against a passive opponent. The slain opponent's body is dragged away by a goblin in a highly amusing scene.

In the fight to the death you start off against a fairly good, but easily beaten sword-wielding barbarian. After twelve hits, or after being decapitated, he falls to the ground and his place is taken by a slightly more skilled opponent.

The only disappointment is with the lack of variety in the graphics. The quality is excellent, but the game lacks quantity. The sound effects are as good as can be expected bearing in mind the Electron's limited capacity for special effects.

The final offering, MONSTERS, has been dredged up from the mists of time. It was a hit way back in the very early days of the Electron's history, when it was one of the best ladders and levels games around. But today it is merely run-of-the-mill.

Run up and down the ladders and along the brick levels, dodging the marauding bug-eyed monsters. You have a pick axe with which to defend yourself, but it's not to hit the poor blighters with, you use it to dig holes. Wait for a monster to fall in, then scamper up and fill up the hole, burying the monster. Leave it too long in the hole and it will escape and turn into a very angry, vicious green monster. These are best avoided.

MONSTERS is a simple, undemanding game that can be used to pass away an afternoon or two. It's not in the same league as PIPELINE, but good fun all the same.

BARON alone does not justify the asking price of SAM 11, so if you've got the other three games in this compilation, SAM 11 can't be recommended. However, if you haven't bought BARBARIAN or PIPELINE separately this compilation becomes a must.

Roland Waddilove

### \*\*\* Second Opinion \*\*\* (Electron User)

A very mixed bag of games in Superior's latest SAM compilation, ranging from the superb PIPELINE to the ancient, but good, MONSTERS and the brand new, but disappointing, BARON. Its value for money must depend on how many of the other titles you have already collected.

### **THE LAST NINJA**

The state of the martial arts...fighting with fists, swords, numchukas and skurikens, through six puzzling levels. The top BBC/Electron game of 1989.

"Ninja is fast, furious and totally addictive"

...Micro User

### **BY FAIR MEANS OR FOUL**

A realistic and entertaining boxing simulation. You can even cheat...if the ref's not looking! Have you the skills and cunning to become World Champion? Keyboard or joystick controls.

"Excellent boxing game"

...Micro User

### **SKIRMISH**

A brilliant, full-feature version of the classic joust game, with beautifully animated sprites. 1 and 2 player options.

"I can recommend Skirmish wholeheartedly. It is one of the most playable games I have ever seen"

...Micro User

### **BLAGGER**

A new, much-improved version of the classic Alligata Software game, with twenty tricky, but highly amusing levels.

"The game is a winner...very enjoyable, sure to give many hours of entertainment"

...Electron User

### **Instructions**

Please see individual entries for each standalone title for complete playing instructions.

### **Review (Electron User) - "Four Square Compilation"**

The rate at which SAM is churning out compilations is phenomenal and he is now up to number 12. Unlike previous offerings, this latest four-game box of fun does not feature anything new, and all the games have at some time been released before. In fact, some are quite recent releases.

The first game, SKIRMISH, is a trip into a fantasy world in which you sit astride a giant ostrich and engage in medieval-style jousting contests with opponents riding giant buzzards. Weird!

It sets itself apart from other games by taking the idea of a two player game one stage further - you play not only against another human player, but also against a number of other computer opponents. Thus half a dozen combatants can be on the screen at once.

To joust you must fly into an opposing player making sure your lance is higher than his. A vanquished human opponent loses a life and re-appears somewhere else on the screen. A computer opponent however, falls off his mount and turns into an egg, while his riderless buzzard flies off into the distance. You must grab the egg quickly or it will hatch spawning a rider of the next grade.

SKIRMISH features three different types of computer-controlled rider - the bounders, wearing armour, are easy to defeat; the hunters are more cunning and the shadow lords are almost impossible to dismount.

When all the computer-controlled riders have been dismounted the next wave begins. Later stages add even more nasties: The lava troll that stalks along the bottom of the screen ready to grab any foolhardy contestant who comes too close, and the indestructible pterodactyl that flies backwards and forwards until the wave has ended.

The controls are simple: Left, right and flap. The last command causes your bird to flap its wings once. Press it repeatedly to hover and for all your worth to gain height.

THE LAST NINJA is a story of jealousy, power and revenge - of good versus evil and one man's struggle against overwhelming odds. It is easily the best martial arts cum adventure on the market (except for the recently released LAST NINJA 2).

An evil Shogun slaughtered the Ninja community on its once-a-decade visit to the sacred island of Lin Fen. A solitary Ninja had been left behind to guard the shrine, feed the cat and other such tasks. Now he has sworn to avenge the deaths of his comrades and re-build the Ninja empire.

You play Armakuni as he begins his assault on Lin Fen. There are 16 locations on the island and you must kill every guard and collect all available objects on each level before moving on to the next.

Level one is set in the wilderness, a barren wasteland of rocks, bushes and paths, but it is patrolled by the Shogun's warriors. Initially unarmed, you must pummel your opponents using only your fists and feet. Things become a bit easier as you round the first corner and find an abandoned sword - the first of five weapons. The instructions advise you to use the same weapon as your opponent, but I found the sword to be effective against most adversaries.

THE LAST NINJA is quite a departure from programmer Peter Scott's traditional style - the prolific author of countless cute platform games had really come up with the goods this time. NINJA is fast, furious and totally addictive.

In spite of its rather peculiar title, BY FAIR MEANS OR FOUL (BFMOF) is in fact, a boxing game. It allows you to execute a variety of boxing moves, including body blow, uppercut, standard punch and duck punch.

You can also move backwards and forwards and block your opponent's blows by engaging either a high guard or a low guard. These are the fair moves, but you can also

execute foul ones - head butt, knee kick and groin punch. The fights are supervised by a referee who will try to ensure a good clean fight. However, there are times when his attention wanders, so if you want to play dirty, that's the time to act.

The probability of executing a foul move without attracting the referee's attention is indicated by the colour of a box below your score. If it is red then you will almost certainly be spotted, while red/white indicates that you stand a reasonable chance of getting away with it. A white silhouette gives the all clear for all manner of foul deeds.

Rounds are one minute long, and the time can seem to go very quickly when you are losing. If neither player manages a knockout, the one with the higher energy level at the end of the round is the winner. The defeated player loses a life. If you manage to defeat your opponent five times you go on to fight a tougher opponent.

The ring scene graphics are not particularly impressive and the game seems rather devoid of colour. However, the animation of the two boxers is very lifelike, as they swing their arms and jump around on their toes.

BY FAIR MEANS OR FOUL is the result of a well-used idea approached from a different direction and, as such, has been implemented well.

Feel in the mood for a bit of thieving? Like to rob a safe or two? Well, BLAGGER gives you the chance. This is by far the oldest game in the compilation, first reviewed in the September 1984 issue of ELECTRON USER.

As Roger the Dodger, intrepid master burglar, you have four lives and 20 different screens to search for golden keys in houses, shops and banks. It's nothing if not addictive and a great deal of patience and thought are required to work out how to get through each scene.

Some surfaces melt as you walk over them, mysterious gooseberry-like objects kill you if you touch them and sundry nasties such as spaceships, humbugs, gnashing teeth, locomotives and RG signs (the author's initials) must be avoided.

After collecting all the keys on the screen you make your way to the safe which will then open and let you move on to the next screen. However, this is difficult if you have eroded away the only escape route while collecting the keys. There is also a time limit in which to complete the screen.

The game is a winner and is very much a just-one-more-go piece of software. The program makes good use of colour and graphics, though the sound can sometimes be a bit irritating. BLAGGER is very enjoyable and sure to give many hours of entertainment.

Overall, this is yet another winning compilation from the Superior stable. The individual games were all once full priced and sold extremely well. As part of a compilation they are unbeatable.

Julie Boswell

### \*\*\* Second Opinion \*\*\* (Electron User)

Once more Superior Software has produced a compilation of superb quality. The games can't be faulted and for just under a tenner represent good value for money.

The only cloud on the horizon is that as these games were so popular when first released, you may already have one, two or even all four of them. Each game that already have diminishes the value of this unimaginative PLAY IT AGAIN SAM 12 compilation.

## BARBARIAN II

Have you the skill and strategy to reach the Dungeon of Drax? Twenty gruesome monsters to defeat in an 80 screen maze.

"The monsters are spectacular in size and depth. A most impressive and playable game."

...Acorn User

## HYPERBALL

A brand-new release by Superior. The best version ever of the classic 'bat-and-ball' game, with 6 levels and a massive total of 120 screens. Special features include: infra-red scanners, 8-ball splitters, aliens, cannons, weapons' purchase, bonus rounds and screen-jump options.

## PERCY PENGUIN

The classic and highly addictive game by Superior. Percy must kill the Snobeys in the frozen maze by hurling ice cubes at them, but deadlier breeds then appear!

"Enjoyable to play with good graphics and sound"

...A & B Computing

## PANDEMONIUM

A brilliant 'Top Ten' game by Peter Scott featuring teleporters, lifts, springs, weird aliens to shoot and lots, lots more, as you attempt to construct the core.

"Eighty screens of fun make this game my favourite"

...Micro User

## Instructions

Please see individual entries for each standalone title for complete playing instructions.

## Review (Electron User) - "It's Lucky Thirteen"

Superior Software certainly shows no signs of superstition as it launches number thirteen of what is easily the longest running series of compilations for the Electron. Four more programs from the recent, and more distant, past - two of which were coded by the ubiquitous Peter Scott.

HYPERBALL is a game of the Breakout genre. You'll probably remember the Breakout revival of a couple of years ago when straightforward brick busting gave way to a more sophisticated game with feature bricks and bonus levels. HYPERBALL is one of these.

With a comprehensive set of feature bricks at your disposal you could be forgiven for thinking that the game was going to be a piece of cake - well, don't you believe it. This is one of the most formidable Breakout clones that I have encountered on any machine. Combine this degree of difficulty with the fact that there are 120 arenas to complete and you could be faced with hordes of Hyperballers.

Thankfully the programmer has anticipated this problem and split the 120 arenas into six groups of 20, allowing you to start on any one of the six. At least in this way you will get to play on a minimum of six different arenas.

Catching a dislodged feature brick activates one of the eight possible special effects, the majority of which work in your favour. Catching the Detonator brick allows you to split the ball into eight separate fragments with a press of <RETURN>. This is most effective if you have just manoeuvred your ball behind the wall. The Slowball brick is self-explanatory, as is the Stickball one. Infrared changes the colours on the screen, making otherwise invisible bricks appear again.

A little firepower is introduced with the inclusion of a Laser brick, and Indestruct increases the mass of your ball, giving it the ability to plough effortlessly through even the most robust of brick walls. Smart-block is a bit of a sneaky inclusion: If you are able to collect three of these special pieces of masonry without losing a life you can move straight on to the next arena.

This sounds hunkydory until you begin collecting these blocks. I am certain that the program drops them in such a way that you are tempted into lunging for that third elusive block, inevitably losing a life in the process. The final variety of brick is disguised as an alien and, if collected by accident, has unfortunate effects upon the wellbeing of your bat.

A touch of originality is injected between rounds. The successful completion of an arena is rewarded with a simple bonus routine. A flashing bat appears on the screen and all that you have to do is press the Spacebar when it is visible and you earn yourself bonus points. OK, so it's hardly an Earth shattering bonus round, but what is useful is what you can do with those points once you have won them.

If you aren't too concerned about achieving immortality in the high score table you can trade points for three types of laser cannon, a warp drive or an extra life.

HYPERBALL is one of the biggest and best versions of Breakout on the Electron, and a most worthy inclusion on this compilation.

PANDEMONIUM, second in the compilation, is unmistakably from the keyboard of Peter Scott, the prolific author of countless platform games, most of which look just like this one.

On this occasion you are faced with the task of collecting all 12 parts of a core. The instructions are pretty vague so we must assume that some sort of nuclear reactor is involved. Armed with a laser, a healthy jump, the reflexes of a cat and the intellect of Einstein you set out into a hostile world that is literally teeming with alien beings and nasty stinging plant-like things.

To make things easier, anything you are supposed to collect is coloured blue. In addition to the core parts you will find food, laser energy and extra lives.

PANDEMONIUM is a highly polished example of Mr Scott's work. As usual, lateral thinking should be used at all times. Identify the most logical route from A to B then ignore it completely, select what appears to be the most unlikely of directions and you won't be far wrong.

Apparently impossible jumps between platforms can often be negotiated by having at least one foot standing on thin air before you take off. Impressive vertical jumps can be achieved by standing on one of the many large springs.

Worthy of note are the phone box teleports, which can provide a speedy means of transport in an otherwise hostile environment. The only snag is that you must know the code number of your destination teleport before you can operate the device. In other words you have got to have reached the far teleport on foot before you can take a short cut.

This is not a program that pushes back the frontiers of platform gaming, but what it does, it does well.

PERCY PENGUIN is a version of a game that was a moderate success in the arcades back in the mid-eighties. Unfortunately it isn't the best of the arcade conversions that reached the Electron.

It is set in a maze-like arctic wilderness constructed of blocks of ice. The inhospitable landscape is inhabited by Percy Penguin and a swarm of Snobeas, stinging creatures that have an insatiable appetite for penguins.

As luck would have it, Percy has left his mega-turbo laser pistol back in the igloo, so he must improvise if he is to survive. The aim is to rid the maze of Snobeas, the numbers of which increase as you progress through the levels.

The penguin is an inventive little critter and Percy soon realises that an ice cube weighing several hundred kilos takes a heck of a lot of stopping once it gets moving. Using a combination of careful positioning and some pretty good timing you can help Percy puree the Snobee population.

As a game, PERCY PENGUIN falls down in several areas. Response to the controls is poor, the fluidity of the action suffers in proportion to the degree of on-screen activity, and there is no indication as to where the new Snobeas will appear.

In the original game the inactive Snobeas were encased in blocks of ice, so you knew where to stand before killing your next one. In this version the newly hatched bees appear at random, but more often than not, random means right beside Percy and you're minus one life.

I suppose that if you haven't been spoilt with the original then you won't notice the discrepancies, but you'll still have to thump the push button until you get a response. For me this is the weakest of SAM's offerings, but one out of four isn't too bad.

Sam's final tid-bit is BARBARIAN 2. In the first episode of this hack and slash extravaganza Mr Barbarian took on all comers in his valiant bid to free Princess Mariana, alias the curvaceous Ms Whittaker, from the clutches of the evil Drax. Drax escaped justice and fled to the deepest recesses of his lair. If the world is to sleep easy in its bed the Barbarian or Mariana must venture forth into this hostile land and seek out the coward. Yes, she is just as likely to kill the dinosaurs as he is!

BARBARIAN 2 employs a different format. The straightforward fight to the death has been replaced by an arcade adventure type scenario. The game is still packed full of hacking and slashing, but this time you also have to walk about and find objects.

Spread over four levels, with roughly 26 screens each, the Drax domain is quite extensive. An additional element of difficulty is introduced in the form of changes in direction as you step from one screen to the next.

It may appear that you have merely moved by one screen to the right, but don't you believe it. If you keep an eye on the compass arrow at the bottom of the display you will find that you have turned through 90 degrees. As the instructions state, a map

is pretty useful if you are to collect all of the objects and then find your way back to the exit.

Keyboard controls are used throughout: These are extensive, complicated, and one of the biggest difficulties you will encounter in playing the game.

Our hero or heroine can perform six directional and four aggressive moves, the latter being initiated by pressing <RETURN>, plus any one of four direction keys. For a long time I found myself turning around or jumping into the air when what I actually wanted to do was decapitate my opponent with a flying neck chop. Most of the humanoid opponents have been replaced by horrible nasty creatures that snap and bite, plus an oversized yellow dinosaur with a taste for musclemen.

Various objects must be collected en route, many of which have magical properties, without which your quest is doomed to failure. The orb and shield guard against death from Drax's magic and the demon's fire, while other trinkets boost the usual parameters such as strength and resistance to damage.

BARBARIAN 2 gives you very little time to ponder your current predicament. If you stand around for more than a couple of seconds there is a puff of smoke and some slobbering beast starts lumbering in your direction.

How you are supposed to sit with pencil and paper and map each level I don't know. I spent most of my time trying to avoid the monsters, rivers and those infernal bottomless pits.

With patience, and a fair amount of effort, you will eventually master the complex control combinations that are the key to success in BARBARIAN 2 - from then on things really begin to get difficult.

It would appear that Superior has come up trumps again with yet another cracking compilation. Thirteen may be an unlucky number for some but certainly not for Sam.

2. CDFS E00, DFS E00  
3. CDFS E00, DFS E00  
4. CDFS E00, DFS E00

## PREDATOR

Nothing like it has ever been seen before! You've heard about the Schwarzenegger film PREDATOR...now you can play the leading role. Fight your way through the South American jungle, but, beware the mysterious alien...

"A fun game having a lot of the feel of a Schwarzenegger film"

...Micro User

## BALLISTIX

It's whole new ball game! The fastest, wackiest, toughest computer game yet to appear. Play against a friend or the computer...60 different screens.

"BALLISTIX is original, fun and very addictive. Each new level is a challenge which brings a new court layout with several surprises"

...Electron User

## SUPERIOR SOCCER

An action-packed arcade game, with realistic graphics, or a challenging football management game...or, for the ultimate in football excitement and realism, you can play a combination of both!

"Puts you in the role of football player/manager, combining on-the-field action with strategic planning just like the real thing!"

...BBC Acorn User

## STAR PORT

A brand-new arcade-adventure with 60 action-packed screens, written by the author of QUEST and CAMELOT. Rescue the medical supplies from the strange triangular space station...but only if you can solve the increasingly difficult letter-puzzles on each level.

## Instructions

Please see individual entries for each standalone title for complete playing instructions.

# PLAY IT AGAIN SAM 15

*Professional, Originally Released On Cassette Only*

Game Types : Arcade  
Release Information : 1990: PLAY IT AGAIN SAM 15, Superior/Acornsoft, £9.95  
Compilation Comprises : 1. LAST NINJA 2, Superior/Acornsoft  
2. CYBORG WARRIORS, Superior/Acornsoft

## LAST NINJA 2

The Last Ninja is back with a vengeance! Battling with fists, shuriken stars, swords and lots of other devious weapons, against the evil Shogun in downtown New York.

"Animation is excellent and there's lots of detailed scenery. The puzzles are quite fiendish" ....Micro User

## CYBORG WARRIORS

A brand-new release by Superior. A multi-level, sideways scrolling shoot-em-up, with lots of weird robots and monsters to shoot, and tokens to collect which can give more powerful weapon systems. The BBC Micro/Master version has a joystick option, which allows two players to battle together.

## NETWORK

An action-packed 'Top Ten' game by Peter Scott, featuring teleport machines, lifts, springs, strange aliens and lots, lots more. Shoot your way through more than 100 different screens as you attempt to collect the twenty parts of the 'Flynche' machine. Nerve-tingling excitement.

## RICOCHET

A massive arcade adventure with brilliant graphics, as you control SPRAT, the Small Partially Robotic Alien Time-Traveller. Five different levels: FORTRESS, TECHLEV, DERELICT, THE UFO and ANCIENT.

"A superb problem-solving game. A must for your games collection"

...BBC Acorn User

*Professional, Originally Released On Cassette Only*

Game Type : Chance Game Based On TV Show  
Author : Unknown  
Standalone Release(s) : 1986: PLAY YOUR CARDS RIGHT, Britannia, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : BRITTANIA, Unit M28, Cardiff Workshops, Lewis Road, CARDIFF  
CF1 5EB  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"BASED on the highly successful TV game. The TV game is a London Weekend Television Production, made in association with Mark Goodson and Talbot Television."*

Based on the highly successful TV game. Hosted by Bruce Forsyth and adapted for your home computer.

It is a game for two players, or a single player playing against the computer, attempting to achieve maximum points by doubling your points on the turn of a card, just like the TV game.

**Instructions' Source** : PLAY YOUR CARDS RIGHT (Britannia) Back and Inner Inlay

## Review (EUG)

As the software house suggests, this is an ultra-rare BBC/Electron game. As the software title suggests, it is (or at least was at one time) the official home computer conversion of the popular Bruce Forsyth game show in the days when points "made prizes" (not "rich people"). Of course, most of the show's continuing success to this day lies in the fact that a) Bruce Forsyth presents it and b) it is a very simple game based in large part on luck.

Bruce grins cheekily at you from the cassette and disk covers above the old kaliedoscope jack logo of PLAY YOUR CARDS RIGHT but, as you might suspect, he makes no actual appearance in the game itself (via a graphic representation, that is). Therefore, after the instantly recognisable jam of PYCR music has been emitted from your micro, you fall back onto the simple higher/lower five card walk across the screen - the winner winning two of three games! - and the final gamble for big points if the cards go in your favour.

Initially it sounds like a fairly simple program to write but if you think hard about the game show format, you quickly realise that there are many rules to consider. Happily, the author appears not to have neglected any and, after inputting whether you are playing against the machine or a 'friend', you are presented with a screen asking you "We asked 100 men/women/married couples in their 20's/30's/40's" followed by a series of imaginative survey questions. By the millennium, the show's questions had become much sillier than when this program was written and the game doesn't present any strange surveys involving Bruce's sexual magnetism or entertainment value (or lack of them as is usually implied). Disappointing news for most.

As is the norm, player one can guess any number from 1 to 99 people who answered in a certain way and player two can guess either <H>igher or <L>ower. The input of numbers is shown in a way similar to the TV's desk counter with big digital numbers and (flashing) arrows pointing up and down. Unlike the TV show, the winning number is not displayed but the reasoning why not is sound as, with a limited supply of

questions, this lengthens the number of times the same questions can be attempted. An exception is when the guess is "bang on"! For the next question, it is player two who guesses first, with player one bidding all the numbers higher or lower.

The card board is as you would expect with two lines of cards, the first turned over, and the options <H>igher, <L>ower, <F>reeze and <C>hange card (if the rules permit). Whoever has won the question - and it is almost invariably the player with the question's <H>/<L> option - can try and advance to the last card "by predicting whether each of the cards is higher or lower than the preceding one. Whoever turns over the final card wins the game."

The strategy couples usually employ on television is to think in terms of the number of the cards in the pack higher or lower than the one they are currently staring at. Hence, on a three, four or five (of whatever suit), they never go lower and likewise with the cards towards the top of the pack (the Ace counts as high!), they never go higher. As we all know though, this does **not** work with computer random numbers and, when employing the same strategy as game player, the cards become real b\*\*\*\*\*s - all too often seeming to give out unrealistic shuffles.

Despite this, progress can be made by following the tried and tested method (it just takes longer!) and it's hard not to hear Bruce reading out the questions in your head as you read them. There do seem to be a number of times when the gameplay just doesn't suit the rules though and, considering Britannia just assume we've all watched the TV show and just drone on about the game's copyright on all the inlay covers, it's impossible to check whether the rules were different on the older TV shows than they are now.

For instance, guessing wrongly usually gives the opposing player a "free go" on TV. In the game, this is also the case but, for some odd reason, if it is the very last card that is incorrectly guessed the freebie is forfeited. There seems to be no logical reason why.

While the rules on changing cards are correct (in that you can only change the card if you "freeze" the game then answer another question correctly to get control again **or** have won a question and are beginning at card one for the very first time), when the computer "freezes" then regains control, its attempt to change the card fails due to a bug in the program code. This means the real player has a very unfair advantage and to get around this, it's best to choose a two player game, choose which player you want to be and then best guess for both players. Doing this also means you always get to try for big points too!

Probably the best part of the game is this straightforward big points gamble, which dispenses with questions but simply gives you 200 points to gamble over seven cards. In the television show the object is to gain a certain number of points by a certain card but this is not implemented here, although you can always choose to play it that way if you wish.

You choose to bet anything from 50 points to whatever you're holding on whether the next card will be higher or lower. Although you're not gambling with money, it's surprisingly tense - especially when you build up a fortune in points and decide to risk it all! Your points then becomes the high score if appropriate.

Although PLAY YOUR CARDS RIGHT does well, certain improvements to the change card (and possibly free go forfeit) bugs and a more realistic routine for getting cards would help its playability. Plus, of course, it's annoying that there are a limited number of questions. Other titles in the same league (e.g. BLOCKBUSTERS, BULLSEYE and TREASURE HUNT) all come with sets of **question files** which increase lastability by a good measure. As the game was officially available on disk, these would have been an even better idea than with most - as loading time would be far shorter! Another irk is the message "You're score =" which is totally unacceptable, full stop.

Finally, the only join-in audience shout incorporated is the "Nothing for a pair - not in this game!" one and, as the many more are all part of the game's atmosphere, these should probably have been included too. Still, despite these criticisms, it's good for a few hours' fun.

Dave Edwards, EUG #53

Instructions currently unavailable.

## **Review (Electron User)**

This superb tape, containing three separate programs, will be a valuable and popular addition in many schools and homes. I would certainly have spent my money on it even with only two of the three games - the third is the icing on the cake!

Hangman must have been played in every home and school as it's a superb way of stimulating young children to think about their spelling vocabularies without it ever appearing to be work. The trouble with some implementations I've seen for micros is that the graphics tend to either be very poor or to emphasise the gory ending of the game.

Here the graphics are bold, colourful and friendly - not even the youngest child would be frightened by them. There are a variety of vocabularies built into the program, sorted either by age or by subject category. There is also a most useful option, in which the teacher could input words for the child (perhaps related to a reading scheme or current topic), or two or more children could try to outwit each other. Although many educationalists frown on competition, children revel in it and the competitive angle is a strong stimulus for some.

The second game is called Memory and is a version of the old but enjoyable game of pairs, played with playing cards. Here two children play against each other, turning over two cards to reveal pictures and shapes. When a pair is matched, that child scores a point, the cards are left revealed and the game continues.

The method of entering the chosen cards is simple and fairly young children will soon grasp the idea. Although the graphics are less impressive than in Hangman, they are quite presentable and clear.

# PLUNDER

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Strategy; Elizabethan Trading Game  
Author : D. G. Evans  
Standalone Release(s) : 1984: PLUNDER, CCS, £5.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : CASES COMPUTER SIMULATIONS, 14 Langton Way, London SE3 7TL  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"A game of Elizabethan strategy. The year is 1587 and Spain is preparing a massive Armada. To finance this enormous fleet, the Spaniards are running gold from the American continent back to Spain. Your task is to patrol this area and prevent the gold reaching Spain in the time allocated. Ferocious sea battles are enacted. After each salvo, damage and casualty reports are shown so that you may decide to re-engage the enemy or retreat. If you win you will need the gold you plunder to pay for the damage to your ship and shanghai more crew. You are determined to be more successful than your hated rival Sir Francis Drake. There are three levels of difficulty and two types of game."*

## 1. Object Of The Game

You are the captain of a British galleon. You have been commissioned by Her Majesty to stop the Spaniards running gold from the New Lands to Spain. To earn a knighthood you must achieve one of the following:

		Gold pieces stopped
<b>Short Game</b> (60 turns)	Level 1	20,000
	Level 2	40,000
	Level 3	60,000
<b>Long Game</b> (120 turns)	Level 1	40,000
	Level 2	60,000
	Level 3	120,000

## 2. Information Available

A high resolution chart of the Atlantic Ocean is displayed showing your position. Continuous reports showing:-

GOLD ST	-	Number of gold pieces stopped.
URNS	-	Number of turns elapsed.
GOLD	-	Number of gold coins on board.
WEATHER	-	Weather conditions in the area of your ship.
MORALE	-	Number of victories. This factor will affect the morale of your crew and their fighting effectiveness.
WEAPONRY	-	The number of annons operational. Note: maximum number allowed is 30.
MEN	-	Number of men on board. Note: maximum number allowed is 400.
SHIPS	-	A measure of the soundness of the ship.
CAN'LOST	-	Number of cannons destroyed in last attack.
MEN LOST	-	Number of men lost in last attack.
D.P. LOST	-	Number of Damage Points lost in last attack.

## 3. Decisions Required

When to attack or not.

Whether to fire cannons or go alongside and board the enemy vessel. (If the enemy is too damaged the enemy will sink and the gold will be lost.)

When to return to a port to make repairs and replenish the crew.  
Whether to explore uncharted islands or abandoned ships.  
Whether to trade in the bazaars of the port.

#### **4. Playing The Game**

When the game starts you are in command of a ship which appears on a high resolution map of the west of Europe, the Atlantic, northwest Africa and the east coast of America. Through use of the cursor movement keys, you ship is manoeuvred about the map. What the weather is like determines how easy it is to find the Spaniards. When one is found though (and there are four types of ships) the lookout informs you that one has been spotted. You are then given the option of attacking/retreating and then firing/boarding. If you decide to attack a graphic display of your choice of combat is then enacted. The fight is conducted over a number of rounds. At the end of each a result of the action is shown.

Dotted around the map are seven ports masked in red. On entering the location of a port a graphical representation of the harbour is displayed. The player must then manoeuvre his ship through the other ships in the harbour and land against the dock. At the dockside is a marketplace where various services/goods can be purchased. The various prices are all set up at the start of the game and vary from port to port. Trading goods from one port to another is one way of obtaining gold to finance repairs.

#### **5. Hints On Play**

If your ship has less than 11 Damage Points left, it will sink. If your crew falls below 20 then the crew will lose control of the ship and the ship will sink. Spanish ships are easier to find when the weather is calm or mild than when the seas are stormy.

Spanish warships have more fire power than galleons or merchant ships or troop ships. Avoid engaging in early stages of the game.

# **PLUS THREE GAMES DISC**

*Professional, Originally Released On ADFS 1D00 Disc*

# PODD

## *Professional, Originally Released On Cassette Only*

Game Type : Educational; Ages 5-11  
Author : Don Walton  
Standalone Release(s) : 1984: PODD, Acornsoft/ASK, £9.95  
Compilation Release(s) : 1985: BEST FOUR - LANGUAGE, ASK, £9.95  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : APPLIED SYSTEMS KNOWLEDGE, 68 Upper Richmond Road, LONDON  
SW15. Tel: 01-874 6046  
Disc compatibility : CDFS E00, DFS E00

### Instructions

*"Podd has a secret. When you find out, don't tell anyone. Podd can do lots of things that you can do but this adorable character can also perform many unusual actions. Podd actually knows 120 words but isn't going to tell you what they are. You have to find them. You'll probably have to think very hard about the action words that you use. You may want to ask your friends or even use a dictionary for some ideas. Podd will fascinate you, frustrate you, charm you, make you laugh and give hours of fun. Make a friend. Play with Podd! Ages 5-11"*

PODD is a fascinating character who can do many things. When you type a word describing an action such as "run" or "jump", Podd does it. Podd's antics are great fun. But Podd is still a stranger to the world of boys and girls and has not yet had time to learn any actions connected with objects. For example, Podd can't ride a bike or play with a ball or read or write, but Podd does know how to do some unusual things entirely alone. Podd actually knows 120 words but isn't going to tell you what they are. You have to find them. When you do, keep them a secret!

### In all A.S.K. programs

<RETURN> Remember: once you have typed in your response a program will  
< icon > deal with it until you press the <RETURN> key.

<ESCAPE> You can always return to the beginning of a program by pressing  
< icon > the <ESCAPE> key.

<DELETE> You can rub out anything typed in, before the <RETURN> key is  
< icon > pressed, by using the <DELETE> key.

<\_Hand\_> Means : Please press the space bar to carry on with the program  
< icon >

< ? > Means : the program did not expect the response it has just re-  
< face > ceived. Perhaps there was a typing error? In any case, to carry  
on, just press the space bar and try again.

<CTRL> All of our programs incorporate sound. There are various volume  
levels - holding down the <CTRL> key and pressing the <S> will  
<S> change the level - keep pressing the keys until you are happy  
with the volume.

Note: The program will not run on computers that have 0.1 operating systems.

### How to use the program

The program tells you what to do at each stage.

In game 1, Podd does single actions. In game 2, you can ask Podd to do several actions, one after another. To select either game, type 1 or 2 and press the <RETURN> key. If this is the first time that you are playing, try game 1.

### **Game 1:**

Podd appears with the words, "Podd can...". The computer is waiting for you to type in a word. Now think of something you would like Podd to do. When you have decided, type in the word, press the <RETURN> key and see what happens.

If Podd knows the word, Podd carries out the action. When Podd has finished, Podd will be ready for the next word. Once again, "Podd can..." appears at the top of the screen.

If you use a word that Podd doesn't know that Podd doesn't know, the words, "Oh no I can't!" appear under the first sentence. The space bar symbol appears at the same time. Press the space bar.

Podd appears again with the words, "Podd can...", so that you can try another word.

When you want to try game 2, press the <ESCAPE> key to go back to the beginning of the program.

### **Game 2:**

Type in the number of actions that you would like Podd to do (between 2 and 5) and press the <RETURN> key.

Type a word into the first box and press the <RETURN> key. If Podd knows the word, a little smiling face and the space bar symbol appear. Press the space bar. Type in the next word and press <RETURN>.

If Podd doesn't know the word, the message, "I do not know that word!" appears at the top of the screen. The space bar symbol appears at the same time. Press the space bar and try another word.

Remember to press the <RETURN> key after each word. When you filled in all the boxes, press the space bar, sit back and let Podd entertain you.

At the end of the sequence the space bar symbol will appear. When you press the space bar you will be taken back to the beginning of the program.

### **Educational notes**

Children learn through play. Playing is experimenting with the world. Through this children begin to learn to control their environment and they discover the most powerful method of self expression and control, language.

Podd has been designed as a program which uses the power of play to promote language development. The incentive of being able to control Podd will draw on the vocabulary that they know already and encourage them to search for new words. Podd knows 120 words, some of which are synonyms and can help as clues to other words.

If things become rather frustrating, a suggestion about possible words to try, will inspire new ideas. A dictionary will be very useful if children are going to make the best use of this program. They will undoubtedly go to friends of all ages for ideas as well. It might be useful to suggest they keep a written list of the words that Podd knows.

Assistance with spelling might be required. Podd will not recognise actions if they are mis-spelt. It may be a good idea to write the word down and to help the child to memorise it. It could then be typed into the machine or written down on the list by the child. This could encourage accurate spelling.

As another activity, children might like to devise their own Podd booklets of action sketches or cartoon strips with lists of words. They will find it easy to draw a satisfying picture.

# POKER

## ***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Superb Graphical Poker Simulation  
Author : Tom Pinone  
Standalone Release(s) : 1986: POKER, Duckworth, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : DUCKWORTH, The Old Piano Factory, 43 Gloucester Crescent,  
LONDON NW1 7DY  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### **Instructions**

*"You are in a noisy, smoky saloon bar with six seasoned poker players. One of them, maybe evil-looking, cigar-smoking Black Jake, deals out seven hands of five cards each. From then on you are on your own with \$1000 dollars to lose. First the betting goes around the table until everyone has stopped raising the stake or dropped out of the game. Then you can change up to three of your cards to make a better hand, and the betting continues. When the betting is over, the cards are shown and the best hand wins. If everyone else has thrown in their hand the last player wins but won't show you his hand. The next round then starts with another dealer. Moll, the attractive barmaid, serves the drinks and also gives advice if asked!"*

*"Full instructions and rules of play are provided in the game and the computer will even decide which of your cards to change should you wish to change them. A word of warning: don't assume that your fellow players are beginners - they probably bluff and double-bluff far better than you ever will! Warning - this game can seriously damage your wealth!"*

*"ISBN 0 7156 2138 6. In UK Only £5.95."*

**Instructions' Source** : POKER (Duckworth) Back and Inner Inlay

### **Review (Electron User) - "Poker Comes Up Trumps!"**

The smoke hangs heavy in the still air of the Wild West saloon. With an evil glint in his eye Black Jake raises the stakes once more. Is he bluffing? Can you afford to find out? Just two of the nail-biting questions you will ask yourself as you play POKER from Duckworth. Here is an opportunity to pit your skills against six of the meanest players in a game of five card draw poker.

Instructions on how to play the game are provided within the program, so even if you have never played poker before you will be able to hold your own with the best of them within ten minutes of loading the game. Play is simplicity itself. Whenever you are due to make a move a menu of the available choices is displayed. The micro even sorts your cards into the right order.

The dealer deals six hands face down and one for you face up, this being followed by the first round of betting. Stakes are raised in multiples of eight dollars, with no upper limit.

You begin the game with 1,000 dollars. You can stick, throw in your hand or discard up to three cards. Any new cards are dealt and the second round begins. Betting continues until all remaining players have agreed to see each other's hands. At this point the computer announces each hand in turn and pays out the winner.

If you are new to the game you may be unsure of the best move to make so you can have a quiet move with Moll the barmaid who will make suitable suggestions.

On occasions it can be quite rewarding to bluff your way through a hand. Your opponents are all experienced players and will often do the same thing. There is nothing worse than chickening out only to find that Billy the Kid only had a pair of twos!

I found POKER to be totally absorbing. Even though the money wasn't real I still got a thrill from collecting a big win.

Sound .....	5

# POLAR PERILS

*Professional, Originally Released On Cassette Only*

Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Review (Electron User)

What's your attitude to polar bears? Do you think that they're sweet, cuddly things, wrapped up snugly in white fur jackets looking like something off a Christmas card? That used to be my opinion until I played POLAR PERILS.

The action is set in the Arctic and your job is to guide your eskimo through the icy wastes, safely. Easier said than done!

The first screen has the eskimo at the top of the screen facing the cold Arctic waters. He has to get to the other side by leaping onto a passing ice floe. The trouble is that these floes move randomly and there's no guarantee that the one chosen will take the eskimo within leaping distance of the other shore. Happily you do have three eskimos, but it's amazing how fast you use them up.

To make things worse a polar bear is also leaping from floe to floe looking for its dinner (the eskimo). You have to guide your little man to one of the two islands, grab the spear you will find there and kill the bear.

Next comes a trip across the ice, which is so thin that in places it can't bear the eskimo's weight. The bears can't wait either and try to devour him while he's attempting to collect rocks which can be used to map out a path through the thin ice and so to the other side.

Once there the eskimo faces a journey in a fragile kayak through iceberg infested waters. Apparently, he has to collect six blocks of ice to build an igloo but I've never got that far (thanks to the bears).

It's a smashing game; addictive, irritating, amusing and frustrating in turns, the sort that has your family giving you queer looks as you scream at the Electron. I can't remember when reviewing a game gave me so much pleasure. Thoroughly recommended.

Nigel Peters, ELECTRON USER 2. 5

# POOL

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade Game; Machine-code Pool Table  
Author : Unknown  
Standalone Release(s) : 1984: POOL, Dynabyte, £7.95  
Compilation Release(s) : 1986: SUPERSELLERS: THE DYNABYTE COLLECTION, Dynabyte, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : DYNABYTE, 31 Topcliffe Mews, Wide Lane, Morley, LEEDS  
LS27 8UL  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### Instructions

Inside the smoke-filled Pool Hall, you carefully line up your cue. Good judgement is essential as you want to avoid being hustled in this game.

You shoot gently this time, and just kiss the black into the corner pocket. The game is won and you get ready for the next challenger. POOL is a realistic representation of the real thing using super smooth colour graphics for accuracy and detail. You control the cue angle and strength of shot and the computer does the rest together with keeping track of penalty shots and the score.

Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Only the quickest can survive in this super-fast 'zap-em' game requiring superior reflexes. The future of the galaxy is in your hands as the ruthless invaders from NGC 891 crash through the ionosphere.

Starting with just three lives, you must destroy each wave in turn. A life is lost if you are hit by the enemy fire or if the enemy manage to get past your craft. A bonus life is awarded every 100,000 points. Behind the last wave of enemy craft hides the mothership. This must be destroyed so that you may advance to the next level.

A hi-score table records the top eight scores.

## Game Controls

<CTRL> - Left, A - Right, <RETURN> - Fire

**Instructions' Source** : POSITRON (Micro Power) Inner Inlay

## Review (ELBUG)

This is a very fast Space Invaders type of game, requiring superior reflexes if you are to prevent the aliens from landing. The game is not that original as computer games go, but worth buying if you like the adrenaline draining 'blast and zap 'em' type of game. Rating: \*\*\*

Alan Webster, ELBUG 1. 3

## Review (Electron User)

You've seen it all before. The space invaders tramp predictably across the screen, edging relentlessly earthwards. You wipe them out mercilessly with your quick firing laser base, rapidly clearing the first screen. It appears all too easy - then all hell breaks loose...

The second wave doesn't follow a set pattern. They swarm about all over the place setting up defensive boxes. If you don't break them up they will be your downfall. Moving quickly earthwards they have landed before you can gather your shattered wits. And that's only the second wave - there are nine in all, each progressively worse.

POSITRON is a fast moving, colourful and satisfying game. So sharpen your wits, tighten your sweatband and give it a whirl.

Adam Young , ELECTRON USER 1. 8

# PREDATOR

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade Adventure  
Author : Peter Scott  
Standalone Release(s) : 1988: PREDATOR, Superior/Acornsoft, £9.95  
1990: PREDATOR, Superior/Blue Ribbon, £2.99  
Compilation Release(s) : 1990: PLAY IT AGAIN SAM 14, Superior/Acornsoft, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : CDFS E00, DFS E00

### Instructions

Your objective is to destroy the alien creature that is hunting you, within the allocated mission time. You will have to fight your way through four increasingly difficult levels of play, before finally facing the alien and destroying it. It's gonna take all of your survival skills to outwit whatever it is that's lurking out there...and perhaps a small nuclear device!

### Status

The status area of the screen is broken into sections.

At the top left of the screen, a display shows the number of lives you have remaining (large blocks), with an energy level indicator beneath (small blocks). Six small blocks of energy are equivalent to one life. When the display shows no lives...it's all over for you!

The weapon you currently have is shown at the top of the screen below the PREDATOR logo, together with its ammunition level. The number of grenades you have remaining is shown at the top centre-right of the screen. You start with three grenades.

Your overall score is shown in the display at the top right of the screen, with the time remaining shown below the score. You must complete your mission within the allocated time, that is, before the time reading falls from the initial level of 4500 to zero.

### Gameplay

When you start the game, you have just descended from the helicopter. Your team mates have already dashed off into the jungle. From here on, it's up to you. Take each step with great caution, remembering you're in uncharted jungle, where anything can happen. And it will!

You start the mission with a weapon. You may drop the weapon and pick up another if you find one on your mission. There are four different weapons, each with different firing characteristics. Choose and use your weaponry with great caution.

You'll find more of your team as you progress further into the jungle - nearly all horribly mutilated. Remember, survival is the name of the game, so look at any weapons you may find of theirs and decide if you'll need to swap it for your current one. If you manage to survive longer than your team mates obviously have, you'll need to make the best use of the jungle elements in order to outsmart your enemy. Bullets won't solve all your problems in this neck of the woods! Grenades are bound to come in useful if you find yourself helplessly ambushed.

Remember that strange rustling in the bushes? You hear it every now and again but can see nothing. Well, there is something out there and it is most definitely after you. It can track you using its heat detecting eyesight, and every now and again,

the screen will change colour. This is the creature's viewpoint of you running through the jungle. Beware - it's on to you! A triangle will form on the screen - this is the cross-hairs of the creature's weapon, if you get caught within the triangle, you'll be killed...unless you can outwit the creature, of course...

### Game Controls

Z - Run Left, X - Run Right, \* - Run Up, ? - Run Down.

Use left/right keys in conjunction with up/down keys for diagonal movement.

\* - Jump, ? - Crouch, <SPACE> - Throw grenade, P - Pick up/Drop weapon.

When holding a weapon, use <RETURN> to fire across or <RETURN> and \*/? to fire up or down.

When not holding a weapon, use <RETURN> to punch and <RETURN> in conjunction with \* to kick and with ? to block.

H/R - Hold/Restart, S/Q - Sound/Quiet

<SHIFT> and <ESCAPE> - Quit Game

**Instructions' Source** : PLAY IT AGAIN SAM 14 (Superior/Acornsoft) Inner Inlay

### Review (Electron User) - "Alien Violence"

The Predator in the title isn't the beefy Arnold Schwarzenegger - he's the bait. The plot, which is taken directly from the film of the same name, involves an alien creature which is hunting Arnold and his pals and killing them in most unpleasant ways. The climax of the film involves our hero surviving an explosion which even three yards of lead shielding would object to.

Basically this is a sideways scrolling shoot-'em-up with you controlling Schwarzenegger in the starring role. Our hero moves from left to right past parallax scrolling scenery - the bushes in the foreground move faster than the trees further away. Shoot the enemy soldiers coming at you from all directions, and even popping up from camouflaged holes in the ground.

The basic controls are standard Z or X for left and right plus \* to jump and ? to crouch. Holding down the direction controls and pressing \* or ? moves Arnie diagonally up and down the screen. Pressing <RETURN> fires his gun either forwards or diagonally, again dependent on the up and down keys. This gives a great deal of control over what is, essentially, a simple game.

There is also the option to drop the gun you're using and pick up a new one, but so far I've not come across one that's loaded. If you're not carrying a gun you can resort to punches and kicks, but they're not very effective against half a dozen gun-slinging soldiers charging at you.

Your final weapon is the grenade, of which you have three. You have to be very accurate when lobbing them, and in the thick of the action it's not worth the time or effort.

The enemy soldiers are quite stupid and you actually have to get in their way for them to shoot you. And - at long last in an arcade game - if they do get in each other's way their bullets have a similar effect on their pals. I've been waiting a long time for a game that does that.

The soldiers that pop out of the ground, fire and then duck down again must be in trenches, but as long as you hit the right area of ground you can knock them out even if they are not visible.

However, the killer geese that fly across from time to time are more lethal. Of the three or four groups that appear on the first level most can be dodged, while one or two can be ducked - no pun intended.

At intervals, the screen turns blue and the sights of the alien's weapon slowly move across the jungle scene towards you. If you are hit you're dead. There is a way to escape, but I'll leave you to discover it.

The graphics are effective given the limitations of the four-colour Mode 5 screen. Apart from a preponderance of green - what do you expect in the jungle? - everything was clearly outlined and looked good. Not only that, but when our hero was hiding behind a bush or running behind a foreground mesh you still see him through the gaps.

There isn't much sound - gun shots, ones to indicate Schwarzenegger has been hit plus one for the alien and an end of game tune that really wasn't worth the effort. However, as this was a pre-release version it may improve.

This is a fun game having a lot of the feel of a Schwarzenegger film loadsa violence - and the fact that this is another Peter Scott work, coming hard on the heels of BARBARIAN II, guarantees that it's as good a rendition on the Electron as could be achieved.

Lazarus

### \*\*\* Second Opinion \*\*\* (Electron User)

Another cracking game from the Superior stable, and infinitely preferable to the old re-releases on the SAM compilations.

The sideways scrolling is smoothly executed and the graphics are well defined. It's addictive and fun, so get your combat gear on and save the human race from that alien predator.

PRES GAMES DISC 1 was supplied as a disc only product with no paper-based documentation.

## Review (EUG)

What the PLAY IT AGAIN SAMs did for tape compilations, PRES hoped to do for disc with the GAMES collection. The natural advantage being you don't have to wait around for a few minutes while each game loads in with a disc. Each disc in the GAMES collection, of which this is the first, contains eight different computer games, instantly selectable from a PRES MENU which has been quite blatantly gleaned from the loading screen to the Micro Power series of games.

Indeed, PRES GAMES DISC 1 contains eight computer games which were ALL released under the Micro Power label on cassette in 1983 and 1984 - the old favourites BANDITS AT 3 o'CLOCK, BUMBLE BEE, CROAKER, FELIX IN THE FACTORY, ELECTRON INVADERS, JET POWER JACK, KILLER GORILLA and STOCK CAR. All of them are machine code games with multi-coloured sprites and nice colourful screens. They were popular for years after their original release.

BANDITS AT 3 o'CLOCK is a dogfight for two players and is probably one of the weaker games on the disc. CROAKER was publicly acknowledged to be "not as good as HOPPER" [by Acornsoft] and is nothing special. INVADERS and STOCK CAR are similarly uninspiring tried-and-tested formulae that will lose your attention quickly.

Luckily the other four make up for their failings. BUMBLE BEE is a whole new idea where you control a very smooth scrolling bee whizzing around a maze, eating honey and luring the chasing spiders into the obstacles set for them. The walls of the maze are mounted on hinges so you can walk through walls (in a sense) to perfect your escape.

FELIX IN THE FACTORY is the first of three FELIX games, which are all pretty good. It's a platform game with Felix's only objective being to keep the generator at the bottom of the screen topped up with oil. The bottom level of the screen is pretty safe but the levels above are teeming with all kinds of cutesy little nasties which you need to slither past to get the oil can. You also have to contend with a sweet

little mouse that scurries across levels at random with a "scurrying" scale of notes accompanying it - when you hear it, get on a ladder! You can grab a sandbag and trap the mouse for bonus points, or a pitchfork to stab the other nasties for loadsa points, but this must be done with an ever-watchful eye on the oil level of the generator. You simply don't have the time to do everything!

KILLER GORILLA is another ladders-and-levels game in which you are pitted (not altogether unsurprisingly) against a gorilla. Not that the gorilla seems to do much in itself; the hero is likely to be more concerned about the barrels and flames which come cascading down from the top of the screen where the gorilla is holding his girlfriend captive. It's a tad slow and has some annoying problems such as the hero not being able to climb ladders while holding the hammer. It's entertaining in the extreme though.

JET POWER JACK is one of those games which looks easy but just isn't. The idea is for Jack to work his way from the top to the bottom of the screen by 'boosting' over the gaps on each level. Unfortunately, the jetpack is very difficult to operate correctly and Jack frequently finds himself dead.

The disc is protected up to the eyeballs and won't play on any of the other BBC-series computers beside the Electron. Attempts to load any individual files also result in a tirade of abuse from the Operating System. Understandable precautions against the pirate, of course, but having the side effect of preventing a user from either loading in a cheat routine before the game or an upgrade such as KILLA (which solves the ladder 'bug').

Also because of this, you cannot speed up the menu system which is ridiculously slow, taking about a minute to display the screen and not allowing any input until it has. This rather defeats the object of discs taking a shorter time than tapes and is completely unnecessary.

Instead of getting the instructions on an inlay card, PRES have put them on the disc along with the games. Thus, if you forget the objective or the keys, you have to turn off and reboot it. The discs actually retailed at £9.95 each originally so not to get a box or instructions seems a bit lame. A remedy could have been to allow the user to print out the respective instructions but there is no such option and once again, the protection keeps you from putting in your own.

However, although none of the games were unique to PRES, they do all work with all Elk systems (including the ones setting PAGE to &1D00) and, as none of them are available on disc elsewhere, they are certainly worth having.

PRES GAMES DISC 2 was supplied as a disc only product with no paper-based documentation.

## Review (EUG)

The second of PRES' eight game compilations is another outing of games originally released under the Micro Power label; retaining the slow menu system and complete disc protection of the first one.

Blasting in first is CYBERTRON (aka CYBERTRON MISSION) which is one of those games that, although impressive when first released, has not aged gracefully. The idea is to work your way across the screen from left to right without touching the aliens or the side of the maze you are trapped in. It's not easy and the 'aliens' are pathetic, although it is written in Mode 2 and has a nice display of colours.

FELIX AND THE FRUIT MONSTERS is the second of the FELIX games and has more or less the same sprites as the FACTORY jaunt. It's a variation on the SNAPPER/PAC MAN theme with an almost identical maze-screen yet there are no dots or pills to eat. Instead, floating around the maze are three fruits which you must prevent the monsters from eating. You can do this by dropping an 'ether' in their path - this will root them to the spot if they pass over it. Or you can try to pick up the item of fruit which has floated dangerously close to a monster and move it as far away as possible. Needless to say, contact with the monsters results in death; what your objective is is to keep the monsters and fruit apart for the length of time denoted at the top of the screen. It's not easy.

FRENZY is a great arcade action game where you simply draw lines from one side of the screen to the other trying to trap a row of dots in the smallest part you define. Unfortunately, the game crashed when I reached about level twelve and gave a 'Bad program' error. I had got much further on the tape version so there is a software error involved in PRES' conversion to disc.

THE MINE is one of those games that is so simple yet timeless that it is available even now for the mainstream computers. You are 'boxed in' by a wall of sludge which fills the whole screen. As you walk in one of the four directions, this sludge

disappears and you create a makeshift maze. More or less in the corners of the maze are monsters which have just enough breathing space to pace backwards and forwards and plot how to reach and kill you. If you walk into their domain, destroying the sludge between them and you, you can shoot them or run away. Shooting is best on the red monsters which can't similarly retaliate. The green dragons breathe fire which reaches further than your laser beam, so running away from these is advisable. You can create a path underneath a rock and providing the dragon's hot on your heels, he will soon find himself crushed under the yellow cloud. Beware though: monsters left boxed in too long will simply float over the sludge to a point where getting you is easier!

ESCAPE FROM MOONBASE ALPHA is sometimes billed as an adventure, but is not the NORTH, SOUTH, EAST affair. You are lost in a maze of rooms searching for a doctor and collecting bags of gold. There are a large variety of monsters (generally one to a room), mystical characters and objects about. You will need to fight any monsters before you can pick up gold in that room - and you will probably be turned into a frog by a mad television set at some point. (I kid you not!) Fortunately, you can tell whether or not you will win the fight by comparing your strength with that of the monster. If it looks doubtful, run away or eat a hulk pill to multiply your strength by five for just enough time to beat up the foe. A side effect of this is when you return to normal, you will be a seven stone weakling! If you think this sounds like a bit of fun, it is...for a while. It's a very different game but a little too slow and if you succeed, it depends on pure luck.

The game MOONRAIDER is present on so many compilations it beggars belief but smooth-scrolling shoot-'em-up games don't come any smoother! It nicely demonstrates some of the appeal of 8-bit computer systems while being very addictive and beautifully presented.

RUBBLE TROUBLE is the pick of the bunch, written by P. A. Morgan (who also wrote the fantastic DRAIN MANIA) and involves running around a maze hurling the maze's rocks at the mutant Krackats. There are a few other games of this type available (PERCY PENGUIN and MANGO) but this is the best because a) the Krackats take a good few seconds to 'hatch', hence your caveman hero has enough time to work out a strategy for dealing with them before they attack; b) if you push the rocks and miss, they come hurtling back towards you, so you've got to remember to get out of their way, c) there are some special effect options: Hayfield where the screen is covered with rocks and Invisible where the maze flashes on and off at regular intervals and d) the instructions are accompanied by some of the best music ever heard on the Electron. A very professional game.

SWAG is a game about dodging policeman and robbing banks and is not up to the standard of the rest. It's a two player game ONLY so you can't play alone and the rules are very weird, as is the action. It seems to meander on forever and soon loses your interest.

In conclusion, GAMES 2 has stronger games than the first. Although it still has the flaws of the slow menu system, the lack of an option to print out the instructions for each game and the added glitch of the FRENZY bug, it was actually released on the same date (with GAMES 3) so this is understandable. Even if you forget CYBERTRON and SWAG too, this compilation is value for money.

## Review (EUG)

What's your favourite Micro Power game? FELIX IN THE FACTORY? You need PRES' first disc, mate. MOONRAIDER? Disc number two. CYBERTRON MISSION? Get a life. But if you're personal fave hasn't yet been covered by those PRES compilations, the chances are you'll find it on GAMES disc three - shipping you on eight more stops around the Micro Power office!

Actually, this compilation is the strongest of the three reviewed so far [There are six in total! - Ed] and has a greater "variety" factor - instead of eight arcade games, you get an ADVENTURE, a CHESS simulator and the tricky DANGER UXB puzzle plus some of the faster and more challenging arcade jaunts; namely GHOULS, POSITRON, SWOOP, FELIX AND THE EVIL WEEVILS and GALACTIC COMMANDER (in order of their playability).

GHOULS is a Mode 5 platform game with four screens to complete. It is easily the best title Micro Power ever produced even though it is not very big. [The Electron version of IMOGEN was produced by Superior - Ed] You control a creature which bears more than a passing resemblance to Pac Man with legs and you must get from the bottom to the top of the screen by climbing/jumping from platform to platform. A simple idea but one done with a lot of style.

While you are grounded by gravity, floating around above you is the Ghoul (One of those from the title - his friends join him when you start getting too good!). He tries to 'home in' on whenever you're standing so you frequently need to lure him somewhere unnecessary then make a run for the jewels, eating any Pac Man style edibles on the way! Your progress is also hindered by huge bouncing spiders, retracting floorboards and moving platforms. An interesting effect regarding gravity is that if the ground underneath you IS moving, YOU must also move WITH it - that is, if you want to avoid plummeting to certain doom! It's a trick that's easily learned but then becomes difficult to pull off sometimes.

There's also a power pill which makes the ghoul(s) disappear for a bit. Sometimes you need to think strategically when eating it though as the Ghoul will continue to move. He just can't pop you off until he re-appears (after a short period of time). Sometimes it pays to keep an eye on his position and avoid the pill.

POSITRON (INVADERS) is an early Gary Partis game which is a manic space-invaders affair. You swing from left to right and zap merrily until you either die or you get to level eight and you are presented with the message "No FOR at line 34213, Bad Program". This bug is present on the tape version too and is connected with the Plus 1 interface. On the tape version, you can disable it and then the game works fine. But it's tragically easy to reach the bug here and it appears PRES were operating a conspiracy when this made it onto a format where the Plus 1 HAS to be connected!

SWOOP is another space-invaders game. This one is a variation on the ARCADIANs theme and doesn't compare too favourably with the best of its type on the Elk. You are at the bottom, they are at the top...yeah, zzz. But watch out for "their" missiles. Instead of disappearing when they miss you, they remain active for a while and pose a constant hazard - maliciously sitting there waiting for you to crash into them.

FELIX has gone through a shrinking machine! AND THE EVIL WEEVILS, it seems, are cyan-coloured worms! Now, you're stuck in another factory, trying to spray them to death with Weevil-killer while treading on a maze of conveyor belts. Weird beyond belief but, that stated, quite good. Its "evil" weevils, named Sluggies and Zippies, are a departure from its two prequels and don't look evil at all!

The weakest arcade game is GALACTIC COMMANDER, where you must guide your ship through nine phases of simulated space. Luckily, what it lacks in colour is compensated for by DANGER UXB, a Mode 1 arcade game set on a puzzle grid. You must defuse (move over) a number of bombs before your time runs out. Each time you cross a square, it disappears and a note is played. You cannot move over the hole it leaves so you to get back you can either run around it OR use the 'slide left' and 'slide right' keys to rotate the ROW on which you stand left or right.

It's not particularly hard for the first few screens on the low skill level though harder skill levels introduce some boots set on squishing you which usually succeed. The notes played encourage quick movement (so you can hear your Electron playing The Sting!) and another nice feature is a dropping man bonus game.

The more mentally taxing games are not the best of their type. CHESS is a very slow adaptation of that Game of Kings where moves can take upwards of an hour [Get COLOSSUS CHESS 4! - Ed] and the computer always wins. Frustrating in the extreme.

ADVENTURE is, not unsurprisingly, reliant on NORTH, SOUTH, EAST and WEST commands. Yet it has an added feature in that you can play as a "Wizard" (and, amazingly, a French one!) once you've completed it once! It is an early adventure and not as well presented as it could be; the screen displaying white text on a blue background in Mode 6. But it's not bad as beginners' adventures go.

And so another of PRES' superb compilations brings us a lot of retro games we thought were only available on tape. However, the same flaws as the first two discs are present again - a very slow display of the menu system, a virtual force-field around the disc disallowing cheats or upgrades to the programs and the odd bug in the games themselves. But it's the only way to get GHOULS on disc and, for this alone, I can highly recommend it.

Dave Edwards, EUG #47

# PRES GAMES DISC 4

*Professional, Originally Released On ADFS 1D00 Disc*

Game Types : Arcade  
Release Information : 1989: PRES GAMES DISC 4, PRES, £9.95 (3.5" Disc)  
Compilation Comprises : 1. ARCADIANS, Acornsoft  
2. BUG BLASTER, Alligata  
3. MAGIC MUSHROOMS, Acornsoft  
4. METEORS, Acornsoft  
5. MONSTERS, Acornsoft  
6. QWAK, Superior/Acornsoft  
7. SNOOKER, Acornsoft  
8. VIDEO'S REVENGE, Budgie  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : PRES, PO Box 319, Lightwater, SURREY GU18 5PW  
Tel: 01279 72046  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

PRES GAMES DISC 4 was supplied as a disc only product with no paper-based documentation.

## Review (EUG)

By the demand of all those Electron owners who bought a disc interface only to find the market sadly lacking in disc games, PRES acquired the rights to more top games and released compilation four. This was released in 1989, over a year after the Micro Power bundles of discs 1 to 3, and that software company was well and truly exhausted.

One assumes that a reshuffling of copyrights was going on at the time - Superior Software, to whom PRES are indebted for all PRES GAMES 4's contents, had bought the rights to Budgie's VIDEO'S REVENGE, Alligata's BUG BLASTER and many of Acornsoft's introductory titles including ARCADIANS, METEORS, SNOOKER, MAGIC MUSHROOMS and MONSTERS. As every good Elk-boy knows, Superior were also developing their own games for many years after 1989 and one of their new games QWAK also made it onto this disc.

The format of the new disc is unchanged, apart from the very slow menu system being exchanged for a much quicker menu (At last!). But as you'd expect from PRES, you get these eight games instantly selectable - but in no way copy- or alter-able!

VIDEO'S REVENGE, from the earlier tape version, is a colourful space-ship scroller with a mass of animation, parallax stars and 100% machine code throughout. PRES' version makes it obvious too that somewhere in this code is the equivalent of ON ERROR RUN. And in their version an error occurs. In fact, it occurs as soon as hit ANY alien! If you were only wanting this one on disc, cross through the compilation immediately. In the worst bug ever on a PRES disc [And there have been several others! - Ed], the 'game' is rendered completely useless! Each time you hit an alien, it restarts (with the ironic opening screen 'TESTS SHOW SYSTEM OK') and each time you hit an alien, it restarts and...

BUG BLASTER. This is one of the famous Elk Centipede-clones, with a long Centipede winding its way down through a field of mushrooms to your pod at the bottom. You must manoeuvre left and right and eliminate all the sections of the beastie before it gets you. Each time you hit a section, it disappears and the long centipede

breaks into two smaller ones. Suddenly there are bug sections scooting all over the place and you also need to whizz up and down to avoid contact.

There are several other versions of this game available (Superior even made its own!) but the sprites in this one are 'neatest', although the flashing spider looks a bit trippy. The action never drags, there is adequate variety through a colour-switching palette and a wonderful sequence of notes to indicate you have just gained an extra life.

The best of the bunch is ARCADIANs; one of those rare games that will never age. The smoothest, clearest, most electrifying game of space invaders produced for the Electron. The aliens glide in on you pixel-perfectly and it's as addictive today as when it was first released.

The other Acornsoft games haven't aged so well. METEORS is a bird's eye view of your craft in space and you're surrounded by transparent cartoony clouds; the meteors of the title, no less. You must avoid them and shoot them whenever possible. A bullet splits them in half, so you need to plan your shots to avoid the screen being full of meteors after a few seconds. The smallest meteors (halves of the halves of the halves) disappear when shot, so pick them off first. It's a neat idea and done quite well but its monochrome screens look old fashioned and there's a lack of variety even though the action is quite smooth.

Playing SNOOKER on a computer is always a weird experience and on the Electron you have the choice of two bad simulations of Snooker. This is seen as the better of the two available but it does rely on different skills than the real thing hence doesn't score very highly. However, it too is smooth - and very nicely coloured, animated and presented.

MONSTERS is truly awful. Beyond tedious, this game is set on four levels where you, as the hero, must dig holes for the monsters to fall through. Unfortunately, despite being so blind that they stagger through holes willy-nilly, the monsters are curiously nimble and always grip the side of the hole they fall into. This necessitates you rushing back and sadistically bashing them with the spade until pain and gravity send 'em down to doom. Some monsters need to fall through more than one level but basically, that's all there is to this game. And it's plain boring.

Evidently tiring of this, the red monsters invade MAGIC MUSHROOMS; a unique game that consists of twelve screens where you need to collect all the mushrooms on flat surfaces. You run and bounce around, accompanied by manic scurrying sounds, bounding across every conceivable type of terra firma (of which some isn't firm at all) and must figure out the best route across each screen. It's a fantastic Mode 2 piece that includes a screen editor and load and save facilities. But you need the instruction manual to use it properly - and PRES don't supply it!

QWAK is the most modern of the games and comes second best. Based on the "Bubble Bobble" idea, all its graphics are cute but deadly. It's not hard but it's fun and after each screen you get a password to stop you needing to play screens you've completed over and over again!

The verdict on this one is harsher than the previous ones as, in its day, Acornsoft titles were compatible with joysticks plugged into a Plus 1. ARCADIANs, MONSTERS and METEORS are pure arcade games that benefited enormously from joystick control. Joysticks do NOT work with this disc.

Sloppily though, the routines FOR joystick control have NOT been removed and neither have screen prompts for the fire button. So follow the prompt, press it and your machine will have a mental breakdown!

It is inevitable that a disc system taking a huge chunk of memory for its operation won't interfere with machine code games (that expect that memory to be free) but the sacrificing of the joystick options should be explicit in PRES' advertising and on the disc itself. Not doing so makes it look very disreputable and, although four of those other games are great, this compendium is the worst so far.

Dave Edwards, EUG #48

# PRES GAMES DISC 5

*Professional, Originally Released On ADFS 1D00 Disc*

Game Types : Arcade  
Release Information : 1989: PRES GAMES DISC 5, PRES, £9.95 (3.5" Disc)  
Compilation Comprises : 1. CONSTELLATION, Superior  
2. COSMIC CAMOUFLAGE, Superior/Acornsoft  
3. FRAK!, Aardvark  
4. GUARDIAN, Alligata  
5. KILLER GORILLA 2, Superior/Acornsoft  
6. MAZE, Acornsoft  
7. PLANETOID, Acornsoft  
8. STARSHIP COMMAND, Acornsoft

PRES GAMES DISC 5 was supplied as a disc only product with no paper-based documentation.

## Review (EUG)

PRES' fifth compilation is another disc of numerous games from differing software houses. STARSHIP COMMAND, MAZE and PLANETOID were old Acornsoft favourites; COSMIC CAMOUFLAGE, CONSTELLATION, KILLER GORILLA 2 and FRAK were fairly newish (for the disc's original 1991 release) releases from Superior Software and GUARDIAN a so-called Alligata Hit from the mists of time. So there's a fair arcade feel to this compilation with its familiar format.

Actually, it may be incorrect to state KILLER GORILLA 2 as new. The same game went by a 1983 title of ZANY KONG JUNIOR and had languished in Superior's office for seven years after DONKEY KONG's copyright holders forced its withdrawal. No real changes were made to it apart from the addition of a colourful loading screen and so this 'new' Mode 1 arcade jaunt as a baby gorilla is really a title from 1983!

For this reason, despite its name, KILLER GORILLA 2 is nothing like its Micro Power predecessor. Your gorilla, controlled with the keyboard, does no killing whatsoever. Quite the reverse. HE is often the one killed - by falling off vines or being bitten by patrolling teeth. The controls are fiddly as well although the knack comes with a little time. There's adequate sound and nice sprites but only four screens.

COSMIC CAMOUFLAGE is Superior's sequel to Acornsoft's METEORS (see PRES GAMES DISC 4) and is far better than the original. It retains a monochromatic Mode 4 screen but the foreground colour varies as you attain different sectors, which is appreciated. Of course the essential components of the METEORS game are still there: It's still a game about shooting rocks that divide into smaller and smaller pieces; these pieces then weaving about the screen until you disintegrate the smallest one or they smash into your ship.

Your ship has a number of improvements though. A welcome one is that your ship does not continue to thrust after you release the key - it comes to an almost immediate halt. This allows you to frantically weave in and out of the meteors with more ease. And you'll need to as there are variants of the meteors present on screen too. These

variants behave differently, while cleverly not distracting from the theme of the game.

Some home in on you and some ricochet around the screen (whereas a meteor floats off one side and onto the other). When they hit you, your ship is quite spectacularly annihilated! There's also a loading screen.

FRAK [This f-word title was a new way of swearing when your caveman was killed but, as it didn't catch on, you can download an Internet BBC version with the recognisable one - Ed] is the story of a yo-yo-ing caveman who must get from one side of the screen to the other, collecting all the keys he finds. It's a platform game with a difference.

The sprites are VERY large and the caveman you control is hindered in his progress by the Scrubblies. They don't do very much except block the way and a swift yo-yo is enough to knock them off their perches. However, you need to find a platform close enough to them and use the yo-yo strategically. Daggers fly randomly from top-right to bottom-left of the screen too so you need to bear these in mind.

You start on the left and when you reach the right, the screen, in a rather 'lumpy' fashion, scrolls so you are at the left of the next one. You must navigate several screens to reach the far-right and win the level.

CONSTELLATION is a program about heavenly bodies and allows you to view points in space as they would have looked at a particular point in time. It's hard to judge how accurate it is unless you're an astronomer and it's not as well presented as Century's STARFINDER.

MAZE is very dire and comes as standard with PLUS THREE GAMES and ACORNSOFT HITS 1 already. It's slow, it's boring and every room looks the same - making it very difficult to navigate your way around yet it has a bit of colour and is one of only two commercial maze programs.

With this in mind, it's hard to believe STARSHIP COMMAND came from the same people! This too was one of the first Acornsoft games but the difference between it and MAZE are staggering. Here, the graphics are crisp (even if monochromatic), the game is very smooth, it incorporates a staggering amount of options and performs the perfect arcade/strategy balancing act. But, it too is not only included on ACORNSOFT HITS 1 but also available on ROM Cartridge!

GUARDIAN and PLANETOID are parodies of one another and to include them both on the same disc is a bad move. They are both Electron versions of the 'Defender' game - the scrolling line hills with floating life forms (stalagmites) and aliens intent on carrying a life form to the top of the screen and mutating. If they manage to do so, they become virtually unstoppable so the object is to either shoot them on sight or shoot them in the act of abducting the life form then catch IT as it plummets earthwards and set it down gently.

In both, and all, you are an aeroplane-type craft and the action is viewed from the side. It's not possible to choose the better of these two versions (But again PLANETOID has been duplicated in the PLUS THREE GAMES compilation!) - the best is Micro Power's THE GAUNTLET; the only one missing from the first PRES GAMES DISCs!

Once again, those games that claim to be joystick-compatible on screen aren't and cause the system to crash if you try it. Once again, you can't print out the instructions - and the entire screen editor in FRAK's original documentation is completely dispensed with!

The disc also fails in that, this time, every game except KILLER GORILLA 2 is available unprotected elsewhere. You're left with this, FRAK, COSMIC CAMOUFLAGE and CONSTELLATION. They justify this disc's existence only by a very narrow margin.

Dave Edwards, EUG #49

# PRES GAMES DISC 6

*Professional, Originally Released On ADFS 1D00 Disc*

Game Types : Arcade  
Release Information : 1989: PRES GAMES DISC 6, PRES, £9.95 (3.5" Disc)  
Compilation Comprises : 1. ALIEN DROPOUT, Superior  
2. CENTIBUG, Superior  
3. FRUIT MACHINE, Superior  
4. INVADERS, Superior  
5. PERCY PENGUIN, Superior  
6. STRYKER'S RUN, Superior  
7. WORLD GEOGRAPHY, Superior  
8. ZALAGA, Aardvark

## Review (EUG)

We've come quickly to the last of PRES' disc compilations for the Acorn Electron feeling deflated after the fifth effort. But the magic words "Superior Software" [The most well respected company for the Elk - Ed] could offer hope to ADFS gamers with a disc chock full of their earliest releases...and one brand new release thrown in too!

First on PRES' by now standard menu system is STRYKER'S RUN. You are John Stryker and, as the name suggests, you run. From left to right in fact. And across a war ravaged landscape patrolled by guards, planes and spacecrafts and your own forces.

Straight running across the screen doesn't take very long and you have a supply of bullets and hand grenades to help you deal with the various threats you encounter. Hand grenades are most useful when your way is barred by a landmine as the grenade will destroy it and aid your safe passage. As you near the right hand side of the screen, there is a short pause and you begin on the left hand side of the next screen. The background is a long screen and the landscape cleverly 'continues'.

This, and the colourful screen (Mode 2!), 'cartoony' characters and animation, make the game one of Superior's most famous. But although it's certainly visually pleasing, the means of implementing a playability factor doesn't really work as well as it should. One example is that your character will often find an abandoned helicopter/spaceship and you can choose to board it and fly across as many screens as its fuel will allow. But propulsion of both John on terra firma and the airborne hero are slow - and the planes flicker dreadfully!

Another, as if to lay home the point, is your bullets and those fired by your enemies, move at the same frame rate as the "run"ning man! As the bullet disappears a short distance from where it is fired, you can outrun it! This makes the game feel surreal. Not necessarily that this makes it easy though. It's not.

Next on the list is ZALAGA, originally released by Aardvark; a brilliant Space

Invaders clone with loads of sprites, intricate and very varied attacking patterns and levels of ever-increasing difficulty. It and STRYKER'S RUN were both the most recent, and the pick, of all the games on this disc; released first in 1987 and compiled by professional machine code programmers.

The rest of them date from the 1983 days when Superior's software was on small blue inlayed cassettes. There's another two Space Invaders clones - ALIEN DROPOUT and the aptly-titled INVADERS, a FRUIT MACHINE simulator, maze with a birds eye view PERCY PENGUIN and CENTIBUG, the traditional caterpillar blaster. The eighth title is a quiz called WORLD GEOGRAPHY, notable today not for its map of the world but all its out of date information. Hazard a guess at the population of WEST Germany?

Whilst evident that not nearly as much time went into their preparation, all are fair and some of them are quite good. First, ALIEN DROPOUT is an interesting space variant requiring phenomenal speed on the keys: Non-firing bugs fall from the top of the screen into boxes one by one, and each of the ten boxes can hold five bugs. You must shoot as many peacefully-boxed bugs as you can as the sixth bug into a box will push out the first one and it comes out MEAN! Of course, while it distracts you (or kills you!) the 'box'ing goes on and you must try and blast away a set number of bugs (increasing in proportion to level) before there are so many free bugs that there's nowhere to hide! If you reach this target, you must destroy the bug's mothership, which rains down a constant stream of bullets throughout each game to keep you on your toes!

PERCY PENGUIN is also a fast and nicely presented number - and this is the only place to get it on disc - where you control a pretty penguin in an expanse of ice-cubes. You must hurl said cubes at the Snobeys before your time runs out and collect all the cherries on each screen. It's a game like PENGWYN and RUBBLE TROUBLE but it's a little different and all three are addictive and challenging!

But the remaining four aren't anything to get excited about: FRUIT MACHINE is a very slow one armed bandit simulation which is about as exciting as cow dung - but the Master RAM Board helps a bit; CENTIBUG is admitted to be vastly INferior to Alligata's BUG BLASTER [PRES GAMES DISC FOUR, Reviewed in EUG #48 - Ed] and WORLD GEOGRAPHY is bleak even if you are interested in world population and country identification.

INVADERS, different to ELECTRON INVADERS on PRES GAMES DISC ONE, is quite playable although nothing you won't have seen before. Many of these games ask 'Do you want sound?' before they begin and this gives a clue as to the level of programming involved. The majority of professional software allows you to alter sound DURING game play. Our Superior Software's beginnings were indeed humble.

It's not an overly impressive disc but there are no errors and the first two games and PERCY PENGUIN really make the difference. The rest become drôle after a short time especially when you know better versions are out there. Still, loading is very quick and Michael Hutchinson's ZALAGA loading screen is quite impressive.

Of course, that PRES' non-cataloguable disc "feature" is there and you have to REMEMBER the instructions as they aren't supplied or printable from screen! Still, overall, the conclusion of the PRES series is adequate and salvages them from a "Their last releases were very poor" label.

Dave Edwards, EUG #50

# PRIMARY TIME

*Professional, Originally Released On Cassette Only*

Game Type : Educational; Telling-The-Time Guide  
Author : C. J. Dawson  
Standalone Release(s) : 1984: PRIMARY TIME, Alligata, £6.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ALLIGATA, 178 West Street, SHEFFIELD S1 4ET  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

The fun-filled way to learn to tell the time. The combination of sound and simple display complement each other to produce a very easy to use teaching package.

Simply select from the five alternatives shown, the correct time as displayed on both the analogue and digital clocks, then wait and see! But why the mouse and grandfather clock? Well you know how the nursery rhyme goes...

"Hickory dickory dock, the mouse ran up the clock..."

Featuring personalised command details. Instructions are available in the program at any time. High resolution graphics and imaginative sound effects. Age: 4 Plus.

**Instructions' Source** : PRIMARY TIME (Alligata) Back Inlay

## Review (Electron User)

Telling the time has never been easy for children. These days they can get meddled with the mixture of analogue clocks and digital watches. PRIMARY TIME from Alligata is designed to help children from about four upwards to overcome the problems and become expert time tellers.

The format of the program is very simple. A clock is drawn with its hands set to a random time. The same time is also displayed in digital form. Five possible answers are given and the user to select the correct one.

The program starts with an instruction page indicating which keys are needed. It then waits for a name to be entered. Next comes the main menu from which various options can be selected. The simplest only gives o'clock times and then come half pasts, quarters and minutes.

On the o'clock times the computer beeps the correct number of times as an extra help. As for all options, the possible answers are written up the side of a grandfather clock. The cursor that has to be moved is a mouse. Unlike some time-telling programs, this one does not require pin point accuracy when selecting an answer, which makes the package suitable for young children provided they can read.

A pleasant touch is that if the clock shows 1 o'clock the mouse falls down with a musical flourish.

Ten questions are set on the chosen option. Correct answers are rewarded with a Well done. If the child makes a mistake, he or she is given the correct answer. A score out of ten is given at the end. The graphics make good use of the Electron's high resolution capabilities. They are rather slow because the program is written in

Basic. The various sounds are pleasing enough, but there is no option to turn them off.

The programmers obviously understood the nature of small fingers. The <ESCAPE> and <BREAK> keys are programmed to re-start the sequence. It needs a <CTRL>/<BREAK> to exit the program.

One minor problem is that the correct answer flashes once when it appears. I don't think many children would notice this.

Children between the ages of four and ten who need help with telling the time could benefit from using this program. The younger ones will need help from a friendly adult. If used sensibly, this is a valuable and worthwhile program.

Sound .....	6
Graphics .....	8
Playability .....	7
Value for money .....	9
Overall .....	8

# PRO GOLF

***Professional, Originally Released On Cassette Only***

Game Type : Golf Simulation  
Author :  
Standalone Release(s) : 1990: PRO GOLF, Atlantis, £2.99  
Compilation Release(s) : None  
Stated compatibility : BBC/Electron Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ATLANTIS, 28 Station Road, LONDON SE25 5AG  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

"A GOLF SIMULATION FOR 1 - 4 PLAYERS : SUNNINGDALE (ENGLAND) and PEBBLE BEACH (USA)  
"Driving rain, freezing cold, almost dusk? No problem because now you can play two of the world's greatest golf courses without leaving the comfort of your own home."

PRO GOLF is a golf simulation for 1-4 players and features two famous courses, SUNNINGDALE (England) and PEBBLE BEACH (USA). Both courses are recorded on each side of the tape, with Sunningdale recorded first on one side and Pebble Beach recorded first on the other.

## Game Options

Single Round:- (1-4 players). Choice of championship or medal tees. Scorecards displayed between holes.

Practice:- Get to know the game. Practice any hole from any tee using any wind or ground conditions.

WIND:- 0 (no wind) to 20 (severe wind). Constant:- Player chooses wind conditions and they remain constant throughout the round. Variable:- Computer decides wind conditions and may alter these slightly between strokes.

GROUND:- Wet, Normal or Dry. This may be a random choice by the computer or user defined to last one complete round. Ground conditions will effect bounce and putting. If playing on wet or normal ground with a high wind (variable), the ground may begin to dry out before the end of the round.

BACKSPIN:- (Irons only) the ball will not bounce as far when using backspin. In most cases, it will move backwards after the first bounce.

## Playing The Game

Fairways:- Choose club, direction and strength of shot (with reference to the Club/Distance and Hazard effect tables). Press and release the space bar to start your swing and press the space bar again to hit the ball. Too early or too late and the ball will be sliced, pushed, pulled or hooked. All distances given are from tee to centre of green.

Greens:- Choose strength and direction of shot with reference to ground conditions and slope of green. Slope is between 1 (gentle) and 10 (severe). Arrow points downhill. Slope will have a progressively greater effect as the ball moves across the green. Press and release the space bar to start your swing and press the space bar again to hit the ball. Too early and the strength of shot will decrease, too late and the strength of the shot will increase. As the ball travels across the green the strength of the shot decreases. The strength remaining must be less than 24 for the ball to drop into the hole. If it is 24 or greater, the ball will continue with a slight random variation in direction. For any given strength, the ball will move roughly twice as far in dry conditions as in wet, with normal conditions lying half way between.

### Club/Distance Table (Assumes Good Shot and Full Strength)

Club	Distance (yards) travelled in air from		Max % diff. due to wind	Max allowance needed	Bounce Normal ground
	Tee	Fairway			
1 Wood	260	221	21%	12 degrees	7-37
2 Wood	244	207	23%	13 degrees	7-35
3 Wood	228	196	25%	14 degrees	7-33
1 Iron	218	196	36%	20 degrees	7-29
2 Iron	200	180	40%	22 degrees	7-28
3 Iron	184	166	44%	24 degrees	7-27
4 Iron	170	153	49%	26 degrees	7-26
5 Iron	154	139	53%	28 degrees	7-25
6 Iron	138	124	57%	30 degrees	7-24
7 Iron	124	112	62%	32 degrees	7-23
8 Iron	110	99	67%	34 degrees	7-22
9 Iron	94	83	72%	36 degrees	7-20
10 Sand iron	72	65	78%	38 degrees	7-18

Bounce varies with strength of shot. Wind has no effect on bounce. Ball will bounce further on dry ground, less on wet. Ball will only bounce on green or fairway, hazards immediately stop ball.

### Effect Of Hazards

Type of hazard	Type of lie	Allowable clubs	Reduction in distance	Random variation in chosen direc- tion plus/minus
Heavy rough	Good	4-10 irons	33%	10 degrees
Heavy rough	Bad	5-10 irons	48%	20 degrees
Light rough	Good	3-10 irons	20%	5 degrees
Light rough	Bad	4-10 irons	36%	10 degrees
Trees	--	3-10 irons	17%	5 degrees
Bunkers	--	10 iron only	33%	20 degrees
Edge of a bunker	--	all	17%	5 degrees
Edge of water	--	all	17%	5 degrees
Stands	--	all	36%	5 degrees

Out of bounds - Penalty stroke if ball lands out of bounds  
 Water - Penalty drop if ball lands in water  
 Banks - Ball bounces in a random direction when landing on any bank.

Using wrong club from a hazard will not move ball but will cost a stroke.

### Game Controls

O, P and <RETURN> keys to select CLUB, DIRECTION and FORCE. Other keys as indicated in the game. Press and release SPACE to start your SWING and press SPACE again to hit the ball.

# PROJECT THESIUS

*Professional, Originally Released On Cassette Only*

Game Alias : RICK HANSON 2  
Game Type : Text Adventure  
Author :  
Standalone Release(s) : 1985: PROJECT THESIUS, Robico, £9.95  
Compilation Release(s) : 1986: SAGA OF A SPY, Robico, £24.95  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : ROBICO, 3 Fairland Close, Llantrisant, MID GLAMORGAN CF7 8QH  
Disc compatibility : Unknown

## Instructions

*"PROJECT THESIUS: RICK HANSON 2 is a text only, machine code adventure for the BBC B and Acorn Electron. The game has been written with the aid of MIDGE The Message Compression System. It has over 200 atmospherically described locations, hundreds of messages, devious problems, many objects to collect and examine and other characters to meet. The amount of text crammed into the micros has to be seen to be believed!"*

## Entering Commands

PROJECT THESIUS has an advanced command line interpreter which allows you to type, in upper or lower case, unpunctuated sentences and multiple statements. The program analyses your command and acts on certain "key" words.

FROM TIME TO TIME, THE MESSAGE "I need more information" MAY APPEAR. This means that the computer understood part of what you typed but needed an extra word or phrase to carry out the command. For example, GIVE HELMET would not be sufficient. The correct phrase might be GIVE THE HELMET TO THE MAN or GIVE THE MAN THE HELMET.

To enter multiple statements simply leave a SPACE between each set of commands. For example, to go north then west you could type NORTH (SPACE) WEST on the same line.

Most words may be abbreviated. For example, GET becomes G, LOOK becomes L, EXAMINE becomes EX, NORTHWEST becomes NW and DOWN becomes D. Keep commands simple as it is usually the case that two or three "key" words need to be linked to carry out the desired action.

The program has a limited understanding of the words IT and THEM. They act on the last object mentioned on the current line. For example LOOK AT THE SHOES THEN WEAR THEM. To repeat a complete command line, press the TAB key.

The following are examples of command lines to help you during play. Some of the object names may have been changed so as not to spoil your enjoyment of the adventure.

LIST POSSESSIONS	INVENTORY
SWITCH ON THE LIGHT	TURN OFF THE LAMP
OPEN DOOR	EMPTY THE CHEST AND GET
LOOK AT THE DIVING SUIT	EVERYTHING
DROP THE HAMMER	TAKE ALL
EXAMINE THE FLIPPERS AND THEN	GO EAST PICK UP THE BOOK AND
WEAR THEM	READ IT
PUT THE PACKET IN THE BIN	THROW EVERYTHING
KILL THE MAN WITH THE CARVING	REMOVE THE DINING SUIT
KNIFE	CLOSE THE DOOR
TIE THE ROPE TO THE HANDLE	UNTIE THE ROPE
SHUT THE DOOR	PRESS THE BUTTON

The following system commands may also be used:

SAVE : Save current game position to cassette or disc  
RESTORE or LOAD : Load a previous position from cassette or disc

CLS : Clears the screen  
TEXT 0-7 : Set text colour  
SCREEN 0-7 : Set background colour  
QUIT : Start again

### The Dossier

"One of our most reliable sources has sent word that the enemy has made a major breakthrough in particle beam technology and is currently developing an Adventure Weapons System. This work is being carried out under the code name Project Thesius. If we are to retain the balance of power, it is imperative that we find out more about Project Thesius.

It is my considered opinion that we send an agent in, undercover, to obtain as much information as he can about the A.W.S. One of our submarines will beach the agent at Fisherman's Cove and will remain in the surrounding waters awaiting the agent's return. Further information will be provided once the agent has landed - some in subtle form so as not to raise the suspicions of the local authorities.

This mission will require the services of our most intrepid agent: Rick Hanson.

AGENT CHUCK REDHOUSE

### Hints

Make a map. Remember that all the puzzles in this adventure have logical solutions and there is no 'magic'. Read descriptions carefully as they may contain clues.

### Helpsheet

To use this help sheet, find the question to which you require either a hint or answer in the list below. [The original help sheet is set out in a different format which is more problematic with a text file format]

How do I dry myself?

H: Find something absorbent

A: Remove the flippers and diving suit then dry with the towel

How do I stop myself tripping on the path?

H: Don't be so clumsy!

A: Remove your flippers!

What should I do in the cave?

H: The sand is soft!

A: Dig

How do I open the chest?

H: Type a numeric code

A: Read the page torn from the directory. Note that "Billy" can only relate to "W. Short 640". Go to the cave, dig up the chest and then type 640

How do I use the telephone?

H: Read the notice

A: Lift the receiver, insert the coin into the slot and dial 640

How do I pass the guard post?

H: Obey all the rules!

A: Ensure you are dry and that no swimming gear is present. Give the guard the beach pass (from the overalls)

How do I map the village?

H: Make each location different. [Read the descriptions carefully]

A: Drop objects

How do I pass the dog?

H: Draw the dog's attention away from yourself

A: Drop the rabbit before opening the gate

What should I do in the field?

H: Read the location description carefully!

A: Drop snare, leave the field then return to the field to find a rabbit.

Where is the carnation?

H: Where do flowers sometimes grow?

A: The carnation is in the flower bed in the cottage garden

What use is the cheesewire?

A: Make a snare. Make sure you are not wearing the gloves!

What use is the name tag?

H: Read it for a clue

A: "Billy" gives a hint to the 'phone number and the chest code

What does the message in the newspaper mean?

H: It is a coded message!

A: The cinema name refers to the end of the forest road which lies to the east of Witherton. Go north into the forest from the end of the road. The times refer to directions. Imagine a clock face where the numbers are translated into directions. 12 would be north, 3 would be east. Therefore 3.00 would be northeast, 3.15 would be east, etc.

How do I pass the wild boar?

H: Don't hang about!

A: Use the directions from the coded message in the newspaper

How do I leave the clearing at the end of the forest?

A: Jump!

How do I work the helmet?

H: Find a source of power

A: Insert the battery into the helmet. Switch the light on/off

How do I cross the high wall?

H: Climb something nearby

A: Climb the tree. Make your make to the topmost branch. Tie the sheet to the branch and then climb down the sheet to the far side of the wall.

How do I avoid the bees?

H: Hide somewhere

A: Go into the water trough

How do I enter the castle?

H: Avoid the obvious route!

A: Wait for the helicopter to fly over for a second time. Go to the eastern area of dusty ground and a trapdoor into the castle sewers will have been revealed. Open trapdoor with a spanner then enter

Where is the spanner?

H: The village!

A: Remove your overalls in the village and wait!

The helicopter kills me. How can I avoid it?

H: Don't hang about!

A: Enter the castle

How do I prevent the guards from noticing me?

H: Stop making your presence obvious!

A: Turn the lamp on your helmet off

How do I leave the courtyard?

H: Avoid the obvious route!

A: Climb trellis

How do I work the dumbwaiter?

A: Raise or lower the dumbwaiter.

Why am I captured in the corridors?

H: You obviously don't work in the castle!

A: Wear the mask and the lab coat

How do I open the sliding door?

H: Type a password into the computer

A: Go to the alcove nearby and wait for someone to use the door

How do I open the laboratory door?

H: Find an electronic device to open the door

A: Take the weighing scales to the door and stand on them

How do I get the plans?

H: Who do you think has them?

A: Kill the professor

How do I kill the professor?

H: Strangle him

A: Wear the gloves. Strangle the professor with the snare

How do I stop the alarm going off?

H: Turn it off

A: Pull the lever in the storeroom

How do I map the mined beach?

H: Look in the security room for a clue

A: Examine the map in the security room

When I reach the jetty, nothing happens. Why?

H: Signal your colleagues

A: If your boat is not waiting, you have failed to signal the submarine

What should I do at the pinnacle?

H: Signal your colleagues

A: Signal with the helmet at the pinnacle overlooking the sea!

How do I escape the guards and dogs?

H: Don't hang about!

A: Keep moving to evade them! Remember you're a super-fit secret agent!

How do I see in the dark?

H: Shed some light on the problem!

A: Light the helmet

How do I stand on the wall?

A: You can't

How do I signal the helicopter?

A: You can't

**Instructions' Source** : FIVE STAR GAMES 3 (Beau Jolly) Inner Inlay

### **Review (Electron User)**

After playing the first Rick Hanson game, I couldn't really see that Robico could improve the quality of their games. I was wrong - they have. The dossier that comes

in the game's packaging outlines Rick Hanson's latest mission. The enemy has made a breakthrough in an advanced weapons system using it.

Rick's mission is to discover as much about it as he can, which will require him to get the plans for the system. A submarine drops him at Fisherman's Cove, a secluded spot on the enemy shoreline. The submarine will stay in the area until Rick has finished his mission and will then pick him up.

To help him, various undercover agents in the area have left instructions - some in the form of subtle clues - and others will meet him to aid him in his task. You start on the beach at Fisherman's Cove. It is very cold and the first thing you should do is find something to help you get dry.

When you find it, removing your wet clothing first will help and if you wipe the towel rather than yourself you should find that you can start to concentrate on your mission.

Examining the towel will provide a clue, and you should now look for a telephone box. Examining everything when you get there will give you some numbers to try if you go back to the cave and dig.

One of them will provide you with some clothing. A visit back to the telephone box, now that you know which number to use, will allow you to hear a message giving details of the location where you will meet your first contact.

You can ignore the helicopter for the time being, and an examination of your clothing will find you on the outskirts of Winterton, the village where you are to meet your first contact.

While PROJECT THESIUS isn't the hardest adventure I've ever played, it is the most enjoyable. The location descriptions are full with masses of detail. A superb game that I can highly recommend.

# PSYCASTRIA

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Scrolling Shoot-'Em-Up  
Author : Gary Partis  
Standalone Release(s) : 1985: PSYCASTRIA, Audiogenic, £7.95  
1990: PSYCASTRIA, Alternative, £1.99  
Compilation Release(s) : 1987: ELECTRON POWER PACK 2, Audiogenic, £9.95  
1987: FIVE STAR GAMES 2, Beau Jolly, £9.95  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+, Master 128  
Supplier : AUDIOGENIC, Winchester House, Canning Road, HARROW HA3 7SJ  
Disc compatibility : CDFS E00, DFS E00

## Instructions

The Psycastria have constructed four different types of installation, one on land, one at sea on a giant carrier ship, one on the surface of the moon and the final one in deep space. It is in these installations that they store their energy supplies in circular pods. You, now endowed with the skill and cunning of the famous Boggles, are in charge of a highly manoeuvrable craft capable of stunning mid-air changes of direction. Using just your basic astro cannons, you must attack each installation in turn, avoiding the high buildings that stand up from the surface. However, the Psycastria will put up a strong defence with their bizarre shaped fighters. You can cause as much damage as you like to the installations, but your main aim to destroy the ten circular energy pods then land on the main landing strip, signified by the leading arrows on the left hand end of the strip. Once you have landed, there is a sub-game in which you can try for a bonus by destroying aliens that fly across the screen. When that is over, you can take off for the next screen.

You start with three lives and get an extra one for every 30,000 points, and your points score determines your eventual rank (10 levels from Novice upwards).

The game starts as soon as you press 1-4 for the number of players.

## Game Controls

Use the following keyboard controls...

Z - Left, X - Right, : - Up, / - Down, <RETURN> - Fire

Cursor Down/Cursor Up - Pause/Restart

**In Pause Mode:** S - Sound, 0 - Force Demo

**Instructions' Source** : ELECTRON POWER PACK 2 (Audiogenic) Inner Inlay

## Review (Electron User)

Yes, folks. It's time once again for some good old zap and blast. Why communicate with alien life forms when you can incinerate them? The alien command bases are located on land, at sea, on the moon and in space. Your task is to decimate all four.

Play is limited to a narrow window in the middle of the screen, best described as Zaxxon viewed from directly above the ship. This provides you with a bird's eye view of the buildings and weapons which constitute the enemy base.

Your ship, always positioned mid-screen, is allowed to move from side to side in order to avoid buildings. The screen scrolls continuously from right to left or vice versa, depending on which way you are facing. Scenery and enemy forces are drawn using good detail and are animated faultlessly.

You begin your attack from the left of the command base, flying at ground level dodging to each side, shooting tanks and ammo dumps. If you haven't destroyed everything by the time you reach the right of the base your ship flips over automatically and you return to destroy the remaining defences.

The enemy is present in the form of numerous fast moving UFOs which come screaming in trying to ram or shoot you down. Owing to their high speed you cannot wait to see the whites of their eyes before firing. Adopt the age old technique of continual rapid firing whether the enemy are on the screen or not.

While on the subject of the enemy craft, do watch out for the tail gunner. On several occasions I nipped into an alien's slipstream only to receive a laser salvo from its rear end.

An annoying feature is that when your ship is destroyed you are returning to the start and all the enemy tanks and ammo dumps are replaced. This means that the only way you are going to reach screen two is to wipe out the enemy using a single ship. There is no way you are going to achieve this in your first few minutes. The aliens come thick and fast, and their aim is deadly.

PSYCASTRIA is a very good arcade game let down by rather difficult play.

# PSYCASTRIA 2

***Professional, Originally Released On Cassette Only***

Game Type : Arcade Shoot-'Em-Up  
Author : Gary Partis  
Standalone Release(s) : 1990: PSYCASTRIA 2, Atlantis, £2.99  
Compilation Release(s) : 1989: FAB FOUR VOLUME 1, Audiogenic, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+, Master 128  
Supplier : ATLANTIS, 28 Station Road, LONDON SE25 5AG  
Disc compatibility : Unknown

## Instructions

*"Aliens from the planet Psycastria have built powerful space platforms from which they are attacking the smaller planets of the galaxy. The consequences of a Psycastrian victory are too terrible to contemplate. They must be stopped at all cost."*

Start the game by pressing 1-4 to select from 1 to 4 playres. (If you want to use a joystick, press FIRE first). You start with three lives but gain an extra life for 30,000 points.

You must destroy the ten circular energy pods to be found on each level then land on the main landing strip, signified by leading arrows on the left hand side of the strip. The Psycastrians in their strange shaped space craft will do their best to stop you - and you must take care not to crash into the high buildings dotted throughout the space platforms.

In between levels there is a bonus game in which you destroy aliens which fly across the screen.

The consequences of a Psycastrian victory are too terrible to contemplate. They must be stopped at all cost.

Good Luck!

## Game Controls

Z - Left, X - Right, \* - Up, ? - Down, <RETURN> - Fire

Or use BBC compatible joy-stick.

Cursor Up/Down - Pause/Restart. Press S whilst paused to toggle sound off/on.

# PUNCMAN

*Professional, Originally Released On Cassette Only*

Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## **Review (Electron User)**

PUNCMAN is a software package containing two programs that aim to help children from the age of eight upwards learn elementary punctuation in an enjoyable way. Puncman, a sort of educated Pacman, writes a short story on the screen and a character called Noshier swipes the punctuation marks.

In Puncman 1 it's the capital letters and full stops that he takes. With Puncman 2 he becomes bolder and takes the commas and question marks as well. The pupil has to help Puncman replace them all correctly by guiding him, using the cursor keys.

There are seven stories in each game, each of a different level of difficulty. A good feature is that you can choose the story level you want without having to go through the others. One criticism is that it would be nice if you could jump back to the instructions from the game. It would also be nice to have the option of varying the speed of Puncman who might be too slow for some children, too fast for others. Having said that it's a nice program well written and instructional.

# QUEST

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade Adventure  
Author : Tony Oakden  
Standalone Release(s) : 1987: QUEST, Superior/Acornsoft, £9.95  
Compilation Release(s) : 1989: PLAY IT AGAIN SAM 8, Superior/Acornsoft, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : CDFS E00, DFS E00

### **The Scenario**

You play the role of Walter Cobra, a clever but absent-minded young lad who has two favourite hobbies: exploring and inventing. One day you stumble across a faded old map which shows the route to a buried object marked as "The Golden Dragon". The starting-point on the map is a wishing-well located a couple of miles from your home.

The next day you amble over to the wishing-well and climb down the walls of the well. Eventually you reach the bottom. You then suddenly realise that you have left behind a very important item: the map.

You decide to press on regardless. You remember some of the places shown on the map but, bearing in mind the size of the map, this quest will surely be the greatest challenge of your life!

### **Your Objective**

Your objective is to seek and find the legendary Golden Dragon. En route you must collect twelve power crystals and destroy three reactors. You must investigate: the Chapel, the Joke Shops, the Elephant House, the Armoury, the Ghost Maze, the Music Rooms and the Time Warps.

### **Energy**

At the beginning of the quest your energy is at its maximum. Energy is lost by:

- (1) encounters with creatures and robots,
- (2) falling from a great height,
- (3) colliding with the wall at high speed,
- (4) falling into the vats of acid,
- (5) stepping into electrified spikes.

Energy can be replenished by: (1) solving puzzles,  
(2) collecting the power crystals.

If, at any stage, you are losing energy very quickly, you will automatically be transported away from the danger.

If your energy reaches zero, you will be unable to continue and you will die. However, before you die try pressing certain keys simultaneously - and you may be able to live again. Of course, nothing lasts forever and you will, at most, be offered the opportunity to reincarnate four times.

You must complete the quest without the use of reincarnation in order to see the congratulatory message which finally appears.

### **Using Your Jet Boots**

Your jet boots are a fantastic invention, enabling you to fly for short periods of time. The jet boots' thrust is controlled by two keys:-

- ? - gives half thrust - allowing you to sustain a steady velocity or hover, and
- \* - gives full thrust.

Pressing both keys simultaneously produces a powerful 'hyperthrust'.

However, the jet boots can only be used in locations where there is a large triangular object present. This object is a transmogrifier - providing power for the jet boots. You will notice a large triangle on the starting screen; therefore, you are able to fly by using your jet boots on this initial screen.

Sometimes it is possible to thrust at high speed on one screen, and then coast through the next screen. It is also possible to jump from some screens - where there is no transmogrifier - onto the next screen, and then use the jet boots to thrust away.

### **Stun Grenades**

You start your quest with eight stun grenades. These are represented by small triangles on the console at the top of the screen. They may be used to:

- (1) stun some of the creatures and robots,
- (2) blow up the reactors,
- (3) exorcise the ghosts.

The grenades may be replenished by logging on to the terminal in the Armoury. One extra grenade will be granted each time - at the expense of one unit of energy.

### **Collectable Objects**

There are many collectable objects to be found lying around. These can be picked up by standing upon them (exactly in the centre of the object) and pressing the 'P' key. At most, two objects can be carried at any time. The objects currently being carried are shown at the top-right of the screen along with a brief description.

### **Power Crystals**

There are twelve power crystals to be located. A power crystal is indicated on the console at the top of the screen by a small diamond. They must be collected by walking or flying towards them. Each time a crystal is collected, a diamond on the console will disappear and you will receive an energy bonus. When all twelve crystals have been collected, a force field which blocks your route will be destroyed.

### **Reactors**

You must locate the three reactors. These are represented on the console at the top of the screen by small canisters. All three of the reactors must be blown up. This is accomplished by getting into the reactor and firing a stun grenade. The reactor will then close down, one of the canisters on the console will be removed, and a force field will be destroyed.

### **Terminals**

There are eight terminals to be interrogated. To operate a terminal, you must stand at the edge of it - and you must also be carrying a certain object. To receive a message from a terminal, you need to have the correct password. You should find the appropriate passwords as you wander around. The password for the terminal in the Armoury, for example, is to be found just to the west of the Chapel. Once you have seen a password, it will be automatically remembered.

The terminal display shows:-

- on the left - message from the system,
- on the right - a list of the passwords obtained.

Each of the eight terminals needs to be interrogated. If a terminal's function is not immediately obvious, try exploring further before you operate it. To log off from a terminal, press SPACE.

### **Doors**

You will come across many doors during your quest. Some of them can be opened by keys. At the bottom of these doors you will see a small symbol which corresponds to the shape of the handle of the appropriate key. But beware because there are duplicate keys, and using the wrong key to open a door may result in the quest being impossible to complete.

### **The Clock**

On the left of the console is a real-time clock. This starts at 10:45 and runs continuously throughout your journey. You will notice that time passes more quickly in the Time Warps. Certain puzzles are time-related, so it's wise to keep an eye on the clock.

### **General Hints**

All the creatures and robots you meet follow a predictable pattern of movement. If you can discern the patterns, it is possible to complete the entire quest without losing any energy. Try not to use a stun grenade unless it is essential to do so - a robot may be left blocking a passage and a ghost can reappear at an inopportune moment. Only four stun grenades are needed.

Try to map the scenario. As you move around, you will see several location signs. These show your current sector and level. Sector A is at the extreme left, and Sector H is at the extreme right. These signs should assist you with your orientation.

Some creatures will turn and attack you if you get too close; others will run away and hide. So try to figure out how each creature behaves. You will usually be able to outpace them with vertical movements, but not necessarily with horizontal movements.

### **Game Controls**

Z - Walk/Fly Left, X - Walk/Fly Right

\* - Use Jet Boots, Full Thrust, ? - Use Jet Boots, Half Thrust

<RETURN> - Jump/Swim, <SPACE> - Fire Stun Grenade

P - Pick Up Object (When Standing On It)

S - Sound, Q - Quiet, <COPY>/<DELETE> - Pause On/Off, <ESCAPE> - Exit game

**Instructions' Source** : PLAY IT AGAIN SAM 8 (Superior/Acornsoft) Inner Inlay

### **Review (Electron User) - "Spring Into Adventure"**

Releases from Superior's stable are always to be taken seriously, and the latest game, QUEST, is no exception. It is an arcade adventure - always one of Superior's favourite themes - in which you play the part of Walter Cobra, a clever but absent-minded young chap who has two favourite hobbies - exploring and inventing.

One day you stumble across a faded old map which shows the route to a buried object marked as the Golden Dragon. The starting point is a wishing well located a couple of miles from your home.

The next day you amble over to the well and climb down it. Only after reaching the bottom of the well do you remember the map, which is still at home. However, having come this far you decide to press on regardless and so - according to the cassette inlay - begins the greatest adventure of your life.

The objective is to seek and retrieve the legendary Golden Dragon shown on the original map. In the process, twelve power crystals must be collected and you must destroy three reactors. Destroying a reactor is achieved by getting inside it and firing a stun grenade - one of Walter's little inventions.

You control Walter with three keys: Left, right and jump. He is equipped with another of his little inventions - a pair of jet boots which will only function in rooms containing large triangular objects called transmogrifiers.

A great deal of the game's strategy derives from how you use these boots. Some rooms are so lethal it is safer if you fly through them. But no transmogrifier means you have to build up each momentum from a neighbouring location to literally coast across in free fall.

Scattered throughout the maze are eight computer terminals, which can be interrogated if you are carrying the right object and know the password.

I played this game for a long while without ever encountering a terminal, let alone a crystal. This goes to show just how large the adventure is, and it should certainly keep the old grey matter buzzing for a long time.

QUEST lacks the clean-cut feel present in some of Superior's other games. While remaining an extremely challenging and very stimulating arcade adventure, little things niggled me. The screens are very clustered and sometimes it's not too clear just what is going on.

Some floors can look solid, but you will fall through them because the screen seems to contain some actual program data, which lies across the bottom of the picture.

Summing up, QUEST is a nice arcade adventure, following in the footsteps of CITADEL and PALACE OF MAGIC. The addition of gimmicks like the jet boots and computer terminals keep the interest up and I can certainly recommend it for its addictiveness alone.

# QUEST FOR FREEDOM

*Professional, Originally Released On Cassette Only*

Game Alias : THE LAST OF THE FREE  
Game Type : Arcade-Adventure; Manic-style  
Author : Peter Scott  
Standalone Release(s) : 1986: QUEST FOR FREEDOM, Strobe/IJK, £5.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : IJK, Unit 5 Moorfields, Moorpark Avenue, Bispham, BLACKPOOL  
Disc compatibility : Unknown

## Instructions

This tremendous new machine code arcade adventure features 55 totally different complex screens, 32 aliens, 60 backgrounds, 80 walls, 32 objects, cartoon-style graphics, many puzzles, doors, teleports and much, much more!

The game involves you, as one of the last of THE FREE, trying to escape the planet via the teleport.

The usual left, right and jump controls apply, except you can fall any distance and steer yourself while doing so. Touching an alien or poisonous platform depletes your energy.

The puzzles range from simple to complex. To open a door, which shows which key you need, simply enter the screen with the door, and press the 'use' key (\*). The door opens, and the key disappears.

Some puzzles involve standing on or near objects, and dropping objects near obstacles, but more are solved simply by using the object on the correct screen.

## Game Controls

Z - Left, X - Right, \* - Use Object, ? - Pick Up/Drop  
<RETURN> - Jump, Q/S - Sound Off/On

# QUEST FOR THE HOLY GRAIL

*Professional, Originally Released On Cassette Only*

Game Alias : EPIC ADVENTURES #2  
Game Type : Text Adventure  
Author : Melvyn E. Wright & Dave M. Johnson  
Standalone Release(s) : 1984: QUEST FOR THE HOLY GRAIL, Epic, £3.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : EPIC, 10 Gladstone Street, Kibworth Beauchamp, LEICESTER  
LE8 0HL  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

EPIC adventures are full-scale machine code adventure games. Sophisticated compression techniques have been used to provide a large number of locations and puzzles in each game. The adventures take place in a fantasy world which you must explore in order to find the solution to each game. You will require a combination of cunning, logic and magic, not only to complete your task but even to remain alive.

Each game is played by typing ordinary English sentences into the computer, which responds by describing your surroundings and telling you what is happening. Full playing instructions are included in each game.

Each adventure has the following features:-

Approximately 230 fully described locations, colour, ultra-fast response, fast save of partially completed game on tape, scoring, disk compatible.

A Full-scale adventure in which you have to search the forests and wastelands around Camelot in your attempt to find the Holy Grail and return it to King Arthur.

"So you want to become a Knight of the Round Table?" boomed King Arthur. "Well, I can't bestow a knighthood on everyone who strolls in here looking for fame and fortune. First you must prove that you are worthy of such an honour."

Arthur scratched his head and paced the room for a few minutes.

"I have decided that your quest will be to find the Holy Grail and bring it back here to me."

There were gasps of amazement from all the knights gathered there.

"Impossible," shouted someone.

Arthur continued, "You will face many dangers on your journey but look for the Magic Fruits of the Forest. They will be of great help to you but use their powers only when there is no other course of action open to you."

You leave Camelot feeling more than a little apprehensive. Where will you begin your seemingly impossible quest?

## Playing Instructions

Commands may be entered in the form of complete sentences. It is usually only necessary to enter the first two or three letters of most words, but if this doesn't produce the expected result, retype in full.

The program has a vocabulary of approx. 140 words and it is part of the game to discover what these are. However, some words that you will need to know are listed below. Most of them have single letter input.

NORTH, SOUTH, EAST, WEST, UP, DOWN, IN, OUT

TAKE - To pick up an object

DROP - To drop an object

INVENTORY - To list your possessions

LOOK - To describe your surroundings

SCORE - To obtain your score

SAVE - To save the current game on tape

LOAD - To load back a SAVED game

QUIT - To end the current game

During the game you will need to use a torch. Use the words LIGHT TORCH to work it and OFF to extinguish it.

## Helpsheet

This is an alphabetical list of all the locations, objects, characters and items referred to in QUEST FOR THE HOLY GRAIL. The location and purpose of each item is given, and the information provided in one entry will usually lead you to other items in the list. If you cannot find the word you are looking for, it probably plays no significant part in the game.

It is up to you how you use these clues. You may want to read through them as you play the adventure, or you may prefer to use them only if you get stuck. In this case, a fair amount of will-power will be required to avoid reading entries that you do not wish to see!

Due to our policy of continually improving our produces, there may be minor differences in detail between these clues and your version of the game.

## Hints On Playing The Game

During your travels you will encounter various problems which can only be solved by the use of an object from a later stage of the game. When this happens, ignore the problem for the time being, and carry on until you find the object required. You should then be able to return to the problem by means of the transport mechanism provided.

**AISLE:** Inside the monastery.

**ALCOVE:** Inside the castle, to the east of the courtyard.

**ALTAR:** Inside the monastery.

**APPLE:** In the storeroom. See Fruit.

**ASHES:** In the huge cave, after killing the dragon. Not used.

**AXE:** In the woodcutter's shack. You must not let the woodcutter see you stealing his axe, so take it then hide it before you leave the shack. See Woodcutter. Use the axe to chop down a small tree. See Trees, Scoring.

**BALE OF HAY:** See Hay.

**BANANA:** At the foot of the vine. See Fruit.

**BARN:** In one of the forest clearings. Go in. See Loft.

**BARREN WASTELANDS:** See Wastelands.

**BEAUTIFUL: GIRL:** See Girl.

**MAIDEN:** See Maiden.

**BENCH:** In the barn. Not used.

**BLACK KNIGHT:** To the east of the crossroads. See Knights.

**BLACKBERRY:** In the small room at the east end of the hallway. See Fruit.

**BLANK WALL:** At the end of the dark tunnel. See Tunnels.

**BLUE KNIGHT:** To the north of the forest. See Knights.

**BRIDGE:** Across the valley. You can only cross this from south to north.

**CAMELOT:** On the top of the hill, at the start of the adventure. You must return here with the Grail, to finish the game.

**CANDELABRA:** In the small room in the monastery. You must light the candles with your burning torch. See Monk.

**CANDLES:** See Candelabra.

**CASK:** On the pass. See Vat of Oil.

**CASTLE:** To the east of the swamp, past the lawn. This is surrounded by the moat. See Drawbridge.

**CATTLE:** On the hill. For atmosphere only.

**CAVES:** **HUGE:** To the north of the pass. See Ladder.  
**SMALL:** Above the huge cave.

**CELLS:** In the dungeons. There are six of these, three to the north and three to the south of the corridor. You must pull the ring in the south, central cell to find the secret tunnel.

**CHURCH:** See Monastery.

**CLEARING:** There are two, both in the forest.

**CORRIDOR:** In the dungeons. See Cells.

**COURTYARD:** Just inside the castle adventure.

**CROOK:** To the north of the castle. You will need this to reach the lever.

**CROSSROADS:** To the east of the forest.

**DARK ALCOVE:** See Alcove.

**DEADMAN'S END:** To the south of the swamp.

**DIAMOND NECKLACE:** See Necklace.

**DINGY STOREROOM:** See Storeroom.

**DOORS:** **COURTYARD:** Surrounding the courtyard.  
**GREEN:** At the top of the spiral staircase. Go in. See Small Rooms.  
**MONASTERY:** See Hallway.  
**OUTSIDE TOWER:** See Tower.  
**RED:** At the top of the spiral staircase. Avoid it.  
**YELLOW:** At the top of the spiral staircase. Go in. See Small Rooms.

**DRAGON:** In the huge cave. Throw the cask of oil at it.

**DRAWBRIDGE:** This is used to bridge the moat. See Lever.

**DUNGEONS:** Underneath the castle. Down the steps to the south of the courtyard. See Cells.

**EBONY SWORD:** On the Island. Not used. Note, it does not kill the black knight. See Knights.

**EMERALD SWORD:** In the long grass next to the lawn. See Swords.

**FALLEN: ROCKS:** At the end of the pass. You cannot get past these.  
**TREE:** At the end of the sloping passage from the small cave. See Lance.

**FLINT:** Near Deadman's End. Use it to light the torch.

**FOREST:** To the east of Camelot.

**FRUIT:** There are four of these. Most of them provide a transport mechanism when eaten, as follows:-  
**APPLE:** Returns you to the castle entrance.  
**BANANA:** No effect.  
**BLACKBERRY:** Returns you to the crossroads.  
**RASPBERRY:** Returns you to the north side of the bridge.

**FURNITURE:** In the shack. For atmosphere only.

**GIANT OAK TREE:** See Oak Tree.

**GIRL:** On the island. Give her the necklace and she will offer you the Grail, and one sword. Take the sapphire one.

**GLOWING OPAL:** See Opal.

**GOLD: SWORD:** In the barren wastelands. See Swords.

**THRONE:** See Throne.

**GRAIL:** See Girl, Scoring.

**GRASS, LONG AND SHORT:** Next to the lawn.

**GREEN: DOOR:** See Doors.

**KNIGHT:** At the castle entrance. See Knights.

**HAIRY PAW:** Underneath some of the iron rings. You've lifted the wrong ring! See Rings.

**HALLWAY:** At the north end of the monastery. There is a door at each end. The door at the west end is the main exit from the monastery. Go out. You will need the large key to open the door at the east end.

**HAMMER:** In the barn. Not used.

**HAY:** In the loft. Use this to feed the horse. See Scoring.

**HEDGES:** In the forest. For atmosphere only.

**HILL:** See Camelot.

**HOLE IN ROOF:** In the huge cave. See Caves.

**HOLY GRAIL:** See Girl.

**HORSE:** Near the barren wastelands. See Hay.

**HUGE: CAVE:** See Caves.

**STONE:** At the east end of the valley. See Opal.

**IRON RINGS:** See Rings.

**ISLAND:** In the lake. See Raft. Tie the raft to the saplings before leaving it. See Rope.

**JETTY:** To the north of the lake.

**KEYS: LARGE:** At the top of the spiral staircase. See Hallway, Scoring.

**SMALL:** On the path to the north of the undergrowth. See Witch, Scoring.

**KNIFE:** In the small room at the top of the castle. See Rope, Scoring.

**KNIGHTS:** There are five of these, each of a different colour. You will need to find the appropriate sword to deal with each knight, as follows: Blue knight - sapphire sword; Red knight - ruby sword; Green knight - emerald sword; Yellow knight - gold sword; Black knight - you cannot kill the black knight with any sword.

**LADDER:** In the barn. After using it to climb up to the loft, carry it with you. Use it to reach the hole in the roof of the huge cave. (You will have to drop it again before you can climb it!) See Scoring.

**LAKE:** To the east of the path through the undergrowth. See Raft. Sail east to get to the island, and north to the jetty.

**LANCE:** In the alcove. Use this to move the fallen tree.

**LARGE: KEY:** See Keys.

**OPAL:** See Opal.

**LAWN:** To the east of the swamp, in front of the castle.

**LEAFY PLATFORM:** Up the oak tree. Go east towards the trunk of the tree and climb down the vine. You cannot climb back up here.

**LEVER:** At the front of the castle, pull this to lower the drawbridge. You cannot stretch across the moat to reach it. See Moat.

**LOFT:** Climb the ladder in the barn.

**LOGS:** Made by sawing up the tree. See Trees.

**LONG: GRASS:** See Grass.

**ROPE:** See Rope.

**MAIDEN:** Behind the green door. You are advised not to listen to her!

**MOAT:** Surrounding the castle. If you walk around the castle to the east side, you can then get down the bank of the moat and wade through it. You will need to do this in order to be able to reach the lever, but see Crook.

**MONK:** He appears when you light the candles. See Opal.

**NECKLACE:** Given to you by the witch when you release her. Give it to the girl.

**NICHE:** See Huge Stone.

**OAK TREE:** In the forest to the south of the crossroads. Climb this until you reach the point where the branches spilt, then take the west one until you fall onto the leafy platform. In early versions of the game, a wrong move was fatal. See Trees, Leafy Platform.

**OIL:** See Vat of Oil.

**OLD BARN:** See Barn.

**OPAL:** Given to you by the monk. Place it in the niche in the huge stone at the end of the valley.

**PASS:** At the east end of the valley, beyond the huge stone.

**PASSAGE:** See Sloping Passage.

**PAW:** See Hairy Paw.

**PILE OF: ASHES:** See Ashes.

**LOGS:** See Logs.

**PLANK:** In the barn. See Stepping Stones, Scoring.

**PLATFORM:** See Leafy Platform.

**RAFT:** You have to make this yourself. See Trees and Rope. Use it to sail across the lake to the island. (Drop it then type the direction you wish to go.)

**RASPBERRY:** In the narrow passages next to the small cave. See Fruit.

**RED: DOOR:** See Doors.

**KNIGHT:** Above the valley. See Knights.

**RESURRECTION:** If you get killed, you can choose to be resurrected up to a maximum of three times. You will lose points for this which you cannot regain, so you are advised to load back a saved position whenever possible, instead of opting for resurrection.

**RINGS:** In the dungeons. See Cells.

**RIVER:** At the northeast edge of the forest. Use the raft to cross it on the return journey. (Type Wait when the program suggests that you wait.)

**ROCKS:** At the end of the pass. See Fallen Rocks.

**ROOM:** See Small Room.

**ROPE:** At Deadman's End. You can cut this in half with the knife. One half is used to tie the logs together to make the raft. See Trees. The other piece is used to tie the raft up to the island.

**RUBY SWORD:** In the forest. See Swords.

**SAPLINGS:** On the island. Tie the raft to these. See Island.

**SAPPHIRE SWORD:** On the island. See Swords.

**SAW:** In the barn. See Trees.

**SCORING:** Apart from scoring points by solving the various puzzles etc, you also score points for picking up the following objects: Grail, axe, plank, ladder, knife, all the swords and keys. Note that you do not need all of these objects in order to complete the game.

**SHACK:** In one of the forest clearings. Go in. See Woodcutter.

**SHEPHERD'S CROOK:** See Crook.

**SHORT: GRASS:** See Grass.

**ROPE:** See Rope.

**SILVER SWORD:** On the island. Not used.

**SLOPING PASSAGE:** Next to the small cave. You will have to crawl along part of this.

**SMALL: CAVE:** See Caves.

**KEY:** See Keys.

**ROOM:** 1) At the top of the castle, overlooking the monastery.

2) Behind the door at the east end of the hallway in the monastery.

3) At the top of the spiral staircase. These contain the witch and the maiden.

**SPIRAL STAIRCASE:** Inside the tower.

**ST. BENEDICT'S:** See Monastery.

**STAIRCASE:** There are a number of these inside the castle. See also Spiral Staircase.

**STEPPING STONES:** These form a path through the swamp. The most southerly one is just out of reach, and you must drop the plank here to bridge the gap.

**STEPS:** On the north side of the valley. See also Staircase.

**STONE: HUGE:** See Huge Stone.

**TOWER:** See Tower.

**STOREROOM:** To the north of the courtyard.

**SWAMP:** To the south of the forest, beyond the large oak tree. See Stepping Stones.

**WORDS:** These are used for dealing with the knights. You can only carry one at once. See Knights, Scoring.

**TABLE:** In the small room in the monastery. You cannot do anything with this.

**THRONE:** On the island. For atmosphere only.

**TOOLS:** In the Barn. See the entries for the individual tools.

**TORCH:** In the oak tree. You can see in the dark by lighting it with the flint. You will also need it to light the candelabra.

**TOWER:** At the west end of the valley. Go in the door at the bottom.

**TRANSPORT MERCHANT:** See Fruit.

**TREES:** In the forest. Most of these are for atmosphere only. If you have the axe, you can chop down one of the small trees to the east of the crossroads, then saw it up into logs with the saw. See Raft. There is one large oak tree in the middle of the path to the south of the crossroads. See also Oak Tree and Fallen Tree.

**TUNNELS:** Underneath the dungeons. These emerge behind the monastery wall. Push the wall and go north to enter the monastery. After you do this, the wall will close again.

**UGLY WITCH:** See Witch.

**UNDERGROWTH:** To the north of the fallen tree.

**VALLEY:** To the east of the barren wastelands. This is spanned by the bridge.

**VAT OF OIL:** In the barn. You cannot do anything with the vat itself but when you have the cask of wine, empty it and fill it with oil. See Dragon.

**VINE:** Up the oak tree. Climb down this. See Leafy Platform.

**WALL:** At the end of the dark tunnel. See Tunnels.

**WASTELANDS:** To the north of the monastery.

**WILD HORSE:** See Horse.

**WINE:** Do not drink it.

**WITCH:** Behind the yellow door. Release her with the small key. See Necklace.

**WOODCUTTER:** He will appear when you leave the shack. Do not let him see you leaving with his axe.

**WOODEN: BENCH:** See Bench.

**SHACK:** See Shack.

**WOODWORKING TOOLS:** In the barn. See the entries for individual tools.

**YELLOW: DOOR:** See Doors.

**KNIGHT:** On the path to the north of the undergrowth. See Knights.

### **Review (Electron User)**

Yet another superb adventure from Epic. This time you aspire to join King Arthur's round table at Camelot. Unfortunately, it is not quite as simple to join as you thought. In fact Arthur decides that you will have to perform an deed of valour to prove your worthiness. After much deliberation he decides that the task you will have to perform is to find and return the Holy Grail.

To this there are gasps of amazement from the assembled knights and one even shouts "Impossible!" How right he is! I've been trying for the last two weeks so I should know!

You start your quest on a hilltop outside Camelot. Your first task is to explore the surrounding forest. You will find various objects scattered around here and two very annoying knights who won't actually attack you but do insist on refusing to let you pass.

You eventually come to a large tree. You can climb it with a ladder and a plank (hint!) and even fall partway down through the branches before climbing down to the ground. But unless I'm missing something, you can't then climb back up it!

Your next task is to find your way through the swamp. Here the save game facility is a life-saver, literally! Once through the swamp you have another one of those knights to thwart. But providing you have successfully investigated the surrounding countryside you shouldn't have any real problem here.

Once the knight is vanquished you have a magnificent castle to explore, complete with dungeons, secret passageways leading to mysterious and distant locations and doors that refuse to open. I shan't tell you any more about the adventure - I couldn't if I wanted to. This is where I got stuck!

Suffice it to say that there are about 230 locations, of which I visited about 100, a maximum possible score of 8,000 (I got 2,000) and about 140 words recognised by the program. The puzzles are superb and I think praise is due to the program's writer.

As is usual with Epic, a small cassette insert gives general instructions and a synopsis of all their other adventures. The game loads in three parts. The first program displays the Epic logo and produces a merry little tune. The second gives background information on the scenario, with some simple commands to get you started and then loads the main program.

Overall, while I wouldn't recommend it to an absolute beginner, it is a superb adventure and excellent value for money. Compulsive! I think having now tried all three of the Epic adventures, that they must be the yardstick by which all future adventures for the Electron should be judged.

P.S. If anyone gets those doors open, please let me know how you did it!

Merlin, ELECTRON USER 1. 9

# QUICK THINKING PLUS

***Professional, Originally Released On Cassette Only***

Game Type : Educational  
Author :  
Standalone Release(s) : 1983: QUICK THINKING PLUS, Mirrorsoft, £6.95  
Compilation Release(s) : None

## Instructions

*"Two mind-stretching games by Widgit Software*

*SUM VADERS - armed only with mental power and nimble fingers you eliminate invading alien robots by adding or subtracting vital numbers. But the alien forces continuously speed up their invasion. Can you survive and save the world from a robot invasion?*

*Several levels of difficulty and a two-player game with a handicap option make SUM VADERS an equal challenge for all family members, from 8 years to adult.*

*ROBOT TABLES - control a machine processing raw material into a sequence of perfect robots. Do you know enough arithmetic to set the machine to the right process? The automatic factory won't stop if you give the wrong instructions.*

*Several levels of difficulty and a choice of speed makes ROBOT TABLES an ideal way to exercise multiplication tables both for early learners and more advanced children. Recommended from 6 or 7 to 12 years old and beyond.*

There are two great games on this cassette - SUM VADERS and ROBOT TABLES. They are taped in this order on Side A, with back-up copies in the same order on Side B.

You can avoid long waits by running the tape through on Fast Forward or Rewind until you find the program you want. If you have a tape counter on your recorder you can use it to locate the programs easily if you note the readings at the start of programs, having first set the counter to zero at the tape start.

You are automatically given the choice to load ROBOT TABLES when you take the exit option from SUM VADERS.

## Playing The Games

### Sum Vaders

Alien invaders in numbered space ships fly into vision, hover and drop an invading robot, also bearing a number. The aim of the game is to eliminate the robot before it lands on Earth. In the Adding version of the game this is done by adding the two numbers together. In the Subtracting version the Robot's number must be taken away from the space ship's number.

Typing in the correct answer before the robot lands destroys the robot.

If you are wrong or too late, the robot will land. The correct answer is displayed.

After you have entered a number of right answers the game speeds up, the space ship flies at a lower level, and you get a shorter time in which to answer. As the speed increases the score given for each correct answer also goes up.

The game ends when give robots have landed. In each game session the best score is recorded on the screen.

The game can also be played by two players, each choosing a different level of difficulty. This allows a child to play an adult and still have a chance of winning. In the two-player game, high scores are separately recorded for each player.

At the end of each game there is a choice to play again at the same level (press <1>) or return to the choices at the start of the game (press <0>).

At the start of the game these are the choices you will be offered:

#### **Adding or Subtracting**

- \* press <A> for adding sums
- \* press <S> for subtracting sums

#### **Instructions for players**

- \* press <N> to see illustrated instructions
- \* press <1> for one player
- \* press <2> for two players
- \* press <0> to stop

#### **Level of Difficulty**

- \* press <1> :only numbers up to 9 are used
- \* press <2> :one number is in multiples of 10, and the other is a single digit (eg  $30 + 7 = 37$  or  $50 + 2 = 52$ )
- \* press <3> :two digit numbers may be used, but a carry is not produced
- \* press <4> :any numbers up to 99
- \* press <5> :as choice 4, but the action can get very fast!

When there are two players, Player 1 chooses the level of difficulty first, as shown in the on-screen instructions.

#### **Robot Tables**

You are in charge of a robot making machine and your aim is to make a sequence of ten perfect robots. The raw material you need to make each robot in the sequence is fed automatically to the machine. Each lump of raw material carries a number and you must tell the machine whether or not the number on the lump is next in the sequence.

Only two controls are used:

- \* press <1> if the raw material number is the next (or first) correct number in the sequence
- \* press <SPACE> if the raw material is NOT the correct number in the sequence

#### **Which number is right?**

You find out the right numbers in the sequence by working out the multiplication tables in your head. A panel on the front of the machine shows which multiplication table is being used for a sequence.

For example, if the panel shows that the multiplication table is 3, the raw material you accept for the machine to make the first robot is 3. All other numbers must be rejected. Raw material for the second robot must be numbered 6, for the third, 9 and so on.

The multiplication table in use might be any number up to 12, depending on which level of difficulty you have chosen.

#### **What does the machine do?**

Suppose we are still on the three-times table and we are starting to make the first robot.

If the raw material is numbered 3, which is the right answer, and you accept it (press <1>), the machine makes a perfect robot. If you reject it (press <SPACE>), the machine makes a damaged robot.

But what happens if the first lump of raw material is not numbered 3, let's say it's 4, for example? If you accept it (press <1>), the machine burns up the raw material. If you reject it (press <SPACE>), the machine recycles the raw material.

### **Scoring points**

You score points for making good robots and for recycling material. You lose points for bad robots and wasted material. A panel on the right of the machine records your score. You earn bonus points for every sequence of ten perfect robots.

The machine's speed is fixed and you must answer while the indicator light is green, before the raw material enters the main machine. There is a warning sound before the light turns red and you miss your chance to answer.

### **Learning and Testing**

There are two modes for the game - Learning and Testing.

Learning mode displays the number sequence of the table before the game starts. There is a generous response time and answers are displayed after each robot is made.

Testing mode has a shorter time in which to respond and answers are not displayed until the end of a sequence of ten robots. However, more points are awarded for correct answers (and lost for wrong ones!)

At the start of the game these are the choices you will be offered:

### **Instructions and mode**

- \* press <N> to see instructions
- \* press <S> for the Learning mode (slow)
- \* press <F> for the Testing mode (fast)
- \* press <0> to stop

### **Groups**

- \* press <1> for two-times table only
- \* press <2> for 2, 3 and 10 times tables
- \* press <3> for 2, 3, 10, 5 and 11 times tables
- \* press <4> for 5, 11, 4, 6 and 9 times tables
- \* press <5> for 6, 9, 8, 7 and 12 times tables

**Instructions' Source** : QUICK THINKING (Mirrorsoft) Back Inlay And Booklet

### **Review (Electron User)**

This package by Mirrorsoft contains two games for youngsters, SUM VADERS and ROBOT TABLES. Both programs are designed to give practice in number skills.

SUM VADERS requires you to use some quick thinking to stop the invasion of robots. Addition, subtraction, multiplication and division problems are presented and you have to get the answer right first time. An alien spacecraft bearing a number moves across the screen. It releases a robot invader which also has a number.

The object of the game is to destroy the robot before it reaches the ground. To do that you have to type the correct response to the sum. In the addition option, you have to add the two numbers, while the subtraction option has you taking the smaller number from the larger.

The product is entered in the multiplication option and the smaller number is shared into the larger in the division option. As your skills increase, so does the difficulty, the attackers coming in lower and faster. Your turn ends when five aliens get past and land on Earth.

There are five levels of difficulty for the adding and subtracting options. Only three levels are available in the multiplication and division options.

A nice feature of this program is that two people can play in competition, each player at his own level of difficulty. This enables a child to compete with an adult, yet still be able to win. In the two-player game, high scores are separately recorded.

The second program, ROBOT TABLES, is based upon a manic machine designed to frustrate the would-be mathematician. The aim of the exercise is to create robots - in contrast to SUM VADERS, where the object was to destroy them.

The robots are produced from lumps of raw material that is fed in from the left-hand side. Each lump contains a number. You have to decide whether that number is the next one in the sequence that is displayed below. If you reject good material - a correct answer - or if you accept bad material - a wrong answer - the machine makes a damaged robot.

If the material is OK and it is accepted by you, a perfect robot is produced. If you correctly reject bad material, it's recycled. Points are credited for material recycled and each undamaged robot produced.

Bonus points are given for every sequence of ten robots that are created. There are two modes for the game - learning and testing. In the learning mode the correct sequence of numbers is first displayed. There are much longer response times and answers are displayed after each robot is made.

The testing mode is much faster and points are lost for incorrect responses. I'd be happy to use the programs with most youngsters.

John Woollard, ELECTRON USER 3. 3

# QWAK!

## *Professional, Originally Released On Cassette Only*

Game Type : Platform Game With Cute Characters  
Author : Jamie Woodhouse  
Standalone Release(s) : None  
Compilation Release(s) : 1989: PRES GAMES DISC 4, PRES, £9.95  
1990: PLAY IT AGAIN SAM 10, Superior/Acornsoft, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

### Objective

You take on the role of QWAK, a highly intelligent and athletic duck. The objective (on each level) is to collect all the keys, then go to the door to exit from the level. You should collect the fruit as you go along for extra points. There are 24 levels of play. If all 24 are completed, the levels repeat but are more difficult.

You must avoid the monsters and the spikes. You can shoot bubbles at the opposing monsters. When a monster is hit by a bubble, the monster will disappear for a short while. When it reappears, it moves at twice its original speed and is then immune to bubbles.

### When you collect a potion bottle:

if there is any fruit remaining, the fruit and spikes will be swapped;  
if there is no fruit remaining, the monsters will be stunned for a short while.

You start with 3 spare lives. An extra life is awarded for every 8 flowers collected.

If you complete a level without killing any of the monsters, the message "PEACEFUL!" is displayed and a bonus of 100 x number of the level is awarded.

## Game Controls

CTRL - Left, A - Right, <RETURN> - Jump, <SHIFT> - Shoot Bubble  
S/Q - Sound/Quiet, <COPY>/<DELETE> - Pause On/Off, <SHIFT><ESCAPE> - Quit Level

<SPACE> - Start Game at Level 1 (3 spare lives)

<ESCAPE> - Start Game at last Level recorded (0 spare lives)

P - Enter password (0 spare lives)

Passwords allow immediate access to levels 2 to 21, but you will have no spare lives. The passwords will allow you to practise the levels. To achieve the maximum score (and level) it makes sense to play the game from the first level.

# RANSACK

***Professional, Originally Released On Cassette Only***

Game Type : Arcade Sideways Scrolling Shoot-'Em-Up  
Author : Peter Scott  
Standalone Release(s) : 1987: RANSACK, Audiogenic, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : AUDIOGENIC, Winchester House, Canning Road, HARROW HA3 7SJ  
Disc compatibility : Unknown

## Instructions

*"Peter Scott, the wizard of arcade adventures, presents his first all-action shoot 'em up! You control AL, the globular droid, in a revenge mission against the eight rebellious planets of the Ryvian system. Beware the electric spikes on the surface of the planet, avoid the evil aliens disguised as cuddly computer characters. Collect the laser weapons and bombs as they float past, otherwise you won't survive the hazardous conditions on the planet surface. RANSACK is a high-speed arcade extravaganza that will test your skill and reactions to the limit!"*

"We want revenge!" - that was the surprising decision of the Democratic Council of Planets, normally a friendly bunch of well-meaning but ineffectual representatives.

The Ryvian system of planets had refused to pay its share of the council budget, and then had the nerve to eat the council representative sent to negotiate with them! So, reluctantly, the council invoked the so-called 'Ransack' clause, which allowed them to punish defaulters. Unfortunately, due to the budget shortfall they could not afford to send a battle fleet, only a second-hand and somewhat battered AL (artificial lifeform - the words ROBOT and DROID are regarded as discriminatory, and are no longer used).

## Playing The Game

You control AL, who owing to a stabiliser systems failure can only bounce along, as he wreaks revenge on the eight planets of the Ryvian system. Although you set out with a limited supply of weapons further supplies are teleported onto the planet's surface, where they get swept up by the violent winds that sweep across all of the planets in the system.

Their weapons are contained in protective metal cases, which are marked on the outside with a symbol indicating the type of weapon inside. These include multi-directional and multiple pulse lasers, smart bombs and random bombs (marked with ? to confuse the enemy).

Watch out for the electrified sections of the planet's surface which will drain your energy, and beware the weird alien lifeforms sent against you by the Ryvians. Though they take the disguise of cuddly characters from well-known computer games underneath they're 100% solid evil. Ignore your better instincts and blast them!

Your remaining energy is shown as a series of blocks beneath your score; each hit costs half a unit of energy to be lost. Bombs that you collect are shown on a monitor display to the right, whilst weapons are displayed on the left; only one bomb or weapon can be maintained at a time.

## Hints And Tips From Peter Scott

Learn the planet surface. Stay away from the edges of the screen. Some spikes only take energy if you are moving when you hit the ground.

Conserve your smart bombs: they are usually only given if needed! In the bonus game at the end of each screen you should fire constantly; when the X1 spaceship changes direction an alien will probably appear.

### Game Controls

Z - Left, X - Right, <RETURN> - Fire weapon shown on left hand monitor  
<SHIFT> - Activate the bomb on right hand monitor  
<COPY>/<DELETE> - Pause/Restart, <ESCAPE> - New Game  
Q/S - Sound off/on (when the high score table is showing)

**Instructions' Source** : RANSACK (Audiogenic) Back And Inner Inlay

### Review (Electron User) - "Fun On A Pogo Stick"

It seems just yesterday that I was enthralled with Peter Scott's OMEGA ORB. Like an old friend, Mr Scott is back again with something resembling a space hopper on a pogo stick.

However, Al is not your average toy, but an artificial left form - terms like robot and android having long since been abandoned on grounds of mechanical discrimination. Initially, he's just armed with a front firing laser, but has the ability to collect a myriad of different weapons, including four types of smart bomb and six types of laser.

The scenario is a good old shoot-'em-up, with plenty to shoot at. There are 44 different aliens with 200 attack patterns, all spread over eight planetscapes. Each planet (named after a popular arcade game) is no less than 104 screens wide, giving an action-packed 832 screens.

At the end of each level you are awarded a bonus screen. You have to bounce on top of an alien spaceship while shooting the baddies. I haven't managed it yet.

The scrolling landscape moves at a devilish speed and you'll have to practice hard to see the end of each level.

What makes RANSACK so challenging is a feature that is very easy to miss when you first play the game, especially when, like me, you don't read the instructions.

The landscape is not just scenery - it's a hazard. As you bounce along merrily blasting away at every mild mannered alien in sight, you might fail to notice the appearance of electrified spikes, which have quite a shocking effect on your energy level.

The spikes can be neutralised by a certain type of smart bomb - you will have to discover which one yourself. The problem with smart bombs, and other armament for that matter, is that they fly through the air along with everything else and are liable to be shot by a stray laser bolt, so beware.

The sound employed by RANSACK is just what you'd expect from this type of game, with lots of atmospheric pops, bangs and whizzes. While the title tune sounds familiar, it's unusual and witty.

This is one for every collection. Now where did I put my multi-function, ultra-cluster, auto-sighting, hyper-ranging pogo stick?

Sound .....	8
Graphics .....	9
Playability .....	8
Value for money .....	8
Overall .....	8

## Instructions

Your aim is to obliterate all the enemy ships on the scanner and then dock with your mothership, without running out of fuel.

Use your scanner to locate enemy ships. They appear as blue or yellow dots. Your mothership is indicated by a green dot. Fireballs appear as red dots until they either hit you or burn out. The bottom right hand corner of your cockpit is equipped with a movement scanner.

Once an enemy ship gets within range, it starts to generate fireballs which if avoided eventually burn out. If they do hit you, your fuel is lost. When your fuel starts to run low, a warning siren can be heard.

When each level has been successfully completed, you are given a rating. How quickly can you attain the rank of 'Captain'? (Start level 1).

The game is over if you run out of fuel or if your mothership sustains four hits. Fuel is renewed at the start of every level.

## Control Keys

Z - Left, X - Right, : - Up, / - Down, <RETURN> - Fire.  
S/Q - Sound/Quiet, <ESCAPE> - Quit Game.

Use 1-9 before the game to select the start wave. The default is one.

## Instructions

## The Objective

Ravelskull Castle consists of 4 levels, each exactly 64 times the size of the screen. To complete the adventure, you must work your way through each of the 4 levels collecting the treasure you find and assembling the mystical silver crucifix. Each levels holds one part of the crucifix; you may pick this up only after you have found all the treasure on that level. You are able to pick up various objects throughout the castle.

Most of these objects are helpful to you, but some are a hindrance and some are even deadly!

After picking up an object, you may attempt to utilise it by following this procedure: (a) check that the object is positioned in your hand by using the "<" and ">" keys; (b) press the RETURN key to use the object. Some items may only be used in certain locations. You must logically deduce where and when you should use each item.

## Castle Objects

<u>Ravenbees</u>	- The deadly castle guardians
Acid Pools, Spiked Disks, Man-Eating Plants	- Contact with these is fatal
Spiked Gates, Cell Doors/Bars	- Some of these can only be opened with a key
Wooden Casks	- They may be pushed, but only after the player has a Strength Scroll
Time Door	- An enchanted door which opens and closes by itself regularly
Time Shaft	- A special area on the final level. The last part of the crucifix has been carefully hidden by Baron Strieg in another dimension

By pushing 4 wooden casks into its 4 alcoves, the time shaft can be opened, revealing the last part of the crucifix. Other castle objects include : coffins, earth, stone pillars and the treasure.

## Quest Objects

These objects may be picked up, used and dropped as explained earlier. The quest objects include : keys, pick-axes, dynamite, detonators, scythes, spades, hand-axes, bows and arrows, bells, food and wine (Beware! it may be poisoness or have strange side-effects), magical scrolls and potions.

## Magical Scrolls

- (1) Strength - Reading this scroll allows the player to push wooden casks.
- (2) Time Chime - Synchronised with the time door.
- (3) Lightning Strike - This scroll is fatal!
- (4) Enchanted Door - Causes a door to open somewhere in the castle.
- (5) Teleport - The player is instantly teleported to an otherwise inaccessible area.

- (6) Super Speed - An interesting scroll which allows the player to run about five times faster than normal.
- (7) Energy Drain - Another dangerous scroll.
- (8) Dispell - This scroll simply dispells the effects of the last scroll used.

### **Magical Potions**

- (1) Speed - Drinking this potion enables the player to run twice as fast as normal.
- (2) Slow - Causes the player to run about four times slower than normal.
- (3) Poison - This is a powerfully poison which is fatal, instantly.
- (4) Strength - The player increases his health by drinking this potion.
- (5) Loser - Causes the player to lose all the objects he is carrying.
- (6) Dispell - Dispells the effects of the last potion.

### **Game Controls**

* .....	Run North	COPY .....	Freeze on
? .....	Run South	DELETE .....	Freeze off
Z .....	Run West	< ..	Move hand left (to select object)
X .....	Run East	> .	Move hand right (to select object)
P .....	Pick up object	E .....	Examine object
(You cannot carry more than 3 objects at a time)		J ...	Level jump (only available after completing the previous level without losing a life)
RETURN .....	Use object	S .....	Sound On
D .....	Drop object	Q .....	Sound Off
1 .....	Kill yourself		
ESCAPE .....	Restart game

### **Review (Electron User) - "A Castle With Style"**

The evil Baron Strieg has stolen the silver crucifix. Without its protection, the village of Austburg is powerless against the zombies which inhabit the local swamp. To save the village you must enter Ravenskull castle and locate the four parts of the crucifix.

Before starting this arcade adventure you select whether you are to be an elf, wizard, warrior, or just an ordinary run-of-the-mill adventurer. This appears to determine what sort of treasure you collect as you explore the castle. Wizards collect crystal balls, warriors get shields, and so on.

The screen display is divided into two main areas. The first is the status section, which shows your score, health rating, number of lives and what you are carrying. The rest of the screen forms a large window into the castle and you are treated to an aerial view of yourself and your immediate surroundings.

As you walk in one of the four possible directions the screen scrolls smoothly in that direction revealing more of the castle. The graphics used are some of the best I have seen on the Electron. The playing area is 64 times the size of the action window. There are four levels to the castle with one quarter of the crucifix hidden in each and you can only pick up a piece of crucifix when you have collected every item of treasure on that level.

As you might expect, the castle is constructed like a giant maze, with sections closed off by different types of door. Some of these can be opened using keys, but although they all look the same each one will only open one specific door.

Every time you play the game the objects are in the same position so you quickly learn where to find them.

Apart from keys you will find magic scrolls and potions which will give you special powers - or poison you!

Some of the castle's nastier residents are the ravenbees. These follow specific routes along some of the corridors, and you will need split second timing to avoid these little beauties.

I loved RAVENSKULL - there is a genuine feeling of satisfaction when you guess the correct use for an object or gain access to a new section of the castle. The puzzles are devious and the correct route is not always obvious but you know instinctively when you're on the right trail.

# READ RIGHT AWAY PACK 1

*Professional, Originally Released On Cassette Only*

Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## **Review (Electron User)**

Highlight Software aims this pack at five to eight year olds and it's designed to help develop reading skills. There are two programs on the tape, and each can be played by an individual or by up to four people in competition.

The first game is called Splashdown and the idea is to collect a letter to complete a three letter word. You have a boat with two letters already in it. When an aeroplane flies over, flashing in your colour, you must press a letter that will complete a word.

If correct, the letter drops into the boat, which then sinks. Sink five boats and you are the winner. Any player who completes five words in the same round is a winner, and is rewarded by having a submarine pull a "win" banner to his name.

This program is well constructed and seems to have a good vocabulary. Different skill levels refer to the number of permitted mistakes. There is also an option to give each player the same two letters - all of which make a different word when completed.

One other very useful option is the choice of which of the three letters is missing from a word. The graphics are pleasing and good use is made of double-sized lettering. A good program.

The second program, Firefight, is probably aimed at the eight year olds rather than the fives. You play the part of a fireman who must rescue a girl from a burning house. To reach her you must cross some burning gaps. These can be bridged by selecting the appropriate two letters to complete a word.

There are four gaps to fill, and then the fireman can reach the girl and carry her to safety. As in the first game, there are good graphics and double-height text and a useful range of consonant blends to practice with.

One gripe with this program is the use of cursor keys, which are too near <BREAK>. This is a bad mistake in software designed for young children.

A problem with both programs is that the auto repeat is left on. Again, youngsters are inclined to be heavy-handed on the keyboard and this little bug can cause frustration.

Overall, though, this is a good package. It appeals to children, and people looking for educational software could well consider this one, especially as there are three more packs in the series. These aim to develop word-building skills with six to eleven year olds.

## **Review (Electron User - Double Review Of PACKS 3 and 4)**

READ RIGHT AWAY is a series of four packs each containing two programs designed to give children practice in reading. Here I'll be reviewing the packs for older children. Pack 3, aimed at ages 7-10, contains two programs, Magic E and Break-in. The two programs in Pack 4, Sortout and Letterbugs, are aimed at 8-11 year olds.

The teaching is based upon the phonics approach of sounding out individual letters to make a complete word. The first pack I tried had an exercise with magic e's, that trailing vowel that changes the vowel sounds of bit into bite and hat into hate.

The object of the game is to rescue a damsel from the top of a tower by building a ladder of four of these magic e words. The program contains a vocabulary of over a hundred words, divided into fifteen groups. The random selection guaranteed that repetition was not a real problem.

The sexist nature of the presentation appals me and is quite unnecessary. The teaching of reading does not have to portray the inequalities of sexual stereotypes.

Break-in, on the other hand, makes a mockery of the police. If the child succeeds in helping them capture the four burglars, the policemen dance up and down the screen...

The educational principle is sound. The child has to discriminate between the soft and hard g and c sounds. This program, like the others, requires the use of the RETURN and cursor keys.

However, there's been no attempt to protect the BREAK key. Touching it causes the program to be totally lost, not even OLD and RUN will rescue it. This is very poor as the program is designed for use by young children.

The fourth pack in the series follows the same format as the others. The two programs are contained on both sides of a cassette. The box, although of a high professional standard, contains only the minimum of details. There is no information about the number, variety and selection of words within the programs.

However, the screen displays are of the same bold, clear and interesting format. Sound is used throughout to stimulate and help the user of the program.

Sortout is an exercise in putting letters and words into alphabetical sequence. The child has to control a lift using the up and down cursor keys.

There are three types of problems and two levels of difficulty. As with the other games, up to four children can play in competition with each other. However, all players must be at the same level - it's not possible for an older child to play with a younger in fair competition.

I found the Letterbug program most frustrating. Seven words on a particular theme are represented as blocks - one for each letter. The child has to guess at the letters.

I found that when more than one player was using the program attempts to complete words low down on the screen wiped out the words above. This made it nearly impossible to complete the exercise. I had to introduce the rule that each word had to be tried in turn starting at the top. It's obvious that such a restriction was not intended by the designers of the package.

Delving into the program itself, I discovered the extent of its vocabulary.

There are fourteen sets of words with between eight and eleven words in each set. The topics include trees, boys' names, metals, pets, insects, countries and planets. The variety and grouping of words is rather restricted. It would have been an advantage if phonically related words had been grouped together. There is no facility for new sets of words to be added to the program.

Computers have a lot to offer the teachers of reading. They should also play an important role in the home. This program has some serious drawbacks that professionally-produced, teacher-inspired programs should not have.

However, it's better than nothing. If the program creates a situation where parent and child work together in reading, where the child can show off his or her ability and where reading can be fun, then that must be a good thing. Despite my reservations, I'll use these programs with my kids.

## Instructions

*"An aura of doom hangs low over the mediaeval world of Albion, a primitive, mysterious world where magic still exists. Magic may only be used by the Order of Leofric, Patron of Magic and discoverer of the Thirteen Realms of the Arcane.*

*"As Nathan, Inquisitor of the Order of Leofric, you have been informed that the Lord Talent of Dinham is believed to be attempting to open a portal into the forbidden Thirteenth Realm, the Realm which brings terror and disorder - The Realm of Chaos...*

*"This superb Robico adventure features approximately 200 locations, over 100 objects, exquisitely written text, a plethora of perplexing puzzles, an exciting and original storyline, roving characters, wit and humour, an advanced sentence interpreter, thrills, spills, magic and mystery... In fact, it should give you hour upon hour of mind manipulating, brain-teasing entertainment."*

Albion is a mediaeval world where magic still exists. However, it may only be used by those gifted with The Talent.

All use of magic is controlled by the Order of St. Leofric, Patron of Magic and Discoverer of the Thirteen Realms of the Arcane.

Talents working outside of the Order in the world of the Mundanes are overwatched by the supervisors and may only operate by the good will of The Order. They must regularly undertake examination by an Inquisition to ensure that contact with the Arcane has not caused corruption of mind, body and soul.

The Council of Twelve are a group of the most powerful Talents in Albion. Each member holds a key to one of the Twelve Realms of Order.

As Nathan, Inquisitor of The Order of St. Leofric, you have been summoned to the study of Father-Magister Alian to commence an investigation for the Council of Twelve. Father-Magister Alain informs you that the Lord Talent of the Village of Dinham is believed to be attempting to open a portal into the forbidden Thirteen Realm - the realm which brings disorder - THE REALM OF CHAOS!

Father-Magister Alain closes his eyes, his face cloaked by the gentle mist which rises from the ice-blue slab at his feet. He raises his hands and the azure cloud of the Transmission Spell billows around you...

## Playing The Game

VILLAGE OF THE LOST SOULS uses an advanced sentence interpreter which is able to understand full sentence commands, typed in upper or lower case, as well as multiple statements. Multiple statements may be used by typing AND, THEN, or comma (,) or full stop(.).

HELP prints out a list of useful verbs. This is not a complete list but should assist you during play. LOOK prints a description of your surroundings, EXAMINE

takes a close look at an object, INVENTORY prints a list of your possessions. OPEN/CLOSE acts on doors, GET etc. picks up objects, DROP etc. leaves objects behind and SCORE informs you of your current progress.

NORTH, SOUTH, EAST, WEST, NORTHEAST, NORTHWEST, SOUTHEAST, SOUTHWEST, UP, DOWN, IN and OUT may be used as directional commands. ALL and EVERYTHING may be used in conjunction with BUT/APART/EXCEPT.

Pressing the TAB key repeats the last command line. OG (go backwards!) or OOPS allow you to retract a move you would rather not have made. SAVE/LOAD/RESTORE may be used to save or load your position.

### **Review (Electron User) - "Revitaised Soul"**

Way back in 1985 I came upon a game which heightened my whole perception of text adventuring. That adventure was released by the small, and now defunct, Magus Software - its title, VILLAGE OF LOST SOULS.

It was, indeed, the most sophisticated and atmospheric text adventure which I had ever seen. My only regret was that it was a BBC Micro-only offering, and though an Electron version was promised, it never materialised.

That is, until now. The master of silicon suspense, Robert O'Leary, thankfully bought the rights to VILLAGE OF LOST SOULS and it is now available under Robico's own label for the Electron.

This version is complete, not only with scintillating new packaging, but in a much improved and revamped form including Robico's superb advanced parser, and written using Martin Moore's Amulet machine coding. What's more, the text has been lengthened to add even greater atmosphere to the game.

The adventure includes the command OG which means if you are killed, or you did something you later regret, you can return to the position you were in before the mistake was made.

The Help facility within the game is a marvellous aid if you really do become stuck with some of the extremely devious puzzles.

LOST SOULS is set in a medieval world in which magic exists, but may only be used by those with a touch of the Talent. All use of magic is controlled by the Church, represented by the Order of Saint Leofric, Patron of Magic and discoverer of the Thirteen Realms of the Arcane.

As Nathan, Inquisitor to the Order of Saint Leofric, you have been summoned to the study of Father-Magister Alain to commence an investigation for the Council of Twelve, who hold the keys to the twelve realms of order.

Father-Magister Alain closes his eyes, his face cloaked by the gentle mist which rises from the slab at his feet. He raises his hands and the blue cloud of the Transmission Spell billows around you.

You are transported to the Village of Dinham where the Rector of the Church has requested the assistance of an Inquisitor, since he believes the Lord-Talent of the Village to be attempting to open a portal into the forbidden thirteenth realm, the Realm of Chaos.

The atmosphere has to be smelt to be believed - just try this offering: "There is an unkempt pack of curs here snapping and fighting among themselves ... woof ... bark ... snarl!"

The puzzles are ingenious, often complex and at times excruciating, but all are logical in retrospect, and enjoyable in every aspect.

This is an essential purchase for any serious adventurer. Indeed, in my humble opinion this is the best cassette-based text adventure available for either the Electron or BBC Micro.

## Instructions

*"Fighting "Fantasy/Adventure International UK Ltd.*

*"As the might of the alien Arcadian Empire tightens its hold on our galaxy, the leaders of the secret Earth organisation, SAROS, gather their slender resources into one last daring and foolhardy mission to strike at the heart of the invaders' home planet.*

*"YOU are their last hope. Equipped with a forbidden laser sword, your mission is to seek out the underground resistance and piece together the vital code you need to destroy the enemy. But time is running out and only YOU stand in the way of the Arcadians' complete domination of the galaxy!"*

## Mission Background

As the mighty alien Arcadian Empire tightens its hold on the galaxy, the leaders of the secret Earth organisation SAROS gather their slender resources into one last daring and foolhardy mission to strike at the heart of the invaders' home planet.

Preparing for your secret mission has been a long and patient task. The Search And Research Of Space organisation (SAROS) has had to change; although it has been doing all it can to overthrow the strangle-hold of the Arcadian Empire.

A full scale military attack is out of the question and the only hope of success is a solo mission to destroy the Arcadian's queen computer which controls and organises the minds of the Arcadian troops.

You are the perfect choice for the mission: you are courageous, resourceful and dedicated to liberation.

Your cover is excellent; you will travel as a merchant to the planets Troops, Halmurus and Arcadion all of which form part of the Arcadian Empire.

On board the merchant ship CAYDIA you will discover many useful items for your mission, not least of which is a laser sword. (Warning - deactivate the laser when not in use!)

SAROS has been able to send spies on ahead to gather information before your arrival - find these contacts for new data.

The building that houses the queen computer on the planet Arcadion can be entered by using a numerical code of nine binary digits. (Binary digits are either 0 or 1; so, 110 would be three binary digits.) The underground spy networks may know something to help you discover these digits.

You must locate the rebel leaders, learn the digits, then destroy the queen computer before it destroys you!

### **Conducting Your Mission**

REBEL PLANET has an extensive vocabulary of words (approx. 400) which you can use to enter player COMMANDS.

To enter a COMMAND, just type in what you want to do, to give you an example, some possible commands are listed below:

GET SCANNER	DROP THE CARD
EXAMINE THE SCREEN	WEAR THE LIMCOM
GO WEST AND EAST THEN OPEN THE DOOR	REMOVE THE LIMCOM
PRESS THE RED BUTTON	CLIMB THE STAIRS
ATTACK THE POLICER WITH THE LASER	DROP WENCH IN THE KUBE
ASK THE DROID FOR HELP	TALK TO THE HOTELIER
GET CAPSULE FROM KUBE	

These are just a few simple COMMANDS but as you can see, they range from simple two word (VERB-NOUN) instructions to multiple action COMMANDS. Phrases of multiple nouns should be separated from each other with the use of AND or by a comma:-

GET THE DELTRACTOR AND THE DISK  
GET THE WRENCH, THE CRYSTAL AND THE BOOK

Several separate actions may be included in one COMMAND but actions should be separated by a comma or the word THEN. If a noun is repeated in an action, the noun may be replaced with the word IT:-

GET THE BATTERY THEN EXAMINE IT  
DROP THE LASER AND THE TICKETS THEN GO DOWN  
DROP ALL THEN GO SOUTH  
OPEN THE DOOR, GET THE GRENADE AND THEN PULL THE PIN

The use of the word THE is optional and no full stops are needed to end a COMMAND. If you are new to playing adventures then stick to two word (VERB/NOUN) COMMANDS until you get the feel of the game; you will then find that the computer will soon tell you if you type a COMMAND it doesn't understand.

### **Special Command Words**

LOOK - This will redescribe your current location. (For a close inspection of an object use the word EXAMINE then the name of the object)

I or INVENTORY - This will tell you what you are carrying.

WEAR - This together with an object name allows you to wear an item.

REMOVE - You can remove a worn object with this command.

QUIT - This command will ask you if you want to play again and also ask if you want to RESTORE a saved game.

SAVE GAME - This allows you to save the current game position. The saved game position may be reloaded by using the quit command, the answering YES to "Do you want to restore a saved game mission?"

WAIT - There are times in the game where being able to wait has distinct advantages. This command will let the game move on one move - longer waits can be entered by WAIT 5; WAIT 10; WAIT 20: These commands can be useful when you have missed the pneuma-tube on Halmurus.

ADVANCE CT & RETARD CT see hints on play.

### **Travelling And Exploration**

We have already seen examples like GO NORTH AND THEN WEST but to save on the old fingers abbreviations can also be used for directions:- N, S, E, NW etc. also U for up and D for down.

### **Hints On Play**

The Caydia has a pre-programmed flight plan (examine screen for further data) which is controlled by CAYDIA TIME or CT for short. So; not only are you fighting to accomplish a dire mission but you have the CT factor to consider as well - the Caydia could take off without you! You will find that you have the means to monitor

CT but you will also have two special COMMANDS that could be invaluable as the game progresses.

#### ADVANCE CT and RETARD CT

The ship's clock can, at certain times, be adjusted to speed up or slow down the CAYDIA's countdown sequence. ADVANCE CT will move time on, RETARD CT will move the clock back.

WARNING: RETARD CT can only be used once during your mission to delay the ship's take-off to the next planet! This is due to the Zorton crinium configuration or put another way, we don't want to make things too easy now, do we?

Ensure that both personal status levels are replenished before leaving the ship, carrying a spare HCAP is recommended.

The ARCADIANS have banned humans from carrying weapons, therefore unless you plan on using a weapon, keep it out of sight of the Officials.

Remember to TALK to people (even some ARCADIANS might listen to you). At times this can give you valuable clues.

Finally, examine everything for clues or information on use etc. Brains can sometimes be more effective than brawn, and lets face it, SAROS reckon you are their number 1 agent, so take it away MAESTRO!

### **REBEL PLANET "How?" Cheat Sheet**

Look up the item you are stuck on in the index of objects. The description will describe what each object does. But, for the real cheats out there, I tell lies!

	HOW?
ARCESS CARD	Insert to purchase
ALLOY STRIP	Soft and bendable
ANALGESIC AMPOULE	A comfort to the dying
ARCADIAN PATROL	Best avoided if the odds are against you
ATOMIC BATTERY	Needed in the Queen Computer Room
ARCADIAN BIBLE	Reading material for a lonely galactic traveller
AGRICULTURAL STATION	You'll need directions to get there: probe ahead
ARCADIAN OFFICER	Do your duty. Pay taxes and do exactly as they suggest
ANGRY ARCADIANS	Impress them with your generosity. Give tickets
ARSENAL	Attack with burning laser
BLACK BOOK	Interesting reading
BRANCH	Carrying this will be good exercise
BONES	A mouth-watering treat for someone
BUTTONS	Avoid the red. Examine all openings before you enter
BASE FENCE	Needs disabling & cutting. Meet Professor first!
BATTERY	Remove from Limcom. Implant in Elmonite
COFFEE	Tastes like all vending machine coffee - treacely mud!
COS-MOP	Buy everything
CABLE-CUTTERS	Easy!
CONSOLE	Contains an exit
CRYSTAL	A sonic opener. Tap with the fork
CAYDIA	Don't change course
CRAG-SNAPPER	Likes a good tune
COMPUTIK	Insert card in Computik
CELL	Bend bars with wrench & leave with burning laser
DISPLAY CASE	The glass will melt. Use sword
DELTRACTOR	Removes covers especially in vandalised visiphone booth
DYING MAN	Inject ampoule into man
DROID	Programmed to maintain functioning star-ship
DORADO	The shadow will help you with the password

DISPENSER	Insert card into dispenser - regularly
DUSTMAN DROID	You'll never catch him - he cleans away items left in the complex
DISK	Insert in vandalised visi-phone
ELMONITE	The answer to your problems
FUEL CAPSULE	Will refuel a domian rat trap - but little else
GRILLE	Can only be opened by pressing yellow button. Examine the passage first
GUARD MUSEUM	Easily bribed with the chuckling stuff
GUARD ARSENAL	Attack with burning laser
GRAVITY BOMB	Not to be used in normal gravity
HATCH	Press I.H. which means Inner Hatch to open and close O.H. which means Outer Hatch
HAL-WOLF	Hungry - but short on patience. Give dog a bone
HOTEL RECEPTION (TROPOS) desk	Help the wounded. Examine the fist and even the
HOTEL RECEPTION (HALMURIS)	Read the adverts on the pneumo-tube
HCAP	Concentrated protein. Carry a spare
HALMURIAN BREW	Don't drink it! Give it to someone who needs a laugh!
HALMKEY	Opens alcove
HOVER CAR	A quick ride home. Do as you're told
IMPALED HEAD	Wear mind-probe after making sure you have all you need to continue
IMPERIAL CODE BOOK	Unbelievably difficult to find, good thing you won't need it. Now stop cheating!
JET PACK	Refuel - wear, pull joystick to cross river, get to cave and get to small building.
KEY (HOTEL)	Would you believe it unlocks the hotel room?
LIMCOM	Press button. S.S for Ship Status, P.S. for Personal Status, I.H. for open and close Inner Hatch and O.H. for open and close Outer Hatch.
LIMPET MINE	Kills 99% of household limpets!
LITE KUBE	Examine it to set what's inside. Drop things in the kube. Get things from the kube. Anti-gravity makes them lighter so you can carry more!
LASER SWORD	Activate to use, de-activate when not in use to avoid over-heating and exploding
MIND PROBE	Wear it when with impaled head to communicate
MESSAGE FROM UNDERGROUND	Follow the message after viewing tropean temple which has five circles over the door (00000 = X010X = 010)
MUSEUM	Don't fight here!
OPENING IN SEWER	Fire rope gun and climb
PASSENGER	Talk to the poor, demented alien twice then ask for help
PNEUMA-TUBE	Buy a pass, get on and wait for your stop
POLICIER	Odds on you'll have to be prepared to attack before he summons help! Activate the laser before you get here
PASSAGE FROM INTEROGATION GATION	Examine before entering
PHOSPHATE STROBE	Serpents hate intense flashing lights - so switch it on!
PAPER	Read it in the precinct and muse
PHASER	Dr. Spock probably beamed up without it!

PHOTON GRENADE	Limited explosion. Perhaps a little too limited!
PHONIC FORK	Try tapping the crystal in the presence of sonic sensors
PANTANIUM POWER PAK	Aids fence disablement
PASSWORD (DORADO)	Shadow has it - Give Staff
PASSWORD (TROPOS)	Well, who did send you?
QUEEN COMPUTER	Set your explosive, get out fast and wait for the sound of the explosion before you return
ROPE GUN	Shoot it when you come across an opening
RIVER	Cross with Jet Pak
REGENERATION UNIT	Use it to build up energy. The unit burns up protein so be sure your protein level can take the strain!
ROTUND HOTELIER	Ask for... (Read the ad on the Pneuma-tube)
SPACEPORT	Go Caydia - if it's still there!
SEWERS	Remove sewer cover in visi with the deltractor
SERPENT	Switch strobe on - or run for it!
SECURITY ROBOT	Throw blanket over the robot
SCANNER	View scanner in dark cave
SCOOTER	It's not functioning - no parts availble - besides, you won't need it on this trip
SEWER COVER	Remove with deltractor. The question is which one?
SMALL DISK	Insert in vandalised visi-phone
SHINY METAL	Grag-snappers like collecting rubbish
STAFF	Give to shadow
SPY MISSILE	Crag-snappers like collecting rubbish
SHADOW	Give Staff
TICKETS	Give to impress angry arcadians
TWEEZERS	Bend strip - will fit battery back in Limcom
TUBE PASS	To ride
TIN	Fuel for jet
TRAVEL VALET	Talk to Valet
UNIVERSITY DOOR	Tap crystal with fork
UNDERGROUND	H.Q. Climb rope
VALET	Talk to Valet
VISI PHONE	Insert card and give number required. If listed, you'll be connected. If not, it will be foxed
WRENCH	Bend bars in the cell with the wrench and climb out
WIRE	Connect to power pak at the fence
ZELTA BLANKET	Throw over security robot

WARNING: Over-indulgence can spoil your fun!

### REBEL PLANET "Where?" Cheat Sheet

Look up the item you are stuck on in the index of objects. The description next to it will describe where each particular object can be found. But, for the real cheats out there, I tell lies!

	WHERE?
ARCESS CARD	Goodies from the Travel Valet

### Review (Electron User) - "Space Capers"

When I was in the salad days of my youth, I enjoyed curling up with a copy of a Biggles or Jennings book. Nowadays, it seems, most 12-year-olds idle away their time reading Jackson and Livingstone Fighting Fantasy adventures. How I longed to see Biggles on TV, but never did.

Today, however, many youngsters' dreams are answered as Fighting Fantasy has now reached the screen, all be it on a computer monitor. REBEL PLANET was the first of this type of adventure I had seen. It is a far cry from the likes of RICK HANSON or SPHINX, as fans of Fantasy role playing books will realise.

The adventure takes place on a merchant space craft called Caydia and three planets in the evil Arcadian Empire. Your task is to locate resistance rebels then destroy the invader's Queen computer, before it destroys you.

As with many other adventures, you spend most of your time collecting artefacts to solve the problems you encounter on your journey: But there the similarity with other adventures ends. You have to cope with a dispenser on the space craft, into which you must regularly insert a card.

A digitised relation of K9 shuttles around while you are on the good ship Caydia. You also have to manage to advance or retard time to ensure you don't miss your transport.

To be successful you must deal with various random conflicts which have to be resolved in order to continue. That is not to say that battle is always the best course of action. For instance, an Arcadian guard needs to be paid rather than killed, and the patrols should be avoided at all costs, especially if the odds are against you.

It is also worth talking to any character you meet as even Arcadians may give valuable information. I really enjoyed the live feel of the game generated by the character movements, even if I found them a little irritating to the general solving of the adventure.

My only real criticism of this adventure - once I had made the quantum leap from the usual fare I come across - was the dire lack of location description. Hence I still feel that REBEL PLANET lacks a lot of the atmosphere which you would find in the book.

I also found the parser rather limited, but having said that, I am looking forward to seeing the second in this series: SEAS OF BLOOD. All in all, a good romp which I would recommend to anyone who would like a deviation from the usual.

Pendragon

### \*\*\* Second Opinion \*\*\* (Electron User)

REBEL PLANET is an unusual adventure, and this alone makes it worthwhile considering. However, the poor location description and the lack of good command parser may be put off some adventurers. If these were improved slightly it would make a tremendous difference to the game.

# RED COATS

## *Professional, Originally Released On Cassette Only*

Game Type : Strategy; War-Game  
Author : Mike Williams  
Standalone Release(s) : 1985: RED COATS, Lothlorien, £9.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : M.C. LOTHLORIEN, 56A Park Lane, Poynton, STOCKPORT SK12 1RE  
Disc compatibility : CDFS E00, DFS E00

### Instructions

RED COATS is an all graphic wargame, for either 1 or 2 players, set during the American war of independence. This version of the game will run on either the BBC or the ELECTRON home computer.

The program allows for full use of cavalry, infantry and artillery forces, and contains five different battle scenarios as well as the facility to modify or create your own scenarios. It is important to follow the loading instructions on the cassette shell, together with any messages displayed on the screen during loading. This is especially important when loading in the battle scenarios.

Between 1775 and 1783, the British and Americans fought for Possession of the American colonies. This game reproduces some of the battles that took place in this period.

### Units

There are four types of units: Cavalry, Artillery, Riflemen and Musketeers.

Cavalry: Cavalry units may move a distance of 20. They carry only sabres and therefore cannot fire.

Artillery: Artillery units may move a distance of 10. They require one turn to limber and another to unlimber before and after moving. They require one turn to reload after firing. Artillery fire has an effective range of 350 yards.

Riflemen: Riflemen may move a distance of 10. They require one turn to reload after firing. They are more accurate than muskets and have an effective range of 200 yards. Riflemen are only half as effective as musketeers at hand-to-hand (melee) fighting since bayonettes cannot be used with these rifles.

Muskets: The bulk of both armies is made up of musketeers. The musket has a shorter range than the rifle (100 yards effective range), but can be reloaded more rapidly, and can be used with a bayonet for close fighting.

### Status Codes

During the game, the status of each unit will be reported by a status code. e.g. S100 M60 C R L

The "S100" denotes the strength.

The "M60" denotes the morale.

The "C" indicates that the unit is in cover. A unit in cover takes half casualties.

The "R" denotes that the unit is reloaded. (Artillery and Riflemen only)

The "L" denotes that the guns are limbered (Artillery only)

### Actions

The possible actions are:-

<M> MOVE - The direction is indicated by a number from 0 to 12 (as on a clock face). Decimals are permitted e.g. 3.5.

<F> FIRE - The unit will choose its own target.

<C> CHARGE

<R> RELOAD  
<L> LIMBER - Artillery only  
<U> UNLIMBER - Artillery only  
<N> NOTHING - Do nothing  
<?> HELP - Lists action codes

Firing is 50% effective (i.e. one casualty for each two soldiers firing) at these ranges:

Artillery .. 400 yards   Rifles ..... 200 yards   Muskets .... 100 yards

Beyond this range, the effectiveness decreases, until at twice the effective range, there is no effect.

When a unit CHARGES, it runs wildly at the nearest enemy unit. If a charging unit engages the enemy then the enemy loses morale. If, however, it fails to reach the enemy, it becomes exhausted and loses morale itself. A charging unit travels 40% further than one moving normally.

A unit in cover takes half casualties.

### **Defined Battles**

The tape contains five battles from the American Revolution, Freeman's Farm, Camden, Guilford Courthouse and Eutaw Springs. These may be loaded by selecting the "Load battle from tape" option (L) then selecting the "Play" option (P).

### **Freeman's Farm**

General Burgoyne was leading the British main column through the woods towards Bemis Heights where he thought the Americans were.

General Frazer's column was to his right, and the German allies, under General von Riedsel were to his left.

Suddenly, as he entered a clearing around Freeman's Farm, shots rang out. He had found the Americans.

### **Camden**

General Gates was leading his exhausted American troops towards the British position in Camden. Surprisingly, he decided to march through the night intending to attack the British at daybreak.

Spies reported Gates' intentions to the British General, Cornwallis. Cornwallis decided to surprise the Americans and set off towards them along the same road.

At 2.30am, the two armies found themselves face to face at Parker's Old Field.

### **Cowpens**

The British had been pursuing Morgan's American force for several weeks. Eventually Morgan decided to make a stand, and chose an unusual battlefield on which to do so.

Instead of lining up his forces out in the open, he concealed them in some woods. The British were forced to make a frontal assault across an open area.

### **Guilford Courthouse**

The British under Cornwallis, had been pursuing the American force for some time. Finally Green commanded the American force to make its stand in some fields outside the small town of Guilford Courthouse.

The American force was much larger than the British, but many of the troops were "Militiamen" who had little training and poor morale.

In the actual battle, over 1,000 of the American militiamen fled in the first British advance.

### **Eutaw Springs**

Greene managed to surprise Stewart's British force while it was encamped.

The British had little time to organize themselves before the Americans reached them.

A dense blackthorn thicket and a brick building provided the only available cover.

### **Defining your own battles**

When you run the program, you will be offered the following options:-

- L - Load a battle from tape
- T - Change Title
- M - Change Map
- U - Change Units
- D - Change Deployment
- S - Save battle to tape
- P - Play

[These options may differ slightly on the Haven disk version.]

### **Load Battle from tape**

Press <L>. A battle will then be read from the tape: this may be either a pre-defined battle, or a battle you have defined yourself, and saved to tape.

### **Change Title**

Press <T>. The current title is displayed, and you may now type in your new title. The cursor keys and copy key have their normal function, and so may be used to copy parts of the old title.

### **Change Map**

Press <M>. The current map (if any) is displayed. You may now move the cursor by using the cursor keys, and enter features by using the numeric keys as follows:-

- 0 - Clear space
- 1 - Tree
- 2 - South West corner
- 3 - North West corner
- 4 - North East corner
- 5 - South East corner
- 6 - South Wall
- 7 - North Wall
- 8 - East Wall
- 9 - West Wall

Type <E> to exit from editing the map. During the editing of the map, the area of cover provided by each terrain feature is displayed in blue.

### **Changing the Units**

Press <U>. You will then be able to define up to eight units for each army. The following information is required for each unit:-

The NAME of the unit - up to 17 characters.

The STRENGTH - i.e. number of soldiers.

The MORALE VALUE - up to 100%.

The MORALE THRESHOLD - when a unit's morale value becomes lower than this threshold, then that unit is routed.

The TYPE of the unit - Cavalry, Artillery, Rifles or Muskets.

### **Changing the Deployment**

Press <D>. The map will be drawn, and each unit in turn may be moved around the screen with the cursor keys, to its correct position. Pressing <E> will fix the position of the unit.

Press <R> instead of <E> if you wish the unit to be a "reinforcement" and the program will then ask you on which move number the reinforcement should arrive.

NOTE:- The reinforcements arrive at the beginning of the move. Therefore, if you specify move 1, the unit will arrive before the first move. If an army loses all the

units currently in play, then it has lost the battle. Reinforcements which have not yet arrived do not count.

### **Saving the battle to tape**

Press <S>. The battle will then be saved to tape. This is only permitted if all parts of the battle (Title, Map, units and Deployment) have been defined, either by loading a battle or defining your own.

### **Playing a battle**

Once a battle has been defined or loaded, press <P>. You may now play the battle, either as a one-player game against the computer, playing either British or American, or as a two-player game. The battle information is preserved while the battle is played, so it is possible to replay a battle without re-loading it.

### **Hint**

A muzzle-loading weapon is difficult to reload correctly during a battle. The first shot of each unit has been correctly loaded before the battle before bayonets were fixed. The first shot is 40% more effective than the others. Don't waste it.

**Instructions' Source** : RED COATS (Lothlorien) Back and Inner Inlay

### **Review (Electron User)**

This comes from Lothlorien's "Warmaster" series of strategy games. It is set during the American War of Independence and is for one or two players. On loading you're presented with a menu which gives you the option of creating your own battle or loading in one of five scenarios already defined.

These are re-creations of battles that actually took place and are spread over the period of the war. They present combinations of scenery and variations in the type and numbers of regiments involved. Background information on each of the five battles, as well as full playing instructions, are given in the cassette insert.

I decided to see how Lothlorien did things before attempting to make my own maps, and so I pressed L from the menu to load the first battle. When it loaded the menu was again presented. Incidentally, pressing <ESCAPE> at any time will bring you back to the menu - especially useful if you are getting beaten.

On pressing P you are given the option of a one or two player game, whether you want to command the British or American forces if opting for the one player game, and the difficulty level you want to play at.

Throughout the games I played I could not detect any significant differences between any of the difficulty levels. The map is quickly drawn and each side then makes a move for each of their units. There are four types of units, though the numbers of each vary with each battle. These are calvary, artillery, riflemen and musketeers. The advantages and disadvantages of each are fully explained in the cassette insert.

The musketeers and riflemen can move - in which case a direction and distance is prompted for - fire or charge. In the latter two instances the enemy unit that is nearest is the one which is attacked. The calvary also move as above but, since they only carry sabres, they cannot fire at the enemy. But they can charge and in doing so nearly always win. The artillery fires at the nearest enemy unit but then uses one turn to reload. If you want to move your artillery one turn is needed to get limbered up, one to move and then one to unlimber before it can fire again.

It's also possible to do nothing and, since I could rarely figure out what devilish plan the Electron was putting into operation, this was the command I tended to make most use of.

When planning your own battle scene the other options in the menu are used. The first thing to do is draw your map. The numeric keys are used for this and each one is programmed for a specific item, such as walls, trees and so on.

After your drawing your map you choose the composition of your armies and various factors which determine its effectiveness, like strength and morale.

You then deploy your units on the map, deciding whether they will adopt a position now or be reinforcements that will make an appearance during the course of the battle.

Once you're satisfied with the disposition of your forces you can save the scenario to tape and then play it out. If using the two player option, you will obviously need to confer on the map and deploy your armies separately. At the end of each battle, casualty figures are given and the winner gets their score.

With the Lothlorien games, General Electron usually turns out to be a wily old bird who is difficult to beat. With RED COATS, I found it fairly easy to win. The two player game proved to be more interesting and challenging and generally a lot more fun.

Overall, another good strategy game. If you haven't got one then I can recommend this one. If you have, then you know what to expect and RED COATS is up to the level of the others in the series. Recommended.

Merlin, ELECTRON USER 2. 8

# RELUCTANT HERO

*Professional, Originally Released On Cassette Only*

Game Type : Text Adventure (Written With THE QUILL) In 2 Parts  
Author : Paul Waterman  
Standalone Release(s) : 1987: RELUCTANT HERO, Elk Adventure Club, £3.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : THE ELK ADVENTURE CLUB, 2 The Beeches, Tilbury, ESSEX  
RM18 8ED  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

As the Reluctant (Earth-saving) Hero of this adventure, you need to find the whereabouts of a rare element called 'Trilanthium'. Then, you have to get it back to the aliens before their craft explodes and creates a black hole that would eventually destroy the Earth. It will take all your skills as an ex dock-yard security manager to complete your task in the three days you've got!

You will be given a code at the end of part one. The code must be typed in to enable you to play the second part of the adventure.

A hint sheet for this adventure is available to non-members if they send an SAE to :  
THE ELK ADVENTURE CLUB, 2 THE BEECHES, TILBURY, ESSEX RM18 8ED.

# REPTON

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade; Side-On; BOULDERDASH Style Maze-Game  
Author : Tim Tyler  
Standalone Release(s) : 1984: REPTON, Superior, £9.95  
1990: REPTON, Superior/Blue Ribbon, £2.99  
Compilation Release(s) : 1987: FIVE STAR GAMES, Beau Jolly, £9.95  
1988: SUPERIOR COLLECTION 3, Superior/Acornsoft, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR, Department C, Ground Floor, Regent House, Skinner Lane, LEEDS 7  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

The object of REPTON is to collect all the diamonds on each screen avoiding the falling rocks and lurking reptiles. You have a limited amount of time in which to complete each screen: the TIME indicator starts at 6000 and decreases down to 0; you then lose a life.

There are twelve screens (denoted A-L). Basically, each screen requires you to solve a set of puzzles by determining your routes to collect the diamonds. A rock or an egg will fall if unsupported, and if a falling rock lands on you it will kill you.

On screens A to H, a map is available for viewing. Only one sixteenth of the full area covered by the map is shown on the main screen at any time. On screens I to L, there is no map available.

To view the map, you must first pass over the MAP character during the game play; the map may then be seen whenever you press "M".

Screen A is relatively easy to complete. After the screen has been completed, a password is given. Entering this password at the start of the game will then take you straight onto screen B. Likewise, passwords are given at the completion of all further screens.

From screen B onwards, eggs, safes and keys are present. When an egg falls, it cracks upon landing and a reptile emerges. Contact with the reptile is fatal. In order to open the safes, the key must be located. When you pass over the key, all the safes open to reveal a diamond.

*It is possible to complete each screen without losing a life.*

## REPTON Competition

### The Prize

A prize of £100 will be awarded to the first player to complete all twelve screens of Repton.

### How To Enter

When all twelve screens (screens A-L) have been completed, a congratulatory message is displayed on the screen. The first person to send us a photograph of this screen will win £100.

### Rules

1. The closing date for receiving entries to the competition is 30th September 1985.
2. All entries must clearly show the sender's name and address, and should be addressed to: Repton Competition, Superior Software Ltd, Regent House, Skinner Lane, Leeds LS7 1AX.

3. The company's decision is final and no correspondence can be entered into.
4. The competition is not open to the employees of Superior Software Ltd, the authors of Repton, their agents or their families.

### REPTON Passwords

Screen	Password
A	SCREEN ONE
B	CHAMELEON
C	TERRAPIN
D	SIDEWINDER
E	GECKO
F	PYTHON
G	SALAMANDER
H	IGUANA
I	CUTTLEFISH
J	OCTOPUS
K	GIANT CLAM
L	THE KRAKEN

### Game Controls

Z - Left, X - Right, \* - Up, ? - Down  
<ESCAPE> - Kill Yourself (Useful if you become trapped)  
M - View Map (Screens A-H, after passing over the Map character)  
P - Enter Password (Start of Game only)  
<COPY>/<DELETE> - Pause Off/On, S/Q - Sound On/Off, R - Return to Start of Game

**Instructions' Source** : REPTON (Superior) Back and Inner Inlay

### Review (Electron User)

REPTON is the latest, and claims to be the best, release from Superior Software, one of the leading Electron software houses. In short, it is. It's one of those arcade-style adventure games with you playing the part of our hero, Repton. His mission is to retrieve all the diamonds from a series of twisting underground caves.

Unfortunately, the caverns are also full of precariously-balanced rocks that tend to drop on you if you dig under them. They're often arranged so that if you loosen some before others, they fall in the wrong order and seal off the passage to certain diamonds forever.

In later caverns the diamonds lie underneath giant eggs which fall and hatch into ferocious reptiles when you take the diamond. Needless to say, they then spend all their time chasing after you.

In even later caverns, you have to open a safe using a special key that you must find.

Now for the technical side. The entire screen acts as a window on to the area of the cavern you're in, so that you can only see a sixteenth of the cavern. As you move, the view through the window scrolls very smoothly in the appropriate direction.

Repton is a colourful green-headed character and is beautifully animated. If you don't move him, he starts looking round of his own accord. Not to be outdone, the reptiles strike a fearsome pose with their webbed feet and yellow bellies.

At any time during play you can look at a map of the entire cavern to see where the remaining diamonds are. After completing each screen you're given a password enabling you to skip that screen in the future.

There are twelve caverns in all, getting progressively harder. This is an astounding game reaching new heights in Electron arcade adventures. So if you feel that you're an Indiana Jones type then go out and buy it today.

Philip Tudor, ELECTRON USER 2.12

# REPTON 2

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade; Side-On; BOULDERDASH Style Maze-Game  
Author : Tim Tyler  
Standalone Release(s) : 1985: REPTON 2, Superior, £7.95  
1990: REPTON 2, Superior/Blue Ribbon, £2.99  
Compilation Release(s) : 1988: SUPERIOR COLLECTION 3, Superior/Acornsoft, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR, Department C, Ground Floor, Regent House, Skinner Lane, LEEDS 7  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### Instructions

In order to complete REPTON 2, you must:-

- (a) collect all the 4,744 earth sections;
- (b) collect all the 1,634 diamonds;
- (c) kill all the 18 monsters;
- (d) use all the 64 transporters;
- (e) collect all the 42 jigsaw puzzle pieces; and
- (f) collect the "finish character" which is positioned at the top right-hand corner of the first screen. We assure you that the game has been thoroughly tested to completion.

Each level requires you to solve a series of puzzles by determining your routes carefully. The puzzles are often craftily constructed, and some involve a time element. A rock or egg will fall if it is unsupported, and if a falling rock lands on you, it will kill you. Contact with the monsters, spirits, meteors or skulls is also fatal - you have three lives. There is no time limit to any section of the game.

Scattered through the 16 levels are all the jigsaw pieces of a 42-piece puzzle. When each piece is collected, it reappears at the bottom of the first screen. The completed puzzle reads "REPTON 2 IS ENDED".

The surface of the first screen cannot be accessed immediately because the way is blocked by five skulls. Five puzzle pieces are also inaccessible due to another five skulls. These skulls do, however, disappear. One pair disappears when each of the following is accomplished: collecting all the earth, collecting all the diamonds, killing all the monsters, using all the transporters, collecting 41 out of the 42 puzzle pieces. The surface of the first screen can then be reached and the 'finish character' collected.

### Transporters

The 16 levels are linked by transporters. Each transporter may only be used once, and it always transports to the same position on the same screen.

### Eggs And Monsters

When an egg falls, it cracks upon landing and a monster emerges. The monsters are killed by falling boulders.

### Spirits

On many levels, there are up to eight spirits. Spirits always follow the walls to their left until they reach a cage. When a spirit enters a cage, it changes into a diamond. Therefore, to complete the game, you must also cage all the spirits. Spirits are normally immune to any falling object. However, it is sometimes possible

to daze a spirit by collecting all the diamonds from directly around it or by dropping boulders onto it. This is to be avoided, as the spirit will then move endlessly in a small circle.

### **Meteors**

Meteors fall from above on six of the levels of play. Two other levels are also open to space, but no meteors fall from the sky.

### **Safes And Keys**

Some diamonds are hidden in safes which can only be opened by locating and moving over a combination key. When a key is collected, all the safes on that level open to reveal their diamonds.

### **Scoring**

Each earth section scores 3, 4 or 5 points.

Each diamond scores 6 points.

### **How To Enter The Competition**

If you manage to complete REPTON 2, a congratulatory message will be displayed on the screen. To enter, you must send us a clear photograph of this screen.

### **Rules**

- 1 The closing date for receiving entries to the competition is 31st March 1986.
- 2 All entries must be accompanied by the REPTON 2 COMPETITION COUPON which is printed by the side of these rules.
- 3 All entries must clearly show the sender's name and address, age and T-shirt size (small, medium or large) and should be addressed to REPTON 2 COMPETITION, Superior Software Ltd, Regent House, Skinner Lane, Leeds LS7 1AX.
4. The company's decision is final and no correspondence can be entered into.
5. The competition is not open to the employees of Superior Software Ltd, the authors of REPTON 2, their agents or their families.
6. Please enclose an S.A.E. if you require a list of winners.

### **The Prizes**

The first 100 correct entries received will win a beautifully designed "I'VE COMPLETED REPTON 2" cotton T-shirt. On 31st March 1986, a draw will be made of all the correct entries received. The winner of the draw will receive a prize of £200.

### **Game Controls**

Z - Left, X - Right, \* - Up, ? - Down  
<ESCAPE> - Kill Yourself (Useful if you become trapped)  
S/Q - Sound On/Off

## Instructions

*"REPTON 3 - Are you ready for the ultimate challenge?"*

*Our original Repton game was immediately acclaimed as a refreshingly new concept: a game requiring dexterity to complete its arcade-style elements, and clear logical thinking to solve its strategic puzzles. REPTON involves retrieving treasure whilst avoiding falling rocks, fearsome monsters and haunting spirits. "This is an astounding game reaching new heights in BBC arcade adventure," enthused The Micro User magazine.*

*REPTON 2, released last Christmas was larger and much more challenging than before. Acorn User wrote: "REPTON 2 is better than anything I've played on the BBC Micro or Electron. Brilliant!"*

*Now, available for the Commodore, Amstrad, BBC Micro and Electron, we proudly present Repton 3. A screen-designer is included for devising your own game screens. There is also a character-designer which enables you to redesign any or all of the game's characters.*

*REPTON 3 is much larger than its predecessors - it has 24 fascinating screens. All the favourite Repton characters have been retained, together with several new ones: a creeping poisonous fungus, time capsules and golden crowns.*

*Can you complete REPTON 3?"*

REPTON 3 has a total of 24 game screens. These are provided as three files with eight game screens in each:

File 1: PRELUDE  
File 2: TOCCATA  
File 3: FINALE

The PRELUDE file is loaded automatically when the Repton 3 game is first loaded.

The PRELUDE, TOCCATA and FINALE files are on side 2 of the cassette. To load any of these files, simply select the "L" option on the main REPTON 3 screen, and enter the appropriate filename.

## Objective Of The Game

In order to complete REPTON 3 you must carefully determine your routes through each screen in turn, with the aim of defusing the time-bomb by passing over it. However, before the time-bomb can be defused, you must first:-

- (a) collect all the diamonds (including those concealed in safes or cages),
- (b) collect the golden crown, and

(c) kill all the monsters.

Each screen has a time-limit and, if you do not complete the screen within this time-limit, the time-bomb will explode and you will lose a life. Repton can, however, travel backwards in time because whenever a time-capsule is collected, the time-bomb's clock is reset.

Each screen comprises a series of puzzles. Many of these are interlinked and you may have to solve a number of small puzzles to enable you to tackle a large one. The puzzles may, in some cases, seem impossible - but we assure you that REPTON 3 can be completed.

Rocks will fall if unsupported and should one land on you it will kill you. You must also avoid the monsters, spirits, skulls and fungus - contact with these is fatal.

When an egg falls, it cracks upon landing and a monster hatches out. The monsters are killed by pushing or dropping rocks onto them.

There may be up to eight spirits on each screen. They always follow the walls to their left until they reach a cage. When a spirit enters a cage, it changes into a diamond. A spirit may become dazed if you drop a rock onto it or collect all the diamonds immediately surrounding it. This is to be avoided as the spirit will then move endlessly in a small circle.

Watch out for the poisonous fungus which grows incessantly sealing your fate. Trap it in by surrounding it with rocks if you can, or you may never live to collect the golden crown.

Your route may be blocked by a safe. If so, you must locate a key which will open all of the safes on the screen revealing a diamond within.

Each screen may have a maximum of four transporters. They cause you to be rematerialised at some other location on the screen, but each transporter can be used once only.

### Game Controls

Z - Left, X - Right, \* - Up, ? - Down, M - View Map (Screens A-E only)

<ESCAPE> - Kill Yourself (Useful if you become trapped), <SHIFT>-R - Restart Game

P - Enter Password, L - Load Data File, S/Q - Sound On/Off

K - Select Keyboard Control, J - Select Joystick Control (Plus 1 Interface)

F - Select Joystick Control (First Byte Interface)

### Scoring

5 points ..... for collecting a diamond

20 points ..... for killing a monster

50 points ..... for collecting a crown

### The REPTON 3 Series Editor

The Editor is loaded from side 1 of the cassette by selecting option 2 on the loading screen menu.

### The Screen Designer And Character Designer

We recommend that you carefully read all the instructions in advance and experiment with the controls before attempting serious design work.

### Screen Layout

#### **Key**

1. Pull-Down Notice: This details the version of the game in use
2. Pull-Down Menu: OPTS - options
3. Pull-Down Menu: CHAR - see Character
4. Pull-Down Menu: MAPS - see Screen Designer section
5. Select keyboard control (default setting). The keys used are:  
Z - Pointer Left, X - Pointer Right, \* - Pointer Up, ? - Pointer Down  
<RETURN> - Execute
6. Select Screen Designer
7. Select Joystick Control
8. Select Character
9. Define Time-Limits - see Screen Designer section
10. Define Passwords - see Screen Designer section
11. Save Data File - see Saving and Loading Files section
12. Load Data File - see Saving and Loading Files section
13. End Zone - terminates currently selected mode
14. Currently-Selected Character Window
15. Colour Selection Palette
16. Pointer - moved by using the keyboard, joystick
17. Main display area

#### **Using Pull-Down Menus**

1. Move pointer over menu required
2. Press <RETURN> and menu will appear
3. Continue to press <RETURN> and move the pointer over the option required
4. Release <RETURN> to select

NOTE: When using the joystick, press the joystick button instead of pressing <RETURN>.

#### **Using Icons**

1. Move pointer over icon required
2. Press <RETURN> to select

NOTE: Before selecting a new icon, it is necessary to confirm completion of the previous mode by moving the pointer to the End Zone (icon 13) and pressing <RETURN>.

#### **Saving And Loading Files**

- Loading:
1. Select the Load Data File icon (icon 12)
  2. Enter the name of the file you wish to load
  3. Press <RETURN> and wait until the pointer re-appears

NOTE: The program will not allow you to edit any of the supplied Repton 3 game screens unless you are able to give the appropriate edit code numbers (displayed after each screen has been completed).

- Saving:
1. Select the Save Data file icon (icon 11)
  2. Give your file a name
  3. Press <RETURN> and wait until the pointer re-appears

#### **The Character Designer**

1. Select the Character Designer by selecting icon 8.
2. Select a character for editing from the full set of miniature character icons displayed at the bottom of the screen.
3. Choose a colour from the palette (icon 15) by moving the pointer to the colour and pressing <RETURN>.
4. Move the pointer to the main display area.
5. Fill in pixels as desired with the chosen colour by moving the pointer and pressing <RETURN>.
6. Repeat steps 3-5 until you are satisfied with the redefined character.
7. Repeat steps 2-6 if you want to redefine other characters.
8. Select the End Zone icon (icon 13) when you have finished redesigning the characters.
9. You can now save the screen data file (including the new character definitions) by selecting the Save Data File icon (icon 11).

Pull-Down Menu 3 (CHAR) may be selected enabling you to use the following options:

- (a) Animate - Animates any character where more than one frame is used, i.e. Repton, Monster and Spirit.
- (b) Unset pixels,
- (c) Invert pixels,
- (d) Wipe - Clears the character window to the current colour.

### **The Screen Designer**

NOTE: The program will not allow you to edit any of the supplied Repton 3 game screens unless you are able to give the appropriate edit code numbers (displayed after each screen has been completed).

1. Select the Screen Designer by selecting icon 6.
2. Screen A is now selected. To redesign another screen, select Pull-Down Menu 4 (MAPS) and move down the menu to the required screen (A-H).
3. Select a character for placing on the screen map from the set of miniature character icons displayed at the bottom of the screen.
4. Move the pointer to the main display area.
5. Place the chosen character onto the map in the desired locations by moving the pointer and pressing <RETURN>. (See the glossary below for further information).
6. Repeat steps 3-5 until you are satisfied with the redefined screen.
7. Repeat steps 2-6 if you want to redefine other screens.
8. To redefine the screen colours, move the pointer to the palette (icon 15) and press <RETURN> over a colour. Press <RETURN> repeatedly to alter this colour to one of the other available colours.
9. Select the Passwords icon (icon 10) if you want to define the screen passwords. By default, the passwords are "A" to "H" screens A to H.
10. Select the Time-Limits icon (icon 9) to set the time-limit for each screen.
11. Select the End-Zone icon (icon 13) when you have finished redesigning the screens.
12. You can now save the new screens by selecting the Save Data File icon (icon 11).

### Glossary

#### Character

Repton ..... 1 Placing Repton on the screen determines his starting position. Otherwise, he always starts in the top left-hand corner

Rock ..... - Rocks will fall if unsupported

Diamond ..... - All the diamonds on a screen must be collected

Blank Space ..... - Use blank spaces to erase other characters on the map

Earth Sections ..... - Repton can dig his way through earth

Barrier Sections ..... - The flat-topped variety supports rocks and eggs but they will fall off the curved-top barrier sections

Skull ..... - Skulls are deadly if touched. They are good objects to use when constructing mazes

Fungus ..... - A dangerous creeper. It grows rapidly and is deadly on contact

Crown ..... 1 There should be one crown on each screen

Egg ..... 4 Eggs hatch into fearsome monsters

Safe ..... - Each safe contains a diamond

Key ..... - When Repton obtains a key, all the safes on the screen open to reveal their diamonds

Spirit ..... 8 Spirits must be carefully placed on the screen so that they will follow the walls to their left-hand side

Cage ..... 8 When a spirit enters a cage, it changes into a diamond. Ensure that you place as many cages on screen as you have spirits

Time-Capsule ..... - Consuming a time-capsule resets the time-bomb's clock

Time-Bomb ..... 1 Repton must defuse the time-bomb once he has collected all the treasure and killed all the monsters

Transporter ..... 4 Position the transporter on the screen by moving the pointer and pressing <RETURN> at the desired location. Now, keep the <RETURN> key pressed and move the pointer to your chosen destination point for the transporter. Releasing <RETURN> will now store that location as the transporter's destination point.

### **Review (Electron User) - "Mazes To Amaze"**

Just when you thought it was safe to go back down the mine, Superior Software have released REPTON 3. The game features all the characters and graphics of REPTON 2, but is closer to the original REPTON in gameplay and objectives. It comes with 24 challenging levels to complete, stored on tape as three separate files.

On successful completion of each level you are given the password for the next, which means that when you play the game on subsequent occasions you don't have to wade your way through it all again.

When playing the game only a small section of the overall map is visible at any one time. Each level is laid out like a maze, constructed from boulders, earth, diamonds, giant eggs and many other devilish things. To complete a level you must kill every monster and collect all the diamonds and a golden crown before a time bomb explodes.

The problems begin as you burrow your way beneath boulders. As soon as the supporting earth has been removed, the boulder falls, killing you or changing the shape of the maze by blocking off a passageway. For this reason your route through the maze must be very carefully planned - one badly placed rock and you might as well start again.

As in REPTON, you can call up a detailed map of the whole level to help you choose the correct path through a maze. When I first played the game I thought the monsters were pretty tricky to deal with as they have to be lured beneath a precariously balanced boulder and then squashed.

Worse than the monsters are the spirits, Will-o'-the-wisps which whizz along the pathways at incredible speed. You must lure them into cages, where they turn into diamonds.

As if 24 mind-bogglingly difficult screens weren't enough Superior provides a screen designer too. This is a very classy piece of software which enables you to construct new screens in map form. These can then be saved as data files and loaded by the main game. You could even challenge your friends to solve your latest devious masterpiece.

The game's graphics aren't the greatest I've ever seen but this minor niggle is soon forgotten as you wrap your mind around the puzzles. REPTON 3 is a must for every Electron user.

# REPTON INFINITY

*Professional, Originally Released On Cassette Only*

## **Review (Electron User) - "The Ultimate Repton"**

If you thought you'd seen every possible variation of that classic game, REPTON, and that the theme had been done to death, hang on to your boots, as REPTON INFINITY - from Superior, of course - will blow your socks off. This latest incarnation of that loveable green skinned reptile has got to be the best yet.

There are four different games - and I don't mean four sets of screens for REPTON 3 - and four utilities to enable you to write your own games. In the first, Repton 3 - Take 2, you amass as many points as possible by collecting crowns and diamonds and disposing of the odd monster or two.

The usual gigantic eggs are scattered about ready to hatch into irksome monsters. Less difficult to shake off are large spirits which float about and can be trapped in cages which then turn them into diamonds. Teleporters abound, but they can whisk you off into dead ends or traps if you're not careful.

Repton 4 is the second game and here your task is to grab banknotes conveniently left lying around piles of jewels. Try to kill the ghouls that hatch out of the eggs, but watch out for the fungus that spreads like wildfire.

Magiblocks are special boulders that can be pushed up, down, left or right and when you get three in a row they turn into diamonds which can be collected for a bonus. Transporters are present as usual, and photocopiers are an additional feature. They can copy almost anything, but only work once.

Repton 4 is similar to REPTON 3 with slight variations. The new features add a few puzzles and keep up the interest.

The third game is Robbo, and this departs even further from the traditional Repton gameplay. There are many similarities, but also quite a few differences. You control a small robot, and to test his intelligence, he has been placed in a time-space puzzle vortex.

You have to collect the flashing orbs and solve a number of puzzles, like repairing a computer, lighting a bulb, putting a can into a fridge, mowing some grass and one or two more.

The last game, Trakker, is probably the strangest of the four. You are the driver of a Jaffa - the Jagga Annihilation and Fruit Flinging Associates - and your mission is to dispose of all the hideous Jaggas and other nasties.

You are equipped with a bulldozer (a JCB GT?), sticks of dynamite, detonators and Killafruit. To use the dynamite you guide Kevin, your pal, to the dynamite, then run over a detonator. Jaggas can be squashed with tomatoes, but only from behind. And bananas turn them into tubular spiders - all very strange, but fun.

Once you've mastered these four games you can get to grips with the REPTON INFINITY game creator itself. Four utilities are involved in the making of a game, the first being Film Strip, a sprite editor. Here you can modify an existing character or start from scratch and design a new one.

Once the characters have been formed you write a Basic-like program using a special editor and compiler. The purpose-designed language is called Reptol and is fairly straight-forward, though like any programming language you'll need to put a fair bit of effort into learning it to get the most from it.

The 71 page manual provides descriptions of all the commands, plus a beginner's tutorial section. The commands include CHANGE to change one character to another, IF ... ELSE ... ENDIF and GOTO are like their Basic counterparts, KEY tests the <RETURN> key, SCORE increments your score, MOVE moves a character and so on.

Once the program logic has been created it's on to the Landscape Designer. This is where you design the maps that are used to create the landscape through which you move. The utility is quite simple and just involves picking up various characters and plonking them on the map.

Skill is required in designing puzzles and traps, so be prepared for a little head scratching.

The final task to be done is to link all the files created - sprite, landscape and program logic - into one runnable program, and this is performed by the fourth utility File Link. This enables you to specify the filenames of the various parts so they can all be loaded in the right sequence.

REPTON INFINITY is definitely the ultimate in this popular series. Not only are the four games superb - and all different from the standard Repton format - but the game creator is a stroke of genius.

I must admit to being a little bewildered by the number and variety of functions and options, and I have yet to create a full game. It'll take a fair bit of hard work, but not half as hard as writing the whole thing from scratch. REPTON INFINITY is an absolute must.

Roland Waddilove

### **\*\*\* Second Opinion \*\*\* (Electron User)**

WOW! This is the best yet from Superior. The biggest case, the thickest manual, four great games with two sets of screens each and an amazing program creator that enables you to write your own Repton games in Reptol - a new arcade games writing language. At only £12.95 this has got to be amazing value for money. Well done Superior!

ELECTRON USER 6. 6

# REPTON THRU TIME

*Professional, Originally Released On Cassette Only*

Game Type : Arcade; Overhead Maze Game  
Authors : Tim Tyler & Matthew Atkinson  
Standalone Release(s) : 1987: REPTON THRU TIME, Superior/Acornsoft, £6.95  
1990: REPTON THRU TIME, Superior/Blue Ribbon, £2.99  
Compilation Release(s) : 1990: PLAY IT AGAIN SAM 10, Superior/Acornsoft, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : CDFS E00, DFS E00

## Instructions

REPTON THRU TIME has a total of 40 screens. These are provided as five cassette files with eight game screens in each:

File 1: PREHIST  
File 2: EGYPT  
File 3: VICTORI  
File 4: NOW  
File 5: FUTURE

The PREHIST file is loaded automatically when the game is first loaded.

The PREHIST, EGYPT, VICTORI, NOW and FUTURE are on the cassette. To load any of these files, simply select the "L" option on the main game screen, and enter the appropriate filename.

## Objective Of The Game

In order to succeed in travelling through time with Repton, you must complete each of the 40 screens without using any passwords. Each new set of characters is based upon the **original REPTON 3 characters**.

The new character sets are also shown. For the PREHISTORIC screens, you will notice that the rock and the diamond have been replaced with a boulder and green berries respectively. Therefore, on the PREHISTORIC screens, Repton pushes the boulders (as if they were rocks) and collects the green berries (as if they were diamonds).

Similarly, the monster and the spirit have been replaced with a dinosaur and a pterodactyl respectively. So Repton is chased by dinosaurs (instead of monsters) and pterodactyls (instead of spirits).

To avoid confusion, the following game instructions refer exclusively to the **original REPTON 3 characters**.

To complete the game, you must carefully determine your routes through each screen in turn, with the aim of defusing the time-bomb by passing over it. However, before the time-bomb can be defused, you must first:-

- (a) collect all the diamonds (including those concealed in safes or cages),
- (b) collect the golden crown, and
- (c) kill all the monsters.

Each screen has a time-limit and, if you do not complete the screen within this time-limit, the time-bomb will explode and you will lose a life. Repton can, however, travel backwards in time because whenever a time-capsule is collected, the time-bomb's clock is reset.

Each screen comprises a series of puzzles. Many of these are interlinked and you may have to solve a number of small puzzles to enable you to tackle a large one. The puzzles may, in some cases, seem impossible - but we assure you that REPTON THRU TIME can be completed.

Rocks will fall if unsupported and should one land on you it will kill you. You must also avoid the monsters, spirits, skulls and fungis - contact with these is fatal.

When an egg falls, it cracks upon landing and a monster hatches out. The monsters are killed by pushing or dropping rocks onto them.

There may be up to eight spirits on each screen. They always follow the walls to their left until they reach a cage. When a spirit enters a cage, it changes into a diamond. A spirit may become dazed if you drop a rock onto it or collect all the diamonds immediately surrounding it. This is to be avoided as the spirit will then move endlessly in a small circle.

Watch out for the poisonous fungus which grows incessantly sealing your fate. Trap it in by surrounding it with rocks if you can, or you may never live to collect the golden crown.

Your route may be blocked by a safe. If so, you must locate a key which will open all of the safes on the screen revealing a diamond within.

Each screen may have a maximum of four transporters. They cause you to be rematerialised at some other location on the screen, but each transporter can be used once only.

### **Game Controls**

Z - Left,    X - Right,    \* - Up,    ? - Down,    M - View Map (Screens A-E only)

<ESCAPE> - Kill Yourself (Useful if you become trapped),    <SHIFT>-R - Restart Game

P - Enter Password,    L - Load Data File,    S/Q - Sound On/Off

K - Select Keyboard Control,    J - Select Joystick Control (Plus 1 Interface)

F - Select Joystick Control (First Byte Interface)

### **Scoring**

5 points ..... for collecting a diamond

20 points ..... for killing a monster

50 points ..... for collecting a crown

### **The REPTON 3 Series Editor**

Full instructions for the editor package supplied with this game are detailed under REPTON 3.

**Instructions' Source**    : PLAY IT AGAIN SAM 10 (Superior/Acornsoft) Inner Inlay

### **Review (Electron User) - "Repton Takes His Time"**

Our little green friend is back again in a new set of forty screens. REPTON THRU TIME covers various periods of history ranging from prehistoric and Egyptian, through Victorian, the present day and into the future. All the screens are REPTON 3 standard and will load into any version - but you get the game and screen designer as usual so if you haven't any of the earlier versions you don't need to worry.

You start up with the prehistory screen set where Repton is wearing an animal skin and searching for the ultimate invention - the wheel. On his way he eats the green berries and avoids the red ones; the dinosaurs need crushing by the unaltered boulders. Spirits have become pterodactyls and seek out their caves before turning into berries.

The first screen was nice and easy, reminding you gently of all the usual Repton tricks - but don't make any mistakes because you can only get out of the start area once before it becomes blocked. Repton moves next into the Egyptian period with very brightly designed characters.

The first screen has an original start with two wicker baskets at either side of Repton falling and opening to reveal serpents. It certainly grabs your attention.

The spirits are now mummies seeking out their tombs. The rest of the screens are occupied by pyramids, scorpions and scrolls which you need to collect.

The next set of screens cover the Victorian era. The character designs are less clear with Repton in a frock coat and most of the supporting blocks being gaslights.

There's a little social comment since the creeping fungus is represented by smoking factories. But again there's a nice easy run at first with a good stiff gradient as the screens progress.

There's another tricky start in the present day screen set. The usual Repton key is represented by the Excess card of which there are two next to where you start. There are no diamonds (cans of coke) available and no boulders (suitcases) to shift); all you can do is collect the cards - and take a really good look at the map before you do.

The monster has become a traffic warden and ale houses are the safes, spirits are represented by flying newspapers, which don't seem to quite fit with the rest of the screen concept.

The final set of screens is called Future and they are really hard. Empty spaces and earth are now stars, whereas skulls and fungus are black holes. Time capsules look like teleports and are called timewarps.

The first screen would be easy if the characters were anywhere near normal - but as it was it took me ages to finish.

Pushing around the robots was easy enough, but you can't tell at a glance how they are being supported. Out of crashed spaceships come the BEMs - bug-eyed monsters - spirits are a different type of alien which convert Tie fighters into crystals, and if you grab a laser gun Daleks get challenged too.

This Repton group of screens is reputed to be the last that's going to be produced. I wonder...

## Instructions

*"Space Station ZELGER is running out of energy fast. You are the last hope. Using your 'R2' Droid, collect the 'Z42' compound and return it to the hidden power room. But beware! Laser bolts and radioactive barriers are some of the many dangers awaiting you."*

Your aim is to guide the Robot-Droid 'R2' around the space station ZELGER, in order to find and collect the three boxes containing the compound 'Z42'. Once collected, this must be taken to the power room in order to replenish the energy supply of the space station.

But beware, as you move 'R2' through the many rooms and locations on ZELGER, you will encounter Lazer Bolts, Radio Active Barriers and much more to try and stop you completing your mission.

You only have 20 minutes in which to complete the mission and 'R2' has only four lives.

## Instructions

Having awoken the warrior Thrull from his deep sleep of seven generations you are now set to face the evil Salandra himself.

As the dark Warships land at the beach below you, Thrull speaks.

"I shall remain for a short while to try to repel the hordes of Salandra's invading forces. Perhaps you, who have proved yourself in being here, could reach the very heart of Salandra's domain. If I were to make the journey his spies would know of me and warn the evil tyrant. A small traveller such as yourself could possibly escape the enemy's attention and reach Salandra's fortress which once belonged to the Lord Siran. Siran, now, has been destroyed.

"If you should meet the evil Salandra you will need a talisman of good to protect you. Even then, you will not have sufficient strength to defeat him by yourself.

"Good journey!"

Thrull waves his Sword and a mist descends around you. The mist clears and you find yourself on a beach at the South side of the Great Ocean...

## Official Hintsheet

- There is always an interesting angle to a rum cove. It could provide light relief.
- The jester is only here for the beer (to coin a phrase) but he pits his wits against you.
- The horse needs to chew over the situation before letting you move it.
- Without the horse it will be curtains for you.
- Cave paintings will show the way to enter the fortress.
- The means to venturing behind the blocked door is by the fireplace.
- This adventure is non-violent ... but you want to kill Salandra? Charming!

## Solution (EUG)

Go W and EXAMINE the rock POOL. You will find a fishing net. GET NET and go back E and E. ENTER the CAVE here and go S into a concealed area. USE the NET here to reach the lantern. GET the LANTERN and go N to leave the cave. Now go S, S, S, S, S and W to the hill. Go UP it.

On the top you should EXAMINE the chalk FIGURE and be then able to GET a TINDERBOX. Go E, E and S then climb UP, UP, UP and UP the mountain trail before going S, W, S, W to find a ball. GET the BALL and go back N, E, N, E, E to the cabin east of the bridge. GO CABIN and EXAMINE the CHEST it contains.

OPEN the CHEST and GET the SCIMITAR inside of it before LEAVEing the CABIN. Go W and CROSS the rope BRIDGE. The cabin owner will yell at you but CUT the ROPES of the bridge to leave him stranded and go S and S until brambles bar your bar. CHOP the BRAMBLES with the scimitar to reveal a way south. Follow it S, CHOP down more BRAMBLES and go S again. PUSH the stone DOOR to open it.

Now GO through the DOOR and travel S, S and S to the market square. Go E and GET the ROPE in the stable. Return N and N to the cavern and LIGHT the LANTERN. Go W to enter the dark cave and TIE the ROPE to the stalagmite. CLIMB DOWN the rope to find a gold piece. GET the GOLD piece. Now CLIMB UP and return E, S, S and S to the market square. UNLIGHT the LANTERN to conserve its power.

Go W into the inn and W again to be faced with the landlord. GIVE the GOLD piece to him and he will give you a private room. OPEN the WINDOW and PULL back the DRAPES to reveal a sleeping cat. GIVE it the BALL and GET the HAY when it chases after it. Now GO through the WINDOW to leave the inn and E and E again into the stable.

GIVE the HAY to the horse which will then allow you to GET HORSE and RIDE HORSE. Go W and N to the T-junction. Ride E and E past the waiting robbers. DISMOUNT and DROP hold of the HORSE. Now go S and E and GET the PICK from the quarry. Go S and W to enter the West hut. EXAMINE in turn the DEBRIS and the MOSAIC and then READ the INSCRIPTION you uncover. Go E, N and N then climb UP and UP the rocky path to ENTER the NEST.

CALL QUAG here and the eagle will carry you up to the fortress. GO in through the WINDOW. Go E to the East Wing and GET the BUCKET of coal. EMPTY the BUCKET and go S. Now go D and D the steps and finally W. FILL the BUCKET with water from the tub. Go back E, U, U, N, W and W to the West wing and GO inside the large FIREPLACE. EXAMINE the WALL and PUSH the loose STONES. ENTER the HOLE. LIGHT your LANTERN again and go S.

OPEN the COFFIN and EXAMINE the body of SIRAN. DROP the SCIMITAR to free up space and GET his CHARM. Go back N, GO through the HOLE, go S and go E to a room with a locked door where you first entered the fortress. UNLOCK the DOOR and GO through where the DOOR stands open.

Inside the anteroom, each time you try to go N, various demons will appear. EMPTY the BUCKET of water to extinguish the wall of flame and try to go N again. USE the PICK to smash the wall of ice. This time going N will take you into Salandra's chamber. WAVE the CHARM and Thrull will appear to battle with the evil Salandra. Keep LOOKing (Key L only) until you complete the adventure.

# RETURN TO DOOM

***Professional, Originally Released On DFS 1900 Disc***

Game Type : Text Adventure; Disc-based  
Authors : Peter Killworth and Jon Thackray  
Standalone Release(s) : 1989: RETURN TO DOOM, Topologika, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : TOPOLOGIKA, 1 South Harbour, Harbour Village, Penryn,  
CORNWALL TR10 8LR  
Disc compatibility : CDFS E00, DFS E00

## Instructions

TOPOLOGIKA are proud to present Peter Killworth's latest and greatest adventure. RETURN TO DOOM is part two of his developing Doom Trilogy - and is every bit as baffling as COUNTDOWN TO DOOM, one of the classic games of all time!

### About The Author...

By profession a theoretical research oceanographer - and occasional anthropologist and magician - PETER KILLWORTH's first attempt at this new entertainment form ('Philosopher's Quest') sold 25,000 copies.

### About The Adventure...

The planet Doomawangara (Doom for short) is a dangerous place. As the only explorer ever to survive 1 (COUNTDOWN TO DOOM), you should know. However, an unexpected distress call sends you flying back to Doom in a mission to rescue an ambassador who has been kidnapped by renegade robots.

After surviving a deceptively simply beginning, you'll meet lots of original Killworth puzzles, alternative universes, weird weather, an empty field will never look the same again! You'll accrue a talkative four-legged friend who'll make you feel like laughing one minute and crying the next - maybe even both at the same time! The game ends with a danger-a-minute sequence that would even scare Indiana Jones (half) to death!

## Screen Display

The top line contains a short description of where you are, together with your current score. The bottom section displays your current location in greater detail, together with your own input and the game's responses.

## Specimen Commands

GO NORTH, THEN EAT THE PIG, E, SW, IN

GET ALL BUT THE DUCK AND GOBLET, AND LEAVE

GET - takes the first relevant object

DROP - similar

TAKE THE PIG AND UNICORN, WAIT

SAY HELLO

HELLO - equivalent to saying it

LOOK - gives a full description of where you are

SAVE - stores your current position on disk

RESTORE - brings back the saved game

RESTART - begins at the beginning

QUIT or STOP

VERBOSE - makes program always give the full description of where you are

NORMAL - makes program give full description the first time you arrive at a new place, with short descriptions for later visits

INVENTORY - lists your current possessions

## The puzzles

You may be puzzled why the EXAMINE command is of only limited use. The game is conceived in such a way that in solving the puzzles you are not involved in merely happening to discover things about the objects. It is only by manipulating them where possible, or combing them in some way, that the relevant features are revealed. Some locations, however, do contain hidden depths...

## On-line Help

If you get completely stuck, on-line help is available by typing HELP. Look up your problem on the list of hints and give the hint number you require.

You will then be given some sort of clue. The HELP facility is structured in stages so that you will initially get a partial clue, and will be given due warning if the entire puzzle is about to be revealed to you!

	Hint
I can't go north from the landing area	1
I get killed by the montipython	1
I get driven back by the plant smell	2
I get killed by the boogatigers	3
I can't turn the lamp on	4
I get chomped by the teeth	5
I can't get through the door	6
Nothing happens when I say 'PRONA'	7
I get killed by the grobbler	8
I die if I open the chlorine tank	9
I can't get past the trap	10
The tectonometer sometimes reads 'Overload'	11
I can't get through the cleft	12
I got to the robot camp, but it's deserted and I can't go anywhere	13
I can't get out of the cell	14
I can't get into the safe	15
I can't get through the dark passage	16
I die in the singularity	17
I can't get back through the dark passage	18
Nothing happens when I press the shapes on the terminal	19
Sometimes lethal rain hit me	20
I bounce off the artefact	21
I die entering the northeast artefact entrance	22
I can't see what the 'writing' on the artefact is	23
I can see, but can't read, the artefact writing	24
Nothing happens when I say 'TOGA'	25
I don't know what to do with the rat	26
I can't get through the hatch in the artefact	27
I can't do anything with the bed	28
Pressing the hemisphere doesn't do anything	29
I can't get past the ecosaur	30
I slide down the slope	31
I can't get over the salt sea	32
I can't get past the sabreboog	33
I can't get past the allodiles	34
I die when the winds blow me onto the sage	35
I can't get across the cornice	36
I can't do anything with the computer	37
I keep running out of the scary jungle	38
I can see there are three levels in the artefact but I can only get to two	39
I can't get back past the ecosaur	40
I can't cross the alkaline lake	41
I can't pick up the ball	42
I can't escape the pteromorph in the desert	43
I can't get back across the sea	44
What can I do in the large field?	45
I can't dig properly in the centre of the field	46

I get killed by the buzzing noise	47
I'm lost in the desert	48
The droffids get me!	49
I can see the helmet, but can't reach it	50
I die when I throw the ball	51
The helmet smashes on the floor	52
I lose everything I have when I drop through the hole in the artefact	53
I can't get my belongings back past the omnigrab	54
Should I catch the egg?	55
I can't get out of the shifting halls	56
I have no idea what to do in the zero-gravity area	57
I die if I leave the raft	58
When I press one of the shapes on the raft, I die	59
I can't get through the wormholes under the desert	60
I can't control the raft	61
I can't get the boots	62
I can't get out of the zero-gravity area	63
I can't get past the enzymes	64
I die after passing the enzymes	65
I can't answer the head's questions	66
I don't know the non-disease exits in the artefact	67
I found the dog but can't do anything with him	68
I can't leave the swamp	69
I can't do anything with the silica square on the bare hill	70
I lose the dog up the hill	71
I can't get past the oganobuffalo	72
I can't get the holocrys beyond the forcefield	73
The silica in the pasture kill me	74
I can't get out of the singularity	75
I can't get past the robot guards	76
I get hit by missiles in the pyramid	77
I can't get into the armoury	78
The armoury robots kill me	79
I get hit by the laser	80
The laoratory robots kill me	81
I get hit by the laser	82
The laboratory robots get me	83
What do I do with the ambassador?	84
I get trapped underground with the ambassador	85
The robots catch up with me	86
The second grobbler kills me	87
I drop the ambassador in the landing area	88

Note: If you're not sure about the use of any particular object, Hint 89 will help.

## Review (Electron User)

Robico is well known for the quality of its BBC adventures and so it was with some interest that I tackled its first Electron game. You play the part of Rick Hanson, secret agent. Your mission is to assassinate General Garantz, an evil criminal who is threatening to explode a nuclear bomb in New York unless he is paid a ransom.

You begin your mission in a railway station. An initial exploration of the fourteen locations surrounding you reveals several objects, all of which are useful.

A visit to the telephone box should give you further information about your mission, but reversing the charges is a throw-away line. After collecting everything else you can find you must look for a route out of the station. Leaving by the front door is not the answer as you will soon discover. Hesitation can also prove fatal as one of the general's men is somewhere inside looking for you with evil intent.

To get on the right track, or rather over it, head back to the bridge. A passing train is on, and in time. The guard should be dealt with quickly, so put in the spanner in his works. Leaving the train will find you in a village with more exploring to do.

There's lots to do here and if you take a gamble in the tavern you will find you can stay the night. You must now try not to avoid too close a shave, and cracking the code should see you well equipped to solve the remaining puzzles before leaving the village.

I am very impressed with this game. It has about 220 locations and is totally logical. Packaged with the game is a card which entitles you to help if you get stuck.

Also enclosed is a smart adventure's notebook. This is about the size of a diary and consists of blank, colourful pages. I'm not sure how useful this is, but it does add an air of professionalism to the game.

The program uses screen memory because of its size so you can only see eighteen lines of text at any one time.

RICK HANSON is nothing less than brilliant and Robico must now join Epic as being the software houses for adventures on the Electron. I look forward to spending time on the follow-up version, RICK HANSON II, which from initial impressions seems to be every bit as good.

# RICOCHET

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Adventure  
Authors : N. G. Davidson & D. J. Willams  
Standalone Release(s) : 1990: RICOCHET, Superior/Acornsoft, £9.95  
Compilation Release(s) : 1991: PLAY IT AGAIN SAM 15, Superior/Acornsoft, £9.95  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated. Electron version works on BBC.  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : CDFS E00, DFS E00

## Instructions

The objective of the game is to find the hourglass on each level and then teleport out. When you do this you will be given the password to the next level. (You can subsequently enter that level directly by pressing the P key and giving the password.) The ultimate objective is to finish all five levels in a row, hence gain the full 100% score and discover the secret message.

To jump, you must press the Squish key, and then let go. How high you jump depends on how much you squish. You can also jump to the left or right, by pressing the Roll Left or Roll Right key as you leave the ground. You can practice moves before commencing play by pressing SHIFT-SPACE.

Your energy level (bar at right of screen) is increased by eating foodstuff by walking on top of it and pressing the Pick Up/Drop Object key. Objects may be used to vanish obstacles blocking your way. Keys open doors, which disappear, but the keys remain; some may open more than one door. You can hold a maximum of two objects (including keys) at any one time. Look out for secret passages, particularly on the later levels.

Some objects, obstacles and characters to look out for as you ricochet through the five levels of the game include:

**FORTRESS** - power drill (then look for the hole in the wall), lead, bunsen burner, alchemist, robber, ghost. (When you have the hourglass, the fire and a 15% score, jump down the deep hole and find the teleport.)  
**TECHLEV** - fruit machine, tax demand, computer disc, stamp, sodium, slug.  
**DERELICT** - flower pot, crystal ball, match, map, maiden, witch, beggar.  
**THE UFO** - cocktail glass, extinguisher, identity card, oil, guard, robot.  
**ANCIENT** - dagger, world, Cyclops, Mercury, Caesar, Atlas, Hermes.

## Game Controls

Z - Roll Left, X - Roll Right, \* - Roll Up, ? - Roll Down  
\* - Pick Up/Drop Object, ? - Squish  
<COPY>/<DELETE> - Pause On/Off, S/Q - Sound/Quiet  
<SPACE> - Start Game, <SHIFT><ESCAPE> - Lose Life

**Instructions' Source** : PLAY IT AGAIN SAM 15 (Superior/Acornsoft) Inner Inlay

## Review (Electron User) - "Having A Ball"

RICOCHET is more than just another arcade adventure from the Superior stable. It's brilliant. After the disappointment of BARON in the SAM 11 compilation I needed something to lift my spirits and RICOCHET did the job admirably.

Anyone who has seen CITADEL or PALACE OF MAGIC will instantly recognise the format. The display is a side view of the current location and moving off the left, right, top or bottom quickly flicks to the next screen.

In this game you control Sprat - the Small Partially Robotic Alien Time-traveller - a cute little rubber ball with a happy smiling face and sunglasses. You don't walk. You roll or bounce your way around the ladders and levels, or take a swim.

Levels that can't be reached can quite often be bounced up to. You hold down the Squish key to squash Sprat as flat as possible then let go and he springs up. Aiming straight up isn't a problem, but trying to make Sprat go in any other direction is difficult to say the least - he flies around the screen bouncing off every object within reach. It's very frustrating but good addictive fun, trying to get him through a small hole to the left or right.

Your aim, amid all this mayhem, is to collect an hourglass from each of the five worlds of RICOCHET and then teleport out. You are given a password on doing this, so you can skip the completed levels on subsequent games. You start on the mystical Fortress world, then move on to the exciting futuristic Techlev and dismal Derelict worlds.

Your energy is displayed as a bar running up the right hand side of the screen and is deleted by rolling into the various monsters that inhabit the worlds or the dangerous objects that litter each screen. Energy is increased by eating the food left lying around.

Keys must be collected in order to open doors - usually one key will open one particular door. Other objects can be found, such as a tomato, a coin and a spade, but I'm not yet sure what to do with them. They can be placed on pads located in certain places and I'm sure that they'll have some beneficial effect when I've located the right pad for each object.

The graphics are among the best seen on the Electron, and the sprites are superbly animated. The title screens are particularly well drawn and worth the wait while they load. The sound effects are minimal but didn't affect my enjoyment.

This latest arcade adventure is causing me a few headaches and sleepless nights - it is very addictive. If you have completed CITADEL and PALACE OF MAGIC and are looking for a fresh challenge, RICOCHET fits the bill quite nicely.

Roland Waddilove

### \*\*\* Second Opinion \*\*\* (Electron User)

Not since PALACE OF MAGIC have I been hooked to an arcade adventure, but this frustrating game has me securely in its grip. The way the ball bounces round the screen drives me round the bend. The objects and obstacles are mini puzzles - find the object and place it on the corresponding pad. A brilliant game that makes a welcome change from the usual SAM repeats.

"Electron User Golden Game"

ELECTRON USER 7. 2

# RIG ATTACK

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade; Bomb Submarines From Intricate Oil-Rigs  
Authors : Kevin Blake & Jason Sobell  
Standalone Release(s) : 1985: RIG ATTACK, Tynesoft, £7.95  
Compilation Release(s) : 1988: MICROVALUE FOUR GAMES VOLUME 1, Tynesoft, £3.99  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : TYNESOFT, Unit 3 Addison Industrial Estate, Blaydon, TYNE & WEAR NE21 4TE. Tel: 091 414 4611  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### Instructions

RIG ATTACK is an action packed game with scrolling screens, demanding skill and quick reflexes to guide your helicopter from rig to rig without coming under attack from enemy submarines.

The submarine is equipped with the latest missiles, your 'copter carries short range bombs that need to be dropped at a low altitude to reach that darting submarine in the waters below.

### Hints

Don't let your 'copter to run low on fuel shown by the bar meter at the base of the screen. Land on Helipads to re-fuel. When enemy sub comes onto the screen you have to eliminate it before you can re-fuel and continue your patrol.

### Game Controls

Z - Left, X - Right, ; - Up, . - Down, : - Fire

# RIK THE ROADIE

*Professional, Originally Released On Cassette Only*

Game Type : Arcade In Stages  
Author :  
Standalone Release(s) : 1987: RIK THE ROADIE, Alternative, £1.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+, Master 128  
Supplier : ALTERNATIVE, Units 3-6 Baileygate Industrial Estate,  
Pontefract, WEST YORKSHIRE WF8 2LN. Tel: 07977 79777  
Disc compatibility : CDFS E00, DFS E00

## Instructions

You are Rik, roadie to the world famous pop group, ALTERNATIVE ROCK. In order for Alternative Rock to stay popular, you, as their roadie, must get all their equipment to the gig, take it into the hall, and set up the sound levels before the gig starts.

### Stage 1

You have 200 miles to go to reach the site of the next gig. You have only 6 hours to get there, set the gear up, and check the sound levels. Get to the gig as quickly as possible, avoiding all oncoming traffic. Hitting anything will cost you time, as your van is repaired.

### Stage 2

Now you are at the gig, you have to carry the equipment from the van into the hall. As amplifiers and speakers are very heavy, you cannot hold them for very long. Move as fast as possible before your endurance runs out, and you drop the very heavy (and expensive) equipment.

### Stage 3

Finally, the equipment is set up, and all that remains is to set up the power levels. Too low, and the audience cannot hear the group Too high, and the fuses blow. Keep the levels in the red, and as soon as the optimum level is reached, the next sound channel is automatically selected. Once all four channels have been set, you can sit back, relax and watch your group the world famous ALTERNATIVE ROCK perform live on stage.

Once all three stages have been completed, then you have to transport the equipment to the next gig, with less time to complete it in!

**Stage 1:** Z - Left, X - Right, \* - Accelerate, ? - Brake

**Stage 2:** Z - Move left foot, X - Move right foot

**Stage 3:** \* - Power up, / - Power down

## Review (Electron User)

This is the first Kansas adventure I've managed to get a look at and I'm quite impressed. Although written in Basic, the responses are excellent and a peek at the listing shows that a lot of work has gone into producing the program. Right. Now for the plot.

Legend tells of a "time-ring" belonging to Zor, an evil magician of the Middle Ages. Your task is to search for and find the ring. No easy task, I can assure you.

I won't reveal too much about the game. There is one problem, however, that is likely to stump you - how to get past the crocodiles. This is a bit nasty, but man's best friend should come in handy here. The other problems are totally logical (in retrospect).

A good atmosphere is generated by wise use of room descriptions, but don't try TAKEing the things you are told about, most of them aren't recognised.

Incidentally, Kansas gives a lifetime guarantee on its cassettes. This, along with the reasonable price of the game seems quite good to me.

There is a superb puzzle involving a locked door and a piece of parchment that isn't all it seems. But I'll leave the pleasure of finding out exactly what I mean for you to discover.

The program itself does get a bit frustrating in that it doesn't recognise GET and all the verbs I tried had to be typed in full. For instance, you have to type in EXAMINE, EXAM isn't recognised. Possibly I'm just getting lazy.

The actual level of the adventure is aimed at the average player. However I think beginners will find it interesting, though the more experienced player shouldn't take all that long to solve it.

Overall, a well-linked plot that's very nice to play, and a well-priced product that's good value for money. More please.

Merlin, ELECTRON USER 2.12

# ROBIN OF SHERWOOD - THE TOUCHSTONES OF RHIANNON

*Professional, Originally Released On Cassette Only*

Game Type : Text Adventure  
Authors : Mike Woodroffe and Brian Howarth  
Standalone Release(s) : 1985: ROBIN OF SHERWOOD, AInternational, £7.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ADVENTURE INTERNATIONAL, 85 Summer Street, BIRMINGHAM  
B19 3TE  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

In the days of the Lion spawned of Devil's Brood, the Hooded Man shall come to the forest. There he will meet Herne the Hunter. The powers of Light and Darkness shall be strong within him. And the guilty shall tremble.

**Instructions' Source** : ROBIN OF SHERWOOD (AInternational) Back Inlay

## Quick Peek (Electron User)

It is over a hundred years since the Normans conquered England, but rebellion still flares. Many English secretly believe a Hooded Man - a fugitive - would be chosen by Herne the Hunter to lead the English against the Norman tyranny. This time is now ready for the appearance of the Hooded Man - you. This Scott Adams' adventure includes features such as the stringing together of commands and input of complete sentences. A free hint sheet is included with the game.

ELECTRON USER 3. 3

## Review (Electron User)

It isn't unusual for me to get stuck in adventures, but to do so when a cheat sheet is enclosed with the game certainly is, which goes to show the quality of Adventure International's ROBIN OF SHERWOOD. While the plot of the game is new, the characters and some of the events in it follow the recent TV series closely.

You, of course, play Robin of Locksley, the Hooded Man and your task is to find and safely store the Touchstones of Rhiannon. You start the game in the Sheriff's dungeons, awaiting trial for killing deer. Escaping is difficult and probably one of the most well constructed puzzles I have seen.

Once you are free you should save the game - exploration of the castle is risky, though necessary. It shouldn't be too long before you manage to get out of the castle and when you do you'll find yourself in the middle of a 60-odd room maze. I suggest you save the game again at this point.

The usual maze-mapping methods won't work here as the objects you have seen so far can't be collected.

The maze is logical, though, so you can map it linearly. Moving two moves east and then two west will bring you back to your start position providing you haven't tried to go off the map.

If you find you need less moves on your return journey then you have reached the end of the map and should, by reducing the number of moves, be able to find where the edge is. Eventually you'll manage to map it all.

I was a bit disconcerted to find myself dumped in the forest maze so suddenly, and this put me off the game for a while. Once I had got further into it though, I found it to be one of the best adventures to have come my way for a while.

# ROBOTO

***Professional, Originally Released On Cassette Only***

Game Alias : ROBOTRON 2084  
Game Type : Arcade Platform Game  
Author : Eugene Smith  
Standalone Release(s) : 1984: ROBOTRON 2084, Standalone, £9.95  
1986: ROBOTO, Bug Byte, £2.99  
Compilation Release(s) : None  
Stated compatibility : BBC Side A, Electron Side B  
Actual compatibility : As stated  
Supplier : BUG-BYTE, Liberty House, 222 Regent Street, LONDON W1R 7DB  
Disc compatibility : CDFS E00, DFS E00

## Instructions

Rampaging auto components are destroying the galaxy's last power source, ROBOTO is at your control. 51 screens and a great challenge!

The challenge starts here...

Earth, the year 2086. The once mighty sun is a tiny speck in space. Most of the surface of the Earth lies a barren waste. Life is confined to a tiny oasis, at the centre of which stands a crumbling building, the last operating power station. This is now threatened by a control malfunction causing the auto components to rampage throughout the complex. A major power failure is imminent. As the only cybertechnician of the group, it is your responsibility to regain control by de-activating each of the 51 zones in the complex. You must achieve this using the last squad of five working droids. You have modified the droids to deal with the situation, they are equipped with lasers and hover packs. You have created...ROBOTO.

## Game Play

There are 51 zones or rooms. The components are de-activated by destroying the "power orbs" and leaving through a different exit to the one you entered by. Unless, that is, there is only one exit. It is best if you map the reactor as you go on as it contains one-way systems. Some power orbs give extra ammunition. Bonus points are scored by destroying meanies. You can let ROBOTO rest against a wall which can be very helpful if slithering past some of the nasty things you will find in the dark!

## Game Controls

Z - Left, X - Right, \* - Up, ? - Down, RETURN - Fire, P - Pause  
Dual Plus 1 Joystick Control Recommended

**Instructions' Source** : ROBOTO (Bug Byte) Inner Inlay

## Review (Electron User)

ROBOTO is set in the distant future where a feeble sun shines on a barren Earth. A crumbling power station has developed a serious malfunction which has caused the auto components to run rampage around the complex. Unless you can regain control by de-activating all the zones a major power failure will occur which will wipe out the last remaining life on the planet.

You control a robot, a stick-like object which can float gracefully around the 51 high resolution screens. You can dive, climb, or cling on to vertical walls as you blast the various nasties out of existence.

Each screen contains a power orb. When you destroy one, most of the meanies on that screen will stop firing at you, making it much easier to progress to the next zone

without losing a life. Additionally, some orbs give extra ammunition, which is particularly useful as it is all too easy to run out completely.

Many of the rooms are real devils to get through first time and require deft use of the control keys which, thankfully, you can redefine.

The program is well written, has no obvious bugs, and follows the now familiar style of having BBC Micro and Electron versions on opposite sides of the tape.

The graphics are smooth, albeit with a little flicker, and the sound is not too intrusive, but I wish you could turn it off from within the program.

This is an enjoyable game for the nimble fingered, requiring a good memory or a well drawn map. ROBOTO is well worth adding to your collection.

## Review (Electron User (ROBOTRON 2084))

What an absolutely brilliant game! This must be the ultimate in high speed arcade action. The sound is excellent and the graphics superb. The screen is filled with laser bolts, flying debris, brain waves, mutating monsters and robots. It's got to be seen to be believed!

There are nine screens full of various nasties to be disposed of and people to be rescued. As you progress through each screen, the number of nasties increase and they get meaner and meaner.

You start off positioned in the centre, surrounded by assorted robots and monsters with nowhere to hide and only a laser pistol with which to defend yourself.

On screen one there are only robots plus a few obstacles. These can be quickly dealt with, in fact if you don't blast everything in sight within about five seconds then you have had it. Bonus points are gained if you pick up the two humans wandering around.

Screen two starts with ordinary robots, large indestructible robots, pulsating rings, people and more obstacles. After a short while the pulsating rings mutate into machines which hover about the screen firing spinners at you, so speed is essential.

Screens three and four are the same - only worse, that is there are twice as many robots and machines.

Screen five is a bit tricky. In addition to all the other obstacles and nasties, there are giant brains with tiny bodies and legs. These fire thought bolts or brain waves which home in on you and then mutate into another indescribable form.

Six is the same as four, which is a bit of a relief after the struggle to blast your way through five.

Seven is nearly impossible. There are pulsating rings - different to the previous ones - bouncing about the screen at high speed. They quickly mutate into giant frogmen's heads on tank tracks which emit spinning balls.

Eight and nine are like three except that there are far more robots - over 40!

There are the usual options available before the game starts - sound on/off, set start level, keyboard/joysticks and a two player game. Once the game has started there is a pause facility so you can stop for a second to get your breath back.

To play ROBOTRON properly you will need a pair of joysticks (Plus 1 type). There is a keyboard option but it is impossible as there are four keys to move and another four to fire in each direction. The only way to play is to use the two joystick option. One joystick is for moving and the other to fire. You can actually run one way and fire the another. The problem with two joysticks is how to hold them though. I ended up strapping one to each leg!

ROBOTRON is a highly recommended action packed arcade classic. On a scale of 1 to 10, I would give it 11 for addictiveness.

Supplier : THE ELK ADVENTURE CLUB, 2 The Beeches, Tilbury, ESSEX  
RM18 8ED  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"You are ROHAK, mighty barbarian from the northern wilderness.*

*"Seeking adventure, you travel far south to the city of Cazanthe. Not to your liking, you find employment in a barber's shop. You become acquainted with a girl called Zlonia. Your friendship grows until one day she is kidnapped by the evil wizard, Trolez-hiar for his foul purposes. You decide to rescue her and here your adventure begins..."*

You are Rohak, the mighty warrior. Skilled in the art of two-handed sword-fighting, you live with your tribe up in the Tesapor mountains. But, as life goes on, you get bored and decide to venture out, to look at the rest of the world of Yoram.

You set off and make your way past the deserts of Foras and hitch a lift on a sailing ship through the Straits of Asdon until you reach the city of Cazanthe. Upon entering the city, you find an inn known as 'The Crossbow And Quarrel Tavern'. You stay there, working to pay the rent, as an assistant to a barber. You make good your stay for many a month.

During your stay, you meet a girl called Zlonia and you come to know her well. Then one day you hear bad news. Tholez-hiar, an evil wizard who has been kidnapping innocent girls in use in unholy murders to the foul God of Terror Gisor, has stolen Zlonia!

Upon hearing this ill-fated news, you decide to rescue her, but what clues do you have on her whereabouts? You sit down at a table and think. This is where YOU take over the position.

Find Zlonia and return with her to 'The Crossbow and Quarrel Tavern'! Rumour has it that Trolez-hiar has many friends out to kill you. Good luck on your mission!

The adventure loads in four parts and you must complete each part in order to obtain the password for the next. Commands must be entered in verb-noun style. The following words might come in handy:

ASK, EXAMINE, JUMP, NORTH, SOUTH, EAST, WEST, NW, NE, SW, SE, CLIMB,  
ON, OFF, IN, OUT, KILL, GET, DROP, GIVE, SAY, INVE and many more.

Some words have abbreviations.

A hint sheet for this adventure is available to non-members if they send an SAE to :  
THE ELK ADVENTURE CLUB, 2 THE BEECHES, TILBURY, ESSEX RM18 8ED.

# ROMAN EMPIRE

*Professional, Originally Released On Cassette Only*

Game Type : Strategy; War-Game  
Author : M. C. Lothlorien  
Standalone Release(s) : 1982: ROMAN EMPIRE, Lothlorien, £9.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : M.C. LOTHLORIEN, 56A Park Lane, Poynton, STOCKPORT SK12 1RE  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

A War game set in the early days in the Empire.

### A. Setting and Objective

The setting is Rome in the first century B.C. You are Emperor and your objective is to conquer the six countries which are hostile to you at the beginning of the game. In order to conquer a country, you must wipe out their troops.

To enable you to do this, at the outset of the game you have five GENERALS, each in command of an army (signified by a flag) which does not initially contain any troops. You have also 10 LEGIONS (signified by an eagle) each consisting of 5,000 men.

The idea of the game is to build up some or all of the armies from the various legions and launch campaigns in the appropriate countries.

### B. The Play

The central reference point is the main OPTION menu. This is first displayed after you have chosen the level of difficulty you wish to play (1 is difficult, 2 very difficult and 3 impossible). You will always return to this menu when you have fully executed any of the main options.

The options allow you to display the current situation with regard to: 1. LEGIONS, and 2. COUNTRIES/ARMIES.

You may also:

3. ATTACK (Launch a campaign in a particular country)
4. RETREAT (Withdraw your army from a particular country)
5. CAMPAIGN REPORT (This will give you the up-to-date position of the campaign in a country)
6. NEXT PERIOD - This option means that your troops will fight a further period. NO BATTLES WILL TAKE PLACE IN ANY PERIOD UNTIL YOU EXERCISE THIS OPTION.

Additionally on the option display, there is a record (top right) of the number of periods you have fought and (bottom left) of your current totals for victories and defeats.

Once you have familiarised yourself with the opposing forces, resources at your disposal etc. and decided on your opening strategy, you will need to build up your armies in order to make attacks. From here on, you may find that you need to reassess the situation after each period - until you have either conquered all the countries or been finally defeated by losing all your troops.

### C. The Displays

#### 1. LEGIONS

The display gives you: the identification number of each legion (1-10) together with the men (small soldier) in each. Each legion always starts off with 5,000 men and no extra troops will be available to you during the course of a game. Legions can only fight when they have been assigned to an army. The number of men in each legion forming part of an army will always be adjusted to the average for that army. This will be updated either after a battle or when legions are added/pulled out.

**The other factors displayed are as follows:**

- i) **FE.** The fighting efficiency of the troops. For the legions this is always basically six although when assigned to an army, this will increase (whilst in the army but not on the legions display) to the value for the individual army. This reflects the ability of your different generals and will remain constant for all games.
- ii) **M.** The morale of the legion. This will alter during the course of a game, depending upon circumstances.
- iii) **E.** The energy level of the legion. This will decrease when they are fighting and increase when they are not.
- iv) **S.** The 'status' of the legion. This will either be 0, which means it is not at the time forming part of any army, or will show a number from 1-5. THIS NUMBER INDICATES TO WHICH OF YOUR ARMIES IT IS CURRENTLY ATTACHED. (Note the country it is fighting in - the army may not be fighting in any country). If a legion is wiped out the status column will show an 'X'.

**2. COUNTRIES/ARMIES**

- a) **Countries:** this part of the display gives you:-
  - i) **Troops (small soldier)** The number of troops that each hostile country has. This will decrease due to casualties if you are campaigning there and increase due to recruitment if you are not.
  - ii) **FE.** As with legions (and later, armies), this indicates the fighting efficiency of a country's troops. This will be constant throughout any one game but will vary from game to game and depending upon level of play. Again it is partially fixed according to historical troop efficiencies and partially random, depending upon their leader.
  - iii) **M & E.** These are as per the legions.
  - iv) **S.** The current status of the country. "0" indicates that the country is hostile and you have no army there. "99" indicates that it has been conquered. Any other number (1-5) indicates which of your armies is engaged there at the time.
- b) **Armies:** (YOUR armies). The display here is largely self-explanatory and largely as for countries (above). Troops are the total men in the legions forming the army. Energy and morale figures are generally averages of those of the constituent legions. Status (1-6), indicates the country (0 if none) in which the army is campaigning.

PLEASE NOTE THAT WHEN YOU ARE SHOWING THIS DISPLAY, YOU ARE ALWAYS GIVEN THE OPPORTUNITY TO ADD OR REMOVE A LEGION/LEGIONS TO OR FROM AN ARMY OR ARMIES. If you try to add or subtract legions which are unavailable or which do not form part of the army from which you are trying to remove them, the computer will ignore you.

**D. General Points**

- 1. You will not be allowed to make an attack with an army that is already engaged. It must first be withdrawn from the country where it is campaigning, THEN you may use it to make your new attack.
- 2. Similarly to '1' above, if you are already attacking a country with one army, you will not be allowed to attack with another at the same time. You may

withdraw (Retreat) the one and then attack with another or you may add or withdraw individual legions to or from the army already there.

3. If an army conquers a country during a period, that army is automatically considered to be withdrawn - you do not specifically have to do this yourself. if an army is wiped out during a period, it may subsequently be built up again and used to attack without having first to be specifically withdrawn. Please note that if you withdraw all the individual legions from an army, that ARMY is NOT considered to have been withdrawn unless you actually do this yourself.
4. If a legion is allocated to an army, whether engaged or not, it is considered to be away from Rome. If all your legions are away, watch out for Barbarians!
5. At the end of a game, you will be given an overall summary of your performance.

*Good luck and we hope you enjoy the game!*

S.P.Q.R.

NB. Whenever you are asked for a numerical input eg. legion, army, country, etc. 0 (zero) is always your escape route and will take you on to the next phase.

**Instructions' Source** : ROMAN EMPIRE (Lothlorien) Back and Inner Inlay

### **Review (Electron User)**

Here is a chance to turn the clock back 2,000 years and try your luck at conquering the world. The nine armies of Rome, each commanded by a great general, consist of 18 legions, each with 5,000 legionnaires. You must decide how they will be divided among the armies and which country each army will attack.

You can display at any time the state of each army, its manpower, fighting ability, morale and strength, and also the deployment of your legions and their current manpower. Also available at any stage is a map of the world, showing the countries which you have conquered to date.

Another display gives the strength of your opposition. Using all the information available, you decide who to attack and the optimum size of your army.

An attack is then launched and continued until either the opposition is subdued or your army is wiped out (if you are anything like me, it will be all the latter).

The foregoing sounds simple, but tactics are everything. Also the world is a big place, and the object of the game is to conquer the world, nothing less. While you're doing this you also have to defend home against the barbarians who are just waiting for the defence to become weakened by excessive conquering and pillaging.

I had great fun switching my armies around, sending battle-weary troops home and replacing them with fresh men and launching raids to harass and weaken the defending armies.

I also found a way to conquer the world and lose hardly a man in the process, without cheating, but I'm keeping that to myself.

The game involves a lot of text and few graphics. I found it extremely intriguing, and it passes away the hours on a rainy afternoon.

A game, I think, for the mature player, who likes to use his head rather than shoot from the hip.

Adam Young, ELECTRON USER 2. 6

# ROMEO AND JULIET

***Professional, Originally Released On Cassette Only***

Game Type : Utility Package; Investigate Shakespeare's ROMEO Play  
Authors : John Mahoney, Stewart Martin & Jim Wynn  
Standalone Release(s) : 1985: ROMEO AND JULIET, Penguin Study Software, £5.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : PENGUIN STUDY SOFTWARE. No further information given.  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Written by practising teachers who have had many years' experience of successfully preparing students for literature examinations. Penguin Study Software gives you the ability to study an 'O' level or CSE text by means previously impossible. You can:*

- a) investigate major characters, themes and images and the subtle relationships between them,*
- b) research specific essay titles or examination questions,*
- c) thoroughly revise a particular character, theme or image of your choosing - at your own pace,*
- d) work through the entire play or concentrate your study on a particular act or acts.*

*If you are studying for an examination as a full time or part-time student, or are reading purely for interest and pleasure, Penguin Study Software will increase your knowledge of the text and help you to enjoy and profit from the study of literature."*

Once you have loaded the program you will be able to select, under a number of headings, those areas of interest you wish to explore.

In addition, you may restrict your search to particular parts of the play if you so wish - otherwise it will be assumed that you would like to search it in its entirety.

## Getting Started

Start with a simple search for just one item, for example a theme you find interesting.

As the computer comments on what it has found, you will gain a maximum benefit by looking in your copy of the text for the reference given - carefully consider its context by reading a number of lines either side of the exact place indicated.

With experience, you will be able to undertake very sophisticated studies of the text by carefully selecting combinations of characters, themes and images. This type of questioning is likely to reveal important relationships within the play and lead to greater understanding - although highly structured enquiries of this kind require some thought on your part to begin with.

For example, in Shakespeare's 'Macbeth', it is well known that Macbeth is involved in the murdering of several people - it might therefore be tempting to assume that Macbeth and the theme of blood would be a fruitful combination to explore. In fact, a far more revealing insight might be gained if blood, as a theme, were to be considered in its relationship to water, for example.

As appropriate, the computer will suggest other profitable lines of enquiry which you might like to follow up, either on their own or in the combinations it suggests.

To help you get the best out of the program you are limited to choosing a maximum of three items at any one time - this is completely independent of any decisions you may wish to make about concentrating your search on particular parts of the text.

**Have your copy of the text handy**

Act, Scene and Line numbers are referenced to 'The New Penguin Shakespeare' as used and recommended by the Royal Shakespeare Company. If you are using other editions of the play you may find that some of these numbers vary slightly, and you should bear this in mind when looking at your text.

# ROUND ONES

## *Professional, Originally Released On Cassette Only*

Game Alias : SPHEROIDS  
Game Type : Arcade; Pinball Simulation  
Author :  
Standalone Release(s) : 1988: ROUND ONES, Alternative, £1.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+, Master 128  
Supplier : ALTERNATIVE, Units 3-6 Baileygate Industrial Estate,  
Pontefract, WEST YORKSHIRE WF8 2LN. Tel: 07977 79777  
Disc compatibility : Unknown

### Instructions

A long time ago in a galaxy far, far away...oops, wrong story!

You control a Block Assault Transport (B.A.T.) at the bottom of the screen. With this, you must deflect a Block Assault Laser Launch (B.A.L.L.) towards a series of blocks at the top. This ain't as easy as it sounds!

A collision between a block and a B.A.L.L. will usually destroy a block but some blocks have stronger shielding and will take more hits to destroy.

Also roaming around some sectors will be conflictors (these are not very nice to know) and laser whose fire will destroy you.

To make life a little easier, you are equipped with a Force Shield which will protect you from these. It also has a useful side effect of deflecting the B.A.L.L. back up the screen and also catches Driblets. (You mean I didn't tell you about these!?!)

Diblets are released by mystery blocks when hit. Catching one will cause an effect which may be good (such as giving you an Annihilator) or bad (trial and error time again, folks!)

All blocks are colour coded like this:

Normal block	-	white
Tough block	-	yellow
Speed block	-	red
Mystery block	-	black

### Game Controls

Z - Left, X - Right, SPACE - Release B.A.L.L./Fire Annihilator  
P - Pause ESCAPE - Restart, RETURN - Force Field

NOTE: A cassette remote control is desirable for this program as higher levels are loaded from tape in blocks of eight screens, i.e. 1-8, 9-16, etc.

**Instructions' Source** : ROUND ONES (Alternative) Back and Inner Inlay

### Review (Electron User) - "Breaking Out Again"

Once upon a time, just about at the dawn of time as far as computers are concerned, there was a simple, but addictive, little arcade game called BREAKOUT. In it you controlled a bat and had to hit a ball which bounced off various blocks and destroyed them.

The BREAKOUT idea vanished into the wilderness for about five years, but has now reappeared in a number of guises. Alternative's ROUND ONES - actually called SPHEROIDS on the title screen - is the latest addition and comes in at the budget end of the market.

In this latest version, the bat has become a Block Assault Transporter and the ball is a Block Assault Laser Launch (Gettit?). Many of the blocks are simple and require one hit by the ball to destroy them. Others, coloured yellow, require two or more hits.

Red blocks increase the speed of the ball while black ones release a driblet. Catching these can increase the size of the bat (although it might reduce it at other times) or they may cause the entire screen to explode - I'll leave it for you to discover which driblet does what.

Destroying all of the blocks on one screen will move you to the next. When you have completed eight screens the next set is automatically loaded from the cassette. There are some 100 or so to master in all.

The second and subsequent sets of screens introduce new hazards. Lasers fire at you and multi-coloured conflictors can cause havoc with the ball. Your force field protection will come in very useful, but this is in limited supply and must be used sparingly.

It's a tough game, so the programmers have supplied you with nine badly needed lives. It took me ages to master just the first screen, and I frequently lost the balls one after the other in record time. Fortunately there is an option to alter game speed.

The quality of Alternative's games has certainly improved recently and ROUND ONES will make a worthy addition to your collection.

I have one major gripe about the game, which features some really clever multi-coloured backgrounds. They look superb, but can act as an almost total camouflage for the fall. I feel the game would have been better with simple plain coloured backgrounds. Oh, and I must mention the awful music, it's painful to listen to.

## **Instructions**

Instructions currently unavailable.

## **Review (Electron User)**

There are few subjects which crop up in conversation more than computers. But one that perhaps does appear just as regularly is royalty in all its forms - people have been fascinated by kings and queens for centuries.

Author Anthony Holden has collected a vast number of facts, both trivial and vital, about royal persons from earliest times to modern day. These are presented as a series of 30 tests, grouped loosely by subjects as diverse as "The Kings Musick" and "1066 and all that", and as intriguing as "The Bad..." and "Verse and Worse".

The difficulty of the questions varies a great deal, but I am sure very few people would score highly at first. It is possible to answer individually or to have two teams competing. One drawback, of course, is that by loading the data from cassette it is accessed serially. This can be frustrating.

An introductory passage introduces each test, after which the question is posed. The author's answer is then shown so that marks may be awarded and entered. This obviously is to prevent an answer such as "Duke of Edinburgh" being disallowed if the built-in answer was "Prince Philip".

I found this program quite fascinating, addictive and educational. It is also a welcome antidote to zapping aliens.

## Instructions

*"Crush the boulders and squash the mutant Krackats as they scavenge for food amongst the rotting ruins. Only the fittest can survive in the land. Features rebounding boulders."*

During the period of years from 2001 to 2003, a third world war took place. It was terminated by a massive nuclear bomb. The effect of the explosion and radioactive storm which followed was not restricted to the super powers; its effects were felt all over the world.

The devastation caused resulted in a new life for the world's inhabitants - that of primitive caveman. In this now desolate landscape the only creature to survive is the 'Krackat', a mutated turtle-like creature whose only diet is that of human flesh! Your only hope of survival is to kill the ever increasing number of Krackats. You perform this by pushing the pieces of rock (which form the maze walls) onto the Krackats.

Background radiation is rising, thus you must complete your task before the rocks disintegrate or you die of radiation sickness.

On the second and third screen, the bonus rocks have special functions.

A boulder will move unless it is blocked by another rock, in which case the boulder will be crushed instead. Boulders will bounce back towards you if you miss a Krackat.

Crushing the green rocks results in bonus points scored. Do not attempt to move a rock which contains a bomb, since this may start another holocaust!

The Krackats develop from eggs, so you may be able to kill them before they hatch!

A bonus caveman is awarded at 6,000 points.

## Game Controls

Z - Left, X - Right, \* - Up, ? - Down, <RETURN> - Push/Crumble  
S/O - Sound On/Off, <DELETE>/<COPY> - Freeze/Restart

Alternatively, you may use a joystick.

**Instructions' Source** : RUBBLE TROUBLE (Micro Power) Inner Inlay

## Review (ELBUG)

RUBBLE TROUBLE is one of a number of new releases from Micro Power which has been converted from the BBC Micro. The game is set in a post-nuclear wasteland and involves crushing mutant 'Krackats' by pushing boulders onto them. The game is similar in concept to the arcade game "Pengo", except that the scenery is different and when you push a boulder it bounces back and forth across the screen. This can be very dangerous, especially if you happen to be in the way of the rebound.

There are also bonus rocks strewn across the screen which are very useful for points. There are three different scenarios to this game ranging from the simple "Pengo" type screen to one where the whole playing area is full of blocks, and you have to find your way through (this is much more difficult than it sounds).

The graphics are fast and smooth, and the sound effects excellent. There are also comprehensive instructions (including weird sounds) and a high score table. Overall this game is very good and certainly a novelty. If you've played "Pengo" then you'll love RUBBLE TROUBLE. Rating: \*\*\*\*

Alan R. Webster, ELBUG 2. 2

## Review (Electron User)

Have you ever felt the irresistible urge to pick a fight with a Krackat? No? Then for a new experience, try this game for size.

The world's a mess after a nuclear holocaust and things aren't made any better by mutant flesh-eating turtles called Krackats. As seems to be the way of things in computer games, you find yourself in a maze, the walls of which are made of boulders. Your only hope of survival is to crush the little nasties and so gain points.

As if this wasn't enough, a little gauge at the top of your screen tells you the background radiation level. When this gets too high, it's curtains for you. Time is of the essence.

You can push a boulder unless it's blocked by another. In which case, the boulder itself will be crushed. Beware if you miss a Krackat, as the boulder will bounce back and crush your frail bones.

Also avoid boulders marked D, as these contain a bomb and don't like being pushed around. Should you survive all this, a bonus life is given at 6,000 points.

The keys are standard - Z and X are for left and right, : and / for up and down. To push a boulder, just stand next to it and hit your <RETURN> key.

There are three levels, one of which is ominously entitled the Vanishing Maze.

It's a game to keep all ages amused for hours on end. The first rate graphics really enhance its enjoyment and the sound effects are particularly good as is the music accompanying the instructions. Despite the dreadful scenario, it's a great game.

Keith Young, ELECTRON USER 2. 7

# S-PASCAL

*Professional, Originally Released On Cassette Only*

## Review (Electron User)

PASCAL is the latest in a series of programming languages from Acornsoft. It arose from investigations into possible developments resulting from the inclusion of data structuring facilities in an ALGOL-60 like language.

It was designed around 1970 mainly by Professor Niklaus Wirth working at the Institute for Informatics in Zurich, but also benefited by the inclusion of some of the ideas of C. A. R. Hoare who was also working on data structuring facilities in programming languages.

He published his language in 1971 and named it after the great seventeenth century French philosopher Blaise Pascal, who invented one of the earliest known calculators.

Two years later, in 1973, Hoare and Wirth attempted a formal definition of the language in response to user experience to shed light on areas of uncertainty. This led to a revision and extension of the original language.

As with all computer languages, Pascal was designed for a specific purpose. Niklaus Wirth's main objective was a language better suited to teaching programming than any existing language at the time. He was successful in his aims and it soon became popular as a teaching language.

Very quickly, user groups sprang up in several countries to exchange information and ideas on Pascal and the language was adopted by the University of California, San Diego in 1973/4 as their main teaching language. UCSD were responsible for a implementing Pascal for a wide range of computers.

One of the main reasons for Pascal catching on so quickly is that it is concise - the rules of grammar can be written down on just four or five pages.

Pascal is fairly simple to learn although complete beginners may have trouble initially as the knowledge required to write your first program is greater than for Basic.

Pascal is a highly structured language with a rigid format that the programmer is required to adhere to. Everything is laid out so neatly and logically that it is difficult to go wrong. It encourages a style of programming in which programs are built up step by step from small well defined procedures.

All programs start with the word 'program' followed by the name of the program. All the constants and variables used must be declared after the title, plus their type - for example, integer. Any procedures used are defined following the variables and constants and the action part of the program commences with 'begin' and finishes with 'end'.

Pascal programs are very readable, being almost self documenting and needing very few comments. The program flow is easy to follow and the structure clear; making alterations, improvements and debugging very simple.

Lisp is quite interesting, Forth is fast and powerful, Basic just a Mickey Mouse toy for kids - but Pascal is a real programmer's language and a delight to use. Pascal is a compiled language, not an interpreted one like Basic which means that Pascal programs run many times faster than their Basic equivalents.

There are two popular ways of implementing Pascal, each with its own advantages. Either the text of the source code can be decompiled to pure machine code - which

makes it very fast but specific to that machine - or it can be compiled to P-Code which is then interpreted when run, not unlike Forth.

This is slower but more easily transferred to other machines. Acornsoft's S-Pascal is not a full blown version but contains a subset of Pascal to teach the language and provide an introduction to structured programming. It is designed for people who know little or nothing about Pascal but are familiar with Basic. It allows short programs of up to 1.25k to be written, compiled and executed.

There are several important differences between this latest language from Acornsoft and the previous ones. The first is noticed immediately on opening the box - which is slightly larger than normal. Inside is the cassette and manual whereas with the other languages, the manual had to be purchased separately on top of the cassette. This makes S-PASCAL some seven pounds cheaper than the others.

The second difference is noticed when S-PASCAL is loaded and totally confused me at first - it wouldn't have if I'd read the instructions, but who does? When loading is complete, after about five minutes, the Electron is still in Basic. The loader can be listed and Basic programs typed in and run. I thought that it hadn't loaded and wondered where the Pascal program was.

S-PASCAL is a compiler only - not an interpreter - so commands cannot be entered in direct mode. What you get are several new \* commands to enable you to write, compile and run Pascal programs.

To type in a Pascal program \*NEW is entered. Programs can be typed in, edited and listed as with Basic, but using lower case characters so as not to confuse the compiler when it is run with Basic keywords which are stored as tokens.

\*COMPILE will activate the compiler producing code which is stored in a reserved area of memory. It can then be executed with \*GO.

Pascal programmers will be disappointed with Acornsoft's S-PASCAL as there are so many omissions compared to a full implementation and they will feel very restricted with the subset. However, this is only designed to be a simple, limited version to give people an insight into how Pascal works.

Most Pascal reserved words are present with procedures, functions and arrays being possible, and all the mathematical operators are available. However, hardly any of the predefined functions or procedures have been included such as SIN, COS and ABS.

Variables can be character, Boolean or integer, but not real, which explains why many of the functions are not available.

CALL has been added - not a standard Pascal word - to allow machine code routines and the operating system to be accessed from within Pascal.

Acornsoft have chosen to compile the source text directly to machine code instead of P-Code as with many implementations.

The code is placed at &1100 and there is enough room for about 2.5k. The source text can be saved in the same way as basic and the object code produced, saved with \*SAVE.

Compiling the source text directly to machine code has several advantages over compiling to P-Code. After compiling, the compiler - actually a Basic program 11k long plus 4k workspace, residing at &1F00 - is no longer needed.

This means the object code can be \*RUN on its own, or the compiler space used for a Basic program which calls the machine code, or high resolution graphics - for example Mode 0.

Instead of using a Basic compiler program, why not write in Pascal, a far superior language and compile that? A Pascal compiler is far more powerful than a Basic

equivalent, with far fewer restrictions. Can a Basic compiler cope with multi-dimensional arrays, procedures and functions to which parameters are passed and that have local variables? Acornsoft's S-PASCAL can.

The compiler uses a two pass assembly, printing the mnemonics and object code each time, and if the printer is enabled, it can be listed. Errors are spotted on the second pass and the appropriate line listed with an arrow pointing to the mistake, and a message is printed saying what the error number is and where it occurred in the line. The error can then be looked up in the manual or on the reference card supplied.

I was curious to find out just how fast Pascal was. How efficient is the machine code? So I wrote equivalent - or near enough - programs in Basic, Forth, Lisp, Pascal and assembly language. It simply involved setting a variable to zero, then going round a loop 30,000 times, incrementing the variable by one each time. The speed test results are shown below:

Assembler .....	1.4 seconds
Pascal .....	11.3 seconds
Forth .....	12.5 seconds
Basic .....	34.9 seconds
Lisp .....	285.0 seconds

The test showed Pascal to be up to three times as fast as Basic and marginally faster than Forth, which is generally reckoned to be a fast language itself. The test also highlighted the incredible inefficiency of the code produced - Pascal taking some eight times longer than the specifically written machine code routine.

This is not a criticism of S-PASCAL but is just a fact of life. Compilers cannot hope to be as efficient as a purpose written machine code program.

Acornsoft has achieved their main objective of producing a simple subset of Pascal for teaching the language and structured programming. The compiler is straightforward to use and the manual is short - 67 pages - but clear, and covers every aspect in detail.

The tape, and manual, contain seven demonstration programs showing what the system is capable of, which is quite a lot.

S-PASCAL has a further function as a tool for writing short machine code routines which can be \*RUN or called from within a Basic program. This is probably more useful to the experienced programmer.

Programmers are strongly recommended to look at Pascal - especially those writing so called 'spaghetti' programs full of GOTOs. It will improve their structure no end. If you already write structured programs, then learning Pascal will be a doddle.

S-PASCAL is a welcome addition to the list of programming languages for the Electron, and if they even bring out a full blown version on a ROM Cartridge you can bet that I will be one of the first to get it.

## Review (ELBUG)

Having been foully murdered by her husband, the Lady Leonara has cursed the castle and all who set foot within it. It was my task to find her mortal remains and lay them to rest in peace.

The present ghastly inhabitants didn't seem impressed by my chivalry, however, and did their damndest to kill me. A few kindly souls did assist me, if I first solved their problems, so it does help to be polite!

The game is a coloured text, split screen affair with lots of well written descriptions. The castle abounds with locked doors which require an endless supply of keys. Opening doors becomes such a confusing business that I found I spent an hour trying to unlock one which I later found wasn't even locked!

Not so easy is the solution to the wandering monster that follows you. Unfortunately he continues to reappear with monotonous regularity causing you to repeat the same action ad infinitum. The game however has a nice 'feel' to it and is not too difficult. Rating: \*\*\*

Mitch, ELBUG 2. 2

## Review (Electron User)

It's three in the morning and I've just had my throat cut for the umpteenth time. I've said before that these MP adventures are getting better, and they are.

How the notting hill do I get through the gates? Why can't I get the shotgun off the farmer? Why don't I just give up and go to bed? NEXT DAY: Aah...That's how it's done! What? Not again. Right. This time I give up. If anyone out there can solve this adventure - tell me how!

A long time ago Lady Leonara was left at home while her husband went off to war. While he was gone she took a lover. But, alas, she was caught by Lord Salim upon his return. The enraged lord sealed her in her room and left her to die.

Many years later Lord Sadim is killed in an accident. As he lies dying, a woman in white is seen laughing all over his corpse. Frequent sightings of this mysterious woman over the ensuing years convince the locals that she is the ghost of the Lady Lenora.

Seeing as how you flunked out with the Blue Dragon the locals offer you one final chance - redeem yourself or retire. Can you enter the castle, overcome the dangers and give the lady her final peace? Probably not, but at least you can have fun trying.

You find yourself outside the west gate of the castle and your nightmare begins...

The game follows the usual MP style of coloured messages and long descriptions. A departure from the norm is the use of real-time and character interaction. If you sit pondering what to do you invariably see a "Time passes..." message. This instils a feeling of panic. The first time the monk "smiles sadly, blesses you and moves on" you'll be racing after him to try and find out what you should've done!

Two things I found while nosying through the program were the two commands VERSION and MODE. VERSION gave, "Version 1.1 MP Software". MODE was a funny one, but it seems to switch between Mode 6 and Mode 7. Yes, I know we don't have Mode 7! Makes you think though, doesn't it?

I'm not sure I can give a valid verdict on this game as I didn't get far enough. It seems quite hard and is therefore worth recommending but, and it's a big but, you get your throat slit far too often for my liking.

At any rate it compares very well with similar types of adventures and, on balance, is a worthwhile addition to the collection. Overall, MP adventures are always reasonably priced and as such, are definitely worth buying. Recommended.

## Review (Electron User) - "Superb Trilogy"

Regular readers will know I have long been an admirer of all Robico adventures and have played each of the Rick Hanson trilogy beyond exhaustion.

RICK HANSON, PROJECT THESIUS and MYOREM, which make up the trinity, have been released individually during the past two years. This package not only bundles the three games together with other goodies like a Robico pen, hint sheets and an adventurer's notebook but also offers a £5.00 saving on buying the games separately.

The accompanying documentation reveals the development of the Robico parser and adventure writing system and sets the scene for each adventure for those who are uninitiated to this super spy.

This 600 location marathon begins logically enough, with Rick Hanson - formerly titled The Assassin. As Rick Hanson, agent extraordinaire, you find yourself in a disused railway station at the start of another secret mission. What it entails, you don't know, but you soon find out, unless an enemy's bullet gets you first.

The red seat cover and bull scenario has now become a classic stumbling block for nearly all who have played this game.

In PROJECT THESIUS, you have been chosen to investigate enemy development in particle beam technology which threatens world security.

You begin your mission on a sandy beach, and your first task is to dry yourself and avoid the scrutiny of an enemy helicopter. I defy anyone to solve the Witherton village maze at the first attempt.

MYOREM is the third and most highly developed of the adventures, and for sheer complexity is my favourite. Tied, gagged and bound to a post in a dusty arena with a firing squad about to send you to your maker, you have only your thoughts to secure your survival.

And of all the marvellous puzzles you will be hard pressed to find one more enjoyable than the wooden hut problem.

There are a number of mazes, but each is quite individual in style and require careful mapping, though the mountains in MYOREM require a different technique.

Layered atmosphere and humour make offerings from most other companies pale in comparison. There are also literally dozens of exquisite chaining puzzles to think out and solve.

At £24.95, this isn't cheap, but after all, you're getting three of the best adventures available for the Electron.

Presentation .....	10
Atmosphere .....	10
Frustrarion factor .....	10
Value for money .....	8
Overall .....	10

"Electron User Golden Game"

Pendragon, ELECTRON USER 5. 1

# SAIGON

***Professional, Originally Released On Cassette Only***

**Disc compatibility** : ADFS 1D00, CDFS 1D00, DFS 1D00

*"In the dead of night, a sergeant from a top U.S. crack commando squad is dropped by helicopter behind enemy lines in the steamy jungles around Saigon. His brief is to single handedly penetrate the Viet Cong strongholds and release fellow compatriots still held captive by communist guerillas. This is the ultimate challenge. A Compulsive, Action Packed, Mutli-levelled game requiring Concentration, Skill and Stamina to successfully accomplish your mission."*

Armed with grenades and the latest M16 rifle, Sergeant Rumbo sets out on his mission to free the P.O.Ws still held captive by communist guerillas long after hostilities have ended with the U.S.

His stock of grenades is limited but can be replenished during his mission. Releasing the P.O.W.s will increase your number of lives accordingly.

The enemy soliders will do everything in their power to stop you and you could often find yourself out-numbered, so take cover and get shooting!

## **Game Controls**

Z - Left, X - Right, \* - Up, / - Down, RETURN - Fire, COPY - Throw Grenade

To increase grenade stock, run over Ammo boxes.

To increase number of lives, release captives.

# SANTA'S DELIVERY

*Professional, Originally Released On Cassette Only*

Game Alias : MERRY XMAS SANTA  
Game Type : Arcade Shoot-'Em-Up  
Author :  
Standalone Release(s) : 1986: SANTA'S DELIVERY, Tynesoft, £6.99  
Compilation Release(s) : None  
Stated compatibility : BBC/Electron Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : TYNESOFT, Unit 3 Addison Industrial Estate, Blaydon, TYNE & WEAR NE21 4TE. Tel: 091 414 4611  
Disc compatibility : CDFS E00, DFS E00

## Instructions

SANTA'S DELIVERY is the ideal game for children of all ages (4-94).

Santa has a busy Christmas Eve. Delivering all his presents to the girls and boys whilst negotiating hazards such as slippery ice-covered roofs, wandering snowmen, snowballs and melting icicles.

A multi-level game with superb graphics and arcade action.

Santa leaves home laden with presents before daylight breaks. To save time and to make sure children don't see him, he drops the presents down the chimneys. To do this, position him over a chimney and press <SPACE>, then go on to the next house by jumping the gap between the roofs.

Some of the children leave Santa pieces of Christmas cake and Plum Pudding to help him on his way. If he indulges in these it will increase his "Belly Bonus" and if he manages to drink the glass of sherry which will eventually appear, his "Belly Bonus" will increase his score at the end of the screen.

As you progress through the game, various hazards will appear - snowballs that need to be jumped over, melting icicles and moving snowmen that need to be avoided.

"SPECIAL GREETINGS SCREEN"

After the main program we have included a seasonal screen compilation and festive music feature with a name key option.

## Game Controls

< - Left, > - Right, A - Up, Z - Down, <SPACE> - Jump, P/S - Pause On/Off

# SARACOID

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade; Shoot-'Em-Up  
Author : Dean Lester  
Standalone Release(s) : 1989: SARACOID, Audiogenic, £9.95  
Compilation Release(s) : 1987: ELECTRON POWER PACK 2, Audiogenic, £9.95  
1990: TRIPLE GAME PACK 1, Summit, £2.99  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : AUDIOGENIC, Winchester House, Canning Road, HARROW HA3 7SJ  
Disc compatibility : CDFS E00, DFS E00

### Instructions

The Saracoids are blob-like alien life-forms that float through Outer Space, taking energy from any planet that they come across. For self defence, they group together in long strings that snake down through the atmosphere in various strange formations. The warning is out that the Saracoids may soon be passing by Earth. They will undoubtedly want to stop and replenish their energy supplies. You have been given the job of manning the missile launcher with orders to prevent the Saracoids landing - for if they once touch ground, they mutate, taking on a different form, and immediately home in on the nearest living thing - which, in this case, is YOU!

Good pilots may be able to survive by utilising the full manoeuvrability of the launcher. As well as moving from side to side on the ground it can hover up to a certain altitude in the air. Radar has spotted 24 different waves coming in. You'd better get familiar with the controls quick!

### Scoring

You start with three launchers. An extra one is awarded for every ten screens completed. The number of lives is displayed at the bottom left, and the High Score at the bottom right. At the top of the screen you have the current score and wave number.

### Game Controls

Z - Left, X - Right, <RETURN> - Fire, : - Up, / - Down

# SAS COMMANDER

*Professional, Originally Released On Cassette Only*

Game Type : Arcade; Shoot-'Em-Up  
Author :  
Standalone Release(s) : 1984: SAS COMMANDER, Comsoft, £6.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron. Electron version plays fast on BBC.  
Supplier : COMSOFT, 67 Kent Road, Harrogate, N YORKS HG1 2NH.  
Tel: 0423 57464  
Disc compatibility : CDFS E00, DFS E00

## Instructions

As a member of the anti-terrorist squad of the S.A.S, you are sent to trouble spots around the world to free hostages, kill terrorists and restore freedom. As you walk down siege-stricken streets, you may never know who is lurking around the next corner, but then again...he who dares, wins!

**Instructions' Source** : SAS COMMANDER (Comsoft) Back Inlay

## Review (Electron User)

I must admit that when I first saw the title of Comsoft's latest offering all my finely-honed, Guardian-reading hackles rose. Another arcade anthem to macho man? More bodies littered across the screen? I was dead against it.

That is I was until I started playing it, and then I was hooked. The idea is quite simple. A group of urban terrorists has infiltrated three streets. There are ten to each street and your job is to root them out.

However it's not that easy. As you tote your gun along the terrorised terraces, the terrorists appear at the windows blasting away at you. Of course you can dodge their fire and shoot back (each terrorist killed increases your points score) but beware. Some of the terrorists have taken hostages and are hiding behind them, sniping at you. Hit a hostage and you're drummed out of the game.

It's gory but great fun. Well worth looking at.

Trevor Roberts, ELECTRON USER 2. 5

# SAVAGE ISLAND PART 1

*Professional, Originally Released On Cassette Only*

Game Alias : SCOTT ADAMS ADVENTURE 10  
Game Type : Text Adventure (Rated Advanced)  
Author : Scott Adams  
Standalone Release(s) : 1983: SAVAGE ISLAND PART 1, Adventure International, £7.99

# SAVAGE POND

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Platform Game  
Author :  
Standalone Release(s) : 1984: SAVAGE POND, Starcade, £7.95  
1987: SAVAGE POND, Bug Byte, £1.99  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : STARCADE, 1 Golden Square, LONDON W13 3AB  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Awesome in its conception...BRILLIANT in its depiction...DYNAMIC in its execution... The world you are about to enter bears no resemblance to any arena you have ever encountered before. Weapons are of no avail in this small habitat.*

*"The only source of protection at your disposal are quick wits and fast reflexes. The only reward is to survive against monsters of unbelievable ferocity and cunning, and to avoid hazards more perilous and deadly than any you might find on a trip through the outer universe. This is the real world, populated by the creatures of our own inner universe, where Nature is red in tooth and claw. Brace yourself now, and come with Starcade into the still water and deceptive calm of a SAVAGE POND."*

You are now in the watery environment of the pond. At the top of the screen is a line allocated to SCORE, FROGS and HIGH SCORE.

Score and high-score are self-explanatory. The aim of the game is to build up a strong and healthy colony of frogs. (How else can we continue to play frog games? After all, they have to breed somewhere!) More about frogs later, but pay particular attention to a small log on the island in the top centre of the screen.

The rest of the scene depicts a pond. The water is full of fat and delicious amoeba (dare we say strawberry-flavoured?) pulsating merrily away as they wait their turn to be digested.

Rather more sinister are the hydra, weaving their deadly tentacles as they lie in wait for the unwary. One sting from their harpoon cells means a deep purple, and permanent dream for the unfortunate victims.

Occasionally a juicy worm falls into the water. There are a useful supplement to the tadpole's diet, and add substantially to the score. For a very limited time, the extra strength absorbed will give immunity to the stings of the hydra, and allow you to go into places where you would be very smartly dealt with. (But don't push your luck!) Every five worms that you eat prepares the way for another tremulous step along the path of evolution. For convenience, the number of worms currently eaten is shown in the bottom left hand corner of the screen. Every time the total reaches five, a beetle larva appears. If you can capture and eat him before worm-count is cleared, then you are one step nearer to reaching your goal. If he is not eaten, he will remain there and increase your opportunities for promotion at higher levels.

There are nine steps to be taken before you begin the serious occupation of frog breeding, but rather than interfere with the action, the program is only interrupted three times. Three phases are used to allow adjustments to screen data, but will also give the player an indication of his achievements to date.

At the bottom of the pond are three eggs of frogspawn. Even as you look, one egg has begun to develop. When the egg has fully opened, our tiny protagonist is ready to

face the perils of his brave new world. He will not venture forth until he is sure that there is some sentient being ready to control and protect him, so take a deep breath and push that joystick firmly forward. Once he is out and about, this small and very vulnerable creature is in your hands, and will go where you command. The speed at which he swims is controlled by the fire button.

Now you can swim around and test the water. Fill your little tummy with goodies, and try to capture those worms. If you don't eat, you will eventually starve to death so tuck into delicious amoeba. This level is positively idyllic. Flitting above the pond are multi-coloured dragonflies, dropping eggs in all manner of places. Do your best to eat the eggs as they are good for you. Should you fail to catch them in flight, try to eat a worm and dive into those forbidden places to devour them before they hatch. If that plot fails, watch out for the larvae as they emerge and dash frantically for safety. In your own interests, see that they don't make it; or they will shortly return as voracious dragonfly nymphs.

The nymph's staple diet is tadpoles, and he will pursue his quest for food relentlessly until his appetite is satisfied. Your only chance is to avoid those crushing jaws until his energy is exhausted, and he feels the urge to go and hide himself away to chrysalise and become yet another dragonfly.

As you master each phase, further hazards will be automatically introduced until you reach the stage where you can begin the serious business of frog breeding. As in the natural order of things in Mother Nature's plan, there are some things you can eat, and other things trying to eat you. Here are some of the pond nasties you will meet along the way.

Fresh water jelly fish drop in for a bite. Beware of them as they bob up and down near the surface of the water. Their stings are as deadly as the hydra. Mother Nature's deadliest enemy, the greatest despoiler of the countryside, will bring along his dumper truck and off-load a drum of radio-active waste into the hitherto innocent water's edge. No doubt some of our many critics will declare that this sort of activity is strictly controlled, and that we have departed from the reality of our saga. This sort of thing couldn't really happen. Could it?

In our next stage to liven things up a bit, we have a change of scenery. By way of encouragement, we also introduce our very first frog, sitting proudly on top of his little brown log.

Now the game becomes multi-action. As the dragonfly flits overhead, Mr. Frog can fill his face by capturing it with his long, sticky tongue.

This is activated by pressing the space bar, and if timed properly, will give pause for that infernal egg laying.

If, having got this far, you are unfortunate enough to have all your eggs and tadpoles destroyed, then we have made special arrangements with a computer mating agency. Your little frog will have a visitor and, in a loving embrace, they will produce a specimen of spawn, and depart for pastures new, after a knowing wink from our amphibian friend. The spawn will come to rest at the bottom of the pond, before hatching to give you another chance towards development of that colony.

Down below, the tadpole is continuing his pursuit of ruining his digestive tracts. His problems are increasing by the minute. The radio-active waste is becoming quite a problem.

Creeping into our web of fantasy, comes the water spider. Spiders are cowardly creatures, renowned for their stealth, patience and cunning rather than their courage. This spider will not harm you unless you are foolish enough to become enmeshed in his web; one more tadpole will be conveyed to his parlour.

With so much slaughter about, it is inevitable that the water will in time become dirty and stagnant. This creates an ideal environment for the water flea. These are natural refuse engineers, and they will sample anything left lying about. If you

have nothing better to do, it might be a good idea to swallow them up before they go to work on an egg. Having survived all of these hazards, the frog colony is ready to grow. Unfortunately, the radiation has now affected terrestrial creatures in the vicinity of the pond. The mutant bumble-bee hovering over your frog's head is pretty angry. The days of idly sitting by living off dragonflies are definitely over. Now you must defend yourself by using that tongue to kill the bee before it gets you; he and his buzziness associates are like apiarian space invaders, they are out to get you.

Your target is to breed as many frogs as you can without being killed off by the bees or the natural hazards of the pond. It's up to you to maintain the balance. Remember : without tadpoles, you cannot breed frogs. Without frogs you cannot have tadpoles. Good Luck!

### Cast List

Starcade proudly presents the members of the cast of this program in order of their appearance:

**AMOEBA (Rhizopoda)**. A single cell animal which moves and eats through temporary extrusions of the elastic surface of the epidermis (outer skin). This creature lives in water and reproduces by sub-division, as do all other members of the protozoa family. These include Diffugia, Arcella, Spirostomum, Ambiguum, Stentor Polymorphous and others.

**HYDRA (Chlorohydra Viridissima)**. Hydra appear in a variety of forms, but generally these little animals bear a strong resemblance to a miniature tree. They normally anchor their foot in the mud and catch their prey with harpoon cells triggered by their tentacles. Hydra reproduce through buds (polyps), which eventually break off to become separate entities.

**BLOODWORM (Phylum Platyhelminthes)**. A very small reddish-yellow worm which lives in damp conditions. This creature has one tooth set above the mouth. Of the family Turbellaria.

**DRAGONFLY (Erythronia Najas)**. A beautiful but short-lived specimen which lays its eggs in water, notwithstanding that other members of the Odonata family may prefer to anchor their eggs to plantlife in or around the water. The eggs and newly hatched larvae are extremely susceptible to predators, but once the larva has developed, it becomes a ferocious monster with powerful biting jaws. The front legs are hinged to project past the head to seize the prey.

**JELLYFISH (Craspedacusta Sowerbeii)**. A free swimmer which is similar in appearance to the more familiar saltwater variety, but which is in fact a close relative of the hydra. They are both members of the group Coelenterata, and their method of catching and eating food is practically identical.

**BEETLE LARVA (Macroplea Leachi)**. The tiny beetle larva lives totally under water until maturity, when the adult beetle leaves for dry ground.

**SPIDER (Argyroneta Aquatica)**. The only true water spider. It weaves its web underwater, and then traps an air bubble and sits back to await dinner.

**WATER-FLEAS (Scapholeberis Mucronata)**. Tiny creatures which live on detritus and organisms, commonly found in most ponds. They are of the family Cladocera.

**BUMBLE-BEE (Bombus Lapidarius)**. Our bee has none of the characteristics of the rest of the family owing to an over-reaction to radiation.

**THE COMMON FROG (Rana Temporaria)**. There are many, many varieties of frogs and their close relatives, toads. Their basic diet is of insects which are caught by the frog sitting perfectly still until food comes within range, then capturing it on the end of a long, sticky tongue.

The frog breeds by the female laying eggs, which are fertilised by the male. The resultant spawn develops into a tadpole which lives and breathes underwater, feeding on small organisms and plants. The process of change known as metamorphosis takes place gradually over a period of between three to six months, after which they become young, air breathing frogs, and take to the land.

**Instructions' Source** : SAVAGE POND (Starcade) Back and Inner Inlay

### **Review (Electron User, STARCADE Release)**

Are you an ecology buff? Does your soul resonate with Mother Nature in all her glories? If so then SAVAGE POND is the game for you. Even if you're not a nature freak you'll probably still go for it.

By virtue of the ?, \*, Z and X keys you become a tiny tadpole, swimming round in a pond, eating amoebae to keep up your energy. An idyllic sounding life, isn't it? The trouble is that it's not just you eating amoebae. It's other things eating you. The hydra that lurks on the bottom of the pond is just one example.

You can get temporary immunity to the hydra by gobbling down some of the little blue worms that are slowly falling through the water. Every five of these that you gobble adds to your score and takes you one step nearer being a frog.

The aim of the game is to build up a colony of these frogs. It seems at times that everything else has the opposite intention.

Don't pay too much attention to the impressive-looking dragonfly buzzing overhead, it won't do you any harm. Having said that, you have to watch out for her eggs which if they get to the bottom, develop into a nasty monster with an enormous appetite.

And if that's not enough, as the game progresses there's also radio-active dumping, mutant bumble bees, cowardly water spiders, water fleas and a whole host of other dangers to your colony.

It's not easy being a tadpole in the savage pond but it is fun. The game is original, amusing and addictive. In fact it's a winner.

Bev Friend, ELECTRON USER 1.12

### **Review (Electron User, Bug Byte Re-release)**

To most people a frog is a small green slimy amphibian which sits lazily on a lily pad devouring passing flies. I too had this impression until I tried my hand at the tadpole survival course, otherwise known as the SAVAGE POND.

The screen displays a cross sectional view of the pond. When the game begins the pond is quite barren except for a handful of hydra on the bottom. Having emerged from one of three eggs you begin to stuff yourself with the nutritious amoebae which float in the water above. These are useful for gaining points, but do little to aid your progress towards becoming a frog.

Froghood is achieved by consuming the worms which drift from the surface to the bottom. For every five worms consumed you take a step toward maturity, nine such steps and you become a frog.

Unfortunately for our wriggling buddy, life is not a bed of lilies. Apart from the deadly hydra you must also cope with eggs dropped by passing dragonflies.

It is imperative that these are consumed before they reach the bottom because if they are allowed to hatch you will meet your maker at the jaws of a dragonfly larva.

For each step you take toward maturity a new hazard is introduced to the pond. These take the form of jellyfish, spiders, and even radioactive waste.

SAVAGE POND was reviewed in this magazine over eighteen months ago and received a very favourable reception. It has now been re-released at less than half the price and is therefore a bargain not to be missed.

# SCIENCE 1

*Professional, Originally Released On Cassette Only*

## **Review (Electron User)**

This package consists of four separate programs on balances, meter reading, thermometer reading and lenses. The meter program is on twice, in Mode 1 and in Mode 0. The Mode 0 version added nothing - I preferred the extra colours of Mode 1.

The introductory program has a noisy title plus an index. I expected the index to give single letter entry to load a program, but the options are to see the index or leave the program. Leaving the program gives you a blank screen and it is necessary to CHAIN whichever program you want. The trouble is, you've now forgotten their names and the sheet of information has different titles for them.

The balancing program collects your name, then gives a menu of options. You have to decide whether to be nice or nasty - there is no explanation as to what this means at this stage!

The program gives practice in working out how to balance see-saws. The explanation is rather sketchy, but if you do get the answer correct a little diver hurls himself into a cup of liquid or, if you chose nasty, he goes splat on the floor. If you get the answer wrong, large arrows indicate which way the see-saw tips, and then the diver splats if you are nice or splashes if you are nasty.

The meter reading program provides practice on reading the two most common school meter scales. It is well constructed, making good use of large text, and with an option to magnify the relevant part of the scale.

The program is rather fussy, four key presses are required before an answer is put in.

The thermometer program is very similar to the meter program. It provides practice in reading 0-100 degrees C, 0-150 degrees Fahrenheit and clinical degrees C thermometers.

Light provides a lesson in ray optics at concave/convex lenses/mirrors and is, again, well constructed using good text and attractive, simple graphics. The whole program is rather slow, particularly the sixteen questions.

Overall these are well-produced programs with the meter and thermometer sections the pick of the bunch. The major disadvantage of this educational package is total non-compatibility with the BBC Micro. If these programs are run on a Beeb, they have a nasty little trick - they clear the micro's memory.

Many schools have BBCs and Electrons. I would choose a program that would run on both machines to use in my school.

# SCIENCE FICTION QUIZ

***Professional, Originally Released On Cassette Only***

Game Type : Quiz  
Author : Brian Aldiss  
Standalone Release(s) : 1984: SCIENCE FICTION QUIZ, Acornsoft/Ivan Berg, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : IVAN BERG, Dunluce House, 4-8 Canfield Gardens, LONDON  
NW6 3QT  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"How does your knowledge of Science Fiction rate against a Grandmaster of the genre? This rewarding and compelling program for your BBC Model B or Acorn Electron computer has been specially adapted from the Weidenfield Quiz book and will provide hours of edification and amusement for family and friends.*

*This is a quiz about science fiction in its wildest sense, including such modern masters of the indefinable as Jorge Luis Borges as well as the main-liners like Frank Herbert, Arthur Clarke, Philip K. Dick, H. G. Wells, Fredrick Pohl, and the new school of SF film-makers.*

*Science fiction is one of a series of six Grandmaster Quizzes, in which you can pit your knowledge against that of a grandmaster of the subject. The writer's specialised skill and expert knowledge makes the quiz both challenging and exciting. Each program has thirty sections of ten questions - a massive 300 questions in all - and you can take the quiz alone, in competition with a friend, or in teams. You can choose a timed option too - and if you're getting too many of the answers right, your computer can reduce the time you have to answer!*

*This pack contains one program cassette, one quiz data cassette and an instruction booklet.*

*Brian Aldiss is the author of many science fiction novels, President of World SF and the author of the only definitive history of the genre, "Billion Year Spree".*

The main aim has been to amuse. That is to say, the questions and quotes are chosen because they seem in themselves worth reading, even to readers who are not devotees of science fiction. As to what constitutes science fiction - or SF, as addicts prefer - never 'sci-fi' - there the views of a quiz-master are naturally inclined to be catholic. The broader the field, the better the horses run.

An attempt has been made to increase the difficulty of the quizzes gradually throughout the book. In these cases, difficulty is in the mind of the beholder, of course; but my hope is that Quiz No 30 is a real stinker.

I have been greatly assisted by Stephen Gould and, in particular, by that master of rolls, Mike Ashley. My thanks to them. And to all those who find themselves coralled with such amazing company.

- Brian W. Aldiss

When the program is loaded, there is a short bleep and the program title appears. Press the SPACE bar as requested and you will be asked:

Do you want to do the quiz:

1. On your own
2. As two competing individuals
3. As two competing teams

Enter choice : ?

Answer the questions as prompted by typing in your response. Press <RETURN> when you have completed each entry.

The main menu will now appear and the thirty quiz titles are displayed on two screens. To move from one screen to another, type 0 and press <RETURN>. Select the quiz you require, type its number and press <RETURN>) then remove the program cassette from the deck and insert the data cassette when prompted. Make sure that the correct side of the cassette is uppermost: quizzes 1-16 are recorded on side 1 and 17-30 on side 2. Press SPACE BAR as requested. When your quiz has finished loading, there is a short bleep. You are now ready to begin the quiz.

#### How To Answer The Quizzes

Most of the quizzes start with a section introduction written by the author. To move on to the second paragraph, or to see the first question press <SPACE>.

If you request a time limit, a clock counts down in seconds in the top right-hand corner of your screen. If you do not enter an answer before it reaches zero, you receive no marks: if two teams are playing, the question is offered to the opposition. However, you are allowed to complete an answer which you started to enter within the allotted time.

To pass a question, press <RETURN>. A passed question will be offered to the opposition, if you are playing in teams.

Some questions may require you to refer back to the section introduction. Do this before you enter your answer by pressing the <ESCAPE> key. Pressing the <SPACE> bar will return you to the Quiz menu and your answers so far will be lost.

Some questions require several separate answers. When a) appears on screen, you enter your first answer, when b) appears, you enter your second answer, etc.

When you have given the answer and pressed <RETURN>, the author's answer is displayed. Compare the answers and decide how many points you should have. You can enter 0 if you are completely wrong, 1 if you are halfway there, and a maximum 2 points for a completely correct answer. Type in your score as requested. When you press <RETURN> the next question appears.

At the end of the quiz, the final scores and the total time taken to answer the questions is given. In the case of a draw, the contestant with the shortest time will win.

If you decide to try another quiz you will be returned to the Main Menu. You can run the same quiz again simply by re-selecting its number: it is still in the computer's memory. If you do not wish to try another quiz, the program will end.

# SCOTT ADAMS SCOOPS

*Professional, Originally Released On Cassette Only*

Game Types : Text Adventure  
Authors : Scott Adams and Brian Howarth  
Release Information : 1988: SCOTT ADAMS SCOOPS, Adventure International, £9.95  
Compilation Comprises : 1. PIRATE ADVENTURE, Adventure International  
2. VODOO CASTLE, Adventure International  
3. STRANGE ODYSSEY, Adventure International  
4. BUCKAROO BANZAI, Adventure International  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ADVENTURE INTERNATIONAL, 85 Summer Street, BIRMINGHAM  
B19 3TE  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00 (All)

## Instructions

Please see individual entries for complete playing instructions.

## How An Adventure Works

If you've never played an Adventure before, you're in for a real treat. Adventuring permits the player to move at will from location to location within the game "environment" and to examine objects for clues that will reach the objective of the game. For example, an adventure might begin something like this:

I'M IN A ROOM. VISIBLE OBJECTS ARE A RUBY-ENCRUSTED BOX AND A CLOSED DOOR. TELL ME WHAT TO DO.

You might want to begin by entering a direction (North, South, East, West) to see if you can leave the room. Chances are, though, that you will have to find a way to get through the closed door. Let's try something basic. You type:

OPEN DOOR

but the computer tells you in no uncertain terms:

SORRY, IT'S LOCKED. WHAT SHALL I DO?

GET BOX

and the computer responds with:

OK

By saying "OK", the computer has let you know that the command has been accepted and the box "picked up". Now that you're "holding" the box, let's see if we can peek inside. You type:

OPEN BOX

This time the computer understands and you are rewarded with the following response:

OK. INSIDE THERE IS A KEY AND A RARE POSTAGE STAMP.

Since we still want to exit the room, trying the key to unlock the door might be a good idea. The postage stamp might come in handy so you type:

GET KEY AND STAMP

But the computer responds:

SORRY, I CAN'T DO THAT...YET!

Ah yes - asking the computer to get both the key AND the stamp is most definitely a COMPOUND command, something that your computer cannot understand. Try again, this time asking for the objects separately. You type:

GET KEY

and then:

GET STAMP

The computer will answer "OK" each time and you will have what you need.

By "getting" the key and the stamp, they are stored for later use as you are, in effect, carrying them. As for your next series of moves, you might want to go to the door (GO DOOR), try the key in the lock (UNLOCK DOOR), and move down the hallway that's just outside. (GO HALLWAY).

You're on your way!

### **Review (Electron User) - "No Food For Thought"**

This is certainly the era of compilations. By their very nature such releases tend to be gambles, and when I saw this one from Adventuresoft, which includes four Scott Adams text adventures, I was a bit sceptical.

Why, on a four adventure compilation, was there the need to include two of Scott's most mediocre offerings, VODOO CASTLE and PIRATE ADVENTURE? VODOO CASTLE is a good mystical taster for absolute beginners but that is as far as I would go in recommending it.

STRANGE ODYSSEY and the previously unreleased BUCKAROO BANZAI whetted the appetite, but if the object of the exercise had been to release a cross-section of the best of Scott Adams, wouldn't Adventuresoft have been more judicious in including a classic such as GOLDEN VOYAGE instead of the minute PIRATE ADVENTURE.

Having played all of Scott Adams' adventures when they were first released, I was anxious to experience BUCKAROO BANZAI. The sales hype states, "Only by unravelling the many puzzles set by Scott Adams do you stand any chance of completing this futuristic adventure set in the world of pop groups and science fiction." I wish I had been given the chance!

The copy I was sent - like many others - was riddled with garbled messages and annoying bugs. The little of the game I was able to play did not convince me of its merits.

It is not, as Adventuresoft accredit, an adventure of moderate difficulty but rather, totally confusing. I understand that unbugged copies are now in circulation - a little late for many, I am afraid.

STRANGE ODYSSEY is a superb science fiction jaunt which will involve much head scratching if you are to succeed in your quest on an alien planet. Its parser and text compression are rather limited by today's standards, but this adventure is more than four years old.

PIRATE ADVENTURE has nothing, in my opinion, to recommend it. It is supposedly an escapade involving the discovery of fabulous treasure on a strange island. It is, in fact, nothing more than a collection of short brain teasers with only two treasures and 20 odd locations, doing little to tax the old grey stuff.

This is a Pandora's box of a compilation which would be a bargain investment for the beginner to text adventuring, but will hold little of any substance for the more experienced traveller.

# SCREWBALL

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Colour Blocks Game  
Author :  
Standalone Release(s) : None  
Compilation Release(s) : 1987: BLUE RIBBON GAMES DISC 1, Blue Ribbon, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : BLUE RIBBON, CDS House, Beckett Road, DONCASTER DN2 4AD  
Tel: 01302 21134  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

You are Screwball and you have 60 seconds to change the colour of all the squares that surround you (by simply jumping on them).

Menacing you all the time, however, are the "BLACK BUGS" ... and they sure are mean. They even cheat by sometimes not even walking on the squares.

If they catch you, then I'm afraid you lose a life. Kill the BUGS by digging holes for them to fall through. If you really are in a fix then as a last resort you may HYPERSPACE to the top of the grid ... but you won't always survive your journey.

## Game Controls

A - Up/Left, Z - Down/Right, \* - Up/Right, ? - Down/Left  
<SPACE> - Dig Hole, <RETURN> - Hyperspace  
S/Q - Sound On/Off, <DELETE>/<COPY> - Freeze/Unfreeze Game

## Scoring

50 Points for each square change  
500 Points for killing a "BLACK BUG"  
Bonus Screwball each level

**Instructions' Source** : BLUE RIBBON GAMES DISK 1 (Blue Ribbon) Inner Inlay

## Review (EUG)

From rather an unpromising beginning, towards the end of the shelf life of the BBC series machines, Blue Ribbon software really became the King of the budget title. This is not so because it produced high quality games of its own though. The majority of its better releases had already been outed by Superior as full-blown £9.95 titles and were picked up by Blue Ribbon to be re-released when they had finished bumming around the charts. Blue Ribbon did produce a few of its own games from scratch though, and SCREWBALL is one of them.

Considering Blue Ribbon titles were so cheap, and thus all-pervasive on the High Street late-Nineties, the first thing you may wonder is why the game SCREWBALL is conspicuously missing not only from your games collection but also from every mail order list in your back issues of ELECTRON USER. One answer to this is that it was never made available on cassette - [At least not for the Electron! - Ed] instead it was one of five titles on the first BLUE RIBBON GAMES DISC.

Now this disc, as with all Acorn Electron disc-based products, is rarer than a Kansas City title. The version here at EUG HQ does in fact have a professional inlay displaying BBC MASTER and an alternative ELECTRON 'sticker' (In reality, it looks like the word has been printed by a dot-matrix onto a disc-label and then cut into a narrow strip) badly disguising this. There is no doubt though that this IS a professional release by Blue Ribbon for the Electron with a Plus 3 3.5" ADFS disc drive attached - the games have been specially adapted to work at &1D00 and in some cases they are 'cut-down' Elk, not BBC, versions.

Such is the case with SCREWBALL. It takes a few seconds to load and assemble then the screen is filled with 3D boxes. The idea is a simple variation on the CRAZY ER\*BERT style of game. You move the Screwball character, a red man with a pogo-stick looking body, with the AZ\*/ keys and he leaps from square to square changing the colour of it as he lands. In each of the four corners of the grid is one Black Bug, a sort of sombre (and completely unanimated) monster which moves one square in any direction seemingly waiting a random amount of time between moves.

The idea is to navigate the grid and change all the squares to a different colour. A fairly bland top-screen border tells you the time remaining of the minute you have to accomplish this, what level you are on and what your score is. The grid itself is not exactly eye-catching, and appears slowly, but is done in machine code. So too are the characters: your character turns to face the way he is jumping when you press each key. There's a few blips as the baddies and you hop around.

Unfortunately, the whole essence of the game is without any real challenge; actually managing to become tedious before even the first minute of playing it has passed! Notably, it seems to run very slowly on the Electron - the minute you are meant to have to complete the colouring in actually equates to two. This actually had me wondering if it was, although included as part of the Electron compilation, really a BBC only game that had not been converted.

Stick it into your BBC Master (or an Elk with Turbo board) and it plays a lot faster, although still not as quickly as one might have expected.

In both cases however, hopping your Screwball around the board is ridiculously easy and the ludicrous amount of time you are allowed means you can quite literally run circles around all of your arachnoid-looking opponents. As the levels increase, in a rather sad attempt to introduce some variety, the colours are altered (Whoopee) and a few blocks disappear at random. Leaping into a space causes death, as does collision with a bug, but once again the spaces are not particularly difficult to avoid.

If you wish to, you can try and score more points by digging holes in the grid for the bugs to fall into. Doing so belies that the bugs have no artificial intelligence at all - they just move blindly towards you like Zombies!

One more feature is the Hyperspace key (SPACE) which will transport our hero back to the top of the grid. Except that sometimes it doesn't work and he dies instead. Not a bug but actually a feature. When do you need to use it? Well, personally, never. But the author imagines the situation where you are surrounded by bugs and need to escape. My own feeling would be that if you are stupid enough to be in that situation, you deserve to be eaten by them!

Tragically, there is simply nothing more to say about SCREWBALL. It has no loading screen or fancy effects and you know you're really grasping at straws if you find yourself writing about the Pause/Unpause feature in a review.

This is rather surprising in that, although Blue Ribbon's own titles were inferior to the ones they re-inflicted on the world in collaboration with Superior, they did manage to code similar comparable jaunts effectively. Interestingly though, if you browse through how many Blue Ribbon titles were *actually* available *at the time* that GAMES DISC 1 was released, you will find only *nine* individual cassettes in total were available. Did they discount releasing SCREWBALL because they felt, themselves, that it just couldn't measure up in its current form?

To get five games on each disc later though, they may have needed to pull one more out of a hat. It may just be speculation but the game's poor quality certainly seems explained by such rationale.

Finally, perhaps as a rogue Blue Ribbon title, SCREWBALL will be worth a look, and even a download, to complete the Blue Ribbon 'collection'. However, collectors who have only heard of its existence right now should be rest assured that they haven't missed anything worth seeing.

Dave Edwards, EUG #63

# SEA WOLF

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Simulation  
Author : Unknown  
Standalone Release(s) : 1983: SEA WOLF, Optima, £6.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : OPTIMA, 36 St Petersgate, STOCKPORT SK1 1HL  
Disc compatibility : CDFS E00, DFS E00

## Pre-Mission Briefing

You are advised to read these instructions carefully while the program is loading and refer to them during play.

On starting you will be presented with a message asking you to choose the skill level. These are: RATING, ENSIGN, GUNNER, CAPTAIN and COMMANDER. Until you get used to the game a skill level of RATING is suggested as it is almost impossible to be destroyed at this level. (Almost!)

This is the default (normal) setting, but it can be changed by using the cursor UP/DOWN keys to select an alternative setting and pressing RETURN. The game will then begin.

## Main Display

The initial display is divided into three parts: COMPUTER DISPLAY, LONG RANGE SCAN and SHORT RANGE SCAN.

They will all be described in detail, but briefly:

The COMPUTER DISPLAY gives various messages such as battle status, the type of shipping in view and so on.

The LONG RANGE SCAN gives a display of shipping positions relative to your own.

The SHORT RANGE SCAN gives a radar display of nearby shipping on the targetting computer. This can be looked on as an electronic periscope.

## Computer Display

The TYPE display shows the type of enemy ship encountered - for example, DESTROYER.

The LASER display shows the current status of the lasers.

The TORPS display shows the current status of the torpedo tubes.

The OXYGEN display shows the current oxygen pressure in psi.

The CONDITION display shows the current battle status.

The ENEMY TO... display shows whether the enemy vessel is to the left or right of the centre of your sights. This normally defaults to the right.

The DAMAGE display shows the current percentage of damage. If this reaches 100 per cent, your submarine, Sea Wolf, will be destroyed. However, it is possible for Sea Wolf to be repaired (see DOCKING) and carry on with the mission.

The STATUS display shows the current morale of the crew and the overall well-being of the vessel.

The KILLS display shows the current number of kills, 15 being necessary to complete a mission.

The ENERGY display shows energy remaining. If this falls below zero, Sea Wolf will be destroyed. DOCKING restores energy levels to their full value.

The WARP display shows the current amount of energy that will be used to travel between two sectors shown on the long range scan (see LONG RANGE SCAN.) This will normally be zero.

The PAUSE display shows the current pause status (ON/OFF). While ON, the game is effectively frozen.

### **Long Range Scan**

The LONG RANGE SCAN is at the top left of the main display. It serves as a display of shipping positions and movements and is updated automatically from time to time and after a successful attack. The scan also shows the position of enemy bases and Sea Wolf's home base. These will be in the same positions each game, the home base being in the bottom right of the grid.

The position of Sea Wolf is shown as a flickering, submarine-shaped cursor. This can be moved around by using the cursor control keys. Once the Sea Wolf cursor is in the desired position pressing the WARP key will move Sea Wolf to that position. Immediately after a WARP or under normal conditions the cursor will show the TRUE position of the Sea Wolf.

When you enter a sector WARP will remain at zero until you move the cursor when WARP will show the energy required to move. This energy will be removed from your total energy when you WARP. The WARP facility is incorporated to speed up progress between sectors - a process which could lead to much wasted time if it were in "real time", as the rest of the program.

### **Short Range Scan**

The SHORT RANGE SCAN gives a radar display of the enemy position in relation to your sights.

In order to score a hit, it is important to tilt Sea Wolf to the correct angle, using keys A and Z. The < and > keys affect horizontal movement. Remember that any of these actions will be affected by your speed. (See KEY TABLE.)

### **Weapons System**

Sea Wolf is equipped with two weapons systems, either of which is available for your use at any time. You cannot, however, use them simultaneously.

The LASER is a high power CO2 type, power rated at +1,000 watts. It is important to note that since the laser is external to the ship it will almost certainly be damaged by only a few hits. It is also a great drain on the ship's power source.

The TORPEDOES are always fired in pairs from two torpedo tubes under the front of the ship. They are less powerful than the laser but are not as likely to be damaged quickly during battle.

You have an unlimited supply of torpedoes, but be careful how you use them. Fleet Command will not be happy if they're wasted.

### **Docking**

This is achieved automatically whenever you return to base. All damage will be repaired, including oxygen leaks. In this case cabin pressure will be recharged. Weapons on standby will be repaired by the crew in due course.

Too much docking will be regarded as cowardice, and your rank will be affected.

### **Battle Tactics**

Each type of enemy vessel will always follow the same route, which is dependent upon many factors.

Civilian vessels are NOT strategic targets and should not be attacked at any time. Other shipping consists of tankers, destroyers, battle ships, etc. All of these are targets and should be destroyed without hesitation.

Attack range is about 1,000 yards, but remember that the enemy may not come into view immediately, and Sea Wolf may have to be turned left or right to face them.

Crashing into enemy ships results in your instant and complete destruction. To avoid this, steer left or right of the enemy at ranges of 100 yards or less, as collision will occur at ranges of under about 20 yards (unless the enemy is almost off the short range radar when you will just miss him).

It is most important to remember that the whole game is played in real time, so if you go and make a cup of tea you may return to find yourself dead! To avoid this, the pause feature included should be used.

Good tactics will be rewarded with a well deserved promotion, whereas poor tactics may well result in demotion.

Good luck!

## Game Controls

### Key Table

0	-	9	.....	Alter speed
---	---	---	-------	-------------

### Short Range Scan

### Function Keys

f0	.....	Arm torpedoes
f2	.....	Arm laser
f4	.....	Select Warp
f6	.....	Pause On
f8	.....	Pause Off

Long Range Scan movement follows cursor keys.

**Instructions' Source** : SEA WOLF (Optima) Inner Inlay

### **Review (Electron User)**

SEA WOLF from Optima Software is a new kind of war game, combining logic with action. You set about destroying the enemy fleets in the submarine Seawolf, trying your best not to get wiped out in the process.

You can start off as a rating, where the enemy (bless his sporting heart) gives you a run for your money, and end up as a captain, where the enemy (the swine) will try and squelch you as soon as you poke your nose outside the base.

The second phase is where you line up the target in your sights and let fly with either torpedoes or lasers. An average Seawolf target can absorb about twelve hits from torpedoes and half as many from the lasers before becoming a kill. All the time you're attacking, if the target is a warship, you are sustaining damage from his counterattack. The kills accumulate, and fifteen is a completed mission. Unfortunately, the damage accumulates as well and 100 per cent means curtains.

You can, however, return to base between attacks if you so wish and "zeroise" any excitement. Choosing 'soft' civilian targets is an easy way of ending up with fifteen kills. I did this quite often. (I suppose you could say I'm just a sheep in Seawolf clothing!)

Anyway, Seawolf is slightly different, but I thought only just above average. Available graphics are under-utilised, and I would have liked to see more colour used. Also more imagination could have gone into representing the target ship - whether it be a tanker or a battleship, the image is exactly the same.

Having said that, if you want a war game that is out of the ordinary and isn't just zapping aliens then Seawolf will fit the bill.

Derek Schofield, ELECTRON USER 1. 9

# SECRET MISSION

*Professional, Originally Released On Cassette Only*

Game Aliases : SCOTT ADAMS ADVENTURE 3; MISSION IMPOSSIBLE  
Game Type : Text Adventure (Rated Advanced)  
Author : Scott Adams  
Standalone Release(s) : 1983: SECRET MISSION, Adventure International, £7.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ADVENTURE INTERNATIONAL, 85 Summer Street, BIRMINGHAM  
B19 3TE  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

In this exciting Adventure, time is of the essence as you race the clock to complete your mission in time - or else the world's first automated nuclear reactor is doomed! If you survive this challenging mission, consider yourself a true Adventurer!

Difficulty Level : Advanced

## How An Adventure Works

Read the standard introduction to Adventure International adventures under SCOTT ADAMS SCOOPS.

**Instructions' Source** : SECRET MISSION (Adventure International) Back Inlay

## Review (Electron User)

Readers may remember a TV program called Mission Impossible in which the leader of a government spy team always received his instructions on a tape, which after being played, self-destructed. SECRET MISSION (Adventure International) is the third in the Scott Adams series of games and is based on that TV series.

You, like the leader of the spy team, have to play a tape to find out what your task is. Your mission is to prevent the destruction of a nuclear plant. A saboteur has planted a bomb in the reactor and it is up to you to defuse it.

On playing the tape in the briefing room you discover that the saboteur has been there before you. A quick exploration shows that you have only got access to eight locations.

Several security doors bar your way, though a visit to the grey room should give you the means of getting through one of them. You now have a visitor's pass and a means of getting into the white room. Wait until you hear a noise though, the saboteur is suicidal and will provide vital additions to your inventory.

The window is now the place to go and the tape recorder will help you here. You'll have to fool that camera, so think you you'd send for here, to repair the window.

You should now have another key and a return to the console should help you to get through another door. A floor cleaner is soon found and therefore, two objects that will put you well on the way to finishing the game.

I think this is the hardest of the Scott Adams games I have tried. An excellent adventure that I highly recommend.

# SENTENCE SEQUENCING

*Professional, Originally Released On Cassette Only*

Game Type : Educational Programs  
Authors : Ann Wills and Russel Wills  
Standalone Release(s) : 1984: WORKSHOP, Acornsoft, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ACORNSOFT, Betjeman House, 104 Hills Road, CAMBRIDGE CB2 1LQ  
Tel: (0223) 316039  
Disc compatibility : CDFS E00, DFS E00

## Instructions

This pack contains two SENTENCE SEQUENCING programs on cassette (Get it into Order and Nursery Rhymes). Loading instructions appear on the inside front cover of this pack. All other instructions are contained in the programs and are shown on the screen.

Each program presents a series of jumbled sentences which must be rearranged to form a nursery rhyme or a logical sequence of sentences. Sentences to be moved are first located and selected using the cursor up and cursor down keys. The sentences are then moved using the number 2 and 3 keys.

The "Teachers' Notes" give the user control over the length of time that a child works. Once the time is selected, up to 20 children can use the program and their results will be stored for later recall.

## About the authors

Russel Wills began his career in computing in 1965 when he joined IBM as a lecturer. He then worked in Africa for five years as a systems analyst returning to the UK in 1972 to take up his present post as lecturer in computer education in Dundee.

Ann Wills is head teacher of a primary school. Russel and Ann Wills share a common interest in the development of software for the microcomputer, and the integration of this material into the school curriculum.

## Contents

INDEX, ORDER, RHYMES

## Loading Instructions

Select the number of the program you wish to load and press <RETURN>. Normal cassette operating messages are given during loading. Once the correct position on the cassette is reached each program takes two to three minutes to load.

Note: Programs can also be loaded and run in the usual way with the CHAIN command; to load and run the program ORDER, for example, type CHAIN "ORDER" and press <RETURN>.

## Inserting New Sentences Into SENTENCE SEQUENCING

Once your students have become familiar with the groups of phrases supplied on the Sentence Sequencing program you may like to replace them with your own teaching material. The procedure for replacing existing groups of phrases and then saving the amended program is given below.

1. Select and load the program you wish to amend.
2. Press <BREAK>.

3. Type OLD and press <RETURN>.
4. Hold down CTRL and press N (this turns page mode on for listing, although nothing appears on the screen).
5. Type LIST 6000, and press <RETURN>.

The section of the program that contains DATA statements will be displayed in a list on the screen. Each statement begins with a line number and is part of an ordered set of sentences. The final DATA statement in each set will be XXX.

If the DATA statements that you wish to change are not on the screen, press <SHIFT> to move on to the next page.

6. Press <ESCAPE> to end the listing of the program.
7. Move the cursor using the arrow keys to the beginning of the appropriate data statement.
8. Press <COPY> to copy the data statement up to the position where the new sentence is to be inserted. This should be after the double quote which follows the word DATA.
9. Ensure that the <CAPS LK> light is off.
10. Type in your new sentence, putting a double quote after it.
11. Press <RETURN>.

Any of the program lines containing DATA statements can be replaced by typing them out again or using this method of copying. Whenever a new program line is typed it replaces the old version of that program line. A data statement can be removed by typing its line number and then pressing <RETURN>. Sets consist of up to six sentences followed by the DATA XXX statement. A new program line can be inserted between two other lines by giving it a line number that is larger than one and smaller than the other.

12. Press <SHIFT> and <CAPS LK> to turn the <CAPS LK> light on.
13. Type RUN and press <RETURN>.
14. When the changes have been tested, press <BREAK> to leave the program.
15. Type OLD and press <RETURN>.
16. Save this version on to cassette by typing SAVE "filename" and press <RETURN>. NOTE: We recommend that you can use your own filename so that the original program remains intact. In this case, your new version of the program cannot be loaded via the INDEX, but you should use the CHAIN or LOAD command, for example: CHAIN "filename" <RETURN>

# SERPENT'S LAIR

*Professional, Originally Released On Cassette Only*

Game Type : Graphical Adventure  
Author :  
Standalone Release(s) : 1984: SERPENT'S LAIR, Comsoft, £6.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron. Electron version plays fast on BBC.  
Supplier : COMSOFT, 67 Kent Road, Harrogate, N YORKS HG1 2NH.  
Tel: 0423 57464  
Disc compatibility : Unknown

## Instructions

SERPENT'S LAIR is a graphical adventure game. Fly your magic carpet around the world meeting animals as diverse as the Polar Bear, the Emperor Penguin and the Comodo Dragon of Indonesia. Help the wizard find the treasure, solve the riddle of the Sphinx, feed the Polar Bear with fish and help the Giant Panda find his bamboo.

**Instructions' Source** : SERPENT'S LAIR (Comsoft) Back Inlay

## Review (Electron User)

This adventure program is designed to be used by children in the age range seven to twelve. It concerns the rather unpleasant Princess Ambrosia who was sent on a mission to find the King's treasure. The trouble is she found a good sweet shop in Bognor Regis and there she stopped, stuffing herself with sweets.

Guess what? You are sent in her place, equipped with a magic carpet. Most unusually for an adventure, the action takes place on planet Earth, with geographical locations such as Loch Ness, the Arizona Desert and Indonesia. Many of these places are drawn out in high resolution colour graphics.

The locations are in their (reasonably) correct geographical positions so that if you go east from London you will get to Egypt or west from Japan takes you to India. It is recommended in the instructions that the game is played with an atlas, and this, of course, gives the program some educational value. A number of animals are met on the way, ranging from polar bears to tarantula spiders (again, mostly in their correct regions) and it is necessary to aid these or outwit them.

An experienced adventurer would solve the problems with ease. They are designed to be easy, so that when the tiger wants meat it will be found near at hand. My own son, aged seven, got tremendous satisfaction from working out how to get past the Comodo Dragon. The program comes with a couple of sheets of paper which give you the story so far, and some general instructions for getting going. These are invaluable to the novice adventurer.

There is also a function key strip; the keys being set up for ten common commands. There seemed to be one bug here as the GET command did not work.

You are even given the phone number of Comsoft's chief adventurer which you can phone if stuck. My family nearly resorted to this service to solve the riddle of the Sphinx.

This is a most satisfying program. It offers a gentle introduction to adventurers and could well suit many adults as well as children. It was thoroughly enjoyed by my son, who took three days, with help, to solve it.

The package is priced very reasonably and the program loads and runs just as well on a BBC Micro and could be of interest to the growing number of schools which use both machines.

# SHANGHAI WARRIORS

# SHARK

***Professional, Originally Released On Cassette Only***

Game Type : Arcade  
Author : Sam Inglis  
Standalone Release(s) : 1989: SHARK, Audiogenic, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : AUDIOGENIC, Winchester House, Canning Road, HARROW HA3 7SJ  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"The Purple Priority Warning came from all three stations simultaneously. The Intruders' three-pronged attack had caught the Earth Defence Installations unawares, allowing them to steamroller straight through the token defences and leave them on the brink of complete control.*

*"The emergency session of the United World Parliament was in uproar. Who could save the day? Only one man had the courage, the skill, and the determination, Colonel Charles St John Sharkey, known to his friends as 'Shark'.*

*"'Will you save us?' begged the World President.*

*"Shark didn't have to think twice.*

*"'I'll give it my best shot, Sir.'"*

You play the role of Shark, attempting to halt the advance of the Intruders. Your mission is to penetrate deep into their ranks and strike at the heart of the invasion by destroying their Command Centres.

Your first task is to defeat their jungle offensive. Your subsequent missions may not be so straightforward...

## Hints

Extra weapons/ability may be obtained by collecting the weapon packs of aliens you have destroyed. Some troops leave behind their backpacks which contain either a high velocity rifle, a machine gun, or award extra jumping ability, temporary invincibility, or occasionally extra lives.

Enemy trucks and helicopters are destroyed by sustained attack. Watch out for drivers and pilots who will try to attack you once you have destroyed their craft.

## Game Controls

You can choose the main keys that are used to play the game - use whichever you prefer, but not Q, S, P, U, M or the ESCAPE key, since these are fixed keys which control game features. The default keys are Z and X to move left and right, <SHIFT> to jump, <SPACE> to duck down and <RETURN> to fire.

Use S and Q to turn the sound on or off, M to turn the music on or off, P to pause the game and U to resume. Pressing <ESCAPE> ends the current game. Press the space bar to start a new game.

## Colour/Monochrome Option

The game can be played using a colour or a monochrome display. Select the BLACK AND WHITE option if you do not have a colour monitor or TV, in which case the game will adjust the colours to make the graphics easier to discern with a monochrome display.

**Instructions' Source** : SHARK (Audiogenic) Back and Inner Inlay

### **Review (Electron User) - "Bracing Blasting"**

SHARK is one of two new titles from Audiogenic, the first this year. The scenario is typical - the bad guys have invaded in force and you, Colonel Charles St John Sharkey, nicknamed Shark, are the only hope. Will you take on this dangerous mission to rid the world of enemy agents? Of course you will.

It turns out to be a multi-screen wargame very much in the mould of STRYKER'S RUN - you dash across the screen left to right blasting away at all and sundry, and when you near the edge the screen flicks to the next.

You can jump around the screen from object to object so that one moment you may be running along the ground and the next precariously balanced edging along an iron girder.

There are a number of different sections: Jungle, barrack square, town streets and more. Each sector is immediately distinctive - in the jungle you can run along the ground and through clearings, and jump on to giant blocks of tone and large tree branches.

In town you can leap from window ledge to window ledge, the roofs of houses and so on. Clever use of dithering - mixing the pixels of different colours to give the appearance of new colours - adds to the overall effect.

You certainly need to keep on the move and your finger on the trigger as an endless stream of foot soldiers bears down on you. Luckily, your machine gun makes short work of them. The trucks and helicopter gunships are far more robust, and consequently much more dangerous. The latter home in on you, dropping bombs all the time. The trucks drive at you while the occupants lob grenades.

You must shoot both the helicopters and trucks several times before they burst into flames, but the danger does not stop there - you now have to contend with an armed and understandably furious pilot or driver charging you on foot. Contact with anything that moves is fatal.

Some useful bonuses are on offer if you can get to them. Killing certain foot soldiers lets you retrieve their backpacks. Collect them to find a machine gun, extra lives, temporary invulnerability and so on.

The game features some nice touches - the keys can be redefined and the colour schemes altered to make viewing easier if you are using a black and white TV or monochrome monitor. The pause/restart, quit and sound on/off options are all present and correct.

One drawback lets the game down, and that's the lack of accuracy when detecting collisions. Many a time I have side-stepped an enemy solidier or seen a bomb land well short of me only to find myself disappearing in a puff of red smoke. It is an irritating flaw in an otherwise highly enjoyable game. However, you do get used to it and it's not that much of a problem - just give everything a fairly wide berth.

The screen display is excellent and the Mode 2 - unusual for the Electron - multicolour graphics are well defined, although there is a strip of garbage along the bottom of the screen like Superior's CITADEL and one or two other games. You won't notice it after a while.

The speed is excellent too, making it a fast-paced and exciting game to play. There's no music but the sound effects are reasonably good with a rat-a-tat when you fire your gun, and a wheee... when a bomb or grenade heads your way.

SHARK is a simple and bracing shoot-anything-that-moves-before-it-gets-you type of game. Colonel Sharkey will certainly win his fair share of devotees, especially among those seeking a hero to inherit the mantle of Commander Stryker.

Martin Reed

**\*\*\* Second Opinion \*\*\* (Electron User)**

At first I thought this was much too hard - just one hit by a stray bullet and you bit the dust. However, with practice I soon got the hang of it was addicted in no time at all. If you're after a good blast you can't go far wrong with this little beauty.

"Electron User Golden Game"

ELECTRON USER 6. 1

# SHARK ATTACK

***Professional, Originally Released On Cassette Only***

Game Type : Arcade  
Author : Cliff Ramshaw, J. Bell & J. Halliday  
Standalone Release(s) : 1984: SHARK ATTACK, Romik, £5.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron (Runs too quickly on BBC machines)  
Supplier : ROMIK, 272 Argyll Avenue, Slough, BERKS  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"You are in shark infested waters. You have to protect the octopi, your only protection is the shark net."*

The object of the game is to protect the octopi from certain death from the sharks. The only thing that will stop them is the shark net.

You control a net laying ship.

You have to surround as many octopi as you can with the net, to prevent the sharks getting to them.

If a shark manages to eat an octopus before you can protect it, the shark becomes a killer shark, which eats everything in its path, including your net.

After you have protected the octopi (or after they have all been eaten), you must fill the majority of the screen with the net to enable you to proceed to the next screen.

There is a high score table to record the highest score on each of the ten skill levels.

## Game Controls

Z - Left, X - Right, \* - Up, ? - Down

Press <SPACE> to start with these keys. To use a First Byte joystick, press F. To use an Acorn joystick, press <FIRE>.

To alter the skill levels, use the vertical cursor keys.

Q/W - Sound off/on, <COPY>/<DELETE> - Pause/Continue

# SHIPWRECKED

***Public Domain, Originally Released On ADFS 1D00 Disc And DFS 1D00 Disc***

Game Type : Arcade Adventure; Platform-style  
Author : Dominic Ford  
Standalone Release(s) : 1996: SHIPWRECKED, Electron User Group, PD  
Compilation Release(s) : None  
Stated compatibility : Electron, BBC B, B+ and Master 128  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ELECTRON USER GROUP, 42 Canterbury Road, REDCAR TS10 3QF  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

In the year 2440, planet Earth was invaded by forces from another galaxy. Now, in 2442, most of Earth is under alien control. You had managed to find a way to destroy the aliens using a special laser weapon but shortly afterwards your research fell into alien control.

You were half-way across the ocean toward the neighbouring country of Bagami, where the aliens still have little control over the humans, in your cargo boat when a storm broke loose.

The storm has swept your boat onto an island and broken the hull. Although at first sight, the island appeared to be uninhabited, you have now quickly realised it to be the aliens' secret base.

In order to save humanity, you must escape from the island and reach Bagami. To do this, you must find the aliens' teleport and activate it in their control room. The teleport key can only be obtained by taking six fresh fish keys to the control room. When this is done, the teleport will be activated and you will be taken away from the island.

## Scoring:

Exploring a new screen .....	1
Collecting a power booster .....	5
Solving a puzzle .....	20

A total of 500 points are available, although you do not need all of them to complete the game. Collecting the power boosters is optional.

## Power Losses:

Touching a monster .....	-1
Firing a laser (if you do not hit an alien) .....	-1
Falling into water .....	-10

## Game Controls

Z - Left, X - Right, <RETURN> - Jump, ? - Down ladder  
P - Open door, <SPACE> - Object control, <DELETE> - Fire laser  
<ESCAPE> - Restart screen, <SHIFT><ESCAPE> - Suicide

SHIPWRECKED is greatly improved with a Master Ram Board.

**Instructions' Source** : SHIPWRECKED (EUG) Original Text File

## Review (EUG)

In an exceedingly unlikely plot, a scientist escaping from a country overrun with aliens is shipwrecked on a similarly populated island and forced to collect six fish keys. Mankind's only hope is your exploratory and arcade skills in a huge PALACE OF MAGIC style adventure from Dominic Ford.

The first thing that strikes you about SHIPWRECKED is that it has all the elements of a professional release. A nice loading screen, full instructions (although the writer strangely mixes up the past and present tenses), a huge number of locations to explore, a variety of puzzles and an assortment of meanies that don't take kindly to your presence! In addition, you'll also find an immunity cheat can be activated before the game is loaded if you wish.

When the game proper has loaded, you are treated to a slideshow of all the different locations you can visit in it. Over these are printed SHIPWRECKED, its author and the sound options in a customised blue and white font. Each location is a vibrant and appropriate colour, from top-level English red bricked walls to bottom-level eerie green dungeon stones, and each houses a suitable composition of objects, aliens, caskets and water. Look out for the fishes too so you can get a rough idea as to where they're located!

As you might have guessed, a PALACE OF MAGIC comparison is all-involving. You get a side view of all the rooms with many named differently so as to aid rough identification of your position. You are advised to make a map, control is via the traditional Electron keys and your scientist's energy is constantly negated by brushing against baddies. Gravity will pull you down through any gaps in the terrain and you also need to watch out for water - which is the fastest whittler down of your energy!

If in severe peril, you are immediately transported back to the opening by which you entered the room and can run/fall left or right as well as scrambling up and down ladders. Jumping produces the familiar 'bounce' sound and there are conveniently placed power boosters after those occasions when you may suffer substantial injury.

A nicely framed Mode 2 playing area with multi-coloured sprites also adds to the feel of the game and the mission set to find the fishes is no easy task! In fact, the author recommends at least two hours to complete the jaunt even when you know where you're going. If you sense a 'but' though, here it comes...

SHIPWRECKED is hard - and one cannot help feeling that this could be the main reason that the immunity cheat is included. Unlike in other arcade adventures, you have only one life and once your energy has been depleted to zero, you bite the dust. Also, your exploration of the game is constantly hindered by doors. To get through each colour-coded door, you need the pass of that colour and you can only ever get through the door by having that pass and holding down key.

This can become extremely tiring as you can only carry two items at a time. So if there are a succession of doors between you, the fish and the control room (where each of the six fishes need to be deposited) you must go through a bizarre picking up and dropping off procedure, frequently resulting in you forgetting where you have left particular passes!

There are two types of aliens: patrolling and flying. The general rule is to shoot them both on sight but the flying ones have a habit of occasionally passing through your bullets [Also, look out for a strange bug that sometimes leaves your fired bullet on screen when it strikes one. Try touching it! - Ed]. These latter, although they cannot fire at you, are pretty merciless. Once they attach themselves to you, firing has no effect and you must run screaming to the next room before they vanish! An annoying waste of energy if your bullet should've taken them out.

While general control of the character is good, jumping takes much more familiarisation. One leap practically clears the whole screen so just hopping from ledge to ledge becomes an art! This is mainly apparent if playing with a Master RAM

Board operational though. Without one, although the action is somewhat slower, jumping is a bit less fraught!

These quibbles do indicate two different features within the game. That you are equipped with a gun, albeit rather dodgy at times, is one and that the doors do not disappear when you enter them with the requisite 'key' is another. There are also a number of other puzzles in the game, along the PALACE OF MAGIC lines of certain objects dispensing with certain obstacles. These are left, by both the instructions and this review, for the player to discover!

Only written in 1996 and spawning the aptly-titled sequel SHIPWRECKED 2 in 1997, SHIPWRECKED is one of only a few BBC/Electron PD releases that attempted to build on that market Superior Software created with CITADEL. Yet these non-scrolling arcade-adventures retain a sense of timelessness even when they are indeed this recent. Perhaps you won't be glued to this for your whole life but it's worth a lingering look!

Dave Edwards, EUG #49

## Instructions

The Jupiter Commission was set up in 2490 to mark the fiftieth anniversary of mankind's victory in the Great Alien War of 2440. It was intended to build a spacecraft, Jupiter I, as the largest ever space station. The structure, however, was constructed using untested techniques and collapsed shortly after completion in 2502.

Following a deal between the Bagami Space Authority and the Jupiter Space Authority and the Jupiter Commission, documents were made available concerning tested building techniques. Jupiter II was then designed but the cost was too great and due to the depression of the 2500s, the plan was scrapped.

In 2517, plans began for Jupiter III, which it was hoped would be more successful than its predecessors. Following completion in 2523, it was an instant success. Gravity was achieved on board using two revolving discs, in which all passengers and cargo were kept. The hotel was fully booked every night for the first year!

Disaster struck in 2525, however, as aliens eager for revenge invaded Jupiter III. Moreover, they are threatening to bring it out of orbit of Mars, its current location, and send it crashing into Earth. If they did so, humanity would be wiped out completely.

You have been selected to go alone on a mission to save Jupiter III and mankind. Your craft will dock at the far end of the Docking Bar. You should note that although gravity will remain in your craft and others around it, the Docking area itself is a zero gravity enviroment.

## Oil Hazard

There is evidence to suggest that the aliens have filled some areas of Jupiter III with oil to create a sulphurous atmosphere which they can breathe. Be careful as this oil is corrosive. The atmosphere is poisonous, so keep your suit on at all times - although bear in mind that extra protection is required for a space walk in the vacuum outside Jupiter III. Also beware of the fuel in the fuel tanks (in front of the Docking area) - this is explosive!

## Power Losses

Touching a monster ..... -1  
Firing a laser ..... -1  
Falling into oil ..... -10

Power is only lost when you fire a laser if you do not hit an alien. You start with 64 units of power.

## Information About The Aliens

The aliens wear a strong protective suit which makes them difficult to kill. You are armed with a laser which can kill them at close range. To fire this laser, press the DELETE key. Some guards wear thick armour which lasers cannot penetrate. Such aliens have never been successfully destroyed but corrosive substances may work as may blow to the underside where the armour is much weaker than elsewhere.

### **Zero-Gravity Areas**

There are several areas of Jupiter III which have no gravity. These include the Docking area just outside the spacecraft in which you start, and the service areas at the top of the map. Zero gravity areas always have a blue background.

In a zero gravity area, you float in the air and it is difficult to stop once you have started in move in any direction, except when you hit the wall.

### **Continues**

After you receive a 'GAME OVER' message and start a new game, you will find that many of the puzzles remain solved and will not need resolving in the new game. If you break a panel in Jupiter III, for example, this panel will remain broken in the next game. If you want to start a completely fresh game therefore, you need to reload the game.

This feature is also present in SHIPWRECKED, and is actually an unsolvable bug which has been made into a documented feature.

### **Objective**

The objective of your mission is to return Jupiter III to an orbit around Mars and so avoid a collision with Earth. If possible, you should also clear all of the aliens from the craft.

Your mission is more important than your own life. Do not return to Earth until it is complete, but try to find some way back afterwards.

Upon completion of your mission, you will be given a four-digit code. Make a note of this, and then re-run the game. On the main menu, select 'GAME COMPLETE' and then type the code when requested. You will then receive a congratulatory message!

### **Game Controls**

Z - Left, X - Right, RETURN - Jump, / - Down ladder  
P - Open Door, E - Check Power  
<SPACE> - Object control, <ESCAPE> - Restart screen  
<SHIFT><ESCAPE> - Suicide, <DELETE> - Fire laser

To check whether you need a power booster, press E. Your suit will emit two tones. The closer they are together, the less power you have.

In your adventures, you will find keys, doors and many other objects which you will need to identify yourself.

**Instructions' Source** : SHIPWRECKED II (Dominic Ford) Original Text File

### **Review (EUG)**

The final game to come from Dominic Ford is his sequel to arcade adventure SHIPWRECKED, JUPITER III. This time you're not shipwrecked on an island but marooned in space on board an ill-fated spacecraft. It's many years into the future - a lot more than the original even! - yet neither you nor the beastly alien critters that have stuck their flag into Stanley Kubrick's realisation seem to have changed their appearance at all.

More of the same as SHIPWRECKED, you wonder. For professionalism, one thing's for sure: it can't be faulted. The disk version displays one of the most impressive Mode 2 graphical demonstrations you've seen for a long time, with a vortex of swirling pixel-stars nicely framed behind a huge multi-coloured title. In the space below you find a menu of four options. Although the first game had a loading screen of a

reasonable quality, this one is purely unbeatable! And Dominic Ford manages to squeeze the whole game even into systems with PAGE at 1D00. Note that, for loading time reasons though, the Mode 2 screen is missing from the tape version.

Selecting option 1 loads in the game proper. Like with the first SHIPWRECKED, you are now treated to a backdrop of a location on board JUPITER III with the message 'Press SPACE To Start'. Yet the width and breadth of the playing area now fills the whole screen and waiting for a slideshow of the playing locations is in vain.

This is because, whereas the first jaunt was a CITADEL-comparable room-to-room release, this whole element has been dispensed with now that Dominic Ford is really showing off. He is now pitting you in an EXILEsque scenario - where the screen cleverly scrolls around to keep your character in the centre of it!

Note hastily at once this isn't another EXILE however. What it is, in terms of *gameplay*, is the more of the same as you'd imagine when comparing it with the prequel. That is, a graphic adventure where you need to collect and use objects from and in various places and carry certain coloured passes to get through those coloured doors. There's a brilliant use of all of the BBC/Electron's colours and the scrolling keeps pace with the action reasonably well, although it's a bit jerky on an Elk with MRB and it's best to play without it (even though the speed is so evidently reduced!).

There are added touches to the craft, such as zero-gravity sections - and a fatal oil hazard in one area - and these are interesting, even if only at first. You may soon have reservations about Zero-G. It's a real nightmare to navigate without finding your man flying around the screen in the same patterns time after time!

You have been equipped with a marginally more crappy gun than you had in SHIPWRECKED and shooting the aliens basically has the effect that you lose lots of power getting close enough to them and as soon as they are scrolled back onto the screen after a short voyage to another part of the 'map' they mysteriously reincarnate. All these 'features' quickly become irritating, due in most part to the game being so frustratingly difficult. It really is one of the toughest pieces of software you've ever played...

The situation isn't helped by instructions which concentrate in large measure on the irrelevant. These can be accessed by selecting the second option from the disc version menu. (Printed instructions accompany the tape version!) The Game Objective section simply states words to the effect of 'Return Jupiter III to its orbit around Mars'. Great! How?

Completing the game, via the in-built option 3 immortality cheat (The only way to proceed unless you are a glutton for punishment!) will yield a four digit code that can be entered by selecting option 4. Doing so receives congrats and information about Dominic Ford's plans for the final SHIPWRECKED game - which never made it into production.

All things considered, it's very different to its predecessor, but not necessarily better. It has many more features but a surprisingly large number of irksome qualities which weren't quite so irritating in the first adventure. And although it uses the same game sprites and has the same general 'thread' of an arcade adventure, it straddles the genre with a little unease; the Zero-G and scroll-based parts may look visually impressive (despite an occasional quick flash of sprites in the bottom left corner during a scroll) but are rather alien to these puzzle-based types of game where establishing a method pays dividends!

In JUPITER III, there is no simple way. You need a high degree of arcade skill and key manipulation, the ability to think logically, a comprehensive map of the craft by your side, a good memory, the cheat mode on and a dollop of patience smothering it all. Any missing element guarantees your failure in whatever it is you're supposed to be doing. Balanced against this are a full screen playing area, 100% machine code scrolling and displaying, full use of colour, a huge map to explore and

document, impressive screens and a large number of differing puzzles to solve. Minimal sound is also utilitised when you fire a gun check your power, jump or die.

As with the first game, much time and effort has gone into this one and it's apparent. Whether or not you like it, or choose to compare it with SHIPWRECKED, two things are for sure: The object of the game is *not* to collect fishes this time. And it's a lot better than those games our Superior didn't have a hand in!

Dave Edwards, EUG #50

# SHUFFLE

*Professional, Originally Released On Cassette Only*

Game Type : Strategy; Sliding Block Puzzles  
Author :  
Standalone Release(s) : 1984: SHUFFLE, Budgie, £1.99  
Compilation Release(s) : 1986: ACTION PACK, Alligata/WHSmith, £3.99  
Stated compatibility : Electron  
Actual compatibility : Electron

Disc compatibility : CDFS E00

## Instructions

Hours of fun for kids of all ages (the grown up kind too!). Beat the clock and rearrange the muddle to its perfect formation. 9 individual puzzles to test your powers of logic and speed of thought.

## Game Controls

To move blocks:           A - Left,     S - Right,     F - Up,     C - Down  
To move blank space:   K - Left,     L - Right,     \* - Up,     ? - Down

Press <ESCAPE> to solve or restart.

**Instructions' Source** : ACTION PACK (Alligata/WHSmith) Inner Inlay

## Quick Peek (Electron User)

A sliding block puzzle of the traditional type. You have to unscramble a puzzle made up of a number of blocks, one of which is a blank. There are two sets of control keys. One set moves the blank and the other moves blocks into the blank. The idea is to solve the puzzle in the fewest possible moves and the shortest possible time. There are eight different puzzles with three levels of difficulty.

ELECTRON USER 3. 3

## Review (Electron User)

Sliding block puzzles are still a popular pastime for children and adults alike. This offering gives a choice of fifteen different pictures for you to sort out.

The basic idea is that a picture is drawn on the screen, divided into squares, and these squares are then shuffled. Your task is to get them back into the correct order and so re-make the picture.

There are three levels of difficulty. At the first level the picture needs only a few moves to get it back in order, whereas the third level will require many more.

The sound, which is simple but meaningful, can be turned off if required. You may mark the edge of any square with lines if you wish. The pictures range from sequences of letters or numbers, through pictures of houses or flags to a series of patterns. All are pleasantly coloured, and a lot easier to complete with a colour television.

One of the spiral patterns is very difficult. It makes use of flashing colours and looks like nothing on earth until it is completed.

Technically the program is very good. My main gripes are that the keyboard repeat is left on and the choice of keys is unusual. There is, however, a First Byte joystick

option within the program and it works with a Plus 1 joystick too if you use the Joyplus program in the Electron User for April 1985.

This is a worthwhile program, with many interesting features. At the easy level, it could appeal to five-year-olds, but the flashing spiral takes it right through to Einstein standard.

# SIM

## ***Professional, Originally Released On Cassette Only***

Game Type : Arcade Platform Game  
Author : Joshua Portway  
Standalone Release(s) : 1985: SIM, Viper, £7.95  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : C.S.M. (Consolidated Software Marketting), Suite 40, Strand House, Great West Road, Brentford, MIDDLESEX TW8 9EX  
Disc compatibility : CDFS E00, DFS E00

### **Introduction**

*"70+ screens \* 20+ different game characters \* Two voice music \* Multi-colour mode 2 graphics \* Realistic jetpac sound effects \* 13 objects to carry \* Smooth sprite movement \* Option to change control keys \* Problems to solve in order to complete the game"*

The energy crisis is reaching a catastrophic level. Hercules K. Orange-bottom (galactic superhero) has been commissioned by H.M.Govt. to go in search of Simarils to feed the reactor. Not a simple task for although the Hercules knows the whereabouts of the Simarils he encounters numerous obstacles, all of which are capable of destroying him and his jetpack.

Sim is an arcade strategy game. The object being, to control a man and his jetpack through numerous scenes, collect ten Simarils one at a time and deposit them in a reactor, which is in the temple screen. However, you must avoid all moving characters designed to block your way and manoeuver around them. Apart from the Simarils, there are also various stationary objects which you can pick up to assist you to get past the evil characters, e.g. a carrot, to tempt the rabbit away from its warren.

The evil characters include clouds, suns, snakes, flying saucers, rabbits, starfish and radioactive seaweed.

Helpful objects are anything that is stationary.

### **Game Controls**

<COPY> - Left, <CTRL> - Right, <RETURN> - Thrust  
<CURSOR UP> - To pick up an object, <CURSOR DOWN> - To drop an object

LINCOLNSHIRE DN20 9AX  
Disc compatibility : CDFS E00, DFS E00

## Introduction

Enter SIM CITY and take control. Be undisputed ruler of a sophisticated real-time city simulation. Create your own dream city (or dream slum) from the ground up, or become the master of existing cities such as SAN FRANCISCO or NEWCASTLE. You are the Mayor and City Planner with complete authority.

Your city is populated by Sims - simulated citizens. Like their human counterparts, they build houses, flats, offices and factories. They expect to be protected by the police and fire brigade and they enjoy sport in the stadium. And, also like humans, they complain about things like taxes, mayors, taxes, crime and taxes. If they get too unhappy, they move out; you collect less taxes, the city deteriorates.

The next few sections will explain the overall concept of SIM CITY and will give information which will help you design and develop better cities.

## System Simulations

SIM CITY is the first of a new type of entertainment/education software called SYSTEM SIMULATIONS. We provide you with a set of RULES and TOOLS that describe, create and control a system (in this case a city). The challenge of playing a SYSTEM SIMULATION game is to figure out how the system works and take control of it. As master of the system, you are free to use the TOOLS to create and control an unlimited number of systems (in this case cities), within the framework and limits provided by the RULES.

In SIM CITY, the RULES to learn are based on city planning and management including: human factors, such as residential space, jobs, quality of life; economic factors, such as land value, industrial and commercial space, electric power, taxation; survival factors, such as crime, pollution, disasters; political factors, such as public opinion, zoning, keeping businesses and residents happy. The TOOLS provide you with the ability to plan, zone, build, bulldoze, re-zone and manage a city.

## The Main Objective

The main objective of SIM CITY is to design, manage and maintain the city of your dreams. Your ideal may be a bustling metropolis or a linked group of small communities providing slow paced country living. As long as your city can provide places for people to live, work, shop and play, it will attract residents. And as long as traffic, pollution, overcrowding, crime or taxes don't drive them away, your city will thrive.

An assessment of your success is provided by the SCORE given on the EVALUATION SCREEN. A score of above 500 (out of a possible 1000) means you are doing better than average, 800 or greater indicates you are being very successful. If you score 950 or more, then send a photograph of the EVALUATION SCREEN to Superior Software and we will send you a signed congratulatory certificate.

You can also try to sort out the problems presented by the four SAVED SCENARIOS. These can be loaded in from the game disc or cassette.

### **Game Controls**

The controls are very simple. The Z, X, \* and ? keys are used to move the select arrow around - LEFT, RIGHT, UP and DOWN respectively. The RETURN key then selects.

The CURSOR ARROW keys are used to scroll the landscape on the EDIT SCREEN.

If you wish to pause a game, then select the MAP SCREEN or EVALUATION SCREEN. Press RETURN to restart the game.

To get started, load in the program, then continue as described under the heading EDIT SCREEN.

### **Saved Scenarios**

There are four saved scenarios for you to try and sort out. Aim to produce well-balanced, successful cities within about twenty years.

The four scenarios are:

SAN FRANCISCO in 1906 after the earthquake and fires. This is saved under the filename SANFRAN

NEWCASTLE in 1960, a depressed economy and generally a 'Dullsville'. This is saved under the filename NEWCAST

CHERNOBYL in 1986 after the nuclear reactor accident, when the land around the reactor needs bulldozing to 'clean it up' before redevelopment. This is saved under the filename: CHERN

HONG KONG in 1997, when a depressed city that has been squeezed into a small area has the potential to expand. This is saved under the filename HONG

### **Edit Screen**

When you load in the program you will initially be asked for a name for your city. Type in a name of up to 12 characters and press the RETURN key. A region will then be 'terraformed' consisting of water (in cyan) and land (in red). Rough land is shaded with black. You will then automatically move into the EDIT SCREEN, which has a row of icons at the bottom. By pressing RETURN with the pointer on the MAP SCREEN (looks like Britain), you can see the whole region. Press RETURN again to return to the EDIT SCREEN. If you don't like the region produced for you and wish to restart, or if you wish to load in a saved city, then move to the DISK ICON and select accordingly (see below).

Once you have a region with which you are happy, or have loaded in a saved city, then you are ready to start to develop, or re-develop, the city using the MANAGEMENT ICONS and CONSTRUCTION ICONS as described below.

The current date is given at the bottom of the EDIT SCREEN. At the end of each year, the screen will go blank for a short time whilst all calculations are updated. The amount of money currently available to your city is also given at the bottom of the screen.

To the left of the EDIT SCREEN are the demand indicators; red for RESIDENTIAL, cyan for COMMERCIAL and yellow for INDUSTRIAL. If the demand is positive, this indicates the Sims are 'happy' and possibly require more of that type of zone for development.

## The Icons

The construction, development and management of your city is controlled by the twenty icons at the bottom of the EDIT SCREEN. Any icon can be selected by moving the select arrow over it, and then pressing the RETURN key.

The six icons at the right of the screen are the management icons and control special functions such as setting taxes and saving a city to disc or cassette. The other fourteen icons control the construction of your city.

[Disc Icon]        DISC ICON is used to save a city to disc or cassette, to load in a saved city or to restart the game.

To load in a saved city, simply type in the filename and press RETURN, with the disc or cassette containing the file ready to load. To save a city, you should always use your own formatted disc or a cassette and NEVER USE THE GAME DISC OR CASSETTE. Type in a filename of up to 7 characters, press RETURN (twice when saving to cassette) and wait for the file to be saved. Please note that your game score will not be saved - you start again with a score of about 500. You cannot catalogue a disc or cassette whilst playing the game, so keep a note of your city filenames.

[ Monster ]        DISASTERS can strike at any time whilst playing the game, but by selecting this icon you can bring a disaster down upon your city, in order to assess your ability to deal with it. The three types of disaster are: TORNADOES, EARTHQUAKES and MONSTERS. Each produces different types and degrees of damage.

[ Suitcase ]        BUDGET SCREEN can be selected by the pointer as usual, but also appears automatically at the YEAR END so that you can adjust your budget for the coming year. (Please note that in a real city the financial figures would be about 1,000 times greater than the values used in this simulation.)

Move the pointer to the + or - signs and press RETURN to adjust the values. The tax rate can vary between 0 and 20%. The tax collected from each zone is a product of the tax rate, population, land value and a scaling factor. A tax rate of above about 2% will have the Sims complaining, but 5-7% is not unreasonable. To slow city growth without shrinking it, set the tax to 8 to 9%. Underfunding the Police, Fire or Transit Departments will lead to a deterioration in services. You should not overfund these departments.

To leave the BUDGET SCREEN, move the select arrow to the QUIT icon or to the BUDGET SCREEN icon and press RETURN.

[ Tick/Cross ]     EVALUATION SCREEN allows you to assess how well you are doing, and to ascertain when problems such as CRIME and POLLUTION are arising.

The population decides the type of city you have. Up to 24,999 is a VILLAGE; 25,000 to 49,999 is a TOWN; 50,000 to 74,999 is a BIG TOWN; 75,000 to 99,999 is a CITY; 100,000 to 124,999 is a BIG CITY; and 125,000 or more is a CAPITAL.

The GRID percentage gives an indication of how much of your city is connected to the power supply, and hence is able to develop. You will have to search around your city to find zones that are not connected, and link them to the power supply, otherwise areas may degenerate.

The SCORE is the ultimate assessment of your success and is an average of your (i.e. the mayor's) approval rating over the

previous ten years. Factors affecting the overall city SCORE are indicated in the CITY DYNAMICS CHART.

- [ Britain ] MAP SCREEN allows you to take an overview of the city region. Pressing the P key will show the area where police protection is greatest. Pressing the F key will show areas where the fire protection is greatest. Pressing the RETURN key will allow you to exit from the MAP SCREEN.
  
- [ Bar Chart ] GRAPHS show the variation of various factors over the previous ten years. The first set of three graphs (shown as a series of bars) are equivalent to the demand lines at the side of the EDIT SCREEN. Red is RESIDENTIAL, black is COMMERCIAL and cyan is INDUSTRIAL. The second set of three graphs shows how well you are doing in preventing CRIME (red bar), how well you are doing in keeping down UNEMPLOYMENT (black bar) and your OVERALL APPROVAL rating (cyan bar); in each case the more positive the graph, the more successful you are being.
  
- [ Extinguisher ] FIRE DEPARTMENTS help protect the surrounding area against fire damage. The effectiveness of fire protection depends on the level of fire department funding. Full yearly maintenance of each fire station is £100. It costs £1000 to build a fire station.
  
- [ PD Badge ] POLICE DEPARTMENTS lower the crime rate in the surrounding areas. This in turn raises property values. Place police departments in high population density areas. The efficiency of a station depends on the level of funding it receives. Full yearly maintenance of each police station is £100. It costs £1000 to build a police station.
  
- [ Power Station ] POWER PLANTS can be either coal or nuclear, chosen from a sub-menu when you activate the power plants icon. The nuclear power plant is more powerful, but is more expensive. The coal power plant pollutes more than the nuclear power plant (but see the CHERNOBYL scenario described overleaf).  
  
Coal power plants cost £3000 to build and supply energy for about 50 zones. Nuclear power plants cost £5000 to build and supply energy for about 150 zones.
  
- [ Helmet ] STADIUMS encourage residential growth once a city has become fairly large. Stadiums indirectly generate a lot of revenue, but create a lot of traffic. Properly maintaining a stadium requires a good road and transit network. It costs £3000 to build a stadium.
  
- [ Aeroplane ] AIRPORTS increase the growth potential of the commercial markets. Once a city starts getting large, commercial growth will level off in the absence of an airport. Airports are large and expensive and should not be built unless your city can afford one. It costs £10,000 to build an airport.
  
- [ Anchor ] DOCKS increase the potential for industrial growth. They have little effect on a small city, but contribute a lot to industrialisation in a large city. Although in general they should be placed in coastal areas, inland docks (such as in Manchester) are permitted. It costs £5000 to build a dockland zone.

### Construction Icons

When an icon is selected, a rectangle will accompany the pointer to indicate the size and area of land that will be affected. Pressing the SHIFT key, at the same time as the movement keys, speeds up the movement of the construction rectangle. Pressing the RETURN key constructs the item selected, provided the land is suitable

(rough ground may need to be bulldozed first) and you have sufficient funds available.

[ Bulldozer ]      BULLDOZER clears rough ground ready for roads, etc. Also can clear existing zones for redevelopment and clear rubble produced by disasters. If you bulldoze the top left hand corner of a zone, the whole zone will be demolished. You can fill in water by first building a road to it (vertical direction only), and then bulldozing the road.

Bulldozing one section of land costs £1.

[ Road Icon ]      ROADS connect developed areas. Intersections and turns are automatically created. Lay continuous roads by dragging your pointer with the RETURN key pressed. Be careful - if you accidentally lay a road in the wrong place you will have to pay for bulldozing and rebuilding. Laying roads across water creates a barrage/bridge. They can only be built vertically in a straight line, and no curves, turns or intersections are permitted.

Roadways are maintained by the transit budget, and wear out if there is a lack of funding. The amount of yearly funding requested by the transit department is £1 for each section of road.

It costs £10 to lay one section of road and £20 to lay one section of barrage/bridge.

[ Rail Line ]      TRANSIT LINES create a railway system for mass transit. Tracks should be placed in heavy traffic areas to help alleviate congestion. Intersections and turns are created automatically. Lay continuous transit lines by dragging the pointer with the RETURN key pressed. Transit lines can only cross water vertically (in a tunnel) in a straight line, and no turns, curves or intersections are permitted. If a road and a transit line are to cross, the road must be built first.

Mass transit lines are maintained by the transit budget, and wear out if there is a lack of funding. The amount of yearly funding requested by the transportation department is £4 for each section of transit line.

It costs £20 to lay one section of transit line on land and £20 to lay one section of tunnel.

[ Pylons ]      POWER LINES carry power from power plants to zoned land and between zones. All developed land needs power to function. POWER IS AUTOMATICALLY CONDUCTED THROUGH ZONES WHICH ARE JOINED TOGETHER. Power lines cannot cross zoned land or rough land without first bulldozing. Junctions and corners are automatically created. Lay continuous power lines by dragging the pointer with the RETURN key pressed. Power lines can only cross water vertically in a straight line, and no turns, curves or intersections are permitted. If a road and power line are to cross, the road must be built first. Safety by-laws prevent power and transit lines crossing directly. If you wish to cross power and transit lines, you must first establish a zone (residential, commercial or industrial) at the intersection.

It costs £5 to lay one section of power line on land and £20 over water.

[ Tree ]      PARKS can be placed on any clear land. Parks, like access to the coast, raise the land value of surrounding zones.

It costs £10 to zone one park.

[ House ]      RESIDENTIAL ZONES are where the Sims live, build houses, apartments and community facilities such as schools and hospitals. The development of residential zones is shown in the ZONE DEVELOPMENT diagram. Factors influencing residential value and growth are traffic density, pollution, population density, surrounding terrain, roadway access, utilities and parks.

[ Buildings ]      COMMERCIAL ZONES are used for many things including retail stores, office buildings, parking and petrol stations. There are six levels of commercial growth, from the small general store to the tall skyscraper, as illustrated in the ZONE DEVELOPMENT diagram. Factors influencing the value and growth of commercial zones include internal markets, pollution, traffic density, residential access, labour supply, airports, crime rate, transit access and utilities.

It costs £100 to zone one plot of land as commercial.

[ Factory ]      INDUSTRIAL ZONES are for heavy manufacturing and industrial services. There are five levels of industrial growth, from small pumping stations to large factories, as illustrated in the ZONE DEVELOPMENT diagram. Factors influencing industrial growth include external markets, access to docks, transit access, residential access, labour supply and utilities.

## Design Strategy

You will have to devise your own strategies for designing and developing your dream city, and learn by trial and error. Here however are a few points to guide you.

1. The number of residential zones should be approximately equal to the sum of commercial and industrial zones. When your city is small, you will need more industrial than commercial zones, and when your city gets larger, you will need more commercial zones than industrial.
2. Separate the residential from the industrial zones.
3. Proximity to parks and water increases land values and hence taxes collected.
4. Allow time for any changes you make to take effect. This may take two to three years or longer.
5. All zones and utilities must be powered for the city to fully develop.
6. Save your city to disc or cassette before trying any major new policy so you can go back if your plan doesn't work.
7. Roads or mass transit must provide access to each zone for it to fully develop. Mass transit systems can carry much more traffic than roads, but are more expensive to build and maintain. Roads and mass transit systems typically occupy 25-40% of the land in urban areas.
8. Check the EVALUATIONS SCREEN and GRAPHS often. The Sims will let you know how they are doing. Also the statistics can be useful. If your population is shrinking, don't go zoning new areas that may never develop. Look for problems in the existing zoned areas, and spend your time and money solving them.

[ZONE DEVELOPMENT graphical section, RESEDENTIAL buildings have BLACK outlines, COMMERCIAL buildings have CYAN outlines and INDUSTRIAL buildings have YELLOW outlines. The graphics cannot be reproduced here for obvious reasons.]

## SIM CITY Dynamincs Chart

## Review (Electron User)

This is a graphic adventure game simulating the voyages of Sir Francis Drake in the Pacific Ocean. Having taken the cassette from its attractive library case, the first thing I noticed was that the program was almost impossible to load.

LCL have put the program on both sides of the cassette, but both proved difficult and required adjustments to tone and volume of my tape recorder for almost every block.

I took the only way out, struggled to load the program once and resaved it onto my own cassette. It took over an hour to achieve.

The loading program presents a title sheet and sound that's meant to be the sea, and then draws a map of the Pacific Ocean. The second loads and then takes about thirty seconds to initialise.

Your boat starts at Lima and you must follow Drake's route via New Albion - California - across the Pacific to Java. On the way you commit acts of piracy so that you may bring riches back to your queen. The boat is steered using the cursor keys and you have a permanent status record of cargo, supplies, crew number, cannon balls and damage.

As you sail you will encounter hazards such as rocks and reefs and may need to put into an unknown port for repair. The sea bed awaits anyone whose damage reaches 10.

If you see a Spanish ship, you may attack or ignore. If the ship has a name, attack it. You always win. If it does not, winning or losing is random.

Incidentally, a ship you beat has more cargo to steal. If you move away and come back, you can quickly gain your required cargo. Winning is quite difficult and needs careful mapping and it is in this that the program has its value. A keen child would need to keep a chart - sample included with the program - and would thus practice record keeping, co-ordinates and map work.

A big snag is that if the player loses, the whole program has to be reloaded.

It is not very well written in many ways and rather easy to cheat the system. Documentation is poor, keywords that are needed are not given but nonetheless at its lowish price - about six pounds - it could be considered for primary schools.

Rog Frost, ELECTRON USER 2. 6

# SIR NATHANIEL'S SAVING GAME

*Public Domain, Originally Released On ADFS 1D00 Disc*

Game Type : Arcade; Monochrome Card Game Based On Natwest Board Game  
Author : (The) Dave  
Standalone Release(s) : 1998: SIR NATHANIEL'S SAVING GAME, (The) Dave, PD  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : EUG, 42 Canterbury Road, REDCAR TS10 3QF  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Based upon the card game of the same name, Sir Nathaniel's Saving Game pits the player against three opponents ub a bid to be the first to collect the five Natwest piggies.

On commencing a new game, the main screen is displayed with the prompt "Play As Player 1/2/3/4". After the 'real' player is selected (one of the keys specified is pressed), there is a short pause then each player in turn is either given money or not according to the 'card' they draw from the 'deck'. The real player must press 'RETURN' to take the card.

As the game continues, each player's savings will increase and a player may 'draw' an object card. When this occurs, all the money that player has accumulated will be spent and the player must begin to save again from zero.

The aim of the game is to collect the five piggies of the Natwest bank. The baby of the family, Woody, is given to each player free of charge but the other piggies are obtained only when a player either saves or exceeds the amount of money to claim that piggy. The piggies' names and the amounts needed for each are:-

Annabel	£25
Maxwell	£50
Lady Hilary	£75
Sir Nathaniel	£100

When any new piggy is claimed, the player's saved money reverts to zero.

As soon as any player claims Sir Nathaniel, they have won the current game and if the winning player is an opponent, the 'real' player is commiserated. If the 'real' player has chosen to 'play as' the winning player, a congratulatory message will appear. Pressing 'SPACE' begins a new game. Pressing 'ESCAPE' reports how many games have been played and how many the 'real' player has won.

# SKIRMISH

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade Classic Joust Clone  
Author : Delos D. Harriman  
Standalone Release(s) : 1988: SKIRMISH, Go-Dax, £9.95  
Compilation Release(s) : 1990: PLAY IT AGAIN SAM 12, Superior/Acornsoft, £9.95  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : GO-DAX, 12 Chiltern Enterprise Estate, Theale, BERKSHIRE  
RG7 4AA  
Disc compatibility : CDFS E00, DFS E00

### Instructions

This classic flying combat game is set in a fantasy world of medieval knights and strange birds.

The enemy knights always play, with either one or two human players. Beginners are recommended to play in pairs, so they can help each other, and experts may enjoy the extra challenge of a human opponent.

Player 1 wears yellow armour and rides on the light blue ostrich. Player 2 wears white armour and rides on the pink stork. All of the enemy knights ride on green buzzards: the Bounders wear red armour and are fairly stupid; the Hunters wear light blue armour and are more cunning; the Shadow lords wear dark blue armour and move the fastest.

When an enemy rider is killed, an egg is produced. If the egg lands safely on one of the six rock ledges, then it will hatch into another rider. It will not hatch if it falls into the lava or a player catches it.

When a player is killed, his new life rises up out of one of the grey energiser pads located on the rock ledges. Until he moves, he flashes and is immune to attack. These are the same energisers from which enemy birds appear at the start of each wave.

On WAVE 3, flames burn away the bridge over the lava pit.

On WAVE 4, the Lava troll appears as another flame above the lava. Any bird flying too close will be caught by his hand and pulled down into the lava, though it is possible to escape with rapid flying.

WAVE 5 is the first Egg Wave. Egg Waves begin with just twelve eggs scattered on the rock ledges.

From WAVE 6 onwards, the rock ledges will begin to disappear. These screens give more freedom of movement, but require different tactics.

WAVE 8 is the first Pterodactyl Wave, though you may meet him in earlier waves if you take too long killing the enemy knights. The 'unbeatable' Pterodactyl kills human players on contact. He will fly away when all the enemy knights have been killed.

In TEAM WAVES, each player gets a bonus of 3,000 points for not killing the other player.

In GLADIATOR WAVES, the first player to kill the other gets a bonus of 3,000 points.

In SURVIVAL WAVES, the player gets a bonus of 3,000 points for not losing a life during the entire wave.

Prepare to Joust, Buzzard Bait!

## Game Controls

BBC Micro	Electron
f4 .....	Start 1-Player Game ..... 1
f5 .....	Start 2-Player Game ..... 2
f1/f0 .....	Sound On/Off ..... 4/3
f2/f3 .....	Pause On/Off ..... 5/6
ESCAPE and RIGHT CURSOR .....	Quit Game ..... ESCAPE and RIGHT CURSOR

### Movement Controls

There are just three controls: Left, Right and Flap. Each player has a choice of keys. Choose the combination of keys which suits you best.

BBC Micro	Electron
<CAPS LOCK> or W .....	Left - Player 1 ..... <CTRL> or W
+ or UP CURSOR .....	Left - Player 2 ..... + or UP CURSOR
<CTRL> or E .....	Right - Player 1 ..... A or E
* or DOWN CURSOR .....	Right - Player 2 ..... * or <COPY>
<TAB> or S or D .....	Flap - Player 1 ..... <CAPS LOCK> or S or D
@ or [ or <RETURN> .....	Flap - Player 2 . P or UP CURSOR or RETURN

In the 1-Player Game, any combination of the Player 1 and Player 2 keys may be used. For example, in the 1-Player Game on the BBC Micro, CAPS LOCK could be used for Left, CTRL for Right and RETURN for Flap.

Joysticks may be used on the BBC Micro version of the game, but not on the Acorn Electron or Master Compact versions. Press the Joystick 1 fire button to start the 1-Player Game; press the Joystick 2 fire button to start the 2-Player Game.

**Instructions' Source** : PLAY IT AGAIN SAM 12 (Superior/Acornsoft) Inner Inlay

## Review (Electron User) - "Battling Buzzards"

Imagine a world in which you sit astride a giant ostrich and engage in medieval-style jousting contents with opponents riding giant buzzards. This is the setting for JOUST, Atari's smash arcade hit.

It sets itself apart from most other games by taking the idea of a two player game one stage further - you play not only against another human player, but also against a number of other computer opponents. Thus half a dozen combatants can be on the screen at once.

Now we have SKIRMISH, a superb conversion of this arcade favourite. Once loaded, three landing stages are displayed and you are invited to start the game.

I found that the player sprites look rather messy because of the crammed-in detail. Aside from this minor point, SKIRMISH faithfully re-creates all the addictive qualities of the original.

The controls are simple: Left, right and flap. The last control causes your bird to flap its wings once. Press it repeatedly to hover and faster still to gain height.

SKIRMISH features three different types of computer controlled rider - the bounders, wearing armour, are fairly easy to defeat, the Hunters are more cunning and the Shadow Lords are almost impossible to dismount.

To win a joust you must fly into an opposing player making your lance is higher than his. A vanquished human opponent loses a life and reappears somewhere else on the screen.

However, a computer opponent falls off his mount and turns into an egg, while his riderless buzzard flies off into the distance. You must grab the egg quickly or it will hatch, spawning a rider of the next grade.

If your lance is lower than your opponent's, you will die and your bird will fly mournfully away. You soon learn to fly to the top of the screen as quickly as possible, but even this commanding position is by no means safe.

When all the computer controlled riders have been defeated the next wave stage begins. Later stages add even more nasties: The lava troll that stalks along the bottom of the screen ready to grab any foolhardy contestant who comes too close. And the indestructible pterodactyl that flies backwards and forwards until the wave has ended. The pterodactyl can appear on earlier waves if you take too long to dispose of your opponents - give it lots of air space.

SKIRMISH provides all the useful features that make all the difference to any good game: Pause/restart, sound on/off and quit game are all included. I can recommend it wholeheartedly - and it's even better if you have a SLOGGER Turbo board fitted.

It is one of the most playable games I have seen this year and will certainly lead to many late nights. To quote the loading commentary: Prepare to joust, buzzard bait.

# SKYHAWK

***Professional, Originally Released On Cassette Only***

Game Type : Arcade  
Authors : Steven Lee & Margaret Stanger  
Standalone Release(s) : 1986: SKYHAWK, Bug Byte, £2.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : BUG BYTE, Mulberry House, Canning Place, LIVERPOOL L1 8JB  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"THE BATTLE BEGINS...*

*Skyhawk: the ultimate flying machine.*

*Scrolling countryside to defend . . . or die in the trying."*

## The Game

The story so far...

They lived in fear from the raiders. It was almost as if the retribution for the War would never end. Then the silver-suited men appeared. Skyhawk arrived. The raiders returned but, this time, they met powerful weapons - Skyhawk and you...

## Game Play

Allow maximum fuel and ammunition to be loaded before taking off, speed is of the essence. On the bottom right of the screen you will see the fuel and ammunition loading. Use the radar to position yourself and listen for the low fuel warning.

## Game Controls

Points are awarded for shooting down aircraft: 25, 50, 100, 200. A bonus life is awarded at 3,000 points. Fuel decreases according to the speed. You must land on an undamaged fuel pad to refuel and re-arm. Skyhawk is the bar in the centre of the radar display. The blips are the enemy. Intact fuel pads are the lights on the bottom.

Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR, Department C, Ground Floor, Regent House, Skinner Lane, LEEDS 7  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### Instructions

Your character, the robber, has to collect the bags of gold that are falling from the bank window that he has smashed. The object is to fill the billboard with the pound signs which are awarded for each bag collected. If five bags get past you to the water, a life is lost. Bags that do not get past are displayed as a flashing alarm above the bank.

Your opponent in the game is a policeman, who will try to knock you into the water. Also against you are flying police cones which have to be kicked to avoid losing a life and floating dustbin lids which must be avoided. If, however, a police box is kicked while it is flashing, it will turn the traffic light to red and enable you to, by contact, send the policeman into the water. This facility also stops the bags of gold from falling.

If the traffic light turns to red-and-amber, you have a limited amount of time to get the policeman. A green light means contact with the policeman is fatal. The bags of gold score more points the nearer to the top of the screen they are collected. A bonus man is awarded for each 10,000 points scored, but only to a maximum of 3.

### Game Controls

Z - Left, X - Right, \* - Up, ? - Down, RETURN - Kick  
<COPY>/<DELETE> - Freeze/Restart, S/Q - Sound On/Off  
Joysticks may also be used

**Instructions' Source** : SMASH AND GRAB (Superior) Back and Inner Inlay

### Review (Electron User)

With a swift kick, you send the police traffic cone crashing through the bank window. Bags of money begin to fall from the broken window and drift gently down towards the river below...

In SMASH AND GRAB, your job as the villain is to catch the falling loot before it reaches the river. As is always the case in these ladders and levels games, there is a snag. In this one it is in the shape of PC Plod, your local neighbourhood bobby. This particular policeman would be more at home in the Sweeney than pounding the beat.

Should you be running along the level directly above him, he is quite likely to leap upwards and thrust his truncheon through the floor into your nether regions. When he is on the upper level his actions are even more dramatic as he falls flat on his face and batters you around the head.

To complicate things even further, the occasional trio of flying traffic cones will

wing their way along one of the levels in your direction. These can be dealt with by either getting out of the way, or by kicking each one in turn by pressing <RETURN>.

Although it may sound that odds aren't exactly in your favour you do have one trick up your sleeve. Should you kick one of the four police boxes when the light on top is flashing the traffic light at the top of the screen changes to red. Immediately the bags of money stop falling, and any physical contact with the policeman will send him plunging into the water below.

If you can collect eight bags of money you progress to the next screen. However as each missed bag of loot hits the water an alarm bell appears at the top of the screen. Five alarm bells and a life is lost.

Jon Revis, ELECTRON USER 2. 6

# SNAKE

***Professional, Originally Released On Cassette Only***

Game Type : Arcade  
Author : Wynand Thompson  
Standalone Release(s) : 1985: SNAKE, Kansas, £3.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : KANSAS CITY SYSTEMS, Unit 3, Sutton Springs Wood,  
CHESTERFIELD. Tel: 0246 850357.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Eat the red and magenta spots and your snake will grow. Eat a green spot or hit a wall and you will lose a life!

Clear any screen in less than a minute without losing a life and you will be awarded a BONUS.

## Game Controls

Q - Up, A - Down, Cursor Left - Left, Cursor Right - Right  
<SHIFT> - Accelerator

You may use a Plus 1 joystick if you prefer.

# SNAPPER

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade; PAC MAN style  
Authors : Jonathan Griffiths  
Standalone Release(s) : None  
Compilation Release(s) : 1989: PLAY IT AGAIN SAM 7, Superior/Acornsoft, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128. Plays very fast.  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### Instructions

Guide the Snapper through the maze eating dots and fruit while trying to escape the creatures from the cave. When you eat a flashing dot, the creatures turn blue and become edible; eat them quickly while you can. Uneaten creatures start to flash just before they are due to change back again.

When you have eaten all the dots, you tackle a new screenful. The game gets progressively harder, and with higher scores as the fruit increase in value.

You start with three Snappers, but can earn another one by scoring 15,000 points. You must survive thirteen screenfuls before catching a glimpse of the ultimate prize - the Acorn, worth 5,000 points!

### Game Controls

To control the Snapper's movement, you can use either a joystick (only Plus-1 on the Electron) or the keyboard. Press Fire to start the game if using joystick control; press the SPACE key to start the game if using keyboard control.

Z - Left, X - Right, : - Up, / - Down  
S/Q - Sound On/Off, <COPY>/<DELETE> - Pause On/Off, <ESCAPE> - Quit Game

# SNAPPLE HOPPER

***Professional, Originally Released On Cassette Only***

Game Type : Educational Arcade Games  
Authors : Betty Root & Fisher-Marriott  
Standalone Release(s) : 1985: SNAPPLE HOPPER, Macmillan, £5.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : MACMILLAN, Macmillan Publishers Limited, 4 Little Essex Street, LONDON WC2R 3LF  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Two great games of fun and skill for kids of 4-8. See your children's reading abilities grow as they play and learn.*

*\* Teaches initial sounds and rhyming words \* Designed by one of Britain's top reading experts \* One or two players \* Choice of nine speeds \* Disk copyable*

*Devised by Betty Root, one of Britain's leading experts in reading. Betty Root is the 1985 President of the United Kingdom Reading Association and is in charge of the Centre for the Teaching of Reading, University of Reading. She is especially well known for designing educational games for young children.*

*Programmed by Fisher-Marriott, award-winning software developers.*

*The cassette contains two different games, one on each side : SNAPPLE and HOPPER."*

## Copying to disk

The publishers allow you to make one copy only of each program on to disk. Any further copying is prohibited and is an offence under the Copyright Act. Make sure you have a formatted disk with at least 17K spare memory for each program. You must make your copy as soon as the program has loaded and the main menu screen has appeared, before any key has been pressed.

Press CTRL and D simultaneously then release. The program saves automatically in two parts: CASTLE and BYTES; CLOWN and SHAPES.

To load the programs from disk type CH."CASTLE" or CH."CLOWN" then press RETURN.

## Running the programs

Both games are great fun for children but they also have an educational purpose. SNAPPLE helps children recognise words which have the same two beginning letters, such as SKate and SKull. HOPPER helps children recognise words which rhyme, such as BOAT and GOAT. They feature an element of chance as well as skill so children of varying ages and abilities can play together happily.

## Program settings

To play the game without sound effects, wait until the menu screen has appeared, then press CTRL and S simultaneously.

Type 1 or 2 then press RETURN to select a one-player or two-player game.

Type a number between 1 (very slow) and 9 (very fast) to select an appropriate speed.

To break out of the game at any stage and return to the menu for re-selection, press CTRL and Z simultaneously, then release. New options can be set and the game begun again.

When you have finished playing one game, and want to load another, press CTRL and BREAK simultaneously then release.

## **SNAPPLE**

### **Two Player Game**

A picture is shown in each player's tree. The arrow indicates whose turn it is. That player must press a key (<RETURN> for right-hand side, A for left-hand side) to generate a new picture. If the two pictures shown begin with the same two letters, the first player to press <RETURN> or A respectively wins the SNAP and gains an apple from the tree. A false SNAP gives the opponent an apple. The winner is the first to win six apples.

### **One Player Game**

This works in the same way, but with the player (right-hand side of the screen) challenging the computer (left-hand side). The player must press <RETURN> for a SNAP.

## **HOPPER**

### **Two Player Game**

Eight pictures appear on lily pads. The frog indicates whose turn it is. A picture appears in the centre of the pond. The player must spot which of the eight pictures rhymes with the one in the centre, and press the appropriate number. If an incorrect number is pressed, or no number at all, the rhyming word appears on the screen. (Pressing any key speeds up the removal of this word.) The winner is the player to accumulate the most lily flowers.

### **One Player Game**

This works in the same way; the aim being to spot as many of the rhymes as possible.

# SNOOKER

*Professional, Originally Released On Cassette Only*

Game Type : Arcade; Snooker Simulation  
Author : Kevin Reid  
Standalone Release(s) : 1984: SNOOKER, Acornsoft, £9.95  
Compilation Release(s) : 1988: ACORNSOFT HITS 2, Superior/Acornsoft, £9.95  
1989: PRES GAMES DISC 4, PRES, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+, Master 128  
Supplier : ACORNSOFT, 4A Market Hill, CAMBRIDGE CB2 3NJ  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

This is a game for two players. The winner is the person who scores most points. There are eight different colours of balls on the table and their points are assigned as follows: Red-1, Yellow-2, Green-3, Brown-4, Blue-5, Pink-6, Black-7 and the white cue ball.

Each player in turn uses the cue ball to try and hit other balls into the six pockets situated along the two sides and at the corners of the table. This is called 'potting'. The player's turn ends when he *either* scores no points during his turn or plays a 'foul shot' (this will be defined later). When the red balls are potted, they are not replaced, unlike other coloured balls.

Whenever red balls are present on the table, the player must first pot a red. If successful, then he must try to pot another colour. If successful, he can attempt to pot a red ball again. When all red balls are potted then the player must try and pot other balls in ascending order of their colour values.

A 'snooker' is defined as no clear line of sight between the cue ball and any valid balls.

FOUL SHOTS: the cue ball must hit the ball of the appropriate colour first. Failure to hit any ball, or hitting the wrong colour ball constitutes a foul shot. The opposing player then gains *either* 4 points or the value of the ball which should have been hit, whichever gives him the most points. If the cue ball ends up in the pocket, then the opponent has 4 points OR the value of the ball which the cue ball first touched. The cue ball will then be put back on the table.

FOUL SNOOKER: If by means of a foul shot a player causes his opponent to be snookered, i.e. there is no clear line of sight to a valid ball, then his opponent may ask him to play the shot.

## Scoring

RED	1
YELLOW	2
GREEN	3 [CYAN]
BROWN	4 [FLASHING MAGENTA]
BLUE	5
PINK	6 [MAGENTA]
BLACK	7

The green and brown balls are represented on screen by the colours cyan and flashing magenta respectively.

A score board at the top of the screen displays the scores of both players. An arrow at the right of the score board indicates whose turn it is.

The green strip at the bottom of the screen represents the cache in which the balls are collected when potted.

### **Game Controls**

Using the Z, X, : and / keys, the cue is 'drawn' on the screen pointing in the direction of the intended shot. The length of the cue determines how hard the shot will be: the longer it is, the harder the shot, and *the cue ball goes in the direction of the extended cue.*

To complete a shot, press either S, B or T according to whether you want a Normal Shot, a Backspin or a Topspin.

### **Other controls**

SPACE BAR ..... Select ball colour  
C ..... Confirm colour  
R ..... Renominate colour or shot  
O ..... Change to other player  
ESCAPE ..... Start a new game

### **Joystick controls**

Using the joystick to 'draw' the cue on the screen in the direction of the intended shot. Moving the joystick further from the centre position will lengthen the cue: the longer it is, the harder the shot. When the cue is ready, press the Fire button.

The player will now have the option of using the joystick to select the colours of balls and spins:

Right ..... Gives a choice of colours of balls and spins  
Left ..... Stops the selection of balls and spins  
Fire ..... Confirms the selection  
R ..... Renominate colour or shot  
O ..... Change to other player  
ESCAPE ..... Start a new game

- Positional cue ball feature
- Ball select feature
- Accurate cue function position
- Play help feature on colour
- Playable on B/W TV
- Full or short game option

## Instructions

Snooker - a load of balls. Well, judging by those words planetary physics could be a game of marbles. I mean, the sheer joy of matching those spatial velocities, the angles of intersection, the conservation of momentum and the restitution. Just there you have it. Physical co-ordination, advance geometry and applied mathematics. And they try to tell me I've had a mispent youth; I couldn't have learnt as much in a three year degree course at the local Poly. Some people say I wouldn't have learnt as much in a ten year course but I don't think they've got much regard for the educational system.

Well, they spent years trying to perfect a snooker table to play on at sea, but with this I can take it on the Shuttle (and with my qualifications, maybe I should) or I can play a game in the comfort of my own home. O.K. So I don't have a full-scale table in front of me but then I'm not paying two grand for one (Could this be a lesson in economics?). I mean, all in all, this has got to be the BEST game around - even the girlfriend can play. The rest of the family have also been noted having a go.

So unless you're a generous, free spirited nature, guard this game with care. You never know who you'll find playing it next!

## Starting A Game

After loading, the message "1 or 2 PLAYERS?" will appear.

1 = one player option

2 = two player option

Select the option you require, and the message "15-BALL GAME?" will appear. This permits you to play a full or a 10-ball game. After choosing your mode of play, the message "PLACE WHITE BALL" will appear. Using the keys shown, position the + within the "D" on the table plan. Ensure that the "+" is not touching one of the other balls. When you are satisfied about the position of the cue ball, press "FIRE" and the cue ball will appear.

### **First Break**

The message "POSITION CROSS" will appear on screen. To make the break, move the + which represents the cue aiming point. i.e. the line the ball will take to your target point on the pack of reds. When you have chosen this position, press the Space Bar.

Holding this button down will increase the strength of your shot. The shot will be taken when you release the button.

### **Potting And Spin**

To aim for a ball, use the same procedure for controlling the cursor as described above. To put spin on the ball, just move the cursor in the direction that you wish the ball spin to take, whilst first pressing the Space Bar.

Then release the Space bar and continue to press the direction key. When you release the key, the shot will be taken.

If you do not pot a ball and are playing a two-player game, the next shot is offered to your opponent, otherwise you may continue.

If you pot a red you must then select a colour.

### **Selecting A Colour**

After potting a red, the message "SELECT COLOUR" will appear. A white square will appear on screen on one of the colours and you must move this to the colour you are going for. This is done by using the keyboard left to right. When you have selected the colour you want, press Space Bar and the game will be resumed. When all the reds are potted, the computer is programmed to automatically select the colours in proper order.

### **Options**

When the message "POSITION CROSS" appears, there are three options available:

#### **1. DELETE BALL FUNCTION. Function key 1.**

The Space Bar deletes the next ball which is flashing and moves on to the next one. To skip a ball. press any direction key. To skip through them all, continue pressing any direction key until the cross reappears.

#### **2. ABORT GAME FUNCTION Y/N. Function key 2.**

Y starts a new game.

N returns you to the current game.

#### **3. FOUL SNOOKER OPTION. Function key 3.**

This option is only available on a two-player game.

After a "FOUL SNOOKER" message appears, press Function key 2 to get the instruction "FOUL PASS Y/N".

If you answer "Yes" then the turn is passed on to your opponent, and if it is "No" you choose the colour to pot.

# SNOWBALL

***Professional, Originally Released On Cassette Only, BBC Game Made Compatible With Electron With Slogger MRB Plus Jafa Mode 7 Adaptor/Simulator (Optional), Also available on CDFS and DFS Disc***

Game Type : Text Adventure  
Authors : Pete Austin and Mike Austin  
Standalone Release(s) : 1987: SNOWBALL, Level 9, £9.95  
Compilation Release(s) : None  
Stated compatibility : BBC  
Actual compatibility : Electron With MRB, BBC B, B+, Master 128  
Supplier : WHS Distributors, St Johns House, East Street, LEICESTER  
LE1 6NE. Tel (0533) 551196  
Disc compatibility : CDFS E00, DFS E00

## Instructions

SNOWBALL is a big adventure game. It has over 7,000 locations and has taken nine months to produce. It's probably unique among adventures in having a realistic, planned background and being set aboard a starship that could actually work.

You play Kim Kimberley, secret agent extraordinary.

Your mission: to safeguard the interstar transport, Snowball 9, as a last resort following catastrophic accident or sabotage.

Thus when your modified freezer-coffin wakes you with the Snowball still in transit, you know that something must be very wrong. You're weakened and disorientated from lengthy hibernation, but the fate of two million passengers is in your hands!

To play the game, turn to the middle section for loading instructions and commands.

## Background

Snowball 9 started its journey to the stars from the EEC's Ceres base, one of fifty colony starships launched in the 2190s. It carried the first colonists for Eridani A.

First to be despatched were the ten giant passenger disks, rotating ponderously to provide internal gravity. Each was towed gently by a cluster of small tugs and floated into the void with 200,000 sleeping colonists on board.

Then the Snowball's engine unit followed, accelerated rapidly by the spectacular flares from its four great fusion motors. Like previous launches, and the link-up with the disks some weeks later, this was holo'd worldwide...though few people bothered to watch.

Looking like a necklace of sparkling beads, Snowball 9 headed out into deepest space, and into a century of obscurity.

But the major part of the launch was yet to come. And it happened quietly, out of the glare of publicity. The chains of accelerators, beyond Pluto, burst erratically into life throughout the following three years: firing ten-tonne blocks of ammonia-ice at precise speeds after the receding craft. Once reeled in by the Snowball's skyhooks, the ice was built into a huge hollow shell around the linked passenger disks. When complete, this shielded the disks during the voyage; until the ice was finally needed as fuel for the ravening fusion drives.

The ice-shell, which gave the Snowball series its name, formed most of the mass of the completed craft. And without the accelerator/skyhook system of "in-flight refuelling", realistic-time interstar voyages would not have been feasible.

As with life, the first thirty years of Snowball 9's journey were the most interesting. The computers and crew had to catch as much ice as possible before it flew past. But even then there were never more than 6 active crew at a time.

Then the starship was left to coast until its destination was near, the crew hibernating with the passengers. A brief flurry of activity to start deceleration, and back to autopilot. Even allowing for the great resilience, and hence low sophistication, of the Snowball's machine intelligences, they are quite capable of running everything unaided. No further crew members were woken until a year from journey's end.

The plan from here on was to continue deceleration, shed the remains of the ice-shield (by now eaten away to insubstantially by the needs for fuel), and dock with the target planet, Eden, in geostationary orbit. Finally the passengers would land by glider-shuttle...a process taking many years to get everybody down, and necessitating the retrieval of grounded gliders by sky hook: the same gliders being used many times.

That was the plan, anyway.

Meanwhile in the Eridani star system, the robot descendants of the original survey craft that scouted Eden have been hard at work. The original crude waldroids, directly controlled from the survey craft's computers, were good for little other than routine manual work. But they have long been superseded by a host of specialised robots: highly intelligent and suitable for any task.

Indeed, in the outer reaches of the planetary system the first accelerator chains are already being built. It will not be long before colonists can leave Eden for remoter stars.

The colonists have taken over a hundred years to reach Eden, but the robots can obtain information and programming at high speed. They are immeasurably ahead of their future 'masters' in knowledge and technology. Even if Snowball 9 arrives safely, it is by no means certain that the passengers will be able to cope with the sudden outdating of all their experience.

The physical well-being of the colonists is, however, assured by the robot's diligent work. Condos, paveways, PVTs, holo nets, pre-ordained work...everything necessary for civilised life will be provided. After all, why risk further disruption of the social fabric resulting from a manifestation of the so-called "pioneer spirit"?

All you, as Kim Kimberley, have to do is rescue the Snowball 9. The task of helping the colonists cope with the city that the robots have built can be tackled in the sequel to this adventure: "Return to Eden". Neither will be easy!

### **Kim Kimberley**

Kim is 1.7 metres tall, weighs 55 kilos, is fairly intelligent, athletic and has brown eyes and fair hair. Now aged 22, or 25, or 131 years depending on how you calculate these things.

Born on September 29th, 2172 AD, of Jorel Cowans and Alice Kimberley, Kim was raised by the Hampstead Creche. This was a peculiar place, set amongst decaying buildings, and heavily reliant on a mix of relationship/engineering, behaviour conditioning and Hell-Fire religion. It was finally closed in 2185 for breaches of the Android Protection Acts. It seems to have done Kim little harm however, though possibly contributing to a tendency towards introversion.

Then to Milton Keynes School of Life: a fine, residential establishment situated (despite its name) in Malta. The staff were, in effect, Kim's family. (This type of situation, by the way, was far from unusual in the late 22nd century. Advances in entertainment and travel, plus the sexual revolution resulting from AI, partho and cloning techniques, made a family up-bringing the exception.)

Kim returned to England for National Service before progressing to Oxford (being not quite bright enough for Cambridge). Kim proved a good student, and established many close relationships, though nothing permanent.

It was during National Service that the event central to the Snowball mission took place, though it went unremarked at the time. Kim was approached, discretely, to do security work. Initially this simply involved training, and occasional surveillance of possible subversives (Unionists, Americans, members of racial minorities etc) but it soon developed into counter-espionage (e.g. arresting Russians who used the public reference libraries).

And then, when the Snowball project got under way, Kim was approached to volunteer for the stars. The Snowball craft were as near automatic as possible, and carried a trained crew in case anything went wrong. But suppose something happened to the crew?

What was needed were one-or-two trained people, carried without the crew's knowledge, who could emerge and take over if something went really wrong. And, with the Snowball 9, it has...

### **The Game**

SNOWBALL is a full scale adventure game, with well over 7000 locations, 700 messages, about 60 objects etc etc. You will have to solve a large number of puzzles while finding your way to the main control room in the engine unit - and saving the starship.

To play SNOWBALL, load it from cassette and then simply enter English phrases to tell the computer what you want to do (e.g. SEARCH THE ROOM or LOOK AT THE PANEL). The program will act as your eyes and ears to describe your surroundings.

As with all proper adventure games, SNOWBALL is very easy to play - you don't need to be able to type rapidly, or blast aliens by reflex. But don't be too surprised if it takes weeks (or months) to complete.

The best way of playing is probably to use the program in short sessions, stopping if you seem to be totally stuck and resuming if you come up with an idea that might work. Making a map will probably help, though I advise against trying to show all the rooms! Remember that you can use the SAVE and RESTORE commands to save the current state of play and restart later - they are quite quick.

If you have any problems with solving the game, please use the hints card included. You're welcome to enclose it with a letter if you like, but hint-requests may not be answered unless the card is included.

If you have any problems with using the game program, please tell us which computer you have (and, for cassette problems, which cassette recorder you have). Please help us to help you!

### **How to load and Start**

SNOWBALL is a 32K program which uses most of the computer's memory. There is a copy on each side of the cassette.

The game can't be restarted if you press BREAK, so don't!

### **Instructions**

The program asks "What now?" whenever it expects you to enter another command. Simply type an English phrase to tell it what you want it to do and press RETURN. The program will act on your request, ask you for the next command, and so on.

The program knows an extensive vocabulary of English words (over 200) and it looks at your entered command, picking out the words it knows and 'guessing' your meaning from these. Only two or three words are used for each phrase, so you are advised to keep instructions simple.

In practice you should find it is simple to state what you want to do, but if the program does not understand just rephrase your request.

SNOWBALL provides great freedom in possible commands but, to help you get started, some possible instructions are summarised below:

INVENTORY	SEARCH THE ROOM
LOOK AT COFFIN	PUSH THE GREEN BUTTON
EXAMINE COFFIN	LOOK AROUND
NORTHWEST	GIVE DRINK TO ROBOT
TAKE SPANNER	OPEN DOOR
WEAR HELMET	WHAT'S MY SCORE
DROP THE RED FORM	CUT TUBE WITH SCALPEL

These are only a small sample of the words known by the program. To save typing, words can be abbreviated (e.g. EAST to E, NORTHEAST to NE, and AGAIN to A).

The command analyser used by SNOWBALL is even cleverer than that used in our "Middle Earth" trilogy of games. For example:

- \* Word order is less important. For example "GIVE THE ROBOT A DRINK" is the same as "GIVE A DRINK TO THE ROBOT"
- \* You can take or drop EVERYTHING
- \* As well as compass directions for movement, LEFT, RIGHT, FORWARDS and BACKWARDS are allowed
- \* AGAIN repeats the previous command
- \* SNOWBALL understands IT, and IT can save you time. Use IT if you want to act on the same object as in your last command - but please keep IT simple

You should also know three special commands:

QUIT	Abandon the game. You can start it again if you like.
SAVE	Keep the current state-of-play on tape. Start your recorder on RECORD with a blank tape first.
RESTORE	Load a SAVED position back from tape.

### **Scoring**

There are no "treasures" in SNOWBALL: you don't score points for finding things and storing them away as in many games.

Instead, points are scored for doing things that are steps on the way to the eventual goal for getting to the main control room and rescuing the starship from its fate.

For example, you need to get out of the freezer coffin, where you are at the start of the game, and subsequently need to assemble a working space-suit. Both these activities score points.

On the debit side, if you're caught by the Nightingales you lose points. And if you manage to get killed you lose more.

### **Hints**

Buyers are entitled to a free clue each, and a hints card is enclosed for this. Put it in an envelope, with another stamped, self-addressed envelope, and send it to the address at the back of this instruction booklet. We will do our best to reply as quickly as possible. Don't use up the clue too soon!

Answers will be truthful, but partial answers may be given to questions which take too much work (e.g. "Please list all words understood by the program" or "What are the functions of all the objects?"). We'll try to be fair and help you to progress.

- \* Everything in SNOWBALL has a purpose.
- \* Remember that the adventure is set in the starship described in this booklet. It is logically designed and there is no "magic". However, some of the technology used might be described as magical in 1980s terms.
- \* North means towards the front of the starship and the other "compass" directions are relative to this. Up and down, on the other hand, are determined by local gravity.
- \* At the start of the game, you are in the lowest level of a passenger disk. You need to go "up".

### **Terran Expansionary Phase, 2120 - 2210**

The late 21st Century saw a great increase in space travel within the solar system.

Fusion power was not yet feasible, conventional fuel sources were close to running out, and the energy needs of the industrial nations were ever-increasing. The solution lay in space. Solar reflectors, if made large enough, could easily concentrate any amount of energy...and beaming it back to Earth was simplicity itself.

What was not simple was to transport enough material for thousand-mile reflectors into space. Indeed, it was much more efficient to use what was already there...and thus the first accelerator chains (footnote a) were set up to boost asteroid material from beyond Mars into Earth orbit.

By 2120, thirty percent of Earth's energy came from the space reflectors and the proportion was steadily rising. And, to supply the colossal requirements of the orbital industries, the whole Solar System was linked by accelerators.

Then workable fusion power was perfected. And it was VERY cheap.

The whole space sector of the economy was redundant. And a lot of politicians risked looking very silly indeed.

Thus a use for the accelerators, space reflectors and orbiting factories had to be found...and Stellar Colonisation was it. A lot of voters/party members read SF, after all. And colonies are always popular (at first, anyway).

So the accelerators were linked up and fired out of tens of thousands of small exploration probes in all directions. These robots would coast through space with only one mission - as each flashed past a star it would report back the existence of Earth-sized planets. Unmanned, they could continue for centuries.

-----

footnote a) Electro-magnetic accelerators: Linear-motor guns. The payload was slowed down by sky-hook (a docking unit connected to the main space station by a VERY long, elastic strand).

Ten years behind came larger survey craft, each clutching a great ball of ammonia ice to power its fusion motor. If one was lucky enough to be following a successful exploration probe, it had just enough time to decelerate (from its coasting speed of 0.3 C) before reaching the star. Once there it would scout the system and if there really were habitable planets (or even ones requiring controlled climate domes as long as the ground was solid) it would radio the information back to Earth.

Then, while waiting for the first colonists to join it, decades later, the survey craft would proceed to prepare a world for them to live in.

First came a long, slow, painstaking period of asteroid mining - assembling the necessary materials to build its first robot-production line. The first robot would

take ten or twenty years, the next ten or twenty days and the thousandth would take minutes.

By a process of careful boot-strapping, highly-intelligent space factories were built...and colossal disk receivers to collect the constant stream of technological data from Earth.

Next came the landings on the target planet, city building and making ready for the colonists. And, at the same time, preparations for launching more probes and survey craft.

The Terran Expansionary phase was scaled down as time passed, and eventually stopped - as far as Earth was concerned. Domestic political pressures changed, and politicians became more concerned with the quality of life for the so-called Free Nations than with space exploration. But the starships were in flight, and the foundation of the Human Empire was assured.

### **Geopolitical Summary, 2195**

To generalise: nations can be divided into two groups: the Big 5 super-powers, and the Free Nations.

The Big 5 (China, EEC, Pacific, US Empire and USSR) are fully urbanised, dependent on sophisticated technology, and despite their much-publicised feuding they have reached de-facto compromises to prevent war. Politically, they are neither true democracies nor dictatorships. Most of their populations live in luxury (though the man-in-the-street would never admit this).

The Free Nations are, in effect, the former Third World. No significant improvements have taken place in living standards or technological infrastructure, though populations are higher than ever before. Communications are excellent, however. The people know that they are kept in poverty and resent the fact, and ironically this is a major reason for the Free Nations' poor development performance. Other reasons are: proxy wars, wealth disparity combined with ready supplies of weapons, poor infrastructure, reduced world market share due to automation elsewhere, excess imports to ruling cliques, skill-drain, population growth, endemic disease and climatic instability.

In the near future the Big 5 will finally decide to help the Free Nations, but in the 2190s they are chasing stars.

England, Kim's "birth"place, is a minor part of the EEC. Very prosperous, 50% built-up and with a population of 70 million.

To the evident astonishment of its citizens, who consider it a most boring place, the major industry is tourism. In summer, you can't move in London for the waldroids shuffling around: foreigners soaking in the sights through every gleaming lens.

The biggest employer of labour, however, is the Experience Industry. The Dream Palace of Wigan and Reveline of Buc?ks churn out epic "adventure games" for the enjoyment of billions worldwide - and for the 30 million unemployed at home.

Housing is good, robot slaves are plentiful, and most people are quietly happy in the belief that their country is best.

### **Implementation**

SNOWBALL is written in Level 9's own super-compact adventure language known as 'a-code'. This gives machine-code speeds and is much smaller. Additionally, text messages have been compressed to about half size (by the automatic extraction of the most common strings - such as "the" - and their replacement by single characters). Additionally, the coding is rather cunning in places.

Thus the game needs much less space than it ordinarily would - and we can cram in much more details than others do.

Compilation Release(s) : 1990: SPORT SPECTACULAR (Alternative), £7.95 (Tape);  
£11.95 (5.25" DFS Disc)  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ALTERNATIVE, Units 3-6 Baileygate Industrial Estate,  
Pontefract, WEST YORKSHIRE WF8 2LN. Tel: 07977 79777  
Disc compatibility : CDFS E00, DFS E00

## Instructions

Britain's No. 1 Football Management Game

- \* Four Divisions
- \* FA Cup
- \* European Cup
- \* Cup Winners' Cup
- \* Full Game Save

Ever fancied yourself as the Manager of a Football team? Ever thought "Why did they buy him?" or "He's a useless manager, I could do better than that!"? Well, now's your chance. Test your decision making and managerial skills with Alternative Software's Football Management game SOCCER BOSS.

Tips for new managers; Players move in and out of form - so keep an eye on their skill ratings, take care in the transfer market - a player with a skill rating of 1 costs £10,000, but selling him will only earn you £7,500. If an injury crisis strikes and you can't afford new players, you can play a goalkeeper out of position - but his skill level will plummet!

# SORCERER OF CLAYMORGUE CASTLE

*Professional, Originally Released On Cassette Only*

Game Alias : SCOTT ADAMS ADVENTURE 13  
Game Type : Text Adventure (Rated Advanced)  
Author : Scott Adams  
Standalone Release(s) : 1986: SORCERER OF CLAYMORGUE CASTLE, AInternational, £7.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ADVENTURE INTERNATIONAL, 85 Summer Street, BIRMINGHAM  
B19 3TE  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Long ago, in times passed beyond remembrance, Solon the Master Wizard and wearer of the Secret Cloak lost the 13 Stars of Power. The grasping Vileroth believed the Stars to be the only source of Solon's expert wizardry. But, unbeknownst to Vileroth, it was the Secret Cloak that controlled the Stars and protected the wearer from their awesome powers. Unable to master the Stars, Vileroth was undone.

In his final days, as Vileroth's strength slipped from him, he concealed the 13 Stars of Power within the Castle of Claymorgue, determined that no-one save he should possess them. Solon, learning of Vileroth's destruction, despatched his faithful young apprentice Beanwick to retrieve the Stars.

"Tread carefully, O Beanwick! Would that I could assume this quest myself, but alas, I can only send with you these few spells. Claymorgue Castle harbors further spells, but beware - one unskilled in the arts cannot predict their outcome."

## How An Adventure Works

Read the standard introduction to Adventure International adventures under SCOTT ADAMS SCOOPS.

## Some Helpful Words

Although the vocabulary accepted by your computer is extensive, you may find the words listed overleaf to be of great help as you set about your Adventure. Remember: These are just a few of the words available.

Climb	Examine	Leave	Move	Quit	Say
Drop	Go	Light	Pull	Read	Take
Enter	Help	Look	Push	Save	Hit

## One Letter Commands

You may use the following single keys to perform a variety of tasks and to expedite playing time. Type the letter for the function you wish to use and press RETURN.

N, S, E, W, U, D	- Go North, South, East, West, Up or Down
I	- Display inventory of items on your person
L	- Look

## Saving Your Adventure For Later Play

An Adventure will often last longer than the time available in a single sitting. You may save the game you are playing and return later to take up where you left off. To save a game in progress, type SAVE GAME at any time the WHALL SHALL I DO? message appears on your screen. You will be asked to specify A, B, C or D. This will allow you to assign a code letter to your game so that you might restore it at a later time.

To restore a saved game, type LOAD GAME before you begin a new game. The computer will ask DO YOU WISH TO RESTORE A SAVED GAME? Type YES and type the correct code letter (A, B, C or D). The Adventure will resume at the point at which you saved it.

To end a game in progress, type QUIT. If you intend to continue the game later, be sure to save it before using this command.

### Some Playing Tips

Be sure to examine the items you find during your Adventure. Also, keep in mind that most problems and solutions require no more than common sense to solve; special knowledge and information are rarely required. For example, if an area is too dark to see in, you are going to need a light in order to avoid disaster.

If you get stuck, type HELP and press RETURN. You may or may not receive assistance, depending on what you are carrying, where you are at and a number of other factors. Too, be careful about making assumptions - they can be fatal!

Finally, if you are seriously stuck, special Hint books are available from Adventure International (U.K.). Call (021) 643 5102 for ordering information.

Here is a sample to show you how to get started in the game and how the Hint Book can save you hours of frustration while you are having fun solving the adventure.

1. Can not get into the castle?  
TAKE INVENTORY
2. More help for above problem  
DO WHAT ANY SPELL CASTER WOULD DO
3. Solution to above problem  
CAST SEED SPELL

### Solution (EUG)

The object of THE SORCERER OF CLAYMORGUE CASTLE is to locate 13 mystic stars and store them in a hollow tree in the Enchanted Forest.

You start in a clearing and if you DIG a HOLE here, you will immediately get the first mystic star automatically. Hoorah! One down, twelve to go. GO into the MOAT and HOLD your BREATH. SWIM DOWN past the monster and GET the TOWEL. Now SWIM DOWN, SWIM EAST and move UP. WRING out the TOWEL. (Ignore the choked gasps you are making - you eventually breathe out safely!) OPEN the CABINET and you will automatically find the bliss spell. GET the CRATE as well.

Go S and S into an empty room. The walls are moveable so first PUSH the EAST WALL. Now to cast the first of all those spells you're carrying - CAST SEED. Go W, N and W. You will be in a room with a lever. PULL LEVER and DROP the pieces of WOOD. Now go E and S back to the empty room and PULL the WEST WALL. You can now GET the UNRAVEL SPELL. Go E, N and E and CAST the UNRAVEL SPELL upon the rope suspending the chandelier. Go W and DROP the BLISS SPELL. Now go back S again to the room with the moving walls and PUSH the SOUTH WALL.

Hoorah! There's the second star that you need. GET the STAR before going DOWN and CASTing the LYCANTHROPE spell. This turns you into a ferret, scares the rats and, in this smaller state, allows you to GO HOLE, GET the third STAR, GO back through the HOLE and WALK DOWN to the end of the staircase.

You will now be in the anteroom where you should CAST the FIRE spell AT the DOOR before GOing through the DOOR. GET the next STAR then GO back through the DOOR and UP. WALK UP the staircase and go N, N and W into the entryway. GO over the DRAWBRIDGE then W and S into the forest of enchantment. You are looking for a tree to store the stars in. CAST the FIRE spell (It's there even though it's not mentioned in the inventory, only in the written instructions for the game!) AT a

TREE then LOOK at the ASHES to discover another star. Now DROP STAR five times, freeing up your inventory space.

Now go E and GO back over the DRAWBRIDGE and E, E into the courtyard. GET the BLISS spell and go E to the room with the fallen chandelier. GO onto the CHANDELIER. GET the sixth STAR and CAST the QUEEN spell. (Remember the Wicked Queen in Snow White?) A magic mirror will appear. GET the MIRROR and now CAST the LIGHT spell which will make the light (chandelier) light (in terms of weight). Where does Adams get these ideas from? Up the chandelier will go...

GO into the LOFT now. The chandelier will fall back down behind you. GET the POTION and THROW the CRATE. The next part has to be done perfectly as the Bliss spell wears off just after the moves have been completed. So CAST BLISS, JUMP into the ballroom, go W, S and PUSH the EAST wall. GO through the DOOR, DOWN and CROSS the STREAM of hot lava. (If you want to know how you managed it, LOOK MIRROR!) Go S and GET the next STAR and also GET the DIZZY DEAN SPELL.

Go N, N, UP and UP through the dusty room, W and N into the courtyard. DROP the MIRROR, DROP the DIZZY DEAN SPELL, GET the PERMEABILITY SPELL and go W. GO DRAWBRIDGE again then go W and S back to the forest. Two more stars to drop here so DROP STAR, DROP STAR. Go E into the field and GO over the DRAWBRIDGE. Now go E, E and S then PUSH the EAST wall to get back to the dusty room. Dusty, eh? GET DUST!

Go W and DRINK the POTION. Now PUSH DOWN on the ground and it will fall away revealing a room with another star. GET STAR and LOOK at the DRAGON to get another star automatically. Now THROW the DUST at the dragon and he will sneeze, creating an exit. GO HOLE and you will wind up in a wizard's workshop. GET the STAR here and GET the FIREFLY spell.

Go W, U and N back to the courtyard. DROP the TOWEL and hike W. GO DRAWBRIDGE, go W, go S and DROP the FIREFLY SPELL. This next part really sucks but trust me, it has to be done: Keep typing GET STAR until you have picked all of them up. Now CAST PERMEABILITY SPELL and everything will go black. Now you must DROP each STAR again (in the dark). When your inventory's exhausted (star-wise) then CAST the YOHO spell.

You'll be transported back to the drawbridge. GO DRAWBRIDGE then and go E and E. At this point you should SAVE the GAME as the next parts are quite tricky and some of them are random hence you may have to try a couple of times before this solution works correctly.

GET the TOWEL and GO into the FOUNTAIN (of youth). GET the STAR and GO COURTYARD. (Sometimes you won't survive!) DRY MYSELF and DROP the wet TOWEL. GET the BRICKS and GET the DIZZY DEAN SPELL. Now for the really tricky bit. SAVE the GAME again before continuing.

Go W and GO DRAWBRIDGE. LOOK UP and then LOOK BATTLEMENTS. Aha! There's a can on them. CAST the DIZZY DEAN SPELL. It gives you arms of steel! THROW BRICKS, AT CAN. If you're told "I hit it!" then you're in luck. If not, then tough, you'll have to re-load and try again. After success go E and E and GET the CAN from where it has fallen. Go E and GO into the CRATE. GO into the HOLE and GET the piece of METAL. It appears to be a canopener.

OPEN the CAN by typing USE CANOPENER and LOOK into the CAN to get the twelfth star. Now DROP the CAN and DROP the CANOPENER. GO HOLE and JUMP then go W and W to the drawbridge. GO over the DRAWBRIDGE, go W and S and GET STAR, GET STAR.

Now onto the endgame. GET the FIREFLY SPELL again and go E and GO into the MOAT again. HOLD your BREATH and SWIM DOWN five times. You should LOOK at the moat BOTTOM whereupon you'll get the very last star. Now CAST the YOHO spell to transport out of the water before you need to take a breath and CAST FIREFLY to be transported to the hollow. See why you dropped the stars earlier? Keep typing DROP STAR until all thirteen stand in front of you and finally type SCORE.

# SOUTHERN BELLE

*Professional, Originally Released On Cassette Only*

Release Information : 1988: FIVE STAR GAMES 3, Beau Jolly, £9.95  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Review (Electron User)

When steam locomotives were popular, many schoolboys had ambitions of becoming engine drivers. Even adults who were not steam engine fanatics often dreamed of taking control of a real train. Now, with SOUTHERN BELLE, you can re-live those days and try your hand at being a steam engine driver in the comfort of your own home.

The ultimate aim is to travel from London to Brighton taking your place on the footplate of this King Arthur class locomotive. A menu has seven options, including a demonstration run, various practice options and a problem run. The demonstration run automatically engages after a minute and you would be well advised to watch this. It gives you an idea of the features and terrain you are going to meet. A leaflet explaining the principles of steam locomotion is included in the package.

The demonstration over, you should spend some time on the training run. When you have mastered the training, and it will take a while, you can move on to more challenging schedules such as the record breaking run set on July 26th 1903 at 48 minutes 41 seconds.

You must keep to speed regulations and be careful not to derail when going round bends - a regular occurrence in my attempts. The screen is built round a central window containing a 3D graphic representation of the track, surrounding countryside and the footplate.

The information display includes a digital clock, water, coal, and speed indicators, and a typical railside signal. There is also an indication as to your current position along the line.

The passing countryside and stations are depicted using 3D wire graphics. Unfortunately they aren't very smooth, jumping in big blocks as the train moves forwards, particularly when travelling at speed. Sound is kept to a minimum and consists mainly of suitable hissing noises and the inevitable whistle.

The program is certainly original. As an attempt to provide something new, it succeeds and I enjoyed reviewing it, if only for that. This game should certainly be a hit with railway enthusiasts and simulator fans, but whether it will catch on with arcade addicts only time will tell.

# SPACE CAVERNS

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Shoot-'Em-Up  
Author :  
Standalone Release(s) : 1986: SPACE CAVERNS, Tynesoft, £6.99  
Compilation Release(s) : None  
Stated compatibility : BBC/Electron Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : TYNESOFT, Unit 3 Addison Industrial Estate, Blaydon, TYNE &  
WEAR NE21 4TE. Tel: 091 414 4611  
Disc compatibility : CDFS E00, DFS E00

## Instructions

Fly your Spacecraft through the numerous underground caverns en route to your homebase. Any flat surface may be landed on, provided that both ship 'pads' are level.

Points are awarded the longer the player survives.

Every time a round is complete, the gravity is increased.

## Game Controls

Z - Left, X - Right, <RETURN> - Thrust

## Instructions

*"A team of astronauts taking part in lunar exploration are stranded on the moon. Your job is to pilot the lunar module to make a successful landing on the moon, pick up the astronauts and ferry them to safety. You will have to make a number of journeys because you can only fit in one person at a time. But there are problems - the surface of the moon is riddled with craters so you can only land on certain spots; also a freak asteroid storm is making landing and taking off extremely hazardous!"*

You are the pilot of a lunar module sent to rescue a team of stranded astronauts from the surface of the moon. The moon is pitted with craters and there are only five flat landing pads where you can land. You have only four modules, so collisions must be avoided. Unfortunately, there is an asteroid storm going on! Your mission is to guide the module down from orbit, through the asteroids, and land safely on one of the landing pads. Then you have to take off back through the asteroids to resume your orbiting pattern. You must keep doing this until you have landed at each of the five pads. Only then can you move on to the next mission - and it'll be a tougher one!

## Game Controls

Z - Left, X - Right, <RETURN> - Thrust  
<SHIFT> - Release from orbit/take off from moon

## Instructions

*"So you think you can control the most complex piece of flying machinery - well maybe you can, but first, like all pilots, you must earn your 'wings'!"*

*"Space Shuttle is a full feature flight simulator with a difference. The high resolution graphics show you, with dials and gauges, all of the information you will need during your mission into space. The views through the cockpit window are really quite something.*

*"Your mission in this space adventure is to successfully pilot the shuttle through each stage of the Launch, Fetch and Finals. After a brief weather report, your shuttle is launched into space. You control the shuttle and attempt to manoeuvre into position to receive the malfunctioning satellite using the remote arm. After closing the doors, you are into the re-entry stage. Using the radar assisted plot board, you guide the shuttle down into the landing zone and attempt to successfully land the shuttle without the use of engines in the White Sands Desert. After the mission, a debrief screen shows you where you went right or wrong and your points out of 600.*

*"HIGH RESOLUTION GRAPHICS AND SOUND"*

You are about to fly the world's most sophisticated flight vehicle... **THE SPACE SHUTTLE!** However, like most worthwhile things, it is not easy. There is much that you need to learn before you make your first completely successful flight (launch to landing).

## Part 1. Introduction

### A. Welcome!

This flight manual was written to help **you** learn about the many requirements of a successful mission so you can earn your "WINGS" as soon as possible!

### B. Mission Plan

Your **plan** is as follows: **Launch** yourself successfully into orbit. **Fetch** a malfunctioning satellite by first **parking** next to it and the retrieving the device with your remote control **arm**. After the satellite is safely stored, close the bay doors, fire retros and being **re-entry**. Fly into a final-approach to the runway resulting in a safe **landing**, **debrief** your mission afterwards to find your successful phases of flight, and your mission score compared to the high score.

### C. Mission Phases

The **bolded** words in the above paragraph were used to emphasize the various parts of the simulation, which is divided into three distinct phases (**LAUNCH**, **FETCH**, **LAND**). The phase **FETCH** and **LAND** each have two sub-phases namely, **PARK** and **ARM** and **ENTRY** and **FINAL**, respectively. So then, there are actually five phases and sub-phases.

When you see these **KEY WORDS** on your instrument panel and in this flight manual, they will refer to one of these five portions of the simulation. The **LAUNCH** phase gets you into orbit. The **FETCH** phase is your chase and retrieval of the satellite (sub-phases **PARK** and **ARM**). After closing the bay doors and firing your retros you move into the **ENTRY** sub-phase of **LAND** which is your descent from orbit to a final approach window. Here you perform a mock-landing flare in preparation for your final approach. In the **FINAL** sub-phase of **LAND**, you will control the shuttle's altitude, range to runway, drift, velocity, and pitch and roll attitudes. Hopefully all this control freedom will result in a safe landing and a complete mission.

#### D. Aborts

All phases and sub-phases have success criteria (to be discussed later) and **ABORT** criteria or time limits. If an **ABORT** occurs, a falling tone and a flashing screen will tell you which phase you just muffed and will automatically "auto-pilot" you to the next phase. You will receive no score, however.

#### E. Control Tips

Control Inputs are **always** noted by a falling tone. In some phases, a graphic square is also used.

The joystick has a substantial "dead-band" centre so that the stick's position is not critical. The control is that of **RATE**. That is to say, when the stick is moved past the dead-pband limit of flight condition is changed at the update rate of the simulator. This changing will not stop until the stick is re-centred. Since your joysticks have no self-centring springs, you will have to remember to centre it yourself. If in doubt or confused...**centre the stick!** Then try again.

### **Part 2. Displays**

#### A. Landing Site Weather

This display is your landing site weather. The most important data shown are the **WIND** speed and direction, and the cloud **CEILING**. These three will essentially determine how difficult it will be for you to land the shuttle. If you forget this information, don't worry, you will get a chance to see a weather summary just before firing your retros for re-ENTRY. You will find that the winds will blow you from side to side which you will have to correct for by "banking into" the wind. The **CEILING** is the altitude at which you start your final approach. The lower the ceiling, the more difficult it will be to land with adequate velocity. A 5,000 foot **CEILING** is a real challenge, however perfect landings (see section IV) are possible at all **CEILINGS**. Press any key to start the simulation.

#### B. Instrument Panel

Ah, the instrument panel! Looks busy? Well, ever seen the **real** thing? That's **busy!** Please let me explain! The top quarter of the screen is the mission-status panel. Here you will find the mission **PLAN**, the **STATUS** label, the mission **CLOCK**, and the mission **SCORE**. The second quarter is the view out the shuttle window. The last half is the actual instrument display. Everything on your TV screen has been put into one of four categories, **LABELS**, **DIGITAL READOUTS**, **INSTRUMENTS** and the **VIEW OUT THE WINDOW**. These are explained in the following four sub-headings:

##### **1. Labels**

The term **label** refers to display elements which convey information by way of abbreviations or short descriptive words. Labels are **never** numbers and may or may not change during flight. The labels which do not change are called **Static Labels**. Labels which change during flights are called **Dynamic Labels**.

a) **Static Labels** are defined below:

- |                             |   |   |
|-----------------------------|---|---|
| <b>PLAN</b>                 | - | shows the three phases of the simulation  |
| <b>RANGE</b> and <b>ALT</b> | - | indicates that the rangewise progress of the shuttle is plotted on the horizontal axis of the plotboard (extreme left instrument) and that the altitude is plotted on the vertical axis |
| <b>RJETS</b>                | - | indicates that a graphic display of the reaction jet being fired is below. A white graphic light appears to the right   |

- of the appropriate label. Display is active when the **MODE** label reads **RJET**
- A - F** - Forward or aft propulsion
  - L - R** - Left or right propulsion
  - U - D** - Up or down propulsion
  - ARM** - indicates that a graphic display of the commands to the remote control **ARM** is below. Display is active when the **EVENT** label reads **ARM**. A graphic light appears to the right of the appropriate command
  - RT** - Horizontal right command
  - LT** - Horizontal left command
  - UP** - Vertical up command
  - DN** - Vertical down command

b) **Dynamic Labels** - are defined below:

- STATUS** - indicates which of the three phases the simulator is in
- MODE** - indicates one of three shuttle **control modes** (**AERO** - aerodynamic control; **RJET** - reaction jet control; **AUTO** - auto-pilot control - no joystick control of flight path)
- RH** - runway heading. Denoted by letters (**N, S, E, W**). Active during **LAND**.
- EVENT** - short descriptive words or abbreviations which describe the current primary function, event or sub-phase

#### Event Labels

- COUNT** - countdown proceeding
- IGN** - main engines running
- LIFT** - lift off
- ORBIT** - orbit achieved
- ACQ** - satellite acquired; shuttle attempting to **PARK**
- PARK** - shuttle parked by satellite
- OPEN** - bay doors open or opening
- ARM** - retrieving arm active
- LOCK** - locked to satellite
- CLOSE** - bay doors closed or closing
- RETRO** - forward **RJET**s have caused de-orbit
- ENTRY** - descent from orbit is in progress
- BLKOUT** - communication blackout
- FINAL** - shuttle on final approach

## 2. Digital Readouts

These displays communicate flight and mission-related data. Some displays update in "real-time", others at the completion of each sub-phase. No more than three digital readouts are active at once. They are defined as follows:

- CLOCK** - Time into mission. Updates real time
- SCORE** - Current mission score. Updates at the end of the sub-phases
- RTRW** - Range to the beginning of the runway. Active when the **EVENT** label reads **FINAL**
- ALT** - Altitude of shuttle. Active when the **EVENT** label reads **IGN**; **ENTRY**; **BLKOUT**; **FINAL**
- VEL** - Velocity of shuttle. Active when the **EVENT** label reads **ACQ**; **RETRO**; **ENTRY**; **BLKOUT**; **FINAL**
- RH** - Runway heading. Active when the **EVENT** label reads **ENTRY**
- RTT** - Range to target (satellite). Active when the **EVENT** label reads **ACQ**
- FUEL** - Reaction jet fuel remaining

## 3. Instruments

Three analog-type instruments are situated on the instrument panel. On the far left is the **PLOTBOARD** which displays the shuttle's range versus altitude progress. This instrument is active in the **LAUNCH** and **LAND** phases or when the **EVENT** label reads **IGN**, **ENTRY** and **BLKOUT**. The centre of the box or window of the plotboard is the ideal

rangewise location for the **LAUNCH** phase. Although altitude is also represented by this plot, always use the digital **ALT** readout to adjust your altitude.

The centre instrument is the pitch altitude or rate of climb indicator. It is active in the **LAUNCH** and **LAND** phases. From the top of the meter to the bottom, the hash marks represent pitch attitudes +90, +45, 0, -45, -90 degrees, respectively. On FINAL approach, the attitudes +15, 0, -15, -30, -45 give climb rates of +75, -30, -135, -230 and -310 at a reference velocity of 400 f/s. These rates are proportioned to **VELOCITY** except the 0 degree attitude which always gives -30 f/s. The 0 degree attitude is the pitch attitude required for a successful landing.

The far instrument is the compass heading. It is also active during **LAUNCH** and **LAND**. West of North headings are not allowed because launches and orbits are always easterly.

#### 4. The View Out The Window

The view out the window changes with altitude and control input. Heading changes cause the scenery to shift left or right, as the shuttle climbs the mountains move downwards leaving first a cloudless sky then a star field as the shuttle approaches orbital altitude.

When the **EVENT** label reads ACQ, the view shows the target satellite. The satellite image grows as the shuttle closes to within 60 feet. If the shuttle passes the satellite, it will **DISAPPEAR** from view. Backing (or slowing) the shuttle down will eventually place the satellite out in front once again (RTT > 0) and the image will reappear. Aim to keep the satellite in the centre of the window.

Following the **PARK** event, the shuttle tail camera will display the shuttle bay area. The pilot may witness the opening and closing of the shuttle doors as well as the entire operation of the remote arm.

After successful retrieval, the camera is turned off and the shuttle is prepared for retro fire. After retro fire the shuttle starts its descent towards earth.

On **EARTH** approach the scene changes to a White Sands type desert approach with a mountainous background. As you close, the runway perspective slowly grows until the shuttle's wheels are over the beginning of the runway. A **CRASH** piles you into the desert floor.

#### Mission Score Display

Shows your score for each section and also the TOP TEN scores.

### Part 3. Controls And Success Criteria

#### A. Launch

Z - Left, X - Right, . - Up, ; - Down

In this phase, the ALT digital readout, plotboard, attitude and compass instruments are important. Headings are controlled by the Z and X keys. Altitude and pitch attitudes are controlled by the . and ; keys (. = joystick back ; = joystick forward).

Note your heading - North; your attitude - + 90 degrees (straight up) and that the mountains have moved downwards and that your ALT and VEL readouts have substantially increased ... you are **flying**!

How about some control? Then press the ; key until you hear or see the DOWN response tone. Then release **immediately**. Note your plotboard progress. You have pitched over slightly. Sure enough, your attitude meter says you have nosed down 15 degrees to +75 degrees. Now to change your heading. Press the X key and hold it there for 5-6 control response tones then release. Did you see those stars move to the left and the compass heading move to the East? Well, you have just performed all the necessary manoeuvres to achieve orbit. Here are your requirements:

**GIVEN:** Your boosters will shutdown at a velocity of 25200 f/s. The **VEL** display increments in 400 f/s steps. Pitch attitude at +90 (straight up). Northerly heading.

**YOU MUST:** (at shutdown) be **in the box** - closer to the centre the better; **NOSE LEVEL** (0 deg); Heading should be **easterly** within + or -5 deg; ALT = 530000 + or - 5000 feet.

**LIMITS:** Pitch attitudes + 90 - 90; Headings to those East of North. Now fly into orbit until the **EVENT** label reads ACQ and the small target satellite appears out of your window.

#### **B. Park**

Z - Left, X - Right, . - Up, ; - Down  
F - Forwards, B - Backwards

You are now in the **PARK** sub-phase of the **FETCH** phase. Did you **abort** your way here? Then you have no score yet. But that's OK. Guess what? **PARK** is more difficult than **LAUNCH** primarily because you use more keys. The **MODE** label now reads RJET which means you are controlling only reaction jets. Your forward and aft thrusters are controlled by 'F' and 'B' keys. 'B' slows your velocity; 'F' increases it. The satellite is travelling your insertion velocity (25200) thus RTT does not change from 4000 until you fire either a FWD or AFT thruster. Pressing ';' will tip your nose down hence the satellite will move up. Pressing '.' will pull your nose up hence the satellite will move down. Pressing 'X' will move your nose right hence the satellite will move left. Pressing 'Z' will move your nose left hence the satellite will move right.

Press 'F' once and note that you increased VEL by 20 f/s and that **RTT** is decreasing in steps of 20 ft. Now move to the left or right until you hear **one** control response tone then **release immediately**. The satellite should be drifting right or left. Now stop it by putting in **one** opposite command and then **release**. It should have stopped. Now stop closing on the satellite by pressing B. Your **VEL** should read 25200 and RTT should not be changing. UP/DN control works in the same fashion as RT/LT.

You are strongly advised not to input more than one UP/DN/RT/LT command at a time until you get the feel of the control. OK, now that you have performed the manoeuvres, here are your requirements:

**GIVEN:** Shuttle in orbit, nose level, at 25200 f/s, on an easterly heading, at an altitude of 530000 ft (100 miles).

**YOU MUST:** Manoeuvre satellite to within two pixels of the centre of the window. RTT must be 0000. VEL = 25200. Hold position for 60 seconds.

**LIMITS:** Satellite must be no more than 50 ft in front of the shuttle (you start at 4000 ft) and less than 50 ft behind it. Note if you PASS the satellite RTT will begin to increase and the satellite will **disappear**. You have approx. 60 seconds to accomplish this phase.

#### **C. Arm**

To enter the **ARM** phase, press the 'O' key for **OPEN**. Note the **EVENT** label reads **ARM**. The remote arm is now active. ';' key is **UP**. '.' key is **DOWN**. Right and Left are X and Z.

Z - Left, X - Right, ; - Up, . - Down

**GIVEN:** Shuttle parked by the satellite. Flight control in AUTO-pilot.

**YOU MUST:** Touch the bottom point of the satellite with the end of the arm. The end of the arm should be on the centreline of the satellite to within one pixel horizontally. **EVENT** label will read **LOCK** when satellite locks to arm. Retract the satellite all the way down into the shuttle (doors will not shut of not all the way in). Press 'C' to **close** doors.

**LIMITS:** Control is limited so that the operator cannot hit the shuttle with the satellite. Time counts against you. You **MUST SUCCESSFULLY COMPLETE** this phase to

proceed. Be speedy! You have 100 seconds after which the arm will retract and you will have to close the doors and continue without the satellite.

#### **D. Entry**

Once the satellite doors are closed, a brief delay will occur while the shuttle's systems prepare for retros. A reminder of the wind strength and direction appear in the window. Soon you will see the **STATUS** and **EVENT** labels read **LAND** and **CLOSED** respectively. You are now ready for re-**ENTRY**. Your **RETROS** (forward thrusters) cause you to lose velocity while the auto-pilot pitches your nose down. You are now in the **ENTRY** sub-phase of **LAND**. Control is the same as for the **LAUNCH** phase.

Notice the silence. You are not using your main engines. You are a glider. You will get one and only one chance to land the shuttle. So pay attention! Here's what required:

**GIVEN:** Shuttle at 20000 f/s; Nose down at 75 degrees; VEL will delay to 800 at the end of the **ENTRY** sub-phase. The same instruments and displays are used as when in the **LAUNCH** phase.

**YOU MUST:** At VEL = 800; Your heading must be on the RH label value (N). Your **NOSE** must be **LEVEL** (as in a landing flare); and you must be INSIDE THE WINDOW in the lower left of the plotboard and ALT must be 10000 + or - 500 feet.

**LIMITS:** Pitch attitude is limited to - 90 to + 90 degrees. Headings are limited to those of East of North.

**HINT:** Do not try to pull out at all until 30-40 KFT. Maintain - 15 degrees pitch attitude until you see 5-15 KFT on the ALT readout then pull out to 0 degrees. Experiment yourself. This ain't easy!

#### **E. Final**

Don't worry if you **aborted** to here! You will have more opportunities to get all these requirements straight. But if you did make it, congratulations!

Three digital displays will be active on this the **FINAL** sub-phase of **LAND**. They are **ALT**, **RTRW** and **VEL**. The active instruments will be the **PITCH-ATTITUDE** instrument or rate of climb meter (centre) and compass. Please note the substantially slower update rate (approx. 1 sec). However, this rate is close to the shuttle's real response, so please ANTICIPATE your control commands!

**GIVEN:** VEL = 900 f/s; RTRW = 30000; ALT = CEILING; Wings level; Nose down at 15 degrees; Drift = + or - 178 pixels off runway centreline; Winds as per the **LANDING SITE WEATHER** chart.

**YOU MUST:** In order to land; VEL 250; Wings level (0 deg); Nose level (0 deg). No more than 5 degrees either side of NORTH. Be over runway (RTRW NEGATIVE) but not more than 5000 feet along it (RTRW - 5000).

Z - Left, X - Right, . - Up, ; - Down

**CONTROLS:** Pitching your nose down will cause you to lose height and gain velocity. Climbing will have the opposite effect. Move right and left to keep the runway central.

**LIMITS:** Roll + and - 45 degrees; Pitch + to - 45 degrees; Drift = limited to window.

You are almost through one complete mission! You may now replay by pressing 'Y' as noted at the bottom of the **DEBRIEF** display. Now centre your stick start the simulator and **HAPPY LANDINGS!** We will talk about your score after you land.

If your score is in **TOP TEN**, you will be asked for your initials (3 characters).

#### **Scoring**

It is possible to earn 100 points for each of the five phases, except arm phase where you lose one point for every second taken. Your **TIME** and **FUEL** score is added only after a successful landing. After all, if you crashed, who cares how much time or fuel you saved? Below, in tabular form are the perfect conditions of each sub-phase, the total amount of possible points and the penalty rates for non-perfect flight conditions.

<b>LAUNCH</b>	(100)	Subtract one point for every 100 ft away from 530000 ft. Subtract 10 points for every degree away from E. Subtract 10 points for every degree off level.
<b>DOCK</b>	(100)	Subtract one point for every foot away from satellite. Subtract one point for every 10 pixels from centre.
<b>FETCH</b>	(100)	Subtract one point for every second taken.
<b>RE-ENTRY</b>	(100)	Subtract one point for every 100 ft away from 10000 ft. Subtract 10 points for every degree away from N. Subtract 10 points for every degree off level.
<b>LAND</b>	(100)	Subtract 10 points for every degree off N. Subtract 10 points for every degree off level. Subtract one point for every foot/sec. away from 250 ft/sec. No points if you don't reach runway. No points if you overshoot runway.

Well, **that's it!** Keep trying. Follow the instructions. Watch those instruments and digital readouts. Then correct the way you steer. Soon you will be (if not already) successfully completing missions with scores above 450.

**Instructions' Source** : SPACE SHUTTLE (Microdeal) Back Inlay And Instruction Manual

### Review (Electron User)

Ever wondered what it must be like to sit atop several million pounds of thrust as it blasts you skywards toward a minute hole through which you must pass? Ever thought how difficult it must be trying to link up with an object the size of an armchair in the vast emptiness of space while both of you are hurtling around the earth at 17,000 miles an hour? What goes through your mind as you pilot the world's biggest and most expensive glider toward a minute strip of tarmac, knowing that you'll only get one chance, balancing height and speed to make a good or disastrous landing? Stop wondering. Cease thinking. Put yourself out of your misery. See for yourself.

Microdeal has got it all on cassette. SPACE SHUTTLE encompasses all these things. You lift off and pilot the shuttle toward a small "window" to achieve a successful orbit near a satellite you have to reclaim. Your progress is plotted on a screen on your instrument display board. Once successfully established in orbit you dock with the satellite and retrieve it with your mechanical arm.

Retro fire slows you down and you re-enter the earth's atmosphere and pilot the shuttle down to the landing strip. Easy, hey? Just you try it! One millimetre out on blast off or re-entry and you rendezvous with neither the satellite nor landing strip and no points are scored. A mite too heavy with your thrusters on docking and you end up spinning out of control or crashing into the satellite - with no points. Fail to balance your height and speed correctly on approach and you end up as yet another crater - again no points.

The easiest part is picking up the satellite with the shuttle's arm. Sad to say, these are often the only points I can pick up, and I've been at it for ages.

For your money you get a full instrument display, a panoramic view through your windscreen and an extremely interesting and absorbing game. Any section at which you

fail is aborted and the next section is started, so you always complete the game, even if you're a compete "no-no" like me.

On the minus side, the game is in black and white, and I found the music between the games a bit tedious. You can't turn it off without BREAKing the program. If you want ten minutes' peace and quiet you have to reload the game before restarting.

But don't let that put you off. It is a game well worth buying.

Adam Young , ELECTRON USER 1. 9

## Instructions

*"The deadly cylon fleet has reached its destination. Their objective - destroy planet earth. Each ship in the fleet carries a single devastating lithium torpedo. Earth shields are up but their power is being drained. You, as commander of earth's last remaining space station, are all that stands between the cylons and earth's total destruction."*

As commander of earth's last orbiting space station, your mission is to destroy as many of the invading Cylon fleet as possible before their lethal lithium missiles hit the earth.

As the missiles are guided by on-board computers, hitting the enemy ship with your phaser before the missile hits earth will automatically destroy it.

The Cylons attack in waves of fifty, each wave getting gradually faster. Your phasers are prone to overheating and if overused will cut out for a few seconds (the word 'OUT' will flash in place of 'ACTIVE').

Earth's shield power is shown in the middle gauge marked 'E-SHIELDS'. When this reaches 1,000, the shields will begin to glow red under the stress of the bombardment.

Your score is calculated under section marked 'TOTAL SCORE' and an updated 'HIGH SCORE' is held whilst the program is running.

BEWARE - If you fail in your mission to save earth, the planet will be destroyed and explode into hundreds of pieces.

## Game Controls

You control your phaser sights with the following keys:

Z - Left, X - Right, : - Up, / - Down, <RETURN> - Fire

# SPACE TREK

*Professional, Originally Released On Cassette Only*

Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## **Review (Electron User)**

This is quite a good implementation of the classic game for micros. I would imagine there are still quite a few people who have not yet commanded the Starship Enterprise on its voyages through the edges of space where it encounters the dreaded Klingons/Vaiders.

The program offers a variety of commands via which the on-board computers produce information on screen. The commands are printed on handy reference cards included in the cassette case. The program is written to run on both the Electron and BBC Micro, so the speed tends to suffer when run on the Electron. With the program priced competitively and the listing freely available, Dimax have bravely taken a positive stand in the controversy over copying.

I have played Trek on the Electron before, and this is a much better version than the one I bought previously. Even with all the on-board computers, it's still very tough going. There are moments requiring split-second decisions, but generally tactics can be formulated carefully. The speed with which I moved from Condition Green to being disabled was rather disconcerting, but I think that was more a reflection on the captain than the ship.

# SPACEMAN SID

***Professional, Originally Released On Cassette Only***

Game Type : Arcade Platform Game  
Authors : David Woodhouse and Tony Racine  
Standalone Release(s) : 1984: SPACEMAN SID, English, £7.95  
1984: SPACEMAN SID (Joystick compatible), English, £7.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : ENGLISH, PO Box 45, MANCHESTER M60 3AD. Tel: 061 835 1558  
Disc compatibility : Incompatible

## Instructions

*"SPACEMAN SID fights to survive on the planet Tribos, featuring scrolling screens, sliding bridges, meteor storms, 100% machine code action and one player game - joystick not required!"*

SPACEMAN SID stared out over the barren landscape, no enemy in sight. Bored, Sid's mind drifted back to the mission briefing and the C.O.'s desperate instructions.

"Sid... You are required to recapture out Dilithium Crystal Mines necessary to Earth's defence systems. The mining operations on Tribos have been captured by the Martian Forces. You have been picked to take the new XR5 Laser-Armed Combat Rover, to infiltrate the Martian defences and to destroy the enemy command camps."

Suddenly, lights appeared from over the horizon, and his attention instantly fixes on the approaching drone, his hand slams onto the fire button, reducing the oncoming craft to a ball of flame and twisted flying alloys.

"Drok..." gasps Sid. "That one nearly got me!"

But there is no more time for contemplation as an Enemy Scout Ship appears in close pursuit of his now vapourised comrade.

## Game Controls

Z - Left, X - Right, <SHIFT> - Jump, <RETURN> - Fire  
Q/S - Sound Off/On, <SPACE> - Pause On/Off

## Scoring

Small Rock	30 pts
Large Rock	50 pts
Meteor	50 pts
Drone	50 pts
Scout Ship	100 pts
Enemy Base	500 pts
Alien Bomb	0 pts
Beacon	0 pts
Land Mine	0 pts

Bonus Craft for completing Level 3

SPACEMAN SID features three progressive leves of difficulty and five sectors. Watch out for the meteors in sector 3 and the nasty sliding bridges in sector 4.

**Instructions' Source** : SPACEMAN SID (English) Back and Inner Inlay

### **Review (Electron User)**

As SPACEMAN SID, you're sent to the planet Tribos to attempt to recapture the Martian-occupied dilithium crystal mines which are essential for Earth's defence. Your only protection on this barren landscape is your XRS laser-armed Combat Rover.

As you proceed cautiously, jumping over pits, you are confronted by endless hazards - drones and enemy scout ships are only two of the Martian dangers. Land mines abound too, and there's nothing so unnerving as seeing your wheels dance into the air with gay abandon as you trip over an innocent-looking explosive.

And just wait until you get into the further sectors, where you're finally confronted by the dreaded bases of your fiery enemy. Tempted? You should be. Any potential Sids out there will be positively riveted by this tricky little game.

The keys are easy to use. X speeds you forward, Z slows you down while <SHIFT> certainly makes you jump. You tend to use <SHIFT> a lot. <RETURN> releases the laser beam to burn the nasty green machines from Mars.

The three progressive levels of play and five sectors, combined with convincing graphics which give a 3D effect to the heavens, produce a fascinating and frustrating game which can keep the family amused for hours.

Keith Young, ELECTRON USER 2. 7

# SPECIAL OPERATIONS

*Professional, Originally Released On Cassette Only*

Game Type : Strategy Wargame With Graphics  
Author : M. C. Lothlorien  
Standalone Release(s) : 1984: SPECIAL OPERATIONS, Lothlorien, £7.99  
Compilation Release(s) : 1988: 10 COMPUTER HITS, Beau Jolly, £9.95  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : M.C. LOTHLORIEN, 56A Park Lane, Poynton, STOCKPORT SK12 1RE  
Disc compatibility : CDFS E00, DFS E00

## A. Setting And Objective

This exciting adventure war-game is set during the latter days of World War 2. The game utilises a split-screen and maps of various locations. Your position is shown in such a way that you are only shown what you would be able to see if you were on the ground (except the compound scenario which is an aerial photo).

Time plays an important role. You also have a time limit you set yourself; this is a rendezvous time for your pick up plane.

Your team members have two specialist skills, the choice of team members is up to you. There are thirty to choose from.

## B. Restart Objectives And Time

"Continue saved game Y/N". To play a saved game, press Y and follow instructions. N starts a new game. Select Objective 1-7 from the list, time 1-9. The number of hours to pickup is in 10's of hours. e.g. 6 = 60 hours time to pick up.

## C. Team Selection

From thirty applicants, choose four to accompany you, the team leader. At this stage, you will only be aware of one skill per applicant. To find a second skill, you will have to interview. This will take a full day and only eight can be interviewed before the mission commences.

When asked "Interview?" answer "i" will reveal second skill.

Having selected your team of four, the computer will create the adventure - this takes about a minute.

## D. 3 Main Scenarios

Although there are eighteen maps, the majority of play will be around FOREST, COMPOUND and COMPLEX.

1 FOREST - You are parachuted into the centre, close to the target area. The map will depict an impression as you come down; it is NOT accurate.

Your position is shown by a flashing square. While in the forest, beware of enemy patrols.

A key to the forest terrain is available by using "tf" command.

2 COMPOUND - The entrance to the underground complex is in the centre of the compound and is constantly guarded. The place is literally crawling with enemy personnel.

3 COMPLEX - The underground complex is a series of passages and rooms. The display shows what you can see plus area you have been in. You cannot see around corners!!

Apart from the East and West edges, there are no dead ends. All passages lead somewhere.

There are three possible entrances and exits at the East and West edges. To exit, use the "ou" command at these locations.

You can only exit by the way you entered apart from the MAIN entrance.

### **E. Time**

Time elapsed will constantly be displayed in hours and minutes. Different actions and skills use different amounts of time, and also vary with the scenario e.g movement in the forest takes twenty minutes, in the complex, it takes two minutes.

It's up to you how much time you need but for excitement, don't give yourself the maximum.

### **F. Actions/Skills**

Actions are shown in the reference tables.

Use of team skills is important.

Only three skills may be used simultaneously.

The team leader is proficient in all skills BUT YOU CAN SELECT HIS SKILL USE ON FIVE SEPARATE OCCASIONS.

Team skills are constantly displayed.

Team members only use skills when instructed. This is done by the "su" command. You will then be asked "SKILL TO USE?" Enter first three letters of the skill. If one of your team has this skill, it will be used until cancelled.

For leader skill, you must first select "Lea" then follow above procedure.

To cancel skill used; type "sc" when asked for ACTION and then the first three letters of the skill.

To cancel leader skill, you MUST enter "lea" and not the skill.

NOTE : To correct errors, press z once or twice. If you select "su" or "sc" in error, escape by keying in a skill which you DO NOT POSSESS in your team. Skill use is cancelled in combat.

### **G. Combat**

When an enemy patrol enters one of the adjacent areas to the team, combat will normally occur. During combat, your men will be shown at the bottom of the screen numbered 1 to 5. Team leader is number 1.

The enemy is deployed at the top.

For each of your men you must select an enemy target, then move each man two squares by using cursor keys (5-8) or 9 for no movement.

One hit causes a wound. Two hits causes death.

In order to hit a target, there must be a clear line of sight.

When hit, the man will "flash" on and off.

After combat, a status report on your team's condition will be given with by "st" command.

### **H. Saved Games**

You may save the current game. Enter "qu". You will be asked to save the game position by pressing Y. Follow the on-screen instructions.

### Tips

1. Keep your leader safe.
2. There are at least six completely different routes into the Compound and Complex.
3. Be careful in the Compound and Complex. These are high security areas.
4. Take great care in choosing your team. Get the best balance of skills.
5. Remember your leader can use any of the thirty skills.
6. Use skills to the utmost. Keep trying them and find out what they are capable of.

### Objectives

1. Find location of the enemy compound and take photographs of it. You do not need to enter.
2. Find a method of getting in and out of the Compound.
3. Find a method of getting in and out of the Complex.
4. Get samples of an experimental chemically based rocket fuel.
5. Get sample of viral agent.
6. Get details of the rocket guidance system.
7. Destroy the production area in the Complex.

### Reference Table - Actions

mn, ms, me, mw = move N, S, E, W (North is always top)  
in = enter terrain, feature or vehicle (skills or equipment are sometimes used)  
ou = get out  
su = skill use  
sc = skill cancel  
eq = list of equipment found  
se = search (not in caves)  
ta = take (a piece of equipment)  
hi = hide (you, not the equipment)  
at = attack guards (forest only)  
no = do nothing (short periods)  
w = wait (long periods)  
st = status report on the team  
tf = terrain features in the forest  
qu = quit the game

### Skills

Acr(obat) Act(or) Bio(logist) Car(tographer) Che(mist) Cip(hers)

## Instructions

Destroy the spiders, slugs, bats and worms before they destroy you!!!!

Life in the garden was never like this - evil bats, slimy slugs, nasty little spiders and a manic worm make for a very hectic time in the garden - did I just say garden? It's a jungle!!!!!!

## Game Controls

Z - Left, X - Right, \* - Up, ? - Down, User-selectable key for Fire  
Or make joystick selection when requested.

**Instructions' Source** : SPECTIPEDE (Mastertronic) Inner Inlay

## Review (EUG)

The BBC/Electron owner is spoilt for choice when it comes to the CATERPILLAR-style game, and they appear in so many compilations that it's pretty much inconceivable that one of them isn't somewhere in your games collection. SPECTIPEDE is the bug blasting variant from the budget company MASTERTRONIC; a fast-executing but clumsy conversion - and one that kills you off far more often than those of a similar vein!

The blaster at the bottom of the screen, the sparse mushroom field becoming more and more overcrowded as the game goes on and the long insectipede winding through them and splitting in two when hit by your bullets is one of the symbols of the true retro age. It's available in almost this standard form on all machines up from the humble GAMEBOY to the most powerful PC, and now you're unlikely to be asked to pay out anything like the £8.95 ALLIGATA thought BUG BLASTER justified, or even the £2.99 budget price this title went for. [At least, not just for it alone. - Ed] So the question is what this particular title has to recommend it from the rest?

Regretably, as indicated by the above intro, the answer is not very much. You CHAIN it from the prompt and, after a few seconds' loading, the micro makes an odd twittering sound as the MASTERTRONIC 'logo', which is actually just the word, wriggles over your screen in an S-shape typical of budget 'loaders' and introduces you to "SPECTAPEDE"!

Immediately being presented with spelling mistakes like this, a fault of which a few budget companies are guilty, is at best irritating and at worst merely symptomatic of what is to come.

After loading the next part, the screen blanks to Mode 6 and you are asked which button you wish to use to fire. This causes two problems. First, absolutely no effort has gone in to making the said screen look attractive and even the cursor is still amateurishly blinking away. Secondly, the message gives the impression that you only need one key to press in order to play the game. So, for instance, you

might quite likely press <RETURN>. You must then tap whatever button you have chosen to continue (unnecessary!) and then you are informed of the existence of the OTHER buttons: Z - Left, X - Right, + - Up and . - Down. With the <RETURN> key as fire, you're then left with a huge gap between your fingers (stretching over one button on the Electron and two on the BBC) unless you reload the game and choose \* or <SPACE> as fire - the only two realistic choices, anyway! And what of the possibility of a player using one of the reserved keys as a fire button? Well, try this and your game will be a chaotic mess where the fire button not only fires but also sends your blaster in the specified direction at the same time! For goodness' sake, MASTERTRONIC! Either have an option to redefine all the keys or choose sensible ones and be done with it!

More loading and a similarly sighworthy screen asks "KeyBoard or Joystick (K/J)?", "High/Low Resolution" and "Fast, Medium or Slow Game" in turn. Now there's no doubting the usefulness of these features. Far too few games have the joystick facility and the resolution factor means simply that you can play in either Mode 1 (High) or Mode 5 (Low) which is both easy on the eyes of respective players, helps vary the action of a style of game which can seem to go on (and on!) and also makes the game a little easier as the "pede" occasionally has a longer breadth of screen to cross in Mode 1. You can even look upon this option as giving you two conversions of the game; the only differences between some of those put out by other companies was the Mode. Speed of game, of course, also helps those whose arcade prowess is not up to that of the hardened arcade addict.

But unfortunately the author has blown it again! In practice, the game speed has little effect on how tough it actually is to play and the options must be chosen before any game is commenced. So the screen is forever flashing up and demanding input. Even this would be bearable were it not that, after inputting F, M or S, you were not forced to sit through a truly awful string of blips for fifteen seconds before the game started. The same is also true on death, except the tune lasts twice as long!

The game itself although it runs well on the Electron, goes far too fast on the BBC, even on the S(low) setting and, also as mentioned in the intro, death is a frequent occurrence. Often you 'die' not as a result of a collision with any of the insects in the field (actually a garden in this clone) but simply after blasting the last portion of the pede. This is extremely frustrating and means you can probably not survive beyond level three...and it's not the only bug. On death, your previous blaster stays on screen and becomes an obstacle to be avoided, but can also be used to shelter behind from a pede on the bottom level of screen coming at you from the side. If it's a feature, then it's one not seen on other conversions, not one you'll like and looks like a bug!

After a while you'll be dead and invited to enter your name (by a left-justified message that simply appears obliterating the background) at a "?" prompt. As the keyboard buffer isn't cleared, you'll be staring at a row of Zs and Xs so, to make your mark, you must first delete them! Having rather emphatically berated this product by now, it does find some saving grace in its graphics, which do all the right things and are animated quite smoothly. A wriggling worm, bouncing spider and mushroom-laying spider (!) invade the screen quite regularly and keep the player on his toes.

There's no getting away from the fact that this is a flop though, even though it was published at a time when budget titles were not expected to be of a very high standard. It was originally published quite early into the life of its respective machines (1984), and, as ALLIGATA and SUPERIOR's versions were doing the rounds at almost a tenner, with a little thought could have provided serious competition at its reduced price. But it doesn't, it wasn't, it isn't...and it never will be. For any bug blasting, stick with the aptly-titled BUG BLASTER!

Dave Edwards, EUG #55

Disc compatibility : Unknown

## Instructions

### The Scenario

At the end of the thirteenth century, there lived in the land of Lorraine ten wise and powerful Magelords. Each of them had studied sorcery and enchantment from childhood days, and each knew how to evoke potent spells capable of causing metamorphosis and devastation.

### Your Mission

You play the role of one such Magelord named Eldon The Spellbinder. Your task is to find the evil Zorn, who has deserted the Magelord brotherhood and fled to the Castle of Lorraine. Then, by collecting the correct ingredients, you must mix the Ultimate Spell, cast it at Zorn and banish him for good.

### The Castle of Lorraine

You must work your way through the many rooms comprising the castle's two floors, three citadels, catacomb and dungeon. To move between levels, you must locate a teleport or use the portals. Your route through the castle is complicated due to secret passages, one-way doors and doors that will appear only after specific tasks have been performed.

### The Creatures of the Castle

The creatures guard the castle from trespassers. When a creature touches you, it takes a certain percentage of your energy dependent upon its strength and your shielding. Without shielding, the percentage (for each type of creature) is:

WATCHER .....	2%
BLACKWITCH .....	3%
CYCLOPS GUARD .....	4%
WINGED SKULL .....	5%
FOREST HAG .....	6%
ZOMBIE .....	7%
DEATHMONK .....	8%

### The Magic Ingredients

Magelords have extensive knowledge about magical ingredients and their use in spells. Some of the important ingredients are:-

**BURNED ASHES** : The first and most common ingredient. This ingredient is created in some villages by burying the bark of the Red Oak Tree. It is used in spells that will cause effects on other beings: for example, Freezing spells.

**SULPHUR** : This profane ingredient is found as a yellow powder. The villagers around the castle use it in a simple way to cure wounds. The Magelords use it to restore strength and for Healing spells.

**TOAD'S LEGS** : This pungent-smelling ingredient is created by taking and drying the legs of the Giant Green Toad. Some of the villagers use it in soups and exquisite delicacies. The Magelords use it for Freezing spells.

**DRIED ROOTS** : This ingredient is not so common nowadays since it is produced from the roots of the Nightshade, once abundant, but now rare indeed. It is used in spells that will work upon the spellbinder, such as healing and Shielding spells.

### Use of Spells

The magical spells are created by mixing an effective recipe. All novice Magelords are taught these three extremely useful spells:-

**HEAL** : Casting this spell will raise your strength by 10%. Ingredients: Sulphur and Dried Roots.

**FREEZE** : This spell is used against creatures. It cools their blood and thereby slows them down. The spell will cease its effectiveness once you have left the room in which it was cast. Ingredients: Toad's Legs and Burned Ashes.

**AIRSHIELD** : A spell which will protect you from the creatures in the castle. It causes the air around you to swirl rapidly thus making the creatures' hits 50% less effective. Ingredients: Wine and Burned Ashes.

You can't kill creatures by regular spells, but the FREEZE and AIRSHIELD spells will help you to avoid their bad effects.

When wandering through the castle, you may find hints or clues about creating more effective or totally new spells. If you come across new ingredients or recipes, always make a note of them - you never know when they might come in useful!

### The Icon System

At the bottom of the game screen, you will see the Icon System. There are six icons that may be selected:-

- |            |                    |  |
|------------|--------------------|--|
| [ Arrow ]  | MOVE               | - This icon is automatically selected at the start of each         |
| [ Icon ]   |                    | new game. You can move left, right, forwards and backwards. After  |
|            |                    | selecting other icons, you should resume movement by choosing this |
|            |                    | icon.  |
| [ Eye ]    | LOOK/SEARCH OBJECT | - When standing next to an object, this                            |
| [ Icon ]   |                    | function will search it for other objects, clues or special uses.  |
| [ Potion ] | CHECK INVENTORY    | - When chosen, you are first shown your Strength                   |
| [ Icon ]   |                    | Percentage. Other items are displayed each time you press the      |
|            |                    | Forward Movement key (the "?" key).                                |
| [ Bowl ]   | MIX A SPELL        | - You must first have an appropriate recipe. Scroll                |
| [ Icon ]   |                    | down the list of ingredients by pressing the Forward Movement (the |
|            |                    | "?" key.). To select an ingredient to be used for the spell, press |
|            |                    | the Selection Key (the RETURN key). After you have chosen the      |
|            |                    | required ingredients one at a time in the specified order, you     |
|            |                    | should then scroll down the list to the END marker and press the   |
|            |                    | Selection Key. The ingredients will then be mixed together.        |
| [ O ]      | CAST A SPELL       | - Scroll down the list and choose the spell by                     |
| [ + ]      |                    | pressing the Selection Key (the RETURN key).                       |
| [ Hands ]  | USE AN ITEM        | - Scroll down the list and choose the item you wish to             |
| [ Icon ]   |                    | use by pressing the Selection Key (the RETURN key).                |

### Game Controls

The movement keys are user-definable. However, you will not be able to choose the function keys, <ESCAPE>, <CTRL> or <SHIFT> because these keys have a constant usage.

The following keys are suggested:

Z - Left, X - Right, \* - Backwards, ? - Forwards, <RETURN> - Selection key

BBC MICRO		ELECTRON
f0 .....	Select MOVEMENT icon .....	1
f1 .....	Select LOOK/SEARCH icon .....	2
f2 .....	Select INVENTORY icon .....	3
f3 .....	Select MIX SPELL icon .....	4
f4 .....	Select CAST SPELL icon .....	5
f5 .....	Select USE ITEM icon .....	6
f6 .....	SOUND ON/OFF control .....	7
f7 .....	PAUSE ON/OFF control .....	8
SHIFT and ESCAPE .. Commit suicide ..... SHIFT and ESCAPE

### **Review (Electron User) - "Bewitching Adventure"**

In true adventuring tradition, SPELLBINDER asks you to take the role of a powerful and wise Magelord entrusted with the awesome task of banishing the evil Zorn. In order to do this, you must search the foreboding Castle of Lorraine, find Zorn and then by mixing the ultimate spell, despatch him to the wilderness forever.

Released in the aftermath of a glut of arcade/adventure hybrids, SPELLBINDER must offer than the usual range of features, particularly with its relatively high price tag. This it does, mainly through its icon system, its size, its graphical detail and spell-collecting and casting procedures.

Playing SPELLBINDER is not difficult. The character moves freely around each room, though you do have to be accurate when guiding him through one of the many doors.

Control is aided by a well thought out icon system complementing the four definable keys. These icons, selected by function keys, enable you to mix and cast spells, examine and use items to be found in the adventure, and keep tabs on what items you have in your possession.

SPELLBINDER's graphics are not outstanding. However, the program designers have put some thought into littering the stone-walled castle with the sort of medieval accoutrements you would expect to see in a place like this.

Heraldic shields and gargoyles adorn the walls and you find suits of armour, wooden barrels and sturdy chests dotted around the place, all adding atmosphere to the proceedings.

What is more impressive than the detailed graphics, is the sheer number of rooms comprising the two floors, three citadels, catacomb and dungeon.

One-way doors, secret passages and teleports all confuse the explorer but I found the colour coding of the various parts of the castle (the game is in two-colour, high resolution Mode 4) most helpful in creating a game map.

What makes this more than a mapping and avoiding the monsters affair, are the weird and wonderful spells you are called on to cast. First however you must find the ingredients for each spell - items like burnt oak leaves, toad legs and sulphur are all essential components of the common spells.

The instruction leaflet details some spells, but it is up to you to obtain the rest. Speaking to the stone dwarves, browsing through the bookshelves and similar ruses will all help glean the necessary information.

The game sticks to some quite strict adventuring rules - it is more a problem-solving graphical puzzle than a key-bashing exercise of dexterity.

The spell element, which you must master if you aspire to solve SPELLBINDER, is far from easy. It is this aspect of the game, coupled with the thought put into much of the design which marks it out as better than most of the other, similar offerings.

# SPHERE OF DESTINY

***Professional, Originally Released On Cassette Only***

Game Type : Horizontally Scrolling Arcade Game  
Author : Gary Partis  
Standalone Release(s) : 1986: SPHERE OF DESTINY, Audiogenic, £7.95  
Compilation Release(s) : None  
Stated compatibility : BBC Side A, Electron Side B  
Actual compatibility : As stated  
Supplier : AUDIOGENIC, Winchester House, Canning Road, HARROW HA3 7SJ  
Disc compatibility : Unknown

## Instructions

*"Bruce the bashful jet-ball is speeding along the technicoloured inter-Starian freeway en route to where his true love waits. But the course of true love never runs smooth, and the freeway surface is starting to crack up, with unpredictable results. So the stellar highway engineers have marked sections of the surface with different colours according to the different effects that they have on progress. Certain sections slow you down, speed you up, or make you bounce. Other sections can have the disastrous effect of reversing your ball controls - while others are just plain deadly!"*

*SPHERE OF DESTINY is superfast arcade action for the BBC - including Master - and Electron. There are 64 stretches of freeway to test your reactions and dexterity to the limit - with a fulfilling reward for those who can make it through!"*

Bruce the bashful jet-ball is speeding along the technicoloured inter-Starian freeway en route to where his true love waits. But the course of true love never runs smooth, and the freeway surface is starting to crack up, with unpredictable results. Rather than set up an intergalactic contraflow system, the stellar highway engineers have marked sections of the surface with different colours according to the different effects they have on progress...

BLUE - O.K. No problem.  
YELLOW - O.K. No problem.  
BLACK - Black Hole. Avoid these sections at all costs.  
RED - Slows Bruce down.  
GREEN - Gives Bruce a boost of speed.  
MAGENTA - Gives Bruce a bounce.  
WHITE - O.K. Gives a small bonus.  
CYAN - Reverses Bruce's speed and steering controls - aagh!

Bruce has to travel 64 eons before he gets to his true love - and his reward! (In the year 2129, women seem to go for the oddest balls) Lucky Bruce has three lives, and your job is to help get him there - or at least as far as possible!

Note - Every self-inflicted bounce will reduce your lifespan more quickly!

## Game Controls

Z - Left, X - Right, \* - Speed Up, ? - Slow Down, RETURN - Bounce

## Review (Electron User) - "Something Really Special"

Just in at the last minute is SPHERE OF DESTINY, the latest game from Gary Partis, author of such notables as POSITRON, PSYCASTRIA and the vast DR WHO AND

THE MINES OF TERROR on the BBC Micro. The title is perhaps more suited to an adventure, though I assume it derives from the reggae group Spear of Destiny.

The idea of the game is simple: Guide a bouncing ball through 60-odd levels of a 3D obstacle course within the allotted time limit. Control is also relatively simple - left, right, accelerate, decelerate and jump/bounce. The action takes place on a five-lane roadway made up of a number of multicoloured tiles, each of which has a different function.

White squares give bonus points, purple ones make you bounce. Green tiles increase your speed but red bring you to a virtual standstill. Beware the cyan tiles - right becomes left, accelerating slows you down and you're soon totally lost.

Owners of the Spectrum, Atari or Amstrad CPC will notice many similarities with TRAILBLAZER from Gremlin Graphics. SPHERE OF DESTINY is a perfect example of the way delicate little refinements can give a game that subtle feel of something really special.

From the rolling demo to the clicking on and off of the keyboard LED as an invitation to enter your name in the high score table, SPHERE bombards you with special effects.

The game features some of the most advanced programming techniques seen on the Electron. Unfortunately I found SPHERE, like Gary's other recent games, much too difficult.

This is a great pity as he's remarkably good at finding that elusive addictive quality. I still regularly go back to PSYCASTRIA but I have rarely completed the first stage. Perhaps Gary should release his games before he's had a chance to get too good at them - it might give us mere mortals a chance!

I found it particularly ironic that the highly amusing scrolling text featured a message of thanks to someone who had helped make the game "more playable". I only made it to level three a couple of times in a few hundred attempts.

SPHERE OF DESTINY is driving me nuts, but I'm sure it'll still be driving me nuts in a year's time.

*Professional, Originally Released On Cassette Only*

Game Type : Horizontally Scrolling Arcade Game  
Author : Gary Partis  
Standalone Release(s) : None  
Compilation Release(s) : 1989: FAB FOUR VOLUME 1, Audiogenic, £9.95  
Stated compatibility : BBC Side A, Electron Side B  
Actual compatibility : As stated  
Supplier : AUDIOGENIC, Winchester House, Canning Road, HARROW HA3 7SJ  
Disc compatibility : Unknown

## Instructions

The inter-stellar highway is constructed from brightly coloured tiles. Unfortunately Bruce the jet-ball is very sensitive, and reacts to different colours in different ways.

Blue and Yellow are no problem, but Red slows you right down. Green speeds you up and Magenta makes you bounce, whilst Cyan reverses the controls (Aaarrgh!). White gives a bonus, but avoid the Black holes at all cost!

## Game Controls

Use Z and X to move left and right, \* to speed up and ? to slow down. Press <RETURN> to bounce, but beware - too much bouncing can be bad for your health! Can you take Bruce through all 64 levels with just three lives?

# SPHINX ADVENTURE

***Professional, Originally Released On Cassette Only***

Game Type : Text Adventure  
Author : Paul Fellows  
Standalone Release(s) : 1984: SPHINX ADVENTURE, Acornsoft, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+, Master 128  
Supplier : ACORNSOFT, 4A Market Hill, CAMBRIDGE CB2 3NJ  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"This pack contains cassette plus instructions for SPHINX ADVENTURE on the Acorn Electron, a classic adventure in which you move through caves, fight with trolls, collect treasure and finally make your way to the Sphinx to collect your reward. But the Sphinx is not that easy to find, and along the way there are all the pitfalls - some predictable, and others not - typical of the adventure game."*

The game starts by describing your immediate surroundings and possible routes that you can take; type in a command such as GO WEST, or just W (you will discover other abbreviations as you play the game). Press <RETURN> after each command.

As you travel you will come across various objects which you can take with you. To pick up objects type in TAKE followed by the name of the object. You can take as many as you want, but you can only pick up one at a time since the computer only looks at two words in one command.

The computer becomes your eyes, ears and hands. It tells you what is happening to you, and you must tell it, in return, your response to the situations that you find yourself in.

## Some General Advice

Going North may take you North to begin with, but the path or tunnel may bend round so that you find yourself back in the same place. Take note, and try a different direction.

You will be travelling in the dark sometimes, and so will need a light source.

## Useful words

Don't be afraid to experiment with a wide range of verbs and nouns. Only in this way will you discover the vocabulary of the adventure; this is part of the fun but is also vital to overcome all the obstacles in your path to the Sphinx.

To move in some direction, try something like GO UP, DOWN, IN, NORTH or N etc.

To get or drop some keys, for example, try GET KEYS, TAKE KEYS or DROP KEYS.

To get a full description of where you are, LOOK.

For a full list of your current possessions, use INV or INVENTORY.

A selection of other words: FILL, ENTER, PAY.

To stop altogether, QUIT.

## Score

The score depends on two things: how much treasure you manage to bring to the Sphinx and how many mistakes you make on the way. So although the maximum score is 800, in

the first few games when finding out what you can or cannot do, the penalties for errors may keep your score right down. Don't be discouraged (unless your score is less than 5!).

You can find out your score at any point during the game by typing SCORE.

### **Saving and Loading**

An additional procedure on the disc version allows your current position to be saved and then loaded back into the adventure. Type SAVE or LOAD then enter the filename at the prompt.

### **Hints & Answers**

Here is a list of commonly asked questions about Sphinx Adventure, together with a set of hints and answers.

I can't open the clam.

Hint: Find an implement that will help.

Ans.: A jack will open the clam.

What do I pay to get across the toll bridge?

Ans.: Anything will do, as you can regain it.

How do I kill the vampire?

Hint: In the usual way.

Ans.: With a wooden stake.

I can't get across the chasm.

Hint: Try magic.

Ans.: Wave wand.

I can't get across the glacier, as it breaks.

Hint: You need something magical.

Ans.: You need the mithril ring.

I can't get out of the serpent.

Hint: Try aggravating it.

Ans.: Set light to something.

I can't get out from under the bottom of the rock slide.

Hint: Try magic.

Ans.: Rub the magical mithril ring.

I can't get across the lake.

Hint: What do you need when crossing water?

Ans.: Find the boat.

The pirate can't be killed.

Hint: Is that disturbing?

Ans.: No, he can't be killed. He just dodges away.

The pirate steals something whenever I move away from him.

Hint: He will always try to steal from you, and only you.

Ans.: Put the objects down, and they will not be touched.

I have lost something. How do I get it back?

Hint: The thief does not keep it on him.

Ans.: He stores it in a safe place.

I can't pass the fiery walls.

Hint: Put out the fire then.

Ans.: Use the water, but don't just drop it.

After a time, my lamp runs out.

Hint: Use magic to brighten the lamp.

Ans.: Do as Aladdin did to his lamp.

I can't get past the goblins.

Hint: You need something they don't like.

Ans.: The dragon's teeth frighten them.

I lose a weapon when I kill the dragon.

Hint: Use a weapon that will remain with you.

Ans.: Be bold and use no extra weapons at all!

I can't find the dragon's teeth.

Hint: Make sure it's dead first.

Ans.: Look for them after killing the dragon. They are there.

I can't get past the crocodile.

Hint: Make him interested in other things.

Ans.: Feed him.

I can't pick up the mouse.

Hint: It is frightened of you, so make it happy.

Ans.: Entice it with cheese.

I can't get rid of the bear.

Hint: Divert his interest to something else.

Ans.: Orcs are frightened of bears, so find an orc.

I can't get rid of the orc.

Hint: Find something it does not like.

Ans.: It is frightened of bears.

I can't find my way out of some rooms.

Hint: Use magic.

Ans.: Rub the magic ring.

I can't get all the points.

Ans.: Either you have not found everything or something was used or stolen.

I have got to the Sphinx, but can't finish.

Hint: Use hints from the messages on the walls.

Ans.: Kneel and use magic.

**Instructions' Source** : SPHINX ADVENTURE (Acornsoft) Back And Inner Inlay

### **Review (Electron User)**

SPHINX ADVENTURE was the first adventure to be released by Acornsoft and is, to my knowledge, still the only one available on cassette for the Electron. It's modelled very generally on the original Crowther and Woods' Colossal Caves. You'll meet some familiar characters in it, though, to be fair, it is nothing like Colossal Caves and is a very worthy adventure in its own right.

Your task is to search an underground complex to add yet more treasures to the pile you have built up from previous adventures. You start your quest on a well-trodden road and a quick search of the countryside should find you equipped for the start of your quest. Then it's off to the Valley of Doom and down the Hall of Spirits for the start of your perils. You'll soon come across a pirate and a dwarf who will leave you an axe.

Your first major problem is likely to be in getting past the fiery passage - this is where you find out whether you have the bottle for this adventure! Later you'll need to escape from a sea-serpent - match that if you can! The troll shouldn't prove to be much of a problem. You should be able to discover where he puts his loot. Right! That's enough clues!

One thing I couldn't discover was whether there was any meaning to the graffiti in the Inner Sanctum. I'm sure that there are more locations to be discovered here. Please let me know if you have figured it out.

I've managed to map more than 100 locations so it is a big adventure. In fact I must confess that it is one of those games that keeps you up until the small hours. Five o' clock in my case.

Overall, an extremely good adventure and one that I can wholeheartedly recommend. Let's hope Acornsoft do conversions for their other adventures. Excellent stuff.

Merlin, ELECTRON USER 2.11

# SPITFIRE '40

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Aircraft Simulation  
Author :  
Standalone Release(s) : 1990: SPITFIRE '40, Alternative, £2.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+, Master 128  
Supplier : MIRRORSOFT, Hoborn Circus, LONDON EC1P 1DQ  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Spitfire 40 is not only the closest you're likely to come to flying one of the most famous aircraft of all time - it's a spectacular wartime adventure as well.*

*"As a young Spitfire pilot in 1940, you'll be trained in the techniques required to fly a Spitfire. You'll be able to practise your combat skills, before going on missions in full combat mode - the real thing. A full demonstration of the Spitfire's features, and the type of mission you'll be sent on is also included on the disk.*

*"Once you've mastered the controls and can fly the Spitfire with confidence, you can take to the skies for a dogfight with the enemy. Get the most of the aircraft's authentic looping and rolling capabilities to outwit your opponents, and manoeuvre your way to dominance of the air.*

*"You can save all your practice and combat experiences, allowing you to rise through the ranks of the RAF to the coveted position of Group Captain, DSO DFC VC.*

*"Your personal pilot's log is included with the program, together with a keyboard guide and quick reference flight checklist.*

*"THE BEST THING SINCE THE REAL THING*

*"'Spitfire 40 is a graphically excellent game' - Computer & Video Games.*

*"'Flying the Mirrorsoft Spitfire is a joy' - Commodore User.*

*"'The best simulation in years' - Crash."*

## Preface

Spitfire '40 is not only the closest you're likely to come to flying one of the most famous aircraft of all times - it's a spectacular war-time adventure too.

Picture the scene - it is the Summer of 1940 and you are a newly trained pilot, posted to a Spitfire Squadron in South East England.

Like so many of those young men in 1940, you will learn that a Spitfire is no ordinary place. You will discover its special capabilities and, most importantly of all, how to handle it in combat. As you learn, you can save your growing experience to tape or disk. With practice and your increasing skill, you can rise through the ranks, gaining medals, to reach for the highest accolade - to achieve the rank of Group Captain and the coveted VC, DSO and DFC medals.

SPITFIRE '40 gives you not just valuable experience in the principles and techniques of flight combat; it's a lot of fun, too!

## Loading and Game Controls

When the program has loaded, you will be asked to load:

ORIGINAL LOG

SAVED LOG

Use the joystick and fire button to make your selection. For convenience this manual refers only to joystick controls. The keyboard alternatives are listed below:

: - Joystick up, / - Joystick down, A - Joystick left, S - Joystick right  
<SPACE> - Fire

See the separate keysheet for a summary of all the keys used during the game. See also keysheet for loading a saved log.

A list of pilots' names on the flight log will appear. Choose your pilot by moving the joystick up or down, then press fire.

The logbook for the pilot you have selected is displayed, including rank, medals, flying hours and victories.

Press fire again and you will see a menu of flight modes:

PRACTICE  
COMBAT  
COMBAT PRACTICE

Use joystick and fire to make your selection.

### Practice

This option puts you into the cockpit at the take off point on the runway to enable to practise flying your Spitfire before you head off into combat. If you can then land successfully on a runway, you can save your log on tape or disk to start building up your experience. To save, follow the on-screen instructions, then press FIRE. You should read the flying and landing notes thoroughly first.

### Combat

This mode is the heart of the program. On selection, you will be given your mission instructions, for example:

ENEMY 3 (number of aircraft)  
INTERCEPT 14 (distance in miles)  
BEARING 200 (bearing from the runway)  
HEIGHT 6000 (enemy height)

Now you must take off and engage the enemy in combat. The enemy will remain at roughly the height first given in the instructions. If you are successful and return safely to a runway, you can save your combat record to build your record.

### Combat Practice

The purpose of this option is to enable you to gain some elementary experience in handling the Spitfire in combat. You will find yourself at 10,000 feet with enemy aircraft coming at you in frontal attacks. Practise following and firing at them, allowing for deflection shooting which requires you to judge where the enemy will be by the time your bullets have reached the target.

Your successes in combat practice are not recorded and you can return to the main menu by pressing <RETURN> or by crashing.

### Instrument Panel

Clockwise from the upper left, the instruments are:

FUEL GAUGE	- Indicates the amount of fuel remaining. You start with enough for 45 minutes' flying.
AIRSPEED INDICATOR	- Indicates speed in units of 100 mph.
ARTIFICIAL HORIZON	- Represents the plane's altitude in relation to the true horizon, with black for the sky and white for the ground.
VERTICAL SPEED INDICATOR (VSI)	- Represents vertical speed and movement at intervals of 1,000 feet per minute in the climb or descent section.
ENGINE REV. INDICATOR	- Indicates engine speed in 100s of revolutions per minute.

- |                         |   |
|-------------------------|---|
| SLIP AND TURN INDICATOR | - The top needle represents sideways movement through the air (slip). The bottom one measures the rate of turn; the more displaced the needle, the higher the rate of turn. |
| COMPASS                 | - Indicates compass heading.  |
| ALTIMETER               | - Indicates height above the ground. The large needle shows 100s of feet, the small one 1,000s of feet.   |

The instrument panel on your screen is a faithful reproduction of that in the original Spitfire. However, two instruments have been added for ease of use.

- |                  |  |
|------------------|--|
| RUDDER INDICATOR | - Shows the position of the rudder.  |
| PITCH INDICATOR  | - Represents a sideways view of the Spitfire. Although this duplicates part of the function of the artificial horizon, it does assist orientation when diving or climbing steeply. |

## Joystick

The forward and backward movement of the joystick controls the Spitfire's elevators. Pulling the joystick backwards will raise the aircraft's nose; pushing the joystick back lowers it. This is known as altering the pitch of the aircraft. The sideways movement of the joystick controls the ailerons, which in turn will make the Spitfire roll or bank to the left or right. A secondary effect of rolling is that it causes the aircraft to turn and change direction. The joystick fire button activates the eight Browning machine guns mounted in the wings.

You should be aware that there is an inevitable time lag between moving the joystick and reaction of the aircraft, particularly when applying an opposite correction such as reversing the joystick when rolling the aircraft back to straight and level flight after completing a turn.

## Keyboard Alternatives To Joystick Controls

Ailerons <A> <S>

Roll and bank the Spitfire left/right. A secondary effect is to make the aircraft turn and change direction.

Elevators <:> </>

Raise/lower the aircraft's nose to alter the pitch.

Fire <SPACE>

To activate the wing-mounted machine guns.

## Keyboard Instrument Controls

Throttle <Q> <W>

Increases/decreases power; exact level can be gauged from the engine speed indicator on the instrument panel.

Rudder <Z> <X>

Turns the rudder left/right; exact position of the rudder is shown on the instrument panel. After applying rudder, the first press of the opposite rudder key initially centralises the rudder. This additional feature is particularly useful when there is no time to make a visual check.

Flaps <F>

Toggles flaps up or down; current position is indicated on the instrument panel by the letters U and D. Putting the flaps down lowers the stalling speed of the aircraft; they should not be lowered at speeds above 140 mph.

Undercarriage/Gear <G>

Toggles the undercarriage up or down; the current position is indicated on the instrument panel (black for up, green for down). You should not attempt to fly with the undercarriage down at speeds much above 160 mph.

## Aircraft Controls

Brakes <B>

Toggles the brakes on or off; the current position is indicated on the instrument panel (green for off, black for on).

Map <M>

Toggles the map screen on or off; the map is a representation of South East of England. A white aircraft symbol indicates your current position and a black aircraft symbol shows the position of the enemy. The three squares represent areas which can be examined in greater detail (see below). Looking at the map also has the effect of freezing the simulation and can therefore be used as a pause key.

Expanding the Map <N>

If the Spitfire is within one of the three squares, press <N> to show the current detail. Further keypresses will first expand the area and then contract it. Ground detail is shown in a position relative to the Spitfire's current heading.

Sound <CTRL>

Toggles the sound effects on and off.

## Handling And Flying

### Taking Off

If you have chosen Practice or Combat mode, the Spitfire will be positioned on the runway ready for take-off.

### Checklist

- Flaps up
- Push throttle to give power of 2,000 rpm
- Brakes off
- Increase power to maximum rpm
- As speed reaches 100 mph, ease back gently on the joystick
- When the Spitfire lifts off, retract the undercarriage
- Check that the instrument panel indicator is black
- Do not attempt a steep climb until the speed is over 140 mph
- After completing the climb, reduce power to around 3,000 rpm for cruising speed and level flight

### Climbing

The rate at which the Spitfire climbs is shown on the VSI. This rate is controlled by the power of the engine and the angle of climb.

The optimum rate of climb for this type of Spitfire was 185 mph at approximately 2,850 rpm, giving 2,500 feet per minute. At this altitude you will not be able to see the horizon out of the cockpit. The ceiling height for this aircraft was approximately 35,000 feet.

Experiment with altitudes and power settings to gain experience. If you attempt too steep a climb with insufficient power, the speed will drop until a stall occurs.

### The Stall

The stalling speed of the Spitfire is 75 mph with the undercarriage and flaps up and 65 mph with them down. Remember that if the aircraft is too close to the ground, the consequent loss of altitude will cause a crash. If you have the sound control on, you will hear a warning that the aircraft is approaching stalling speed.

### Straight And Level Flight

Straight and level flight is achieved with the wings horizontal and the VSI at zero. Level flight is achieved by adjusting the aircraft's altitude first, and when level, adjusting the speed using the throttle. Practise flying at various speeds, comparing the actual horizon with the artificial horizon. As power is increased, the Spitfire's nose will tend to rise; with a reduction of power, it will drop. This can be compensated for with the joystick.

Zooming around at maximum power, however tempting, is not recommended if you want to succeed as a Spitfire pilot. The optimum cruising speed is approximately 200 mph, but check this out: Remember, there is only a limited amount of fuel for each sortie.

### **Diving**

You may find yourself in a full power vertical dive during aerobatics or combat, and pulling back on the joystick will have no effect. Reduce power and you will return that control will return to the joystick.

### **Turns**

The direction of flight can be changed by banking the aircraft with the joystick. The Spitfire will remain at a fixed angle of bank when the joystick is released, and the rate at which the aircraft turns is dependent on the angle of the bank. The turn can also be tightened by using the appropriate rudder at the same time. The nose tends to drop in a turn; this can be corrected by easing the joystick back slightly.

The aircraft can be returned to level flight by applying the opposite joystick movement. At first, you may find there is a tendency to apply too much opposite joystick and the aircraft will end up banked in the opposite direction. It is vital during combat to learn to anticipate the movement of the aircraft and small repeated movements of the joystick are far more effective than one large movement.

The direction of the aircraft can also be changed in level flight by using the rudder alone. However, as the wings are level, this also has the adverse effect of skidding the aircraft sideways in the opposite direction. Nevertheless, careful use of the rudder alone can be helpful in certain situations, particularly during an approach to landing.

### **Slip**

It is possible for the Spitfire to slip sideways and lose height whilst maintaining a constant heading. To check out this feature, fly the Spitfire at a safe height and watch the instrument panel closely. Put the Spitfire into a left turn, then apply right rudder until the compass stops moving. If you look at the slip and turn indicator, you will see that the turn needle is in the neutral position and the slip needle is to the left.

### **Landing**

The recommended procedure for landing a Spitfire was to start the approach by reducing speed to 140 mph and lowering gear and flaps. The last part of the approach was made at a speed of 90 mph, descending at 1,000 feet per minute. Just before landing, the joystick was eased back to bring the craft level, and the throttle reduced.

But, as usual, practice is more difficult than theory, and landing is one of the trickiest parts in flying the Spitfire.

There are three main principles to stick to:

- \* Hold the speed at 90-100 mph at a constant rate of descent,
- \* Position the Spitfire on the approach path to the runway, and
- \* Reach the start of the runway at a height just above zero.

### **Try the following exercises to develop your landing skills:**

Climb to 5,000 feet and cruise at 200 mph. Reduce power and hence speed. (Raising the nose slightly will drop your speed quickly.) Lower the undercarriage and flaps. When the speed drops to around 100 mph, adjust the throttle and nose altitude so that constant speed is maintained and the VSI reads 1,000 feet per minute. The power setting should be around 600 rpm. Note the position of the horizon against the cockpit. Level out at a predetermined height and maintain speed and altitude. If you find difficulty in raising the nose despite pulling back on the joystick, a quick burst of power will help.

The next stage is to practise flying the Spitfire so that you are lined up on runway and flying over it a predetermined height. Approach the runway from a distance so

that you have plenty of time to alter your approach. As you gain experience, you will learn to use ground objects as reference points to turn into the approach. These are wind effects in the program to worry about. The accepted practice in landing was to fly parallel to the runway in the opposite direction to your final approach, allowing you to turn through 180 degrees and line up for the final approach. Very gentle use of the rudder will assist in achieving the correct line.

The final stage in the early stages, the program is forgiving of errors in landing. However, as your experience and performance records builds up, your skill must increase accordingly or you may crash when landing.

You can land away from runways, and take off again, but your experience and additional flying hours are not logged unless you land on a runway.

It is assumed in this simulation that there is haze in the sky and ground detail disappears above 3,000 feet.

## **Maps**

As an exercise in navigation, you may find it useful to fly over the areas and draw the maps, entering the relevant distance and bearings between objects. After combat, this information could be crucial in getting back safely.

## **Combat**

The procedure for entering combat mode has already been explained. It is important, however, to understand something of the air combat techniques that were relevant in 1940.

There were four golden rules in air combat:

1. Climb quickly to give yourself a height advantage in attack. This enabled the pilot to climb away after an attack, as the speed gained in diving could be translated into momentum to regain height.
2. Never fly straight and level in the combat zone for more than a few seconds - weave about as much as possible. This increased the areas of the sky observed and made the Spitfire a moving rather than a stationary target. The key was to watch your mirror constantly.
3. In reality, attacks usually came from the rear and at an angle. To evade these, it was necessary to turn as sharply as possible towards the direction of attack, increasing speed if possible. Turning in the opposite direction would place the defender in a stationary position in relation to the attacker.

More often than not, air combat ended up as a dogfight with two aircraft trying to out-turn each other in ever-tightening circles, inevitably reducing height. Maintaining accurate turns was therefore a vital factor.

4. Another method of escaping attack was to dive away. In 1940, this was an option open to the enemy fighters but not to the Spitfire. In the Spitfire, pushing the nose forward caused the engine to cut (under negative G) and valuable seconds were lost, whereas enemy fighters did not suffer this problem. This is the reasons why films of the period will show Spitfires rolling on their backs before diving (hence maintaining positive G). Fortunately, such problems do not occur in this simulation.

## **Simulation Combat**

The key rules of air combat have been built into this simulation:

If you are under attack from behind, the enemy aircraft will appear in the mirror. Try to increase speed to escape and turn as sharply as possible. Use the rudder to induce slip or skid.

If you lose contact with the enemy during combat, you should get back to the height of the original contact and check your map. In keeping with one of the key rules, a climbing turn is the preferred method for regaining height.

There is a much higher chance of hitting an enemy aircraft, the closer you are to it.

If you manage to shoot some or all of the enemy aircraft down, you can return to a runway and, on landing safely, save your latest status.

## **Aerobatics**

A number of interesting aerobatic manoeuvres can be carried out in this simulation. For example:

### **Loop**

At a speed of 250 mph at full power, ease the joystick back gently. As you invert, reduce power and continue easing back the joystick until you are flying straight and level. Reapply power to come out of the loop.

### **Loop with Roll off the Top**

Start as for a loop. When you are inverted at the top of the climb, roll the plane left or right until you are level. Use the joystick to keep the nose at a fixed position on the horizon as you roll out. You can use this manoeuvre to escape an enemy, gain height and reverse direction.

### **Roll**

Raise the Spitfire's nose slightly above the horizon. Apply left or right joystick. Keep rolling until the Spitfire is again straight and level. Practise using the joystick to roll the plane whilst keeping the nose pointed at a fixed part of the scenery. Applying opposite rudder assists in keeping a constant heading.

### **Splits**

Roll over until the Spitfire is inverted. Then pull the joystick back until the horizon appears and you are flying level. You will have lost height and reversed your direction.

## **The Theory Of Flight**

This complex subject cannot be fully dealt with here, but it is necessary for you to understand the basic principles so that you may be better able to fly this simulation.

Aircraft designers shape the top of a wing like the back of a spoon so that the air passing under a wing is slowed and pushed down as it hits the underside. This is the opposite of what is happening above the wing, so the rising pressure pushes the wing up. Suction above and pressure below creates lift. When this lifting force is greater than the weight of the aircraft, it will leave the ground. Lift and weight are two of the forces which act upon an aircraft; the others are thrust and drag. To accelerate to a speed at which lift can overcome weight, a powered aircraft needs an engine to provide thrust. Just as lift must overcome weight, thrust must overcome the resistance of the air to the aircraft moving through it. This is the drag, which can be reduced by streamlining the shape with the undercarriage and flaps.

In addition, the most important criteria for a fighter like the Spitfire are manoeuvrability, speed, and instability. Speed and manoeuvrability are obvious requirements for such an aircraft, but instability needs a little explanation. Stability in an agile fighter would spell disaster because, when attacked from out of the blue, the fighter pilot needs his aircraft to react immediately. So the designers built instability into the plane; it's harder to keep them straight and level than to throw them around all over the sky.

## **Historical Background**

The Supermarine Spitfire is, perhaps, the most famous aeroplane ever built - both a legend in its own time and a most beautiful machine. But your chance to fly this tremendous craft is only a part of the whole story.

Conceived by R.J.Mitchell in 1925, the Spitfire was far in advance of the technology then available. It was not until 1936, when Rolls Royce developed the Merlin engine

and a second World War was feared, that the impetus was there to turn the idea into a prototype aircraft.

The first flight was in March 1936, revealing a revolutionary aircraft design with a top speed of 350 mph and superb manoeuvrability, two factors which are the crux of all fighter design.

By the outbreak of the Second World War, a total of 2,160 Spitfires were on order and on October 16 the first combat took place over Scotland. Then, in May 1940, the Germans pushed strongly towards the Low Countries and France, and the RAF retreated further until the final withdrawal from Dunkerque. Britain was alone, facing the most successful fighting machine since the Roman Empire across just 21 miles of sea.

Hitler was well aware of the importance of superiority in the air. He was convinced by the Chief of the Luftwaffe, Hermann Goering, that his pilots and machines would soon gain a decisive victory over the Royal Air Force, which the Luftwaffe outnumbered three to one.

The average age of a wartime Spitfire pilot was twenty, and some went to operational squadrons with as little as ten flying hours to their credit. Despite this, the Battle of Britain was won by three means: technology, spirit and, paradoxically, mistakes.

The advanced technology of the Spitfire enabled the RAF to arrest attacks - radar assisted in accurate interceptions being made. The spirit of the young pilots is legendary. German mistakes were the result of bad intelligence reports and an underestimation of the British resolve. Once the Germans altered their tactics to bombing civilian targets in the Blitz, the Battle was won.

The Spitfire continued as a front line fighter in the RAF until the advent of a jet-propelled aircraft. Over 20,000 were built, and a number are still flown today.

THE LEGEND OF THE SPITFIRE WILL LIVE FOREVER.

### **Acknowledgements**

The publishers of this program would like to thank Michael Fopp and the Battle of Britain Museum for assistance and advice during development.

There are three Spitfires on display at the Royal Air Force Museum, Hendon, including the earliest surviving MkI aircraft and the postwar Mk24 version. Entry to the RAF Museum is FREE.

### **Flight Checklist For Your Spitfire**

#### **TAKE OFF**

- 1) Brakes off
- 2) Engine revs at 3,400 rpm
- 3) Lift off at 90 mph
- 4) Retract gear

#### **LANDING APPROACH**

- 1) Reduce speed to 140 mph
- 2) Lower flaps and gear
- 3) Final approach between 80 mph and 100 mph

#### **OPTIMUM CLIMB**

Varies with height

200 mph at 2,850 rpm giving 2,500 ft per minute

#### **OPTIMUM CRUISE**

200 mph at 1,900 rpm

Level flight is achievable between speeds of 90 mph and 350 mph

#### **FLYING LIMITS**

STALL - Approx. 65 mph with gear and flaps down  
DIVING - 450 mph  
LOOP - Enter with a speed of greater than 250 mph  
ROLL - Between 180 mph and 300 mph. Nose just above horizon. Higher speed for an upward roll  
CEILING - 35,000 ft

#### OUT OF CONTROL AND DISORIENTATED

- 1) Reduce power
- 2) Apply joystick in opposite direction to turn indicator
- 3) If appropriate, apply rudder in direction of slip indicator. Centralise when indicator at zero
- 4) Ease back on joystick if in a dive

#### LOADING/SAVING YOUR LOG

Insert a new tape and follow the on-screen instructions.

**Instructions' Source** : SPITFIRE '40 (Alternative) Back and Inner Inlay

### Review (Electron User) - "High Flyer"

All you lovers of those old World War II films can now train to become top fighter pilots with SPITFIRE 40, a new flight (or should that be fight) simulator from Mirrorsoft. With plenty of practice, skill and just plain good luck, you can rise to the rank of Group Captain and be decorated with the VC, DSO and DFC.

On starting, you are presented with five pilots' names from which you must select one. A log book for the pilot is then shown. This displays his name and rank, the number of flying hours clocked up, the number of victories and any medals awarded. I was disappointed not to be allowed to enter my own name here.

Finally, a menu is printed which shows the three game options. The first is a practice run which enables you to concentrate on learning how to fly the Spitfire without the worry of being shot at by enemy planes.

A successful landing adds the flying hours to your log. Once you've clocked up enough hours and feel fairly confident of your ability to fly you can try your hand at aerobatics in preparation for combat.

Combat practice places you in a situation where you can try out your technique. In this mode, crashing or being shot down does not count against you on your log.

Once you've had enough of this, you can move on to the real thing - air to air combat. First you are given your mission instructions. These tell you how many enemy

planes there are and where they are situated in relation to the runway.

When airborne, you can have a map of the area you are currently flying over displayed on-screen. The enemy planes' positions and their heights are also indicated.

My favourite part of the game is the dogfight. I found it difficult to hit the enemy at first as it takes about a second for the shots to reach their mark.

Overall, the game is fairly easy apart from landing the Spitfire. The dogfights can be quite tense and the first time you shoot down an enemy aircraft you get a real feeling of achievement.

The instruction manual is clear and tells you all you need to know about the game. Not only that, it also gives you a brief, but interesting, background history to the Spitfire and includes a small bibliography of books for anyone wishing to learn more about this great aircraft.

The one thing I found lacking was that almost undefinable something which makes a game addictive. I enjoyed playing it for short periods, but it isn't one of those I would automatically reach for when sitting down for a gaming session.

# SPOOKSVILLE

***Professional, Originally Released On Cassette Only***

Game Type : Arcade Adventure In Traditional Style  
Author :  
Standalone Release(s) : 1989: SPOOKSVILLE, Blue Ribbon, £2.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+, Master 128  
Supplier : BLUE RIBBON, CDS House, Beckett Road, DONCASTER DN2 4AD  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Spooksville is no ordinary town! For it boasts all manner of creepy crawly, ghoulish inhabitants. Do you have the courage to go where no man has been before? Do you dare to enter Spooksville? Your goal is to collect the Spellbook that is hidden deep within Spooksville. Only a super adventurer like you has the ability and strength to traverse numerous soul destroying paths, which will uncover many dangers!"*

Many centuries ago, an all-powerful Spellbook was stolen from the Great Magician. This Spellbook was taken by Count Dracula, in the form of a bat, right from under the Great Magician's nose. Since then it has laid deep in the darkness of Spooksville, the notorious town where all manner of hostile beings roam!

The Spellbook's magic spells can only be used every five hundred years and time is slipping away. It is only weeks before this time arrives. Someone has to enter Spooksville and retrieve the Spellbook before it is put to terrifying use! Who could that be? Could it be you?

Gaston the Intrepid is your name - adventurer extraordinaire. The mission to Spooksville is seen as just another death defying assignment into the unknown. But to Gaston, this means excitement, thrills and death to the fiends.

The Spellbook presently lies somewhere within the Spooksville sanctuary, and guess who is there? Your old fiend Dracula. But he's only one freak that you will encounter on your journey. Frankenstein and many others are out to prevent you accomplishing your mission.

You must use your powers of discernment to decide who or what is there to help or hinder your journey into Spooksville. You, Gaston the Intrepid, have those powers...Good Luck!

Although there are many things within Spooksville with the sole aim of killing you, there are also items, sometimes hidden or just laying about, that can help you achieve your goal. Beware! If any of the 'Big Monsters' come into contact with you, it will be instant curtains!

You will have to climb ladders, ropes, enter dark, forbidding rooms, but somewhere there is help at hand. There's gold to help you bribe your way, lamps to help you light your way and swords to help you fight your way to the Spellbook.

However, there are two items that must be collected and held on to if you are to achieve your objective; the ring and the scroll. The ring is hidden in the Crypt but as to where the scroll is, that's anyone's guess. Happy hunting!

On the BBC version, Spooksville is accompanied by an eerie throbbing just like your heart-beat...or perhaps it IS your heart-beat.

## Features

5 Crosses	Drop in room with five pillars
1 Holy Water	Drop on grave on island - kills ghoul
1 Rope	Extends rope in Frankenstein's lair
1 Barrel	Get out of well in Frankenstein's lair
1 Lamp	Lights up grave yard
1 Stake	Kills Dracula
2 Gold Bars	Pays for boatman
1 Fireball	Kills Frankenstein
1 Sword	Kills Cannibal
1 Rod	Produces bridge in right room

## Game Controls

Z - Left, X - Right, : - Up, / - Down, <RETURN> - Jump  
<SHIFT> - Fire, <SPACE> - Fires at objects in particular locations and can also be used to pick up and drop  
S - Sound, Q - Quiet, P - Pause, O - Continue

**Instructions' Source** : SPOOKSVILLE (Atlantis) Back and Inner Inlay

## Review (Electron User) - "Haunting Entertainment"

In SPOOKSVILLE, you play the part of Gaston the Intrepid who is trying to find a spellbook stolen from a great magician many centuries ago by Count Dracula.

The spells can only be used every 500 years, and that time is just about due. The book is hidden in the town of Spooksville - so in you, Gaston, jolly well go to face Frankenstein, Dracula and sundry other horrors.

This torrid scenario paves the way for another arcade adventure game in the style of that old favourite CITADEL. The graphics and sound are also closely based on the older game.

Gaston can travel left and right, as well as up and down ropes and ladders. From time to time objects found may help solve the game. For example, the stake will kill Dracula and the barrel will enable Gaston to escape from Frankenstein's lair. Other objects include crosses, holy water, rope, a lamp, gold bars, fireballs, a rod and a sword.

A fairly comprehensive "what does what" list is given in the instructions. Essential to success are the ring - hidden in the crypt - and the scroll, one of the few items whose location and purpose is not revealed before you start.

Old time CITADEL players will remember the ghostly cloaked figures which needed a magic spell fired between the eyes to remove them from screen. SPOOKSVILLE has these, or similar figures, in abundance.

In fact, there is one in every room except the starting screen and all need to be shot smartly in order to survive. A strange feature of your weapon is that you must be moving when you fire it.

Its range is short so don't fire till you see the red of their eyes. Tall monsters can't be destroyed by the standard technique - it is essential to find the correct object to dispose of them.

This is yet another budget game which has not been written well on the Electron. if you can imagine playing CITADEL with your feet stuck in syrup then that's what you've got here. Mind you, things are changed out of all recognition if you own a SLOGGER Turbo Board. Then the game is almost too fast, but certainly playable.

I would strongly commend the original CITADEL as a far more interesting game, but if you've completed that, SPOOKSVILLE will do at a pinch.

Rog Frost

**\*\*\* Second Opinion \*\*\* (Electron User)**

This is another spin-off based on the highly successful CITADEL. While not quite matching up to the original, it is nevertheless very enjoyable. If you like this sort of game then at only £2.99, it represents a bargain and will provide many hours of entertainment.

# SPORTING TRIANGLES

***Professional, Originally Released On Cassette Only***

Game Type : Strategy; Quiz With Great Graphics  
Author :  
Standalone Release(s) : 1990: SPORTING TRIANGLES, CDS, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+, Master 128  
Supplier : CDS, CDS House, Beckett Road, DONCASTER DN2 4AD  
Tel: 0308 890000  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"No matter what your sporting preference, SPORTING TRIANGLES is bound to intrigue, puzzle and frustrate. Over 1,500 questions from across twelve action-packed sports.*

* Soccer	* Cricket
* Rugby (Union and League)	* Golf
* Athletics	* Boxing
* Equestrianism	* Tennis
* USA Sports	* Pot Luck
* In-door sports	

*All the features of the Top Rating TV quiz show are combined in this equally rated computer version:*

- \* Take on a friend in this 1, 2 or 3 player game.
- \* Time limits can be adjusted to six levels of play.
- \* Computer opponents are available if your friends aren't. The rounds are equally authentic.
- \* Thought provoking Hit-for-Six round.
- \* Fast-moving Quick-Fire round.
- \* Frustrating General question round.

*SPORTING TRIANGLES - a must for the sporting fanatic's computer library!"*

## Options Screen

This is the screen which sets up the game, entering the number of human and computer players, deciding the order of play and setting the time limit within which all questions must be answered. Information must be entered as follows:-

### a) Number of Players

You will be first prompted to enter the number of human players, 1 to 3, followed by <RETURN>. Sporting Triangles is a three player game, so if there are less than three human players the computer will generate one or two players to complete the line-up.

### b) Names of Players

You will then be asked to enter the names of the contestants. The names may be up to eight characters long and will be presented in upper case; they should be terminated by <RETURN>.

Players should not have the same names and only alphanumeric characters are allowed.

### c) Length of Round

You will then be prompted to enter 0-6 for the length of round. 0 switches the timer off. 1 gives ten seconds to answer each question. 2 gives twenty seconds and so on.

d) **Confirm Selections**

Finally, you will be asked if all the information you have entered is correct. Entering "N" or "Y" appropriately will either reset the screen to allow re-entry of the details or will move the game forwards to the next step.

e) **Order of Play**

A die will now appear in the top left of the screen and this will rotate. Pressing <SPACE> will stop the rotation and a score will appear by the side of the player's name. This process continues for each player and, when complete, the screen is redisplayed with the player names in the order in which play will take place.

### **Sports Selection Screen**

The options screen is replaced by a screen showing the twelve specialist sport subjects available. They are named and represented by the figures which appear throughout the game. Players are prompted by name, in order of play, to choose their sport. Once selected, a sport is unavailable as a choice to the other players. Computer players make their own selections automatically. The selection of a sport does not mean that all a player's questions will be on that subject. The questions are selected from all three chosen sports and general sporting knowledge questions: in fact it would be possible to choose a sport and not be asked a question on that sport!

Once the choice of specialist sport is made, there is no opportunity to change, short of resetting the game to the beginning. The cursor is moved across the sports selection screen by the left and right cursor keys only. Selection is made by pressing the SPACE bar.

### **Loading The Questions**

The computer will now begin to load the questions. Each of the cassettes contained in your package has a different question set. They should be used alternately. The six rounds of questions will be loaded in. The game contains a full error detection system and will prompt for action should there be a problem or malfunction, so please be patient. [On the Haven disk version, there are two disks: one containing question sets 1 and 2 and the other 3 and 4. You will be asked to input the set to use on the introductory screen.]

The game is divided into six rounds which occur as follows:

1. Standard Question round
2. Standard Question round
3. Hit for Six Question round
4. Standard Question round
5. Standard Question round
6. Quick Fire Question round

### **Contestant Screen**

Now we come to the beginning of the quiz itself. The characters representing the three players are displayed in the Studio, with score boards and a sport caption behind each contestant. The start of round one is announced and the first player prompted to get ready to roll the die.

### **Game Board Screen**

This consists of a large triangular board, divided into coloured segments. Each colour corresponds to a specialist sport; red for player one, blue for player two and white for player three. Purple corresponds to general sport. The rotating die will re-appear and the first player presses <SPACE> to stop the die. A small black triangular "puck" will then proceed to move the corresponding number of segments around the board, the colour of the final square determining the subject of the question which is to be asked.

### Standard Question Round

There are four Standard Question rounds, each player, in turn, is asked a question of the category decided by the colour segment on which the puck rests. The player has the indicated amount of time to think of an answer and say it out loud to the other playres. If the answer is unknown or cannot be guessed then the "Give up" option may be used. This displays the correct answer and then moves play to the next player.

The "Answer" option displays the correct answer and asks the player "Were you correct?". He should select the appropriate response by moving the highlight bar over the "YES" or "NO" boxes and pressing fire. The highlight bar is moved by the left and right cursor keys or Z and X, and confirmed by pressing <SPACE>. Two points are awarded for a correct answer. Play returns to the Contestant Screen for the next player to take his turn.

### The Hit For Six Question Round

In this round the player is presented with a clue to the identity of a Sporting Personality, Event or Venue and a selection of seven possible answers. Six points are available for a correct answer on the first guess. If the guess is incorrect or the time allowed is exceeded, then a new clue is shown and the possible score decreases by one point. This process continues until the player answers correctly or the score value becomes zero. On a correct answer the points scored are added to the player's score and play moves on to the next player. In the case of zero points value, the correct answer is shown and then play passes to the next player. The answers are selected by moving the highlight bar up and down using the \* and ? keys and confirmed by pressing <SPACE>.

### The Quick Fire Question Round

This is a "buzzer" round in which the Quiz Master asks a question which is open to all three contestants. Each is allocated a "buzzer" key on the keyboard and the first to press their buzzer wins the opportunity to answer the question. The keys are as follows:

Red contestant	Z
Blue contestant	V
White contestant	M

The buzzer keys only become active when the question is completely displayed. When a buzzer is pressed the two other buzzers are disabled, the sound of the buzzer is heard and the score of the player who has buzzed flashes. The answer to the question is then displayed and the contestant is asked "Were you correct?". Answering "YES" adds two points to his score and the next question is asked. However, a wrong answer leads to the deduction of one point, to discourage guessing!

There are six Quick Fire questions in the round.

### Final Scores

The end of the Quick Fire Question round is the end of the game. Should you wish to play a second hame using the same player details, press Y when prompted. When the Sport Selection Screen is displayed the sports chosen in the first game are not available. Pressing NO will reset the game and you must start from the beginning.

# SPRITES VERSION 2

*Professional, Originally Released On Cassette Only*

Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## **Review (Electron User)**

Whatever you enjoy doing on your Electron, writing games or education programs or just playing around, this program is without doubt a real boon. It lets you produce beautifully fluid-smooth animation in minutes with a minimum of difficulty.

A sprite, for the uninitiated, is a block of graphics which can be moved around the screen pixel by pixel giving smooth movement. The micro takes care of deleting and moving the image, leaving the background underneath undamaged.

The package consists of three definier programs, some ready made sprites - although it's more fun to make your own - and about twenty machine code routines, each incorporating different features and using varying amounts of memory.

Writing, changing and using the sprites is simplicity itself, with the use of the resident integer variables and calls to machine code routines from your Basic program. All this is explained in the comprehensive manual.

Also supplied are two demonstration games complete with listings. However these do not do the sprites justice, being simple and uninspiring.

What puts this program way ahead of other packages available is its many features. These include a collision detector, preset flight paths, extra-large super sprites, an amazing enlargement facility, and up to 48 sprites at once, each of which can have two alternating images instant animation as the sprite moves.

Simonsoft Sprites has to be one of the best things for programmers wanting to write good programs since the Electron itself.

Andrew Oldham, ELECTRON USER 2. 2

# SPY SNATCHER

*Professional, Originally Released On DFS 1900 Disc*

Game Type : Text Adventure; Disc-based; The Last Official Electron Adventure Released!  
Authors : Jonathan Partington & Jon Thackray  
Standalone Release(s) : None  
Compilation Release(s) : 1992: SPY SNATCHER, Topologika, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : TOPOLOGIKA, 1 South Harbour, Harbour Village, Penryn, CORNWALL TR10 8LR  
Disc compatibility : CDFS 1900, DFS 1900

## Instructions

The object of SPY SNATCHER is to identify and catch the 'Mole' (whose premises are known as 'The Zoo').

This person, last night sometime, removed the plans of the 'Sonic Macrothrodule' from the chief's safe, and is preparing to leak them to a hostile power (Ruritania). The chief, Sir Arthur Cayley, in co-operation with Superintendent Hardy of Special Branch, leaves you to explore The Zoo to see what evidence you can find.

Because everyone else is under suspicion, nobody must know that you are about - there will be trouble if you run into the security guard, or any personnel who happen to be working late!

SPY SNATCHER is Thackray and Partington's best game yet. Inspired by THAT book, SPY SNATCHER will keep you on the edge of your seat. And the edge of sanity too...

## Foreword

SPY SNATCHER was written, designed and programmed by Jon Thackray and Jonathan Partington.

The game was written in 1988 following the publication of the book "Spy Catcher" by Peter Wright. Nothing and no-one in SPY CATCHER is intended to bear any resemblance to any of the characters in that book, whether living, dead, real or fictitious, sane or insane.

Jon Thackray and Jonathan Partington would like to thank all the (insane!) people who play-tested the early versions of SPY SNATCHER including Richard Forster, Bob Redrup, Peter Killworth, David Seale, Richard Clayton and TOPOLOGIKA.

The Acorn versions would not have been possible without the dedicated work of Jon Thackray, who designed and wrote the playing system.

The Amstrad versions would not have been possible without the dedicated work of Richard Clayton of Locomotive Software, who wrote the playing system for Amstrad CPC, PCW and IBM versions.

Writing games like SPY SNATCHER really is a labour of love. Countless hours have gone into the organisation of the game, the creation of it, and the testing. Please don't give copies away to your friends. Make them buy it, so that TOPOLOGIKA will be encouraged to release even more guaranteed graphic-free top quality classic text adventures!

Welcome agent number 3084. Do you want to be told the details of your mission? Y

You have been summoned to MI7 headquarters, popularly known as 'The Zoo' in order to unmask a mole.

The chief of MI7, Sir Arthur Cayley (known to his friends as 'Z') is extremely worried, because the plans for the new Sonic Macrothrodoule are believed to have been leaked. They were kept in the safe in his office, and were there yesterday when he came in at 9 am; the safe had been disturbed when he checked it in the morning but the plans were still there. Z reckons that it would take at least an hour to remove the plans, copy them and return them.

With Cayley is Superintendent Hardy of Special Branch, who has been assigned to MI7 on special duties for some weeks.

"We're off for a drink in the 'Cloak And Dagger' now," says Z. "Take a look round. Because of your unofficial position we can't openly give you access to the files, but if I were you I'd start with my secretary's office while she's downstairs - she'll have details of my movements yesterday as well. You can probably rule out Newton, who is abroad, and Brauer, who's on holiday. Nobody else knows you're in the building now that a new Security guard has come on duty. The guard usually patrols at about 7pm. Don't let anyone see you, or you'll have to abandon the investigation. Come and find us if you think you have some useful information. Good luck!"

Cayley and Harrison are joined by a third person as they go down the stairs.

You are at the southern end of the first floor corridor, which seems to be fairly brightly lit throughout: for security purposes the lights seem to be fixed on at all times. Three doors confront you at this point, each bearing the names of their alleged occupants.

To the south, the notice says "Sir Arthur Cayley K.B.E. Head of Dept." To the west, a similar sign says "Miss Pell. Secretary." To the east, the notice says "Russell. Accounts."

There is a further corridor to the north, with several more closed doors leading off it. Which way will you go?

We assume that you already know how to play adventure games. (If this is your first game, write to TOPOLOGIKA for a free copy of the leaflet "What is an Adventure Game?" which shows you the sort of thinking you have to go through in order to get anywhere!)

The next few pages contain questions that even tough players ask (when they're stuck!) along the lines of 'What do I use the XXX for?'

If you really are stuck, you can find a hint number by looking up a particular clue. Once you know the number, type HELP <RETURN> at the prompt. The computer will ask you which number you want.

Type the number then press <RETURN>. Once you've read that hint, the computer will ask if you want another Hint from that set, i.e. on the same topic. If you do, press Y <RETURN>. If you don't, press N <RETURN> and you'll be dropped back into the game.

Each hint contains about three clues on the topic you've chosen.

How do I stop the tape from being erased? - Hint 1  
How do I stop the tape from being erased before the information is gone? - Hint 2  
How do I get information from the tape? - Hint 3

How do I decipher the secret message? - Hint 41  
What do I do with the information on the sweet wrapper? - Hint 42  
What do I do if the pub is closed? - Hint 43  
What do I say to Cayley and Hardy when I meet them in the pub? - Hint 44  
How do I use any specific object in the game? - Hint 45

Still stuck?

Whilst we will always try to give telephone help with *technical* problems, we cannot tell you how to solve the puzzles. If, despite having tried the on-line help system, you're still well and truly stuck, drop us a line with a brief but complete description of your problem. We'll pass your letter on to Jon Thackray or Jonathan Partington who will respond in due course - but only if you enclose an SAE for their reply.

## Instructions

*"Outstanding High-Resolution Character Animation For One or Two Players Playing Simultaneously"*

*"This game marks a new era in BBC/ELECTRON programming, a product of unequalled quality that will become a legend of its time."*

*"A brilliant and unique split-screen layout which allows both players to play independently."*

*"The action starts from screen one, no need to wait your turn as you guide the white and black spies through the inter-connecting rooms of the Foreign Embassy. You'll need to keep one eye on your opponent, though, as you set (and defuse) a variety of bobby traps, engage in club to club combat and frantically search for the Top Secret Briefcase, but don't forget to collect your passport, secret plans, money and a key which must be obtained in order to escape before your plane takes off."*

## Introduction

Welcome to the MAD world of SPY Vs SPY. You will quickly appreciate what is going on, the strategies and tactics come later!

This booklet will help you to get to grips with some of the tactics and includes some important knowledge.

Created by Antonio Prohias, the secret agents dressed in black and white first appeared in MAD magazine in 1960. Their antics as they battle for supremacy over one another, have been enjoyed by millions in paperback as well, since 1972.

TYNESOFT is proud to introduce the first official SPY Vs SPY computer game.

The game can be tackled by two players - one seeking to outwit the other - or one player against a computer-controlled agent. Both appear on the screen independently and both play simultaneously, planting booby traps, engaging in battles with their clubs when in the same room, chasing one another and generally getting in the way as much as possible.

An adventure with a real live opponent out to thwart your every plan and initiate your very destrucion.

The ultimate action strategy game, SPY Vs SPY introduces two new computer game features to help you make the most of the MADcap action.

**SIMULVISION** utilises a revolutionary split-screen display depicting both players' activities simultaneously. Even when playing alone against the computer, you can see what he is up to.

**SIMULPLAY** lets both players play simultaneously. There's no need to wait your turn as you travel throughout the maze of interconnecting rooms. The search goes on for the Top-Secret briefcase and both spies must keep a weather eye on what their opponent is up to, while planning and dashing around themselves.

## **Game Controls**

### **White Spy (Player 1)**

Z - Left, X - Right, F - Up, C - Down, G - Manipulate object/strike opponent

### **Black Spy (Player 2/Computer player)**

M - Left, < - Right, ; - Up, > - Down, \* - Manipulate object/strike opponent

## **Options**

f0 ..... Number of Players  
                  1/2 and quit game when spies are on separate screens  
f1 ..... Difficulty level i.e. number of rooms in a maze and the time to  
                  search them in 1 - 7  
f2 ..... Music on and off toggle  
<SPACE> ..... STARTS GAME

## **Object Manipulation**

First, move within range of any object (border of box will flash). Then press the manipulate key. Any object found within a room can be opened or lifted and may reveal one of the hidden items you are looking for. If you're not so lucky, it will activate a BOOBY TRAP, blowing you to smithereens...

## **Opening Doors**

Again, move within a range of any open or closed door, press the Manipulation key and it will close or open.

## **Game Elements**

### **Simulvision**

The top half of the screen monitors the actions of the White Spy, the bottom half depicts the Black Spy (either player two or the computer). The activities of both Spies are revealed to both players in the rooms shown on the left side of the screen. The right side is reserved for the Trapulator and its six icons.

### **Simulplay**

With the clock running, we didn't think it was fair to make players wait to take turns. So, Simulplay.

Since both Spies' activities take place out in the open, the challenge includes watching and remembering what the other Spy does while you go about your business.

## **Game Objective**

The ultimate objective is to escape from the embassy with the Top Secret Briefcase with your passport, money, secret plans and the key. If this complete victory is not possible before your time runs out, your Spy will content himself by out-scoring his rival.

### **Hand-To-Hand Combat**

When both Spies enter a common room, they will have the option of attacking the other player. At this point, with only one of the two **SIMULVISION** screens active, the Spies wield clubs and the players use the keyboard to control both Spy and club, attempting to land several solid blows to the other Spy's body. If either Spy had the briefcase when this confrontation began, the winner can now grab it and run.

In the combat mode, Spies cannot search objects, or use the **TRAPULATOR** (no map or traps). Doors, however, still work. If Spies are not within range of any object when pushing the Manipulate Key they will wield clubs with which they can hit the other Spy in the stomach.

Hitting the other Spy weakens him, and about five solid blows are needed to "kill" him. However, Spies will recover strength over a period of time.

If a Spy is carrying anything when he enters a common room, the object is lost or hidden in the common room, depending on the type of object. Traps and remedies are lost, while inventory items and the briefcase are hidden somewhere in the room. The winner of the combat sequence can search the object out, and either regain or gain possession.

NOTE : At the beginning of each new game, both Spies will start out in the same room only a few steps from each other. So keep your guard up.

### Time

Both players start with equal time to travel the maze, collect required objects, search for the briefcase and exit the embassy before their plane takes off. However, there are several time penalties. If you are the victim of a booby trap or the loser in a bout of hand-to-hand combat the clock will continue to count down even though you are 'unconscious'. These losses of time can never be regained.

Both players can never run out of time at the same time. Therefore one player will outlive the other. The surviving player will continue his search for the briefcase, required objects and the exit. If you are playing against the computer and the computer has time remaining, you can abort the mission by pressing f0. Even after your Spy's demise, the traps he has set remain. The game is by no means over just because one player's time has run out.

### Booby-Traps (See Trap And Remedy Chart)

As players move through the maze of rooms, they may select any of the five booby-traps. The booby-trap arsenal contains: Bombs, Springs, Buckets of Water, Guns and Time Bombs. The Time Bomb cannot be carried or neutralized! The Gun and the Bucket of Water can only be attached to a door. All other traps may be placed behind anything found in any room.

Spies can carry traps in and out of rooms, placing them where they wish when they are ready.

1. Hold the Manipulation key, you have just accessed the TRAPULATOR. Observe the large arrow.
2. Move the arrow about the TRAPULATOR using the Left and Right key.
3. Position the arrow over the booby-trap of your choice.
4. Press the Manipulation key. The booby-trap is now held by your Spy.
5. Position the Spy in front of the hiding place you have selected.
6. Watch for a flash in your Spy's room. This flash indicates the Spy is properly positioned.
7. Press the Manipulation key. The booby-trap will disappear and you will hear a beep. This indicates the trap has been set.

Once a trap has been set, **either** Spy can set it off! A Time Bomb will go off in fifteen seconds once selected. Any Spy(Spies) in the room at the time of detonation will be zapped. Unlike other traps, the Time Bomb is not set off by the searching of the Spies. They come in handy if you are being chased. The other player will be awarded points for each trap set off by the opposition. if the bobytrapee had been in possession of the briefcase, the other Spy can use this time to attempt to locate the victim and grab the briefcase.

To add insult to injury, when a player sets off a trap, he gets zapped while the other Spy laughs hysterically.

### Remedies (See Trap And Remedy Chart)

**Except** for the Time Bomb, each of the traps has a disarming remedy hidden throughout the maze. Each type of remedy is always hidden in the same type of location. For example, the scissors are used to disarm the Gun. Scissors are only found in the First Aid kits hanging on the back walls. As with traps, remedies can be picked up and carried from room to room. Spies can **not** carry more than one thing at a time EXCEPT inside the briefcase.

## Booby-Traps And Remedies

TRAP	SYMBOL	REMEDY	LOCATION
Bomb	Everywhere <b>EXCEPT</b> with door	Water bucket	Red Fire Box on Left Wall
Spring	Everywhere <b>EXCEPT</b> with door	Wire Cutters	White Tool Box on Right Wall
Water Bucket	Door <b>ONLY</b>	Umbrella	Coat Rack
Gun with a string	Door <b>ONLY</b>	Scissors	First Aid Kit on Back Wall
Time Bomb	<b>ANYWHERE</b>	None!	N/A

## Trapulator

Located to the right of each of the rooms is a calculator-like TRAPULATOR. it serves four basic functions. You can use it to SELECT BOOBY TRAPS; pinpoint your LOCATION, gauge your TIME remaining and check INVENTORY.

Across the top of the Trapulator is a digital clock which indicates the time left until your plane takes off (with or without you)! Below the clock are six buttons. On the first five, selectable booby-traps are indicated. However, the sixth button in the lower right-hand corner calls up a map of the embassy you have broken into.

The map will appear in the room that your Spy was occupying at the time the map was requested. The room your Spy is in will be the one blinking on and off. Black Rooms indicate that your Spy has been in that room at least once. Any required inventory items not yet collected are represented by a dot. The map does NOT tell you what item is in a particular room, just that something you are looking for is there. Finally, the Trapulator displays items you have successfully collected as you ready your escape. The map does NOT show the location of the other Spy.

## TRAPULATOR model FSS 84

1 : Warning Indicator  
2 : Timer  
3 : Bomb  
4 : Spring  
5 : Water Bucket  
6 : Gun & Sting  
7 : Time Bomb  
8 : Map  
9 : Passport  
A : Money  
B : Key  
C : Secret Plans

## Inventory

Your mission being to escape the opposition's embassy, Top Secret briefcase in hand, it is important to remember that all else is but a mere distraction. Before time runs out, you must manage to find and keep the briefcase, locate the only exit and run for your plane with **all** of the following: **PASSPORT**, travelling **MONEY**, the secret **PLANS** and the **KEY**.

## Placing An Object In The Briefcase

In order to pick up any of the four required items i.e Passport, Money, Key or Secret Document, place the briefcase into the file, picture, etc. that holds that item and then remove the briefcase, the item will automatically go into the briefcase.

## Exit

There is only one way out of each embassy building. The exit door is marked. You can **not** leave without all of the required inventory, the airport security guard will see to that!

## Ranking

At the conclusion of each game, players will be awarded the title or rank they have earned. Bonus points and time penalties are calculated by the computer. Rather than indicate a numeric score, you will get "ranked".

**Instructions' Source** : SPY VS SPY (Tynesoft) Mini-manual

### **Review (Electron User) - "Superb Spy Thriller"**

My name is Bond, Roundhay Bond of the tea service and when ELECTRON USER needed someone to review Tynesoft's new game SPY VS SPY, I was their man. This is one of those pieces of software you pick up, play, and after 20 minutes of fruitless fumbling, concede it's better to read the instructions first. This is because it is more complex than it first appears and requires a lot of thought and pre-planning.

Take my advice: Don't rush until you know what you are doing. The game can be played by either one or two players, the Electron controlling your opponent if you select the one player option.

SPY VS SPY employs a clever technique it calls simulvision - a system where the screen is split horizontally across the middle, dividing it into two equal sections.

The two spies move independently of each other and their location is shown in each half of the screen - one at the top, one at the bottom. When both are in the same room only one location is shown. Although similar systems have been used on the Electron (DUNJUNZ springs to mind), SPY VS SPY's display is much clearer and this makes the game easier on the eye and nicer to play.

Each room is drawn in 3D as if viewed from the front. This makes it easier to judge the relative positions of objects than other 3D games I have played.

To the right of each playing area is a peculiar looking device called a trapulator. This displays the time remaining, the objects carried, objects found and a booby trap selector.

The aim of the game is simply to recover four particular objects (I won't tell you which, it'll spoil the game) from a rival embassy, pop them in a briefcase and escape back home on an aeroplane.

On the face of it, this may seem simple, but don't forget the other spy is trying to do exactly the same thing, and he's not going to make it any easier for you.

The objects are hidden in a variety of places: Behind paintings, in cupboards and so on. A nice feature is the way they are shifted around when they're being examined by one of the spies.

As well as the objects you are searching for, you can run into booby traps left by your rival. If you are fast enough you can see where he places them, courtesy of the clever simulvision and either avoid or disarm them.

Unfortunately, you can only pick up and carry one object or tool at once and if you are holding the wrong one, poof, the little guy floats off to that great embassy in the sky, while the other laughs himself silly.

A very useful booby trap is the time bomb, as this can't be disarmed by either spy. Once selected and dropped you have 15 seconds to leave the room or you'll go up too. The trouble with booby traps is that either player can trigger them, so don't forget when you put them.

The control keys are a little odd, but remarkably well placed, although the Electron's keyboard is a bit cramped at the best of times for two hands, let alone four. The game is compatible with the First Byte joystick interface so it may be possible to have one player on keyboard and one on joystick.

All other add-ons, such as Turbo Drivers, for example, should be disabled, as the game takes a long time to load and due to its complexity, can easily be crashed by such units.

For graphics and sound the game is one of the best produced for the Electron and is a credit to the whole programming team.

Overall, I have to say I have never had so much fun trying to outwit a computer at its own game and the sight of your opponent being electrocuted by touching a booby trapped doorknob is hilarious.

Due to its complexity, it's not a game for younger children, although it's already caused a few squabbles among my family over who plays next. Highly recommended.

## Instructions

### The Scenario

You play the role of Spycat. After loyally (?) serving M.I.4.1/2 for over fifty years, you hear that you are soon to be retired - with only a pittance of a pension! This has something to do with M.I.4.1/2's cash shortages and the governments's recent budget cuts. You feel humiliated and betrayed; you resolve to find three important classified research documents, then flee to Greenland to write your memoirs.

During your endeavours, you will come across some familiar faces. Enlist their support if you can; you will need all the help you can get. Watch out for the technical wizard "Q" and his many strange (and dangerous) creations. At one stage, you will need to make a journey to somewhere so secret that no-one knows where it is!?

### Your Objective

Your objective is to:-

- (a) collect all three research documents,
- (b) transfer them to microfilm,
- (c) obtain a typewriter, a passport and an air ticket to Greenland,
- (d) proceed to Heathrow Airport,
- (e) emigrate to Greenland and write your memoirs.

### Energy

Keep an eye on your energy level - shown at the top-left of the screen. Your energy will reduce if you walk into the surveillance cameras or touch any of the strange contraptions invented by "Q".

If your energy drops too low, you will die from exhaustion. Energy may only be replenished by finding and using an energy pill or a glucose pill.

If you enter a room in which you can see a skull-and-crossbones, then beware! This usually indicates some deadly danger - such as an electric floor - in that room or an adjacent room. Tread carefully otherwise you may find that your energy quickly drains away.

### Doors

To open a door, stand in front of it and activate the "in" icon. Unless the door is locked or impassable, you will go through - into a different area.

### Collectable Objects

There are 16 objects to be found positioned throughout the rooms. These include a Sinclair Z88 computer, a passport and a pound coin. These objects can be picked up and dropped anywhere as you wish.

There are also another 15 objects which can be obtained from cupboards, machines, etc. These objects are generally of a rather sensitive nature (for example, U.S. secrets) and may only be dropped into other cupboards.

You can carry up to three objects at a time. To pick up an object, you must:-

- (a) highlight an empty pocket - that is, a pocket that contains "NOTHING" (as shown at the top-right of the screen);
- (b) activate the "^" icon.

To drop an object, you should:-

- (a) highlight the pocket containing the particular object;
- (b) activate the "^" icon.

### **Using Objects**

To use an object, activate the "[" icon.

Some objects - such as energy pills - may be used anywhere. However, most objects may only be used when you are standing upon a platform base - indicated by two inward-pointing arrows either side of the platform.

To give an object to a particular character, use the object on the platform in the room where the character is present.

### **Tranferring the Research Documents to Microfilm**

You must transfer all three research documents to microfilm. This is the only way you will be able to take the information out of the country, and you'll need this confidential material when you write your memoirs. To tranfer a piece of research to microfilm, you must take the research to a particular room; then you should use the research document in that room. When it has been microfilmed this will be indicated in the "research documents" panel shown at the top of the screen. The microfilm will then be carefully hidden about your person.

### **General Hints**

You start your mission in Blackhall. Walk to the right off the screen; keep out of the way of the moving surveillance camera; jump over the crates; walk right past a door and past another camera; jump onto the crates. Now stop and pick up the Sinclair Z88 computer by activating the "^" icon.

Walk left until you reach the nearest door. Go through it by activating the "in" icon. You will now find yourself in the Ministry. Go to the right until you come across a door marked "Q". Go through, right and drop the computer before you reach the sidepass door. Now you must go back and find the appropriate sidepass that will enable you to open this door.

Trust no one, and always expect the unexpected!

### **Game Controls**

Z - Left, X - Right, <RETURN> - Jump  
Cursor keys - Select Icon, <SPACE> - Activate Icon  
1, 2, 3 - Highlight Pocket 1, 2, 3

The heart icon shows your energy level.

The sound can be turned on or off by highlighting the musical note icon with the positive or negative sign respectively.

### **Credits**

The Spycat	PETER "GIMME MY PENSION" CORRECT
The Prime Minister	The Rt. Ho MARGO THATCH, M.P.
"M"	BERNIE "NOT A DOUBLE AGENT" HOLLUS
American Ambassador	BRAD "NUKE THE LOT" MUCKBURGER
Soviet Ambassador	MIKHAIL "GROOVY" GORBOCHOPS
Greenland Ambassador	BJORN "GOOD MOANING" SMORGASBORD
Special Guest Star, "Q"	Sir CLIVE AMSTRAD

**Instructions' Source** : PLAY IT AGAIN SAM 9 (Superior/Acornsoft) Inner Inlay

### **Review (Electron User) - "Spy Spoof"**

SPYCAT, Superior's latest release for the Electron, is based very loosely on the recent Peter Wright SPYCATCHER fiasco. In it, you play the role of a shady character going by the name of SPYCAT. After loyally serving M14-and-a-half for more than 50 years you hear that you are soon to be retired with only a mere pittance of a pension.

This has something to do with the ministry's cash shortages and the government's recent budget cuts. You feel humiliated and betrayed, and resolve to steal three important classified research documents before fleeing to Greenland to write your memoirs.

To give you an idea of the thread of humour which runs throughout this extremely well-written arcade adventure, you will at some point come across the following locations: Blackhall, 10 Drowning Street, the sewers, Heathrow Airport, Greenland and a location so secret that no one even knows where it is.

During your endeavours you will come across some familiar faces - enlist their support if you can. But watch out for the technical wizard Q, and his many strange and dangerous creations.

Several objects are scattered about, and the purpose of some is rather dubious to say the least. Among the items to be found are a Sinclair Z88, a pound coin, some US secrets and a passport.

During the game you control a small, cloaked figure, which is presumably a car in a trenchcoat. It is animated quite smoothly and responds tightly to the control keys.

The best bit of animation is when you leave the keyboard alone for a while. After a few moments, Spycat will flash at you, revealing a kinky penchant for polka-dot boxer shorts.

To use certain items, you must be standing on one of several platforms which are scattered at various useful locations. And that brings me to the worst feature of SPYCAT.

Every action in the game, apart from the movement of the main figure, is controlled from a small panel of icons at the top of the screen. Picking up, replacing and using objects, opening doors, turning the game sound on and off and more are all done by moving a pointer to highlight the relevant icon, followed by pressing <RETURN>.

This seems silly. In a different game with a different scenario it would be a perfectly acceptable way of controlling parts of the action. In SPYCAT however, with its already crowded Mode 5 screen, it quickly becomes tiresome and slows down the action.

This is a shame, as it's my only complaint in an otherwise excellent game. I can see the temptation to add more of a high-tech feel to a game of this type, but the programmer has succumbed to using positively unhelpful gimmickry.

All in all, though, SPYCAT is an excellent arcade adventure with a strong vein of humour underlying all the action - seeing Maggy at her desk in number 10 Drowning Street really tickled me.

If you can get used to the unwieldy icon system, this game is certainly worth the cash - it will puzzle and amuse you for days to come.

## Instructions

*"Don't get mad, get even! Push that giant cat trap and grab yourself a moggy."*

Don't get mad, get even!

If you're a mouse then avoiding cats is a way of life. Now the Squeakaliser is on the case. Collect the keys and you can release the instruments of revenge. Push that giant cat trap and grab yourself a moggy. Hand over the dynamite and watch him run.

Watch out as you collect your keys, or the cats will pulverise you if they can. Keep an eye on the time, as it could be the end of the chase for you.

Go ahead puss! Make my day!

## Game Controls

Z - Left, X - Right, \* - Up, ? - Down

**Instructions' Source** : SQUEAKALISER (Bug Byte) Back and Inner Inlay

## Review (Electron User) - "Darn Near Catatonic"

Software at a reasonable price is always welcome and it's nice to see more appearing on the market. But we want reasonable value for money and I feel that this offering falls short.

SQUEAKALISER, a maze type game with you playing the mouse world's answer to Clint Eastwood, didn't make my day. The half-pint-sized hero must gather a number of keys to open a box containing a giant cat-trap. This is moved round until all the cats have been eliminated from that screen.

On alternate screens the box opens to reveal sticks of dynamite that have to be handed to the cats. Unfortunately, sometimes the cat hands it back and runs off.

The idea behind the game is good. Movement of the hero is simply up, down, left and right. The sound is adequate and the graphics very cute indeed - when the hero gets his comeuppance the little birds twittering round his head are plain to see. But the game is just not properly finished off.

The opening screen starts the rot with the title, Squeekaliser, which shows that someone, somewhere can't spell.

The game uses part of the screen for memory resulting in the picture being limited by two very distracting bands of colour at the top and bottom of the display. I cannot believe that such a simple game should use that amount of memory.

One result of the limited playing area is that the remaining screen is too small to generate anything other than a very basic maze.

When the game starts you are offered a choice of two levels, known as Sheer Panic and Sweaty Palms. These would be better renamed as Sheer Boredom and Sweat It Out. The only difference between the two is that choosing the first causes all the characters to slow down to the point where it is almost impossible to cross the screen before time runs out.

Another point of frustration is that although your mouse starts with seven lives, once he is cornered and despatched by a cat, he is reincarnated in exactly the same place. This usually means the loss of all your lives.

Oh Bug-Byte, PLAN B was terrific, I liked DUNJUNZ so much I went out and bought it myself, but for me SQUEAKALISER is a catastrophe.

## Instructions

*SQUEEZE is a game of strategy which children and adults of all ages will enjoy. You and your opponent each have a shape. The aim of the game is to squeeze your opponent out and to put as many of your shapes onto a board as possible. There are lots of different shapes and board sizes from which to choose and three levels to master.*

*Planning your moves is challenging and exciting. You are able to go from a simple movement up, down or sideways to one which turns or flips the shapes. SQUEEZE encourages its players to visualise and to estimate how shapes relate to each other in a given space. While having a lot of fun, you will be improving your geometry and toning up your problem-solving muscles as well!*

## Introduction

It is easy to learn to play this game. You and your opponent (which could be the computer) each have a shape. The aim of the game is to get as many of your shapes onto a board as possible. Every game is different because new shapes come up at random each time and there are eleven board sizes from which to choose.

The shapes used in this game are called pentominoes (rhyme it with dominoes!) because they all consist of five connected squares.

## In all A.S.K. programs

<RETURN> Remember: once you have typed in your response a program will  
< icon > deal with it until you press the <RETURN> key.

<ESCAPE> You can always return to the beginning of a program by pressing  
< icon > the <ESCAPE> key.

<DELETE> You can rub out anything typed in, before the <RETURN> key is  
< icon > pressed, by using the <DELETE> key.

<\_Hand\_> Means : Please press the space bar to carry on with the program  
< icon >

< ? > Means : the program did not expect the response it has just received. Perhaps there was a typing error? In any case, to carry on, just press the space bar and try again.

<CTRL> All of our programs incorporate sound. There are various volume levels - holding down the <CTRL> key and pressing the <S> will  
<S> change the level - keep pressing the keys until you are happy with the volume.

Note: The program will not run on computers that have 0.1 operating systems.

## How to use the program

The program tells you what to do at each stage.

First: select a board size between 10 and 20. If this is the first time that you are playing, try size 10.

Next: decide at which level you would like to play. At level 1 you can only move the shape UP, DOWN or SIDEWAYS. At level 2 you can also TURN your shape. At level 3 you can move it up, down or sideways, turn it or FLIP it over as well.

Then: choose whether 1 or 2 people are going to play. If you choose 1, the opponent is the computer.

Now: Type in the names of the players. Press <RETURN> after each name. If the computer is playing, it is Player 2 and calls itself "Micro".

### **Before the game begins**

Depending on the level you have chosen, 1, 2 or 3 pentominoes will now appear on the screen. You can experiment with them. You can move one about, using the arrow keys. You can move another one about, with the T key for Turn, and a third one with the F key for Flip. When you are ready, press <SPACE> to start the game.

### **The game begins**

The board appears. On the left side of the screen is a red pentomino for Player 1 and a yellow pentomino for Player 2, with scoring boxes under each.

A pentomino appears in crosses on the board. Compare it with those on the left to see whose it is.

The name of the player to start the game appears at the bottom of the screen. When this player has decided where to keep the first pentomino, press <RETURN>. It will be coloured in.

If it is the computer's turn to start or play, it will have a think and put its pentomino down. It will be coloured in.

The name of the next player appears at the bottom of the screen. This player's pentomino will then appear in crosses on the board. When this player has decided where to keep it, press <RETURN> and it will be coloured in. Now play returns to the first player and that pentomino reappears. The game continues.

One point is given for each piece placed successfully on the board and the score is recorded in the boxes as the game proceeds.

When there are no more moves left for a player, the message "(player's name) can't go" will appear. The computer will check to see if the opponent can go. If this is possible, the opponent will get another turn. When neither player can move, the winner's name or the words "Game drawn" will be displayed.

The player with the highest score wins. Press <SPACE> to see the scoreboard. It shows the scores for each game so far, and gives a total. Press <SPACE> again to start the next game.

There are four games to a match with a grand total at the end of the match. Once you have seen your grand total, press <SPACE> and see what happens...

When you are ready to go back to the beginning of the program, press <ESCAPE>.

### **Remember**

Pentominoes must not overlap each other. If you overlap once, a ? appears. Press <SPACE> for another move. If you overlap again, you miss a turn.

Try to leave spaces on the board which you can use later but which the other player cannot use. SQUEEZE your opponent out!

If there is a space and you cannot see it, you are allowed one HELP per game. Press H to use it. Your pentomino will be put down and coloured in but it will not count towards your score.

### **Educational notes**

SQUEEZE is a game of strategy that encourages its players to visualise and to estimate how shapes relate to each other in a given space and how their movement continually affects and alters the remaining space. It promotes the ability to think about moving shapes in three basic ways. In this game the players translate them (move in straight lines) turn them (through 90 degrees) or reflect them (flip over). Everyone will enjoy the challenge of anticipating and planning moves and they will be grasping an important geometrical concept without even realising it.

Children will remember the fun they had cutting out their own squares or shapes and sticking them down in different ways. Not only would they have enjoyed the interesting patterns that they had created, but they would also have concentrated on the changing nature of the space being used. Similar games and activities could be made with cardboard from different arrangements and numbers of squares (more or less than 5 to a shape).

# STAFF OF LAW

*Professional, Originally Released On Cassette Only*

Game Type : Text Adventure  
Authors : C.J. Potter & A. Potter  
Standalone Release(s) : 1984: STAFF OF LAW, Potter Programs, £2.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : POTTER PROGRAMS, 7 Warren Close, Sandhurst, Camerley, SURREY  
GU17 8JR. Tel: 0252 877608  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

You have been summoned to the land of Arda as the chosen one by the Lord Moram. The Despiser has taken the Staff of Law and corrupted its power. Only the chosen one has the ability to wrest from the Despiser The Staff of Law, and so restore peace and harmony to the land of Arda. Are you up to the task?

**Instructions' Source** : STAFF OF LAW (Potter Programs) Instruction Leaflet

## Review (Electron User)

Stop! Hands up those of you who have never heard of Thomas Covenant. Right! I hereby banish you from this review. Read the next one. It's about frogs or gorillas or something. As the rest of you are aware, Stephen Donaldson is the best writer of the century and the Thomas Covenant books are the greatest works of fiction ever. Who? Tolkien? Never heard of him.

Anyway, take another look at the title of this adventure. Ring any bells? Correct. Well, the bad news is that although the story-line originates from the Unbeliever series, it is not about him. You will meet Mhoram, or Moran as he is called here, and the Despiser, but Hile Troy, Elena, the Forestals, Ravers and the rest are missing.

You play the part of the "Chosen" (minus ring). You've been summoned by the high council where you're informed that you are the only one who can defeat the Despiser and return the Staff of Law to Andelain. I mean, Arda.

Here all the similarities between the books and this game end. You're now faced with an extremely fiendish adventure during which you'll learn to wire-walk and dive from great heights. I won't give you any clues, but you will need to know what a dumb waiter is.

There were, however, several things I didn't like. Mode 4 for example. What's wrong with Mode 6?

Also there's no save game facility, surely a definite must for an adventure? And you have to type in nouns in full, for example DRAWBRIDGE. Try typing that in a few times. Also there are spelling mistakes: 'Suddenly you hear a LOAD crash'! Mind you, the way my cassette recorder's been playing up recently, they could be right.

If it seems that I've pulled this adventure to bits, rest assured that, considering the complexity of the plot, these criticisms are a minor consideration. Also the program is written in Basic and therefore fairly easy to change anyway.

On the plus side is the skill and inventiveness shown by the programmers. Solving

this game requires a great deal of thought, as most of the problems will be new to you. Happily, Potter Programs offers a help service for this and their other adventures - one that I expect will be much used.

An excellent adventure that, although it would benefit from tidying up, is still well worth buying.

Merlin, ELECTRON USER 2. 7

# STAIRWAY TO HELL

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Platform Game  
Authors : David Vout & Simon Vout  
Standalone Release(s) : 1985: STAIRWAY TO HELL, Software Invasion, £9.95 (Big Box)  
1986: STAIRWAY TO HELL, Software Invasion, £6.95 (Small Box)  
Compilation Release(s) : None  
Stated compatibility : BBC Side A, Electron Side B  
Actual compatibility : As stated  
Supplier : SOFTWARE INVASION, 50 Elborough Street, Southfields, LONDON  
SW18 5DN  
Disc compatibility : Incompatible. Customised Loading Sequences

## Instructions

STAIRWAY TO HELL is a 15 screen game in which your task is to guide your man down through the various caverns to the Earth's core where he will encounter the Devil. On the way, he must collect items of treasure to score points. Higher points are awarded the deeper you go and an extra man is given for each screen completed. All 15 screens must be completed to be able to win.

The journey is split into four stages with four screens per stage. On the tape version, each stage must be loaded from tape and the scores etc are automatically transferred.

Part 1 :- "The Mine", "The Pump Room", "The Grotto" and "Vermin"  
Part 2 :- "Blizzards", "The Thaw", "The Garden" and "The Sub-Tropics"  
Part 3 :- "Jungle", "Mangroves", "Swamp" and "Desert"  
Part 4 :- "Entrance To Hell", "Fire & Brimstone" and "An Audience With The Devil!"

## Game Controls

Z - Walk left, X - Walk right, : - Climb up, / - Climb down  
RETURN - Jump (A short press will make a short jump and a long press will make a long jump)  
SPACE BAR will stop the game, wipe the score and set up the next screen.  
S - Sound, Q - Quiet

At "END OF GAME", pressing SPACE BAR will replay from the first screen of the particular section you are in and the RIGHT CURSOR KEY will load the next section. Tape versions must be loaded again from the start.

**Instructions' Source** : STAIRWAY TO HELL (SInvasion) Back Inlay

## Review (Electron User)

By far the biggest game I've yet seen for the Electron, STAIRWAY TO HELL is basically a graphics action game. But it has been produced on such a scale that it takes on the aura of an adventure program. It is actually four linked programs - the first three consist of four separate screens each, and the last of these three, making a total of 15 screens, each of which is nearly a game in itself.

The object is to guide your explorer on his journey to the centre of the Earth through the various hazards to the last screen - an audience with the Devil. I haven't seen this final screen yet, but the preceding fourteen constitute a bewildering variety of detailed graphics and excellent animation.

Each is a variation on a familiar theme - climbing over obstacles, up and down ladders, jumping holes or moving hazards and collecting objects for points.

Variation is the key word here, and I can't think of a possibility which has not been covered in some way in one or another of the locations.

Moving is by the usual keys (Z, X, \* and ?) and <RETURN> for a jump. Each section of the game has some short instructions, informing you of the environments, how to score points and bonus marks, and what to look out for.

Part 1 takes you down into the subterranean world through mines, the pump room and the grotto, each with its own brand of hazard such as rock falls, trolleys and rats. From here you move into the realms of ice and snow, which gradually thaws to become a sub-tropical forest with mutant plants. The temperature rises still further in part three, where snakes abound in the jungle, crocodiles in the swamp and mosquitoes in the mangroves. Should you survive the desert and the entrance to Hell, fire and brimstone are everywhere as your explorer avoids falling lava and jumps flaming pits.

I'd really love to know what the audience with the Devil is like! The instructions do have the strange observation "Is this your journey's end?", so perhaps Software Invasion are keeping something up their sleeves.

My favourite screen is the Grotto, featuring invisible tunnels which you can only enter when approaching from the correct direction. Walking happily along you suddenly find yourself on a different level!

Along the way the very skilful will have accumulated enough points and information to enable them to solve the final screen, and in doing so stand a chance of winning one of the prizes being offered - the first worth seven hundred and fifty pounds!

Sound, however, is only adequate but to be fair this is not surprising when you consider how much has been packed in. STAIRWAY TO HELL has all the hallmarks of a very classy production. If you enjoy this sort of game, you'll love this one, and like all good adventures, it will take a lot of time and perseverance to complete.

One final point. The cassette is one of an increasing number with the Electron version on one side and the BBC Micro version on the other. The result is that many shops are now stocking Electron games where previously they only carried those for the BBC Micro. Manufacturers save on production costs as one tape is cheaper to produce than two, and of course more Electron programs in the shops means more tapes sold. This has to be good for the industry in general and Electron users in particular, and I would like to see this practice adopted by all software houses whenever it is practical.

## Instructions

*"One of the Class VII B ships of the ill fated Galactic Colonisation Programme has mysteriously re-entered Earth space . . . totally silent. Non humanoid life forms have been detected on board. Enter the ship and take part in this extraordinary graphic adventure through 120 rooms to solve the enigma of the STAR DRIFTER . . ."*

## The Game

Your adventure aboard this ancient colonisation liner begins on the bridge; your task - to discover the answers to this strange disappearance of the fleet.

You may move freely around the open areas of the ship, discovering artifacts and clues; but many parts will be inaccessible to you without the keys to the computer controlled doors scattered around.

Beware of the intermittent force fields in some of the corridors which will drain your Oxygen supply when active. However, with an oxygenator unit, it is possible to replenish your Oxygen supply by standing in one of these forcefields. Watch out for the many alien life forms that have infiltrated the ship; they will rapidly reduce your oxygen supply if they are allowed to touch you.

Each of your three lives will be terminated when the Oxygen supply is exhausted.

## Playing The Game

When the game has loaded, you will need to select the keys that you wish to use. From the title page, you may start the game by pressing <SPACE>.

Initially, communication with the Earth is impossible. Your first task therefore will be to locate the ship's RADIO and return it to the bridge, which is where you start the game.

You may only carry three items at any time; these are displayed on the left of the screen.

**Instructions' Source** : STAR DRIFTER (Firebird) Back and Inner Inlay

## Review (Electron User)

The first thing that strikes you about STAR DRIFTER is the sophisticated loader complete with twinkling stars. The game allows you to define the keys you wish to use to move around, fire and pick up or drop objects. Other options include sound on or off to spare the rest of the family, and freeze/restart, which I always find useful to rest my aching fingers.

This is the latest in the current vogue for graphics adventures. Set in a maze of

passages on board an ancient starship, your task is to uncover the mystery surrounding the disappearance of the other members of the fleet. The walls of the passages are covered with strange equipment and messages, not unlike Egyptian hieroglyphics.

You soon find that you are not the only creature on board the ship, which is filled with a variety of small, colourful and deadly alien lifeforms, each of which will try to rob you of your vital oxygen supply. When you've picked up the gun you can gain points for zapping them as you travel round the ship.

The graphics are nicely done, as good on a colour TV as a black and white one. The spaceman moves fast and smooth, though it must be said that he slows somewhat when the screen is full of agitated aliens.

Some of the passages are blocked by walls which can be blasted, and others by force fields which repel you unless you are carrying the correct two keys.

Only three objects at a time can be carried, and the instructions suggest that you should start by returning the radio to the bridge to enable communication with Earth.

The limiting factors are three lives and the oxygen supply, so to solve this game you'll have to keep very busy.

STAR DRIFTER needs more thought than most space action games, and it should help bridge the gap between these and text adventures. All in all I quite liked it, even if I didn't get very far. It's well written and the package has been well produced.

# STAR FORCE SEVEN

***Professional, Originally Released On Cassette Only***

Game Type : Strategy; Space Game  
Authors : Ian Souter  
Standalone Release(s) : 1986: STAR FORCE SEVEN, Bug Byte, £2.99  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : BUG BYTE, Liberty House, 222 Regent Street, LONDON W1R 7DB  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"You are the last Star Fleet Commander deep in space battling for 25 planets. Navigational and battle options, spyships, ground forces, fighters and a range of weapons. Stop the invasion of Earth and destroy the Battleglom from Vragus IV."*

You beat the Zurgs by destroying their home planet or by capturing and keeping 25 other planets.

You lose points by destroying enslaved planets and losing your own ships. Don't lose your command ship.

Navigational controls are Star Jumping, Orbiting and Attacking. Battle options are Break-off (f0), dense fire (f5), dispersed fire (f6). Battles start with a dispersed fire pattern, the concentrated fire pattern allows you to fire at a ship of your choice. Breaking off the action creates an emergency star jump to a random planet. Displays show energy levels; the screen turns blue when the Zurgs are firing back.

In orbit around a planet options are Bombard, Assault, Retire. Remember using up all your energy has its drawbacks. Assaults are started by an air attack followed by a land battle. If the planet is friendly it can supply recruits and fighters etc. Garrisons are essential if you are to hold the planets captured. They will also need changing.

Status reports include information on energy and force deployment. Scouts can operate independently of the main fleet. Intelligence is vital. The Zurg fleet has heavy and light cruisers and they seldom operate with more than 20 ships. You will need an industrial base to build fighters and watch the energy levels.

The best of luck.

**Instructions' Source** : STAR FORCE SEVEN (Bug Byte) Back and Inner Inlay

## Review (Electron User)

STAR FORCE SEVEN is a military strategy game set in a futuristic space context. You take the part of the space fleet commander, battling for 25 planets and trying to prevent the marauding Zurgs from invading Earth. Your first task is to decide how many of the various types of spacecraft you require. You have a limited number of points and must choose carefully between cruisers, transporters, spy ships and so on. Having made your decision, you decide which star to visit first.

There are 26 stars and, to make life easy, each starts with a different letter. When you reach a star, your main options begin. You can get intelligence reports on the size and population of the various planets. You may move into orbit around a planet and assault it or bombard it. If there are any enemy space fleets around you can attack them either in a random way or by picking off individual craft. If the

pressure gets too much for you, you can do a star jump and hope to find somewhere safer and quieter.

This is not an arcade type of game so there is no graphic action which you control. You make general decisions and the computer then carries out the action.

When you are battling to win a planet the display consists of the numbers of troops remaining, both your own and those of the enemy. I found this game rather dull to play. It looks like the kind of game that we had five or six years ago when computers had limited graphics capabilities. It does not offer a real chance to use your own skills and relies too much on random happenings.

Another factor I disliked was that on being destroyed, I had to reload data to be able to play again. I'm afraid I even found the rather limited sound an irritant. Thankfully this can be switched out.

There are five difficulty levels ranging from easy to difficult, but even level one was too hard for me. If you like this kind of strategy game no doubt you would be pleased to add this to your collection. I'd prefer to invest my money elsewhere.

# STAR PORT

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Platform Game With Puzzly Doors  
Authors : Tony Oakden  
Standalone Release(s) : None  
Compilation Release(s) : 1990: PLAY IT AGAIN SAM 14, Superior/Acornsoft, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : CDFS E00, DFS E00

## Instructions

The STAR PORT BETA has been attacked by hostile alien forces. A brief semi-coherent message was received from the STAR PORT requesting assistance...then all contact was lost. This message, and information on the STAR PORT, are reproduced for you before the mission commences. Press SPACE to leave the scrolling message screen.

Your overall objective is to recover five cases of medical supplies and then to use the escape ship at the top of the port. If you successfully complete the mission, you will be given a special message. If you write to Superior Software, quoting this message, you will be sent a signed certificate.

## Mission Instructions

The STAR PORT is triangular in shape. You commence the mission at LEVEL 0, the lowest level. Dotted around are objects which can be collected by simply walking or jumping on to them. Once collected, the objects will be used automatically.

The objects include; oxygen cylinders (which add 500 units to the remaining oxygen, up to a maximum of 1,000 units), batteries (which boost the energy level), extra blaster ammunition, medical supplies, numbered security doors. The security doors are red with numbers on them. The red doors with E on them cannot be opened with pass keys. Blue doors can only be opened by solving a puzzle (see below).

The base is populated by robots. These are destroyed by various numbers of hits by the blaster. Points are scored for destroying the robots, with higher scores being obtained for destroying the flying robots. You must score at least 500 points by destroying robots in order to complete the mission successfully.

Your mission can be terminated in three ways; run out of oxygen, run out of energy, run out of puzzle time.

## Puzzle Instructions

To open a blue door, you must solve a puzzle. Each puzzle consists of four interlocked wheels, which must be rotated in order to get the letters into the pattern;

```
      A
     B   C
    D   E   F
     G   H
      I
```

It is useful to practise puzzle-solving before commencing the mission (by pressing the P key), as once you are in the game, then the puzzle must be solved within a time limit. On LEVEL 1 only one wheel needs to be turned to complete the puzzle, on LEVEL 2, two wheels need to be turned ... and so on.

## Mission Controls

Z - Left, X - Right, <RETURN> - Jump, <SPACE> - Fire  
Press <RETURN> for longer to jump higher.  
<COPY>/<DELETE> - Pause On/Off  
S/Q - Sound On/Off (When paused), <ESCAPE> - Quit Game (When paused)

#### **Puzzle Controls**

1 - 4 ..... Turn Corresponding Wheel Clockwise  
SHIFT and 1 - 4 .. Turn Corresponding Wheel Anticlockwise  
R ..... Reset Puzzle to Start Positions  
ESCAPE .... Quit Puzzle (return to status screen or game)

# STAR WARS

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade 3D Wire-Frame Machine Code Battle  
Author : "Vector Grafix"  
Standalone Release(s) : 1987: STAR WARS, Domark, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : DOMARK, 22 Hartfield Road, LONDON SW19 3TA  
Disc compatibility : CDFS E00, DFS E00

### Instructions

At last the most famous coin-op Arcade Game and one of the most successful films of our era come together in this Domark publication!

Faithful to the original, the home computer version of STAR WARS should win first place in any game player's collection and will always be the one you go back to time after time.

The first scene is the Space Attack, with waves of hostile space-craft attacking your lonely but powerful ship. You battle to the Death Star, and once there fly close to the ground in a daring attempt to blast the space towers and flying stars, steering your way through the barrage.

Finally, you emerge in the trench, jumping and ducking the stretch barriers and shooting the missile emplacements fastened to each side of the death defying walls. There are many levels to the game with stirring music and fast and furious action is guaranteed throughout.

### The Game Structure

You take the place of Luke Skywalker, steering your X-fighter space ship from one attack wave to another, in order to eliminate the Death Star.

Each attack wave consists of three sequences:

#### **Sequence 1 - Dogfight In Deep Space**

Approaching the Death Star, you must shoot down the defending Empire's Tie-Fighters, while avoiding their deadly missiles.

#### **Sequence 2 - Through The Towers**

After reaching the Death Star's surface, you have to survive the attack of various laser towers, which grow up from the ground.

#### **Sequence 3 - Down The Trench**

At last, you dive down into the trench searching for your final aim: the exhaust port. Hitting the exhaust port causes the Death Star to explode and your mission has ended successfully.

At the beginning, you start out with a number of shield points. Each hit by an enemy missile, or collision with a Tie-Fighter, Laser Tower or Laser Barrier will decrement the shield strength by one point. At the end of each wave, you will get extra shield points, and bonus points for each remaining shield.

If you lose all of your shield points, your X-Fighter explodes and the game finished.

### Scoring

Hitting and destroying the various targets increments your score during the play. Here is a list of the different values:

Missiles .....	33 Points
Tie-Fighter .....	1,000 Points
Laser Tower .....	200 Points
Trench Turret .....	100 Points
Exhaust Port .....	25,000 Points

The ten best players are recorded in the highscore list.

### Choosing The Level Of Difficulty

At the very start of each new game, you have the possibility to choose between starting at wave 1, 3 or 5 with a different starting score of 0, 400,000 or 800,000 points. (Beginners are recommended to start at wave 1)

To choose the starting wave, you simply point with your cursor at the appropriate icon and press the FIRE button.

### Game Controls

Your spaceship will be steered by moving the joystick; the lasers of your X-Fighter are fired by pressing the FIRE button. See keyboard control instructions on the screen.

Good Luck, and may the Force be with you! Always.

**Instructions' Source** : STAR WARS (Domark) Back And Inner Inlay

### Review (Electron User) - "Use The Force, Luke!"

Several years ago Atari released a coin-op arcade game based on that most famous of films, STAR WARS. Employing fast moving vector graphics, it was an instant success. Domark have now released a version for the Electron.

As in the original game, the action is divided into three scenarios - dogfight in space, through the towers and down the trench. These scenes are repeated with increasing difficulty as you proceed through the game.

Scene one is based on Luke's dogfight in space en route to the Death Star. The Empire's Tie-fighters zoom in at high speed, launch laser bolts, then veer away. Using the four direction keys you steer the fighter's gunsights over the laser bolt and fire. The same tactics also work with the fighters, but the bolts must be your main priority. Each hit you sustain destroys one of your shields - you begin the game with six. Lose every shield and the next hit will destroy your fighter.

If you survive the dogfight you are transported to the surface of the Death Star (though not on level one). Here you begin a strafing run through a forest of laser-firing defence towers. I found this to be the easiest of the three scenes. By swinging your sights slowly left and right while pressing the fire button, you can destroy all towers and laser bolts in your path without sustaining a hit.

The final scene is set in the trench. To destroy the Death Star you must travel its full length and accurately blast the exhaust port at the far end. Success is rewarded with an exploding Death Star.

On level one the only hazards in the trench are laser bolts - you can avoid these by flying high and left, only venturing down into the trench at the very end to zap the exhaust port. Unfortunately, these tactics don't work on the higher levels, where the trench is criss-crossed by barriers - these must be flown over or under.

Unfortunately although STAR WARS sounds attractive, the graphics are chunky (Mode 5) monochrome and at times, poorly defined. The gameplay is very sluggish and the controls are slow to respond. On top of this you have to sit through a 20k loading

screen before the game starts to load.

All this adds up to a pretty dull, unexciting fare. I would advise you to try before you buy.

# STARFINDER

***Professional, Originally Released On Cassette Only***

Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## **Review (Electron User)**

This BBC/Electron program is described as a starfinder and home planetarium. It comes in a very plush library case, complete with a book of about 140 pages. Chapter one in the book is designed to help you with the software (you'll certainly need that). The bulk of the book is a treatise on astronomy. Most of the text could be read by an intelligent older teenager.

The program itself loads very smoothly to present a menu of options. To start with you enter date, time, position and which way you wish to look. This is fairly straightforward.

You may then look at a section of sky. This rather untidy screen plots stars very slowly. It takes about a minute to complete. Using the "space probe" (a small cross) you may identify any star shown by positioning the probe on the star. The screen displays information in the form Az=W15 Alt=31 Omicron Cet!!! This cryptic clue is somewhat explained is somewhat explained in the text.

Incidentally, the program includes planets, the Sun and Moon and even Halley's Comet as well as stars.

Having got your display you can change your direction of view left or right by 45 degrees or look up instead of along (with a one minute pause). You can also move forward in time.

Returning to the menu (<ESCAPE>) gives you the chance to search for any of the heavenly bodies contained in the program. The computer will display them at your specified time or at their highest point in the sky. This can be of great interest. For example, as you eat your Christmas tea in 1985, Halley's Comet will be at a height of 36 deg between south and west and Jupiter will be beneath it.

While search and time stepping facilities are excellent, the screen star maps take a lot of getting used to, but with perseverance constellations can eventually be learned.

One particularly useful function for the lucky few is the ability to print a star map at the touch of P. This produces a high quality screen dump on Epson-compatible printers.

Overall this seems a worthwhile program for the enthusiastic astronomer, but perhaps rather overpriced at £12.95.

## Instructions

Banished to the Star Maze after committing the crime of the century - stealing the Emperor's jewels - you find yourself in an amazing 3-D maze which is constructed on a platform in space. Can you find your way out before you run out of energy and are lost forever?

## Game Controls

L - Turn Left, R - Turn Right, F - Move Forwards, B - Move Backwards  
M - Create Map Plan, <ESCAPE> - Create New Maze

**Instructions' Source** : STARMAZE 2 (Mastertronic) Inner Inlay

## Review (Electron User)

The idea in STARMAZE 2 is very simple - you are lost in a maze and your task is to escape. Regular watchers of BBC TV's Adventure Game will know the idea, but in this version there are no puzzles or passwords. The only problem is finding the exit.

You travel around the maze by moving forwards. When you want to change direction you may turn through 90 degrees left or right. You don't see yourself - just a view of passages and junctions. These are neatly drawn and give a real impression of three dimensions.

The bottom of the screen is devoted to a status display which shows how long you've been stuck in the maze, how much energy remains, your position and how far you are from the exit.

Maze sizes - your choice - can vary between a small 5 x 5 up to a large 12 x 12 matrix. Large mazes are quite difficult to solve, but if you get really stuck, the computer can draw a map of the whole maze.

This program suffers from a number of drawbacks. The first is that it is very slow. It takes some 10 seconds for the computer to work out what you are looking at and then draw it. Secondly, the mazes lack interest. Certainly they are random and different each time, but they tend to consist of long straight passages with very few junctions.

Finally, the game's ending is very weak. A congratulatory message just says "You've done it" while a dull five note tune repeats itself. If you haven't got a maze game you could consider this.

# STARMON

## *Professional, ROM Chip Expansion*

### Instructions

Instructions currently unavailable.

**Instructions' Source** : Instructions currently unavailable.

### Review (Electron User)

If you've always thought that a monitor was an alternative to the family TV, you may think that a machine code monitor would be a fast version. In fact, STARMON is a piece of software stored on a micro chip. This type of software is sometimes called firmware and to be able to use it, you will need a sideways ROM card to plug into the expansion port at the back of your Electron.

A machine code monitor program like STARMON enables you to look at the contents of the micro's memory, both the 32k of RAM and the other 32k of ROM. The program is very easily loaded. Just type \*ST and it's there - instantly.

Once loaded, you may well wonder what to do with it. Well, the clever part of STARMON is that it uses the memory normally occupied by Basic, so running STARMON will not interfere with the program in memory.

It is easily possible to study any program - even those unlistable ones. Of course, you do not get a Basic listing. It is the contents of memory you see, but STARMON will do its best for you. The contents of memory can be displayed in decimal, hexadecimal, binary or even octal. In addition, if STARMON thinks it detects an ASCII character it will print that. It can also disassemble code - that is, it produces a listing in assembly language.

This all sound very fearsome, but if you are a beginner to this kind of thing, don't be put off because you can quickly learn some skills. For example it is very easy to alter the contents of memory without spoiling the program. I have personalised halls of fame so that they load with my name.

For the advanced user, STARMON is a very full program. With it you can search memory for bytes or strings, or move chunks of code around from one area of memory to another. You can block fill memory, write directly to memory locations or alter the 6502 registers. There are also facilities to single step through programs, which can greatly help with debugging, or allow you to learn what machine code instructions do. It is also possible to dump STARMON screens to a printer for future reference.

STARMON comes with a well written 42 page booklet, which makes the program easy to use. This whole package would be very useful to anybody keen to program, or even just dabble in machine code. It is a thoroughly professional piece of firmware.

### Review (ELBUG)

This is an entirely new arcade style game, first developed for the BBC Micro. It makes good use of graphics though only in two colours.

You are in a starship and you have a visual read-out of position of enemy ships and your energy levels on the right of the screen. Your ship stays in the centre of the screen in the same direction so, when you bank left or right, the rest of the universe rotates around you.

There are many controls to get used to, all giving extra interest. This is a good game which should sustain your interest for quite some time. Rating: \*\*\*\*

Philip Le Grand, ELBUG 1.1

### Review (Electron User)

Space is getting awfully nasty nowadays. It seems to be full of aliens all bent on destroying anyone in their path. In STARSHIP COMMAND you're in charge of a battle starship with the task of ridding space of these hostile elements. The only weapons you possess are your torpedoes and your skill. The skill consists of being able to manoeuvre your ship into a position where you can zap the other ships which are coming at you thick and fast.

You've got both short and long range scanners which show the enemies' positions as they approach. The position of your ship and the closer attackers are shown on the main screen. Your ship stays still in the middle of the display, the other ships appearing to move round it as you turn left and right in order to fire at them.

You've also got a rotation meter to tell you how fast you're turning and an indicator of the state of your energy banks. Should these banks fall to zero your defensive shields collapse and the aliens will destroy you. I did warn you that it's getting nasty out there.

It's not just the aliens you have to look out for, either. At the end of every mission you are assessed by your superiors. And their judgement can be worse for than anything the aliens might hand out. Even if you do well, all you are rewarded with are other, harder missions. I can't say that it's easy, but all the information you need is there before you on the various scanner displays.

The game seems to have everything. The graphics are superb, the instructions thorough and, once you get used to the way your ship stays still while the aliens move, the whole thing is enthralling.

Peter Gray, ELECTRON USER 1. 1

## Review (Electron User) - "Space Oddity"

I was very impressed by Larry Horsfield's first release last year, MAGNETIC MOON, and was therefore looking forward with hopeful expectation to this, its sequel.

STARSHIP QUEST, is a three-part science-fiction adventure which involves a lot of clear thinking and planning if you are to be successful. I spent as much time thinking and scribbling on my map as I did in playing the game.

You begin your quest in the now familiar role of Mike Erlin, second Lieutenant of the United Planets Survey Service spaceship Stellar Queen. Your mission is to explore a huge city which has been discovered on MAGNETIC MOON's orbital planet. You are keen to discover whether this is the source of Vast Knowledge.

As the scenario unfolds aboard your spacecraft, you must engineer a number of actions quickly and precisely. The beginning is something akin to the start of ENTHAR SEVEN or THE HUNT, with an important time factor to negotiate if you are to get started in this ingenious teaser.

In fact, part one has some of the most perplexing puzzles I have come across in any text adventure. Even if you are successful, you will soon find out that all the trouble you went to flying a space jeep to the planet Fathnar was in vain. You are somewhere else!

As in MAGNETIC MOON, it is essential that you use the commands LOOK UP, LOOK DOWN, LOOK ACROSS and LOOK UNDER periodically to ensure that you don't miss any clue or artefact.

In fact, Stellar Queen is an epic in frustration. Once you have conquered a fabulous beast called a Bearion you breathe a sigh of relief only to discover that your entire inventory has been stolen.

Commands are entirely limited to verb-noun input which at time adds to the frustration, and I long ago groaned at having to type GO DOOR in order to enter a building or machine. You will need to SLEEP and WAIT at different points in part two and indulge in some climbing as the adventure nears its climax.

Larry hasn't quite matched Geoff Larsen's construction of atmosphere with THE QUILL, but his puzzles are superb. If you scratch your head as much as I did over this brainteaser, you'll end up bald. Beware the Tigerilla, and buy this one.

## Instructions

### Play Mode

If the computer has been selected for one or more of the play options, the computer asks for the skill level for it to play at. Using the control keys varies the skill level. Press SPACE to continue. Table speed has three options; fast, normal, or slow - again, this is controlled by the control keys. Press SPACE to continue.

### At The Table

- a) To play, position the cue ball in the 'D'. Press SPACE.
- b) Then move the '+' to the ball you have selected to hit and position it at the point of contact you decide will offer you the best shot. Press SPACE.
- c) Select the spin you require: top, bottom, left or right. Press SPACE
- d) Select the power you require. To execute the shot, press SPACE.

After potting a red, you will be asked to select a colour. Move the '+' over the colour you require and press SPACE, the colour you select will be shown on the bottom on the screen. During match play if your opponent commits a foul shot you can request him/her to play again. The computer will always choose to play itself. Your decision is made using the control keys and pressing SPACE.

### Rules

Normal Snooker rules apply. A red ball (score 1) is pocketed first followed by a colour (score as table). The same sequence follows until no reds are remaining then the colours are potted in sequence.

Yellow ... Score 2  
Green .... Score 3  
Brown .... Score 4  
Blue ..... Score 5  
Pink ..... Score 6  
Black .... Score 7

For a foul involving the yellow, green or brown ball, a fixed penalty of 4 points is incurred. If blue, pink or black are struck out of sequence the foul values are 5, 6 or 7 respectively.

PLEASE NOTE: Due to the limitations of the computer, it is not possible to show a black or brown ball. The black is represented by a white circle and the brown by a green with a red circle.

### Game Controls

Z - Left, X - Right, \* - Up, ? - Down, <SPACE> - Fire  
S/Q - Sound Off/On, <ESCAPE> - Restart

### Opening Screen

f1 changes player 1 to the computer option and vice versa.  
f2 changes player 2 to the computer option and vice versa.  
Press SPACE to continue.

# STIX

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade FRENZY Clone  
Author : Andrew Trott  
Standalone Release(s) : 1984: STIX, Supersoft, £6.95  
Compilation Release(s) : 1987: ELECTRON POWER PACK 2, Audiogenic, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : SUPERSOFT, Winchester House, Canning Road, Wealdstone,  
Harrow, MIDDX HA3 7SJ  
Disc compatibility : CDFS E00, DFS E00

### Instructions

The Stix is a bundle of energy that roams the universe destroying everything in its path. However, a freak cosmic storm has trapped the Stix in a warped hypersquare, giving you the opportunity to harness its evil power for the good of mankind. But to keep the Stix under control you must restrict its movement by constructing force fields inside the hyper square using your field synthesizers. There are four hazards to overcome...

1. Above all, avoid being hit by the Stix - if it touches any part of an incomplete force field, the field synthesizer will disintegrate.
2. If you pause for more than an instant while constructing the field, the field stabilizer will disengage, destroying the field synthesizer unless you can complete the field in time. You will get warning of this by the field flashing red and green.
3. There are two primitive particles of matter left over from the cosmic storm, a quark and an anti-quark. They move in opposite directions around the boundary and will destroy your synthesizer if they hit it.
4. You must ensure that your energy cells do not discharge, otherwise your entire supply of field synthesizers will be lost.

### Scoring

Score 20 points for each percent of the hypersquare that you manage to fill using slow mode. But if you use fast mode you only get 2 points.

When you have restricted the Stix by filling in more than 75% of the square, you will move to a new dimension, scoring 100 bonus points for each percent over the 75%. You start with four field synthesizers. To start a new game, press <RETURN>.

### Game Controls

Use the following keyboard controls...

W - Up, A - Left, S - Right, Z - Down

Hold down < to move slowly or > to move quickly.

Disc compatibility : CDFS E00, DFS E00

## Instructions

As a prelude to the imminent invasion of Earth, the warmongering alien army have unleashed a powerful meteorite storm to bombard the Earth's defences and secure a safe landing for their mother ship. Earth's scientists are preparing a super laser capable of destroying the meteorites before they can do any damage. However, five light refracting diodes must be added before the laser will have sufficient power to carry out its task. Realising that the invasion may be thwarted, an expeditionary force of heavily armed aliens has been landed to prevent completion of the laser. Whilst fighting off this army of attackers, you must find the diodes and transport them to a secret location where the laser is being assembled. Only when all five diodes have been delivered will Earth be saved from certain destruction.

Your task is to find the five light refracting diodes that will power a super laser and prevent the total destruction of Earth by a rapidly approaching meteorite storm. You will find many objects along the way to help you in your quest, such as energy bottles, smart bombs, etc. The five diodes are strategically placed around the different locations: forest, garden, moon, cellar and castle. Each location can be accessed via a network of transporters, thus enabling all diodes to be collected and taken to the house at the edge of the forest where, if dropped, they will be removed to power the laser. Good luck!

## Game Controls

Z - Left, X - Right, \* - Jump, / - Squat, <RETURN> - Fire  
P - Pick Up/Transport, D - Drop Object/Detonate Bomb  
S/Q - Sound On/Off, H/G - Pause On/Off

**Instructions' Source** : STORMCYCLE (Atlantis) Inner Inlay

## Review (Electron User) - "Storming Action"

STORMCYCLE is an arcade adventure in which you must find five light-refracting diodes which are urgently needed to complete a souped-up laser to protect the Earth from a meteor storm unleashed by aliens.

You wander around the garden outside your house where all the diodes must be collected and deposited but quickly discover that you are not alone. Strange beings drive vehicles along the ground and overhead and contact with them saps your energy. Flying devils also drop bombs which have a similar effect. Your trusty sword will need to be constantly at the ready or your strength will soon waste away.

Your worst hazards are the pits. Fall into them and a whole life is instantly lost - it's just as well you've got three. Assuming you avoid these pitfalls you'll be able to use the energy bottles which are scattered about to recharge yourself.

A smart bomb will destroy all aliens on the current screen, but they have remarkable powers of regeneration and you'll have little time to stop and congratulate yourself.

Movement between the various sections of the game - garden, forest, moon, cellar and castle - is by means of transporters which look like fat little pharaohs and each will take you to a different area. Some lead to dead ends where your only option is to use the suicide key. One of your first tasks will be to discover which transporters are useful.

The diodes can be spotted without difficulty, but this doesn't mean they're easy to get at. It takes a bit of practice to become proficient at collecting some of them and one even requires a jump into empty space where you vanish behind the title bar at the top of the screen. There's a bug here - if you jump you can reappear temporarily at the bottom of the title screen.

One other possible bug - or is it a feature? - is that on one screen you become walled up in the castle. If this happens it is fatal but you can easily avoid this fate as there is no need to visit that location.

STORMCYCLE is a good game, though not in the same league as Superior's CITADEL, so ordinary mortals like me can complete it and read the congratulations screen.

The graphics are suitable for a budget game, the animation is fast and it has sensible features like sound on/off and pause. In fact, STORMCYCLE makes an ideal starter for arcade adventuring.

Rog Frost

### **\*\*\* Second Opinion \*\*\* (Electron User)**

STORMCYCLE is an excellent budget title that will provide hours of fun. An arcade adventure in the style of CITADEL and PALACE OF MAGIC, the major part of the game involves searching and mapping.

You won't go far wrong investing your pocket money here.

Janice Murray

## Instructions

An adventure game using hi-resolution full-colour graphics. You are stranded on a strange planet, and your mission is to return to civilisation and home. Many of the locations are shown graphically, including the spaceship, the cliffs, the mountains and (if you succeed) your home.

**Instructions' Source** : STRANDED (Superior) Inner Inlay

## Review (Electron User)

This is the smallest adventure that I have ever seen and, despite the fact that it has graphics, one that I truly didn't expect to like. However I was wrong. Although I don't think it would pose problems to the experienced adventurer it is nevertheless an enjoyable romp.

You have been stranded on an alien planet and your task is to find a means of leaving it and returning home. It won't take you long to find a spaceship but unfortunately it's guarded by an unfriendly robot.

A careful search of the planet, along with a spot of hang-gliding, should provide you with the means of getting past the robot and, hopefully, into the spaceship. After activating the engines you should search your craft. The articles you find, along with judicious use of Dr. Who's Tardis (!), should be enough for you to find your way home.

The graphics are quickly drawn and are the clearest I have seen in an adventure. As with all graphical adventures the trade-off between the program size and quality of graphics is something you need to judge for yourself.

Do you choose a complex adventure with limited graphics or an easy adventure with well drawn graphics? This program falls into the latter category. I liked it.

Merlin, ELECTRON USER 2. 5

# STRANDED!

*Professional, Originally Released On Cassette Only*

Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Review (Electron User) - "Science Fiction Jaunt"

STRANDED - not to be confused with the Superior Software adventure of the same name - is Heyley's latest release and was originally programmed for the Acorn Archimedes. It follows the tradition of THE TARODA SCHEME and is a science fiction jaunt set in the far future.

The improved loading and response time impressed me, as did the excellent opening scenario. It is obvious that Howard Roberts has been back to the drawing board and come up with a real gem this time.

Once again you begin the adventure trying to escape from a spacecraft in orbit around a strange planet. You are imprisoned in a hold of the Starfreighter Etoile, with a fat guard keeping a very close eye on you.

It took a lot of experimentation and over an hour of key tapping before I gave up in exhaustion at my failure to escape from the hold. I eventually resorted to Heyley's generous Help sheet and discovered that I had a fair amount of waiting to do.

I feel that without such help, many novice adventurers would have given up this taxing adventure as a bad job. STRANDED is not definitely not for the faint-hearted.

Having made my escape I then explored the rest of the spacecraft, killing the crew along the way, before crash landing on the surface of the alien planet. But first ensure that you are carrying the photonemitter and the blueprints.

It is only then that the fun really does begin. I discovered some quite off-the-wall ideas in this game which are somewhat reminiscent of Level 9's THE WORM IN PARADISE. Indeed the whole adventure is sprinkled with humour, which has become something of a Heyley trademark.

For instance, in order to carry the hole you must first possess the anti-common sense. You will have to build an escape craft called appropriately enough, a tin can. A box of anger also has a quite obvious use.

The adventure kept me awake for many hours and was the cause of some rib-tickling chuckles. However response to incorrect input was sobering. I was often told off by the computer for being too brief: "What sort of English is that? I don't think you are taking full advantage of the full sentence parser, are you?"

However, despite my praise of this game I still have a few criticisms concerning the development of Keyley's parser. It seems crazy that upon typing REST, the game went into Restore mode.

Equally when I typed PUSH BUTTON at the wrong location, the response was "Nothing happens" rather than "I cannot see a button here". Perhaps this is nit-picking, but maybe I am right in suggesting that Heyley employ a few more proof readers to correct such embarrassments.

STRANDED is a large adventure with constant disc access to allow more than 220 locations and 450 messages. It is undoubtedly the best that Heyley have produced to date.

### Review (Electron User)

If you've ever wondered what it would be like to fly one of the world's best combat planes then take a look at STRIKE FORCE HARRIER. Mirrorsoft would probably agree that it's not quite as good as the real thing, but then it's about five million pounds cheaper!

The display is quite impressive, with excellent graphics. Your instruments cover the lower half of the screen and consist of a map and radar, thrust and fuel gauges and the status of the undercarriage, flaps and brakes.

The windscreen covers the top half of the screen. This is where the action takes place. Through it you can see the ground, horizon, sky and clouds, plus a few more instruments.

Flying the Harrier is fairly easy. Within ten minutes I was looping the loop and doing barrel rolls. This is only a small part of the game though. The plane is armed with bombs, missiles and cannons to defend yourself from surface to air missiles, anti-aircraft fire and enemy aircraft (MIG 23s).

Your mission is to destroy the enemy HQ 500 miles from your starting position. This is achieved by blasting enemy tanks on the ground with your cannons and bombs.

A ground site can then be set up and your own forces moved up by an airborne drop at a speed of around 600 knots. Each new base needs defending from tanks as you attempt to set up the next.

STRIKE FORCE HARRIER is more than a single flight simulator, it's a battlefield simulator. It requires a knowledge of ground attack techniques and skill in air to air combat. The 27-page manual supplied describes these tactics in details, along with an outline of your mission and tips on flying.

There are several different levels of difficulty, including a practice mode in which you aren't attacked.

After a bit of practice you can try your hand at combat. Far from easy this - it takes a long time to master. If you're after something more than a flight simulator then Harrier is well worth considering.

The addition of ground and air combat makes this one of the best games of its type on the Electron.

## Instructions

### The Story

For many years, a war has ensued between the Allied Nations and the Volgans. The battle was reaching a stalemate position, but recently the Allies, through good intelligence and some luck, have managed to obtain the plans of the Volgan's next offensive. If the Allied Forces can capitalise on these plans they can end the impasse and the war. You play the role of Commander John Stryker commissioned to take this top-secret information to the Allies' HQ.

### The Game

You can jump, run, duck, fire your laser pistol and throw grenade. You can take nine hits before you are killed; your hits-status is shown at the top-left of the screen. On your journey across the battlefields you will find various air vehicles, which you can enter and fly. You may utilise their superior weaponry, but remember, different vehicles have different abilities (e.g. some climb faster than others, some only fire laser and do not drop bombs). All air vehicles have a limited amount of fuel.

Along your path you will also meet Allied soldiers (in green uniforms) and Volgan soldiers (in white uniforms), and you will see air vehicles battling against each other. Sometimes it is useful to let Allied soldiers to do some fighting for you. Your opponents, the Volgans, have a variety of weapons at their disposal comprising rifles, pistols grenades, machine-guns, mortars, mines, helicopter gunships, rocket launchers and SAM missiles. Watch out for the land mines!

## Game Controls

**Review (Electron User - Double Review Of STRYKER'S RUN and CODENAME: DROID)**

## - "Dynamic Duo"

Electron users have done it again - top software house Superior Software has been pressured into converting its top selling BBC game STRYKER'S RUN to the Electron. It has also converted its brand new, block-busting follow up CODENAME DROID: STRYKER'S RUN PART 2.

STRYKER'S RUN (Part 1) is a commando style shoot-'em-up featuring some of the most outstanding graphic backgrounds seen on the Electron. You control Commander Stryker and your task is to guide him through enemy lines back to the Allies' headquarters to deliver top-secret information.

The game-play is straightforward - you can run left or right, jump and duck. As you reach the edge of the screen the next one flicks up after about half a second. Crossing the battlefield you'll pass beautifully drawn cities, wrecked buildings, graveyards, burnt tree stumps, hills and mountains. It's amazing how much is crammed into the game.

Initially, the only weapons you have are a pistol and a pocketful of grenades to fend off the enemy Volgan troops and helicopter gunships. The troops can be despatched with either a bullet or grenade, but there's no defence against the helicopters' bombs - you run for your life.

As you progress through the screens you'll find a stubby, wedge shaped aeroplane. You can climb in the cockpit and zoom off. Then you can bomb the enemy troops and have a crack at shooting down the helicopters.

There's only a limited amount of fuel however, and you soon float gently back to earth (that's if the rocket launchers don't blow you out of the sky first!).

There aren't many sound effects and the animation is a bit flickery at times, but overall it's a good game and well worth the money.

CODENAME: DROID, the follow-up to STRYKER'S RUN, is a different game altogether, and it held my interest much longer.

Commander Stryker is back, the war is still raging and you must take him on another dangerous mission into occupied territory, this time on the planet Volga.

Your objective is to steal the Volgan's latest weapon - a spacecraft fitted with a revolutionary matter/anti-matter warp drive. This is stored underground and you must pass through rocky caverns, leaping from boulder to boulder, climbing ropes and plunging down shafts on a fast moving lift.

This is merely the surface defence. If you survive this there is an ancient shrine, the crew's quarters and a missile factory to negotiate.

This sequel is more complex than its predecessor and there is far more to the game than simply blasting your way through each screen. For instance, you can't use the lifts unless you have the correct pass and your pressure suit and laser pistol need recharging constantly. If you can't solve these immediate problems you won't get much further than the first few caves.

There are around fifteen different objects to collect, including energy cells, spanners, fuel for your jet pack and security passcards. In addition, there are buttons to press and switches to flick, though I must admit I haven't found these yet.

Microfilm cassettes are useful as they contain maps of the current level and include the Volgan guards' positions. This enables you to plan your route ahead.

You have a wrist terminal computer which can be activated at any time to check on your status. Here, you can recharge your suit and blaster provided you have picked up an energy cell.

The animation is good and slightly faster than STRYKER'S RUN, though the scenery is graphically simpler, but it does scroll rather than flick when you reach the edge of the screen.

Stryker himself is capable of far more actions than before. He can now run, jump, climb up and down ropes, kneel and crawl through narrow crevasses on his stomach. And it's faster to boot.

STRYKER'S RUN is good, but CODENAME DROID is brilliant and deserves to do well. Reserve a place in your arcade collection immediately and start saving - it's worth every penny.

## Instructions

The London Underground has degenerated into a battleground.

Opposing gangs of dealers, pushers, punks and muggers fight for supremacy over the city's key stations.

You are the SUBWAY VIGILANTE. Your duty is to protect the law-abiding tube travellers and wipe out the rival gangs.

Your task; in each level, you must wipe out approximately 30 gang members, before progressing to the next station.

## Game Controls

Z - Left, X - Right, : - Up, / - Down, <RETURN> - Fire

### With fire button held down:

Z - Elbow Jab, Z & : - Headbutt, : - Flying kick, : & X - Punch, X - Kick

**Instructions' Source** : SUBWAY VIGILANTE (Players Premier) Back and Inner Inlay

## Review (Electron User) - "Mash A Mugger"

SUBWAY VIGILANTE from Players is set several years in the future when London's Underground network has degenerated into a battleground, with drug dealers, pushers, punks and muggers fighting for supremacy. You step into this hell-hole as the SUBWAY VIGILANTE, determined to rid the underground of these evil beings so that the normal, law abiding passenger can enjoy a safe journey.

This scenario provides the backdrop for a great deal of violent punching, kicking and head butting. The game takes place on a platform of a London Underground station. This is portrayed in full and glorious black and white - unlike the screen shots shown on the cassette instructions which look more like Spectrum ones. The playing area is made up of the lower part of the screen. The opposition are also shown in black and white along with you, the hero of the game.

You seem to have two opponents all of the time and when you manage to flatten one, it mutates into the next order of species. These may be armed with a device which looks like a chain saw, but as far as I can make out, they are no more difficult to deal with than the previous beasts. If you are knocked down, you too can get up, as you have five lives.

The controls are simple - four keys can move your forwards, backwards, left and right around the platform and in conjunction with the fire key various jabs, butts, punches and kicks are produced.

Doing damage to an opponent seemed to depend to a large extent on luck. On numerous occasions I punched one of these evil characters only to see the other one fall over. I also think they may do in each other from time to time.

You soon develop a simple strategy. If you move to the left of the screen and stand there performing flying kicks, you can beat the opposition and only rarely get flattened yourself.

If you do well enough, you are asked to start your tape recorder. This loads up a different scene, but it makes no difference to the gameplay. I think this second screen, which features skull and crossbones and Nazi insignia is the last. Despite some fairly large scores (obtained with the stand-at-the-left strategy), I have not seen any more.

All this leaves us with a very simple game. The loading screen, portraying some fairly ugly customers is probably its best part. But lack of colour, inept beeps and poor animation all indicate one to be left on the shop shelf.

Rog Frost

### **\*\*\* Second Opinion \*\*\* (Electron User)**

Graphically, SUBWAY VIGILANTE is superb. The loading screen is a well drawn Mode 4 picture showing three thugs, and the game graphics - again Mode 4 - have detailed backgrounds and superbly drawn and animated sprite-like characters.

Like many martial arts games, you can usually beat each opponent with just a couple of moves. Consequently the game becomes quite dull as you repeat each manoeuvre over and over again.

### Review (Electron User) - "Soap Opera"

Television these days seems congested with soap operas. Whether it is a simple British offering in the mould of Eastenders, a dire Australian attempt like Sons And Daughters or an elaborate American extravaganza such as Dynasty, whenever we switch on, it is the continuing story of such and such.

I suppose it was only a matter of time before these everyday lives found their way into computer adventures. SUDS is unashamedly a direct spoof on the four major British soaps - Emmerdale Farm, Coronation Street, Crossroads and Eastenders - but the names have been changed to protect the innocent.

The adventure loads in four parts, though you don't need to complete each one to progress to the next. However, each section is undoubtedly more difficult than its predecessor.

You are required to negotiate the puzzles of Emeroyd Farm then catch a train to the mean streets of Manchester and the perils of Abdication Street. If you successfully overcome the traps of the TV studio, the Cross-Eyes motel looms where the mad arsonist awaits you. Finally, if you haven't lost your sanity, who knows what the fabled land of the Dead Enders has in store for you.

I have now completed the Emeroyd Farm section and have made major inroads into the three other parts of this mega-game, and life is becoming complex beyond imagination - after all, isn't that what soap-operas are all about?

The puzzles in part one, although logical in retrospect, are ingenious and riddled with superb puns.

For instance, upon climbing a tree I discovered a herring which I duly smoked over a war women's campfire. Hey presto, I had a red herring. However, this has a particular use which I will leave for you to discover.

Later in the adventure I had to pour a bucket of cement over some relatives who were blocking my path to the next section. Of course, the result was to cement relations.

The Black-Pudding bomb in Abdication street is something else and I don't think Equity would be too pleased to discover its purpose.

A skeleton will provide the key to succeeding at the Motel, where the problems have had me scratching my head for nights on end. Meanwhile the Dead Enders have quite a few surprises awaiting even the most experienced of adventurers.

This is a truly addictive adventure which requires as much thinking and planning as key tapping. The humour is refreshing and something in the mould of WHAT'S EYORE? or LOCKS OF LUCK.

AMERICAN SUDS is now in production with an Australian version to follow. In the meantime, I suggest you go out and buy SUDS immediately.

# SUMMER OLYMPIAD

**Professional, Originally Released On Cassette Only**

Game Type : Multi-load Sporting Contest  
Author :  
Standalone Release(s) : 1988: SUMMER OLYMPIAD, Tynesoft, £9.95  
1990: SUMMER OLYMPIAD, Microvalue, £3.99  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : TYNESOFT, Unit 3 Addison Industrial Estate, Blaydon, TYNE &  
WEAR NE21 4TE. Tel: 091 414 4611  
Disc compatibility : Unknown

## Instructions

"SUMMER OLYMPIAD is your chance to take part in the ultimate athletic challenge. The highly requested sequel to our smash No. 1 Hit WINTER OLYMPIAD, this exciting game successfully captures the electric atmosphere and competitive spirit of five challenging summer games. Test your skill at High Diving, Skeet Shooting, Fencing, Hurdles and Triple Jump. Every Event benefits from outstanding graphics, animation and truly exhilarating game play."

## Opening Ceremony

On loading, you may select from 1-4 players. Type in your name and press <RETURN>. You may now select the country you wish to compete for by pressing <SPACE> to advance the choice icon followed by <RETURN> to select.

## Event 1 - Fencing

The first competitor to score three hits is the winner of the bout. You play against the computer by using the keys:

Z - Move left fencer up the play area : - Riposte  
X - Move left fencer down the play area / - Parry

Press <RETURN> to lunge.

## Event 2 - Triple Jump

Use the Z and X keys alternately to build a steady rhythm. Depress the SPACE BAR and hold when you reach the white line. The angle at which you will jump will now increase until you release it, giving the angle of take-off for his hop, skip and jump.

NOTE: Crossing the white line causes a foul jump.

## Event 3 - Skeet Shooting

Move the "shotgun target" sight around the screen using:

Z - Left, X - Right, : - Up, / - Down

Place your sight over a moving skeet target and press <RETURN>. If a hit is achieved then the skeet will disintegrate.

In each of the three rounds, you have 24 skeet to hit. You may, however, not use all your allotted ammunition. Any left over are counted in the event of a tie.

## Event 4 - Hurdles

Hit Z and X alternately to increase running speed. Pressing <SPACE> allows the man to jump hurdles when pressed at the correct time.

## Event 5 - Diving

To begin your dive, press <SPACE>. The diver will automatically leap into the air.

Z - Speeds up anti-clockwise rotation, X - Speeds up clockwise rotation

: - Untuck,    / - Goes into tuck position,    <RETURN> - Pike

Pike can only be accomplished when not in a tuck position or moving to a tuck position. You must also be moving clockwise and be in the upper third of your rotation (1 o'clock to 5 o'clock if compared to a clock).

Scoring points depends on style, entry into water and complexity of dive.

All the events include a pause mode which is enable/disabled by pressing <DELETE> (On)/<COPY>(Off).

Tape users should rewind the tape to the Opening Ceremony when Event 5 has been completed. i.e. to the filename called "Open".

# SUNDAY

*Public Domain, Originally Released On 3 x DFS E00 Disc*

Game Type : Arcade Adventure; "Monkey Island" style  
Author : (The) Dave  
Standalone Release(s) : 1997: SUNDAY VERSION 6.0, (The) Dave, PD  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : EUG, 42 Canterbury Road, REDCAR TS10 3QF  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions (SUNDAY Version 6.0)

This manual is designed for use with the most recent Acorn Electron version of SUNDAY; SUNDAY Version 6.0. The revision herein contained differs only in the characters' names, which have been changed to bring the game in line with the novella published in 1997. Download it from [www.8bs.com](http://www.8bs.com)

### General Overview

SUNDAY is a graphic adventure based upon an actual occurrence in 1992 which led to the severe psychological damage of its creator. In some respects, it is funny; in others it is shocking and disconcerting. To put it in its proper context it is best to read the novella available from Mudfog Books, ISBN 1899503-27-7. This sets the scene for the adventure which follows.

This new modified SUNDAY is almost materially identical to the ADFS version of SUNDAY for the Electron and, although some of the dialogue is now recognised as being a little immature, it has all been retained as it was in the original first version for the BBC Master.

### Loading And Disk Control

You can read the brief instruction manual for SUNDAY by selecting 1 from the small menu that appears on the <SHIFT>-<BREAK> instruction. You can also print it out by pressing 2. When <ESCAPE> is pressed, the DAVE title will be displayed.

At some points in the game, you will be asked to insert Disk One, Two or Three and should do as requested.

### Loading Screen

When the main SUNDAY loading screen is displayed, it is necessary to press <ESCAPE> to continue straightaway. A tune will play until either <ESCAPE> is pressed or it reaches the end. The screen will then be wiped. Pressing <ESCAPE> again will clear the screen faster.

### Options Screen

A sprite will appear first in the centre of the screen then the Options will be filled in around it. When the Options Screen appears, EVEN IF PREVIOUS GAMES OF SUNDAY HAVE BEEN PLAYED ON SEPARATE SETTINGS, each option will revert to its default value. You have the choice on this screen to select the Text Speed, change the Censorship Options, see the official credits or start the game. Before this can be entered however, press <M> to stop the music.

### Changing the Text Speed

The default setting is 5 seconds. This is the time from when spoken text is displayed on the screen to it being blanked and replaced with new text, and it can be altered in two ways.

Pressing <T> will move the button of the Text Speed to the right a notch. When the text Speed reaches the end of the dial, it will return to the far left notch. There

are five settings the button can be placed on (1, 3, 5, 7 and 9) and these are from left to right.

An alternative is to input the specific time which is done by pressing <P> followed by a number between 1 and 9. On depression of <P>, an input box on the Options Screen will be high-lighted in white. You do not need to press <RETURN> after typing the number.

## Changing the Censorship Options

The censorship option is automatically turned ON at the beginning of each game. If you wish to play an uncensored version, pressing <V> should change it.

Although this option prevents most swear words (certainly all the coarse ones!) from appearing on screen, it should be realised that this also has the effect of removing some of the most disturbing spoken passages from the game itself and may slightly diminish the impact of certain scenes when operational.

"Turdvirgin", Balls and Bollocks are RETAINED in the censored version, as is the occasional Dick.

If depression of <V> fails to change the censorship option, the game has been permanently censored by someone and the Original Edit is not an option. [But also see the Haven file 'For Parents' regarding this.]

## Official Credits

Pressing <C> will display a box at the bottom of the screen listing the current version of SUNDAY and who is responsible for its completion. Pressing <RETURN> will return to the Options Screen.

## Starting A Game

Pressing <SPACE> will start the game. A typical way to start without wasting any time would be to type:

P2V followed by <SPACE>.

This will start an uncensored version of the game with a text speed of two seconds.

## The Main Game Screen

When you begin the game, the screen is divided into two oval scoring sections and four box sections. They all have specialised uses:

1. The HI-SCORE box shows the highest score achieved by anyone on SUNDAY. The first game of a session is set to a default value of 1500. Greater scores will replace this figure.
2. The SCORE box shows your current score. See SCORING.
3. The WHAT'S HAPPENING box shows the centred name of the scene, or an action involving a specific change in pace, environment or temperature.
4. The WORDS SPOKEN box contains a centred line of text which continually changes and is replaced to give the illusion of speech. See CHARACTERS for an explanation of distinguishment.
5. The centre box is the graphic part of the game. This displays all the scenes in an 88 x 64 grid of pixels. It also gives information on the date and time before some key scenes.
6. The RESPONSE AND SPEECH box contains the responses a player can choose to give to a character. Also, if the main character speaks without being prompted, his text will appear in this box similar to the WORDS SPOKEN one.

## Playing The Game

Unlike with other games, SUNDAY has a clear-cut knowledge of what you need to achieve to win. Often you will not be physically killed, but will lose the game by

failing to achieve your goal. An example of this is if you forget to set up the date on Saturday night - the Jamie will watch television all afternoon; not only missing all the sexism but watching DALLAS and being a lot more sad than usual.

The game begins on Saturday June 13th at a seedy night-club on the outskirts of Redcar town where all manner of cheeky antics are indulged. This PROLOGUE scene throws the player into the Jamie's world at the point the novella leaves it. The Jamie has not yet pulled out of the influence of a certain Mark Kirk and we see him swing from a nice discussion with friend Carl Swain into an insulting banter on Carl being a "nasty boy". The Jamie also explains the situation regarding his ex-girlfriend Sally Roberts in this scene and, as he leaves, his attention is attracted by a wall. There are now several ways to play the game.

SUNDAY contains ten different characters in total - some of them keep themselves out of the picture in some games - and the Jamie can interact and respond to most of what they say with a variety of different responses, usually four. But the Jamie is not just limited to responding. On suitable occasions, he can start up a different conversation or try different tacks. As with the caper with the wall, displayed instead of "Possible responses" in the RESPONSE AND SPEECH box are "Possible cries of disbelief". But every line works in the same way.

Keys <1> to <4> choose the appropriate response from the four displayed. (If there are only two or three responses, the appropriate keys are ignored.) When the key is depressed, the correct response is highlighted, and the rest are cleared. The word PRESS will appear in small writing in the bottom right-hand corner.

PRESS always means PRESS <RETURN> TO EXECUTE.

On depression of the <RETURN> key, the scoring (and the InsultMeter if necessary) will be updated, and the conversation with whatever character will continue.

As SUNDAY is a huge program, each scene is loaded separately to the Electron's memory. Never remove a disk from the drive while the drive is operational.

### **Location Details**

When a scene has loaded and the display changes, details may be given on the place the scene is set if it is deemed necessary. These will be brief and in a different font to the speech. They will be followed by a PRESS instruction and no other key will operate until <RETURN> has been pressed.

### **Command Mode**

At some times, the Command Mode may be entered in order to make the Jamie do certain things he cannot achieve through the SPEECH AND RESPONSE mode.

To get into Command Mode, press <ESCAPE>. If the SPEECH AND RESPONSE box does not clear, Command Mode cannot be entered at that point. There are specific points in which Command Mode is used and finding them is part of the game. There are obvious signs to look for when commanding the Jamie is possible; him lingering outside an alley for example or in something a character says. Note that you are sometimes only given a few seconds to hit the <ESCAPE> key in a scene!

Command Mode is completely different to the alternative mode. The writing is thinner and you are given a list of your inventory and then asked "What Should I Do?" by the bemused Jamie. This Mode acts more as a traditional type of adventure game; you now type directly what you want the Jamie to do and then press <RETURN>.

Some of the more specialised commands in Command Mode, on top of the traditional TAKE, DROP, KILL, etc. commands are:

DRINK	ENTER	KICK	KISS
RUN	SMOKE	THROW	TWIST

Also in keeping with tradition, the Jamie will respond with stupid comments no adventurer would ever actually make, if you tell him to do something he doesn't understand.

Pressing <ESCAPE> again will take you back to the normal mode and the conversation will be picked up where it was left off - no matter what you have been doing!

### The Insultmeter

After the prologue of the game, a fifth section will appear which is known as the InsultMeter - this is a thermometer-shaped object with 23 markings up the side and a skull and crossbones at the top. Throughout the game, whenever Sally feels offended, the Meter will rise a notch (or two notches for very insulting responses).

### Picking Up And Using Objects

Picking up objects is usually compulsory, although there are some you can only get through Command Mode. You can only carry three objects at a time and, as you are going out to battle, they are referred to as "weapons".

You cannot usually DROP weapons; usually they either get destroyed by another character or lost after they have been used and this gets rid of them.

The majority of weapons you can select are in the Jamie's bedroom on Sunday morning. These all have uses but some are more useful than others. As there is no-one else in the Jamie's bedroom, this scene is totally Command Mode. Each weapon is examined and you can choose whether or not you want to take them by pressing <RETURN> at the PRESS prompt. You can only USE weapons through Command Mode. You must then enter a suitable verb for each item, such as THROW STONE or DRINK WATER.

### Scoring

You can pick up points in SUNDAY for doing and saying certain things. The scoring system does not often work on the principle that the most insulting lines are the best. Certain things always deliver certain numbers of points (such as picking up or using an object) but the number of points each response scores were worked out randomly. i.e. Response one may add 30 points to your score, response two may add 10 points, response three may add 20 points and response four add 40 points.

Every set of responses has different numbers of points to add to your score. If you chose response one on the last response and it gave 40 points, it is more than likely that it will be a lower number of points added to your score if you choose response one on the next set. However, the actual additions of points for each separate response never change. This offers a challenge for the strong-willed to work through the game continually and note down the number of points you get for every separate response, then to try and generate the highest score possible.

The certain things which have guaranteed points are:

Picking up any object .....	100 pts
Setting up the date .....	100 pts
Using weapon/doing something from Command Mode ...	100-350 pts

### Characters

Every character apart from the Jamie has his/her speech appear in the WORDS SPOKEN box. When there are two or more characters in a certain scene (THE WAY HOME scene on Middlesbrough station has five characters at once on some occasions!), you are able to distinguish between each character by the marks around their speech. You are reminded if this on the Options Screen before the game starts. After a few games you will know the character's "quotes" off by heart. Until then you may like to refer to these ways of distinguishing separate characters.

CHARACTER NAME	QUOTES FOR READABILITY
Clarice Roberts .....	' quotes
Sally Roberts .....	No quotes
Mark Kirk .....	No quotes
Sarah McDonald .....	Square quotes
Suzanna Floyd .....	~ quotes
Staff of the Odeon .....	^ quotes
Carl Swain .....	No quotes

Mark Evans ..... Doesn't talk

### **Moving Around**

In SUNDAY, your movement through the scenes is usually compulsory, but you have the option on some occasions to visit different locations through Command Mode.

**Instructions' Source** : SUNDAY VERSION 6.0 (The Dave) Text File Instructions

### **Review (EUG)**

The first thing you notice about this game is that it is a huge program and fills two ADFS "L" discs or three ADFS "M"/DFS DS 80T discs. The second is that it works on the BBC B, B+, Master 128 and Acorn Electron. On !BOOTing disc #1, you are presented with playing instructions in the form of a readable/printable manual - I would recommend printing it if possible as it helps to be able to refer to a hardcopy when first attempting the game. The manual is concise and informative and will help you make your way through the world you are about to enter.

Actually, yet greater an insight can be gained through reading the SUNDAY Novella, a book also written by the game's author. Although this isn't vital, the game follows directly on from the last chapter and you may find your journey through the game is easier after having acquired a greater understanding of the characters and their mutual interaction. It is NOT an essential prerequisite though, as you will discover...

Describing SUNDAY as a game does not do it the justice it so rightly deserves. On playing it, it is more of an experience than a conventional game. Its loader allows you to change the text-response time (Recommended after several games) and whether to play an *uncensored* version. Doing this is *far* more entertaining.

As with all games, you will discover that SUNDAY knows what you need to do to win. Finding out is where the fun comes into it.

The experience begins on June 13th 1992 and the adventure contains ten different characters, complete with their own personalities and characteristics, although one of its beauties is that you will not necessarily meet them all in a single game. Once you "finish" it, it can be played over with more interaction with these previously unseen characters.

On leaving the instructions you are presented with a very nicely presented and detailed Mode 4 loading screen, accompanied by a passable rendition of Axel F. After it has finished, or you have pressed <ESCAPE>, the screen will clear and yet another extremely detailed Mode 4 graphic will be displayed providing details regarding the remainder of the actions/keys used to play, together with mug shots of the characters you may interact with in the game. Not sure that I'd like to run into or meet anyone looking like Suzzie in a well lit alley, let alone a dark one, but I digress...

You are also treated to an extremely good rendition of Enola Gay by OMD - a nice post-apocalyptic anthem; so if you want to find out if this is a portent of things to come, play on. You will not be disappointed.

You control the central character - *The Jamie* - and we first meet him confronting his friend Carl in Zero G, a local hostelry. To say that the Jamie is a forthright and outspoken character would be a drastic understatement. The Mode 4 graphics have a very professional feel to them and, while they lack an arcade 'punch', make up for it in occasional graphical manoeuvres which must be seen to be believed. The graphics all load smoothly and swiftly, and the code behind this is a credit to the programmer.

How the Jamie fares from now on in his efforts to re-engage his relationship with young Miss Roberts is entirely up to you. You must carry on conversations, rather unconventionally, with one response from an ensemble. There's also a "Command Mode", described in the manual, allowing the more regular commands you associate with text

adventures - and a few more 'interesting' ones to boot. Scoring too is unconventional and VERY dependant on the Jamie's (your) interaction with others and the responses chosen.

As you progress through this game, you will, according to how well you interact in this extremely unpredictable world, be asked to enter successive discs that comprise the game. So far I have mastered enough of it to have been asked for each disc in turn before 'dying'. I have also managed to better the default high score of 1,500 (Up to 2,300) but there is far more to be achieved.

Unfortunately, SUNDAY's playability is crippled in comparison to products like THE HOBBIT because each game must be started from the very beginning. This does allow you to meet new characters but does not let you pause and save your experiences to mull over and adapt for future or continued games. However, because no game of SUNDAY is ever the same, it scores highly in other respects.

As noted earlier, this gaming experience is aided by having a printed version of the manual to hand. Although it is not so complicated as to cause referral to it every few minutes, it helps 'nudge' your own interaction and become more in tune with the way the Jamie thinks. As it is something comparatively new to play, this game will appeal to a broad spectrum (No pun intended) of Beeb enthusiasts. It is not like a shoot-'em-up requiring repeat play to gain the winning strategy yet it does inspire you to play again and again to get under the Jamie's 'skin' and achieve the overall objective for the game: Miss Roberts.

The game was written back in 1993 and, as such, quite after the 8bit heyday of the Beeb. But even now in the 21st century, it is both engaging and addictive whilst being a refreshing experience from the run-of-the-mill games churned out by software companies.

To be able to save a game at any juncture would be a desirable bonus as having to start again and again, however interesting and different each time, does not allow you to continue on a course of action you have started and are thus far pleased with, only to have to turn off due to interaction and issues in the real world.

For this reason, I would give this 8/10. Graphics are a straight 10, with playability hot on their heels. SUNDAY is a worthy successor to the Acornsoft and Level 9 adventure games with extremely 'graphic' graphics to surpass their appeal. Recommended.

Kevin Etheridge, EUG #59

# SUPER AGENT FLINT

*Professional, Originally Released On Cassette Only*

Game Alias : SUPER SPY FLINT  
Game Type : Text Adventure  
Authors : C.J. Potter & A. Potter  
Standalone Release(s) : 1983: SUPER AGENT FLINT, Potter Programs, £2.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : POTTER PROGRAMS, 7 Warren Close, Sandhurst, Camerley, SURREY  
GU17 8JR. Tel: 0252 877608  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

You are Super Spy Flint! You find yourself in an aeroplane flying somewhere over the South Pacific with only a parachute for company. You have never made a parachute jump before. Your mission is to infiltrate a secret T.E.R.D. (Terrorists for England's Ruin and Destruction) base. Your objective is to locate and capture the T.E.R.D. secret plans for England's (and the world's) domination. Your only means of escape is the T.E.R.D. space rocket which you must liberate and dock with the secret British space station which is 500 miles above the T.E.R.D. base in geostationary orbit.

Best of luck old bean and remember, it's for England.

**Instructions' Source** : SUPER AGENT FLINT (Potter Programs) Instruction Leaflet

## Review (Electron User)

The first thing that strikes you about SUPER AGENT FLINT is the reasonableness of its price - an example I hope other software houses will emulate.

When you load the program, you find that your task is to infiltrate a secret TERD base to capture their evil plans for world domination. Your only means of escape is a rocket which you must use to dock with a British space station. Happily for those of you who lack astronaut experience, the game assumes that successfully firing the rocket is enough.

The adventure begins in an aeroplane over the South Pacific, You've got a parachute and there's a green light showing, so your next move is fairly obvious.

Once you've landed you can start to explore the surrounding countryside. A submarine and a helicopter will help you in your travels, though the cable car is more useful in keeping things dry.

The rocket is soon found, but getting it started is something else. You need to find four things to operate the rocket successfully and finish the game.

Although there are only about forty locations, don't expect these four objects to be easy to find.

As is beginning to seem usual with Potter Programs, there's no save-game facility, though there are spelling mistakes. What there is, is quite a lot of program protection, including a routine to intercept a <CTRL>-<BREAK>.

At the price of these programs, the programming involved might be put to better use

writing a save-game routine. Overall, although it's in Basic, it's quite fast and fun to play. At the price I must recommend it.

Author : Unknown  
Standalone Release(s) : 1984: SUPER FRUIT, Simonsoft, £5.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SIMONSOFT. No further information.  
Disc compatibility : CDFS E00, DFS E00

## Instructions

Instructions currently unavailable.

## Review (Electron User)

Are you the sort of person who takes pleasure in emptying your pockets of hard-earned cash to feed the slot machines on holiday? If so, you'll love this program from Simonsoft which will soon have you believing you're back on the pier at Eastbourne - except that the money can stay in your pocket.

The game has all the features expected of a real fruit machine including nudges, holds and reel swapping. It also has some highly impressive, if a little slow, graphics such as spinning reels which bounce when they stop, and a coin pile that shows at a glance the state of your finances.

The program makes good use of sound and colour throughout, and includes a very comprehensive instruction program.

I was highly impressed by the quality of this program, which is by far and away the best adaptation I have seen on the fruit machine theme. Congratulations to Simonsoft for an addictive program providing lots of fun, which at just under £6 has to be one of the best value games around for Electron owners.

## Review (Electron User - Combined Review Of BUN FUN, SUPER GOLF and TRAFALGAR)

Please see BUN FUN for this review.

## Review (Electron User)

I've never played golf in my life. My only memory of playing anything like it was taking my dad on the putting green at Gynn Square, Blackpool more years ago that I care to remember. So you can see that I'm not really all that well qualified to judge how realistic SUPER GOLF from Squirrel Software is. I do, however, know a good game when I see one, and SUPER GOLF is just that.

What you get for your money is a gentle and amusing simulation of a golf course, with all 18 holes and the usual hazards such as bunkers, ponds and the wind. When you load the game the first thing you get is a list of instructions. These are a model of simplicity, but be warned - you can't get back to the instruction page from the main program. I advise taking notes the first time you run the game, though you'll soon pick up how to play it.

After the instructions page comes the game proper. The Electron displays one fairway at a time, viewing the course from the side. It then asks you to select which club you want and what strength shot you are going to use. At first it's all a matter of trial and error. Do you use a nine iron or the wedge? Do you hit the ball with a force of 99 or a more moderate 30?

Soon, however, you learn the uses of all the clubs and are quite happily knocking the ball all over the place. And in my case it really is all over the place! I don't know why it is, but my ball seemed to have a morbid fascination with every bunker on the course. Happily I'd chosen the one player version of the game so when I displayed my score card at the end of each round I was the only person I embarrassed.

The game was fun, entertaining and engrossing. I may never play golf but I'll certainly be playing SUPER GOLF again. It makes a great change from zapping aliens, even if I'm not very good at it. Mind you, I do have an excuse for my poor performance. I was feeling under par at the time.

# SUPER HANGMAN

*Professional, Originally Released On Cassette Only*

Game Type : Hangman Simulation  
Author : T. Latham  
Standalone Release(s) : 1983: SUPER HANGMAN, IJK, £5.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : IJK, Unit 5 Moorfields, Moorpark Avenue, Bispham, BLACKPOOL  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

The special feature of this version is the hi-resolution animated man. Watch the expression on his face change as the noose tightens around his neck. Marvel at the detail of his clothing - but don't take too long, he grows very impatient! Contains many categories from educational to just plain fun!

**Instructions' Source** : SUPER HANGMAN (IJK) Inner Inlay

## Review (Electron User)

WELL, they did it with Battleships, Gomuku, Othello and even Chess. So why shouldn't they put a really professional version of Hangman on the Electron?

IJK Software have taken this pencil and paper game and turned it into a highly enjoyable video pastime which can be enjoyed by all the family - something rare in video games today. The graphics are excellent, especially the hanging man, and also colourful. It all adds to the enjoyment of the game. They have gone into great detail with the victim. He blinks, smiles and clicks his fingers. And if you take too long in contemplating your next choice of letter he will give you quite a surprise.

Foreseeing the time when you have learned all the names in each category, there is a section where you can include words of your own choice.

All in all, a simple, good value down-to-earth game and a refreshing change from a screenful of laserbolts and gore.

Adam Young, ELECTRON USER 1. 8

# SUPER POOL

*Professional, Originally Released On Cassette Only*

Game Type : Arcade  
Author : R. Leatherbarrow  
Standalone Release(s) : 1984: SUPER POOL, Software Invasion, £6.95  
1985: SUPER POOL, SInvasion/Dixons, Free In 10 Pack  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SOFTWARE INVASION, 50 Elborough Street, Southfields, LONDON  
SW18 5DN  
Disc compatibility : CDFS E00, DFS E00

## Instructions

A superb pool game with a difference!

Features include time restricted shots, variable cue strength, superb real time graphics.

Level 1 : Pot balls in any order.

Level 2 : Pot balls in correct order.

Level 3 : Pot and hit balls in correct order.

**Instructions' Source** : SUPER POOL (Software Invasion) Back and Inner Inlay

## Review (Electron User)

Have you ever sneered when Steve Davis missed a shot and announced to all and sundry "Even I wouldn't have missed that!"? I know I have. Well here's your chance to put your cue where your mouth is, because Software Invasion is giving you the opportunity to play SUPERPOOL.

Although not quite in the style or atmosphere of the Crucible Theatre, the game represents a pretty accurate simulation of a game of pool, with six balls, coloured and numbered, and a plan view of a pool table. All these go to make an attractive and uncomplicated display, with the scoreboard along the top edge of your screen.

You sight your cue ball by moving an indicator along the cushion, and this is where the ball will strike, provided, of course, that there is not a ball in between, which is in fact your aim.

You select the strength of your shot, press Fire and, if you're like me, the white ball then goes into a pocket. Of course a coloured ball should go in, but then I don't need to explain the rules to you, I'm sure.

In the first frame it's made easy, and you can pot any ball in any order. In the second frame, you have to pot the balls in number order. In both these frames it doesn't matter if you hit any other ball, but in the third frame you may only hit and pot the balls in number order. There are keyboard or joystick options, and your shot is on a timed basis - run out of time and you lose a life.

All in all this is a very good game, but some things I found off-putting. I would have liked the option to remove the timer, because it's not always appreciated, especially in the beginner's game.

I was also a bit dubious about where the balls ended up when certain strengths were selected, and they also have a tendency to suddenly speed up when no other balls are involved.

Taking everything into consideration, the pros outweigh the cons and if you want a game that will keep you interested for hours on end you have to go far to find one better than this.

Adam Young, ELECTRON USER 2. 7

## Instructions

*"You can choose to play either the action-packed arcade game or the challenging football management game, or, for the ultimate in football excitement and realism, you can play the combined arcade and mangement game. So you can choose to be a player, a manager or a player-manager!"*

### ARCADE SOCCER FEATURES

- \* Heading, passing, dribbling, sliding tackles, corners, throw-ins, goal kicks*
- \* One or two player options - play against a friend or the computer*
- \* Full pitch scanner shows the postions of all players and the ball*
- \* Control of playing time, game-skill and team colours*
- \* Full on-screen time and score information and game comments*

### FOOTBALL MANAGEMENT FEATURES

- \* Four divisions with promotion and relegation*
- \* Full season of games - home and away matches*
- \* Transfers - sell players, and buy if you have the cash*
- \* Choose your team according to strengths and skills*
- \* Build up your finances and success by skill and clever strategy"*

SUPERIOR SOCCER is a menu-based program. Use the CURSOR ARROW KEYS to move the arrow around and RETURN to select an option. You needn't be too precise with the vertical position of the arrow. Some options can be repeatedly selected to change the information they display, for example, the "CHANGE TIME" and "CHANGE COLOUR" options on the "PLAY SOCCER" menu.

You can choose to play either ARCADE SOCCER or FOOTBALL MANAGEMENT alone or play the COMPLETE GAME. In the ARCADE SOCCER game you can choose to play either against a friend ("2 PLAYER" option) or against the computer ("1 PLAYER" option). If you select the COMPLETE GAME you will play all your fixtures against the computer.

You can quit the game at any time and return to the initial menu page by pressing the SHIFT and ESCAPE keys together.

## Arcade Soccer

If you choose to play the "1 PLAYER" game, you can select the "SKILL LEVEL" of the computer (between 0 and 9) from the "PLAY SOCCER" menu. This also determines the skill level of your goalie. In the "2 PLAYER" game, "SKILL LEVEL" determines the skills of both goalies.

The arrows around a player indicate you have control over that player. This is normally the nearest player to the ball. However, if you are moving a player around, that player will remain selected until you stop moving, then control will switch to

the player nearest the ball. Your goalie is controlled by the computer, depending on his, and your team's skill.

On the scanner, at the top left-hand side, you can see all the players and the ball. The flashing dots indicate the players you and your opponent currently control. (Sometimes if players near the ball cross paths one may appear on the scanner the same colour as the ball. Be careful not to confuse this player with the ball.)

PLAYER MOVEMENT - You move the player you control using the default keys (given above) or the keys you selected on the title page. Diagonal movement is achieved by using two keys together, for example to move diagonally left and down use the LEFT and DOWN keys simultaneously.

KICKING THE BALL IN THE AIR - To kick the ball in the air, when the player is in contact with the ball, press the FIRE key for a medium distance and press the UP, DOWN and FIRE keys together for a long distance.

PASSING - Press the LEFT and RIGHT keys together for a short pass along the ground; press the UP and DOWN keys together for a long pass along the ground. This can be quite tricky and needs to be practised.

DRIBBLING - This can be very useful and is achieved by simply running with the ball at your feet without changing direction by more than 45 degrees. For example, the ball will not remain at your feet if you turn around from left to right, but will if you change from left to diagonal left and down.

HEADING - When the ball is in the air (or at any other time) pressing the FIRE key on its own causes the player to jump and make a header. You can tell when the ball is in the air from the shadow it casts.

SLIDE TACKLE - To slide tackle, move in any direction and press the FIRE key. Your player will continue to slide for a while. Slide-tackling is particularly effective coming in at right-angles to the direction the other player is moving (for example from the left or right if the player is running up or down).

CORNERS, GOAL KICKS and THROW-INS - For goal kicks and throw-ins, you can vary the direction and power of the kick or throw. The player cycles through a number of directions, and a power-meter (PWR) indicates the strength of the kick or throw. For corners, you can only vary the power of the kick. Pressing the FIRE key releases the ball. Obviously, goal kicks go the furthest, but be careful with diagonal directions as the ball may go out of play if you are not careful.

## Game Controls

The keys to move the players and to FIRE are redefinable (by pressing the C key) before commencing play. Initially the keys are defined as:

BBC Micro			Electron		
Player 1	Player 2		Player 1	Player 2	
Z	>	Move Left	Z	<	
X	?	Move Right	X	>	
Q	{	Move Up	W	£	
A	*	Move Down	S	+	
TAB	£	Fire	Q	_	

## Football Manager

You initially choose one team from the four groups of teams. This team is then placed in Division 4. You play eleven matches in a season, so you play every other team in the division once, either home or away. The first two teams in each division are promoted and the last two are relegated. Your overall objective is to become Division 1 League Champions.

On screens displaying fixtures, results or league tables, select the "GO ON!" option to continue.

On the team selection screen you must "de-select" players from your team squad until you have eleven players left. Your team squad starts with thirteen players, but can vary between eleven and fourteen. The white square at the left-hand side of each player's name indicates whether he is selected or not. The first player listed is your goalie.

Once you have chosen your team, move the arrow to the top line (the "PICK PLAYERS" line on the BBC version, a row of dots on the Electron version) and press RETURN.

You earn a varying amount of money for each match, depending on which division you are in and how many people turn out to see you.

You can use your money to buy players and gain extra money by selling players. You are not offered a player to buy each time you select the BUY option: it depends on the market. The skill (SKL) and strength (STR) of each player is shown. You are advised to use the SELL option before the BUY option if you want to both sell and buy, as the BUY option leaves this section. If you don't buy any new players, your team becomes tired towards the end of a season. Players should be rested regularly otherwise your team performance will suffer.

**Instructions' Source** : SUPERIOR SOCCER (Superior/Acornsoft) Back and Inner Inlay

### **Review (Electron User) - "Tricky Tactics Tackler"**

In the past, football programs have tended to concentrate upon playing the game or managing it. With the advent of SUPERIOR SOCCER you can do both. Once you have specified whether or not you will be playing alone or with a friend, your next job is to decide which sections you intend to tackle.

Realising that you may not always have a full evening free, Superior allows you to play either the arcade or the management part in isolation. The arcade game provides a comprehensive list of options. The ten skill levels determine the ability of the opposition in the one-player game or the skill of both goal-keepers when using the two-player option. Other niceties allow you to specify the duration of a match or change the colours of the team's shirts.

SUPERIOR SOCCER does not support a joystick option so you and your opponent must each select a set of keys with which to control your respective teams. You control only one player at a time and he is identified by arrows. The program determines which player you control by always selecting the one nearest the ball when you relinquish control of the current one. This feature can be over-ridden to some degree by keeping a man moving once he has been chosen.

Players can perform a whole range of footballing type antics, such as passing, tackling, heading and throwing - providing that you can master the controls, that is.

The instructions mention that some of the activities require a great deal of practice before you can execute them fluently. They are not kidding: I must have made twenty abortive attempts to pass the ball before I eventually succeeded. The best way to practice your ball skills is to select the two-player option and then play alone - your chances of winning are also improved slightly.

SUPERIOR SOCCER's graphics are very good. A large central window follows the movement of the ball as it is booted around the pitch by the Gauntlet-style players.

Player movement off the ball and your position in relation to the whole pitch can be monitored by glancing at the Pitch Scanner. This small green rectangle is a map of the pitch on which both teams and the ball are represented by different coloured dots - not that you will find much time to look at it.

One of the game's fun features is the cartoon commentator who issues forth a constant stream of David Colemanisms, but only in speech bubbles. If you begin to find the arcade action a little too hectic you can always sit back and play at being the boss.

Starting in any of the four divisions you must fight your way into one of the top two positions in order to achieve promotion. Your best bet is to gain some experience and money by spending a couple of seasons in division four, before making a concerted effort for the big time.

Your first task as manager is to survey your squad and assess which players are at peak fitness - this can be done by observing their skill and strength ratings.

When playing the management game alone, you just sit and wait for the match results to be displayed on the screen. Following a brief look at the league table you can nip down to the transfer market. Here you can offer one of your down-and-outs for sale and hope that some mug will bid a million.

As you reach the end of the season you may just about be able to afford to buy a new striker, if one is available. The program determines what calibre of player is to be sold and at what price. If either of these factors do not meet your requirements then that's too bad, because there won't be another sale until after next week's game.

The secret of good management is to monitor the skill and strength of each team member closely. If each player is not rested at regular intervals the performance of the whole team can suffer dramatically.

If you have a spare evening at your disposal you can take a shot at both managing and playing. But with eleven games per season, this may prove a little taxing for all but the most ardent of football fanatics.

By combining both the arcade and management routines into one composite program, Superior has given the punter the best of all worlds. No longer can the relegated manager blame lady luck for his downfall. By stepping out on to the pitch with his lads he has nobody to blame but himself.

Jon Revis

### \*\*\* Second Opinion \*\*\* (Electron User)

First it was golf and now it's soccer, here we go...Not being an arcade game fan I only took a passing glance at the "tactical" part of the game - the David Coleman-clone was mildly amusing but his comments were limited and continued even when there was no action on the pitch. The managing section was very simple to use but definitely fun - it kept my attention for several hours. And I'd recommend it for a quiet evening's entertainment.

# SUPERMAN - THE MAN OF STEEL

*Professional, Originally Released On Cassette Only*

Game Type : Multi-load Arcade Extravangza  
Author :  
Standalone Release(s) : 1990: SUPERMAN - THE MAN OF STEEL, Tynesoft, £9.95  
Compilation Release(s) : None  
Stated compatibility : BBC Side A, Electron Side B  
Actual compatibility : As stated  
Supplier : TYNESOFT, Unit 3 Addison Industrial Estate, Blaydon, TYNE &  
WEAR NE21 4TE. Tel: 091 414 4611  
Disc compatibility : Unknown

## Instructions

*"YOU are The Man Of Steel...but don't congratulate yourself just yet! An endless siege of earthquakes and volcanoes are rocking the earth; terrorists have hi-jacked a yacht with Lois Lane and the Governor on board; and two of your most dangerous enemies have struck an unholy alliance! The clock is ticking with only hours left to save the world.*

*In SUPERMAN - THE MAN OF STEEL, a computer comic book which allows you, at crucial moments, to join in the action and become Superman. All of Superman's powers - Flight - Heat Vision - Telescopic Vision Super Strength and Super Breath - are yours to command.*

*And you will need them as you battle Darkseid's para-demons and Lutnor's sinister construction in a pulse pounding race to forestall the destruction of your adopted planet. SUPERMAN - THE MAN OF STEEL takes you into the comic book."*

The game screen shows Icons relating to the available Super Powers. In games where more than one Super Power is available, you may swap between them by pressing <SHIFT>. The bar graph at the side shows your energy status. If this reaches 'E', you have failed and must return to the Fortress of Solitude.

## The Game

SUPERMAN has been directed by Perry White to meet Professor Corwin at S.T.A.R. Laboratories urgently.

Flying from Metropolis, Superman encounters Darkseid's evil Para-Demons born out of The Boom Tube.

Darkseid has equipped some of the Para-Demons with Concussions Cannons. These Cannons fire deathly Concussion Clouds, which Superman must steer clear of at all costs to avoid a substantial drain on his energy levels.

*Powers Available - Flight, Heat Vision, Super Punch and Super Breath.*

After battling through the Para-Demons on the way to meet the Professor, Superman gets a call from Perry White to go immediately to "The Atlantis" anchored outside Metropolis Harbour.

On board The Atlantis, Governor Lee and Lois Lane are being held hostage by fanatical terrorists. Superman's job is to defeat the terrorists and free Lois and the Governor.

*Powers Available - Flight and Heat Vision.*

After leaving The Atlantis, Superman reaches the S.T.A.R. Laboratories, where he meets the Professor who tells him uncharacteristic seismic activity has been

monitored by his scientists. The Professor must board the Shuttle en route to the Star Lab Satellite where he must gather further valuable data on the natural disaster imperilling the planet. Professor Corwin asks Superman to escort the Shuttle through the violent asteroid and kryptonite storms which could riddle the space shuttle and possibly threaten the Professor's life unless Superman is able to protect the Shuttle on its journey.

*Powers Available - Flight, Heat Vision, Super Breath and Super Strength (punch).*

Having reached the Star Lab Space Shuttle, Superman must enter via the airlock and proceed to fly or run down the corridors to the Command Room and rectify the satellite's out of control Robot Defence System. The system recognises Superman but it incorrectly identifies him as an enemy intruder who must be stopped by the numerous mutant robots.

*Powers Available - Flight and Heat Vision.*

Once the Robots have been made harmless, Professor Corwin sets to work analysing his data to discover where the problem is emanating from. But as he starts, he sees out of a window a massive asteroid storm heading towards the satellite which has already been damaged from a previous storm. Superman must fly outside and protect the satellite from the storm whilst the Professor sets about fixing the Satellite's shields and collecting data.

*Powers Available - Flight, Heat Vision, Super Breath and Super Strength (punch).*

Now that the Satellite has been made stable, Professor Corwin has been able to trace the geophysical disturbances to an unidentified Satellite Station that is sending out disruptive signals through the Com-Sat earth station receivers. The Professor gives Superman the co-ordinates of the malevolent Satellite and he must fly there and knock it off the air.

Leaving the Professor, Superman encounters a heavy asteroid storm. In the distance, he see Darkseid's huge killer robot which is rapidly approaching. The robot is heavily armoured and once in range his energy level is displayed within the playing area.

*Powers Available - Flight, Heat Vision, Super Breath and Super Strength (punch).*

Having rendered the Ship harmless, Superman flies inside the Satellite Station to be confronted by scores of fighting Lexcorp Robot Commandos. The Robots, now very annoyed after Superman's external attack of their defences, do their best to stop him flying down the central corridor to the Station's core where the geo-distrupctor is located. The destruction of this is Superman's final battle for the day - everyone can now sleep easy as once again Superman saves the day.

*Powers Available - Flight and Heat Vision.*

### **Game Controls**

### **Review (Electron User) - "Up, Up And Away!"**

Is it a bird? Is it a plane? No, it's SUPERMAN - THE MAN OF STEEL. Tynesoft now brings that hero of the comic book on to your Electron. The software comes on what looks like a C90 cassette - it's a massive program. This is a multi-part game like many of Tynesoft's latest packages, but unlike some, each section must be completed before you are allowed to progress to the next.

The story so far: Mysterious earthquakes and volcanoes threaten to devastate the Earth. Lois Lane and the Governor have been taken aboard a hi-jacked yacht by terrorists and what's more, two of Superman's most dangerous enemies are against him.

The playing screen is divided into two areas. On the left is a control panel showing the currently active super power, your strength, score and so on. The right hand side contains the window where all the action takes place.

Adopting the role of Superman, you first have to meet Professor Corwan at Star Laboratories, but on the way you encounter the Parademons. In this first stage you must kill the demons with your laser eyes or by thumping the living daylights out of them with superhuman strength. A quick blast of super breath helps keep them at bay while you gather strength.

Select Superman's mode of assault by pressing the <SHIFT> key. Icons on the left of the screen will display what mode you are in. As soon as you kill a couple of Parademons more are born through the Boom Tube which drifts down from the sky just when you think you have wiped them out.

Some of the demons ride concussion cannon firing concussion clouds as they approach. Come into contact with one and your energy level quickly falls. If you manage to polish off enough demons within the time limit another scene will load. You will now immediately go to the SS Atlantis, the yacht where Lois and the governor are being held hostage.

Using your super-strength kick, breath, punch and fight your way along the deck of the Atlantis dispatching any terrorists on the way. Free the governor and fly off with Lois to Star Laboratories. If only it was this easy - the bad news is that the terrorists are equipped with laser cannon and seem to have the strength of ten men, so venture cautiously.

On arriving at Star the professor tells you that he must go to the laboratory in a space shuttle to gather important data concerning the seismic activity of the planet. You have to guide the shuttle through an asteroid storm riddled with Kryptonite. Again using your super-powers, punch the asteroids and zap the Kryptonite with your laser vision.

After hours of practice this third stage is the furthest I have reached. The goal is to battle through five more stages and reach the end where you must destroy the geodistruptr situated in the core of the Lexcorp Satellite station.

The game, although very playable, is by no means easy and the first stage may leave you somewhat frustrated after a while. Once you have got through it and on to the next level you'll be curious as to what lies ahead on future levels, making you all the more determined.

There is one annoying fault with this otherwise excellent game. When you die you have to rewind the tape back to the beginning and reload virtually the whole lot. Apart from that, SUPERMAN is super.

David McLachlan

**\*\*\* Second Opinion \*\*\* (Electron User)**

SUPERMAN could have made Golden Game this month, but for two things - it's difficult and you have to reload every time you get killed.

The graphics are superb and the gameplay is exciting and addictive. The sound is minimal, but this wasn't really noticeable. It's a pity you can't practice any section you want as this would have made the game far more enjoyable.

# SUPERMAN VS DARKSEID

*Professional, Originally Released On Cassette Only*

Game Alias : SUPERMAN THE GAME  
Game Type : Arcade  
Authors : Fernando Herrara and Jim Nangano  
Standalone Release(s) : 1988: SUPERMAN VS DARKSEID, First Statr, £3.95  
Compilation Release(s) : None  
Stated compatibility : BBC Side A, Electron Side B  
Actual compatibility : As stated  
Supplier : FIRST STAR. No further information.  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"You Have SEEN The Film...And READ The Comic...Now PLAY The Game! Minimum Rules...Maximum Playability \* Playable 'Intermissions' \* You Control A Giant Animated SUPERMAN \* Joystick Or Keyboard Control \* Amazing Graphics And Sounds \* 1 Or 2 Player Options"*

*"SUPERMAN Vs. DARKSEID, The Arch-Enemy Of Mankind! In the skies, on the streets and in the sewers - SUPERMAN battles to save the world. DARKSEID thirsts for universal domination, but ne needs the ANTI-LIFE FORMULA. This awesome key is imprinted on the minds of certain hunmans. DARKSEID is on earth now and plots a reign of terror to achieve his ends. ONLY SUPERMAN CAN STOP HIM."*

## Introduction

SUPERMAN The Computer Game is First Star Software's first game in its Super Powers collection. It's a game of nail-biting strategy and stunning action. The player takes the part of either SUPERMAN or DARKSEID, battling for control of Metropolis\* and its people.

Note: You can play SUPERMAN solo, against the computer, or compete against a friend.

SUPERMAN : He came from doomed Krypton™ with powers and abilities beyond those of mortal men. He's faster than a speeding bullet, more powerful than a locomotive...able to leap tall buildings at a single bound™. SUPERMAN is mankind's champion in the eternal battle between good and evil.

DARKSEID : DARKSEID is SUPERMAN's most deadly enemy. He lusts for the Anti-life formula\*, an awesome genetic code, which will give him power over all living things. However, this formula is only present in the brains of a few, unknown, humans. So, DARKSEID has come to earth. He plans a reign of terror and destruction. The right atmosphere for his mind-scanners to reveal those who have the formula!

## Game Objective

The game's setting is Metropolis, where DARKSEID's reign of terror has begun. DARKSEID seeks to capture the citizens while SUPERMAN tries to save them. Once all the people of Metropolis have been captured or saved the player with the most people is the winner. However, if during play either SUPERMAN or DARKSEID's energy levels fall to zero, the surviving character wins the game.

## The Metropolis™ Sectors

The play area is divided into three sectors, representing the streets of the Metropolis and underground tunnels. These screens are inhabited by the frantic citizens. Your aim as SUPERMAN will be to guide the people up to the safety of your haven. As DARKSEID, you will seek to drive the people down towards your lair.

## Leaving The Sectors

DARKSEID and SUPERMAN: The first character to qualify (collect a number of objects equivalent to the skill level) can choose to leave the sector and move onto an adjacent screen.

CITIZENS of Metropolis: Move freely to adjacent sectors, unless their route is blocked by a deflector.

### **Game Play In The Sectors**

SUPERMAN		DARKSEID
A .....	Up .....	Cursor Up
Z .....	Down .....	:
S .....	Left .....	Cursor Down
D .....	Right .....	COPY
CTRL .....	Fire .....	P
7 .....	Pause .....	7

### **Heat Vision And The Omega Ray**

These super powers are activated by pressing the fire button. The beam will grow in length and strength until you press the fire button again. If the beam strikes your opponent he will lose energy and drop any objects he has collected.

### **The Deflectors**

The deflectors are positioned at the intersection of streets. They divert heat vision or Omega rays and channel the movements of the citizens. SUPERMAN and DARKSEID can alter the angle of the deflectors to suit their strategy. Position the character over a deflector and press the fire button twice in quick succession. The deflector will rotate one position. Repeat until the desired setting is achieved.

### **Objects**

SUPERMAN and DARKSEID must qualify to leave a particular sector. They do this by collecting mysterious, but important, objects, represented on screen by a diamond. The number of objects required increases with levels of play. The first character to collect the correct number of objects can leave the sector and go on to an adjacent screen. The number of objects successfully collected is displayed on the lower part of the screen. Also, do not forget that being hit by a heat or Omega ray can cause you to drop an object.

## Instructions

*"Electron User Golden Game August 87.*

*"'Could well knock Repton off its perch'*

*- MICRO USER, August 87*

*"The year is 2087 and the world has been devastated by nuclear war. Your mission is to guide a team of specialist Droids through seven levels of a severely damaged hibernation dome and teleport almost a thousand survivors to safety."*

Your mission is to rescue almost a thousand survivors from a hibernation dome, damaged in the recent nuclear war. To complete the task, you must guide three Droids through the seven levels of the building and teleport the survivors to safety. Each of the Droids has a different function. DROID 1 can tunnel through tons of earth at high speed, DROID 2 is a very advanced Droid whose function is to teleport the survivors to safety, and DROID 3 is a Droid of immense strength, used for moving fallen boulders (although even he can only move one at a time).

The damage to the dome is so severe that the slightest mistake can result in a fall of boulders. If one of your Droids is hit by a boulder, serious power loss will result. Beware also the MK. 1 'Guardian' Droids, left in the dome to maintain the life support systems. Their circuits were damaged by the nuclear fall out and they are now hostile. Contact with one of these will also cause serious loss of power. The only way to dispose of these mutant droids is to trap or crush them with a boulder.

Every move must be planned to ensure that your droids do not become trapped. Failure of your mission will result in certain death for the SURVIVORS.

## Game Controls

Z - Left, X - Right, \* - Up, ? - Down  
1, 2 and 3 - Select Droids, Q - Sound Off/On

<ESCAPE> (once) to pause. Any key to re-start.

<ESCAPE> (twice) to start a new life.

**Instructions' Source** : SURVIVORS (Atlantis) Back and Inner Inlay

## Review (Electron User) - "Race Against Time"

I have to admit I must be one of the few people that didn't like REPTON or its many sequels. On the face of it, SURVIVORS seems like REPTON with a different scenario, though the original idea is a bit more sinister.

It all happens in the year 2087 after a massive nuclear war has devastated Earth. Your job is to find and rescue the cryogenically suspended survivors of the holocaust from the crumbling remains of a hibernation dome.

Three specially armoured rescue droids have been sent into the area to help and are now under your control.

Each droid has its own special abilities. The first is a high speed tunnelling machine, the second a mobile teleporter and the third a bulldozer droid for shifting large rockfalls in the area. But it is not going to be easy.

From the moment the title page weaves onto the screen you begin to get the feeling that you are in for a mindbending task. Press S to start the game (After all, who needs instructions?) and you're ready to go.

The screen display shows the power levels of the three robots, the score, time remaining, people left and most important, people saved.

Actually saving someone is a doddle, all you do is move over them with droid number two, the teleporter, and they're whisked to safety.

The problems lie in finding where they are, and then rescuing them without getting trapped yourself.

Now that is not quite as easy as you might think and your route has to be very carefully thought out. One wrong move can bring boulders bouncing down, blocking the escape route.

SURVIVORS becomes more of a challenge when you realise that the three droids have to be used intelligently.

Initially you can use the tunnelling machine to dig a path through the rubble and then use the teleporter to pick up survivors. But you will soon have to start shoving rocks around, and then it starts to get difficult.

You have to cope with the old maintenance droids as well. These once peaceful machines, having been damaged by radiation, are now on the loose and pose a severe threat to any of your own droids that touch them.

Unlike most games of this ilk, touching the enemy does not result in instant death, merely the loss of power. If the power level of any of the three droids falls to zero then you will have to start all over again.

When you do get through level one there are another six to come, and judging by the challenge of the first it may take a long time.

The game is addictive and aided by well-animated and colourful characters. One minor criticism is the sound which is rather a disappointment, the only regular noise being the relentless ticking of the clock, counting your remaining time.

I would have liked to see the addition of a joystick option and screen designer, although this is more personal preference rather than a necessity.

All in all, at this pocket-money price, SURVIVORS represents extremely good value for money and could well knock REPTON off its perch.

### **Instructions**

*"A two player game of dexterity set in Hazard County. Beat your opponent to the jewels and gold with the help of your band of cronies. Includes police cars and one player practice option."*

You are out to steal £250,000 in diamonds before your rival. You accomplish this by collecting the heaps of diamonds which appear on the screen, and taking them to the cache in your house. Unfortunately the other robber is not your only problem. There are several killer droids, employed by one of the insurance companies, to try to apprehend bandits such as yourself and recover the swag. There are two types of droids, Henrys and Percys. One type will try to catch you, the other your opponent. You can "convert" one which is following you by shooting it. You can also shoot the other player's man, and if caught by a droid or shot, you will drop your swag and be returned to your house. Naturally you will soon use up all the ammunition in your gun, but you can get more by depositing gold in the bank. The other way to convert droids is to move onto a DH, which changes all Henrys to Percys, and vice versa. Moving onto a Smiley has the effect of sending your opponent back to his house. If you shoot a police car it will follow you around the screen, which gives points to the other player, though you can stop this by drinking a car of beer (the sort which refreshed the parts other beers can't) and shooting them again.

### **Game Controls**

	Player One:	Player Two:
Up	A	O
Down	Z	L
Left	X	+
Right	C	*
Fire	V	RETURN

f0/f1 - Sound On/Off, f2/f3 - Pause/Restart, N - Unlimited Bullets  
P - Player One, Practice, F/G - Headstart Player 1/2

**Instructions' Source** : SWAG (Micro Power) Inner Inlay

### **Review (Electron User)**

SWAG is a rarity in arcade style games - it is a genuine two player game with the option of the second player being the micro. The aim is to acquire jewellery to the value of £250,000 by moving your man to randomly placed jewels and returning with them to your house.

If that sounds easy, then don't forget that your opponent is after the same treasure

as you and is quite prepared to shoot you to get it. You may also have insurance company robots on your trail. Any collision with them means a quick, empty-handed return home. Of course you have the same advantages as your opponent. There is a different type of robot after him.

Robots can be converted from one kind to another by shooting them or by travelling to a special symbol which occurs on the screen from time to time.

Attempting to keep order in this lawless area are the police. There are three police cars which score points for your opponent if you go near them.

If you shoot one, it relentlessly follows you until you drink a can of beer and shoot it again. You can use that to your advantage by stopping the car near your opponent's home.

With all this shooting you will probably run out of ammunition, but they sell it at the bank, provided you've got gold.

Regrettably, in translating this program from a BBC Micro version, one or two things have been forgotten, The instructions give a most unsuitable group of keys to player two, but fear not, the actual keys are O (up), L (down), + (left), \* (right) and <RETURN> (fire). More seriously, you do not seem to be able to redefine the keys as you might wish.

The game is provided with many options: Sound on or off or a start for either player.

I personally worry about the glorification of theft and violence. Is this what we really want for our teenagers? The trouble is that like so many of these games, it is addictive.

Rog Frost, ELECTRON USER 2. 4

# SWOOP

***Professional, Originally Released On Cassette Only***

Game Type : Arcade Shoot-'Em-Up  
Author : David Elliot  
Standalone Release(s) : 1983: SWOOP, Micro Power, £6.95  
Compilation Release(s) : 1987: PRES GAMES DISC 3, PRES, £9.95  
1988: MICRO POWER MAGIC 2, Micro Power, £7.95  
Stated compatibility : Electron  
Actual compatibility : Electron. Electron version plays fast on BBC.  
Supplier : MICRO POWER, 8/8A Regent Street, Chapel Allerton, LEEDS  
LS7 4PE. Tel: 01532 683186.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

The objective in SWOOP is to rid the space lanes of the homing, swooping Birdmen. They come in eight phases, each more difficult than the previous one. In the most difficult you have to combat two birds at once, with a total of eight missiles raining down on your laserbase.

If a Birdman gets past you, he lays an explosive egg on your laserbase track, thus restricting the room to manoeuvre. All is not lost as this disintegrates after a while.

You can select the level of difficulty at the options menu.

## The Mission

Select:

- A Slow-moving formation with standard-speed Birdmen.
- B Slow-moving formation with fast-moving Birdmen.
- C Fast-moving formation with standard-speed Birdmen.
- D Fast-moving formation with fast-moving Birdmen.

## Game Controls

Z - Left, X - Right, <SHIFT> - Fire

**Instructions' Source** : SWOOP (Micro Power) Inner Inlay

## Review (ELBUG)

SWOOP is one of the few games that happen to run much better on an Electron than in its original version for the BBC Micro. It is a variation on Galaxians, with the birds laying explosive eggs at the bottom of the screen. The game, although nice and fast, is rather repetitive. Rating: \*\*\*

Alan Webster, ELBUG 1. 3

## Review (Electron User)

Have you ever had one of those nightmares where horrible creatures swoop at you out of the sky and, try as you like, you can't get away from them? With Micro Power's exciting new game SWOOP you get the chance to get your revenge using your Electron.

You do this by controlling a laser base at the bottom of the screen. The birdmen are hovering in formation at the top bombing you. Not content with that, they peel off and strafe you. All you can do to escape is either to blast them with your laser or dodge out of the way by moving left or right.

Even if you do avoid them they still cause problems because on landing they turn

into eggs which turn into landmines. Run into these when you're dodging left and right and BANG!

Happily you do have three lives - and you need them! And if you manage to shoot the birdmen, the eggs they've laid fade away. The trouble is that as soon as you've shot down one formation, another one takes its place. And they start coming at you thick and fast.

It's a great game, enhanced by good graphics, nice sound effects and easily used controls. Fast and furious, it needs skill and good reactions to avoid the swarms that come at you as the game progresses. It's addictive - and a lot more fun than the nightmare.

Peter Bibby, ELECTRON USER 1. 3

# SYNCRON

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Shoot-'Em-Up  
Author : Gary Partis  
Standalone Release(s) : 1990: SYNCRON, Superior/Blue Ribbon, £2.99  
Compilation Release(s) : 1988: SUPERIOR COLLECTION 3, Superior/Acornsoft, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

You must endeavour to complete sixteen death-defying missions; on each mission you have to collect a batch of power orbs, destroy as many targets and alien spacecraft as possible, and then search for the HQ Building which you have been commissioned to destroy.

Each power orb is positioned in a huge contrainer situated amindst defence pylons and force-fields. The orbs are guarded by a fleet of alien spacecraft. Watch out also for the land-based missile launchers.

To collect an orb, you must first locate an orb container and then shoot at it.

The container will disintegrate revealing the orb within. Now, fly over the orb (don't shoot at it) and your spacecraft will scoop it up. You can only carry one orb at a time; after an orb has been collected, find a runway and fly between the dotted lines on the runway to land your spacecraft. The orb will be deposited and your spacecraft is now able to pick up another one.

When you are on a runway, you can view the status screen which shows your current score and tells you how many more orbs need to be collected on the mission.

When you have amassed the required number of orbs, you must shoot alien spacecraft and bomb the land targets until you have scored 10,000 points on the current mission. You should then locate and bomb the HQ Building to complete the mission.

Your spacecraft is equipped with a hyperspace-jump facility, but hyperspacing is a notoriously dangerous practice - it is estimated that you have only a 65% chance of ahcieving a successful hyperspace-jump.

A bonus spacecraft will be awarded to you for every twenty alien spacecraft that you destroy.

Your mission begins at level A (the Alpha base). Once you have completed a level, you move on the next one. You may restart the game at this new level by pressing the appropriate letter (A-P) at the start of the game. You can only attempt later levels after you have completed all the preceding levels. Therefore, at the start of the game you can only select level A. It may be useful to draw simple maps of each level that you reach, and use them to plan your route accordingly.

## Game Controls

Z - Left, X - Right, <SPACE> - Turn Spacecraft Around, <RETURN> - Fire/Bomb  
H- Hyperspace-jump (Very risky!)

### After landing on a runway:-

<CTRL> - View current status, <SPACE> - Relaunch spacecraft

Q/S - Sound Off/On,    <COPY>/<DELETE> - Pause On/Off,    <ESCAPE> - Retire

## Scoring

### Destroying alien spacecraft:

Alien Spacecraft 1 .....	150 points
Alien Spacecraft 2 .....	190 points
Alien Spacecraft 3 .....	230 points
Alien Spacecraft 4 .....	270 points
Alien Spacecraft 5 .....	310 points
Alien Spacecraft 6 .....	350 points
Bombing a land target .....	70 points
Collecting an orb .....	120 points
Depositing an orb .....	120 points

## Instructions

*"Do you fill in the pools every week? Would you like to increase your chances of winning? Could a computer assist in filling out your coupon? If the answer to any of these questions is Yes, then System 8 - The Pools Predictor is for you!"*

SYSTEM 8 - The Pools Predictor is a football pools forecaster which can help you plan your coupon for UK football pools.

It predicts the outcome of matches in the four English and three Scottish Divisions. It cannot predict the result of those games involving non-league clubs or Australian leagues.

The program uses a stored database in order to calculate the possible result of the current match from the results of previous matches. This database should be compiled for a minimum of four weeks before any level of prediction accuracy can be assumed.

In order to make life simpler when completing coupons, System 8's 'Perm against Plan' option causes selections to be displayed in columns ready for direct copying to the coupon.

In order to retain the match result data needed to predict future results, the 'Save data' option must be used before the computer is turned off. It is strongly recommended that this data is saved to separate data tapes each week. This makes it very simple to go back to a previous week's data if an error or a recording fault is found subsequently. The master cassette must NOT be used to record match data under any circumstances.

Please note that System 8 is published for amusement only and that whilst Blue Ribbon believe the program to be accurate, they provide no warranty as to its use and will accept no claims for losses incurred.

## Main Menu

The five option main menu appears next.

For the first use, or to start a new season, select option '5 - Set up Divisions' and then follow the on-screen prompts. If there is an odd number of teams in any division, enter a dummy team as the entered team total must be even. Once this has been done, save the data via option '4', so that this information is not lost in case of future problems. As a further insurance against loss of effort, record the data twice at least.

To prepare to use for the current week, select option '1'.

Please note that only league games should be entered, not cup matches. For mid-week matches, it is essential that results are entered immediately as the fixture list is not saved for these games.

Saturday fixture lists are saved with the data and so these can be created at any time.

To create a match list simply enter the team numbers at the prompt. Press 'Q' to quit a division if all the teams are not playing.

After the match list is created the selections can be made by following the on-screen prompts. Remember that System 8 needs to have at least four weeks' data loaded before the selections can be expected to have any accuracy.

'Perm against Plan' displays a coupon-like read out of the selections. System 8 makes a maximum of 32 selections.

Option '3 - Enter Results' is used to record the week's data ready for subsequent weeks. Saturday match results can be entered at a later date due to the fixture list/s being stored on tape. Mid-week match results must be entered immediately after creating the fixture list as this list is not saved to tape although the results are.

Data is saved using option '4'. Please note that this should be the final option selection before turning off the computer. Saving the data twice is a good idea in order to decrease the chance of a saving or loading error causing problems.

Result entries are:

Home win	H	Away win	A
Score draw	S	No-score draw	N
Postponed	P		

### **Loading Data**

Upon loading the program, you are first prompted to load the previously stored match data.

For the first use of the program you should load the start-up data recorded on the master program cassette.

To do this ignore the prompts to change and/or rewind the cassette and simply press <RETURN>. Remember to have a blank cassette available in order to record the database at the end of this session of program use.

### **Game Controls**

Most of the program controls and options are prompted on the screens concerned. By reading the screen carefully, it should be possible to input all the information required simply and easily.

**Instructions' Source** : SYSTEM 8 - THE POOLS PREDICTOR (Blue Ribbon) Inner Inlay

### **Review (Electron User) - "So Do You Feel Lucky?"**

Every week for the last eleven years I have religiously completed my 8 out of 10 column of the pools coupon. The more astute members of ELECTRON USER's readership will deduce that I have still to land my first big pools win, since I am still writing reviews and not living it up on my private Caribbean island.

SYSTEM 8, from Blue Ribbon, is a football pools predictor program that may improve your chances of winning. I use the word may because Blue Ribbon merely hints that its program will improve your success rate.

According to the cassette inlay card, the program's database must contain at least four weeks' results before any level of prediction accuracy can be assumed. This means that you must persevere with the program for a whole month before you can begin to reap the benefits - although you could enter past results.

The data file on the tape is not intended for use with predictions - I know this because when I asked the program for its predictions based upon that data it selected all ten matches from division one. Now this may have been a genuine prediction but I have a sneaking suspicion that sticking pins in the coupon would have proved more successful.

SYSTEM 8 was written in 1988, so the default teams in each division aren't much use for the 1989/90 football season. Job number one therefore is to get hold of your latest pools coupon and shuffle the teams up and down between the various divisions until they are correct, then save the lot to a tape.

While on the subject, I would have found the program far more useable had it included a routine to transfer itself to disc - saving files to tape is positively primitive in these days of cheap disc drives. Perhaps they assume the software will only be bought by hard-up and desperate types!

Setting up the divisions is a once a season task, a more frequent chore is creating the weekly match list for every match in all seven divisions. For Saturday matches this list can be prepared in advance and saved ready for vidi-printer time on Saturday afternoon.

Result entry is actually the easiest routine in the whole program. The day's games are displayed on the screen one by one and all you have to do is press an S for a score draw, N for a no score draw, H for a home win and so on until every game has an associated result. Data entry complete, you can save your work in preparation for the following week's matches.

SYSTEM 8 will predict possible score draws for your treble chance entry or produce Perm against Plan columns that are ready to be copied straight to your coupon. At a price of £2.99 what have you got to lose?

# TABLE ADVENTURES

*Professional, Originally Released On Cassette Only*

Game Type : Educational; Ages 5-12  
Author : Laurie Buxton  
Standalone Release(s) : 1984: TABLE ADVENTURES, Acornsoft/ASK, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : A.S.K., London House, 68 Upper Richmond Road, LONDON SW15  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

TABLE ADVENTURES is an exciting way of helping young children with their tables. The four games involve finding gold at the rainbow's end, canoeing across rapids, escaping from underground, and using skill and logic to minimise your score. Each game starts off very simply but is progressively more challenging, eventually proving a tough problem (even for adults!). A self test is also provided so that you can see how you're improving.

## In all A.S.K. programs

<RETURN> Remember: once you have typed in your response a program will  
< icon > deal with it until you press the <RETURN> key.

<ESCAPE> You can always return to the beginning of a program by pressing  
< icon > the <ESCAPE> key.

<DELETE> You can rub out anything typed in, before the <RETURN> key is  
< icon > pressed, by using the <DELETE> key.

<\_Hand\_> Means : Please press the space bar to carry on with the program  
< icon >

< ? > Means : the program did not expect the response it has just re-  
< face > ceived. Perhaps there was a typing error? In any case, to carry  
on, just press the space bar and try again.

<CTRL> All of our programs incorporate sound. There are various volume  
levels - holding down the <CTRL> key and pressing the <S> will  
<S> change the level - keep pressing the keys until you are happy  
with the volume.

Note: The program will not run on computers that have 0.1 operating systems.

## Introduction

TABLE ADVENTURES is a series of four exciting games based around the multiplication tables. The four games are Rainbow's End, Shooting the Rapids, Underground Escape and Number Families. Each one is harder than the last. At the end is a self test, so you can check how you are getting on.

In Rainbow's End, a puck dances along a wall, lighting up the numbers in the table. Getting enough right answers wins you a crock of gold. In Shooting the Rapids, you steer a canoe down a river. If you hit a rock, you have to find the factors of the number on it, to get past it. In Underground Escape, you are climbing up a mine shaft, when it is blocked by rocks. You have to find common factors to get through. These ideas all come together in Number Families. It's easy to play this game, but to get the best scores needs a lot of thought.

## How to use it

When the program is loaded, you will see a menu on the screen. It asks which game or test you would like. Remember, the games get harder, so for the first go, try Rainbow's End. To get a game, type its number and then press the <RETURN> key.

## Rainbow's End

If you have chosen this game then you will see a number of brick walls. Decide which table, from 2 to 10, that you want. Type the number, and press the <RETURN> key. A puck now bounces along the walls, knocking out bricks and showing the numbers in that table. If you choose 7, for example, the puck bounces along in jumps of 7 and knocks out the bricks over 7, 14, 21, 28, 35...These are then removed, and the rainbow appears over one brick. You have to type in the number of jumps needed to get to this brick. For example, if the number is 35 and the table is 7, then you have to press 5 and <RETURN>. If you are right, a creature comes on, but you can't get your gold. Your score is shown, and the spacebar symbol appears. Once you have pressed it, you get another question. If you are wrong, the gold from the correct brick drops out, and the creature comes on and steals it. A message telling you to start again appears. Press the spacebar to continue with the table you are working on. You have to get five right in a row to complete the game.

## Shooting the Rapids

If you choose this game you will see a 1-100 number square. It will then be flooded and rocks appear in the water. Your canoe comes in at the top left hand corner, a number appears on the first rock, and the canoe starts its run. If the canoe hits a rock, you must find one of the only two numbers that divide exactly into it (not counting the number itself, and 1). Type in one of these two, and press the <RETURN> key.

If you are right, the computer does the division and the result appears on the rock. The spacebar symbol appears, and when you press it, the canoe continues on its way. If your choice is wrong, a message will appear, and your canoe will sink. The spacebar symbol appears, and when you have pressed it the run starts again. When you have completed the run, you will be given your time. Can you break the record?

## Underground Escape

This game also starts with the 1-100 number square used in Shooting the Rapids, but this time the square is upside down. The screen clears, and a mine shaft appears. Rocks roll down the shaft, blocking the route up to the surface. Numbers appear on the first three. You then appear at the bottom left hand corner. Move up, right or left, by using the appropriate arrowed keys. You have to try and climb out of the shaft.

When you reach the first rock, you have to find numbers that go into two of the three numbers on the rocks. There is one important point. The computer always wants the biggest number that goes into the rocks. If, for example, the rocks are numbered 12, 28 and 35, you can select 4, which goes into 12 and 28, or 7 which goes into 28 and 35. You can't select 2, which goes into 12 and 28, as it is not the largest number that goes into these two, ie 4. Type the number you decide on and then press <RETURN> key. In the example, if you choose 4, it will be divided into 12 and 28, which now become 3 and 7 respectively, and you would be left with 3, 7 and 35. If at any stage you type in a number that does not go into two of the three numbers on the rocks then the ? symbol will appear. When you press the spacebar, the number disappears and you can try again.

After typing in one successful number, there will now only be one number that goes into two of the three numbers on the rocks, and you have to find it. Type in the number, and press the <RETURN> key. In the above example, the number is 7. The computer does the division and displays the results on the rocks. You are now left with three numbers, one of which is 1. When you press the spacebar, the rocks disappear and you can proceed up the shaft. As you progress, three more numbers appear on the rocks above you. Find a number that goes into two of the three on the rocks, as you did above, type it in. Now type in the other number that goes into two of the remaining numbers, and you can proceed. Finally, a third set of numbers appears. If you find the correct numbers then you have escaped!

Remember, red hot lava is creeping up the shaft behind you so you must think fast. Mine shafts are dangerous! If you get caught by the lava then you will have to start again. In this case, press the spacebar and you return automatically to the bottom of the shaft, with the same rocks as before.

### **Number Families**

First the computer asks if you want the 20 game or the 60 game. It is better to start with the 20 game, and try the 60 game when you have played with the 20 game for a bit.

In the 20 game, you have to wipe out the numbers below 10. When you start, you will see that the number 1 has a cursor on it. Move the cursor around the grid using the four arrowed keys. To take a number you just press the <RETURN> key when the cursor is above it. When you take a number, you also wipe out its factors at the same time. If, for instance, you pick 18, the 9, 6, 3, 2 and 1 all disappear as well. If you try and take a number that has no factors left, the computer will give you a beep, and the cursor will go to the first number that has not gone. If you had taken 18 for example, it would not now let you take 4 or 7. You could take 12 because 4 is still there.

The aim of the whole game is to get as low a score as possible. When you start your score is zero, after you have taken 18 for example, your score goes up to 18. You can also vary the game by trying to get as high a score as possible.

In the 60 game, you must knock out all the numbers up to 30, using the same rules as for the 20 game.

### **Self Test**

If you want to try the self test, just type in the answers to the questions you are asked, and then, when you are ready to start the test, press the spacebar. Once you have done this, you will be presented with a series of questions. See how fast and accurately you can answer them.

### **Educational notes**

This program both reinforces the facts of the multiplication tables, and often extends this work.

The first game gives some simple table practice, and emphasises the picture of equal jumps along a number line. This image is much more helpful than remembering the separate facts.

In the next two games, the background is the standard "hundred square" used in all primary schools. The games enlarge the child's knowledge of the numbers from 1 to 100. They emphasise "factorising", which is even more important than multiplying. For example they encourage breaking down 63 into  $9 \times 7$  rather than asking the answer to  $9 \times 7$ . This also brings out the importance of "prime" numbers - those, like 7 or 31, which do not break down in the way 63 does.

It is very important mathematically that we see numbers built up from prime numbers - 12, is  $2 \times 2 \times 3$ , or 35 is  $5 \times 7$ , and the last game also emphasises this. It is easy to play but it is hard to score the lowest or highest possible. We challenge anyone to score the maximum of 1137 on the 60 game!

# TABLESUMS

***Professional, Originally Released On Cassette Only***

Game Type : Educational; Ages 6+  
Author :  
Standalone Release(s) : 1983: TABLESUMS, Griffin, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : GRIFFIN, Ealing Road, Alperton, Wembley, MIDDLESEX HA0 1HJ  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"How can you make learning multiplication tables fun for your child? TABLESUMS is a cassette containing two computer programs, TABLESUMS 1 and 2, which aid in the teaching of tables in an exciting and motivating way.*

*Both programs allow the child the choice of which table to practice from 1 to 10, whether the computer is to answer, or the choice of a mixed table. The main section of the program displays a running score total, with correct answers rewarded and wrong answers penalised.*

*After 20 goes the final total is shown on the screen in a novel way and you may play again. Simply follow the instructions given in the booklet and let TABLESUMS take the drudgery out of learning tables."*

## TABLESUMS 1

Press (and if necessary hold) <SPACE> to start. You will first be asked if you want sound; you should press Y for yes or N for no, followed by <RETURN>.

You now have to decide which multiplication table you wish to practise. Type in a number in the range 1-10 inclusive, or M followed by <RETURN>. If you press M then your questions will be mixed randomly by the computer and you will go on to the game immediately. If you press a number then a message will appear to that effect. You may then type C to display the multiplication table chosen. If you press P then you will have to fill in the table yourself.

## Playing The Game

A sum will be displayed using numbers from the multiplication table you have chosen. The object of the game is to bomb the correct answer. Press <SPACE> to drop the bomb. If you hit the right answer you receive a reward, but if you miss or hit the wrong answer you get a penalty.

You have 20 bombs altogether. Throughout the game, the number of bombs you have left is shown at the top of the screen.

When you have had your 20 goes, your score is displayed. If you have gained 100 stars, which is quite a good score, 100 stars will be printed on the screen.

You may then choose to play again by pressing <SPACE>.

## TABLESUMS 2

The operation of the program is similar in almost all respects to TABLESUMS1. The difference is that instead of dropping bombs from a plane onto tanks, TABLESUMS2 involves shooting firework rockets from a milk bottle to hit clouds.

# TACTIC

## *Professional, Unreleased*

Game Type : Strategy; Puzzling Tetris-style Column Game  
Author : Andrew Pepperell  
Standalone Release(s) : None  
Compilation Release(s) : 1991: PLAY IT AGAIN SAM 17, Superior/Acornsoft, £14.95 (Disc)  
Stated compatibility : BBC B, B+ and Master 128  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH LINCOLNSHIRE DN20 9AX  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### Instructions

In order to complete a level you must complete the contract of patterns given at the base of the screen, within the given time limit, using identical blocks (or circles) for each individual pattern. The number of each of the patterns to be made is given by the number (in red) against it. If you make more than the required number of each pattern, then your score will increase. The score for each of the five patterns is, from left to right: 40, 100, 75, 25 and 10. You also receive a 500 point completion bonus and time bonuses.

### Game Controls

Player 1: Z - Left, X - Right  
Player 2: < - Left, > - Right

<COPY>/<DELETE> - Pause On/Off, S/Q - Sound On/Off (while paused)  
<ESCAPE> - Quit Game

### On title screen only:

P - Select number of players  
Cursor Up/Cursor Down - Select start level (provided it has already been reached)  
C - Enter Level Code (Use Cursor Up/Cursor Down and <RETURN> to select the level)  
<SPACE> - Start Game

**Instructions' Source** : PLAY IT AGAIN SAM 17 (Superior/Acornsoft) Inner Inlay

### Review (EUG)

As anyone "up" on their history of Superior Software will know, not only was the company the longest running and most revered and celebrated of all the houses for the Electron, but the Elk was its flagship computer; Elk releases on cassette outselling all the other BBC machines. At the very height of producing some of the most awesome releases the Elk was ever to see, though, Elk versions and all cassette versions of new Superior software were discontinued. In fact, after this decision, they only released two further titles - PLAY IT AGAIN SAM 17 and 18 - before pulling out of the BBC series' market, such as it was.

Now, almost a decade later, not only has the recently unearthed UGGIE'S GARDEN phenomenon proved how Superior had completed BBC/Electron cassettes it never released to the moaning few [See EUG #6 - Ed] but we've also got hold of TACTIC - the one game on PLAY IT AGAIN SAM 17 only officially released on BBC disk! With both these reviews coming in the same issue, you'd be forgiven for thinking Superior was still alive, well and supporting the Electron again!

TACTIC represents some departure from the arcade-adventure or feast of graphically stunning shoot-'em-ups or Repton screens Superior's probably most famous for. This

title belongs squarely in the "puzzle" pile, along with TETRIS, SIM CITY, MASTER BREAK, etc. In many respects it actually looks like a TETRIS rip off, but it implements some intriguing ideas making it really not the same game at all.

Advancing through the levels is not complicated. The screen is split vertically into two equal strips; player one's arena to the left and, fairly obviously, player two's to the right. At the top of the screen, a timer counts down from 99 to 0 and, almost in time with each tick of -1, a different styled piece falls from the top of the arena toward the bottom. Each player must learn where to put the pieces for maximum use in constructing the *shapes* which are displayed along the bottom of the screen.

The game is for one or two players, and if playing alone, area two remains empty (apart from the message "Not in use"). Each piece falling is 8 by 8 pixels, very different to the puzzly shapes of differing sizes that fall from heaven in TETRIS, and can be one of *four* colours: red, blue, white or magenta. The game is set in Mode 1, on a black background hence there are *five* colours on screen so there's evidently some really sophisticated coding employed to achieve such an effect. It's the first Electron title I've encountered that has been able to squeeze an extra colour out of Mode 1!

Also, each piece can be one of three "styles": filled in circle, maze-type square or dot-pattern square. The idea is to get the *same* combinations (that is, the same "style" and the same colour) of shapes somewhere in the arena. On the first level, for example, you must create one horizontal line of three same coloured, same styled shapes and one vertical line of the same to proceed. This information is given by the number 1 next to each "shape display" on the bottom row. As you create one successfully, the number disappears. When all numbers have gone, you proceed to the next level.

The first level is easy beyond belief. Only a very narrow range of the colours and styles fall and you can get away with just watching them fall into place without even tapping the keys. Of course, this doesn't continue for long and soon you have a quite mammoth number of combinations to create and a confusing screen full of your previous failed attempts. This is not good because no pieces will ever disappear from your arena (unless you manage to complete the level) and pieces do fall *constantly*, not even allowing you a nanosecond breathing space.

As the levels build up at the bottom of your screen, the pieces have less time to fall before they 'land' hence you have less time to react to what colour and style they are and less time to decide where to put them. The pieces themselves fall extremely smoothly (pixel by pixel) but, even from the start, at a rather fast rate! The game is one of skill and reaction and it quickly becomes very difficult.

The two-player option allows two games to be played side by side. Whether or not this is necessary is for you to decide. The screen does look more professional and, with two players scrabbling away instead of one, the game really shows its metal with its ability to react to all keypresses without fluxation. But players are not actually battling *against* each other in the strict sense so the only real situation where you would need the function is where there is only one computer but both players are simultaneously desperate to play TACTIC! Even then, if the players are unevenly matched, you would be left with the better player continuing alone while the other waits patiently to begin again...

Nice features incorporated into the game are a customised font, high score table, level change option (allowing you to progress to higher levels after you've completed the lower ones once) and level codes (to jump to the extremely difficult levels). There's also a fantastic Mode 1 loading screen announcing the author Andrew Pepperell.

The actual game graphics are, as you would expect, uncomplicated; apart from nice Superior and TACTIC logos on the title pages, there's not a lot else. Then again, there doesn't need to be. With games of this ilk, the emphasis is on good presentation and addictive gameplay. Both have been achieved.

As outlined in the introduction, unfortunately this game is not 'officially' available from Superior; the version here reviewed arrived on rogue media which was probably never destined to leave the office. All the same, it does exist, it's complete, you'll shortly be able to download it from [www.stairwaytohell.com](http://www.stairwaytohell.com) and, like UGGIE'S GARDEN, it's up to the high standard we've come to expect from this software house.

Dave Edwards, EUG #57

# TALES OF ARABIAN NIGHTS

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Platform Game  
Authors : Ian Gray, Keith Purkiss, Roy Purkiss and Richard Paul Jones  
Standalone Release(s) : 1983: TALES OF ARABIAN NIGHTS, Interceptor Micros, £7.99  
Compilation Release(s) : 1988: 10 COMPUTER HITS, Beau Jolly, £9.95

## Review (Electron User)

Some while ago, when computers were things owned by rather strange people with more money than sense, I went to see a program called ELIZA. It was almost the first program I can remember seeing, and it made a great impression on me.

It seemed that the computer could be spoken to through the keyboard, and that it actually answered back in an intelligent manner. Such programs are old hat now, but this cassette might be interesting for those keen on artificial intelligence, for it gives a marvellous insight into the way such a program is written.

The main menu allows several options, one of which is to load a character from tape. Two are provided, ASTRO and BOMB, and fans of the film and book Dark Star will have the opportunity to convince the bomb to return to the docking bay...

The accompanying booklet gives quite detailed instructions on how to decide the characteristics of the other people, through the examples of HELEN and RON. Creating or altering a characters is fairly straightforward once a little familiarity is gained.

Keywords - including short phrases - and responses can be entered or altered, so that fairly predictable conversations can be held, either between the two selected characters, or between the user and one of these.

The same keyword could provoke differing responses, but there is a priority system which decides which response should occur. Actually, I found the conversations themselves to be rather repetitive and bland, and I was much more interested in designing characters.

However, the booklet does include a rather amusing list of possible conversations, such as the one between a marriage guidance counsellor and King Henry VIII.

The average Electron owner will probably get fed up with the possibilities fairly quickly, but those with a particular interest in this area will find it most worthwhile. I can also see some value in computer studies lessons in schools.

Phil Tayler, ELECTRON USER 3. 1 (Also 3. 3)

# TANK ATTACK

*Professional, Originally Released On Cassette Only*

Game Type : Strategy; Hi-quality Wargame; Part Board Game

## Review (Electron User) - "Wargamers' Delight"

TANK ATTACK is a micro-mediated board game for two to four players. The package comprises a top quality fold-out playing board, a total of 48 plastic tanks and armoured cars and a book of instructions.

The opening screen calls on you to select which of the four countries you want to take part in the conflict. My first few combinations were rejected without explanation. Close examination of the playing board revealed the cause - adjacent countries such as Sarapan and Calderon have a common border, as do Armania and Kazaldis. Opposing countries have a shaded no-mans'-land separating their official borders.

By choosing the correct countries you can devise conflicts of increasing magnitude such as one to one, an alliance of two against one or a full blooded four country war. If you are using only two of the four countries you are given the opportunity to double the strength of your forces by using the spare tanks.

Once you have made your alliances you can get on with the job of placing your pieces in their opening positions. A solid blue line denotes the outskirts of each capital city and all vehicles start from within this line.

Other points of interest on the playing board are the repair centres to which tanks may be returned when damaged by enemy fire, the length of a vehicle's confinement being determined by the severity of the damage sustained. The Electron will inform you when you can return a vehicle to active duty.

On-screen headlines are displayed before each round in the battle - these comprise a news flash, a weather report and a political comment. Prevailing weather conditions can have a marked effect upon the movement capability of one or both armies depending on the location of the weather front.

Your link with the micro is your battle strength display. This shows how many active tanks and armoured cars remain and also reports how many units are currently undergoing repairs. If these figures do not tally with the number of pieces on the board someone is cheating!

At the bottom of the battle strength screen are four icons, some of which will be animated. Only the active ones are available. By moving a pointer over them you can choose to move, attack the enemy headquarters or finish your turn and pass control to the next player. Selecting the movement order icon activates a teleprinter which displays your total movement allowance for the turn. This can be divided up among any number of vehicles.

Once this section is complete you can engage the enemy or fire on the opposing HQ. Both types of vehicle have a maximum range of four board squares, with the Electron making accuracy adjustments to your shots based on the range at which you are firing.

As the battle develops you will eventually come within firing range of the enemy. The Electron asks you to input the armour types of the two units involved - there are three for tanks and two for armoured cars - the numbers embossed on the underside of each unit relate to its armour strength. Finally, you specify the range of your shot and battle can commence.

The view changes to that of an observer on a distant hill top. The tanks fire one shot each and the position of the explosion shows whether or not you hit your opponent or were indeed hit yourself. The teleprinter tells you of the degree of damage sustained by each vehicle. A repairable tank can be placed on a repair depot, but you will be asked to remove seriously damaged ones from the board and your tank tally will be adjusted.

When you reach the enemy HQ to deliver the coup de gras you must move on to the square itself as you are not asked for a firing range. This last shot of the conflict is always accurate and always decisive.

There is no need to go through the rigmarole of securing the remaining enemy buildings - the teleprinter display brings news that this has already been carried out and your victory confirmed.

TANK ATTACK is a superb program that really takes the leg work out of wargaming. By leaving the monitoring of repair times, damage assessment and weather reports to the impartial logic of the micro you can concentrate on what really counts - strategy.

Jon Revis

### \*\*\* Second Opinion \*\*\* (Electron User)

TANK ATTACK is unusual in that it's a computer controlled board game. This is fine if you like this sort of thing, but it won't be everyone's cup of tea. I would have preferred to see the whole game played on the micro rather than half on the micro and half on the board.

## Instructions

Legend speaks of a child captured, then raised by the Apes...

## The Birth of a Legend

From the Western coast of the Congo, to the palm-fringed shores of Zanzibar in the East, African folklore tells of the legendary exploits of one man - Tarzan of the Apes.

Nursed at the shaggy breast of Kala, the she-ape, the white orphan child had grown to learn the ways of the jungle and the language of the beasts. Years later he claimed the inheritance was rightfully his, as John Clayton, Lord Greystoke, Peer of the Realm, but whenever necessity demanded the polished Englishman would revert once more to the naked ape-man.

For Tarzan - or, as the apes called him, Tarmangani - held a deep contempt for his native society, in which he had found greed and cruelty far beyond that which he had known in the savage land of his adoption. Where the myriad life trod the matted vegetation, or flew or swung or climbed amongst the leafy vaults of the great trees, here it was that Tarzan ruled supreme, Lord of the Jungle.

## The Eyes of the Rainbow

And now, yet again, needs drove him to shrug off the thin veneer of civilization and brave the perils of the forest. Lady Jane Greystoke, she who he had won by the might of his steel thews, was in danger.

Held captive by Usanga, chief of the Wamabo, she was to be fed to the devouring maw of Sheeta the Panther and the rapacious talons of Ska the Vulture, if Tarzan failed to retrieve the seven gemstones which had been stolen from the tribal shrine. These stones, believed by the Wamabo to be the Eyes of the Rainbow, were of differing iridescent hues, one for each colour of the spectrum. In his rage at their loss, Usanga had given Tarzan but three days in which to find them, or Jane would be sacrificed at sunset on the third day.

As he swung through the tangled forest, Tarzan had spoken with Manu, the monkey, as the grey-bearded creature had recounted how others of his kind has mischievously taken the precious stones, and scattered them far and wide amongst the shadows of the dank jungles.

Tarzan knew that he must travel without stint hunting the jewels in the heat of Kudu the sun, and by the light of Goro the moon. His quest would take him to the dark caves of the rocky steppes, wherein dwelt bloated spiders and unearthly flames, and to the lichen-covered walls of the Temple of the Sun. He would traverse the swampy morasses and the treacherous quicksand, and find Numa the lion and Histah the snake. He must beware the poisoned spears of the Kurotawi, and the rifles of white hunters.

However keen his senses, however mighty his muscles, he was still mortal. Though he might find numerous artifacts to help him, though he might call upon the friendly monkeys to help him, he was still limited by inexorable time. He knew he possessed sufficient strength and cunning to battle against Death and win, but the hazards of the jungle, the bite of Histah the snake and the clinging embrace of quicksand, all would conspire to hinder and delay.

Time was his greatest enemy. Before Kudu sunk in the west on that third fateful day, Trazan must return the Eyes of the Rainbow to Usanga and discover the forest prison that held his beloved Jane.

His eyes narrowed, his muscles tensed, and from his mighty chest arose the savage tormented cry of the bull ape. . .

The child became a man - and Lord of his jungle domain.

## **Game Play**

### **1. Three Days**

As time passes, the sun will slowly sink in the sky. The jungle will pass through sunset into shadowy night. If Tarzan survives the night, the dawn will give way once more to the heat of day.

The time it takes for three days to pass depends on how successfully Tarzan can avoid or overcome the many hazards he will encounter. For example, every time Tarzan is hit by a spear, or falls into quicksand, a period of time will pass more quickly. If Tarzan is careless, therefore, three days will pass very quickly.

### **2. The Eyes of the Rainbow**

These will appear on the screen as black boxes (look carefully for these, they may be partially hidden somewhere on the screen). If Tarzan is able to retrieve one of these, a picture of it will appear on the bottom right corner of the screen. Tarzan needs all seven gemstones before he can hope to free Jane.

### **3. Objects**

There are various objects (both animate and inanimate) which Tarzan may come across. These will also appear on the screen as black boxes (look carefully for these, they may be partially hidden somewhere on the screen).

If Tarzan is able to pick up any of these, then a picture of the object will appear on the bottom left corner of the screen.

Monkeys, rope, torches, different coloured shields and sunstones are just some of the objects Tarzan may find useful to have with him. To use some objects, it is necessary for Tarzan to drop them in the chosen location.

### **4. Exploring**

Tarzan can move left or right until faced by impenetrable rock. He can also move up or down through any gaps in jungle undergrowth, rocks, walls, etc (these gaps are not always easy to see, they may even be completely hidden from view).

### **5. Controls**

Q - Left, W - Right, O - Up, K - Down, P - Fire  
<ESCAPE> - Restart, <SPACE> - Pause

### **6. Actions**

#### **a. No FIRE button**

W	move right	K	move down or block
Q	move left	W and O	somersault right
O	move up or jump	Q and O	somersault left

#### **b. With FIRE button**

W	high punch right		If Tarzan is able to punch hostile
Q	high punch left		natives off screen, they will not
K	low punch		attack him again in that location.

O        enter 'object mode' or pick up gemstone or object if Tarzan is next to it.

**c. Object Mode**

Q        moves object select cursor left

W        moves object select cursor right

P        drops the selected object. You cannot drop an object in a screen location which already contains an object.

Disc compatibility : CDFS E00, DFS E00

## Instructions

Run the jungle path, jump the torrential rivers, cross the moving lifts in search of the elusive arrows that will bring you to Jane. Then cross the great divide. How? Only you can work it out.

## Points

A decreasing time bonus. The longer you suffer the more you're a duffer.

## Game Controls

<CTRL> - Left, A - Right, <RETURN> - Jump

**Instructions' Source** : 10 COMPUTER HITS 3 (Beau Jolly) Inner Inlay

## Review (Electron User)

This is a four screen arcade game set deep in the jungle. You take the part of Tarzan and the object is to find Jane. Tarzan starts on the first screen and Jane is on the last. All you need to do is follow the arrow signs which will take you to her. It might not sound difficult but, after an hour's play I had only managed to master screen one - and that's the easiest.

All the dangers to be found in the jungle are here - gorillas will crush you, poisonous snakes will bite you and monkeys will drop coconuts on your head. There are also waterfalls, rivers with floating logs and crocodiles to overcome. In addition to these obstacles are the usual collection of mean-looking nasties.

Screen one involves ducking under a snake slithering down from a tree. Just past this are several lifts which you up to different platforms. Next you have to leap across a deep chasm to another platform. Watch out for the monkey with coconuts here. Then jump the next chasm, up the lift and wait for a particularly nasty disembodied head with gnashing teeth to move to the correct position. A couple of leaps and it's on to the next screen.

TARZAN BOY is a Mode 2 game with a surprising number of moving objects. The Electron isn't noted for its speed in this mode, but although Tarzan moves a little slowly, generally the animation is fast and smooth.

You won't be disappointed with TARZAN BOY. It's one of the best levels-type of games released in the past couple of months.

# TEMPEST

*Professional, Originally Released On Cassette Only*

Game Type : Arcade; 3D Wire Frame Action In Space  
Author :  
Standalone Release(s) : 1984: TEMPEST, Superior, £7.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : SUPERIOR, Department C, Ground Floor, Regent House, Skinner Lane, LEEDS 7  
Disc compatibility : CDFS E00, DFS E00

## Instructions

The game of TEMPEST involves you (the yellow "claw") moving across the rim of the blue "stargate". You are armed with a Blaster and a Super Zapper; this can be used only once (per frame) and has the effect of destroying everything but yourself.

(Not that the colours of the "claw" and the "stargate" change at the more advanced levels of the game).

Each frame is a completely new shape until level 9 when the pattern repeats. Levels 49-64 feature invisible boards. The opposing aliens are as follows:-

		COLOUR DURING		FRAME
				NUMBER
NAME	SHAPE	CYCLES 1-16	VALUE	OF FIRST APPEARANCE
Flipper	Line	Red	150pts	1
Spiker	Line	Yellow	50pts	3
Flipper Tanker	Diamond	Magenta	100pts	3
Fuseball	Wavy Star	Multicoloured	150,350,550,750pts	11
Pulsar	Z-shaped	-	200pts	17

You fire bullets from your Blaster and, for emergencies, you have the Super Zapper, which is recharged at the end of each frame.

A brief description of the attackers:-

Flippers - they "flip" end over end around the columns slowly approaching you. Try to destroy them before they reach the rim. Should you need to destroy them on the rim, wait in a sector and as the alien flips over you or an adjacent sector, fire quickly.

Spikers do not appear dangerous as they rarely get to you. Finish them quickly though as the trails they leave have to be avoided when you warp to your next stargate.

Flipper Tankers, although no threat in themselves, turn into two flippers when hit.

Fuseballs - get them before they reach the rim, as they are considerably more difficult to despatch thereafter.

Pulsars should be treated with some respect. When they are active, a "frying" noise is emitted and the rim of their sector disappears. If you are on the rim at this time you will disappear with it.

Tactics: A liberal spraying from your Blaster around the frame as you start should destroy the initial opposition. Flipper Tankers destroyed whilst on spikes discharge

no flippers. In general, if you're going to use your Super Zapper, leave it to the last possible second. When the aliens stop swirling in the distance, all of them will have been generated for the current frame so, if you haven't used your Super Zapper, now is the time to do so.

### Game Controls

CTRL - Spin Clockwise,    A - Spin Anticlockwise  
<RETURN> - Fire Blaster,    <SHIFT> - Fire Super Zapper  
<SPACE> - Start Play,    <ESCAPE> - Restart,    E - Entry Level Select  
S/W - Sound On/Off,    f1/f2 - One/Two Player Game

**Instructions' Source**    : TEMPEST (Superior) Inner Inlay

### Review (Electron User)

Yes, this is the superb arcade game of the same name, converted by Superior for the Electron, and released with the full approval of Atari who created the original.

It involves protecting the universe from aliens who are swarming through the star gates. Your ship, armed with a blaster and super zapper, can skip round the rim of the star gate in clockwise or anti clockwise gates. As the flippers, spikers, flipper tankers, fuseballs and pulsars emerge they can be destroyed with a quick spray of missiles from your blaster - well, theoretically anyway, it's not quite so easy in practice.

The aliens are semi-intelligent and tend to move in your general direction if they can, so you have to watch out for any that make it through the star gate.

If you get in a really tight spot, you can use your super zapper which destroys all the aliens in the gate. However, it can only be used once per screen.

When most of the aliens have been destroyed, your ship enters the star gate to proceed to the next. At this point there may well be several spikers left which must be avoided by blasting a clear route when the message "Avoid Spikes" appears.

There are eight star gate patterns and 255 levels of play. At the start of each game there is the option of one or two players and any odd numbered star gate can be selected.

The sound and graphics are excellent and it's quite an exciting game to play. Also it is quite an original idea. My only criticism is that there isn't a high score table or a joystick option - but is compatible with the Plus 1 and 3. Arcade fans will thoroughly enjoy this classic.

# TEMPLETON

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Platform Game  
Author :  
Standalone Release(s) : 1987: TEMPLETON, Bug Byte, £1.99  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : BUG BYTE, Liberty House, 222 Regent Street, LONDON W1R 7DB  
Tel: 01/439 0666  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"He's in his kind of territory, but on unfamiliar ground. He's a sewer user but you must help - what a rat!"*

Templeton is a neglected rat of the hue green. He has been left to fend for himself within a sewer society. He wishes to return to the city life and escape from his underground tragedy. YOU have been drafted to guide him on his journey.

Within the hostile community, starfish, rubbish bins, sea anenomes, clams and fish are all deadly enemies, while turnstiles are merely troublesome in blocking his path to freedom. Your objective is to help TEMPLETON to find his way through the 30 sewer systems. If you succeed he will be eternally grateful!

1. Turnstiles may only be passed if TEMPLETON possesses the correct colour of ticket in his hand.
2. New tickets can be obtained by touching the ticket character. Note: pass at the bottom of the screen changes colour.
3. A high pitched "beeping" indicates a lack of energy (approx. 10 secs). A bubble will restore energy.
4. A starfish can only be moved if TEMPLETON is directly above or below that character.
5. The rubbish bin can only be passed whilst immobile and closed. When open and roving, it is fatal!
6. On the appearance of a ghost, attempt to turn a corner as soon as possible.

## Instructions

The Train clatters along the lines relentlessly, you stare out of the window at the seemingly endless countryside rolling by. Soon you will reach your destination and then you will receive the opportunity to bring into play your famous investigative talents. For a moment you wonder whether or not you have the talent that will be needed on this case - ever since the national press released news of the fantastic fortune to be discovered at the old Mansion of Major Johnston-Smythe, treasure hunters have tried their luck. Most of them have never been heard of again.

As the Train begins to slow down you prepare yourself for what is ahead by mentally recapping all the information you have gathered so far about the famous treasures:

The Major was a cunning old fox, in order to make it virtually impossible for anyone to inherit his fortune, he had put all his money into Gold, cast into the form of a Figurine or Idol. He then hid this away and told no-one of its whereabouts. Further to this he commissioned Ten more Figurines to be made of various materials and, although worthless in themselves, they were for some reason absolutely essential in order to obtain the main prize. Shortly after this, the Major died and his jealous Nephew made public their activities.

The Train finally stops, now your task beings in earnest. Can you succeed where so many others have failed, or will death be your only prize?...

# TENNIS

## ***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Tennis Match  
Author : Margaret Stanger  
Standalone Release(s) : 1986: TENNIS, Bug Byte, £1.99  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : BUG BYTE, Liberty House, 222 Regent Street, LONDON W1R 7DB  
Tel: 01/439 0666  
Disc compatibility : CDFS E00, DFS E00

### **Instructions**

*"It's 3D Arcade Centre Court action with speech against five of the world's best! Can you out volley, out serve and outwit the likes of Powerful Pierre & Norm Everidge. Ace programming by Margaret 'Champion' Stanger."*

The computer displays the tennis courts, players and scoreboard and asks for the player's name to be typed in. This name appears on the scoreboard versus Manuel Fawltly of Barcelona, his first opponent.

The player is asked whether he wants a one or three set match, and then for a choice between three or six games in a set. He is then asked to choose between joystick and keyboard control and the starts with Manual serving.

If the player loses the match he is invited to play against Manual again. If he wins through to the next round, he may have a chance to play against Powerful Pierre from France, Ivan the Vulgar Boatman from Russia, Norm Everidge from Australia or even the quietly spoken American, John O'Neill.

### **The Rules Of The Game**

The game is played on a court on the screen. The computer-controlled player is at the top of the screen and the player controlled by the keys or joystick at the bottom of the screen.

The object is to hit the ball in such a way that it cannot be returned or it bounces twice in the opponent's half of the court. The opponents continue hitting the ball to and fro until one or the other places a shot that cannot be returned successfully; this wins him a point.

Each point starts with a service. The server stands with both feet behind the baseline anywhere between the centre mark and the sideline of the court, the server changing sides after each point.

The ball is served to bounce in the opponent's service court diagonally opposite him. If the first attempt is faulty, a second attempt is allowed.

The receiver must allow the ball to bounce, all subsequent shots in the rally may be volleyed (struck before it bounces) or hit as ground-strokes after the bounce.

One player continues serving until the game is compete. The opponent serves one game, and then service reverts to the next player.

The first player to win all four points wins the game, unless the score reaches three points all. When this occurs, the game continues until one of the players establishes a lead of two points.

Tennis scoring traditionally uses the scores 15, 30, and 40 rather than one, two and three. If both opponents win three points this is called 'deuce'. The next point is called advantage server or advantage receiver according to who wins it. If the same player wins the next point, he wins the game. If he loses the score reverts to deuce and the game continues until a player has a two point lead.

Tennis matches are usually won by the first player to win two sets. A set is won by the first player to win six games in the set unless the score is 6-5 or 5-6. A final deciding game or tie breaker is played when the score reaches 6-6. This game, and the set, goes to the first player with five or more points and a two point lead. The service changes after the first point, and then after every further point.

### Game Controls

Z - Left, X - Right, : - Up, / - Down  
SPACE BAR to hit the ball, Q - Music on, N - Music off  
F/C - Freeze/Continue

**Instructions' Source** : TENNIS (Bug Byte) Back and Inner Inlay

### Review (Electron User)

Should you be one of the many thousands of people who spend Wimbledon fortnight glued to the TV set you may have considered trying a computer simulation. Bug Byte have just released one such program, though I doubt whether it's destined to be a winner.

You have the option of playing one or three sets with either four or six games per set. Control is via keyboard or joystick and your opponent is always the computer - you cannot challenge a friend. This is a pity as the computer provides such stiff opposition that you will normally only win one or two points during a complete set.

The court is drawn with perspective going into your screen, the computer always being at the top of the screen. When serving, as in the real game, you must remember to keep your feet behind the baseline or you will be foot faulted.

Your player can travel left, right, and up and down the court, and balls can either be volleyed or taken as groundstrokes. When volleying from the net I would suggest that you do not stand too close as you will tend to hit the ball out of court.

I can only assume that the angle of the shot which you play is determined by your position in relation to the ball, though I didn't find that this made too much difference. The ball's flight and its associated shadow, was relatively smooth, although on several occasions it vanished for a fraction of a second in mid-flight.

The characters representing the players are large, angular and rather crude. The best part of the screen is the scoreboard where electronic style numbers display sets, points and server.

Had the game employed a user-selectable skill option it would probably have had more lasting appeal. But in its present form I feel it would soon be abandoned by a thoroughly demoralised player.

# TERRORMOLINOS

*Professional, Originally Released On Cassette Only*

Game Type : Text Adventure  
Authors : Peter Jones and Trevor Lever  
Standalone Release(s) : 1984: TERRORMOLINOS, Melbourne House, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron Side A/BBC Side B  
Actual compatibility : As stated  
Supplier : MELBOURNE HOUSE, Castle Yard House, Castle Yard, RICHMOND  
TW10 6TF  
Disc compatibility : Unknown

## Instructions

*"Wish you were here...  
"...in TERRORMOLINOS...  
"...instead of me!"*

*"TERRORMOLINOS is a hilarious text adventure of an outrageous summer holiday spoof set on the Costa Brava. You must survive a two-week package holiday - and return home with ten snapshots to prove it! The game has been created by the authors of the cult hit HAMPSTEAD and, as would be expected, there are no wizards or dragons to be found! Instead the perils lie on the beach, in the sea, at the bullring...and, of course, in the restaurant!*

*"And that's not all...the various characters you meet in TERRORMOLINOS come and go - including your own family, which you must try to keep together at all times.*

*"In TERRORMOLINOS, every holdiaiy disaster can come true! So why spend a fortune going abroad when you can get gippy tummy in the privacy of your own living room?"*

When chubby-cheeked Cliff Richard first sang "We're all going on a summer holiday," it's unlikely that he was referring to the Costa Brava resort of Terrormolinos, because Terrormolinos is the kind of place you only visit once.

Could you survive a two-week package holiday there, with wife Beryl and kids Doreen and Ken? Among the many perils, you risk being gored by a bull, buried up to your neck in sand, being poisoned, dying of heatstroke, losing an argument with a shark and being run over by a Eurojuggernaut.

The object of the game is not merely to survive the holiday, but to take ten snapshots to prove you did it.

## Moving Off

When the program is fully loaded, the message WELCOME TO TERRORMOLINOS! will appear, followed by some initial instructions.

As the game begins, you are not in Spain but at home in Slough. Beryl has booked a taxi to take you all to the airport. The taxi is now on its way and could arrive at any minute!

Since you have typically left all the packing until the last minute, you must quickly scoot around the house collecting everything you will need to take on holiday. In particular, don't forget your passport, tickets, camera and suitcase. They are all somewhere in the house, and there are other things to be found, too, which you will also need.

## Basics

To move around, use the normal compass directions N, S, E, W, NE, SE, NW, SW. You can also sometimes go up (U) or (D). When using a stepladder, remember to specify UP STEPS or DOWN STEPS.

Apart from movements, most of your commands will be in the form of VERB NOUN. You will often want to pick things up or put them down, e.g GET SNORKEL or DROP HANKY. If you want to look at something more closely EXAMINE SETTEE, EXAMINE STEPS, or whatever.

Members of the family, and also certain other characters you will meet later, can sometimes be summoned if you CALL them.

Other useful commands are SCORE, which speaks for itself; I for Inventory, i.e. what you are carrying and wearing; R for Re-describe, in case you've forgotten where you are and what objects are visible; QUIT, when you've done enough holiday-making for one day; and SAVE GAME/LOAD GAME, to enable you to save the adventure up to the point you've reached and resume later. Check your computer manual for instructions.

## Happy Snaps

Don't forget that your primary task, apart from keeping the family together, is to take those ten photographs. You must use your judgement as to where and when these are to be taken. Your film will have only 12 exposures, so there can only be two duds.

When you take a correct photo, a congratulatory message will appear on the screen. If you take a dud, all you will get is a sarcastic message. Make sure you don't take the same photo twice! Finally, you will have to make special arrangements for locations where there isn't much light.

You can also see on the screen during the game how many correct snaps you have taken.

## Excursions

One of the joys of going on holiday is sitting in a clapped-out bus and being jolted down a hundred miles of cart track on your way to visit some site of interest. TERRORMOLINOS! boasts three such excursions. We suggest that you go on all of them - after all, some of the best snaps are taken on sightseeing trips.

## Scoring

It is possible to complete the adventure with a score of less than 100% as the extra points come from the various other activities you can engage in - which you will have to discover for yourself!

## Wandering Off

Be prepared for members of the family - and others - wandering off. You must retrieve them when they do this, otherwise who knows what could happen?

## In TERRORMOLINOS

On arrival, check immediately into your hotel. Only then can you really start to "enjoy" your holiday.

Some Spanish phrases may come in useful from time to time: HOLA means "Hello", SI means "YES", NO means "No". If you do want a room, ask for UNA HABITACION. That should do!

You may also be asked such questions as QUE QUIERE USTED? ("What do you want?") and HAY EN GRUPO KWIKHOL TOURS? ("Are you with the Kwikhol Tours party?").

## Some Useful Verbs

GET	ADD	FIT	REMOVE	WIPE
TAKE	SWIM	RUB	RING	LEAVE
OPEN	EAT	ORDER	APPLY	KILL
JUMP	DROP	CALL	KNOT	HIRE
EXAMINE	READ	CLIMB	ENTER	GO

### **Quick Peek (Electron User)**

A text adventure of a holiday spoof set on the Costa Brava, in which you must survive a two-week package holiday and return home with ten snapshots to prove it. In this witty game every holiday disaster can and does occur!

ELECTRON USER 3. 3

### **Review (Electron User)**

This is the best adventure game I have yet seen from Melbourne House. The object of the adventure is to go on holiday with your family to Spain, taking ten photographs while you are there. All the photographs have to be taken in the right places and it is up to you to find out where they are.

You start at home. A taxi is due soon to take you to the airport and you must search the house for the things you will need in Spain and get your family together before it arrives.

On arrival you check in at your hotel (make sure it is the right one) and change into more suitable attire before visiting the local shops. An exploration of the nearby beach will lead to a rewarding encounter with a shark.

You should now sample the nightlife, though the red light district has nothing to do with developing your photographs.

You will find that three coach trips are laid on so remember to take your camera. A colloquial insult will help you to find the missing passenger at the monastery. The problem that I get asked most is how do you avoid being killed by the bull?

This is solved by remembering that you do not need to protect your head at the moment and by allowing it to break some crockery. As is immediately apparent from the title, the adventure is very tongue-in-cheek. Unlike HAMPSTEAD, where the humour seemed laboured, TERRORMOLINOS hits the right note every time.

# TEST MATCH

## *Professional, Originally Released On Cassette Only*

Game Type : Cricket Management Simulation  
Author : Derek Baker  
Standalone Release(s) : 1984: TEST MATCH, CRL, £6.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : COMPUTER RENTALS LTD, CRL House, 9 Kings Yard, Carpenters Road, LONDON E15 2HD  
Disc compatibility : CDFS E00, DFS E00

### Instructions

"The No. 1 hit 3D cricket simulation converted for the ACORN - containing two programs - the first a full five day Test, the second a World Cup match. Each program includes a full scoreboard and all the thrills of our national game."

This tape contains the following:

SIDE 1 : (A) Instructions (B) Test Match (C) Data for 8 teams

SIDE 2 : (A) World Cup Cricket (B) Data for 8 teams (C) Team selector program.

All Programs should be loaded using : CHAIN <TEST> [??] for the Test Match game or CHAIN <CUP> for the World Cup game. Once loaded, the tape should be stopped and choice of teams made. Once this has been done, the tape should be re-started to allow the program to 'read-in' the teams. The team selector program should also be loaded using the CHAIN command followed by <TEAMS>. This program contains full instructions for use.

The team selector program allows you to make a tape with your own player names for use in either of the games if you don't want to use the teams already contained on this tape.

### The Game

TEST MATCH - Two innings are allowed for each side and the maximum duration of the game is 450 overs. A batting side may declare its innings closed at any time. The game also allows the follow-on to be enforced. The player with the bowling side may choose any one of SIX bowlers to bowl and may also choose from any one of three styles; ATTACKING, NORMAL or DEFENSIVE. The player with the batting side may similarly choose from the same three styles.

WORLD CUP CRICKET - This game is played with each team only allowed one innings. No declaration may be made during the game. The number of overs can be decided at the beginning of the game. As with Test Match, choice of bowling and batting styles is made at the start of each over.

### Game Controls

All necessary controls are prompted by the computer during play.

# TETRIS

## ***Professional, Originally Released On Cassette Only***

Game Type : Arcade Drop Pieces To Form Wall Classic  
Author :  
Standalone Release(s) : 1988: TETRIS, Mirrorsoft, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : As stated  
Supplier : MIRRORSOFT, Hoborn Circus, LONDON EC1P 1DQ  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### **Instructions**

*"What we have is one of the all-time computer classics...Tetris is addictive - unbelievably addictive - and it holds your attention and keeps you coming back for more...I can't quite put my finger on what makes it so incredibly addictive, but one thing's for sure - it's perfectly simple and simply perfect."*

- ZZAP 64

From the blasted plains beyond the Urals comes the most remarkable computer game yet. The same minds that produce chess champions have developed a cunning game that deceives through its simplicity.

TETRIS a new world from Russia.  
TETRIS a totally original concept in gaming.  
TETRIS addiction is just a game away.

PLAY TETRIS

### **Getting Started**

After loading, select your starting level of difficulty. The higher the number, the greater the rewards, but the harder the task.

### **Playing TETRIS**

A variety of differently shaped blocks fall, one by one, from the top of the screen, or playfield. You can manipulate these shapes left/right and rotate them before they land on the bottom of the playfield.

### **Objective**

Your aim is to create as many complete lines as possible. If you leave gaps, the playfield will fill up rapidly, leaving you less room to manoeuvre. Should the pile of blocks reach the top of the screen, the game ends.

The show key displays the shape of the block that will fall after the current block has landed - useful for formulating your optimum strategy. The rate at which the blocks fall speeds up automatically as your score increases.

### **Game Controls**

< - Left, > - Right, <SPACE> - Rotate, X - Show Next  
A - Speed Up, Z - Drop, S - Sound

**Instructions' Source** : TETRIS (Mirrorsoft)Back & Inner Inlay

**Review (Electron User) - "Costly Addiction"**

When I first read Mirrorsoft's rather spartan description on the packaging of its latest release, my first thought was that it looked like a rather simple game which would have all the appeal of a plate of soggy cabbage. Yet after only five minutes I was hooked. It's a very long time since I have sat up all evening, playing just one game.

First you enter your skill level - between 0 (novice) and 9 (superhuman). I would suggest that you have a few practice games at the novice level first. But be warned. By the time you've finished practising, you'll be well and truly addicted.

One slightly annoying aspect is that immediately you select the level, the game starts. I would prefer a short countdown period first - just two seconds to position my hands over the correct keys would be useful, particularly at higher levels when things tend to be fast and furious.

The challenge starts with a shape which appears at the top of the playing field and begins to drop towards the bottom. As it is falling you can move it left or right or rotate it so that when it reaches the bottom it is positioned where you want it.

Now dexterity and quick thinking enter the scene. Immediately the first shape reaches the bottom, another - which can also be manoeuvred and rotated - appears at the top and starts to fall.

The idea is to manipulate the continuous supply of seven different shapes so that they fit together almost like a jigsaw puzzle - the object being to form complete, unbroken lines horizontally across the playfield.

When a line is completed it disappears and everything above it drops down into the empty space.

The difficulty lies in the fact that if a line has a space in it, it won't drop down. The game ends when the shapes have reached the top of the playfield, which is twenty lines high.

The scoring system is arranged so that you get a number of points for every shape which fits into the playfield and extra points for forming complete lines.

Your score is also modified by the level of the game - the higher the level, the higher the score. The lowest level is slow and you have plenty of time to manoeuvre the shapes - the highest level is so fast that you hardly have time to realise what shape has appeared before it reaches the bottom.

As well as your score several other statistics are constantly displayed and updated on the screen. The useful ones are the total number of completed lines, the number of shapes which have been placed and the current level.

The inclusion of a table which tells you how many times each shape has appeared seems pointless. My guess is that when the game was prepared for release, someone decided the screen looked a bit empty so they decided to fill it up with something that would make things look more complicated than they actually are.

The level of play increases after you have completed a number of lines. For instance, if you start at level zero the game automatically speeds up to level one once you have completed 11 lines. Level two starts at 21 lines, and so on. You can increase the level yourself by pressing the A key.

There are three other useful keys which you can use: X shows the next shape that will appear, Z drops the current shape to the bottom extremely quickly and S allows you to turn off the sound, which comprises just a simple beep when a shape reaches its resting place.

I noticed a small glitch when I tried to type my name on the high score table. The delay before a depressed key started repeating must have been reduced for some

reason and, when typing in DESMOND, I tended to end up with DESSMONND or some other strange mutation.

My only real criticism, however, has nothing to do with the game itself. I would like to know how Mirrorsoft can justify the exceptionally high prices for a game which looks to be a relatively simple piece of coding. And it's only fast enough to be fun on a Turbo Electron<sup>5</sup>.

Value for money .....	5
Overall .....	9

Desmond, ELECTRON USER 5. 9

---

<sup>5</sup>As Desmond talks at length about the different levels, and speeds, that TETRIS can be played at earlier, this very last sentence seems very suspicious. And he stresses he only has a criticism about the price, then, if this sentence is also his, suddenly substantially reduces the market to readers with Turbo Electrons; a giant criticism! The review makes much more sense without this last sentence. It may have been added by someone else.

# THAI BOXING

**Professional, Originally Released On Cassette Only**

Game Type	: Arcade Beat-'Em-Up; Two-Player Option
Author	: Unknown
Standalone Release(s)	: 1986: THAI BOXING, Anco, £7.95 1988: THAI BOXING, The Micro Selection, £1.99
Compilation Release(s)	: None
Stated compatibility	: Electron
Actual compatibility	: Electron, BBC B, B+ and Master 128
Supplier	: ANCO, 85 Tile Kiln Lane, Bexley, KENT
Disc compatibility	: CDFS E00, DFS E00

## Instructions

THAI BOXING is a great spectator sport combining the lightning moves of karate with the brute strength of boxing. Thai boxers are also famous for their agility. In this sport there are no rituals or constraints. They have just one aim - to inflict as much punishment as possible in the shortest possible time. Now this fantastic sport is brought to life on your computer screen in THAI BOXING - the ultimate in superfast beat 'em up action!

In THAI BOXING you control an athletic boxer pitted against a computer controlled opponent - both brilliantly depicted against a variety of exotic backgrounds. Keyboard or joystick control gives you a vast array of attacking and defensive moves. Lightning-fast kicks and punches fly, but remember - THAI BOXING is as much a test of mental agility as physical strength - the winner will be the one who best combines the two - will the winner be you? Find out in THAIBOXING.

## Playing The Game

There are three levels of play. each with its own screen. The first is deceptively easy - use this opportunity to familiarise yourself with the extensive range of attacking and defensive movements.

You control the left hand boxer, and your computer controls the other. The two coloured bars at the bottom represent each player's score. Both start with an equal score, but lose score for being hit by the opponent. The match is over when one player loses all his points.

On the second and third levels, the computer opponent will make full use of his experience and agility, combining lightning reactions with a bewildering array of complex attacking moves. But remember that THAI BOXING, like all martial arts, is as much a test of mental agility as physical strength. It is possible to outwit your opponent by anticipating his actions and either taking the necessary evasive action, or executing your own counter-attack (which has the added element of an element of surprise.).

## Game Controls

Control is by joystick or keyboard. Keyboard controls are...

Z	X	:	/	SPACE	BAR	-	Fire
---	---	---	---	-------	-----	---	------

Use joystick or keyboard controls without FIRE to move the boxer. Pressing FIRE at the same time gives the special THAI BOXING movements...

Fire Off

Z - Backward    X - Forward    : - Jump Up    / - Squat

# THE ACORNSOFT HITS VOLUME 1

*Professional, Originally Released On Cassette Only*

Game Types : Arcade  
Release Information : 1988: THE ACORNSOFT HITS VOLUME 1, Superior/Acornsoft, £9.95  
Compilation Comprises : 1. MAGIC MUSHROOMS, Acornsoft  
2. PLANETOID, Acornsoft  
3. MAZE, Acornsoft  
4. MONSTERS, Acornsoft  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## MAGIC MUSHROOMS

MAGIC MUSHROOMS isn't only an exciting game of skill and quick thinking - it's also a complete game constructor allowing unlimited scope for ingenuity in designing games for you and your friends to play.

Guide Murphy around the screen leaping from brick to brick, bouncing on trampolines, sliding down slides and gliding up escalators in his quest for mushrooms.

He'll find them all over the place. Even on slippery ice sheets and treacherous ground which wobbles beneath his feet, or disappears as he steps off it.

Collecting mushrooms is a hazardous occupation; Murphy must watch out for marauding monsters as he races against time towards the chequered flag.

The game includes nine screens, ranging in difficulty from easy to extremely hard and showing just a small selection of the many techniques you can use in designing your own screens.

## PLANETOID

Action stations! The Aliens are landing! Flying over the planetoid surface your laser-ship speeds to the rescue, firing laser missiles and dodging the enemy and their shell-fire. Save the life-forms while fending off raiders, mutants, bombers, cruisers, spores and megacytes. Lightning reflexes are required to play this game - the fastest ever seen on a micro!

## MAZE

Maze is a real-time game with fast 3-D graphics.

Find your way around the mazes which make up the security system inside the top secret installation of a rival company. To obtain the secret information you are looking for, you must search as many of the levels as you can, moving between them in the computer-controlled lift.

The corridors are patrolled by robot guards armed with rechargeable guns who will shoot you on sight if you can't avoid or destroy them, so you must stay alert to danger at all times. This game is fully compatible with either keyboard or joystick and includes a table of high scores.

## MONSTERS

Pursued by monsters along walls and up and down ladders, your only hope of survival is to outwit them by tapping them in holes which you dig in their path. You can

score extra points by dropping the monsters through several levels, and the further you get the more you can score, as the monsters vary and become more devious.

Quite an exhausting business, so keep an eye on the oxygen level which drops during each screen and eventually runs out, whereupon you die. You have three lives, however, and can earn another one by scoring 3,000 points.

Includes score, table of high scores, excellent graphics and sound effects.

**Instructions' Source** : ACORNSOFT HITS 1 (Superior/Acornsoft) Inner Inlay

**Review (Electron User - Double Review Of ACORNSOFT HITS 1 and ACORNSOFT HITS 2)  
- "Eight Of The Best"**

Each of these double cassette packs contains four games originally released by Acornsoft.

Volume 1 starts with MAGIC MUSHROOMS, which in my opinion is one of the best games Acornsoft ever produced. It is a ladders and platforms game in which you guide our hero, Murphy, along a series of escalators and conveyor belts, slides and trampolines, and past the odd nasty or two.

The object is to collect mushrooms dotted about the screen, but many other features appear in the nine screens making up the game.

You also have the facility to create and save your own screens, so it is possible to design them to be well within the limits of the newest novice or to test the most experienced. The sound is pleasing and the graphics colourful and well designed.

In PLANETOID, a version of the arcade game DEFENDER, the screen scrolls sideways allowing your spaceship to destroy raiders intent on kidnapping humans from the planet's surface. These alien invaders come in a variety of shapes all having their own method of attack.

This version is very fast. Smart bombs allow you to wipe out all the aliens on the screen, and a hyperspace button means you can teleport out of danger.

MAZE has simple but effective 3D graphics which change fairly quickly to give a good illusion of movement. You start on level one of a secret installation and must find three tags hidden in the maze. This will allow you to open a box and release the key which operates the lift to the next floor.

You can view a map of the maze, but this will only show those corridors which you have already travelled along. The position of the evil security robots is also indicated.

MONSTERS is another ladders and platforms game where you dig holes to trap the monsters, then fill in the holes before they can escape.

I was surprised to find two similar games in this compilation - I wonder if it wouldn't have been better to have replaced MONSTERS with another type. In spite of this, the pack represents excellent value and is almost worth buying just for MAGIC MUSHROOMS.

Volume 2 starts with ARCADIANS, an invaders-style offering in which the aliens are not happy to line up and be zapped 0 they randomly peel off from their formation to dive-bomb you.

It's simple but very playable, definitely one of the "let's have one more try" type. Both sound and graphics are good and make this a very professional game.

METEORS comes next, and although a classic, I'm afraid it does look a little dated. Your spaceship sits in the middle of the screen as a meteor shower drifts across its path.

As you blast each boulder it breaks into smaller particles until finally it disappears. When all the meteors have been atomised another screenful appears. The only variety is the periodic visit from one of two types of alien ships which buzz across the screen firing at you. However you get the feeling that they are only half-hearted about it all. Graphics are black white only. I feel this one would have been better left gathering dust in the archives.

SNOOKER is for two players and the best computer version I have seen. You play and score as in the original game and have the option of adding topspin or backspin to your shot. The strength of shot can be adjusted by varying the length of cue shown on screen, and the effects of hard shots are realistic, with balls scattering in all directions.

STARSHIP COMMAND is a space shoot-'em-up in which your battleship stays in the centre of the screen and the universe rotates around you. As well as the viewscreen there is a control panel and radar scanner to warn you of oncoming aliens, some of which are invisible. If your energy becomes low you may launch an escape capsule to return to starbase where, depending on your prowess, you may be given another ship and another mission. If you are too late to launch an escape capsule you will be given a posthumous rating.

It's always easier to criticise than create, but I feel that Volume Two could have been improved by dropping METEORS and including a different type of game, perhaps MONSTERS or BOXER, another excellent ladders and platforms game.

If you don't already have these games as singles they are definitely worth buying, and if you have to make a choice I'd put Volume 1 as being the better value.

Sound .....	7

# THE ACORNSOFT HITS VOLUME 2

*Professional, Originally Released On Cassette Only*

Game Types : Arcade  
Release Information : 1988: THE ACORNSOFT HITS VOLUME 2, Superior/Acornsoft, £9.95  
Compilation Comprises : 1. STARSHIP COMMAND, Acornsoft  
2. ARCADIANS, Acornsoft  
3. METEORS, Acornsoft  
4. SNOOKER, Acornsoft  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## ARCADIANS

We are the Arcadians! Our mission: to destroy all aliens... The Arcadians chant this as they fly in convoy overhead. Without warning, some of them suddenly swoop down towards you: take aim and fire while avoiding their deadly dive-bombing tactics.

This game is for one or two players, is fully compatible with either keyboard or joysticks and includes a table of high scores.

## METEORS

Steer your laser-ship through a hail of meteors smashing them with your laser bolts as they hurtle towards you on all sides. Avoid being hit by the missiles from hostile flying saucers which fire at you as they pass. Your ship is equipped with as many laser bolts as you can fire and as a last resort you can escape through hyperspace.

Complete with sound effects and table of high scores.

## SNOOKER

This is a game for two players and is suitable for both experienced players and learners. Full instructions and the rules of the game are contained in the pack.

You play and score as in the original game. The strength of the shot is controlled by varying the length of the cue, and you are given the option of using Backspin and topspin in addition to ordinary shots.

Snooker is fully compatible with either keyboard or joysticks.

Note: SNOOKER is unsuitable for black and white televisions.

## STARSHIP COMMAND

Command a starship against the attacking alien ships in this demanding high-resolution graphics game. You control the forward drive and sideways thrust of your ship, which is equipped with shields, long- and short-range scanners, and a sector display of the stars and alien ships.

**Instructions' Source** : ACORNSOFT HITS 2 (Superior/Acornsoft) Inner Inlay

**Review (Electron User - Double Review Of ACORNSOFT HITS 1 and ACORNSOFT HITS 2) - "Eight Of The Best"**

# THE ARCHERS

**Professional, Originally Released On Cassette Only, BBC Game Made Compatible With Electron With Slogger MRB Plus Jafa Mode 7 Adaptor/Simulator (Optional), Also available on CDFS and DFS Disc**

Game Type : Text Adventure In Four Parts  
Author :  
Standalone Release(s) : 1986: THE ARCHERS, Level 9, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron With MRB, BBC B, B+, Master 128  
Supplier : WHS Distributors, St Johns House, East Street, LEICESTER  
LE1 6NE. Tel (0533) 551196  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"Everyday Country Folk - but the story's up to you!"*

*If they put you in charge of The Archers, how would you change life in Ambridge? Here's your chance to find out. In this four-part text game, you are the story editor, taking the plot decisions for*

\* Jack Woolley  
\* Eddie Grundy  
\* Elizabeth Archer  
\* Nelson Gabriel

*You're in charge, but you'll have to face the consequences of your decisions. They may cause a stir in The Bull - or in Broadcasting House. Watch out for memos from the Radio 4 Controller and see how you fare in the charts!*

*Level 9 Computing has teamed up with scriptwriters from the world's longest-running broadcasting serial to create a game that takes you behind the scenes - and into the heart of Ambridge life."*

As a trainee scriptwriter on the Archers radio programme, you must make plot decisions for four major characters: Jack Woolley, Elizabeth Archer, Eddie Grundy and Nelson Gabriel. But beware, the plot has its own momentum, and events can easily get out of hand.

When you have loaded the first part of the game, following the instructions below (under the heading Using the Program) you will see the beginnings of a plot for the first character to be played. As you progress through the story you will be asked to make editorial decisions. Press a number from 1 to 3 to choose one of the options suggested. Pressing key number 4 will display the command and help system menu. This gives a list of additional features in the game and full instructions on how to use them.

## The Game

The aim of the game is to keep up the audience figures and hope for a record number of listeners. At regular points in the game you will be shown the audience figures to indicate how well you are doing. Memos from the Radio 4 Controller will also help alert you to possibly dubious plot lines!

There are a number of random elements in the game and the same plot lines may not appear every time you play.

If you are already an Archers fan, you will be familiar with the population of Ambridge. Others will find biographical details of the main characters below and overleaf.

## Using The Program

The game consists of a number of separate programs. BBC Micro B/Electron **fitted with Master Ram Board**, type CHAIN"" and start the tape. When the game starts, STOP THE TAPE AND DO NOT REWIND IT. The next program follows this one fairly closely, and you don't want the tape to play on past it.

When you reach the end of a program, a message on the screen will ask you if you want to go on to the next program. Type YES and press <RETURN>. Start the tape and press <RETURN> twice. The next program loads in the same way as the first one. Remember to stop the tape when the game starts again.

So playing through the entire game is simple. Load it as above, stop the tape when each program has loaded and restart it when it is time to load the next program.

If you have a tape counter on your recorder, make a note of the reading at the end of each program. This will be useful if you want to start in the middle of a game. If you know the tape counter reading, wind the cassette until the tape counter is at the reading you want and continue as if you were loading the first part of the game.

## Saving the game position

While playing the game you can save your current position (so that you can turn the computer off, yet return later to the same stage in the game). To do this, insert a spare, blank cassette in the recorder.

Type 4 instead of 1-3 when asked to make a decision. This will display the command and help system on the screen. Press the RECORD button on the recorder, type SAVE and press RETURN. (If the program asks for a filename, type any short word and press RETURN.) If the tape doesn't move press <RETURN> again. When a message appears on the screen to tell you the save is completed, stop the recorder.

## Loading a saved game position

To load a saved game position you must be playing the same program of the game that you were playing when you saved the game (i.e. that program must be loaded). Remove the game cassette from the recorder and replace it with the one used to save the position earlier.

Type 4 instead of 1-3 when asked to make a decision to display the command and help system on the screen. Type LOAD and press <RETURN>. (If the program asks for a filename, type whatever name you used to save the position and press <RETURN>.) Rewind the cassette on which the position was saved and press the PLAY button on the recorder. Press <RETURN>.

When a message appears on the screen to tell you the load is completed, stop the recorder. The saved game position will reappear on the screen.

## Notes On The Main Characters For Scriptwriters

RACHEL ADAMSON : Daughter of the vicar, Richard Adamson and his wife, Dorothy. She is considered to be fairly sensible, but possibly just beginning to blossom in terms of looks.

BRIAN ALDRIDGE : For the last year or so he has been having an affair with Caroline Bone and is considered to be a capitalist, unthinking, male chauvinist. He owns and runs Home Farm and is very rich.

MARJORIE ANTROBUS : Still carries around her memories of her days in the Raj - when her husband cut such a dashing figure in his khaki shorts. Mrs Antrobus is now a widow but lives happily with her Afghan hounds at Nightingale Farm. The Over Sixties are perpetually afraid she might offer to come and speak to them again about Afghans at one of their meetings.

DAN ARCHER : Sadly, passed away recently.

DAVID ARCHER : Brother of Elizabeth and Shula, he is very hardworking. Recently engaged to Sophie Barlow. he is kind to Elizabeth but gets fed up with her selfishness.

ELIZABETH ARCHER : Youngest child of Phil and Jill and rather unhappy. She is madly in love with Tim Beecham, who is not interested, and has been relentlessly pursued in the past by Nigel Pargetter. She enjoys a hectic social life - going to parties, pubs and wine bars whenever the opportunity arises, although she considers Nelson's wine bar rather boring. She is also very good at spending money - and borrowing it.

JILL ARCHER : Elizabeth's mother. She is warm and understanding, but finds her daughter a handful.

PAT ARCHER : Married to Tony and lives at Bridge Farm. Became hooked on feminism several years ago and has read 'The Guardian' ever since. Attends evening classes with a certain political slant at the Tech.

PEGGY ARCHER : Elizabeth's aunt. She was married to Jack Archer who died of an alcohol-related illness. She owns The Bull in Ambridge and keeps an eye on the Bellamy estate, as her daughter, Lilian, the owner, is away in Guernsey, and that means keeping an eye on the Grundys. In the early seventies Jack Woolley proposed to her but she turned him down. She lives in Blossom Hill Cottage with her cat, Sammy.

PHIL ARCHER : Elizabeth's long-suffering father. He is a successful and hardworking farmer at Brookfield Farm who stands no nonsense except, perhaps, where Elizabeth is concerned.

CHRISTINE BARFORD : Elizabeth Archer's aunt. She works at the Riding Stables and is married to George, gamekeeper at Grey Gables.

SOPHIE BARLOW : Red-haired, muddle-headed fiancée of David Archer. She appears to be very stupid on the surface but perceives some things that others miss. She is kind, warm and adores David but she is adamantly opposed to sex before marriage!

DAVID BARRY : Detective-sergeant with the Dorsetshire Constabulary, stationed at Bournemouth police station. He is going out with Kathy Holland, the teacher who lives at Penny Hassett, but is generally considered to be rather unattractive, with a tendency to wear flared trousers! He has recently failed his Inspector's exams.

TIM BEECHAM : Sloane Ranger, but of a meaner variety than Nigel Pargetter. Elizabeth is in love with him, partly, one suspects, because he pays her little notice. In fact he was quite nasty to her and once spray painted 'Elizabeth Archer wears thermal vests and...' on a wall in Bournemouth. He has also nick-named her 'The Lizard'.

LILIAN BELLAMY : Younger daughter of Jack and Peggy Archer. She inherited the Bellamy estate from her husband Ralph who died of a heart attack. Her tenants include her brother, Tony Archer, and the Grundys. She lives in Guernsey with her son James.

CAROLINE BONE : Belongs to the ancient Bohun family of Darrington Manor. She is distantly related to the Duke of Westminster. After Cheltenham College she did a hotel management and cookery course in Lausanne. In 1980 she moved to Grey Gables as Jack Woolley's personal assistant and has since introduced 'nouvelle cuisine' to the restaurant.

SUSAN CARTER (nee Horobin) : Married to Neil Carter, who works part-time at Brookfield, part-time on a pig unit with Bill Insley, and part-time on his battery hens. She is quiet and sensitive and quite different from the rest of the Horobin family. She once won a pig, which she called Pinky, at the Ambridge fete.

MAGNUS FISHER : Friend of Elizabeth Archer. Was keen on her until he found himself a fiancée.

PRU FORREST : A shy, retiring woman who spends all her time making chutney.

TOM FORREST : Married to Pru, Tom has been gamekeeper at Grey Gables time out of mind (as they say in Dorsetshire). He is Elizabeth Archer's great-uncle. Once he shot and killed Bob Larkin and was acquitted on a manslaughter charge. Otherwise he has not had an eventful life.

SNATCH FOSTER : Friend of Eddie Grundy and fellow frequenter of the Cat and Fiddle. He had a brutish nature and an unpleasant appearance.

NELSON GABRIEL : Runs the wine bar in Borchester called Nelson's. He takes pains to conceal his dubious past, but in his late fifties would like to think of himself as a suave, sophisticated swinger - au fait with everything that's tasteful and of quality, and still attractive to women. He buys and sells antiques and is not averse to making a fat profit out of his friends - but underneath it all he has a heart of gold.

WALTER GABRIEL : At 89 he is the oldest inhabitant of Ambridge village. He used to be a wicked rogue, but is now a loveable old man, with a twinkle in his eye, living alone in his cottage and seeking entertainment from the Over Sixties Club. His fondest wish is that Nelson should settle down and have some children.

ALF GRUNDY : Eddie's brother. He has been in Gloucestershire prison for many years and has a dark past concerned with scrap metal dealing.

CLARRIE GRUNDY : Eddie's wife, she is long-suffering and good-natured. She is a good wife and mother but no great beauty or intellectual by all accounts. She would love to have a nicer home than Grange Farm but is resigned to her lot and regards herself as unbelievably lucky to be married to a Country and Western singing star.

EDDIE GRUNDY : Son of a poor tenant farmer, Joe Grundy, Eddie is married to Clarrie and has two young sons, William and Edward. Eddie is 35 years old and still aspires to be a famous Country and Western singer. His other hobbies include drinking at the Cat and Fiddle, keeping ferrets and making the occasional friendly pass at any female who happens to be around. All in all, though, he is loyal to Clarrie, and is hard-working in his attempt to make something out of the ramshackle Grange Farm.

JOE GRUNDY : Miserable, pessimistic and lazy, he constantly complains of Farmers' Lung when there is any work to be done.

SHULA HEBDEN (nee Archer) : Elizabeth's sister, she is married to Mark, a solicitor, and lives in a flat in Borchester. She works at an Estate Agents and is very sensible nowadays.

HIGGS : The Grey Gables handyman and gardener, he lives alone in a flat over the coach house. He is surly and unloved (except by his friend, the widow woman from Hollerton) but he is wonderful when it comes to growing Chrysanthemums, including the famous 'Woolley's Wonder' that has triumphed many times at the Borchester Show.

CLIVE HOROBIN : About 13 years of age and a member of the huge Horobin family who live at No. 6 The Green (the council estate). The Horobins are all rogues and he is no exception - he will do almost anything for an extra bit of pocket-money.

JEAN-PAUL : The temperamental chef at Grey Gables who is famous for his little French tartlets.

MARTIN LAMBERT : Ambridge's local vet. He used to go out with Shula Archer but she told him to keep his hands off. He has a rather flat personality.

NIGEL PARGETTER : Borchester's loveable Sloane Ranger. He used to go out with Shula but is now madly in love with Elizabeth Archer. He proposed to her once and she declined his hand, and has been spurning him ever since. He tries very hard to stay employed but has had a succession of unusual jobs - including a summer as 'Mr Snowy', selling ice-cream.

MRS PERKINS : Peggy Archer's mother. She lives in an old folks bungalow in Manorfield Close. She is an occupational pessimist and loves to exercise her nagging on poor Walter Gabriel who has been in amorous pursuit for some decades (these days more as a matter of form).

SID PERKS : Barman and licensee of The Bull. He is friendly and well-disposed to most - but has banned Eddie Grundy from the pub in the past.

TRUDY PORTER : A rather attractive waitress, long the apple of Higg's eye, who also bakes lovely pastries.

MRS POTTER : Lives in Manorfield Close, in one of the old people's bungalows. Despite the fact that she has to struggle around on her walking frame, she is a keen attender of the Over Sixties Club.

ROGER : Was Pat Archer's friend/lover - we were never quite sure how much they became involved. He is a lecturer at Borchester Tech.

JOLENE ROGERS : Otherwise known as the 'Lily of Layton Cross'. She used to sing with Eddie Grundy in his Country and Western numbers, but was always very fond of Wayne Tucson (sometimes friend, sometimes rival of Eddie's) whom she has married. She now lives on a modern estate with their baby daughter, Fallon.

ROSIE : Clarrie Grundy's sister. She lives in Great Yarmouth and is married to Dennis. They have two children.

SHANE : Barman and cook at Nelson's wine bar. He is glad to be gay but in rural Dorsetshire this is probably very difficult.

DOLLY TREADGOLD : Once engaged to Eddie Grundy but he broke it off. She is not the most sophisticated of women.

VERA : Joe Grundy's lady friend, a Methodist from Edgeley. Joe never quite hits it off completely with her.

MARTHA WOODFORD : Runs the village shop for Jack Wooley and spends her time gossiping and tinkling around the country lanes on her bicycle. Her husband, Joby, a woodsman, died in 1983.

HAZEL WOOLLEY : Jack Wooley's obnoxious, adopted daughter who, to Jack's disappointment, hardly ever comes to visit him.

JACK WOOLLEY : Bought Grey Gables Country Club in 1962. A self-made man from Stirchley, Birmingham, he has one adopted daughter, Hazel, who 'works in films' in London and does not love him as she ought. Fortunately, he has a faithful, if fat, Staffordshire bull terrier called Captain. Grey Gables is now a fine country house hotel, and the estate includes a shoot, a country park and a golf course. Jack also owns the village shop and the Borchester Echo.

# THE ART STUDIO

***Professional, Originally Released On Cassette Only***

Game Type : Art Package; Multiple-Modes  
Author : Andrew Sage  
Standalone Release(s) : 1989: THE ART STUDIO, Impact, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : IMPACT, 1 Percy Street, SHEFFIELD S3 8AU  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Professional quality pictures are easy to design with this easy-to-use comprehensive graphics package. It can be controlled by keyboard or joysticks so simply load the program and away you go. Create your own works of art!"*

*The Art Studio can produce pictures in Modes 4 or 5 and you can save your pictures or load them back into The Art Studio for modification.*

*Here's a list of the main functions:*

* Draw	* Draw a square
* Zoom	* Draw a rectangle
* Move	* Draw a triangle
* Copy	* Stipple brush   100
* Flip in X axis	* Spray brush   brush
* Flip in Y axis	* Paint brush   sizes
* Fill an area	* Draw a line
* Fill an area with patterns	* Draw a dotted line
* Draw a circle	* Draw rays
* Draw an ellipse	* Erase
* Inverse	* Set flashing colour speed
* Write text	* Paint patterns
* Write large text	* Wipe screen
* Write shadowed text	* Save picture
* Write outlined text	* Load picture"

When the program has loaded you will see a blank screen with a control panel at the bottom (see below) and a cursor on the screen. The cursor is moved around the screen using a joystick (if selected) or by the following keys:-

Z - Left, X - Right, \* - Up, ? - Down

The cursor can be moved anywhere on the screen except the two lines used for the control panel at the bottom.

Before starting to design a picture, it is recommended that you try out each of the commands detailed below. This will prevent any costly mistakes and show you the full power of The Art Studio. It is infuriating to spend a lot of time drawing a piece of work only to find out that a simple command could have done it for you.

## The Control Panel

### 1. Drawing And Selecting Options

This option is automatically highlighted when you load The Art Studio. When selected, moving the cursor will leave a trail of the currently selected colour (see 2 and 8 below to find out how to select different colours).

To leave this option, press SPACE and then use keys A and S to highlight another option. When the option you wish to use is highlighted, simply press <RETURN> to select it.

## 2. Currently Selected Colour

The currently selected colour is shown by the arrow (ignore the numbers in the boxes for now). To change to a different colour, press C. (MODE 5 pictures are produced from four colours and MODE 4 pictures are produced from two colours but are more detailed). You can change to a different colour at almost any time during your design work.

There are other colours available (including flashing colours) if you do not want to use those shown on the control panel. To find out how to obtain these, see 8 below.

## 3. Line

This allows you to draw straight lines of any length and at any angle. Moving the cursor will cause a line to be "dragged" out. When you have the line in the position you want it simply press <RETURN> to "paste" the line to the screen. (If you have a joystick, simply press the FIRE button).

Also you can:

Press O to toggle between a dotted or solid line.

Press DELETE to move the first point of the line to the current cursor position.

Press C to change the colour.

Press SPACE to leave the option.

## 4. Shape

This allows you to produce a variety of shapes of different sizes and "paste" them to the screen. After selecting this option a new menu will appear.

Use keys A and S to highlight the shape of your choice then press <RETURN> to select it. Before you press <RETURN>, move the cursor to the desired point. When the shape appears, use the movement keys to change the size and SHIFT for extra speed. If you select a triangle, you can use the movement keys (or joystick) to plot the three corners of the triangle. When you are happy with the position of the shape, press <RETURN>.

## Circles And Squares

When you have **ellipse** or **oblong** selected, press <DELETE> to change them to perfect circles or squares.

You can press D to toggle the dotted option and you can choose to have the shape filled or unfilled (see 13 below). The only things you cannot have are a filled dotted ellipse or a dotted triangle.

Press <SPACE> to leave the option.

## 5. Brush

When you select this option, a new menu will appear:

The first four are brush types, the next is for brush sizes and the last is an option to produce patterns. You need to select both a brush and a brush size. Moving the cursor whilst in this option will leave a trail of the currently highlighted brush.

- a. Circular brush
- b. Stippled brush
- c. Spray can brush
- d. Square brush
- e. Size of brush (100 sizes)
- f. Pattern selection

When you select option "e", you will be asked for a brush size between 1 and 100. This determines the size of all future painting with brushes in this menu.

If you select the last option, you will be asked for a number between 0 and 255. Selecting 0 will proceed as normal but any other number will cause interesting stripey effects which are well worth experimenting with. Once selected it will also affect other options such as the circle, rays and perhaps most importantly **fill**.

Press <SPACE> to leave the brush option.

#### **6. Saving Pictures**

If you select this option, you will be shown two numbers and asked to press a key. You will then be asked for a name for your picture. Pressing <RETURN> will now 'save' the picture to either cassette or disk.

Pressing <ESCAPE> will abort the saving of your picture and return you to the draw command.

Please note - Do not save your pictures to the Art Studio cassette/disk as you may damage it. Always use a blank cassette or disk.

#### **7. Loading Pictures**

Use this option to reload any of your pictures. Once loaded, it may be necessary to reset the colours and flashing colour rates to return it to its original state.

#### **8. Changing Colours**

**Mode 5** - You can change the colours shown in the control panel boxes by using keys 1, 2, 3 and 4. Key 1 controls the first colour. Keep pressing it until it becomes the colour you require. The same applies for the other three colours. You can also change the speed at which colours flash. Keys 5 and 6 control the speed of the first flashing colour and keys 7 and 8 control the speed of the second.

**Mode 4** - Use keys 1 and 2 to change the colours and keys 3, 4, 5 and 6 to change the flashing colour rates. Press SPACE to finish the option.

#### **9. Fill An Area**

If you select this option, it will fill the area around the cursor with the currently selected colour. Use it with caution as it can have disastrous results if you use it in the wrong places. A useful tip is to save your picture at regular intervals as you are working.

The **fill** option will only fill relatively simple shapes. Complex areas may need more than one attempt to completely fill them. Remember that if you have a **pattern** selected, the shape will be filled in a pattern.

#### **10. Zoom**

This extremely useful feature is essential for really detailed work. When selected it will show a "blown-up" grid of the area around the position of the cursor. You can then alter individual pixels on the screen to get the effect you require.

Control the cursor in the "zoomed-in" area in the same way as the ordinary cursor. Use the <RETURN> key (or fire on the joystick) to place a pixel of the currently selected colour in the boxes on the grid. Your picture will be altered as you work.

A box with the currently selected colour will appear in the bottom corner of the screen. The colour can be changed at any time by pressing C. Press SPACE to finish the option.

### 11. Text On Pictures

This option allows you to type directly onto the screen. Once selected, you will be asked if you want **Shadowed** writing, **Outlined** writing and finally **Large** writing. You can then type to the screen and finish the option by pressing <RETURN>.

A joystick will move the cursor to a new position to put your text. To use key cursor controls you will need to press <CTRL> as well as the direction key (Z, X, etc) otherwise it will print the character to the screen.

For **Shadowed** and **Outlined** writing, you will be asked for the two colours in which you wish the text to appear. These colours are selected by the C key and by pressing <RETURN>. You first select the colour of the background (or outline) colour and then the main text colour. Please note: you cannot have **Outlined** writing if you have selected **Shadowed**.

### 12. Rays

This is very similar to the **Line** command except that the lines will all be drawn from the same starting point giving the impression of rays. Press <RETURN> or FIRE to draw a ray. Press D to get dotted rays. Press C to change colour. Press <SPACE> to finish the option.

### 13. Filled Shapes

When this option is selected, it will cause any shapes that you produce to be automatically filled in the currently selected colour. To deselect this option, press <RETURN> whilst highlighted.

### 14. Inverse

This option results in all drawing (lines, circles, etc) to be inverted with what is already on the screen. Also see 16(e). To deselect this option, press <RETURN> whilst highlighted.

### 15. Rubber

This allows you to rub out mistakes in your work. Change the size of the rubber using the < and > keys. Also, you can hold down SHIFT to make the size change larger. Press SPACE to finish the option. Detailed "rubbing out" can be done with the zoom feature.

### 16. Area Sub-Menu

When selected, a new menu will appear. The facilities in this menu allow you to perform some clever actions on areas of the screen.

- a. **Left/Right Flip** - flips the currently selected area from left to right.
- b. **Up/Down Flip** - flips the currently selected area from top to bottom.
- c. **Move** - moves the currently selected area to a new location. A square of the same size as the selected one appears and can be moved to the new location. If INVERSE is selected (see 14 above) the bits (pixels) moved or copied are inversed as well thus not destroying anything beneath it. Move the square using the movement keys or joystick and press <RETURN> (or FIRE) to move the area. If you are not happy with the selection, press SPACE to deselect it.

- d. **Copy** - This copies the area as with MOVE but also leaves the original area in place.
- e. **Over** - This works in the same way as INVERSE to prevent background detail being lost but only affects options in this sub-menu. This gives the effect of the MOVED (or COPYied) area appearing "behind" what is already on the screen.
- f. **Wipe** - This option wipes the whole screen clean. You must select it twice to avoid accidents. If you accidentally select it press any other key other than <RETURN> to de-select it.

To change the shape and size of the area on which you are working, or to **Move** or **Copy** the area, use <CTRL> and the movement keys or the joystick. Use the A and S keys to highlight options and <RETURN> to select them. Note that you can use <SHIFT> to speed up area selection or **moving** and **copying**. Press <SPACE> to return to the main menu.

#### How to load Pictures in your own Programs

After you have saved a picture and want to load it into the computer but not into THE ART STUDIO, you will need to type in a small program to make it appear correctly on the screen.

The computer needs to be told the colours that you selected and the speed of the flashing colours. This information is given in the Art Studio. Write down the four numbers next to the colour boxes (calling them A, B, C, D) and also the two numbers given when you were saving the picture (calling them E and F).

Now type in the following program, replacing A, B, C, D, E and F in the first six lines with the numbers you have written down. Also replace the word MYPIC in the last line with the name of your picture:

```

10 A%=A
20 B%=B
30 C%=C                | Do not include these lines
40 D%=D                | on the MODE 4 version
50 E%=E
60 F%=F
70 CLS:VDU 18,0,31,19,29
80 VDU 19,0,A%;0;
90 VDU 19,1,B%;0;
100 VDU 19,2,C%;0;      | Do not include these lines
110 VDU 19,3,D%;0;      | on the MODE 4 version
120 *FX9,E%
130 *FX10,F%
140 *LOAD MYPIC

```

Please note that line 70 produces a text window at the bottom of the screen so that you cannot type something over the picture after it has loaded. It can be left out if you do not require it.

You can then type MODE 4 or MODE 5 (followed by <RETURN>) depending on the Mode used. Put the cassette or disk containing your picture into the recorder or drive. Press **PLAY**.

Type RUN and press <RETURN>. Your picture will now be loaded onto the screen exactly as you produced it. (The load address for your information is &5800 although the picture will automatically be loaded at that address).

## Review (Electron User) - "Budget Bash-'Em-Up"

Science fiction fans will delight in having copies of Larry Horsfield's first two adventures, MAGNETIC MOON and STARSHIP QUEST. However, this undertaking is something of a deviation, as it is quite definitely of the Tolkien fantasy mould.

In this four part adventure you play the hero, Alaric Blackmoon, in search of the immortal Axe of Kolt. Your quest is to find and return the weapon to King Kelson in order to defeat the reptilian Xixon who are wreaking their revenge upon his kingdom.

Each of Larry's games include many screens of intricately worded introductory prose to set the scene for the ensuing escapade, and help create a cool atmosphere. Part one requires much interaction with other characters in the game in order to make progress. The atmospheric room descriptions give direct and cryptic help for decisions which you must make later in the game. My advice is to look and listen carefully.

The second part involves a trip to the forest in order to kill the evil Morgeth. Once this is achieved by completing a set of neat chaining puzzles, you have broken the back of this quest. I felt a definite sense of achievement at this point.

Part three involves some mine exploration in typical Indiana Jones fashion. You will need to examine your surroundings thoroughly, using all of your senses if you are to not only survive, but also succeed.

The last part is by far the most difficult and also the best component of the mega-jaupt. In a setting outside the Xixon fortress, you must escape and find King Kelson. The action is cold-blooded and not for the faint-hearted. Once again it is important to take note of the location descriptions.

This enjoyable romp needed a lot of mapping and thinking, as well as direct action. AXE OF KOLT is probably ideally suited for the more experienced traveller, but the Elk Adventure Club offers an excellent Help service.

Though the normal restriction of QUILLed adventures apply, I believe that this is Larry's best offering to date. A challenging adventure at a bargain price.

# THE BIG K.O.

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade; Boxing Match With Cartoony Sprites  
Author :  
Standalone Release(s) : 1987: THE BIG K.O., Tynesoft, £7.95  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : TYNESOFT, Unit 3 Addison Industrial Estate, Blaydon, TYNE &  
WEAR NE21 4TE. Tel: 091 414 4611  
Disc compatibility : Unknown

### Instructions

*"Compete against eight increasingly more aggressive opponents in this unique boxing simulation which stretches your computer to the limits. Super size sprites, superb animation and a touch of humour make this a game not to be missed. One or two players. Keyboard/joystick."*

You compete against the following opponents each of which are attributed with various strengths and weaknesses:

1. Heap Big Nose
2. Strongman Joe
3. Stippo the Steamer
4. Handsome "Devil"
5. Hairy Harry
6. Roger Rattash
7. Groovy Man
8. Cheap 'N Nasty

If you win a match against an opponent, you will be given a code word and you can use this to commence fighting at a higher level when re-starting the game.

### Control Keys

Boxer 1 : <SHIFT> - Left, Z - Right, D - Up, X - Down, F - Punch  
Boxer 2 : <,> - Left, <.> - Right, <:> - Up, </> - Down, <RETURN> - Punch

Boxer 2's keys only applicable when playing in two player mode. All keys are redefinable.

<CURSOR LEFT>/<CURSOR RIGHT> - Pause On/Off

If using a joystick, Left/Right movement will move boxer accordingly. Diagonally Up/Right and diagonally Down/Right in conjunction with Fire Button will initiate an Upper/Lower Punch.

**Instructions' Source** : THE BIG K.O. (Tynesoft) Back Inlay and Booklet

### Review (Electron User) - "It's A Knockout!"

The noble art of boxing comes to the Electron courtesy of Tynesoft. Trade blows with eight mean opponents on your way to THE BIG KO.

On loading you are presented with a very comprehensive menu. You can have a one or two player game using either joystick or keyboard. Options are also there for sound on or off, user-defined keys, load or save the high-score table and load a new boxer.

You have to press three keys to throw a punch - a combination of left/right, head/body and punch. Using this system - and a little skill - you can launch a flurry of different blows that will penetrate your opponent's guard.

The graphics used are very large with each boxer one third of the screen in height. A punch which lands on target is registered with a thud and a visible response from the other fighter - either a flinch or, in the case of Sippo the clown, a nose which lights up.

Before the bout begins your four punches are listed in order of power, so too are those of your opponent. This information can be used to formulate a plan of attack - which can be surprisingly effective.

In the first bout you face Heap Big Nose, a redskin with a tendency to stick his chin out too far. Lefts and rights to the head will soon leave him with reservations.

While fighting you will see two horizontal bands above the fighters. The green one represents strength - don't let this fall to zero or you'll be powerless to defend yourself. The blue bar is the KO meter - once this has reached 100 per cent your opponent will go down.

Following your victory you are given a password which is requested before you are allowed to load the next boxer. Eight fighters are supplied on the cassette so leave the play key down when the game has loaded.

After much sweating, shouting and keyboard bashing, I had fought my way through to the fourth bruiser. Handsome Devil, as he is known to his fans, is a rather robust chap with the complexion of a lobster and some suspiciously pointed ears. My best result so far against this beast is taking him to the third round before losing.

THE BIG KO is one of the best boxing games I have played on any computer. It requires skill, concentration, cunning and - most of all - a cast iron chin.

# THE BOSS

## ***Professional, Originally Released On Cassette Only***

Game Alias : SOCCER BOSS  
Game Type : Soccer Simulation (Text Only)  
Author :  
Standalone Release(s) : 1985: THE BOSS, Peaksoft, £5.99  
1987: SOCCER BOSS, Alternative, £2.99 (Re-release)  
Compilation Release(s) : 1989: SPORTS SPECTACULAR, Alternative, £7.99  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : PEAKSOFT, 48 Queen Street, Balderton, Newark, NOTTINGHAM  
NG24 3NS. Tel: 0636 705230  
Disc compatibility : CDFS E00, DFS E00

### **Instructions**

*"THE BOSS is Britain's No. 1 Football Management Game with \* Four divisions \* FA Cup  
\* European Cup \* Cup-Winners' Cup \* Full game save"*

### **Tips For New Managers**

Players move in and out of form - so keep an eye on their skill ratings.

Take care in the transfer market - a player with a skill rating of 1 costs £10,000 but selling him will only earn you £7.500.

If an injury crisis strikes, and you can't afford new players, you can play a goalkeeper out of position - but his skill level will plummet!

# THE DATING GAME

*Professional, Originally Released On Cassette Only*

Game Type : Quiz  
Author : Dr Glenn Wilson  
Standalone Release(s) : 1983: THE DATING GAME, Acornsoft/Ivan Berg, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : IVAN BERG, Dunluce House, 4-8 Canfield Gardens, LONDON  
NW6 3QT  
Disc compatibility : CDFS E00, DFS E00

## Instructions

This amusing and possibly controversial program uses data specially provided by Doctor Glenn Wilson of The Institute of Psychiatry, University of London, and has four functions.

The first and most powerful feature is 'THE DATING GAME' - a Computer Dating and Compatibility Program for up to 40 people catering for all sexes over the age of consent. A General Compatibility option is also available within the program for non-sexual compatibility (between friends, colleagues, workmates, etc.)

The second program deals with 'LOVE STYLE' and will tell you what kind of Lover you are and, if you wish, compare you with a chosen partner.

Next comes 'PREFERRED RELATIONSHIP'. Four aspects of male/female relationships are measured in this program and your position on the result scales will give you a good indication of what to look for in a partner. Again you may compare your results with those of a partner or prospective partner.

The last program is 'DATING SKILLS' which examines your social skills in dating and mating. You can assess your overall level of sophistication and chances of success.

WARNING: The Author and publishers accept no responsibility whatsoever for the success or failure of any existing or future relationship recommended or examined by this series of programs.

## Introduction

What kind of lover are you? What type of relationship would suit you best? How do you fare in love and sex? Are you compatible with your present partner or would you be better off with someone else? Who could you live with without amorous involvement? These are important questions in anyone's life, and this package is designed to help you answer them.

Love, sex and friendship are sources of great amusement and delight to us all. They can also be harbingers of great distress and woe. Accordingly, these tests have been designed not just to entertain but also to educate. If treated seriously, and answered honestly, the questions will provide feedback that may be of considerable value in helping you understand yourself and your relationships. The programs will not provide a comprehensive and foolproof set of solutions to all your problems, but they may, nevertheless, provide a helpful guide to the conduct of your love life.

There are five options within this package which may be called upon independently for different purposes. These are described in turn:

### Option 1 : The Dating Game

In this test, more than one person must answer the questions before compatibility scores can be computed. The minimum of people is two, but your answers can be held

in memory or saved on a cassette file (you will need a blank cassette for this purpose) for comparison with up to a maximum of 40 people.

One fairly straightforward use of the Dating Game is to assess your compatibility with your current partner or spouse, or with someone you are considering having a relationship with. Another application is to ask a group of people (for example, six couples at a dinner party) to answer the questions and let the computer decide who should be with whom. Since the program will not necessarily pair established couples, make sure your friends are willing and broadminded before you begin!

The program is set up to assess the compatibility of heterosexual couples. It will, however, function quite satisfactorily for homosexual pairings if one person arbitrarily designates themselves as a member of the opposite sex. The program will not tell you whether you should be matched with a person of your own or the opposite sex - this you must decide for yourself in advance. Members of the same sex may often appear to be more compatible than opposite-sex pairs because they are more similar, but this is irrelevant to the heterosexually-oriented person.

The sort of information that is used to assess compatibility in this test is much the same as that used by parents, marriage counsellors and computer dating companies. Actual love matches are also determined by a less easily defined 'chemistry' which includes all kind of little things like eye colour, depth of voice, gestures, or even whether the other person reminds you of a favourite aunt. These things, of course, are impossible to account for. But what a program such as this CAN do is go some way towards predicting how long the match will survive. It's difficult to tell people with whom they WILL fall in love - but much easier to assess the relationship's chances of long-term success.

### **Option 2 : General Compatibility**

This test is the same as that used in Option 1 except that questions which assume that the couple will be sexually involved have been eliminated. The purpose of this is to assess the compatibility of two or more people who are not contemplating sexual involvement but who nevertheless might spend a lot of time together e.g. flat mates, business partners, holiday companions, parents and children, or relatives in general.

It is, in fact, somewhat easier to be compatible with another person on a non-sexual basis because the relationship tends to be more open and there are fewer sources of possible conflict. Age, build and sex-drive become largely irrelevant, for example, and jealousy less destructive. Still, it is not easy to share one's life intimately with another person and this test may prove useful information to anyone contemplating it.

### **Option 3 : Love Style**

This section tells you what kind of lover you are. Research by social psychologists has identified three major dimensions of loving which are called 'serious versus playful', and 'cool versus passionate'. Although there is some verlap among these concepts, they do represent the major orientations or types of love. An individual's position on these scales reveals a great deal about his characteristic inclinations. Once you have answered all the questions about your habits and preferences, the computer will present your personal profile, revealing where you stand with respect to these primary styles of love.

Generally speaking, we are happier with a partner who is similar to us in terms of these three scores. Gross differences may help to diagnose a major source of tension in your relationship. However, small variations are not important, and it should be appreciated that there are some characteristic differences between men and women. Women are on average more practical than men (which means more sensible and compassionate) and men tend to be more playful than women (i.e. more casual and pleasure-seeking). Men and women are about equally passionate (i.e. romantic, emotional and possessive).

Many relationships begin as playful but evolve into something more passionate, while passionate relationships may end up as practical after a long period of time. This

does not present any problems as long as the two partners are not grossly out of step through these transformations.

While some control can be exercised over our behaviour, it is doubtful whether we can do very much about our basic love styles except to know and understand them.

#### **Option 4 : Preferred Relationship**

Whenever two people interact, each adopts a certain role in relation to the other. This section will help to reveal the kind of relationship preferred and your position within that relationship.

There are four aspects of relationship measured by this section and the program will reveal your position within them. They are as follows:

##### **a) Giving versus taking**

If you score towards the 'give' end of this scale, you are a generous, unselfish person. This does not refer specifically to money, but to less tangible things like your time, your help and your emotional support. If, on the other hand, you turn out to be a 'taker' in your relationships, you had better make sure you find a partner who is naturally a giver. Generally speaking, men are usually the takers and women the givers, but if the feminist movement has anything to do with it, this may not continue to be the case.

##### **b) Committed versus free**

This is another pair of opposite preferences which is important for compatibility. The committed person seeks a relationship that is close, intimate and exclusive. This can be a beautiful thing, if you can avoid being too clingy and possessive. The 'free' lover likes a relationship that is open and unfettered. This can keep things fresh and exciting, but there is always a danger that the bird might fly off one day and not come back.

##### **c) Boss versus slave**

Your position on this scale tells you whether you like to 'wear the pants' and be the dominating partner in the relationship, or whether you derive greater pleasure from serving your partner and tending to his or her pleasures. The distinction bears some similarity to giving versus taking. Once again, men often prefer to be the boss and women the slave, but we can all think of notable reversals on this pattern. The boss or slave role in sex is often a reflection of these positions in general life, but then again some striking exceptions occur. Some men who are tyrants in the office come home and submit totally to their wives.

##### **d) Quiet versus exciting**

On this scale, you should look for someone who score similarly to you. Quiet, retiring, introvert personalities are frequently better off with people who are similarly inclined. They can share subdued interests such as reading or gold. Extraverts, on the other hand, like plenty of hustle, bustle and excitement going on about them - very trying to a partner who is not so inclined.

It is worth noting your position on these four important factors, and keeping them in mind when considering your likely compatibility with other people you meet. Remember that for two of them (giving versus taking and boss versus slave) you want somebody who is opposite to you. For the other two (committed versus free and quiet versus exciting) you should be seeking someone who is like yourself. Thus in some ways we find that 'opposites attract', and in other that 'like likes like'.

#### **Option 5 : Dating Skills**

This section examines your social skills in dating and mating. Are you going about finding a suitable partner in the most effective way, or are you boorish and socially incompetent? This test will assess your overall level of sophistication and perhaps give you pause for thought about how to conduct yourself socially with someone whose love you would like to gain or maintain.

The results screen will tell you how you fared overall on the test and will also give you feedback on your performance, item by item, in case you want to go back and

try again to improve your performance. Studying your deficiencies might well be a useful, educative experience.

### **Running THE DATING GAME**

1. You will initially be asked 'DO YOU HAVE A DATA TAPE? (Y/N)'.
2. a) If you are running The Dating Game for the first time, you will of course have saved no data yet, so type N and press RETURN. You are asked whether you wish to run the questionnaire. Type Y and press RETURN.  
  
b) If you have a data tape which you wish to use, type Y, press RETURN and you will be asked to enter the name of your file. You must also tell the computer whether your cassette deck has motor control or not, by typing Y or N and pressing RETURN.
3. You are now asked to enter your personal details. After you have typed in each entry, press RETURN.
4. This is the first question in the Dating Game:

HEIGHT AND WEIGHT: Which description suits you best?

- 1 Tall and slim
- 2 Small and ample
- 3 Quite large overall
- 4 Small and slim
- 5 Average

Read it carefully and select whichever of the suggested answers is nearest to your own response. Then type in the number next to the answer which you chose. Your choice will not appear on screen: your answers are completely confidential.

The next question will appear automatically.

5. When you have completed the questionnaire, you are given the option to run it again. Simply type Y then press RETURN. A second person can then answer the questionnaire.
6. As soon as two or more people have completed The Dating Game, a compatibility check can be made. The option to do this is given when the second person has finished the questionnaire and you do not wish to run the questionnaire again.

Follow the screen instructions. You can check the sexual or general compatibility of any of the people on the list, by typing the number next to their name. You are given a percentage rating and then a more detailed analysis if you request it.

### **Saving Your Results**

When you have finished the questionnaire, you will be asked 'DO YOU WISH TO SAVE THE NEW DATA? (Y/N)'.

If you want to save the data of the people who have just given their answers, type Y and press RETURN. You will need your own blank tape on which to save your results.

You need to choose a name for your data file, say DATA1, so that the computer will recognise and load the file when you want to refer to it again.

Place your tape in the cassette deck. When the message RECORD THEN RETURN appears, press the record and play buttons on the cassette deck, then press RETURN. The message NEW DATA BEING SAVED NOW will appear. When saving is complete, you will see NEW DATA SAVED. Press SPACE as requested and the program ends.

To re-run the program, type RUN. You will enter the program at the point where you are asked if you wish to load a data tape.

Note : You may save up to 40 names on any one file.

### **Loading And Running Love Style, Preferred Relationship And Dating Skills**

If using the cassette version, load cassette two instead of cassette one.

Type CHAIN"PROG2" if you wish to load Love Style, CHAIN"PROG3" if you wish to load Preferred Relationship and CHAIN"PROG4" for Dating Skills.

Press RETURN.

In each of these programs, you will see the title and credits screen, and hear the "Dating Game" theme tune.

You can answer Love Style and Preferred Relationship either on your own, or with another person to compare results. In Dating Skills, only one person can take the questionnaire at a time.

When you have completed your entries, an instruction screen is displayed. Read it carefully before you answer the questions.

If two people are doing a questionnaire, all the questions are displayed for one participant, and then in turn for the other. When both have completed their answers (or when a single participant finished his answers), the question 'DO YOU WANT TO PRINT OUT YOUR RESULTS? (Y/N)' is posed.

If you answer N and press RETURN, the score screen is displayed. If you answer Y, you are asked to turn on your printer, and your results are printed out as they appear on screen.

# THE EYE OF ZOLTON

*Professional, Originally Released On Cassette Only*

Game Type : Text Adventure  
Authors : David Featley and Mark Cook  
Standalone Release(s) : 1983: THE EYE OF ZOLTON, Softek, £7.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SOFTEK, 12/13 Henrietta Street, Covent Garden, LONDON  
WC2 8LH  
Disc compatibility : CDFS E00, DFS E00

## Instructions

In a far off land a good and fair King ruled his loyal subjects with the help of five magic objects. These five enabled peace and prosperity to be maintained in the Kingdom.

Suddenly the tranquil life of the Kingdom was shattered by the arrival of a stranger from beyond the mountains who tricked the King and stole the magic objects. The objects in turn then fell into the evil hands of the Black Wizard who was then able to cast a spell over the land enslaving its people.

Your task is to recover the five objects, and take them to the temple of Zolton, for only there will their ancient magic be powerful enough to overthrow the Black Wizard.

To load this adventure, simply place the cassette in your recorder and ensure that the tape is fully rewound. Now type: CHAIN"" and press <RETURN>. Let the tape run and answer NO (N will suffice) to the question as to whether you wish to load a prior game or not. The adventure will then load as the second file on the tape and start automatically.

Should you wish to save the game so far at any time, then simply type in SAVE as your response to the prompt. Note that many useful words which the game understands are set up for you so that a single press of a function key will produce the full response.

f1 - NORTH	f2 - EAST	f3 - SOUTH	f4 - WEST	f5 - UP
f6 - DOWN	f7 - INVENT	f8 - GET	f9 - DROP	f0 - HELP

Playing this 'adventure classic' is easy, but it may take you many months to solve. The computer will describe locations to you and ask you for instructions. You can move in all the main compass directions for instance, and the program will understand short forms (such as N for NORTH) as well as in fuller form. In general though, the computer will soon tell you if it doesn't understand what you ask of it.

If at any time you should feel at a loss, then typing HELP may lead to the computer supplying you with some useful information of hints and tips. Then again it may not...

Do not think that the task before you is an easy one... Many before you have tried and none have yet returned.

Another superb adventure by David Featley and Mark Cook for the Acorn Electron and BBC Micro. This is but one of adventures classics by Brainstorm marketed exclusively by Softek International.

### **Review (Electron User)**

This review is in response to a request for help from Elizabeth Young of Stondon Massey in Essex. She says the game is fascinating and I agree. Your ruler, the king, has had the five magic objects that enable him to maintain peace and prosperity in the land stolen by an evil wizard. As the influence of this wizard descends upon the land, you are summoned and told by the king that he has chosen you to recover the magic objects and take them to the Temple of Zolton. Here their beneficial influence will help the king defeat the wizard.

You begin your quest on a hilltop with the first task to equip yourself for the trials to come. You quickly discover a hut, two canyons, a lake, an island, a deadly forest and a mysterious castle. The island is the last place you want to visit so you search everywhere thoroughly before tackling the castle.

There is a way into the castle and you will be surprised at the help you can get here, always assuming you can recognise it! Once you have figured it out, you will be in the castle and the main body of the adventure. There are some really devious puzzles to solve, yet no real red herrings.

I will give you one tip. Though the program description says you have to return the five magic objects to the temple, they are not the only things that have to go there.

The program is written in Basic and thus easily listable. This might not help you if you get stuck however, since many of the room descriptions and word parts have been tokenised. For those who haven't met this term before, I'll try to explain. To save memory space the programmer has substituted the more commonly used words and word parts for symbols. The tokeniser converts these symbols into English when they are to be displayed on screen. It also converts your input into symbols the program can understand and respond to. The Electron itself tokenises Basic keywords, though very little information is given in the User Guide.

Overall, an ingenious series of puzzles. Despite being written in Basic it's a very nice game to play and is about average difficulty. I am impressed and have no hesitation in recommending it for all types of adventurers.

CHESTERFIELD. Tel: 0246 850357.  
Disc compatibility : CDFS E00, DFS E00

## Instructions

Welcome to the world of Adventure!

You are about to embark on a magical quest in the comfort of your own home. I will act as your eyes and ears, telling you of your present surroundings and condition etc. Whenever I expect you to type in another command I will ask 'What next ?'.

All you have to do is type in a short English command (without punctuation) and press the key marked RETURN to let me know you've finished. The DELETE key will delete the previous character and holding down the CTRL key and tapping U will delete the entire line. Here are some useful words to get you going:

GET (something), DROP (something), WEAR (something), EXAMINE (something), INVENTORY

To move around my world type UP, DOWN and the 8 main compass directions.

Words can be abbreviated, i.e. N ...for... NORTH, NE ...for... NORTHEAST, G BO ...for... GET BOX. Please keep your commands simple: 'GET something FROM something' is about as complex as I can understand.

Commands can be strung together, so 'NORTH THEN GET SHOE' is fine.

The words SAVE and RESTORE can be used to save and restore your current state of play (to disc or tape) at the end of a session, or before trying anything dangerous. I will ask if you're sure before I let you RESTORE a game.

Now on to a few basic questions I'm sure you want to ask about the game world. Who? What? When? Where? and How?

Firstly, you are Mold, son of Mold, grandson of Mold.

Secondly, if I tell you your former job was infinitely preferable to your present employment and that you were a dung heaper in the prosperous City of Furgle, (the job of dung heaper is not particularly good, no pay, permission to sleep near the warmth of the dung pits and 5% of all you can salvage from the nearby refuse tips), you might not be surprised when I tell you that you hold the post of part-time human sacrifice, (a job with few prospects).

Thirdly, the year is 3004 in the land of Juh, which is where you are.

Fourthly, you are in the tower of Kluf, surrounded by wasteland and poisoned seas, a haven of evil, populated only by fanatical devil worshippers and savage pirate hoards. The tower is the home of the demon Agrogorggan, brother (well sort of) of Naggrogorga (also a demon). They were originally, one creature, (called Gellnarga). Long, long ago, Gellnarga attacked the land where Kluf now stands. (It was ruled then by the elves). As a prophet had predicted that '...death will never wield his

sythe against Gellnarga...' he was very sure of himself. Unfortunately, the elves had been too busy prancing around in the forests to listen to the prophet and so made a magic sword (by capturing a powerful air spirit as it happens, but that's beside the point) to try and kill Gellnarga. Their King rode to battle, the sun gleaming of his golden armour, and hacked Gellnarga in two, and the sword then faded away (as magic swords are wont to do), leaving the two halves to rip the poor King limb from limb. They overran the land, butchering the entire population, poisoning the sea and turning the earth into a lifeless waste. When they had finished, Agrogorggan (greedy for yet more power) tricked his brother and sent him back to Hell. Naggrogorga was reputedly just a trifle bit miffed at being double-crossed and has ruled there ever since.

Finally, you got into your present predicament after trying to better yourself from your post of dung heaper. You were trying to join the adventurers guild. They seemed quite pleased when you asked about joining. To join the guild you must first go on a quest. They showed you in to their 'meeting hall' to discuss a quest with you. 22 pints of mead later, they finally told you what you had to do to join - kill the demon Agrogorggan!

They had worked out this really great plan of how to do it. They would get you to the tower by selling you as a human sacrifice to the pirates who supplied these to Kluf (they would keep the money for you till you returned). When you got there you would reveal you really weren't a sacrifice, escape, overpower the guards and kill Agrogorggan. It all seemed so logical at the time! Next day you were carried comatose to the docks and sold for a large purse of gold.

After some weeks of sea travel you were dragged screaming from the ship, over desert wastes to a dark temple within the tower of Kluf.

Well, that's about it for the instructions. Good luck, you will need it!

**Instructions' Source** : THE FERRYMAN AWAITS (Kansas) On-Screen Instructions

### **Review (Electron User) - "Gallons Of Gore"**

I must start by saying that I have not been greatly impressed by Kansas City's previous offerings, though they were better than a lot of the trivia posing as adventures which can be bought today. However, THE FERRYMAN AWAITS is a marked improvement which will keep many of you up until the early hours of the morning trying to fathom out who, why, what or how.

Kansas boasts that this adventure contains about 60k of text - some of which admittedly is used in the introductory passage - and room descriptions are evocative if rather macabre. Instructions are given in simple sentences, usually no longer than five words - certainly a welcome improvement on RING OF TIME.

The adventure is one of the most gory I have come across and as such should give immense pleasure to horror buffs. It is also riddled with dry humour - try this offering: "You play Mold, son of Mold, grandson of Mold. Your previous job was that of Dung Heaper for the City of Furgle. One of the perks of the job was permission to sleep near the warmth of the dung pits! Your present employment is part-time human sacrifice!"

Unfortunately, the adventure is also riddled with spelling mistakes - I noticed unfortunately and hideously on the first couple of screens. This is becoming all too common with recent releases.

Some of the problems are rather obscure and complicated, chiefly because the game has such a small vocabulary that you can do little except GET and DROP objects. It's a good idea to keep your eyes peeled for any hint that may lurk in the room descriptions.

Good imagery is created by more than six screens of introduction, which set out your task for you in black and white. It seems you are doomed to wander the wasteland of

Juh which appears to be wholly populated by demons, pirates, devil worshippers and deformed creatures.

You are apparently filling the role of hero-adventurer after you made frantic attempts to leave your last employment (I can't for the life of me understand why).

As the adventure opens, you find yourself lying across a stone tablet waiting to be sacrificed by a crazed priest. You are "magically paralysed from the neck down! and your only salvation is to utter the immortal word: Nimlax.

If you enjoy a plethora of blood and guts and can tolerate the "Righty oh, matey" response to almost all you do then this adventure is for you. Otherwise I suggest you try Database's MAGIC SWORD.

## Review (EUG)

Just about at the turn of the millennium, one of the regular mass injections to the STAIRWAY TO HELL website unearthed a great deal of text adventures. To collectors, this was an archive dreams were made of. Not only were there recognisable titles, to use the old cliché, thought "lost forever" but also a great deal of others. Some of the runner-up entries to ELECTRON USER's adventure writing competition, for example, and some of the later titles by Potter were all now freely playable with a few clicks of the mouse.

For a while, the ubiquitous Dave M (webmaster of StH) found himself in a bit of a quandary as to where a lot of them should be filed. Many of them were written with Gilsoft's THE QUILL utility and only limited to a small 'print run'. Some were even written in BASIC. Many seemed to be of mysterious origin, either without software house introductory screens or from a hitherto unknown company. All were also actually submitted to StH as .uef files [Images of the original tape recordings, jargon busters - Ed] with messages stating they worked in Mode 4 or 6 hence on both BBC and Electron machines. But whether this had been the case when/if they were actually *on sale* we have yet to discover.

THE FOUR WANDS is but one of these antiquities, a wholly fictitious NSEW affair in a mythical land where you play a brave warrior. Perhaps to typify the strange things you are in for when you try out one of these beauties, the rather unflattering black and white screen of text that greets you before the first part of this QUILLed adventure loads in states "Copyright D. W. Gore 1988" but nothing else.

It has much of the charm of an EU competition reject, although I have cross-indexed it against those entries Pendragon thought worthy of mentioning at the time and it is absent from them. The idea, as you may have gathered, is hardly bubbling with originality. However, much of the appeal of a good text adventure stems from the atmosphere the narratives generate. As Larsoft proved, you can get away with some of the weirdest scenarios imaginable as long as the programming is devious, the puzzles fathomable and the storytelling slick.

Alas, and I can only speak of part one of FOUR WANDS (as I can't get any further), your attempt to thwart the plans of the evil magician Saluber has rather less to coax you into repeated efforts than comparable titles like SALANDRA. Firstly, the location descriptions are not particularly well written, frequently telling you what you can see before telling you where you are, and Gore has put no 'polish' on the finished product.

You start off in a hut, and wander around the paths and bridges surrounding this location finding little of interest beside a boulder, a gate, a lady living in a cottage and a cellar in your domicile. If you attempt to EXAMINE any objects you find, you get the message that you see nothing of interest (which co-incidentally

you also get if you type EXAMINE followed by any word) when you might expect at least a cursory inspection to take place. Perhaps I'm being finicky but I also found that, at the cottage, the command KNOCK outside the door brought no response but that KNOCK DOOR did. As someone who has programmed with THE QUILL, this kind of parser limitation is very easily avoided and Gore should have ensured he followed the user guide's advice in doing so.

Something which is also annoying is that some messages only appear on screen for a very short period of time before the screen is blanked and the location description re-described. Outside the village shop I was informed of a sign which I thought I might try READING. It brought no response so I EXAMined it instead. At which point I saw what it in fact read flash up on the screen but it disappeared before I'd got to the end of its information.

Regrettably, these problems with the parser and the lack of long enough pauses are in addition to some painful spelling mistakes. "I can't move the boulder. It's too heavy!" is one; "I'm by a stagnant pool" another.

From what I've seen of the puzzles, however, these do go some way to balancing the adventure out. The lady at the cottage requires some wood for her fire and a large plank barricading the back entrance to your hut seems to provide the answer. Trekking all the way back there to get it, you find that it is securely nailed in place so it is no longer an option. After musing a while longer, you discover a pile of wood close by and pull a log out of it. But this isn't the answer either - the lady simply says it's too big for her fire. This style of puzzle is very much that employed by the grandmasters of adventure gaming (the likes of Peter Killworth) and leads me to wonder if Gore was adopting a little of their technique when composing FOUR WANDS. Although once again he lets the adventure down by using punctuation incorrectly throughout this sequence, it is an admirable attempt to devise a devious solution to what seems like an easy problem.

There are a few further odd touches too though. In a cave you will, if you EXAMine it, discover a boat in a pool. The logical next step, you might think, would be to get into it. However, intriguingly, you cannot. But you can pick up the boat and carry it around with you if you wish. This creates rather a strange mental picture of the great hero you are playing - walking around the Turne's local pub with a boat in one hand and an oar in the other!

To conclude it's only fair to say that there's evidently a lot more to this adventure than the opening thirty or so locations this review is based on. These may be upset by the odd programming fluff, yes, but the old grey matter is still put through its paces by FOUR WANDS. Like many of these re-discovered "Are they really legitimate professional Electron titles?", its real problem is that it suffers from having a very 'pre-release' feel to it.

This is not to describe this adventure as amateur though. It's not a bad game at all and clearly a lot of work has gone into its creation. It simply plays as though its full potential was never realised because the finishing touches to it were never implemented.

Dave Edwards, EUG #63

# THE FRENCH MISTRESS LEVEL A

*Professional, Originally Released On Cassette Only*

Game Type : Utility Program To Help Learn French  
Author : Keith Spence  
Standalone Release(s) : 1984: THE FRENCH MISTRESS LEVEL A, Kosmos, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : KOSMOS, 1 Pilgrims Close, Harlington, Dunstable,  
BEDFORDSHIRE LU5 6LX. Tel: 05255 3942/5406  
Disc compatibility : Unknown

## Instructions

*"An invaluable teaching or learning aid for beginners or advanced students of French. The ready-made lessons provide an enormous vocabulary of words, phrases and verbs arranged in subject groups. New lessons can also be created or existing lessons modified as required. The French Mistress presents words first in one language, then the other, in large easily read letters with French accents. Different colours are used for masculine and feminine words; this greatly assists gender learning. All lessons can be run in three different ways: learning only; self-test; or speed and accuracy test. Full editing facilities allow an infinite number of new lessons to be created and stored on cassette or disk for later use."*

### 1. Introducing THE FRENCH MISTRESS

The French Mistress language learning-aid comprises a control program and a series of self-contained lessons. The control program is recorded as the first item on side 1 of the cassette. Some of the lessons follow the control program, the remainder are on side 2. Each lesson covers a different subject, a full list of which appears in section 12 of the operating instructions. Individual lessons consist of lists of words or phrases up to a maximum of 250 entries per lesson. Each entry consists of the English text, French text and gender if appropriate. The English and French texts for each entry can be just a single word or a three-line phrase up to 59 characters long.

On successful loading, a colourful display results showing the program title and a list of available facilities. This is known as the COMMAND MENU. At the bottom of the screen the flashing message LESSON STORE EMPTY will be seen. The LESSON STORE is actually the part of the computer's memory in which the French Mistress stores a lesson. A pre-recorded lesson can be loaded into the lesson store using the method described in section 3, or a new lesson created as described in section 5. The French Mistress will only allow one lesson to occupy the lesson store at any time, this is referred to as "the current lesson".

### 2. Program Facilities

The facilities listed in sections 3 to 11 are available whenever the screen shows the command menu. Individual program facilities are requested simply by keying the appropriate letter. The command menu will then be replaced by a request for further information.

The program will ignore any invalid or illegal commands. For example it is not possible to Run a lesson without having first Loaded the lesson from cassette/disk.

### 3. Loading A Lesson (Key L)

Enter the cassette filename of the required lesson, followed by the RETURN key. If RETURN is pressed without first entering a filename, the next sequential lesson recorded on the cassette will be loaded into the lesson store. A list of lesson filenames is given in section 12.

When the required lesson has been loaded into the lesson store, the screen indicates the lesson title and the number of entries contained in that lesson.

#### **4. Running A Lesson (Key R)**

Initially the screen shows a questionnaire requesting four items of information. End each answer with the RETURN key.

Display times for the French and English texts need to be separately specified in seconds. Values may be 0.1 seconds upwards. For the first lessson tried, it is suggested that two seconds is specified for both the French and English display times. Other values can be tried later. If a value of 0 seconds is entered, this will suppress display in that language altogether. This is particularly useful for self-testing.

Key F or E to specify which of the French or English texts should appear first on the screen. The final question asks if the lesson is to be automatically repeated or not. If Y for Yes is keyed, the lesson will cycle repeatedly until terminated by pressing the space bar and keying X.

For lessons containing verb conjugations, it is recommended that the display times are entered as French = 0.1 seconds, English = 5 seconds. Display French or English first = F.

Once the questions have been answered, the lesson will automatically start. At any time during the lesson the current display can be "frozen" by pressing the space bar; the lesson may be optionally be re-continued (by keying space) or terminated (by keying X).

#### **5. Creating A New Lesson (Key C)**

Enter French text on the dotted lines. Specify gender - when asked (the program automatically allocates gender when "le, la, un or une" is detected at the start of the French text). Enter English text on the dotted lines. The French text, gender and English text combine to fore one "entry" in the lesson store. It is permissible to enter French words in both the French and English text positions; this is particularly useful for entering verb conjugations.

When entering French and English texts, the down cursor key moves the cursor to the next line, the RETURN key terminates the text. French accents are entered immediately after (and on the same line as) the character to which they apply using the keys listed in section 13.

Mistakes in entering text can be corrected with the DELETE key provided the RETURN key has not been pressed, or by keying X (RETURN) as the first character of the English text or as the gender. If the French text has no particular gender the RETURN key should be pressed in answer to the question "M or F?" otherwise key M (RETURN) for masculine words, or F (RETURN) for feminine.

Lesson entries can be repeatedly keyed into the lesson store up to a maximum of 250. Lesson creation can be ended at any time before this however, simply by keying END (RETURN) at the start of line 1 of the French text.

Having created a new lesson the command menu will prompt the Saving of this lesson by flashing the Save command (see section 6).

#### **6. Saving A Lesson On Cassette/Disk**

This facility is only used when a permanent copy is required of a newly created lesson or of a previous lesson which has been modified.

Enter a filename for the lesson (up to 8 characters)

Enter a title for the lesson (up to 24 characters)

Switch the cassette player to the record mode when the program issues the message RECORD THEN RETURN. On completion of the recording the tape should be rewound and the Verify facility requested (See section 7).

Alternatively, insert a blank formatted DFS disk in drive 0.

The Save facility does not affect the lesson held in the lesson store in any way.

#### **7. Verify A Saved Lesson (Key V)**

This facility should ALWAYS be used to check that a newly saved lesson has been successfully recorded. The Verify command will flash in the command menu until a newly saved lesson has been verified.

Enter the filename of the lesson to be verified before switching on the cassette player. If RETURN is pressed without first entering a filename, the next lesson recorded on the cassette will be verified. The program confirms that the verification is successful by printing "loading" then "OK". If verification fails, press the ESCAPE key and save the lesson again using the Save command (see section 6).

The Verify facility does not affect the lesson held in the lesson store in any way.

#### **8. Add To Current Lesson (Key A)**

This facility enables further entries to be added onto a lesson which is already held in the lesson store. Instructions for using the Add facility are identical to those for the Create facility (see section 5).

#### **9. Delete Entry From Lesson (Key D)**

This allows a single entry to be deleted from the lesson currently occupying the lesson store. It may be used to correct keying errors noticed in newly created lessons in conjunction with the Insert facility (see section 10).

Key in the entry number of the entry to be deleted. Entry numbers are displayed whilst running a lesson (see section 4) whenever the display is frozen by pressing the space bar.

#### **10. Insert New Entry (Key I)**

This allows a single new entry to be inserted into the lesson currently occupying the lesson store.

First of all it is necessary to specify the point of insertion required, this results in a display of the entry currently occupying that position. If this is the correct place for the insertion, key "Y" (RETURN) then enter the French, gender and English for the new entry.

#### **11. Test Lesson (Key T)**

The test facility may be used with any lesson which has been loaded from cassette/disk or newly created in the lesson store. In operation, the program displays a word or phrase in one language only; the translation must then be keyed in, this will appear on the screen one character at a time. Each time a wrong key is pressed the computer emits a "beep", and the character is displayed. At any time during the test help is available by pressing the COPY key. Each time COPY is pressed, the next character of the translation appears on the screen. At the end of the test, a performance summary is displayed.

#### **12. Accents And Special Characters**

The following keys are used for entering French accents and special characters.

Accents should be entered immediately after (and on the same line as) the character to which they apply.

French Character	Keyboard Character

## Instructions

*"An invaluable teaching or learning aid for beginners or advanced students of German. The ready-made lessons provide an enormous vocabulary of words, phrases and verbs arranged in subject groups. New lessons can also be created or existing lessons modified as required. THE GERMAN MASTER presents words first in one language, then the other, in large, easily read letters complete with special characters. Different colours are used for masculine, feminine and neuter words; this greatly assists gender learning. All lessons can be run in three different ways: learning only; self-test; or speed and accuracy test. Full editing facilities allow an infinite number of new lessons to be created and stored on cassette or disk for later use."*

### 1. Introducing THE GERMAN MASTER

The German Master language learning-aid comprises a control program and a series of self-contained lessons. The control program is recorded as the first item on side 1 of the cassette. Some of the lessons follow the control program, the remainder are on side 2. Each lesson covers a different subject, a full list of which appears under section 12 of these instructions. Individual lessons consist of lists of words or phrases up to a maximum of 250 entries per lesson. Each entry consists of the English text, German text and gender if appropriate. The English and German texts for each entry can be just a single word or a three-line phrase up to 59 characters.

On successful loading, a colourful display results showing the program title and a list of available facilities. This is known as the COMMAND MENU. At the bottom of the screen the flashing message LESSON STORE EMPTY will be seen. The LESSON STORE is actually the part of the computer's memory in which the German Master stores a lesson. A pre-recorded lesson can be loaded into the lesson store using the method described in section 3, or a new lesson created as described in section 5. The German Master will only allow one lesson to occupy the lesson store at any time, this is referred to as "the current lesson".

### 2. Program Facilities

The facilities listed in sections 3 to 11 are available whenever the screen shows the command menu. Individual program facilities are requested simply by keying the appropriate letter. The command menu will then be replaced by a request for further information.

The program will ignore any invalid or illegal commands. For example it is not possible to Run a lesson without having first Loaded the lesson from cassette/disk.

### 3. Loading A Lesson (Key L)

Enter the cassette filename of the required lesson, followed by the RETURN key. If RETURN is pressed without first entering a filename, the next sequential lesson recorded on the cassette will be loaded into the lesson store. A list of lesson filenames is given in section 12.

When the required lesson has been loaded into the lesson store, the screen indicates the lesson title and the number of entries contained in that lesson.

#### **4. Running A Lesson (Key R)**

Initially the screen shows a questionnaire requesting four items of information. End each answer with the RETURN key.

Display times for the German and English texts need to be separately specified in seconds. Values may be 0.1 seconds upwards. For the first lesson tried, it is suggested that two seconds is specified for both the German and English display times. Other values can be tried later. If a value of 0 seconds is entered, this will suppress display in that language altogether. This is particularly useful for self-testing.

Key G or E to specify which of the German or English texts should appear first on the screen. The final question asks if the lesson is to be automatically repeated or not. If Y for Yes is keyed, the lesson will cycle repeatedly until terminated by pressing the space bar and keying X.

Once the questions have been answered, the lesson will automatically start. At any time during the lesson the current display can be "frozen" by pressing the space bar; the lesson may be optionally be re-continued (by keying space) or terminated (by keying X).

#### **5. Creating A New Lesson (Key C)**

Enter German text on the dotted lines. Specify gender - when asked (the program automatically allocates gender when "der, die or das" is detected at the start of the German text). Enter English text on the dotted lines. The German text, gender and English text combine to form one "entry" in the lesson store.

It is permissible to enter German words in both the German and English text positions; this may be used for entering complete verb conjugations.

When entering German and English texts, the down cursor key moves the cursor to the next line, the RETURN key terminates the text. The Umlaut symbol is entered immediately after (and on the same line as) the character to which it applies using the ^ key on the keyboard. For example, "schön" is entered as "scho^n". During lesson displays, the Umlaut will appear correctly above the character to which it applies. The double letter "ß" is entered using the \$ key on the keyboard. This again will appear correctly during lesson displays.

Mistakes in entering the text can be corrected with the DELETE key provided that the RETURN key has not been pressed, or by keying X (RETURN) as the first character of the English text or as the gender. If the German text has no particular gender, the RETURN key should be pressed in answer to the question "M, F or N?", otherwise key M (RETURN) for masculine words, F (RETURN) for feminine or N (RETURN) for neuter.

Lesson entries can be repeatedly keyed into the lesson store up to a maximum of 250. Lesson creation can be ended at any time before this however, simply by keying END (RETURN) at the start of line 1 of the German text.

Having created a new lesson the command menu will prompt the Saving of this lesson by flashing the Save command (see paragraph 6).

#### **6. Saving A Lesson On Cassette/Disk**

This facility is only used when a permanent copy is required of a newly created lesson or of a previous lesson which has been modified.

Enter a filename for the lesson (up to 8 characters)

Enter a title for the lesson (up to 24 characters)

Switch the cassette player to the record mode when the program issues the message RECORD THEN RETURN. On completion of the recording the tape should be rewound and the Verify facility requested (See section 7).

Alternatively, insert a blank formatted DFS disk in drive 0.

The Save facility does not affect the lesson held in the lesson store in any way.

#### **7. Verify A Saved Lesson (Key V)**

This facility should ALWAYS be used to check that a newly saved lesson has been successfully recorded. The Verify command will flash in the command menu until a newly saved lesson has been verified.

Enter the filename of the lesson to be verified before switching on the cassette player. If RETURN is pressed without first entering a filename, the next lesson recorded on the cassette will be verified. The program confirms that the verification is successful by printing "loading" then "OK". If verification fails, press the ESCAPE key and save the lesson again using the Save command (see section 6).

The Verify facility does not affect the lesson held in the lesson store in any way.

#### **8. Add To Current Lesson (Key A)**

This facility enables further entries to be added onto a lesson which is already held in the lesson store. Instructions for using the Add facility are identical to those for the Create facility (see section 5).

#### **9. Delete Entry From Lesson (Key D)**

This allows a single entry to be deleted from the lesson currently occupying the lesson store. It may be used to correct keying errors noticed in newly created lessons in conjunction with the Insert facility (see section 10).

Key in the entry number of the entry to be deleted. Entry numbers are displayed whilst running a lesson (see section 4) whenever the display is frozen by pressing the space bar.

#### **10. Insert New Entry (Key I)**

This allows a single new entry to be inserted into the lesson currently occupying the lesson store.

First of all it is necessary to specify the point of insertion required, this results in a display of the entry currently occupying that position. If this is the correct place for the insertion, key "Y" (RETURN) then enter the German, gender and English for the new entry.

#### **11. Test Lesson (Key T)**

The test facility may be used with any lesson which has been loaded from cassette/disk or newly created in the lesson store. In operation, the program displays a word or phrase in one language only; the translation must then be keyed in, this will appear on the screen one character at a time. Each time a wrong key is pressed the computer emits a "beep", and the character is displayed. At any time during the test help is available by pressing the COPY key. Each time COPY is pressed, the next character of the translation appears on the screen. At the end of the test, a performance summary is displayed.

## Review (Electron User) - "Alphabet Antics"

THE GIDDY GAME SHOW is a suite of early learning programs based around the characters used in Yorkshire Television's popular series. The principal aim is to get children to recognise the shapes of letters and the sounds they represent.

Program one is an alphabet book with 26 pages - one for each letter. Each page features one of the Giddy Game Show characters (Gorilla, Gus the Professor, or Giddy) plus a picture of an object. The name of the object is written in large and well-formed text with the initial letter of the word picked out in a different colour. It looks very impressive - but does nothing that a book can't.

A criticism of this program and the other three is that the programmers forgot that sound is different on the Electron and BBC Micro so some weird noises result on the Electron.

Game two is a jigsaw puzzle in which the child must assemble letters of the alphabet. Again the visual quality is good and children are led sensibly through a sequence of operations. The reward for success is a screen full of Giddies.

It's a pity the programmers didn't take off the keyboard repeat - that little omission makes it hard for heavy-handed youngsters to control the moving cursor.

Game three requires children to fly Giddy on his magic wand towards some food that Gorilla wants. The name of the food is clearly shown and various pictures of food appear with their initial letters. If the child gets the right food, Gorilla eats the word while the picture vanishes down Giddy's wand. Selecting a wrong food causes Gorilla to growl and frown.

This program is great fun but because the cursor keys are used, there is a real danger of pressing <BREAK> in error. That problem does not occur on the simpler of the two levels as Giddy flies automatically and the child hits the spacebar at the correct food.

The final program is a maze game in which children can help to rescue the King who is imprisoned in a castle. They do this by guiding Princess Galaxzena around the maze past five objects. Some objects begin with forbidden letters and these cause the Princess to use up one of her three lives.

The child has to hit the spacebar when the required options is highlighted. Inevitably, youngsters are going to get the wrong options as the highlight moves on.

The whole package is a very attractive set of simple games aimed at children who are learning to read. The niggles I have are minor, and can easily be remedied by a Basic programmer.

One final complaint is that the instructions are barely adequate but overall, there are a lot of good bytes for your money and I would recommend the program.

## Review (Electron User) - "Beware The Deadly Trap"

Take a portion of CITADEL and mix it with a touch of JET SET WILLY and you end up with the latest, budget priced arcade adventure from Atlantis Software. The rules are simple. Your aim is to recover the golden figurine, a family heirloom which has been stolen by the evil wizard Morthond. The game controls are left, right and jump, and these suffice to get you around the 57 rooms of the wizard's castle, picking up and using objects as you go.

The castle is populated by Morthond's mutant servants. Bumping into them will reduce your strength, as will collisions with spikes or water. Your strength can be replenished by eating the food scattered around. Nice for mice.

If you can keep up your strength you will have to cope with the problem-solving parts of the game. Without giving too much away, you will need to find something hot to melt the snowman that blocks your path, and don't try to use a boat while it has a leaky hull - mend it first. The trampoline will have a number of uses, but great care will be needed to do things in the correct order.

Experienced arcade adventurers will not find these puzzles too much to cope with - in fact they could be an ideal introduction for the novice. The skilful timing needed to prevent loss of strength presents much more of a problem, because your character has incredibly fast movement. This leads to the one major difficulty.

There are many places where one false move topples you into a pit from which there is no escape. Death comes quickly in these cases, and I would have lived a CITADEL-like routine which moves you to comparative safety. To get the "You have failed in your quest" message after a long session of adventuring is a bit too frustrating.

Despite that criticism, GOLDEN FIGURINE is addictive and fun to play. It is well worth getting for your Christmas stocking.

Rog Frost

## \*\*\* Second Opinion \*\*\* (Electron User)

Atlantis is well known for its budget titles, and among them are some real gems. This CITADEL/PALACE OF MAGIC clone could have been another, but just misses that accolade by being too difficult. The problem is that it's far too easy to get stuck in a deadly trap with no hope of getting out - just one slip and your goose is cooked. You then have to return to the beginning and start all over again.

If you like a challenge, have nerves of steel and lightning reactions then look out for this enjoyable, but frustrating, arcade adventure.

Disc compatibility : CDFS E00, DFS E00

## Instructions

*"As a Roman Army runner you have been ordered into training by your Commander. Your training could prove to be very hazardous, if not deadly!"*

In the days of old, army commanders required "runners" to keep in touch with their headquarters. You have been chosen to train for this dangerous occupation.

The training consists of running along the top of the great wall that divides two warring nations. Sounds easy? It's not. You will encounter many hazards and obstacles along the way. Some of the obstacles you will meet are: rocks, arrows, unpleasant guards and fast moving cannon balls. There are other hazards; these you will find out for yourself. Contact with any of the obstacles will result in the loss of one of your lives, remember you only have four, don't waste any,

Your performance is assessed by how quickly you manage to cross each section of wall, if you run out of time you will forfeit a life. There are eight levels to conquer, each level contains sixty four sections, a total of five hundred and twelve sections, not a task for the faint of heart.

At the end of your trial you can enter your name on the roll of honour if you're good enough, accompanied by a choice of four fanfares.

DEMONSTRATION MODE IS AUTOMATICALLY ENTERED AFTER A SHORT DELAY FROM THE 'KEYS-IN-USE' SCREEN; TO EXIT DEMO MODE, PRESS <ESCAPE>.

## Game Controls

## Instructions

"GOLD..." - The rumour spreads through the town like ripples on a pond. Seldom is that word even uttered by mere citizens yet now King Ardanga is offering golden treasure and the title of Adventurer to anyone who dares venture into the catacombs to recover his stolen gems. Arfa, the outcast and greedy dwarf, has made off with three precious jewels from the King's hoard. The sentence of death is upon him but who will volunteer to carry it out?

As you delve deeper and deeper into the twisted tunnels under the King's castle in your search for the missing gems life will become almost as precious as the gold you hope to earn. Time, as always, is of the essence as your lamp slowly fades. Strange monsters guard the way forward and still the jewels elude you.

"Perhaps if you took just one back the King might release you from this task...on the other hand, he might chop your head off!" Only if you survive this mammoth quest intact and bring him the gems will you earn the title of Adventurer, and the promised gold.

Equipped with an unusually powerful command structure, this outstanding text adventure will require all your skills as a solver of riddles and logic puzzles.

"Only the bravest of the brave wear the King's gold: join them if you dare!"

## A Proclamation

I, King Ardanga the Indomitable, Lord of the Fiery Kingdoms and Master of the Ultimate Limits of the Universe, seek vengeance on the person of Arfa, my loathsome and greedy dwarf who has stolen three of the finest jewels from my castle in the northern realm. He that returns with my gems and evidence of Arfa's death shall be named "King's Adventurer" when the task is completed and shall be given gold without measure. But he who cannot fulfil his vow and fails the attempt will be rewarded with DEATH.

## The Adventurer's Tale

"Riches without measure and a King's Adventurer...". Your mind reels at the thought. By this one deed, all your troubles will be at an end - you'll be covered in gold and glory. You conjure up the audience chamber and the scene when you return to lay the jewels and Arfa's head at the King's feet - the shouts of acclaim, the heaped treasure, yourself by Ardanga's side. The vision proves too much and forebodings of the dangers ahead, the dwarf's reputed treacheries and fears of the unknown vanish like smoke. You take up King Ardanga's banner and launch yourself into the quest.

## Arfa The Greedy Dwarf

Your adversary is a cunning and fearsome opponent. He has hidden the jewels in separate chambers and ensured their protection through a variety of nasty and unpleasant devices. He has his weakness though...

...and it's in your interests to puzzle them out, if you want to survive.

### **King Ardanga's Castle**

In, around and under the castle, you must venture. If you knew what awaits you as you start your quest, even gold might not be reward enough! Shadow monsters, rats, spiders and a giant evil hound lurk among the chasms, mazes, booby-trapped chambers and confusing passages. Will there be oil enough for your lamp; will you be able to carry what you need; will you be able to complete your task?

### **Managing The Quest**

#### **Conversing With Your Computer**

To explore the world of "The Greedy Dwarf" all you need to do is to type simple sentences in plain English. Here are a few examples to give you an idea of the sort of instructions that your computer is capable of understanding:

```
RUN WEST QUICKLY
TAKE THE LAMP
EXAMINE THE SCROLL AND THE AMULET
CAREFULLY DROP THE FLASK OF LIQUID PLEASE
SHOUT HELP
```

Your computer has been provided with a vocabulary of over two hundred words, including:

```
VERBS:      FLING, MOVE, LOOK, EXAMINE;
ADVERBS:    QUICKLY, CAREFULLY, QUIETLY;
NOUNS:      DIAMOND, COBWEB, TREE, RUBY;
ADJECTIVES: YELLOW, ELVEN, PINK.
```

Despite the large size of the vocabulary, you may soon find yourself wanting to use a command containing words which the computer does not recognise. For example you might try:

```
REMOVE THE LANTERN
```

to which your computer will reply:

```
I don't know the word "remove".
```

Don't give up! A simple change in the phrasing of your command is usually all that is required to make yourself understood. In the example above, you would find that:

```
TAKE THE LANTERN
```

has the desired effect, as does

```
PICK UP THE LAMP
```

#### **Some Special Commands**

Here are five special commands which you will soon find useful when you begin your quest:

LOOK	Describes your current location
LIST or INVENTORY	Tells you which objects you are holding
SAVE	Creates a cassette file containing a record of the state of the game, so that at a later date you may resume the game where you are now
LOAD	Loads a game saved previously using the "Save" command
QUIT or STOP	Ends the adventure

The actions invoked by these commands all take place outside "game time" so for instance you can request an Inventory as many times as you like without losing any valuable time.

#### **Typing Aids**

Whilst running "The Greedy Dwarf" adventure you will discover that the keyboard auto-repeat has been disabled. It is re-enabled when the program is stopped. To save wear and tear on your fingers, the function keys have been defined as follows:

```
f0      LOOK <RETURN>
f1      INVENTORY <RETURN>
```

f2	SAVE <RETURN>
f3	LOAD <RETURN>
f4	TAKE THE
f5	DROP THE
f6	GO
f7	EXAMINE THE
f8	THANK YOU! <RETURN>
f9	QUIT <RETURN>

If your machine is fitted with a 1.0 or later version of the Operating System then the cursor editing keys will be temporarily disabled and redefined as follows:

CURSOR UP	NORTH <RETURN>
CURSOR RIGHT	EAST <RETURN>
CURSOR DOWN	SOUTH <RETURN>
CURSOR LEFT	WEST <RETURN>
COPY	<BEEP>

You can save yourself even more time by abbreviating words to just the first six letters, so for instance you can type CUPBOA instead of CUPBOARD. You may also omit punctuation and words such as "the", "a", "an" and so on. In addition, some of the most frequently used words can be abbreviated even further. A list of such words and their abbreviations is given below:

DOWN	D
EAST	E
INVENTORY	I, INV or INVENT
LOOK	L
NORTH	N
QUIT	Q
SOUTH	S
TAKE	T
UP	U
WEST	W

Finally, note that directions such as north-east, south-west, etc. should not be written in full. Instead you must abbreviate them to NE, SW and so on.

### **Preserving Your Character**

As the game is both very long and very complex, it is most unlikely that you will solve it in a single attempt, or even several dozen come to that! To prevent frustration at having to replay sections again and again there is a facility to store and recall your character's current position and status from tape.

To save the character type SAVE as a command (alternatively press f2). The computer will now request a filename of no more than seven letters. Type this in and press <RETURN>. If you are using a cassette system make sure you have a fresh tape in the cassette recorder. DO NOT USE THE PROGRAM TAPE!!! Instructions will be displayed on the screen just as for any normal SAVE or LOAD operation.

To load a saved character back into the memory simply enter LOAD as a command (or press f3) and then enter the filename when the computer requests the information. The character will now be loaded back into the game and all the necessary location and object information will be updated.

If you are new to adventuring it is worth saving your character at regular intervals. Although it uses a lot of tape it does help in solving the harder problems.

### **The Adventurer's Vocabulary**

As you will already have realised from the above the game possess a very large vocabulary, some 230 words in all. As well as containing standard nouns and verbs the list includes adverbs, adjectives and incidental connecting words. Many words are included as synonyms, TAKE and GET, for example, have the same meaning as far as

the game is concerned. Several examples from the vocabulary have been given already; whether they work or not is for you to discover!

As far as is possible every word used within the game to describe an object has been included: For example, an "elven long sword" could be acquired by taking the "elven sword" or the "long sword" or just the "sword".

It is worth bearing this in mind while playing the game as parts of the description of a location may well be more important than they first appear. Although it takes time to EXAMINE objects, and time is very strictly limited, you can learn a lot if you take the trouble.

### **Hints For Beginners**

Plenty of paper is necessary, or a supply of Goldstar Maze Masters, as building an accurate and comprehensive map is essential.

Dying is educational! Unlike many adventure games THE GREEDY DWARF is always informative about how you died. Solving the riddles is just part of the game.

Use logic. THE GREEDY DWARF is always logical except when you're stuck in a maze, so a clear head for direction is an absolute must.

Try it! If you can think of a command that sounds sensible, THE GREEDY DWARF will always try to give you a sensible answer.

### **Aids To Adventurers**

Goldstar offers a comprehensive range of material to help you in your quest. Maps, Maze Masters and Hint Sheets are all available for a small fee upon request to Dorling Kindersley Software, 1-2 Henrietta Street, London WC2E 8PS.

**Instructions' Source** : THE GREEDY DWARF (Goldstar) Back And Inner Inlay

### **Review (Electron User)**

The object in this text adventure is to aid King Ardanga, Indomitable Lord of the Fiery Kingdoms. Somehow, Arfa, the greedy dwarf, has stolen three jewels. What the noble king wants is his treasure returned and the evidence of Arfa's death.

You start at the top of a staircase leading down to the caverns where the dwarf is thought to live and the problems start at once. Some of there are very straightforward, but it won't be long before you're falling through trap-doors or having stalactites drop on you.

It's a well written adventure with a fast response time and great attention paid to creating atmosphere.

This starts with the booklet which comes with the program. It not only gives adventuring hints but also contains a proclamation from the King and details of your quest, the dwarf Arfa and the castle. The graphics in the booklet are excellent and this is a better place for them than in the game itself. The quality continues with the location descriptions which are varied and interesting.

The program knows around 230 words and these are not just verbs and nouns. There are also adverbs and adjectives. Commands such as "CRAWL EAST QUIETLY" are understood.

I have to confess I haven't found Arfa or any jewels, but it's a program I can't resist and I keep having another try. I'm certainly pleased that the load and save position facilities work smoothly and easily.

This is a program for the more experienced adventurer and it scores highly in my top ten adventures.

Rog Frost, ELECTRON USER 3. 2

# THE HUNT: SEARCH FOR SHAUNA

*Professional, Originally Released On Cassette Only*

Game Type : Text Adventure With Graphics  
Author : Ian Muriss  
Standalone Release(s) : 1987: THE HUNT: SEARCH FOR SHAUNA, Robico, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : ROBICO, 3 Fairland Close, Llantrisant, MID GLAMORGAN CF7 8QH  
Disc compatibility : Unknown

## Instructions

As the pilot of an intergalactic space craft, you have searched the galaxy for the kidnapper of your crew member Shauna. Your mission has led you to an enormous space station, devoted to scientific study and experimentation, where you have finally docked in berth 5820. Your space craft is battered and on the verge of collapse. Only the 'hull integrity system' is preventing loss of atmosphere and that, too, will fail in a few seconds' time!

You are on the last stages of the hunt. Your search for Shauna is almost over. All you must do now is escape to the space station, explore it and find Shauna, and return with her to the flight deck of your ship.

## Entering Commands

THE HUNT has a command line interpreter that allows sentences but not multiple statements. In other words, a command such as GIVE GUN TO LUGOBOT would be understood, but EXAMINE THE GUN THEN GO NORTH would not.

The usual adventure words may be used. For example INV gives an inventory or list of your possessions; LOOK describes your surroundings; EXAMINE takes a close look at an object; GET picks up an object and DROP leaves an object behind. GET and DROP may be used with an object name, for example GET GUN, or with the words ALL or EVERYTHING. GET on its own gets the first object in the room.

SAVE will store your position to your own blank cassette.

LOAD or RESTORE will load a previous position from your save-game cassette.

Press <CTRL> to see a picture of your location and then press the <SHIFT> key and return to the text.

OG (GO backwards!) or OOPS allow you to retrace one move.

BSAVE saves your position to a memory buffer.

BLOAD loads your position from the buffer.

QUIT restarts the game from the beginning.

The following directional commands are understood: NORTH (N), SOUTH (S), EAST (E), WEST (W), NORTHEAST (NE), NORTHWEST (NW), SOUTHEAST (SE) and SOUTHWEST (SW). UP and DOWN and IN and OUT may also prove useful in places.

## Characters

In your quest you will meet various characters including the Lugobot, the terse Servobot, the Aggro-droid and the Guardroid! A monkey and a dog should prove useful and if you are a particularly skilled adventurer you will meet the evil kidnapper and hopefully Shauna herself!

## Hints And Tips

Make a map! THE HUNT has many locations, each beautifully illustrated, and it is quite easy to become lost.

Every object has a use. Some have several uses.

There is no magic in THE HUNT, but in a science fiction adventure, who knows what might happen?!

### **Getting Started**

EAST, WEAR GYRO, WEST, WEST, GET SCRAP...HIRE TAXI...

**Instructions' Source** : THE HUNT (Robico) Inner Inlay

### **Review (Electron User) - "Lost In Space"**

A 59TH century space cruiser soaring into the unknown, boldly going where no adventure has gone before. The cover shot and introduction may seem familiar but THE HUNT ranks as something of a deviation and gamble for Robico.

Not only is it the company's first adventure which has not sprung from the hands of Rob O'Leary, but it is also Robico's first escapade in the field of graphic adventures.

It is, I believe, a gamble which has paid off. The puzzles are devious but logical, as you would expect from Robico, and the graphics are superb. I would go so far as to say that they are even superior to those in THE LOST CRYSTAL.

As pilot of an intergalactic space craft, you have searched the galaxy for a missing crew member, Shauna. Your mission has led you to an enormous space station where you have finally docked, your space craft battered and on the verge of collapse.

You begin your quest at the console of your ship with only sixty seconds to space exposure. As with all Robico adventures, the start is gripping and can be deadly if you don't equip yourself quickly.

No sooner do you escape from the confines of your ship than you have to face the rigours of intergalactic customs - I would suggest you check your itinerary before doing so. If you succeed, the adventure begins in earnest.

The superb advanced parser enables your Electron to seemingly understand almost any prompt you type in, as long as it has something to do with the game.

My one and only criticism of THE HUNT is that I feel the location descriptions lack a little of the atmosphere of the Robico text-only adventures.

However, the descriptions created in each location are layered to give just enough clues to help with the problem solving. Your search will be difficult, but not impossible: And the conclusion is rewarding.

If for some strange reason you don't like graphic games, the simple command GROFF will let you play the game in text-only format.

I understand this is just the first of many alliances that Robico has made with out-of-house authors. If this is evidence of the calibre of adventures to follow, then you had better start saving your pennies fast.

This is without doubt the best graphic adventure I have seen for the Electron and is an essential purchase for any discerning adventurer.

# THE KET TRILOGY

*Professional, Originally Released On Cassette Only*

Game Type : Text Adventures  
Author : Graham Thorpe and R. A. McCormack  
Standalone Release(s) : 1985: THE KET TRILOGY, Incentive, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : INCENTIVE, 54 London Street, READING RG1 4SQ  
Disc compatibility : Unknown

## Instructions

*"MOUNTAINS of KET, TEMPLE of VRAN, THE FINAL MISSION.*

*The Story so far...*

*The Lords of Ket rule a strife-torn land where magic and mayhem are commonplace. Raiders from the east sweep in and devastate the countryside, spurred by the villainous Priest-King, Vran Verusbel, archmage of the cult of mad monks and by the beautiful, though utterly evil, Priestess Delphia.*

*Unjustly condemned for a murder you did not commit, you have been offered the chance of escaping the hangman's noose by undertaking a perilous quest. Naturally you accept, but to ensure your loyalty to the cause, the Lords have placed a magic assassin bug on your neck, ordered to sink his poisonous fangs into you at the slightest sign of cowardice.*

*Poised at the brink of the unknown brink of the unknown village, you stand alone with the daunting mission before you... With just a handful of coins, your trusty sword and the will to succeed...*

*Your task is to travel beyond the mountains and then underground via Vran's Temple to the ultimate confrontation with Vran himself, penetrating his inner sanctum, beyond the Guardians of the Gates...*

*Each part of THE KET TRILOGY is a colossal adventure in itself which can be played independently of the other two."*

## THE KET TRILOGY

The lands of Ket have long been split into feuding groups and have never known peace. Recently though, particularly vicious attacks have come from beyond a range of mountains in the east - these are known as the **Mountains of Ket**. To put a stop to these attacks, the Lords of Ket have joined together and called for you. You are told that the force behind the raids comes from two people: Priest/King Vran Verusbel, leader of the cult of Mad Monks, and their High Priestess, Delphia; the most beautiful woman in existence. They base their attacks from an evil place, the **Temple of Vran**. It is thought by the Lords that the death of both Vran and Delphia would cause the raids to stop. This then is your ultimate task, but beware as both are cunning and devious.

## About You

Just two weeks ago you were framed with a murder and sentenced to a grisly death. On the eve of your execution you were given a Do or Die choice and you chose to Do!

To ensure your continued loyalty when you are on the mission, a magic assassin bug named Edgar was placed on your neck. His orders are to sink his poisoned fangs into you at the slightest sign of you doing a bunk.

Edgar will provide a run down on all you meet and may be able to give you help in certain instances.

### **Part 1. Mountains of Ket**

Your mission in this adventure is to reach the far side of the mountains alive! To do this you must first locate the secret entrance at the base of the Mountains of Ket. This, you are told, lies within a short horse ride east of the small village. Your task then is to successfully negotiate a route through the strange and mystic mountains. Beware - Many who have entered the Mountains in the past have never been seen again!

### **Part 2. Temple of Vran**

Exhausted, you have just reached the far side of the **Mountains of Ket**. During your travels, you were able to secure four magical items, a scimitar, a ring, a suit of armour and a wand. To pass the final guardian, a huge Zombie, you have to have all of these items, you were then able to make your way down a flight of stairs. Just as you thought you had made it, the Zombie grabbed back at the wand. As you ran down the stairs towards a glint of daylight the Zombie rolled a huge boulder into the tunnel behind you. You are now forced to go on...

Your mission in this part of the Trilogy is to reach the Temple and once there to put an end to all of its evil occupants. You are told that the Temple is somewhere to the east, although it may not be on a direct route. Many of the items you find on your travels will assist you in your task. Try not to waste any as you may need them.

It has been rumoured by the people of Ket that the Goddess of Love, Aphrodite, also hates Delphia because Delphia is so beautiful. Aphrodite may be able to help you kill Delphia - if you can find her!

### **Part 3. The Final Mission**

Exhausted, you made your way through the **Mountains of Ket** and finally located and entered the **Temple of Vran**. Once inside you cunningly brought about Delphia's demise. Using her magic sceptre you found the secret entrance and a flight of stairs leading to the lower Temple. As you descended the stairs you were enshrouded in gloom and the air thickened. You recall a blow to the head. Hours later you awaken...stunned...

This is the concluding part of THE KET TRILOGY and herein lies death or glory. You now face the evil Vran Verusbel himself in his inner sanctum which is located beyond the five enigmatic Gate Guardians.

Not only must you defeat him but you must also ensure your own route to freedom.

## **How To Use The Adventures**

### **Word Entry**

When entering commands please use a VERB NOUN combination. You will be told if your command is not understood or you try to do something impossible. Listed below are examples of a few possibilities...

GET SWORD	EXAMINE LAMP	BUY LAMP
GO NORTH	DROP SWORD	STAND ON CHAIR
COUNT COINS	SAY HELLO	THROW AXE
CLIMB DOWN		

### **Special Commands...**

<b>INVENTORY</b>	List the objects that you may have with you
<b>HELP</b>	May be useful (May not!)
<b>LOOK</b>	Re-describes your present location
<b>SAVE/LOAD</b>	See SAVING & LOADING section later on
<b>QUIT</b>	Ends the game and lets you begin again

Most commands can be abbreviated. i.e. INVE is the same as INVENTORY. The most useful of these being the movement commands: NORTH, SOUTH, EAST, WEST, UP and DOWN abbreviated to N, S, E, W, U and D.

### **Your Statistics**

These are a measure of your current condition. They are put into three categories: PROWESS, ENERGY and LUCK. These abilities are used in Combat.

### **COMBAT**

To enter into combat you must have a weapon. If for some reason you get into a fight then a special combat screen will be displayed. This will show your abilities and (Thanks to Edgar) those of your foe. Combat is split into a number of rounds ending when one of you snuffs it or you chicken out! Each round your prowess and that of your opponent is compared. The higher of the two has a greater chance of hitting his opponent, but even if your Prowess is lower you may still be able to hit!

When you hit your opponent his energy will decrease, when he has none left he will die. The same applies to you! If you are hit then you get a chance to dodge - this is where your luck comes into play. The more you have the more chance you have of dodging.

### **COMBAT (Temple of Vran only)**

If you engage in combat whilst playing the Temple of Vran you will need to prepare a weapon, e.g.:

PREPARE SWORD (<RETURN>)

N.B. This only applies to the Temple of Vran.

### **Saving And Loading**

At some stage during play you may wish to SAVE your present position in the game for continuing at a later date. To do this, enter SAVE, try in a filename and start the tape recording. Press a key and the game will then be saved.

To LOAD a previously saved position, LOAD the main program: Type LOAD and press <RETURN>, then play your data tape. When loading is complete you can then continue from the saved position.

### **Helpful Hints**

It will be very useful to draw a map of the area as you proceed.

Edgar says, "Don't just kill everything!"

Once inside the Mountain - Leave valuables in a safe place for a massive score?

Don't leave anything useful in a different time zone - you may not be able to return!

On your travels you will find many curious items. These may be worn, help you in combat, assist in solving a problem or be of no use whatsoever!

Beware of One Way Doors!

The Arrows are red: Z=1, A=26, etc.

### **100%**

On completing 100% of each adventure, part of a message will be revealed!?!

**Instructions' Source** : THE KET TRILOGY (Incentive) Back Inlay & Instruction Leaflet

### **Review (Electron User) - "Boring Battling"**

This package contains Mountains of Ket, Temple of Vran and The Final Mission - which form the classic and colossal KET TRILOGY. Often when a piece of software

is given enough sales hype to sell sand to the Saudis you becomes a bit sceptical about the quality of the game.

The adventure is hardly colossal. The Mountains of Ket only has about 66 locations, and the complete trilogy has no more rooms than an average Epic or Robico release. But to its credit, it covers three tightly linked Sphinx/Ring of Time type adventures which contain some excellent chaining puzzles and devious passwords. Unfortunately things begin to break down in the dungeons and dragons style combats which seem to occur at every sixth location.

These combats are supposedly based on the prowess, energy and luck factors of you and your foes, yet are nothing more than a rather tedious series of random number generations.

Conflict can be avoided in some cases by trading wares or, in the case of the Ogre, by a spot of illicit gambling. However, your whole progress can be ruined by unaccounted probability.

The room descriptions are sparse and little atmosphere is created. When any does exist, it is destroyed by silly interjections such as when the password to a secret door in mint condition is Polo. That type of humour might be at home in TERRORMOLINOS but is out of place here.

The whole approach seems rather dated, with the parser and text compression being extremely limited.

It is a shame that the memory taken up by the combats and fancy screen display couldn't be better utilised by creating more locations.

I'm not too keen on this adventure, as there are better examples.

# THE HACKER

***Professional, Originally Released On Cassette Only***

Game Type : Arcade Platform Game  
Authors : Timothy J. Wilkinson & John R. Day  
Standalone Release(s) : 1985: THE HACKER, Firebird, £2.99  
1987: THE HACKER, Firebird, £1.99 (BBC Side A/Elk Side B)  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : FIREBIRD, Wellington House, Upper St. Martin's Lane, LONDON  
WC2H 9DL  
Disc compatibility : Incompatible. Customised Loading Sequences

## Instructions

*"The Hacker is the ultimate technological voyager, capable of travelling from terminal to mainframe via the telephone network. There are 12 treacherous stages to overcome before The Hacker reaches the access code at the heart of the system. Grit your teeth and hold on to your floppies!"*

Intent on gaining access to the central computer games library, Hank has developed The Hacker - a controllable sprite capable of travelling through microscopic circuits. The Hacker must pass through Hank's terminal and modem, into the telephone network and out through a second modem, access the mainframe, its buffer and data bus, enter the CPU and reach the main file store. At each stage of the journey, The Hacker appears at the bottom right of the screen and must overcome the obstacles in his path to reach the top left corner. Five white floppy discs appear in each screen and must be collected before moving on. The Hacker has only limited time before his power expires - any power remaining after the completion of a screen is added to your score.

There are 12 stages in this game, each of which can be practised independently by typing HELP when the High Score Table is displayed.

## Control Keys

You can control The Hacker with the following keys:

Z - Left, X - Right, RETURN - Jump, H - Halt, C - Continue

**Instructions' Source** : THE HACKER (Firebird) Inner Inlay

## Review (Electron User)

This hacker really has little to do with hacking. However it makes an interesting and topical story line for the game. It's actually a Manic Miner-type levels game. There are twelve screens and many different puzzles and obstacles to overcome. Your objective is to gain access to the central computer games' library.

You are cast in the role of a small man who is able to pass through electrical circuits. It's here that the action takes place. You must pass through your modem into the telephone network. Then it's out of the mainframe's modem, into its buffer, down its data bus and into the central processing unit. Then you can access the files.

On each screen are five floppy discs to collect and a time limit in which to do it. The time remaining when you've completed the screen is added to your score.

Any screen can be practised without having to start at the beginning and go through each one. This is a useful feature which I wish more games had.

The graphics are quite nice but the movement of the characters is fairly slow and they aren't very smooth. This spoils the game somewhat. I should imagine it's much better on the BBC Micro with that little bit extra speed.

However having said that, Firebird software tends to be cheaper than most, so taking that into account it's a reasonable game.

Roland Waddilove, ELECTRON USER 3. 4

### **Review (Electron User) - "Cheap, But Not Cheerful"**

Quite a lot of budget software has been released recently, some of which compares favourably with games costing up to three times as much. Unfortunately, some only serves to give other budget software titles a bad name and in my opinion this game falls into this category.

It is of the platform and ladders genre, having 12 separate screens. A new one appears only when the previous one has been completed, though there is a practice mode which lets you access any screen.

Controls and movement are limited to left, right and jump. Progress is timed, but there is a pause facility enabling you to stop and plan your route. Unfortunately, I found that the movements of THE HACKER were rather jerky and key response wasn't all I would wish.

The theme is that THE HACKER has to pass through a terminal and modem into the telephone network. Then it's on into a central computer mainframe through a second modem (this is probably why screens B and F are identical and both titled "Do it the Modem Way").

Any similarity to a real hacker breaking into a real mainframe exists only in the screen titles, with names like On The Data Buses which at least gave me a chuckle, and Terminally Yours, which just about reflected how I felt when playing the game.

The sprites are well drawn, being fairly good representations of ROM chips, discs, cassettes and the like, but the remainder of the graphics are rather basic and the backgrounds plain.

Sound was virtually non-existent being limited to one monotonous tone as the character walks. There are different tones as he falls or dies on landing.

The screens are difficult to complete, but I wouldn't describe them as challenging as there doesn't seem to be any incentive to keep trying.

THE HACKER originally appeared about three years ago when software was difficult to find and arcade addicts a bit less demanding. Software houses would do well to remember that standards have improved and games of this quality can be found as simple magazine listings. My overall verdict: Dull and uninspiring.

# THE JOFFE PLAN

***Professional, Originally Released On Cassette Only***

Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

Instructions' Source : 3

## **Review (Electron User - Double Review Of THE JOFFE PLAN and WATCH YOUR WEIGHT)**

### **- "If You've Got A Weighty Problem On Your Mind..."**

When the Editor sent me these two packages, I thought he was trying to tell me something. Well, I've news for him - it's not me that's overweight! These two programs contrast greatly in their approach to the problems of weight-control. Acornsoft's WATCH YOUR WEIGHT is based upon creating a strict diet by accurately measuring calorie intake. Mirrorsoft's THE JOFFE PLAN, in contrast, emphasises the importance of exercise and changes to diet. Both pieces of software are well-constructed packages, accompanied by comprehensive manuals.

WATCH YOUR WEIGHT begins by presenting a graphical display of your weight and height that shows whether you are obese, very overweight, over-weight, desirable or below desirable. The same graph is used for men as women. Although a woman is likely to have a lighter body frame than a man, it is natural for her to have more body-fat without increasing the risk of weight-related diseases. This part of the program is not designed for youngsters under sixteen.

Some people may find themselves below the desirable weight range. The package gives useful advice even to the extent of helping you to put on weight.

For those within the desirable range, physical effort rather than calorie control is recommended, though no details of suitable exercises are discussed in this program.

Those people that fall into the very-overweight and obese ranges are advised not to use the program but to consult their own doctor.

Once the program has helped you decide whether you need to lose weight, and if so how much, it then helps you calculate the number of calories you should have each day. The computer estimates this from your weight, age and sex and the degree of physical activity in your life. The program then asks you if you want to start a diet.

Once you know roughly how many calories you need daily, it can estimate how long you will have to diet to lose the required amount. If you cut your estimated daily requirement down by 1000 calories a day for a week you should lose about two pounds of body-fat. That's about the optimum weight-loss for good dieting.

You've a choice in how quickly you want to lose weight, but the program is structured so that a dangerous diet is not recommended. It's at this stage that a recording of all your personal details and proposed diet is made on a blank cassette. You need to load this data back into the computer each time you monitor your changes in weight.

It is characteristic of both packages that a cassette is used to keep a record of your details and progress. The manuals associated with each package also give a lot of very useful advice on diet and the best types of food to eat.

A major aspect of the Acorn program is the Calorie Calculator. This makes it easier for you to count calories, fibre and fat. Not only will it tell you what a certain food contains, but it also calculates a running total of everything you eat. This helps you work out exactly how much you've consumed during the day, and tells you how many calories you have left.

The program contains a large database of foods called up as you enter your daily diet. At first you have to weigh exactly everything that you eat, but we are assured

that with practice it is possible to guess the approximate amount, the computer automatically calculates the number of calories and then totals the values. The computer also says whether you are eating too much fat or not enough fibre.

Another section of the program helps you to devise meals to meet your dietary needs. For example, if you have only 400 calorie left to eat but you are low on fibre, you can look up 400 calorie meals and select one with a relatively high fibre content.

The Monitoring Your Diet section uses the cassette recorded previously to show you how much progress you're making. It updates the details and enables you to make a new copy. It's suggested that this is not done more frequently than once a week.

The micro draws a graph to show your starting weight, your expected weight loss each week and the predicted duration of the diet to reach your goal weight. The graph also shows how well you're doing.

If you're successful in achieving your target the manual gives you advice on maintaining that weight-loss. On the other hand, if you fail to lose weight then it is suggested that you take the User Guide and a record of your last data cassette to your doctor. I cannot imagine the reaction of my doctor as I present him with my computer and data cassette...

We'll now turn to the JOFFE PLAN. Program One has two parts that are designed to set up your Personal Weight Control Plan. The first major input relates to your desires - how much weight you want to lose and how quickly you want to lose it.

The program won't allow you to enter figures that could be dangerous to your health, nor will it create a plan that would take more than six months to complete. You'll be asked to set a new and easier goal.

The second part of the program contains a series of brief questionnaires which inquire upon your personal eating habits. Nearly all the questions are multiple choice. The answers to the questionnaire are used by the micro to generate a series of penalties. These penalties are imposed upon you if you're not reaching the targets you've set yourself in the first section.

The questions include:

- Do you have a breakfast every day?
- Do you eat with other people?
- Do you work while eating your lunch?
- Do you eat sitting down?

The computer then responds with two recommendations. Mine were:

- Eat a proper breakfast and stop work for lunch

Try telling my boss that!

The Electron then goes on to question your more personal habits:

- Do you take larger-than-average helpings?
- Do you eat the leftovers?
- Do you eat faster than most people?

From these the micro makes a list of changes and asks which you would be prepared to carry out. Finally the questionnaire deals with your relationship with the fattening foods. It asks you to identify those that you treasure the most.

With all the information gathered together, the program makes three proposals. The first is that you should take some mild but specific action towards losing weight. It then puts forward some Amber Zone penalties. If you begin to fall behind in progress then you will be asked to carry them out.

If you fall further behind and enter the Red Zone, then further penalties are enforced. In order to avoid these penalties it's possible to earn credits through taking extra physical activity.

The basis of THE JOFFE PLAN is to reduce your weight and increase your fitness by moderately changing your exercise and eating habits. Your individual plan is based upon what you eat now and how much you exercise now.

It doesn't presume you have a degree of fitness already, nor does it prevent a very fit person following the plan. You may be an over-eater or an under-eater. The program sets goals that are relevant to your individual situation.

The information the micro gains and the targets it has set you are then stored on a blank data cassette. Once this has been made, Program One is not used again - unless you wish to set up a new weight-control course.

Program Two checks your progress. It begins with a short menu asking you to "1. Report in, 2. Check progress, and 3. Check fitness." By choosing Option 1, you automatically check your progress and fitness; after entering your present weight, the micro asks you to take the fitness test.

You measure your pulse rate using the computer and carry out some physical exercise that makes you out of breath. Once breathing hard, you sit quietly in front of the computer for two minutes before taking your pulse again. The difference in the two readings is a measure of your fitness.

Another program is now loaded. It displays a graph of your progress, reminds you of the steps you are taking to lose weight, tells you how many days you have left to reach your target, and gives other useful advice. You are given an opportunity to tell the computer if you have done any extra exercise. This in turn will give you credits which are used to offset any penalties you have received because you're not losing weight fast enough. Finally, a new copy of your data cassette is made.

In comparing the two programs there are three major observations I think are important.

Firstly, the Acornsoft program is recommended for use once a week and no more frequently. THE JOFFE PLAN is best used every day or every other day.

Secondly, the Acornsoft system is contained within a single program. THE JOFFE PLAN has many programs that need to be loaded. Within Program Two a second file has to be loaded for Option 2.

Finally, the Acornsoft system considers only diet. It treats food in a very clinical manner, counting every calorie, balancing numbers and using weight-loss as the only measure of success. THE JOFFE PLAN uses your fitness as well as your weight as an indication of progress. It's not necessary to strictly measure the quantities of food you eat. You simply remember a few limitations that the micro imposes upon your eating habits.

I personally prefer THE JOFFE PLAN but my wife is in favour of WATCH YOUR WEIGHT. Both are worthwhile packages - it's a matter of personal choice which you buy. Certainly, I wouldn't lose weight worrying about it...

# THE LAST DAYS OF DOOM

*Professional, Originally Released On DFS 1900 Disc*

Game Type : Text Adventure; Disc-based  
Authors : Peter Killworth and Jon Thackray  
Standalone Release(s) : None  
Compilation Release(s) : 1990: LAST DAYS and HEZARIN Double-Pack, Topologika, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : TOPOLOGIKA, 1 South Harbour, Harbour Village, Penryn,  
CORNWALL TR10 8LR  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*The planet Doomawangara (Doom for short) appears to be dying...and only you can save it!*

*On this, your third - and last - visit to Doom, you'll question your system of ethics, discover the purpose of the artefacts, and why volacons can exist so close to glaciers. But to save the planet, you may have to be prepared to make the supreme sacrifice...*

*Accompanied by your trusty robot dog, who's as much of a nuisance and a help as before, you'll have to deal with squashed spaceships, renegade robots (still around after RETURN TO DOOM), a ruined city, slow beings, time travel...in fact a whole host of original Killworth puzzles. The last third of the game is on a truly cosmic scale - after winning, you'll never be the same again!*

Thank you for buying LAST DAYS OF DOOM. Over 150K of text and around 218 'rooms' await you! We hope you find the adventure at least as challenging as COUNTDOWN and RETURN TO DOOM.

Accompanied by your trusty robot dog (who's as much of a nuisance and a help as before) you'll have to deal with squashed spaceships, renegade robots, slow beings, a ruined city - in fact a host of original Killworth puzzles - in your quest to save Doom. Yes, in this final instalment of the Doom Trilogy, the awful planet is doomed, and your mission is to save it! You may well have to make the ultimate sacrifice (one that the game's automatic built in 'oops' facility won't be able to help with)! As well as the ROBOT DOG CONSTRUCTION KIT (Have fun building it/her/him!) you'll find an envelope containing a list of clues. If you're stuck, look up the word that sums up the help you need, and note down the clue number. Type HELP <RETURN> followed by that number, and our famous on-line Help facility will be at your service. It's structured in stages; you'll initially get a partial clue, then a more detailed one, and so on. You'll be given due warning if the entire puzzle is about to be revealed to you!

## Screen Display

The top line contains a short description of where you are. No score is displayed since scoring is not relevant to this game. The bottom section displays your current location in detail, together with your inputs and the game's responses.

## Specimen Commands

GO NORTH, THEN EAT THE EGG, E, SW, IN

GET ALL BUT THE ICE AND GUM

GET - takes the first relevant object

DROP - similar

TAKE THE WIDGET AND SPANNER, WAIT

SAY HELLO, AND LEAVE

HELLO - equivalent to saying it

**INVENTORY** - lists your current possessions  
**LOOK** - gives a full description of where you are  
**BRIEF** - makes program give short descriptions of where you are  
**NORMAL** - makes program give full descriptions the first time you arrive at a new place, with shorter descriptions thereafter  
**VERBOSE** - makes program always give the full description of where you are  
**SAVE** - stores your current position on disk (don't save on the game disk)  
**RESTORE** - brings back the saved game  
**RESTART** - begins at the beginning  
**QUIT** or **STOP**

Most commands can be shortened to a few letters, e.g. D means DOWN. If in doubt (i) type word in full and (ii) try just the verb by itself - you'll be prompted if the game wants to know more. Adverbs and adjectives are not used.

### The puzzles

You may be puzzled why this command is of limited use. The game is conceived in such a way that in solving the puzzles you are not involved in merely happening to discover things about the objects. It is only by manipulating them (where possible) or combing them in some way that the relevant features are revealed. (Some locations, however, do contain hidden depths.)

### Dog Handling

The dog acquired in RETURN TO DOOM is here to assist you. He responds to HEEL, STAY, FETCH (Useful for getting tricky objects) and may come if you WHISTLE!

### On-Line Help

**ARTEFACT.** I can't avoid going to the artefact. Hint 76.  
**AXE.** Should I take the axe? Hint 92.  
**BLOBS.** I die if I touch the blobs. Hint 34. I've no idea what to do with the two blobs. Hint 44.  
**BRIDGE.** I die crossing the bridge. Hint 24.  
**BUSH.** The bush blocks my exit in the laboratory. Hint 65.  
**CABINET.** I die if I open the cabinet. Hint 73.  
**CACTUS.** The cactus vlocks my way. Hint 6.  
**CARGO HOLD.** I get trapped in the cargo hold. Hint 2.  
**CAGED CREATURE.** I can't see how to help the caged creature. Hint 33.  
**CAVEMEN.** How do I avoid getting killed by the caveman? Hint 94.  
**CAVERNS.** I don't see how I can move very far in the sandstone caverns. Hint 81. I can't get at the dog in the sandstone caverns. Hint 82.  
**CHLORINE.** I can't enter the chlorine environment. Hint 30. I lose things in the chlorine environment. Hint 66. I can't find anything in the chlorine environment. Hint 74.  
**CITY.** I can't get into the city. Hint 25.  
**COMPUTER.** I don't see what the sign on the computer means. Hint 29.  
**CONTROL ROOM.** I get trapped in the control room. Hint 1.  
**CRACK.** I die when I fall into the crack. Hint 69.  
**CREATURE.** I die when I touch the creature on the operating table. Hint 43.  
**CREW.** I can escape from the ship, but my crew dies. Hint 3.  
**DEATH.** I die without warning underground. Hint 20.  
**DECAPODS.** I can't get past the decapods. Hint 60.  
**DOG.** I don't know how to save the dog. Hint 7. I can't get the dog to follow me. Hint 8. The dog dies fighting the sabreboog. Hint 17.  
**DROFFID.** The droffid blocks my way. Hint 68.  
**DURANGO BROTHERS.** I get killed by the Durango brothers. Hint 99.  
**FACTORY.** How do I get through the door at the factory entrance? Hint 39.  
**FLAMES.** I don't know how to get through the flames. Hint 53.  
**FLUTE.** How do I play the flute? Hint 70.  
**FOOD.** I can't get the food out of the lair. Hint 23.  
**FUMAROLE.** I can't get the object under the fumarole. Hint 13. I think I did the right thing at the fumaroles, but I couldn't get the object. Hint 14.

**GATEWAY.** I can't get past the north or east gateways. Hint 71. I can't get through the gateway. Hint 87.

**GEL.** I die when too much gel falls on me. Hint 50. What's the point of the gel? Hint 52.

**GLOBULE.** I die when I drop the globule. Hint 15.

**GLOVES.** How can I get at the gloves? Hint 47.

**GROBBLER.** I can't get past the grobbler. Hint 90. I die just beyond the grobbler - what did I do wrong? Hint 91.

**HAWSER.** I don't see what to do with the hawser. Hint 85.

**HOLE.** I can't enter the hole into the cave. Hint 12.

**HUNGER.** I get hungry and die. Hint 83.

**ISLAND.** I can't get to the island. Hint 84.

**JUMPING.** I die if I jump or go down a steep drop. Hint 4.

**LADDER.** The ladder crumbles when I touch it. Hint 5. I die when I climb the ladder. Hint 55.

**LANDING.** Where should I land? Hint 93.

**LAVA.** I get trapped by lava on the volcano. Hint 22. I get trapped by lava around the city. Hint 26.

**LEARNING.** I die if I learn more than two subjects. Hint 35. Which two subjects should I learn? Hint 36.

**LEVER.** What does the lever do inside the factory? Hint 46.

**MACHINERY.** What does the machinery do? Hint 48. I can start the machinery, but it seems too easy! Hint 49.

**MAGNETON.** When I pick up the magneton, it jumps onto one of my objects. Hint 37. When I enter an area carrying the magneton, a metal object on the floor jumps up to it. Hint 38.

**MARSHAL.** Should I attack the marshal? Hint 98. The marshal gets killed by the Durango brothers. Hint 100.

**NOTHING.** I die if I see the nothing twice south of the road. Hint 27.

**OPERATION.** I don't know how to perform operations. Hint 32. I don't have the equipment to do the operation. Hint 51.

**PARADOX.** Why do I get told there is a paradox? Hint 63.

**PHASER.** I lose the phaser when I go through the portal. Hint 41.

**PILL.** I can't get the pill and still get out of the solid environment. Hint 42. What should I do with the pill? Hint 72.

**POINTER.** I die when the pointer breaks. Hint 56.

**QUESTIONS.** How should I answer the N\*O\*T\*H\*I\*N\*G's questions? Hint 101.

**RAT.** I can't help the rat in the smithy. Hint 59.

**REVOLVER.** Should I take the revolver? Hint 96.

**ROBOTS.** I keep getting blown up by the robots. Hint 11. I walk into robots after I leave the sill. Hint 58. I lose some objects when I deal with the flying robots. Hint 21. I get shot by the robots SW of the gallery. Hint 62. The robots kill me when I enter the arteface. Hint 77.

**ROCK.** I can't pick up the rock. Hint 18. I can't get the rock where I want it. Hint 19.

**ROCK BARRAGE.** I can't get through the rock barrage. Hint 89.

**ROD.** I can't get the rod in time to do anything. Hint 6.

**SABREBOOG.** I can't leave the sabreboog. Hint 16. The dog dies fighting the sabreboog. Hint 17.

**SCREE.** I can't get down the scree in the artefact. Hint 78. I get thirst and die at the bottom of the scree. Hint 79. I lose the dog down the scree. Hint 80.

**SIGN.** I don't see what the sign on the computer means. Hint 29. I can't read the sign at the gateway. Hint 86.

**SILICA.** I don't know what to do with the silica creature. Hint 28. I didn't understand the message from the silica creature. Hint 45.

**SILL.** I can't get off the sill. Hint 57. I walk into robots after I leave the sill. Hint 58.

**SMITHY.** I can't leave south from the smithy. Hint 54. I can't leave NW from the smithy. Hint 61.

**SOLID.** I can't see how to get into solid environment. Hint 31. I don't know how to move inside the solid environment. Hint 40.

**SPHERE.** I can't pick up the sphere. Hint 9.

**TEST.** What are the answers to the 'test'? Hint 95.

**TIME TRIP.** I don't know what to do on the time trip. Hint 64.

**USE OF AN OBJECT.** To find out the use of an object, usually one you can carry, use Hint 102.

**VOLCANO.** There are two ways onto the volcano. Does it matter which one I use? Hint 10.

**WESTERN.** What should I do in the western? Hint 97.

**WOUNDS.** I get wounded. Hint 75.

**ZANGA.** I don't know how to pass the zanga demon holograms. Hint 88.

## Instructions

*"The secrets of the Ninjitsu way had been jealously guarded for centuries, only once every decade were the scrolls seen at the ritual of the White Ninja.*

*None coveted these secrets more than the evil Shogun. Seizing the opportunity of the ritual he sprang a fiendish trap that destroyed the brotherhood, except for one...You, The Last Ninja.*

*Your sworn oath is to recover the scrolls, you travel to the mystical lands of the Shogun. Already his guards are mastering the ways of the Ninjitsu.*

*To reach the Shogun's Palace you must use all your weapon craft and fighting skills as you travel through dangerous wastelands, magnificent gardens then descend into the direst dungeons before the final confrontation . . . You cannot fail. You are The Last Ninja."*

## Scenario

After two hundred years of Fujiwara Clan rule, whose lifestyle was the most extravagant of any Shogunate, the farmers and common men decided to leave their homes and travel to the Togakure mountains where they established the Ninjutsu, The Mystic Shadow Warriors.

Four centuries later the Ninjutsu had become the most feared warriors of their day, feared by even the most powerful Samurai. Their mastery of weapon-craft and mind-control, from the years of arduous training that forged mind and body into a death-dealing machine, ensured swift and complete victory over their enemies.

Kunitoki, the evil Shogun of the Ashikaga Clan, had long envied the powers of the Ninja brotherhood and would do anything to acquire their knowledge. To this end he has sworn an oath to their total destruction.

Once every decade all Ninjutsu must travel to the Island of Lin Fen where they pay homage to the shrine of the White Ninja and receive further teaching from the Koga Scrolls.

Seizing the opportunity Kunitoki summoned forth all the spirits from the depths of the Nether World and flung their full force against the amassed Ninjutsu. None escaped the wrath of Kunitoki.

Nothing stood in the way of the Shogun achieving his ultimate goal, the knowledge of the Ninja.

He set sail for the island of Lin Fen with an elite force of his Palace Guards and Samurai Officers to begin the arduous training of his troops and thereby creating a new era of Ninja under his control.

Unknown to Kunitoki, Armakuni, the last Ninja, had escaped his wrath. When all his brethren had left for the pilgrimage he had been ordered to stay and guard the Bunkinkan Shrine. This tradition had existed since the dawn of the Ninja as a safeguard should any natural disaster befall the brotherhood when it amassed at Lin Fen.

Armakuni was not pleased he had been left alone for he was to be granted the next level of honour at the reading of the Scrolls; now he would have to wait.

Word soon reached Armakuni of the unnatural disaster that had slain his brothers and gathering all his courage he swore to wreak a terrible and bloody revenge on the Shogun and all his followers.

The island of Lin Fen is a natural fortress with unassailable cliffs surrounding its coast. Having visited the island when he was a young acolyte, he knew the secret passage that would lead him to the Palace of Lin Fen.

Armakuni's confidence was short lived as he discovered the pathways were not as he remembered them; what unforeseen hazards lay in wait for him?

### **Locations On Fen Island**

1. WILDERNESS Many weapons and objects were left scattered around this level.
2. WASTELANDS Dominated by the Lin Fen mountain range
3. PALACE GARDENS Hazardous with many ferocious guards
4. DUNGEONS A place of nightmares...difficult to get out.
5. PALACE, LOW LEVEL Getting into the palace is the first problem, a small problem compared to what comes later...
6. PALACE, THE INNER SANCTUM Great sights in the Shogun's private rooms. Close to the final goal, although it is hidden from sight.

WEAPONS - Numchukas, Shuriken Star, Smoke Bomb, Stick, Sword

OBJECTS - Apple, Blood, Bottle, Claw, Glove, Gun, Key, Rope, Rose, Scrolls, Talisman.

### **The Status Area**

The status area of the screen is broken into sections. The ENEMY WOUNDS display shows how effectively you are combating your opponents. The USING display tells you the current weapon you are using. The HOLDING display tells you which object you are holding. When you visit a shrine or drink from a fountain of knowledge, the items you are told to collect will be shown under the heading FIND below the HOLDING display. In the bottom section of the status area is your overall POWER reserve.

Next to that, the weapons you have available are shown: larger sprites are used to show the weapons in this section, and in the HOLDING display, than are used in the game area.

### **Lives**

You begin play with three lives. If you manage to find an apple this will give you an extra life. If you start the second level with only one life then you will receive another immediately. You also have the added opportunity of trying to find another apple. You will not automatically receive any further lives in the later levels but there will be apples to be found giving you one extra life each.

### **Game Play**

Below are some basic hints and tips that will help you on your quest through the realm of the Last Ninja. Remember, as with all great adventures, things may not be what they seem and we have not given away too much.

The following points apply to all the different locations. It is important to make a detailed map of each level. This is essential because of the structure of the mazes and also to keep a record of where you'll find useful objects.

Finding weapons and objects is essential to your success. You will be told to collect many of the items when you visit a shrine or drink from a fountain of knowledge. When you are told to collect an item, it is usually to be found on the following screen.

To collect an object or weapon, search by crouching down and trying to pick it up. Once collected the object can be used at the appropriate time and place.

Most locations have a major hazard to prevent you continuing your quest and these are usually near the end of the level. Sometimes there may even be more than one.

It is important that you search screens thoroughly as there may be objects lying around that you haven't been told to collect, e.g. on top of rocks, etc.

### **Invulnerability**

In order to overcome certain hazards you will have to use Ninja Magic. This takes various forms, some of which you cannot see as they are hidden behind trees, rocks, in containers like boiling pots or they might literally be right under foot. This magic is picked up in the same way as any other object but nothing will be displayed in the Status Area. Instead, Ninja may display certain peculiarities but these are only short lived.

Finally, all the guards you will encounter are out to kill you and they will use lots of different weapons. There is nothing to stop you using any weapon in your arsenal against any guard but your effectiveness is increased if you use the same weapon as your opponent.

### **Game Controls**

Z - Up-Left,    ? - Down-Left,    \* - Up-Right,    X - Down-Right  
J - Small Jump,    K - Medium Jump,    L - Large jump

### **When not holding a weapon:**

<RETURN> & Z - Pick Up, Crouch & Block,    <RETURN> & ? - Kick  
<RETURN> & \* - Punch,    <RETURN> & X - Pick Up, Crouch & Block

### **When using a sword, numchukas or stick:**

<RETURN> & Z - Hit or Stab Across,    <RETURN> & ? - Hit or Stab Down  
<RETURN> & \* - Hit or Stab Up,    <RETURN> & X - Hit or Stab Across

### **When using a Shuriken Star (or holding a throwable object):**

<RETURN> & Z - Throw Left,    <RETURN> & X - Throw Right

Note : You can keep the <RETURN> key depressed all the time in combat.

P - Pick Up, Crouch & Block,    <SPACE> - Select Weapon,    H - Hold Object  
<COPY>/<DELETE> - Pause On/Off,    S/Q - Sound On/Off,    <SHIFT><ESCAPE> - Quit Game

**Instructions' Source** : THE LAST NINJA (Superior/Acornsoft) Back And Inner Inlay

### **Review (Electron User) - "Cut Above The Average"**

THE LAST NINJA is a sort of jealousy, power and revenge - of good versus evil and one man's struggle against overwhelming odds. Oh yes, I almost forgot, it is easily the best martial arts-cum-adventure game on the market.

For many years the evil Shogun has envied the closely guarded skills and secrets of the Ninja. Executing a dastardly plot he slaughtered the Ninja community on its once-a-decade visit to the sacred island of Lin Fen.

Unbeknown to the Shogun, a solitary Ninja - Armakuni - had been left behind to guard the shrine, feed the cat and perform other such tasks. Now he has sworn to avenge the deaths of his comrades and re-build the Ninja empire.

You play Armakuni as he begins his assault on the island of Lin Fen. There are sixteen separate locations on the island and you must kill every guard and collect all available objects on each level before advancing to the next.

Control is achieved using the keyboard only - this may sound restrictive for a martial arts game, but it works well in practice. In addition to the direction keys there are also three separate jump buttons - each providing increasing distance. As if to demonstrate his supreme athleticism, Armakuni insists upon performing a forward somersault when prompted to jump.

Level one is set in the wilderness, a barren wasteland of rocks, bushes and thoughtfully provided paths for you to walk on, but it is patrolled by the Shogun's warriors. Inexperienced in the way of the Ninja, they do not yet possess your skills, but they are still capable of giving you a good thumping if you become careless.

Initially unarmed, you must pummel your opponents using only fists and feet. Things become a little easier as you round the first corner and find an abandoned sword - the first of five weapons available to you on level one. By pressing the spacebar, you can quickly switch between any of the weapons currently in your possession. The instructions advise you to use the same weapon as your opponent, but I found the sword to be effective against most adversaries.

Unlike many games, you are not restricted to travelling in one direction, but are free to wander where you wish within the confines of the location. Another very welcome feature is the way the guards stay dead after you have dealt with them - there is nothing worse than returning to a location and having to fight the same guard that you killed five minutes earlier.

Once you have mastered the human opponents, why not try your hand with the flaming dragon that guards the exit to level two?

THE LAST NINJA is quite a departure from Peter Scott's traditional style - the prolific author of countless cute platform games has really come up with the goods this time. Ninja is fast, furious and totally addictive.

Jon Revis

### \*\*\* Second Opinion \*\*\* (Electron User)

From the title and packaging I expected this to be just another ordinary martial arts beat-'em-up game. However, although it does have a fair proportion of combat, there is also an adventure element in that you have to explore your surroundings and discover weapons to take on the enemies. I like it, and can thoroughly recommend it.

## Instructions

*"The first two books in this series mark the beginning of a completely new kind of adventure game. They each contain an exciting adventure program for you to type into your computer. As you play the game on the computer, the imaginary world of the game is vividly recreated in the colourful pictures in the book and you can find clues hidden in the pictures to help you."*

*"An adventure game takes you into a different world where you have to pit your wits against magical forces, evil creatures and powerful tyrants. The books give thorough instructions on how to play and hints on what to do if you get stuck."*

*"The programs are written in a standard BASIC and there are conversions listed to make them suitable for Commodore 64, expanded VIC 20, TRS-80 Colour Computer (32K), Apple II, BBC (32K), Electron and 48K Spectrum"*

## About this game

This book contains an exciting adventure game program to type into your computer and play. The game is set in an imaginary land ruled by a wicked tyrant. Your task is to free the people of the land from his domination. You will need to use magic as well as your skill and imagination to succeed. If you have never played an adventure before, you can find out what happens in them and what you have to do under the section "What is an adventure game?"

The first half of the book shows you the world in which the adventure takes place and the people and creatures who inhabit it. You can refer to these pages as you play. Some of the pictures contain secret information, or things you may want to examine more closely.

## Playing the game

There are several puzzles and twists in this game so it will probably take you lots of attempts before you solve it. However, each time you play, you will learn more about how to deal with the problems and dangers on your way.

If you get completely stuck, there are some clues given at the end of the book.

## What is an adventure game?

When you play an adventure game, you become the hero or heroine of the adventure. You have a dangerous quest and you need all your integrity and cunning to succeed. You may meet monsters or enemies whom you have to outwit. You may come up against obstacles such as a raging torrent or a landslide blocking your way. You will come across objects as you play the game (a lamp or a rope, for example) which if you use them properly will help you overcome hazards.

In different adventure games you have different tasks. You may be a detective solving a murder, a pirate hunting for treasure or a spy searching for secret information.

You travel around the imaginary world of the game by telling the computer in which direction you want to move (north, south, east or west). The computer will describe where you are and tell you about any characters or objects there. You type instructions telling the computer what you want to do. Usually you give the computer instructions consisting of two words, for example, CLIMB TREE.

You may lose the game if you get stuck; for instance, if you come to a locked door and you failed to find the key beforehand, or if your enemies capture you. You can play the game as often as you like, though. It will be different each time depending on the route you take, what objects you pick up, how you use them and how you deal with other characters in the game.

You may need to use objects you collect in unusual ways.

### **How to play the game**

On execution, you will be asked if you want to either start a new game or continue a saved one. You can type SAVE GAME at any stage.

When the game begins, the computer prints a message telling you where you are and those directions you can move. You move around the game by typing N, S, E, W, U or D for north, south, east, west, up or down.

Each time you move, the computer will describe where you are. If you want to take something with you, type GET or TAKE and the name of the object. Typing INV (short for INVentory) will list all the objects you are carrying.

You can give the computer instructions consisting of two words, such as UNLOCK DOOR or FILL JAR. (If an object has a name consisting of two words, e.g. silver plat, you can use three-word instructions, such as USE SILVER PLATE.) Instructions such as READ MESSAGE or EXAMINE PICTURES sometimes reveal further information.

The computer is only programmed to understand certain instructions. If it does not understand your command, it prints either "YOU CAN'T", "PARDON?" or "TRY SOMETHING ELSE".

Typing SAVE GAME at any stage lets you store a partly-finished game on tape or disk. You can continue the game later by typing 2 in response to the opening question of the program.

### **The legend of Silver Mountain**

Clustered in small villages at the foot of Silver Mountain, the Sylvani were once peaceful and prosperous, governed by a wise Council of Elders. Travellers from many lands came to visit and settle amongst these hospitable people.

All who knew of the Sylvani knew also of the Stone of Destiny, held by the royal family in the Palace high on Silver Mountain. The Stone gave a King or Queen the power to direct a person's destiny, but it was never used in malice.

In the reign of Queen Pari Sylvan, a great threat appeared in the shape of a massive, vicious Grarg army, intent on seizing the land and the Stone. With them came their most powerful wizard, Magrarg.

In desperation, Queen pari Sylvan obtained permission from her Council of Elders to use the Stone. She entered the Silver Chamber and, placing her hands around the Stone, cried the magic words which would unlock its power.

As she spoke, a great thunderclap echoed as Magrarg joined in mental conflict with the powers of the Queen and the Council of Elders, concentrated through the Stone. Sylvani and Grarg alike reeled under the mental shock waves.

One of the Elders was the son of a Grarg wanderer who had settled in peace among the Sylvani. As the clash of minds grew fiercer, he collapsed under the strain of the conflicting forces within him, and Magrarg howled in triumph.

Since then, the Sylvani have lived in terror as slaves of a merciless overlord, Grarg Ogban; the victims of his murderous thugs. He uses the Stone to wreak destruction on the families and friends of anyone who dares oppose him.

The Sylvani Elders once had hope. Pari Sylvan, brutally murdered by the invaders, left behind a baby son, Kylar. He was entrusted to a wise hermit who brought him up. His identity was kept a closely guarded secret.

Before she died, Pari Sylvan had locked into the mind of her infant son a secret: her royal ancestors had given the people certain magic objects whose combined power would overcome any evil force controlling the Stone of Destiny.

Over the centuries the whereabouts of these seemingly insignificant objects had been forgotten. Kylar Sylvan set off to try and locate them. For years he searched, telling no one of his progress for fear of endangering their lives.

One day, when the Elders sensed he was on the brink of success, Kylar was slain by a greedy Grarg who coveted a brooch he wore - a present from the hermit. Any magic objects he had found returned in a trice to their resting places.

Since then, the Elders have revealed the quest to a succession of true and worthy Sylvani: all have failed. Now they cry out to anyone who will listen, "Who will accept the challenge and free us from tyranny?"

### **The Land Of The Sylvani**

This is the terrain through which you have to travel, searching for the magic objects and overcoming the hazards along the way. You do not know what the magic objects are and you will have to watch out for clues to their identity. Also, what are the magic words which will unlock the power of the Stone? You will need all your ingenuity to succeed in your quest and enter the Silver Palace. Even then your troubles are not over.

You will find that the villagers keep to their homes and dare not talk to strangers in case they are Grarg spies. Many cottages are deserted, their inhabitants having fled or been slaughtered by Ogban's hordes. Patrolling the countryside though, you will find bands of unruly Grargs. You will probably hear their noisy approach before you see them. Kylar was slain near the river where there is no one to hear a cry for help.

The woods are dark and eerie and many attempts to free the Sylvani have ended with journeys through them. The bridge is also not as safe as it looks.

The ancient stone circle has a mystic force. It may hold secrets valuable to you.

Burrowing through the core of Silver Mountain are secret tunnels leading to the Silver Palace. Few people with knowledge of them are still alive. Inside the Silver Palace is the Silver Chamber, resting place of the Stone of Destiny. In the unlikely event of anyone entering the Palace to rescue the Stone, the Wizard Magrarg has woven a powerful spell to prevent anyone, except he and Lord Ogban, approaching it.

There is a huge glacier next to Silver Mountain.

### **Characters You Will Meet**

#### **Lord Ogban**

Insane with power and greed, Lord Ogban rarely leaves his chamber. Having lost all his natural qualities of leadership, he prefers to stay close to the Stone of Destiny which is his only means of control. He is still a formidable opponent, although he shares the Grarg weakness for the food and wine brought in vast quantities to the door of his chamber by a henchman.

#### **Wizard Magrarg**

Although Ogban may consider himself the ruler of the land, in fact it is Magrarg who holds the power. He is happy for Ogban to concern himself with the day to day

torment of the Sylvani, leaving the Wizard free to engage in ever more extreme sorcery. So long as he holds the Stone, there is no magician on Earth to match him. His power is so concentrated that should he catch sight of himself in a mirror, the evil reflected back into his eyes would cause an explosive short circuit.

### **Grargs**

Terrorising the countryside are greedy Grarg patrols. They will capture as soon as look at you. A hefty guard is mounted inside the Palace and any stranger is instantly recognised. Grargs are individually cowardly, yet virtually indestructible due to their sturdy armour and deadly weapons.

### **Hound**

The last gift Queen Pari Sylvan gave her son Kylar was a puppy. Intent on inflicting suffering on any member of the royal household, even a dumb animal, Magrarg put a spell on the puppy condemning it to shiver and starve outside the glass gates of the Palace for ever. Having known no kindness since the first weeks of its life, the playful young puppy has grown into a ferocious guard dog.

### **Troll**

Under the bridge lives a mean Troll. He is kept there by Ogban to prevent Sylvani people moving freely about the countryside.

### **Ogban's Boar**

In his youth, Ogban was a keen hunter. The Wizard Magrarg used to create fantastic creatures for Ogban's sport. One of these horrendous animals, a Boar the size of a bull, was never caught, and now roams the countryside, preying on any living thing it encounters. Grarg warriors refuse to enter its territory, but you may have to.

### **Ghost of the Goblin Guardian**

In his lifetime, the Goblin guarded a secret pathway on the side of Silver Mountain. When he died, he was buried in the Goblin Graveyard, but Magrarg put a curse on him condemning the ghost to haunt the pathway and prevent anyone from passing. Only one thing can free a goblin's soul: somewhere, the Goblin King has left a riddle out of sympathy for his subject but so far no one has solved it.

### **Hermit**

The Hermit who cared for the infant Kylar still lives deep in the forest. He does not seek company and trusts no one except the few Elders who have so far escaped the death-dealing wrath of Ogban. His lifetime spans many generations and he may have knowledge vital to you, but he will need proof of your intentions.

### **Places You Will Go**

- |                     |   |
|---------------------|---|
| Rock Garden         | - made by Queen Pari Sylvan many years ago. Plants flourish extraordinarily well within it.   |
| Wine Cellar         | - used by Ogban to store supplies of wine. Though the casks have been it it since before his time.  |
| White Cottage       | - belonging to one of the Elders recently imprisoned by Ogban. He may have had something to give you to help you on your quest.   |
| Fountain            | - has stood in the courtyard for longer than anyone remembers.  |
| Statue              | - an ancient Sylvani defaced by the Grargs.   |
| Edge of Lake        | - said to be bottomless and subject to freak winds sweeping over its surface. Should you want to cross it, beware!  |
| Mosaic-floored Hall | where a strange force which sap your strength. Don't ignore your surroundings!  |
| Goblin Graveyard    | - "A Goblin's Soul Will Roam Until The Music Of The ... Sings Him Home", an eerie place with this mysterious unfathomable epitaph.  |
| Stone Circle        | - where a sense of well-being welcomes you. The spirits of those nine who built it encourage your quest.  |
| Library             | - dusty and deserted. Grargs are not interested in learning. Note the scholarly books though and in particular one reading "Awake, Lead, Protect, Help, Guide" next to symbols of an eye, a right arrow, a circle of nine dots, a horseshoe and a up arrow. |
| Banqueting Hall     | - frequently frequented by Grargs who drink too much, collapse and sleep.   |

High Pinnacle - to struggle up is a challenge. You may not make it more than once, so be careful not to miss anything.

### **Hints And Clues**

Do not look at this page unless you are thoroughly stuck. Here is a list of instructions the computer understands. If you type a different instruction, the computer will not understand even if it makes sense to you.

GET	TAKE	EXAMINE
READ	GIVE	SAY
PICK	WEAR	TIE
CLIMB	RIG	USE
OPEN	LIGHT	FILL
PLANT	WATER	SWING
EMPTY	FEED	CROSS
REMOVE	BAIL	TURN
DIVE	INSERT	LEAVE
THROW	EAT	BLOW
DROP	RING	MOVE
INTO	BURN	CUT
HOLD	UNLOCK	POISON
SHOW	COUNT	WITH
DRINK	BREAK	PAY
MAKE	REFLECT	STEAL
GATHER	ENTER	

Here are clues to specific problems you will encounter.

### **High walled rock garden**

You need things to plant - and something to help them grow.

### **Bridge**

This is a toll bridge.

### **Misty pool**

There is something mysterious here. You need to empty the pool to find out what it is.

### **Ogban's Boar**

Look around on the island for something to help you get past the Boar.

### **Mosaic-floored hall**

1. What is at the end of the hall? (Food and drink) If you have been to the kitchens, you may have found something to use here that will prevent Ogban harming you - for good.
2. Your passage is blocked by Magrarg's evil spells. Only if you are carrying all the magic objects will you be allowed to go east.

### **Stables**

You need something from the wooden door to the stable. The Grargs carry matches in their uniforms.

### **Fallen oak**

The Goblin Guardian is listening for the sound of the wind blowing through the reeds of the marshes where he was born.

### **Wooded valley**

The hermit will trust you if you give him something that used to belong to him.

### **Underground tunnels**

You can find out in which direction to travel by examining some instructions not far away.

### **Attic bedroom**

What would you expect to find in a bedroom? Examine it and see if there is anything useful.

**Silver Chamber**

You must HOLD the Stone of Destiny and SAY the magic words one by one.

# THE LIFE OF REPTON

*Professional, Originally Released On Cassette And DFS E00 Disc*

Game Type : Arcade Adventure  
Author : Matthew Atkinson  
Standalone Release(s) : 1987: THE LIFE OF REPTON, Superior/Acornsoft, £6.95 (Tape)  
£7.95 (5.25" Disc)  
1990: THE LIFE OF REPTON, Superior/Blue Ribbon, £2.99  
Compilation Release(s) : 1987: PLAY IT AGAIN SAM 9, Superior/Acornsoft, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : CDFS E00, DFS E00

## Instructions

THE LIFE OF REPTON has a total of 40 screens. These are provided as five cassette files with eight game screens in each:

File 1: BABY  
File 2: SCHOOL  
File 3: TEENAGE  
File 4: WORK  
File 5: OAP

The BABY file is loaded automatically when the game is first loaded.

The SCHOOL, TEENAGE, WORK and OAP are on the cassette. To load any of these files, simply select the "L" option on the main game screen, and enter the appropriate filename.

## Objective Of The Game

In order to succeed in enacting Repton's life-story, you must complete each of the 40 screens without using any passwords. Each new set of characters is based upon the **original REPTON 3 characters**.

The new character sets are also shown. For the BABY screens, you will notice that the rock and the diamond have been replaced with a humpty-dumpty and a teddy-bear respectively. Therefore on the BABY screens Repton pushes humpty-dumpty (as if they were rocks) and collects the teddy-bears (as if they were diamonds).

Similarly, the monster and the spirit have been replaced with a dog and a toy soldier respectively. So Repton is chased by dogs (instead of monsters) and toy soldiers (instead of spirits).

To avoid confusion, the following game instructions refer exclusively to the **original REPTON 3 characters**.

To complete the game, you must carefully determine your routes through each screen in turn, with the aim of defusing the time-bomb by passing over it. However, before the time-bomb can be defused, you must first:-

- (a) collect all the diamonds (including those concealed in safes or cages),
- (b) collect the golden crown, and
- (c) kill all the monsters.

Each screen has a time-limit and, if you do not complete the screen within this time-limit, the time-bomb will explode and you will lose a life. Repton can,

however, travel backwards in time because whenever a time-capsule is collected, the time-bomb's clock is reset.

Each screen comprises a series of puzzles. Many of these are interlinked and you may have to solve a number of small puzzles to enable you to tackle a large one. The puzzles may, in some cases, seem impossible - but we assure you that The Life of Repton can be completed.

Rocks will fall if unsupported and should one land on you it will kill you. You must also avoid the monsters, spirits, skulls and fungus - contact with these is fatal.

When an egg falls, it cracks upon landing and a monster hatches out. The monsters are killed by pushing or dropping rocks onto them.

There may be up to eight spirits on each screen. They always follow the walls to their left until they reach a cage. When a spirit enters a cage, it changes into a diamond. A spirit may become dazed if you drop a rock onto it or collect all the diamonds immediately surrounding it. This is to be avoided as the spirit will then move endlessly in a small circle.

Watch out for the poisonous fungus which grows incessantly sealing your fate. Trap it in by surrounding it with rocks if you can, or you may never live to collect the golden crown.

Your route may be blocked by a safe. If so, you must locate a key which will open all of the safes on the screen revealing a diamond within.

Each screen may have a maximum of four transporters. They cause you to be rematerialised at some other location on the screen, but each transporter can be used once only.

### **Game Controls**

Z - Left, X - Right, \* - Up, ? - Down, M - View Map (Screens A-E only)

<ESCAPE> - Kill Yourself (Useful if you become trapped), <SHIFT>-R - Restart Game

P - Enter Password, L - Load Data File, S/Q - Sound On/Off

K - Select Keyboard Control, J - Select Joystick Control (Plus 1 Interface)

F - Select Joystick Control (First Byte Interface)

### **Scoring**

5 points ..... for collecting a diamond

20 points ..... for killing a monster

50 points ..... for collecting a crown

### **The REPTON 3 Series Editor**

Full instructions for the editor package supplied with this game are detailed under REPTON 3.

**Instructions' Source** : PLAY IT AGAIN SAM 9 (Superior/Acornsoft) Inner Inlay

### **Review (Electron User) - "It's A Hard Life"**

Yes, he's back! Superior Software's enormously popular Repton makes yet another appearance - his fourth. This time he stars in the story of his life.

For old hands, the LIFE OF REPTON is a collection of forty new screens for REPTON 3. If you're a fan, that alone should be enough for you to go out and buy a copy. If, on the other hand, you've been living in the asteroid belt for the last two years then a few words of explanation will be in order.

Repton is a cute little reptilian character and the object is to move him around a maze collecting diamonds and killing monsters as you go. Each maze contains earth which you can dig through and barriers through which nothing can pass.

You need to plan your route carefully, otherwise a boulder may fall and trap a diamond or squash Repton. There are several puzzles on each screen and you can call up a map of the easier screens to help your planning.

LIFE OF REPTON includes the original REPTON 3 shell, but not the screens. The forty new screens load in blocks of eight. The first set depicts Repton as a baby, the second shows him at school, the third is Repton in his teens, the fourth at work and the fifth is Repton as an old man.

The graphics in each section have been redesigned - so in the baby set, humpty-dumptys take the place of boulders, teddy bears take the place of diamonds, a fireplace is the skull and irate dogs and toy soldiers become monsters.

The graphics in the other ages are similarly appropriate - as a teenager, cigarettes take the place of the skull, while at work a floppy disc is the spirit. As an OAP war medals become the diamonds.

LIFE OF REPTON also includes the screen editor. This allows you to edit existing screens or construct new ones. The editor is an excellent piece of software in itself.

Before you can edit a screen however, you must successfully complete. When you do, you are given a five-digit code number to be used in the editor. You are also given a password for the next screen so you don't have to start from screen one every time you play.

The instructions are generally helpful, although I did find one oddity in the part which tells you the puzzles are not impossible. It says: "We assure you that Around the World can be completed".

Back with the program, if you manage to complete all five sets of eight screens without using a password you are eligible to enter a competition. Upon completion of a set, a congratulatory message appears along with a competition entry code number. To enter, you need all five code numbers.

Minor niggles apart, LIFE OF REPTON is a superb game which will keep you busy for days, probably weeks. If you don't have a REPTON game already then buy this.

## Instructions

*"A large-scale adventure game with 400 locations, each one depicted in high-resolution graphics and text. The program features a sophisticated multi-statement language interpreter which enables you to communicate using ordinary English sentences, and also to speak to the various characters you will encounter during your travels.*

*"The Rainbow Crystal, which has protected the people of Zaloria for many years, has been struck by a mysterious bolt of lightning and shattered into seven pieces. You have been chosen by the Elders of Zaloria to seek out the seven coloured crystals and find a way to re-create the Rainbow Crystal and restore peace to the Free Lands.*

*"This exciting game can be played either as a true adventure or by using the help book provided, as a piece of narrative fiction."*

Welcome to THE LOST CRYSTAL, a full-scale graphical adventure through a land of magic and mystery. You will be able to move around and explore this fantasy world by typing ordinary English sentences into the computer, which will respond by describing your surroundings in both words and pictures.

During your travels, you will meet various characters and monsters, some friendly, some hostile, and there will be many puzzles to solve. You will need to use a combination of logic and magic to defeat your enemies and successfully complete the adventure.

The game contains the following advanced features:

- \* 400 locations, each one depicted in colourful high-resolution graphics and proportionally spaced text.
- \* Intelligent moving characters with whom you may communicate and interact
- \* Advanced language and speech interpreters capable of accepting complex commands in plain English.
- \* Comprehensive position-save facilities.
- \* Programmable function keys.

## Introduction

Long ago in the Dark Ages, the people of the Free Lands lived in fear of the dreaded Morgs from the Bad Mountains. Led by their ruler, the hideous Bogle, the Morgs were terrifying creatures who used Black Magic to bring misery and despair wherever they went. The villagers of the Free Lands were helpless to resist their power and it seemed as though nothing could stop the Morgs from destroying everything in their path.

One day, after a Morg raid has destroyed three neighbouring villages, the Elders of Zaloria held a meeting to discuss ways of overcoming the mighty force of the Morgs.

Suddenly there was a bright flash of light and a stranger appeared in their midst. He held out a crystal which gave off a strange light of many colours.

"The Rainbow Crystal will protect you from the evil of the Morgs. It has life-giving properties and whilst it is in your keeping, the people of Zaloria and the Free Lands will never suffer illness or misery."

There was another flash of light and he disappeared.

The stranger was true to his word and for many years the Free Lands were peaceful and calm - until the sighting!

One of the villagers ran running into Zaloria shouting hysterically and when the Elders managed to calm him down, he told of how he had seen a Morg up on the hills near the village. That night there was a violent storm and one of the Elders, worried by the story of the sighting, went to check on the Rainbow Crystal. As he stood looking at it, there was a terrific crash of thunder. A bolt of lightning struck the Crystal shattering it into seven small pieces. As the shocked Elder watched, each piece slowly formed into a replica of the original until seven different coloured crystals lay where the Rainbow Crystal once was. Suddenly, a swirling cloud of dust descended and engulfed the crystals. The cloud spun faster and faster until a small tornado developed and carried the crystals up into the night sky.

The next morning an aura of doom descended on Zaloria. The Rainbow Crystal was no more and several of the villagers were struck down by a mysterious illness; the first illness of any kind since the visit of the stranger years before. The villagers were in a panic. There was nothing to stop an invasion of the Morgs now that the Crystal was destroyed, unless the seven coloured crystals could be found and somehow re-formed back into the Rainbow Crystal. But without the protection of the Crystal, no-one would have the courage to set out on such a seemingly impossible quest - or would they?

The Elders have chosen you to try to save Zaloria and the Free Lands from the wrath of the Morgs by finding not only the seven coloured crystals but also a way of re-integrating them into the Rainbow Crystal.

As you set out on your long journey, the people of Zaloria wish you well and you can't help wondering whether you will ever see them again.

### **Loading Instructions**

Because the adventure is so large, it is supplied on two cassette tapes, each of which contains two parts to the game, making four parts in all. To load the game into the computer, proceed as follows:

- 1) Connect up your cassette recorder and computer in the normal way.
- 2) Take the tape marked PART 1 and insert it, with that side uppermost, into the recorder. Make sure that it is fully rewound.
- 3) Type CHAIN"" and press <RETURN>. (Disc owners should type \*TAPE before attempting to load cassette software)
- 4) Press PLAY on the recorder and wait for the first section to load.
- 5) When this has loaded, a brief description of the game will appear on the screen. If your cassette recorder has motor control, the tape should stop playing at this point. If not, press STOP on the recorder.
- 6) When you have read the text on the screen, press the space bar to allow the loading process to continue. If you have stopped your recorder, don't forget to press PLAY again.
- 7) When the main program has loaded, you will see the message 'Press N to start a NEW game or L to LOAD a saved position. If you are playing the game for the first time simply press <RETURN> and leave the PLAY button pressed. The game will continue to load and you will be taken to the start of the adventure.
- 8) If you have already completed part of the adventure and have saved your position on tape, press L in answer to the above question. In this case, you must insert

your data tape into the recorder and follow the instructions on the screen. For a more detailed explanation of this, see the section headed **Tape Handling**.

### **Playing The Game**

When the game has loaded, you will see that the screen is split into 2 parts. The top half of the screen shows a picture of your immediate surroundings. The bottom half contains a description of the location which you are in, and any other relevant test. If at any time during the game there is more text to be printed than will fit on one screenful, the printout will pause and you will hear a short beep. Pressing any key will allow you to read the rest of the text.

### **Entering Commands**

When you see the message "What now?" the computer is waiting for your next command. Commands can be typed in at any time, and they will be executed when the computer is ready to accept them. Don't forget to press <RETURN> after each command. During command entry, you can use the <DELETE> key to delete characters back from the cursor, and CTRL/U to delete the whole line. You cannot use the CURSOR and COPY keys to copy characters from one part of the screen to another.

The program is equipped with an advanced language interpreter which allows it to understand complex multiple commands of anything up to 254 characters in length. On the other hand, it will cope just as readily with commands that consist of only a single letter. For example, to move about you can type WALK NORTH TOWARDS THE BUILDING, or just GO NORTH, NORTH or N on its own.

You can either enter your commands separately: UNLOCK DOOR. Or you can type multiple commands within the same sentence: TAKE THE KEY AND UNLOCK THE DOOR THEN OPEN IT. If you use multiple commands like this, the program is able to fill-in any missing words by searching back through previous parts of the command. For example, you can use the same verb to act upon a number of objects without having to retype it, eg: TAKE SPADE, FORK, LAMP AND HAMMER. It is also possible to perform a number of actions on the same object without having to repeat the name of the object, eg: TAKE THE SPADE, CLEAN IT, GO NORTH AND GIVE IT TO THE GARDENER. Here IT refers to the last object mentioned (the spade). You will notice that all of the above examples are phrased just as you would normally say them, and in general the program will be able to understand most complex commands providing that they make sense in ordinary English. You may also, for example, TAKE EVERYTHING or DROP ALL OBJECTS BUT THE LAMP.

Here are some more examples of correctly-worded commands:

TAKE THE MATCH AND LAMP. FILL IT AND LIGHT IT. TAKE THE MONEY AND RUN SOUTH

TAKE THE KEY AND UNLOCK THE SHED DOOR WITH IT. GO INTO THE SHED, GET EVERYTHING FROM THE BENCH AND LEAVE AGAIN

ENTER THE BOTTLE AND FILL IT WITH WATER FROM THE RIVER THEN GIVE IT TO THE BEAR. SIT DOWN AND EAT THE SANDWICHES AND DRINK THE TEA THEN GO NORTH TOWARDS THE MOUNTAIN

As mentioned above, the program will also accept abbreviated words, and all of the commonly used commands can be abbreviated to a single letter. These abbreviations can also be used in multiple commands, so you could type something like T KEY, UNLO DOO, OPE, IN which is a shortened form of TAKE THE KEY, UNLOCK THE DOOR THEN OPEN IT AND GO INSIDE. There is a list of all the commonly used commands and their abbreviations at the back of this book.

Sometimes the program will not quite understand what you mean and will ask you a question about the command which you have just entered. In this case all you need to do is supply the missing word as requested, or you can retype the whole command if you like.

The game has been designed to be as user-friendly as possible, and at no stage in the adventure does the program insist on a strictly-worded response from the player. In other words, there is usually a number of alternative commands which can be used

in each situation. Every attempt has been made to anticipate the player's likely responses, and to cater for them as much as possible. Therefore, if you are having trouble making the program understand you, and you have tried rephrasing your commands, you are probably doing the wrong thing!

### **Moving About**

The four directional commands NORTH, SOUTH, EAST, WEST are used to move about in the game. Occasionally you will also need to use UP and DOWN. The description of each location includes a list of the possible exits from that location. Directional commands can be shortened to N, S, E, W, U, D and can also be strung together, eg: N, U, U, W, S, S, D, W, N, E. You can also type BACK to return to your previous location.

If you already know your way about, there are two ways of travelling through the adventure more quickly than by typing in the individual directions. The command CONTINUE (which may be shortened to C) will take you as far as is possible in the direction in which you last moved. For example, if you wanted to get to the other end of a long road you would take one step along the road then press C. This would take you along the road until you could go no further in that direction. Alternatively, if you wanted to travel just four paces to the east, simply press E then press the <RETURN> key four times. Pressing the <RETURN> key on its own like this repeats the last command. This works for any command, not just directional commands, but it is the most useful for this purpose.

You may be relieved to know that, like all Epic Adventures, there are no so-called mazes in this game. Directions are always logical, so that if you travel west then east you will always get back to your starting position. However it may still be advisable for you to draw a map of your travels as you go along.

### **Dealing With Objects**

In order to complete the game you will need to manipulate and use the large number of objects that are scattered about the adventure. You can pick things up by typing TAKE followed by the name of the object, alternatively you can use GET. If you wish to drop an object, simply type DROP followed by the object name.

Just as in real life you can only carry a limited number of things at a time, so sometimes you will have to drop one of your objects before being able to pick up a new one. You may type INVENTORY or INV at any time during the game to see a list of the objects which you are carrying, if anything. (See the section headed **The Other Characters.**)

In order to use an object, it generally only necessary to be carrying it when attempting to do the job for which the object was designed. For instance, to unlock a door you need not type UNLOCK DOOR WITH KEY, but simply UNLOCK DOOR. The program will check to see whether you are carrying the correct key, and will inform you if you are not. On some occasions it will be necessary for you to be wearing an object, rather than carrying it. To wear an object, simply type WEAR followed by the object name. To remove it again, use REMOVE.

You need only specify which object you wish to use if you are carrying two objects which could be used for a similar purpose, and you specifically wish to avoid using the wrong one. For example KILL DRAGON WITH GUN or KILL DRAGON WITH SWORD. Because there are a number of different coloured crystals in the game, it is advisable to specify the colour of the crystal when referring to each one. If you do not do this, and there is more than one crystal in the room with you, the program will have to guess which one you mean, and it may not be the one you intended.

Unlike some games, it is not necessary to examine the objects in order to discover hidden secrets about them. All the information you need to know is given either in the description of the objects themselves, or in the associated text. You are, however, advised to READ all signs and notices, and anything else which may contain a written message.

### **The Other Characters**

During your travels, you will encounter a number of other characters wandering about. You can interact with these in various ways, and can even walk to some of them. You will need to get these characters to help you at various stages of the game, either by getting them to perform certain actions, or by asking them for information. They may also want your help from time to time.

The movements of the other characters are not random, each has his own area of the game which he normally patrols. However, these areas may change at different stages of the game, according to the circumstances prevailing at the time. Whenever you meet another character, that character will remain in position until you move away. This is deliberate, and allows you to interact with the characters without them ignorantly walking away from you.

To get the other characters to help you, you will need to talk to them. You do this by enclosing any speech inside quotation marks. Eg: "OPEN THE DOOR". It is not usually necessary to identify the character you are talking to unless there is more than one character with you, and you think that the wrong one may also respond to the message. In this case you should type the character's name AFTER the message: SAY "OPEN THE DOOR" TO THE GUARD. The quote symbol (") is obtained by pressing the shift key followed by the 2 key. It is vital that you remember to use the quote symbol when talking to people, otherwise the program will interpret your speech as a direct command which you are trying to perform yourself.

If you want someone to help you at a particular location, you must find first them and ask them to follow you (type "FOLLOW ME"). Lead them back to the location, then tell them what you want them to do, or ask them what you want to know. You can ask them to stop following you if you get fed up with their company.

The characters may also carry around and use the various objects in the game, and objects may also be passed between you and the other characters. To give an object to one of the characters, simply type GIVE KEY TO GUARD. To take an object from a character you can either use the TAKE command or put GIVE in quotes. For example: TAKE KEY FROM GUARD or "GIVE ME THE KEY". Of course, the guard may not want to give his keys away!

Again, it is not necessary to specify the character if there is only one character with you at the time. If there is any confusion, the program will ask you who you mean. Therefore TAKE KEY will work whether the key is on the ground or it is being carried by somebody else. If the command is successful you will be told whether you picked the object up or were given it.

Remember, you can find out what the other characters are carrying by typing INV. This will give you a complete list of objects being carried by you and any characters in the room with you.

## **Saving Your Position**

It may take weeks for you to complete the adventure. During this time you will need to save your position so that you may return to that same position at a later date. The saved position includes all details of what is happening everywhere in the game, including locations, objects, characters, etc. The program contains two methods of saving your position in this way: Save to tape and save to memory. There is also an automatic save facility whereby your position is automatically saved to memory approximately every eight moves you make, so that if you suddenly get killed you can return to the point just before it happened.

To save your current position in the game, type SAVE. You will be asked whether you wish to save your position to tape or memory. Press T or M at this point. The memory save is useful for short-term saves, for instance before you enter an unpredictable situation or try a dangerous manoeuvre. It is instantaneous and you do not need to fiddle about with recorders or tapes, but you may only save one position at a time. Every time you save your position to memory, it will overwrite any previous position that was stored there. The tape save is used for long-term and permanent storage of positions. You will need to use it before switching the computer off, and to keep a library of different positions on tape, and it only takes a few seconds to save each

one. See the section headed **Tape Handling** for more information on how to use the tape save.

To return to a previously saved position, you may type LOAD at any time during the game. The program will again ask you whether you wish to load a position which is stored on tape or in memory. Press T or M as before. See the section headed **Tape Handling** for more information. After a loading operation, the game will continue from the exact point at which that position was saved.

### **The Autosave Facility**

As mentioned previously, the autosave facility enables your position to be automatically saved to memory approximately every eight moves. You will be told when this happens. This feature is selected when the adventure is first loaded, but you may switch it off with the command SAVEOFF. Type SAVEON to switch it back on again. You may still save your position manually when the autosave is switched on, and it will automatically be switched off if you choose to save your position to memory. This prevents your saved position from being accidentally overwritten by the autosave.

### **Tape Handling**

This section explains how to load the various parts of the adventure, and how to save your position onto tape and load it back in again.

### **New Part Numbers**

As mentioned earlier, the whole adventure is split up into four parts on two cassette tapes. When you have completed one part, it will be necessary to load the next part to enable you to continue the adventure. This is taken care of automatically by the program. All you have to do is to place the appropriate cassette into your recorder and press the PLAY button.

As you finish each part of the adventure, you will get a warning message asking you to press a key to load the next part. When you press a key the screen will clear and a message such as "LOAD PART 2" will be displayed. All you need to do is to insert the tape containing the relevant part number into your cassette recorder and press the PLAY button. The new part will then load in and you will be able to continue the game. It takes less than three minutes to load a new part. The program will only load the correct part number, so if it doesn't load, check to make sure that you have selected the right tape and have rewound it back to the beginning.

Note that PART 1 does not start at the beginning of the tape due to the introductory files that are necessary when loading the complete adventure from scratch. Therefore, when loading PART 1, you can save time if you skip over these introductory files and go straight to the file named PART 1. This can easily be located by reading the loading messages that appear on the screen.

### **Saving Your Position**

Typing SAVE at any time during the game allows you to save your current position to tape or memory. If you select the tape option you will be prompted to enter a filename. This allows you to give a different name to each position that you save so that you can identify it later. Type in any filename of seven letters or less and press <RETURN>. Make sure that you have placed a SPARE cassette in your recorder, and press the RECORD button(s). Press <RETURN> on the computer to save the position onto tape, it only takes a few seconds, after which you can continue the game. Always keep a spare tape with your positions on and NEVER try to save your position on either of the two program cassettes that come with the game!

### **Loading A Position**

Typing LOAD at any time during the game enables you to load back a previously saved position from either tape or memory. You are also given the option to load a saved position whenever you would normally have to restart the game again. For example, when you type QUIT or get killed. The program will prompt you to enter the filename of the position which you wish to load in. If you do not know the filename, simply press <RETURN> and the computer will load the first file it comes to on the tape.

When you have entered the filename, you will be reminded to insert your data tape into the recorder and press PLAY. The file will then be loaded in.

**Please note** that if you attempt to load in anything other than a valid position at this point, the computer will lock up and you will have to switch off and reload the entire program again. So if you have not specified a filename make sure that the program on your tape is a valid position file.

If you make a mistake when entering a filename and that particular file cannot be found on the tape, you can break out of the load function by pressing <ESCAPE>. You will then be able to re-enter the filename, or load a position from memory if you cannot find your data tape.

You may load back any position at any time during the game, even if it refers to a different part number from the one which you are currently playing. For example, if you are currently playing part 3 of the game and wish to go back to an earlier position which was saved when you were playing part 1, all you need to do is to load the position as normal. The program will know whether or not the position just loaded refers to a different part number from the one currently held in memory. If it does, it will automatically prompt you to load the new part number before continuing with the game.

### **Special Commands**

Apart from the commands already discussed, there are a number of other commands which have a special purpose:

If you want to see a repeat description of your current surroundings, type LOOK or L. This will also tell you about any objects lying about, any characters that are with you, and list the possible exits.

The graphics may be switched on and off with the commands GRON and GROFF. Switching the graphics off allows the game to run faster and the whole of the screen is devoted to text output, thereby allowing more messages to fit onto the screen at once. However, you will not see any graphics, and some pictures contain extra clues. The graphics are switched on every time you load in a new position.

If you find that you are regularly entering the same command, or sequence of commands, you can save yourself lots of typing by setting up the command(s) on one of the 10 function keys. This is done by means of the STORE command. After typing STORE you will be prompted to enter the key number, then the sentence which you wish to store on that key. You can store any command sequence you like on a key, provided that the total number of characters on all the keys does not exceed 256, but you are unlikely to need anything like this amount. If you do try to exceed this limit, the program will warn you that the key store is full. You can place a <RETURN> character after the command by using |M just as if you were programming the keys from Basic. See your handbook if you are not familiar with how to use the function keys. Once a command sequence has been set up on a function key, you can enter that command simply by pressing the function key. You will find that we have stored some example commands on the function keys at the start of the game. You are free to use these or change them as you require.

To find out what your current score is type SCORE. This will give you some idea of how you are progressing in the game. It is possible to finish the adventure without scoring maximum points. If this happens you may have missed something interesting along the way and you might like to play the game again to see if you can pick up the missing points.

If you get hopelessly lost or you want to let another player have a go, you can abandon the game by typing QUIT. The program will confirm with you that you really want to quit and will then give you the option of quitting or loading back a saved position. As usual, this saved position can be either from tape or memory. If you do decide to quit, you will be taken right back to the beginning of the game.

### **Hints And Tips**

### Light And Dark

In some areas of the adventure, such as caves and tunnels, there will be no natural light. In these places you will not receive a description of your surroundings unless you have a lamp or something similar with you. You do not have to be actually carrying the lamp, it can be carried by another character or placed on the ground. Remember, just because it is dark this does not prevent you from moving about, only from seeing where you are going!

### Real-Time

You should be aware that the adventure runs in real-time. What this means is that the events in the game are not held up whilst you are sitting at the keyboard trying to decide what to do next. All the characters will act independently of you, and if you walk away from the keyboard for half an hour, you may return to a very different game! However so as not to penalise slow typists, once you have started to enter a command, the program will pause and wait for you to complete the command before continuing.

### **Summary Of Commands**

Listed here are some of the more important commands which you will need to know in order to play the game, along with their abbreviations. It is not a complete list of the hundreds of words which are recognised by the program.

#### **Directional Commands**

<u>Command</u>	<u>Abbrev.</u>	<u>Function</u>
NORTH	N	Move north
SOUTH	S	Move south
EAST	E	Move east
WEST	W	Move west
UP	U	Move up
CLIMB	CLI	Climb up
DOWN	D	Move down
JUMP	JUM	Jump down
IN		Enter
OUT		Exit
BACK		Return to previous location
CONTINUE	C	Travel as far as possible in one direction

#### **Special Commands**

RETURN KEY		Repeat last command
LOOK	L	Get description of current location
INVENTORY	INV	List objects carried
TAKE	T	Take an object
GET	G	Take an object
DROP	DR	Drop an object
EVERYTHING	ALL	Used with TAKE and DROP
EXCEPT	BUT	Used with EVERYTHING
GIVE	GIV	Give an object to a character
"		Speak to character
SAVE	SAV	Save your position
LOAD		Load back a saved position
SAVEON		Switch autosave on
SAVEOFF	SAVEOF	Switch autosave off
GRON		Switch graphics on
GROFF	GROF	Switch graphics off
SCORE	SC	Get current score
STORE	STOR	Define function key
QUIT	Q	Abandon current game
VERSION	VERS	Print version number of game

#### **More Useful Commands**

ATTACK	BREAK	CLOSE	DRINK	EAT	EMPTY	FILL
FOLLOW	KILL	MOVE	OPEN	PUSH	READ	REMOVE
THROW	UNLOCK	WEAR				

## Helpsheet To THE LOST CRYSTAL

Below is a comprehensive helpsheet to the game. This is an alphabetical list of all the locations, objects, characters and items referred to in THE LOST CRYSTAL. The location and purpose of each item is given, and the information provided in one entry will usually lead you to other items in the list. If you cannot find the word you are looking for, it probably plays no significant part in the game.

It is up to you how to use this. Experienced adventurers will probably not need to use it at all, except to score maximum points. If you are a novice you may want to read it through as you play the adventure. You will still get a great deal of satisfaction from solving the game, as it is by no means a step-by-step guide to the solution. At first though we suggest that you try to play the game without it, using it only to help you out when you become stuck.

**ARQUEBUS:** An ancient type of firearm. Given to you by the mermaid. See Hydra, Priestess.

**AXE:** Used by the Bogle for chopping adventurers' heads off!

**BALL:** See Crystal Ball.

**BARNACLE BILL:** An old sea-salt who owns the boathouse on the islet. If you close the boathouse door after you, he won't know that you've been at his loot!

**BILL:** See Barnacle Bill.

**BLACK:CRYSTAL:** Given to you by the mermaid. It is not part of the Rainbow Crystal and you should not drop it in the black crystal room. See Black Eternal Passages, Priestess.

**ETERNAL PASSAGES:** You are transported here by dropping the black crystal in the black crystal room. The only way out is by QUIT or LOAD.

**BLUE CRYSTAL:** Given to you by the priestess. Drop this in the blue crystal room. See Gloomy Cells, Dais, Scoring.

**BOATHOUSE:** On the islet. See Doors.

**BODY:** See Coffin.

**BOGLE:** A particularly nasty character! You cannot kill him, you must avoid him. You may meet him in three places:

- 1) In his cave, particularly if you have sat in his chair. You must be ready to leave by the secret opening immediately the chair is disturbed.
- 2) If you return along the passage guarded by the glass skeleton.
- 3) He will emerge from the cave above the boulder if you leave the boulder underneath the hole in the passage roof.

**BOGLE'S: CAVE:** In the cave complex underneath the mill. See Stone Door.

**CHAIR:** In the Bogle's kitchen. This operates an opening in the north wall of the cave when sat upon. Get the miller to put the sack of flour on it. See Bogle 1.

**BONES:** Underneath the mill grain store. For humour only!

**BOOKSHELF** and **BOOKS:** In Merlin's cave. For atmosphere only.

**BOOT:** In the cupboard. See Water.

**BOOTY AND GROG STORE:** See Boathouse.

**BOTTLE:** See Milk Bottle.

**BOULDER:** In the cave complex underneath the mill. Roll it underneath the hole in the roof and climb up. You will need to have drunk the milk first. See Bogle 3.

**BRASS KEY:** See keys.

**BRIDGE:** See Troll Bridge.

**BUCKET:** In the cupboard. Use this to carry water from the pool to the dragon.

**CANOE:** In the boathouse. Use this to cross the river, in both directions if necessary. The sail pole can be used to retrieve the canoe from the east bank. This saves having to carry it around the temple. See Paddle, Scoring.

**CAVES:** See Bogle's Cave, Merlin's Cave, Strange Cave.

**CELL:** See Dungeon, Gloomy Cells.

**CENTRAL CHAMBERS:** In and underneath the temple. See Dais.

**CHAIR:** See Bogle's Chair.

**CHEESE SANDWICH:** At the entrance to Merlin's cave. Eat this for extra points (the sandwich, not the cave!)

**CLOAK:** In the wardrobe. This makes the wearer invisible, but only for a limited time after putting it on. To repeat the effect, you must remove it and wear it again. It will disappear if dropped outside the complex, or if taken into the temple. See Troll, Hydra.

**COFFIN:** Underneath the white crystal room. Open this to reveal a dead body. You can use the Rainbow Crystal to bring it back to life again at the end of the game. See Scoring. See also Vampire's Coffin.

**COIN:** Left for the milkman outside the mill door. You must take this before the milkman arrives, otherwise you will not get it back. See Wishing Well, Paybox.

**COLOURED ROOMS:** See Crystal Rooms.

**CRYSTALS:** See individual colours.

**CRYSTAL: BALL:** Inside the mill store. If you look into it you will see images from various scenes in the game. It serves no other purpose.

**ROOMS:** See the entries for the crystals.

**CUPBOARD:** In the temple. See Doors.

**DAIS:** In the central chambers. The underground one carries the vampire's coffin. The upper one is where you must drop the seven coloured crystals to reform the Rainbow Crystal. See Strange Writing, Scoring.

**DAMP ROOMS:** At each end of the evil-smelling passage.

**DEAD BODY:** See Coffin.

**DIRTY CAVE:** See Bogle's Cave.

**DOORS: BOATHOUSE:** Unlock this with the brass key. See Barnacle Bill.

**CUPBOARD:** Use the iron key to open this. See Scoring.

**DUNGEON:** Underneath the temple. Unlock this with the iron key. See Scoring.

**GALLERY:** This provides access to the gallery from inside the mill. It is not locked but you will need increased strength to open it. See Milk, Scoring.

**MILL:** Knock and the miller will open it.

**MILL STORE:** Unlock this with the small iron key. See Scoring.

**MOUNTAIN:** At the base of the mountain. Break the glass window and unbolt it. See Whistle, Scoring.

**STONE:** Push this to gain entry into the Bogle's cave. The miller will help you. You cannot open it from inside the cave. See Scoring.

**TEMPLE:** Unlock this with the wooden key. See Scoring.

**TRAP:** See Trap Door.

**WARDROBE:** See Wardrobe.

**DRAGON:** At the east of the evil-smelling passage. Throw water over it to kill it. See Bucket, Scoring.

**DUNGEON:** Underneath the temple. You meet Merlin here, where he has been imprisoned by the vampire. See Doors, Grating.

**ETERNAL PASSAGES:** See relevant colour.

**EVIL-SMELLING PASSAGES:** Underneath the temple.

**FALLEN ROCKS:** On the mountain ledge. You cannot move or get past these. See Secret Passage.

**FANTAIL:** This rotates the mill topcap to keep the sweeps pointing into the wind. It plays no part in the game.

**FLOUR:** See Sack of Flour.

**FURNITURE:** Inside Bogle's cave. For atmosphere only, but see Bogle's Chair.

**GALLERY:** This is a wooden balcony-like structure which surrounds the tower of the mill. There are two ways of gaining access to this. See Doors, Ladder.

**DOOR:** See Doors.

**GEARS:** Part of the machinery inside the mill. They play no part in the game.

**GEM:** See Luminous Gem.

**GLOOMY: CELLS:** Underneath the crystal rooms. The red, green and blue crystals can be retrieved from here after using them for the first time.

**CORRIDORS:** Underneath the temple.

**GLASS SKELETON:** See Skeleton.

**GRAIN: SACK:** See Sack of Flour.

**STORE:** Inside the mill. See Trap Door, Sack Hoist.

**GRATING:** Outside the temple. This leads down into the dungeon cell underneath the temple. It cannot be undone from above the ground. It can only be unbolted from inside the cell. See hammer, Scoring.

**GREEN CRYSTAL:** Given to you by the priestess. Drop this in the green crystal room to get back to the mountain caves. See Gloomy Cells, Dais, Scoring.

**GROG SCORE:** See Boathouse.

**HAMMER:** In the southern small mountain cave. You will need this to hammer the bolt underneath the grating to open it.

**HOLE IN TUNNEL ROOF:** See Boulder.

**HUT:** See Mill Store.

**HYDRA:** He guards the road outside the temple. Use the cloak to pass him or the arquebus or sword to temporarily disable him. He cannot be permanently killed because of his ability to replace any of his missing heads with two more! Although this takes time. See Scoring.

**INDIGO CRYSTAL:** In the damp room at the west end of the evil-smelling passage. See Dais.

**IRON: DOOR:** See Dungeon Door.

**GRATING:** See Grating.

**KEY:** See keys.

**ISLET:** At the base of the mountain.

**JUNCTIONS:** See Roads, Tunnels, Paths.

**KEYS: BRASS:** Given to you by the priestess. This unlocks the boathouse. See Mermaid, Priestess.

**IRON:** In the vampire's coffin. This unlocks the cupboard and the dungeon.

**SMALL IRON:** Carried by the miller at the start of the game. This unlocks the mill store.

**WARDROBE:** In the Bogle's cave.

**WOODEN:** Given to you by the mermaid. This unlocks the temple door.

**KITCHEN:** See Bogle's Cave, Bogle's Chair.

**LADDER:** Inside the mill store. Prop this up the south side of the mill to climb up the gallery.

**LAMP:** At the bottom of the mill steps. Only the miller can light this, and he only has one match, so be careful with it! Give the lamp to him when he mentions it to you underneath the grain store. There is plenty of fuel in it to last the entire game. See Scoring. See also Luminous Gem.

**LEATHER: BOOT:** See Boot.

**BUCKET:** See Bucket.

**LIQUID:** See Water.

**LUMINOUS GEM:** Just outside the dungeon cell underneath the temple. This is used as a source of illumination after you lose the lamp. You will have to fumble around in the dark for a while to find it.

**MAGIC: MONOCLE:** See Monocle.

**WHISTLE:** See Whistle.

**MANUSCRIPT:** In Merlin's cave. For atmosphere only.

**MAPS:** In Merlin's cave. For atmosphere only. (Make your own!)

**MERLIN:** One of the major characters in the game. Being an old hand at adventure games, he is able to offer considerable assistance during the latter part of the game, especially with information. See Dungeon, Strange Writing, Water.

**MERLIN'S CAVE:** In the cave complex underneath the mill. See Wardrobe.

**CLOAK:** See Cloak.

**MERMAID:** On a rock in the mountain river. One of the two mystical characters in the game. She will offer to exchange the following objects (not necessarily in this order): A wooden key for your monocle, a spade for your brass key, an arquebus for your necklace, a black crystal for your white crystal. See Scoring.

**MESSAGE:** See Strange Writing.

**MILK:** If you drink this you will gain increased strength. See Milk Bottle, Gallery Door, Boulder.

**MILK BOTTLE:** Outside the mill door. If this is left here when the milkman calls he will exchange it for a full bottle. It will break if you blow the whistle too close to it. Later on in the game you may fill it with water from the river for drinking purposes. See Priestess.

**MILKMAN:** One of the game's characters. He will knock on the mill door as the miller is operating the sack hoist. When the miller asks you to see who it is, just go to the door. There are extra points to be gained here! See Milk Bottle, Coin.

**MILL:** In the field at the start of the game. It is a traditional tower mill fitted with corn-grinding machinery. Much of the early action takes place inside here. See Fantail, Gallery, Windshaft, Doors.

**FENCE:** For atmosphere only.

**STONES:** For grinding the corn. They play no part in the game.

**STORE:** Inside the mill enclosure. See Doors.

**MILLER:** One of the major characters in the game. When you first meet him you must offer to help him with his sacks. He will then give you instructions on what to do. See Sack Hoist, Lamp, Bogle's Chair, Stone Door, Scoring.

**MILLER'S LAMP:** See Lamp.

**MONOCLE:** In the northern small mountain cave. Use it to see the secret passage. See Mermaid.

**MOUNTAIN:** At the exit of the cave complex underneath the mill.

**CAVES:** Near the top of the mountain.

**DOOR:** See Doors.

**RIVER:** See River.

**TUNNEL:** See Roads, Tunnels, Paths.

**NECKLACE:** In the white crystal room. See Mermaid.

**NOTE:** See Scribbled Note.

**ORANGE CRYSTAL:** In the evil-smelling passage. See Dais.

**PADDLE:** Given to you by the priestess. You will need this to paddle the canoe across the river.

**PASSAGES:** See Roads, Tunnels, Paths.

**PATHS:** See Roads, Tunnels, Paths.

**PAYBOX:** At the entrance to the troll bridge. You may drop the coin in here but it is not the correct way of getting across the bridge.

**POLE:** See Sail Pole.

**POOL:** See Water.

**PRIESTESS:** In the secret passage. One of the two mystical characters in the game. She will offer to exchange the following objects (not necessarily in this order): A brass key for your whistle, a paddle for your brass key, a white crystal for your arquebus, a green crystal for your bottle, a blue crystal for your black crystal. See Scoring.

**RAINBOW CRYSTAL:** This is reformed out of the coloured crystals. See Dais, Vampire, Coffin, Scoring.

**RAISED DAIS:** See Dais.

**RAVINE:** Between the mountain ledges. See Troll Bridge.

**RED CRYSTAL:** On the path east of the river. Drop this in the red crystal room to get back to the mountain caves. See Gloomy Cells, Dais, Scoring.

**RELICS:** Inside the boathouse. For atmosphere only.

**RICKETY BRIDGE:** See Troll Bridge.

**RIVER:** Runs around the base of the mountain. See Canoe, Milk Bottle, Scoring.

**ROADS, TUNNELS, PATHS, ETC:** These are not individually described. See the entry for the nearest landmark.

**ROCKS:** See Fallen Rocks.

**ROPE:** See Sack Hoist.

**SACK HOIST:** In the mill. This is used to raise and lower the heavy sacks of flour through the trap door in the mill grain store. It is operated by the miller. When it is lowered you may climb down the rope to explore underneath the grain store.

**SACK OF FLOUR:** Inside the mill. This is very heavy and you will not normally be able to carry it without first dropping everything else. You may empty it, but then it is of no use! Tie it to the rope as the miller operates the sack hoist. See Scoring, Bogle's Chair.

**SAIL POLE:** On the east side of the gallery. Normally used to position the mill sweeps by hand, but not used for this purpose in the game. See Canoe.

**SANDWICH:** See Cheese Sandwich.

**SCORING:** You score points as follows: Opening the mill store, trap door, wardrobe, mountain door, cupboard, temple door, dungeon, grating. Killing the skeleton, hydra, dragon, vampire. Reading all signs and notices. Offering to help the miller. Following him upstairs. Tying the sack to the hoist. Getting the whistle. Getting into the Bogle's cave. Eating the sandwich. Swapping any object with the mermaid or priestess. Drinking from the river. Dropping the red, green and blue crystals in their rooms. Cutting the web. You score extra points for the following: Opening the gallery door. Retrieving the canoe with the pole. Reading the strange writing. Re-integrating the Rainbow Crystal, Resurrecting the body. See also Milkman.

**SCRIBBLED NOTE:** Left outside the mill door for the milkman. Read it.

**SECRET PASSAGE:** At the top of the mountain, near the fallen rocks. Use the monocle to see it.

**SKELETON:** He guards one of the passages in the cave complex underneath the mill. Use the whistle.

**SMALL:DAMP ROOMS:** See Damp Rooms.

**IRON KEY:** See Keys.

**MOUNTAIN CAVES:** See Mountain Caves.

**SPADE:** Given to you by the mermaid. This plays no part in the game.

**SPIDER'S WEB:** See Web.

**STAKE:** At the end of the gloomy corridor. See Vampire.

**STATUE:** See Priestess.

**STONE:CHAIR:** See Bogle's Chair.

**DOOR:** See Doors.

**FURNITURE:** See Furniture.

**STORE HUT:** See Mill Store.

**STRANGE: CAVE:** Above the boulder passage.

**WRITING:** In the evil-smelling passage. Get Merlin to read it. See Scoring.

**STRONG SWORD:** See Sword.

**SWORD:** Underneath the black crystal room. See Web, Hydra.

**TABLES:** For atmosphere only.

**TEMPLE:** To the east of the mountain river. See Cloak.

**TRAP DOOR:** In the mill grain store. Open this as instructed by the miller, who will then lower the sack through it. See Sack Hoist, Scoring.

**TROLL:** He is normally asleep in the paybox, but will soon wake up if you try to cross the bridge without paying! Use the cloak to escape detection.

**BRIDGE:** The only way of crossing the ravine. See Troll.

**TUNNELS:** See Roads, Tunnels, Paths.

**VAMPIRE:** In the vampire's coffin. Use the stake to kill him before he attacks you. he can be resurrected again with the Rainbow Crystal, but it is not recommended! See Scoring.

**VAMPIRE'S COFFIN:** On the dais underneath the temple. Open it. See Vampire, Violet Crystal, Iron Key.

**VIOLET CRYSTAL:** In the vampire's coffin. See Dais.

**WARDROBE:** In Merlin's cave. Use the wardrobe key to unlock it! See Scoring.

**WARDROBE KEY:** See Keys.

**WATER:** At the west end of the evil-smelling passage. It only LOOKS like water! Use the boot to get across it. If you throw the boot back to Merlin it will fall in the water.

**WEB:** Underneath the temple. Carry the sword to cut it down. See Scoring.

**WELL:** See Wishing Well.

**WHISTLE:** In the strange cave. This emits a high-pitched note when blown and is used for breaking glass. See Wishing Well, Milk Bottle, Skeleton, Mountain Door, Priestess.

**WHITE:CRYSTAL:** Given to you by the priestess. It is not part of the Rainbow Crystal and you should not drop it in the white crystal room. See White Eternal Passages, Mermaid.

**ETERNAL PASSAGES:** You are transported here by dropping the white crystal in the white crystal room. The only way out is by QUIT or LOAD.

**WINCH HOUSING:** At the top of the mill. Here, the miller will explain to you exactly how you can help him. Until this has happened you will not be able to help, even though you may know exactly what to do from a previous game. See Sack Hoist.

**WINDMILL:** See Mill.

**WINDOW:** See Mountain Door.

**WINDSHAFT:** This is the large shaft inside the mill which drives the machinery. It plays no part in the game.

**WISHING WELL:** In the strange cave. Throw the coin down here to get the magic whistle. See Scoring.

**WOODEN: BOATHOUSE:** See Boathouse.

**BRIDGE:** See Troll Bridge.

**DOOR:** See Mountain Door.

**KEY:** See Keys.

**LADDER:** See Ladder.

**STAKE:** See Stake.

**WRITING:** See Strange Writing.

**WRITING DESK:** In Merlin's cave. For atmosphere only.

**YELLOW CRYSTAL:** In the damp room at the east end of the evil-smelling passage. See Dais.

**Instructions' Source** : THE LOST CRYSTAL (Epic) Instruction And Help Booklets

### **Review (Electron User) - "Superb Adventure"**

THE LOST CRYSTAL has been more than two years in the making and supposed release dates have come and gone. However, the wait was worth it. This is one of the best text adventures I have ever seen.

It is offered in a superlative manner, with two cassettes packaged with help and instruction booklets in a scintillating presentation box. The screen shots on the insert give an indication of the marvellous graphics ahead.

The documentation helps set the scene for the 400 location magnum opus which follows. "The Rainbow Crystal which has protected the people of Zaloria for many years," (from the hideous Bogle and his marauding Morgs), "has been struck by a mysterious bolt of lightning and shattered into seven pieces".

You have been chosen to recover the seven crystals and find a way to recreate the Rainbow Crystal and so restore peace to the Freelands.

You begin this massive jaunt standing to the south of a large windmill. An exploration of the mill and its storehouse should let you solve these early puzzles which are really just beginners' fare. Though you may get a shock when the milkman knocks for his money. Don't forget that "Milk has gotta lotta bottle."

In part two, the going gets tough and I had to resort on at least one occasion, to the excellent help book.

Careful progress through the many twisty passages (don't worry, it isn't a maze) and assistance from the strong but cowardly Miller should help you to overcome these hurdles. But, don't waste that coin.

The Bogle is soon encountered and the poor Miller must be sacrificed to save your own skin. Who said that Epic was heathen?

The third part is the largest and most difficult and involves cunning manipulation of objects, some excellent chaining puzzles and the start of your collection of lost crystals.

You will now discover the use for that sail pole you have been carrying since the beginning of the game.

A secret passage will reveal a princess who is really a trading post for some of the possessions you are carrying.

In part four, you become involved in a titanic struggle to rescue Merlin. You must defeat the hydra, a dragon and a vampire before being reunited with an old acquaintance. The end is both spectacular and amusing.

My only criticism of the game is that the colours are sometimes a little garish. The puzzles are, on the whole, logical and typical of the Epic style of construction. The most important character in the game - besides yourself - is the Miller, who demands sympathy and affection. I adored his comments at various stages of the game and his muscular help is required on more than one occasion.

This is a rare adventure which has a lot to offer the beginner and expert. A whole new experience which must be savoured and an adventure which I whole heartedly recommend.

## Review (EUG)

Name three fun games for very young children on the Electron. It's not as easy as you might think, is it? Sure, there are lots of good *educational* titles available as a result of Acornsoft and its collaboration with ASK, ESM and Bourne. But the likes of WORD SEQUENCING and NUMBER BALANCE seem to be more like exercises in English and Maths than a real game, and simple shape-matching games like FACEMAKER are probably no more than a necessary evil to kids now that computers are so all-prevalent in the classroom.

The young-child-fun category I'm attempting to explain is a category where the game is devoid of any real 'educational' content, but instead is just a very simplified version of a game based at a higher age group. One example might be a SNAPPER clone when the ghost moves very slowly when 'homing in' on the Snapper. Another, happily, is what we have in THE MAGIC SWORD; an 'official' disc-based title from Database Software which does some amazing things with the concept of a straight-forward text adventure.

The plot is very simple. A wicked witch has locked up an unfortunate princess in a castle and turned her adoring prince into a frog. You set off to return the unfortunate pair to the standard of living they enjoyed previous to this incident. It involves wandering around a small area using the NSEW keys and collecting any items you find along the way.

Coming from the inventors of NURSERY RHYMES and the FUN SCHOOL series, you're fairly assured of the quality of this product and it doesn't disappoint. On booting up the disc you get a quick title screen accompanied by a lively string of notes played on interrupt, two colourful screens of instructions and then the adventure proper begins.

What is immediately likeable about THE MAGIC SWORD is that the traditional format of the adventure game has not been departed from, despite what has been done to simply it for youngsters. The screen is divided horizontally into two sections and, while the game is presented in Mode 4 (limiting the palette to two colours), complimentary colours mean that text and illustrations always appear darker than the background behind them. The location descriptions, in the bottom rectangle, are presented in double height text to aid readability and a compass featuring N, E, S and W around a crosshair cleverly flashes only the directions in which the player can move in the bottom right.

Above the location description, a blocky graphic appears of what is described below. For example, a window. If there is also an object in the room, it appears too, and to pick it up the player need only press G for GET. When searching through the inventory, each object appears on screen in turn waiting for a keypress before returning to the game.

Now this simplified format of adventure puzzling is certainly not unique to THE MAGIC SWORD and has been utilised in many BBC adventures for children such as GRANNY'S GARDEN and LITTLE RED RIDING HOOD. The trouble with these titles though is that they could not be converted to the Electron firstly because they played completely in Mode 7, which requires all seven colours to be available; and secondly because Mode 7 only requires 1K of memory and the programs would be too long to work in any other Mode.

Probably the best way of appreciating these restrictions is simply to take a look at these other titles on the good ole Beeb and just try and imagine how you would tackle the conversion in order to keep all the elements intact in a conversion to the Electron. It would be a difficult if not impossible process.

What Database have done therefore is, undaunted by the Elk's limitations, to write an adventure of comparable (lack-of-)complexity *within* them. From the original blocky style of Mode 7 graphics we get the illustrations in the top window; from the double-height text so easy to manipulate in Teletext Mode we get the double-height descriptions. It is something of a unique attempt to emulate these popular titles and almost seems to proudly boast almost all of their features.

For example, whenever you move in a valid direction, there is a high pitched sound almost like a grasshopper rubbing its legs together. The screen blanks, the colours change (helping to increase the variety of the screen - this is important with young children as players) in the darkness then the new location appears, complete with its new graphic and updated compass points. If you move in an invalid direction, there is a sound like the rocks falling in REPTON and you are told what you did wrong. This is probably the one major problem in the game however, because the text saying, for example, "You can't move up here!" appears on the very top line of the screen and you often can't see it on a TV.

The adventure itself is also not as easy as you might expect, and moving the wrong way at a certain location is likely to see you roasted in an oven or plunged into a waterfall; in both cases signalling your imminent demise. Some educationalists might argue that this is discouraging but personally I found the adventure games shipped into my classroom on the BBC to be more so where death was *not* possible. I still remember being infuriated by one where I tried to walk into "the Lair of the Killer Spider" and just got the response "That isn't wise!"

THE MAGIC SWORD's death routines also make very good use of the Elk's graphics and sound capabilities. In fact the combination of graphics, sounds, compass and sequences do a lot to counterbalance the fact the game is in monochrome. The original package also comes with a large print instruction manual too which can be referred to in the very unlikely event of the child experiencing difficulty.

Reflect back on the fun category then and you'll probably see that THE MAGIC SWORD aptly fits the bill. As an added bonus too, it works on all Electron disc systems (Sadly though, not on the BBC!), even where PAGE is set to &1D00. It is a slick, professional title for young children which is a great but serious introduction to text adventuring. And it's also quite unique in the library of Elk software available. Personally, if I had to name three fun games for the under fives this would come top, followed closely by Database's excellent NURSERY RHYMES and Mirrorsoft's amazing CRACK IT TOWERS.

## Instructions

*"Tunnel through the strata deep beneath the Earth's crust in search of buried treasure. Clear the mine of fire breathing dragons and man-eating tomatoes with your neutraliser, avoiding toppling rocks, poisonous toadstools and ruthless phantoms."*

## The Game

The object of the game is to tunnel through the strata deep beneath the Earth's crust in search of buried treasure. But the mine is protected by fire breathing dragons and giant man-eating tomatoes. To kill one of these, you must get close to your victim and activate your neutraliser.

The creature will then start to shrink and then disappear completely.

Running under a boulder will cause it to fall to the floor. This can be useful for killing monsters - and also yourself, if you don't move out of the way fast enough. Also beware the poisonous toadstools.

The creatures themselves cannot dig. They change tunnels by turning into ghosts and then rematerialising in a different tunnel. You must kill all of the monsters to advance to the next phase. If this is not done by the time the flowers have all wilted away, you will lose a life.

Bonus points are awarded for the speed with which you complete each phase.

## Control Keys

Z - Left, X - Right, : - Up, / - Down, <RETURN> - Neutralise

# THE MOLE CONCEPT

***Professional, Originally Released On Cassette Only***

Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

Instructions' Source : 3

## **Review (Electron User)**

This package in the Secondary Science series breaks new ground by being in the format of "computer synchronised audio". This means that a tape commentary - spoken by Fred Harris - is played while the software runs. The two are kept in step by the simply method of pressing a key when Fred tells you to.

The programs are disc based only. In fact the driver is kept very busy throughout the presentation which lasts about half an hour. During that time, you will be stunned by the beautiful graphics that your computer can produce, seemingly instantly.

The package aims to teach or reinforce the chemist's rather specialised concept of a mole. To him it is a unit of measurement, not a furry animal. This is achieved by tutorial sessions followed by questions. When used with pupils aged 15 to 16, there seems to be a good balance between teaching and questioning and the novel presentation of the information encourages them to solve the problems.

If any pupil finds questions difficult then a worked answer is given on the screen.

The topic is covered thoroughly during the presentation, with domestic and industrial applications brought in. In fact, long after Fred Harris has finished talking you can still be carrying out titration simulations and working out the molarity of solutions.

The accompanying booklet implies that this software should be used by individual students. Many schools would not be able to afford the computer time for this, but in fact the software works well with groups of pupils.

However it is used, there can be little doubt that students on an O level or CSE chemistry courses will benefit from this software. These pupils enjoy the novel format, the interesting voice and a touch of humour, not to mention the really lovely graphics. The learning they achieve is almost a side issue, but in fact a lot of knowledge sinks in.

This is a program that chemistry teachers really should find time for. It is a positive aid for pupils in coming to terms with this difficult idea.

# THE NIGHT SKY

*Professional, Originally Released On Cassette Only*

Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

Instructions' Source : 3

## Review (Electron User)

Is gazing at heavenly bodies your scene? Do you know an Ursa Major from a Corona Borealis? If your answers are yes, then this program is right up your street (or your Milky Way!). It will allow you to place yourself anywhere in the world, within certain generous limitations of longitude and latitude, and look at any constellation, or the sky in general.

There are more than 80 constellations listed, and they are identified by their three-letter abbreviations as used by the IAU. Care must be taken to enter this with the correct sequence of upper and lower case letters. Of course, we Electron users know it's easier to enter lower case letters on the Electron than on the BBC Micro.

The constellations contain over 1,000 stars, although not all will be available to view from our chosen location, even though a northerly or southerly aspect may be selected.

Various options are available, one being the facility to enter ANY as the answer to the name of the constellation. The micro will then select one and display it, having made sure it is visible. You can then use this as a test, guessing the answer before it is revealed.

If your interest in astronomy is perhaps dormant, this is a super program to awaken it!

Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

The numerous Megalithic monuments which are scattered across these islands are the subjects of countless legends and folktales. One story common to many of the great standing stones is that of petrification in which persons have been turned into stone in retribution for some sinful misdemeanour. The petrification legend associated with the Nine Dancers differs from most others in that the unfortunate persons were not punished for sabbath - breaking.

According to local folklore a princess was engaged to be married to a prince from a neighbouring kingdom. An evil enchantress was so outraged at not being invited to the wedding celebrations that she decided to wreak a most terrible revenge.

On the morning of the wedding she assumed the guise of a travelling musician. She wandered down to the grassy plain where the princess was preparing her floral garland. The sorceress played such sweet music that the princess was overcome by a strong desire to dance. The lilting melodies brought others to join the dance. It was strange that music so fair could come from hands so evil. As the circling dancers whirled around the evil hag intoned:

"Wedding day, thou shalt have none,  
From this day forth thou shalt be stone."

Within the instant the dancers had been turned into stone.

When word reached the prince he became heartbroken. Now, there was a wizard who acted as advisor to the King and Queen and so the prince went to consult him.

The wizard announced that one day the spell would be broken and the princess would be restored to life again. "Whilst she is in stone then so shall you be," said the wizard as he circled the prince three times. "Whosoever revives the princess shall revive you also and the wedding will proceed as arranged."

When the wizard had finished speaking the prince had become stone. In order that no harm should befall the stones the wizard left his abode and, turning himself into an elder tree, he took up position near the petrified dancers.

Other legends connected with prehistoric sites tell of fairies, ghosts, infernal black dogs, hidden treasure and (more recently) U.F.O.s. To those unfamiliar with fairy lore it should be emphasised that the conventional image of a fairy as a pretty little creature with gossamer wings is a recently introduced one. The older tales concerning fairies described that as Little People who were normally formed although small in stature. The association of the fairies with ancient sites is a strong one and prehistoric barrows are often referred to as Fairy Hills.

In the NINE DANCERS you play the part of a reporter for a local newspaper who has been asked to write an article on the stories connected with some of the local tourist sites. As the bus on which you are travelling winds through narrow country

lanes, you gaze out at the passing scenery. The bus swerves to avoid a fox which suddenly runs out in front of it and you are jolted out of your seat. The bus stops in the village of Steignton and you get out.....

### Official Hintsheet

- Examine well the dried-up pond.
- Conversation, overheard within the White Horse Inn, will explain the policeman's reluctance to let you pass him.
- In order to proceed to the stones you will need to divert his attention. The acquisition of an antique will be helpful in this matter.
- To avoid being recognised you will need to change your appearance, twice.
- The pixie is open to temptation.
- At first appearance the black dog may be fetching but will it swallow your ruse a second time?
- An entrance to, and exit from, the fairy world exists when the full moon shines.
- There is a break in the clouds for only a short while.
- A message, in old words, should be exactly followed in order to transform the single stone.
- Once the princess is reverted to stone the game is beyond solution.
- To reverse the wizard's spell you should copy his actions.

**Instructions' Source** : THE NINE DANCERS (Larsoft) Inner Inlay

### Review (Electron User) - "A Rival For Adams"

I was brought up to believe that you only get what you pay for. While that adage is true for most things in life it certainly doesn't always apply to computer software. At only £3.95 I can safely say that THE NINE DANCERS compares favourably with many adventures at three times that price.

The program is packaged in a very professional manner with superbly atmospheric background notes to prepare you for the adventure ahead. "In THE NINE DANCERS you play the part of a reporter for a local newspaper who has been asked to write an article on the stories connected with some of the local tourist sites." One such tourist attraction is a circle of nine standing stones about which legends and flights of fantasy abound.

You begin your quest at a bus stop in a narrow country lane outside the village of Steignton. A quick glance around reveals a litter bin (full of messy rubbish), an old button, a bus shelter and a sign post. My first instinct was to examine the sign which told me that Wychwood was only seven miles away. Having already been there, I turned my attentions to the old button.

This button, it turns out, is part of a very clever chaining puzzle involving a needle and some thread - but I'll leave you to solve that one.

The village of Steignton provides much of the focus of the adventure and all the shops are worth examining. The postcards and advertisements in the window of the general store reveal the first evidence of the debt that author Geoff Larsen obviously owes to Scott Adams in the writing of adventures.

The humour is refreshing and touches upon contemporary life. Above the door of the tea shop an emblazoned sign proudly displays the longevity of the company's continued business - EXAMINE SIGN shows: Purveyors of fine teas since 1986.

Also watch out for the antique dealer who is bound to rob you blind!

The inlay notes hint at magic and mysticism which certainly have a home in this adventure. The first sticking points could be the policeman who blocks your way to the Nine Dancers and, outside the general store, an alarm which must need ringing.

If you want an adventure which compares to Scott Adams at his best, then this it.

### **Solution (Acorn Electron Haven)**

From the starting location go E, N to the pond. ENTER the POND and EXAMINE the RUSHES to find and GET a SHOVEL. Now go U and S to the tea shop. ENTER the SHOP and EXAMINE the COUNTER. GET the LOAF of bread you find before LEAVEing the SHOP and going N and E to the village inn.

ENTER the INN and LISTEN to discover why there is a police presence in the town. LEAVE and go W, N, E, E and E to the fields. DIG and GET the URN. Now go W, S, S and E before DIGging again. GET the PEG you find and EXAMINE the SCARECROW. GET its COAT and WEAR COAT as a disguise.

Go W, N, N, W and W. DROP the SHOVEL as you won't need it any more. Now ENTER the antiques SHOP and OPEN the PAMPHLET inside it. An envelope will fall out. GET the ENVELOPE and LEAVE SHOP. Outside, OPEN the ENVELOPE and a message will fall to the floor. DROP the unnecessary ENVELOPE and GET the MESSAGE. READ the MESSAGE and then DROP the MESSAGE.

Go S, S, W and N to the general store. THROW the URN at the window and the policeman will be alerted from where he was standing guard. Run S to the bus station and REMOVE the COAT. DROP COAT in the litter bin. Now proceed E, N, N, E, N, N, N and N to the stone circle. EXAM the ARCH here to discover a pixie barring the way. DROP the LOAF as bait and withdraw S to the arch. Now go back N and you will see he has made off with the food.

CLIMB the ARCH now and GET the cow-BELL. JUMP DOWN and GO ARCH. Go N and E then CLIMB the ROUND BARROW and GET the PIXY-STOOL (a kind of toadstool). JUMP DOWN and go W and N to the derelict hut. THROW the PEG to get rid of the guardian mutt. Now ENTER the HUT and STUFF the dead HARE with the pixy-stool. GET the HARE and GET the horse SHOE. The sound of a bell or the touch of iron reputedly warns off fairies.

LEAVE the hut and go back S and E to the roundbarrow. DROP the HARE and the dog will eat it, falling asleep. Now CLIMB the ROUND BARROW again and ENTER the ENTRANCE to the fairy world.

Go D and RING the BELL in the banquetting room. Move E and follow the fleeting figure W and W into the West Chamber. EXAMINE the DOORWAY then THROW the horse SHOE into him. ENTER the DOORWAY to the hidden chamber and GET the FIDDLE.

Now return all the way back to the stone circle: N, E, U, GO EXIT, JUMP DOWN, W, S, ENTER ARCH and S. PLAY the FIDDLE to reverse the witch's spell and TALK to the PRINCESS who transforms from one of the stones. Go E and EXAMINE the WIZARD. GET the KEY he offers you. Now go W and GET the GARLAND of flowers before going W again. At the lake, GO onto the GALLEON.

Now go W and OPEN the GATE. GO through the GATE and U. To revive the single stone, reverse the wizard's spell by typing "CIRCLE STONE" three times (If you do not do this correctly the princess turns back to stone and the adventure cannot be completed!) before finally you HANG the GARLAND over the stone. Something will happen!

TALK to the PRINCE and then TALK to the PIPER to complete the game!

# THE PROPHECY

## *Professional, Originally Released On Cassette Only*

## Instructions

For years, the inhabitants of the Lands of the Outer Marshes, at the Northern edge of the Great Ocean, have lived happily in peace. In recent weeks, however, rumours have been growing in the Southlands of the gathering of forces of the Dark Lord Salandra.

Then, one dark morning, the Elders call the Villagers to the Moot.

"Soon, very soon, my friends, the Dark Forces of the evil Salandra will be abroad in our fair land. Even now, the black sails of his warships are gathering at the far side of the Great Ocean in readiness to transport the evil hordes of his armies to our continent.

"Once the Outer Marshes have fallen under his misrule he can spread Northwards past the desert and on to the Valley of the Seven Kings. We are in dire peril and need the guidance...

"...of a mighty warrior."

A hushed murmur fades away into expectant silence. All had heard of the Prophecy of Thrull.

Seven Ages ago there had lived a Warrior whose struggles against the opponents of Peace became legendary. Stories were told that through these deeds he had acquired the favours of the gods and had attained the status of an Immortal. One day he left the Lands of the Outer Marshes promising that he would return if ever the tranquility of the Lands was threatened. He left a parchment with the Chief Elder whereon was inscribed a prophecy. Thrull, for that was his name, was seen no more.

The prophecy foretold that the kingdom across the Sea would fall under the powers of evil after seven generations had been born.

The Chief Elder speaks again.

"The Oracle tells me that Thrull has not died but lies sleeping somewhere near the cliff-top by the Great Ocean. To waken him from his deep sleep one amongst you needs to prove our Village worthy by taking him THREE items which will be found on your quest. Each item will be symbolic of one aspect of Thrull's chivalry and prowess. The items are:

"A SWORD - the symbol of strength and might

"A TALISMAN - the symbol of protection and supernatural force

"THE KNOWLEDGE OF OUR FOREBEARS - the symbol of our understanding.

"The Oracle says that two of the items will be attained through helping others. Five days ago a mysterious intruder broke into the Elders' quarters and stole The Book Of

Knowledge. It would seem to us that this event was related in some way and that the retrieval of the Book has been pre-destined.

"Now, will there be one among you to set out on this quest?"

You hear a loud shuffling of feet and then to your horror, find that all but yourself have taken a step backwards. The Chief Elder addresses you:

"Good luck, my child. May fortune favour you."

So it was that you reluctantly set off on a journey fraught with danger, mystery and adventure. After a couple of minutes' walking you find yourself on an East/West road; GOOD LUCK.

### Official Hintsheet

- There is a 'help' facility within the game itself.
- The stream carries the answer to crossing the bridge.
- There is a concealed room within the tower near the mirror room.
- The horse packs a surprise without adding a rider.
- There is something of note in one tree and a note of something in another.
- The key solution to the beach lies within the cave, if you can find it.
- The fissure may weigh heavily on your mind but don't get too cross.

**Review** : No Review Yet

### Solution (EUG)

Travel W and CLIMB up the hill. EXAMINE the TREE there and SHOUT to scare the bird away. EXAMINE its NEXT and GET the RING. Now go N and E and ENTER the CAVE. Move E and S and GET the KNIFE. Travel N, E and E again then JUMP DOWN from the ledge.

EXAMINE the HORSE and EXAMINE the backPACK. You cannot ride the horse but GET the BOTTLE and GET the TORCH as they will come in useful later. Go S and W then use the knife to CUT the ROPE from the tree. GET the ROPE and go E and N with it. ENTER the STREAM and FILL the BOTTLE with water. You now have to DROP the BOTTLE so you have enough inventory space to do what follows. GET the COIN on the ground and go U and S to the bridge. GIVE the COIN to the bridgekeeper and now go back N. ENTER the STREAM again and GET the BOTTLE you dropped earlier. Go U and S to the bridge again.

CROSS the BRIDGE and go E. ENTER the TOWER and go U, U and W. On the top floor, EXAMINE the dressing TABLE to find a mirror. GET the MIRROR and EXAMINE the WINDOW. You will discover there is a ledge beyond it so GO out on to the LEDGE and TIE the ROPE to the bar. CLIMB DOWN the rope - it will break but you will fall safely onto a ledge below. GO in through the new WINDOW and CUT the ROPE which binds the man.

GIVE the BOTTLE of water to the man and he will present you with a Golden Cross. GET this CROSS and LIFT the TRAPDOOR to leave the tower. GO TRAPDOOR then go E, D, N and S to find a boat. ENTER BOAT and ROW.

On the beach, GET the PLANKS and EXAMINE the ROCK. GET the FISH, go W and GIVE the FISH to the bear. Go E and LIGHT the TORCH from the remains of the fire. Now go W and ENTER the CAVERN. Inside, go N and EXAMINE the ALCOVE to find a key. GET KEY. Go D the steps and you will meet a scorpion. DROP the MIRROR beside it and it will be intimidated by its own reflection. GET the SHOVEL and return U, S and S.

DROP the PLANKS across the fissure then return N, E and E to the beach and DIG. UNLOCK the CHEST and EXAMINE the CHEST to find the Book of Knowledge. GET the BOOK and go W with it. ENTER the CAVERN and go S. The Book is too heavy to carry across the planks so, with all your might, THROW the BOOK across the fissure. Now CROSS FISSURE and EXAMINE the LEDGE to find it again. GET the BOOK for the second time and go S, E and E. Outside the cave is Milithir's shack.

ENTER this SHACK and GIVE back his RING. You will receive a sword. GET the SWORD before LEAVEing the SHACK. Go W, S, U, U and U then ENTER the stone CIRCLE and you will be greeted by Thrull. GIVE him the SWORD, BOOK and CROSS to him to complete this first part of THE RISING OF SALANDRA.

# THE PUPPET-MAN

*Professional, Originally Released On Cassette Only*

Game Type : Text Adventure (Adventure No. 5 In THE LARSOFT COLLECTION)  
Author : Geoff Larsen  
Standalone Release(s) : 1987: THE PUPPETMAN, Larsoft, £3.95  
Compilation Release(s) : 2002: THE LARSOFT COLLECTION, Larsoft, PD (Disc)  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : LARSOFT, 4 Chantry Road, Clifton, BRISTOL BS8 2QD  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Towards the end of the last century, there lived a puppeteer whose puppet shows always attracted large crowds wherever he performed.

Such was the skill of the puppeteer that rumours abounded that the puppets were not made of wood at all but were actually tiny people who were under the puppetman's control.

There was to be a Summer Fete centred around the village of Owlsmore. When it was announced that the puppetman was to attend with his little people, crowds from all over the surrounding country began to descend on the tiny village hoping to witness the much acclaimed spectacle. On the morning before the opening of the Fete it was discovered that the most important marionette of all had been mislaid or possibly even stolen.

The local people on hearing this news began to speculate that this was indeed proof that the puppets were, as they has always suspected, living creatures and that one of them had decided to leave.

Personally, you are astonished to learn of the puppet's disappearance because during the night you had had a most peculiar dream.

During your dream you had been visited by Mnemosyne, wife of Zeus and mother of the Muses. She had spoken thus - "I am Mnemosyne, I am memory."

"In the morning there will be the discovery that a valuable puppet has disappeared. If you are able to help some of my daughters, they in turn will help you find that which has been stolen."

These words from your dream now come back to you but you are unsure as to what to do next. Then a strange feeling comes over you and you hear the voice of Mnemosyne once again...

## Official Hintsheet

- If you are still in a dream you should come to your senses.
- You may learn much by talking to people.
- As the story unfolds situations may change.
- You should be above the bear's attentions. A tasty morsel may be a bait to trap it.
- During the adventure other characters may leave objects behind.
- Some locations will require a few visits.
- There will be a handy protection for you somewhere.
- You will need legerdemain to operate a trap.
- You may spend some time in a nursery rhyme but the stage will be primed for a pantomime.

### **Review (Electron User) - "No Strings Attached"**

Geoff Larsen is fast becoming one of the prime adventure writers for the Electron. With the release of this, his fifth adventure, he confirms his mastery of the genre. THE PUPPET-MAN is one of the most original and engrossing adventures I have seen for a long while, and must be Geoff's finest offering yet.

At the end of the last century there lived a puppeteer whose puppet plays were the talk of the land. In fact his puppets were so lifelike it was rumoured they were little people, made up to look like puppets. At the midsummer fair in the village of Owlsmore the Puppet Man is due to perform but the day before, his star marionette was stolen or mislaid.

During a dream, you are visited by Mnemosyne, mother of the Greek muses. She tells you that if you can help three of her daughters; the muses of dance, comedy and poetry, they in turn will assist you in a search for the marionette.

The adventure becomes a trilogy of inter-related plots in which you first help a ballerina, then an auguste clown and finally Pierrot.

The backdrops incorporate nineteenth century theatre and circus giving the whole adventure the heady atmosphere of vaudeville. The puzzles are complex, but totally logical and require careful thinking and revisiting of different scenes.

The beginning reminds me of something of a cross between Level 9's WORM IN PARADISE and Robico's MYOREM. To be compared even in part to those two masterpieces is sure testimony to the quality of this adventure.

Later on there is a beautiful scenario involving a butcher, a baker and a candlestick maker, and a wooden tub. Another scene involves trapping a bear, while on the stage is a struggling Covent Garden escapologist. As suggested, the adventure involves dancing, comedy, poetry and sleight of hand, and like all of Larsoft's adventures is totally non-violent.

The multi-use of each location and the facility to talk to the characters you meet, means Geoff has used the Quill to its utmost. The mind boggles to think of what he might achieve given machine code programming and better text compression.

This adventure is superb and you will be hard pressed to find a better release for the price. Larsoft is going to be a name worth watching over the next few years. All I can say is buy it, you won't be disappointed.

Pendragon, ELECTRON USER 4.11

### **Solution (Electron User, Contributed by G. Livesey)**

Section 1 : WAKE UP, EAST, EXAMINE STUMP, TALK TERPSICHORE then SOUTH, SOUTH, SOUTH, EAST, ENTER the MANOR. Go UP then WEST and TALK to BALLERINA. EAST, NORTH, GET LADDER, SOUTH, DOWN and LEAVE the MANOR. WEST, NORTH, NORTH, WEST, DROP LADDER and CLIMB TREE. EXAMINE HOLLOW and EXAMINE JACKET and GET SILVER KEY. DOWN and GET LADDER.

EAST, SOUTH, SOUTH, EAST and ENTER the MANOR. Go NORTH into the lounge and UNLOCK CLOSET. EXAMINE CLOSET and EXAMINE SKELETON. When it crumbles away, you can GET the SKELETON KEY. Then return SOUTH, LEAVE the MANOR, WEST, SOUTH, WEST and UNLOCK the DOOR.

ENTER the village HALL and EXAMINE the GOODS on the table to find the ballet shoes. GET the SHOES and LEAVE. Return EAST, NORTH, EAST, ENTER the MANOR, go UP and WEST and GIVE the SHOES to the ballerina.

At this point a Harlequin will appear and you will be transported to section two.

Section 2 : Go EAST and TALK THALIA. Then go SOUTH, SOUTH, SOUTH, WEST then NORTH and GET CLEAVER. Now go SOUTH, EAST, EAST and ENTER the MANOR. Go SOUTH into the dining room and EXAMINE the TABLE. Get the SALMON then travel NORTH, UP, NORTH, EXAMINE the SHELF to find the GLOVE. (You can pick up the GLOVE at this point - although it is not required until the third section)

Go SOUTH, DOWN and LEAVE. ENTER the MARQUEE and ENTER the RING. Now OPEN the CAGE, ENTER the CAGE and DROP the SALMON before you LEAVE the CAGE. Next OPEN the CAGE which has slammed shut behind you.

Go NORTH then EAST and DROP the LADDER then CLIMB the LADDER so that you are on top of the cage. OPEN the CAGE - a bear will lumber out and, smelling the salmon, will be tempted by it. Go DOWN then WEST and ENTER the MARQUEE and CLOSE the CAGE, thus trapping the bear.

Next go NORTH, WEST and UP into the living wagon and TALK to MAN. Now go DOWN, EAST, EAST and ENTER the CAGE. EXAMINE the BOX to discover some netting. GET NETTING and LEAVE CAGE.

Now go WEST and ENTER MARQUEE again then go SOUTH, SOUTH, WEST, SOUTH, SOUTH, SOUTH, SOUTH, EAST then THROW NETTING to trap the attacking owl.

Journey EAST and EXAMINE the BUILDING. EXAMINE CHAINS then CHOP the CHAINS (with the meat cleaver). ENTER the BUILDING and go UP. EXAMINE the NEST to find the clown's stolen eggshell 'face'.

Finally go DOWN then LEAVE and go WEST, NORTH, NORTH, NORTH, NORTH, EAST and ENTER the MARQUEE yet again. ENTER the RING and go NORTH, WEST, UP then GIVE the EGGSHELL to the man and go DOWN.

Harlequin will now appear and you will be transported to section three of the game.

Section 3 : Go EAST and TALK to ERATO then go SOUTH, SOUTH, WEST, ENTER the WILLOW and TALK to PIERROT. EAST, EAST, SOUTH, WEST, SOUTH, GET the CANDLE, NORTH, EAST, EAST and ENTER MANOR. Go UP and NORTH then GET the GLOVE (if you don't have it already), EXAMINE the SHELF and READ the NOTE.

Go SOUTH, DOWN then LEAVE. Now ENTER the STAGE and TALK to the JUGGLER. He will be distracted and drop one of his clubs. GET the CLUB then JUMP DOWN and go WEST, SOUTH, SOUTH, SOUTH, WEST and SOUTH. A man will rush off to the west.

Now you can go WEST, WEST, WEST. DROP the CLUB in order to set off the trip-wire. Go SOUTH, SOUTH, WEST, SOUTH, EAST into the clown's house. EXAMINE the FIREPLACE, WEAR the GLOVE and GET the POKER.

Go WEST, NORTH and WEST into the tavern. EXAMINE the FIRE and POKE the CINDERS. Still wearing the glove, GET the BLACK KEY.

Go EAST, SOUTH and EAST then LIGHT the CANDLE from the clown's fire. Go WEST, NORTH, WEST, UP, ENTER the DOORWAY, UNLOCK Pierrot's DESK and GET his POEM. ENTER the DOORWAY again then go DOWN, SOUTH, EAST, NORTH, NORTH, EAST, EAST, EAST, NORTH, EAST, NORTH, NORTH, NORTH, EAST and ENTER the STAGE again. GIVE the POEM to Columbine.

Now JUMP DOWN and go WEST, NORTH, NORTH, NORTH. Erato will advise you to EXAMINE the tree STUMP. GET the MARIONETTE then go SOUTH, SOUTH, SOUTH, SOUTH and EAST into the

Inn. GIVE the MARIONETTE to the Puppet-Man and prepare for one of the most thankless endings in the history of Adventures!

# THE RISING OF SALANDRA

*Professional, Originally Released On Cassette Only*

Game Types : Arcade  
Standalone Release(s) : 1987: THE RISING OF SALANDRA, Larsoft, £3.95

# THE SAGA OF ERIK THE VIKING

*Professional, Originally Released On Cassette Only*

Game Type : Text Adventure  
Author :  
Standalone Release(s) : 1987: ERIK THE VIKING, Level 9/Mosaic, £9.95  
Compilation Release(s) : None  
Stated compatibility : BBC B, B+ and Master 128  
Actual compatibility : 64K Electron, BBC B, B+ and Master 128  
Supplier : LEVEL 9.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"In this visually dramatic text adventure you travel, as Erik the Viking, in search of the evil Dogfighters who have kidnapped your family. Explore the authentic Viking settlements and seek help from Wizards, Dragons and Giants in strange lands. This exciting adventure game contains over 200 locations. Based on the book by TERRY JONES."*

## Loading

If you are using a 64K Electron, ensure the Master Ram Board is switched on. The program is not compatible with a standard Electron. Loading takes approximately four minutes.

## To Save A Game Position

You may save your current game position so that you can turn the computer off, yet return later to the same stage in the game. To do this:

- Insert a SPARE cassette in the cassette recorder.
- Press the RECORD buttons on the cassette recorder, and after allowing for the cassette leader tape to pass the record head of the cassette recorder, type SAVE and press <RETURN>.
- When the position has been saved, you will see on the screen a not of where Erik is. STOP the cassette recorder.

## To Load A Saved Game

To start again at a saved position:

- Insert the 'saved game' cassette in the cassette recorder and ensure it is fully rewound.
- Type "RESTORE" and press <RETURN>.
- YES and press <RETURN>.
- Press the PLAY button on the cassette recorder.
- When the program has completed loading, the text will reappear on the screen.

## Playing The Game

In this game you are Erik. In an adventure you instruct the computer in simple English sentences so that you may move around from place to place, pick things up, examine objects and carry out a number of other actions.

The game tells you what Erik can see and what is happening around him. To do things, type in simple commands such as:

```
TYPE THE STEWPOT
EAT STEW
GO NORTH
EXAMINE BOAT
```

Remember to press <RETURN> after each command.

The game understands many words. Some of these you will have to discover yourself.

Directions can be abbreviated - for example: N, S, E, W, NE etc as well as U for UP and D for DOWN. If you wish to repeat the previous command, type A for AGAIN.

The following vocabulary should help you get started:

AGAIN (repeat the previous command)

EXAMINE (look closely at something)

LOOK (look around)

INVENTORY (what am I carrying?)

QUIT (stop playing)

SCORE (to find out how well you are doing)

IT (can be used to refer to a noun used in the previous command -

e.g.: EXAMINE FLASK may be followed by the command TAKE IT)

EVERYTHING (allows you to TAKE or DROP everything without having to list all the items)

### Directions

NORTH, SOUTH, EAST, WEST, NORTHWEST, NORTHEAST, etc, UP, DOWN, LEFT, RIGHT, AHEAD etc.

When Erik is on board the Golden Dragon it will move with him. Use LEAVE to leave the ship.

Other useful words are:

ATTACK

BREAK

CLOSE

DROP

EMPTY

FILL

GIVE

KNOCK

LIGHT

LISTEN

MEND

NO

OPEN

PLANT

PLAY

PRESS

PULL

RUN

TAKE

THROW

TIE

WAIT

WAVE

YES

Before starting on your adventure, read the introduction on page 11 which sets the scene. If you find you need more help than is given in these pages, you can acquire a 'hints sheet' from the publishers by sending a stamped, addressed envelope to: Viking Dept, Mosaic Publishing Ltd, 187 Upper Street, London N1 1RQ.

To find out more about Erik, his friends and his enemies, read the extracts from Terry Jones' book THE SAGA OF ERIK THE VIKING which follow the introduction. You may also find a few clues in these pages that will help you to solve the game!

The complete book THE SAGA OF ERIK THE VIKING by Terry Jones and illustrated by Micheal Foreman is available from all good bookshops.

### Introduction To Computer Adventure Games

This game is the second saga of Erik the Viking, the famous warrior who lived a thousand years ago. He owned a large farm in Norway, beside the North Sea, and lived there with his family and servants.

Every summer, Erik's sons sailed off in the Golden Dragon to trade with the Skraelings or steal their gold. And every summer his sons asked Eric to come with them. But Eric thought that he had seen enough strange lands and always refused. He was happy to run the farm instead and swap tales with them in the smoky hall each winter.

One Spring day, Erik wanted to check the borders of his land and make sure that all the sheep had been brought in for shearing. He followed the river which flowed past his house and soon reached the snow-capped mountains to the east. Then he sat down for a rest.

As Erik dozed beneath the fir-trees, he seemed to see a vision. An army of strange creatures swarmed over the farm. His wife managed to hide a few treasures before she

was caught, and then the creatures dragged everyone away. All this time, Erik couldn't move. Then he woke up.

You must play the part of Erik the Viking and find out what has happened. Good Luck!

### **Erik And The Storm**

This is the tale of a Viking warrior who lived hundreds of years ago. His name was Erik. His ship was called Golden Dragon, and its figurehead was a fierce monster carved out of wood, and covered with gold leaf.

One day, Erik said to his wife: "I must find the land where the sun goes at night." But his wife replied, "No one has ever been to that far country. And of those who have tried few have ever returned."

"You are right," said Erik. "But until I have sought that distant land, I shall never sleep in my bed again."

So he called his son who was fifteen years old and told him he must guard their home by day and night. Then he took his sword, which was called Blueblade, stepped on board Golden Dragon and sailed off towards the setting sun.

That night they sailed on far from land, and Erik stood at the helm of Golden Dragon gazing into the darkness. Erik's men whispered to each other that they were seeking the land where the sun goes at night, and that no one had ever found it and lived to tell the tale.

Just then a bright green light appeared above them, and a star shaped leapt across the sky. Erik turned to his men and said, "We shall find what we seek." And no one dared say a word after that.

The next morning they found themselves alone on the ocean with great wave heaving the ship and down. Erik looked up into the sky and smelt the wind.

"We shan't make it!" whispered Erik's men, one to the other, as the storm clouds blotted out the sun.

"We'll be wrecked at sea," they murmured as the first drops of rain fell on the deck.

"There's land!" called out Erik. "Take down the sails...we'll have to row for it."

They leant on their oars as the rain began to pour down on them. And the speck of land on the horizon got bigger as the skies got darker and the sea grew rougher.

But they rowed with all their might and all their main, and, as the lightning forked across the heavens and the thunder rolled all round them, they got closer and closer to land.

"Rocks to port!" cried the look-out, and the helmsman steered Golden Dragon round to starboard. "Rocks to starboard!" cried the look-out, and Golden Dragon swung back to port again. "Look out ahead!" cried Erik, and the golden monster on the helm scraped against the rocks as the sea dragged them down and then threw them up again.

"We've had it now!" cried Erik's men, one to the other and they shut their eyes.

"Keep rowing!" cried out Erik, and he steered the ship between the rocks and the boiling sea until all at once they found themselves in a deep fjord.

One by one Erik's men opened their eyes. The rain still poured down on them and the lightning lit up the wild rocks above them, but the water was calm and they were safe.

"Now we must sleep," said Erik. "But tomorrow we shall repair Golden Dragon before we dare go back on the high seas."

His men laid the mast down and threw the sails across it like a tent, and there they slept for the rest of that stormy night.

### **Erik And The Sea Dragon**

When the Ship, Golden Dragon, had been repaired, Erik and his men dragged her back into the water and held a feast.

They they sailed off into the uncharted seas.

When they had been travelling three days and three nights, they entered a thick mist, and could see neither to right nor left nor in front nor behind.

Thorkild came to Erik and said, "There is something strange about this mist."

"You are right," replied Erik. "Mist is always whitey grey, but this is sometimes red, sometimes blue."

"But the strangest thing about it," said Thorkild. "Is that it is warm. Whereas mist is always cold and damp."

So Erik stood in front of his men and said, "Has any one of you ever seen such a mist as this?" But they all shook their heads.

Just then they heard the most terrible clap of thunder right over their heads, and the whole boat shook with the sound, and the men trembled as the thunder rolled on and on above them.

Thorkild looked at Erik and said, "There is something strange about this thunder."

"You are right," replied Erik. "Thunder always follows the lightning and yet we have no lightning."

"But the strangest thing about it," said Thorkild. "Is that it does not stop but gets louder and louder, whereas thunder dies away."

At that moment, Sven the Strong pointed up into the sky and said, "Look! The sun!" And they all looked up through the mist and saw a great light shining through at them. And Thorkild turned to Erik and said, "If that is indeed the sun, it is a very strange sun."

And Erik said, "You are right. I have never seen the sun with a black spot right in the middle like that, nor have I seen the sun moving through the sky first one way and then the other."

"But the strangest thing about it," said Thorkild. "Is that I have only ever seen one sun in the heavens, but now I see two!"

And at that, a great cry went up from all board: "It's the Great Dragon of the North Sea!" they cried. "Those suns are its eyes!" said Erik.

"And that thunder is its roar!" said Thorkild. And at that moment they saw its huge jaws and they saw that the mist was not mist at all, but the smoke that issued from its fiery nostrils.

"We are lost!" cried Erik's men. "Nothing can save us now!"

But Erik said, "To the oars! We must row as we have never rowed before!" And they leapt to the oars, but try as they might they could not escape, for the Dragon of the North Sea opened its mouth and began to suck the waters down its great fiery throat, and the ship was carried back twice as fast as they could row forwards.

When Erik saw it was no good and that the Sea Dragon was upon them, he turned to Ragnar Forkbeard and said, "What shall we do?"

Ragnar Forkbeard did not answer but, white as a sheet, he ran to the sleeping quarters.

"Has it come to this," asked Erik. "That Ragnar Forkbeard has lost his courage AND his tongue?" And as he spoke the Sea Dragon loomed across the deck of the ship and the men ran here and there putting out fires.

Just then Ragnar Forkbeard reappeared carrying two bolsters and he said, "I have lost neither my courage nor my tongue."

And with that he strapped the bolsters on his back and started to climb the mast.

Sven the Strong turned to Erik and said, "Ragnar Forkbeard has not lost his courage or his tongue - he has lost his wits."

Just then they heard a fearful noise and they span round to see the great Sea Dragon take the stern post in its mouth and snap it in two with its teeth.

Erik lifted his spear and threw it with all his might at the great Dragon, but it just glanced off its horny skin. Then Thorkild threw his great spear, but that clattered to the deck without piercing the Sea Dragon. Then Sven the Strong stood up, raised his spear, and threw it with every ounce of strength he had, and the shaft went straight and true and entered the creature in the soft skin above its lip. For a moment, the Sea Dragon drew back, but not for long - and its great jaws closed around the after-deck and Erik's men all ran back in fear.

"We've had it now!" said Sven the Strong, but Erik pointed up in the air. And they all looked in amazement at the top of the mast. For there was Ragnar Forkbeard, clinging on by his legs, with a bolster in each hand.

The Sea Dragon took another great bite, and half the boat was between its fierce jaws, and its eyes were on a level with the mast-top and its nostrils were thrust into the sails. Whereupon Ragnar Forkbeard leapt onto its nose and gave a most tremendous shout that made everyone look up, and even the Dragon paused and tried to focus its eyes on the tiny figure on its nose. Then Ragnar Forkbeard took one bolster and plunged it into the Dragon's right nostril, and the second into its left nostril. The Dragon paused again. Then Ragnar Forkbeard took his good sword and plunged it into the two bolsters - one after the other - so that they opened up and all the feathers billowed into the air as the Dragon breathed out, and then as it breathed in again, all the feathers suddenly disappeared - sucked into its nostrils.

The Dragon paused, and its jaws went slack, and Ragnar Forkbeard jumped for his life just as the Dragon sneezed a most almighty sneeze, and the sails of the ship filled and the ship shot out of the Dragon's jaws and across the waters and on out of the mist, and over the sea it flew through the air as if it were a bird, not a ship, and at last landed with a great splash, miles and miles and miles away from the Dragon of the North Sea.

Erik's men cheered and threw their helmets in the air, and Ragnar Forkbeard climbed down, and after that no one ever dared to say he had lost either his courage OR his voice OR his wits ever again.

### **Erik And The Dogfighters**

While Erik and his men were staying at the palace of the old Enchanter and his daughter, an even stranger adventure happened.

One morning they wre hard at work on their ship, Golden Dragon, having almost finished repairing the great hole in the stern that the Sea Dragon had made, when they saw another ship far out to sea.

Erik strained his eyes and then said, "I have never seen a ship like that before."

Ragnar Forkbeard too peered into the distance and then said, "This is the strangest ship I ever saw!"

Thorkild raised his hand to his eyes and said, "It has six sails and each sail is round like the sun. And how tall the masts are!"

The old Enchanter came to the shore, and when he saw the ship approached he shook his head, and sighed a deep sigh. "I fear your work on Golden Dragon has been in vain. None of us shall live to see another sunrise."

Erik put his hand to his sword and so too did each of his men.

"Farewell, daughter," said the old Enchanter. "Even I am not powerful enough to save you from this evil that now approaches." And tears came to the old man's eyes.

But Erik gripped his arm and said, "What is this strange ship that approaches? What foe does it bring that strikes such terror into your heart?"

The old Enchanter gazed at him and said, "I know this ship from the fearful past. I have seen it once before from another land. It brings death and destruction for it brings the Dogfighters to our peaceful shore."

Erik and his men looked out at the ship that was fast approaching, and they could see dark figures lining the deck and the glint of many swords.

"Whoever it brings," said Erik. "We shall defend this island to the last breath in our bodies."

But the old man shook his head. "How can you succeed where all have failed before?" And all this time, the Dogfighters' ship drew nearer and nearer.

"Take your daughter to the great cave in the mountain, and we shall find you when the fight is done," said Erik.

But the old Enchanter shook his head. "You cannot fight the Dogfighters. Come with us, and perhaps we shall escape somehow..."

But Erik replied, "We shall never leave our ship, Golden Dragon, for it is certain such an enemy would steal or destroy it." And all this time the Dogfighters' ship drew nearer and nearer, and now the men on the shore could see the glint of steel helmets in the wintry northern sun.

"Come away, quickly, while there is still time!" cried the old Enchanter, but Erik and his men had drawn their swords and already they were taking up their battle stations.

The old Enchanter shook his head and turned to go, but Freya, his daughter, stood where she was and said, "Father, I will stay with these brave men and face this enemy. For I would rather die here and now on this shore than live in fear and shadow in the cave in the mountain."

The old man tried to speak but no words came to his lips. But he held his daughter close to him and then they both hid behind some rocks as the Dogfighters' ship drew closer to the shore.

Erik and his men peered hard to make out their enemy, and now they could see that each of them did indeed wear a steel helmet and each helmet was shaped like a great dog's head!

"Are these men with the heads of dogs?" said Erik. "Or dogs with the bodies of men?" And secretly each of his companions felt sick with fear.

Ragnar Forkbeard turned to Erik and said, "How can we fight such creatures as these?" And Erik stared at the grey sea and said, "Even I fear it is hopeless."

And they watched as the god-headed warriors began to leap out of their strange craft. Then Sven the Strong took Erik to one side and whispered to him, "Erik! Never have I felt such fear as I feel now." And Erik looked into his eyes, and saw the fear there, and said, "Then it is indeed hopeless." And Erik threw his sword onto the stony beach and looked at his men, and they each one of them saw the fear in his eyes.

As the Dogfighters waded nearer, the companions saw that, though the waves were high, the dog-headed warriors stood three feet above the highest!

Then Ragnar Forkbeard also threw his sword onto the stony beach and said, "If Erik cannot fight these creatures, how can we? I too have never felt such fear." Then the shore rang to the clatter of swords as each of Erik's men threw his sword down onto the stony beach...all except for Sven the Strong, and he said, "What has happened to us? Many times in my life I have been afraid, yet it has not made me throw down my sword..."

And Erik and his men looked up and saw the dog-headed warriors wading through the boiling waters nearer and nearer to the shore and their eyes glittered in their helmets cold and hard. And then even Sven the Strong threw down his sword onto the stony beach saying "...and yet, I know, even I cannot fight with such fear in my heart..."

But just then they heard another voice behind them, saying, "It is NOT fear that you feel!" And they turned, and there was the old Enchanter's daughter standing white and frail in the wintry northern sun but her face was strong.

"I feel fear," said Erik to Freya. "Because I know that no one has ever faced these Dogfighters and lived..." and he sank to his knees as if a great weight were pressing down on him, and all the time the dogheaded warriors waded closer and closer.

"But you are wrong!" cried Freya. "Don't you remember there is one here who HAS faced them and lived!"

At this Sven the Strong looked up, and Thorkild looked up, and they said, "Who? Which one of us has ever faced these fearful creatures?" And Freya replied, "None of YOU have, but my father had!" And without another word Sven the Strong strode over to the old man and said, "Of course...If you know them from the fearful past as you say, you have met with them and lived. Tell us HOW!"

And the old Enchanter wept, "It is hopeless."

"Tell us what happened!" cried Sven the Strong, and he lifted the old man up in his hands as the Dogfighters reached the beach at last.

The old man looked into Sven's eyes. "Did I escape?" he asked.

"Of course you did!" cried Sven the Strong, and he saw the fear flicker a moment in the old Enchanter's eyes.

"But they are here! The Dogfighters are upon us!" cried the old man. But Sven did not turn round. He did not see the first Dogfighter reach the first of Erik's men...

"But this is the second time!" cried Sven. "You escaped before! How? HOW?"

"How?" cried the old man, and he shut his eyes.

"It was not fear you felt," cried his daughter. "Don't you remember telling me - it was not fear you felt..."

"No..." said the old man, and the first of the Dogfighters struck the first of Erik's men to the white bone...there where he knelt on the stony beach.

"It was not fear..." said the old Enchanter. "I remember now! It was the FEAR of fear...It was a spell the Dogfighters cast, for they themselves are cold cowards." And the old Enchanter opened his eyes, raised his arms, and for an instant the wintry northern sun turned black - no more than the blinking of an eye - and then Sven the Strong gave a great cry: "Erik! It is a trick!" he cried. "These Dogfighters would make us afraid of being afraid! We are often frightened but we are not cowards!"

And before the words had left his lips, Erik's sword was back in his hand: "I am not afraid of fear!" he cried. "Fear is like an old friend, who shouts by my side!" And he raised his sword and struck the Dogfighter a mighty blow across the shoulders, and the steel helmet rang, and before the echo had died amongst the grey rocks, every one of Erik's men - Thorkild and Ragnar Forkbeard and Sven the Strong and the rest - had taken up their swords off the stony beach. The battle against the Dogfighters had begun...

The battle was long and hard, but eventually the Dogfighters were defeated. They retreated to their strange ship and sailed away.

Erik mended the Golden Dragon and, after many other adventures, returned home laden with treasure. (If you want to know more about Erik's adventures, read the book THE SAGA OF ERIK THE VIKING by Terry Jones.)

Disc compatibility : Unknown

## Instructions

*"An invaluable teaching or learning aid for beginners or advanced students of Spanish. The ready-made lessons provide an enormous vocabulary of words, phrases and verbs arranged in subject groups. New lessons can also be created or existing lessons modified as required. The Spanish Tutor presents words first in one language, then the other, in large easily read letters complete with accents and special characters. Different colour are used for masculine and feminine words; this greatly assists gender learning. All lessons can be run in three different ways: learning only; self-test; or speed and accuracy test. Full editing facilities allow an infinite number of new lessons to be created and stored on cassette or disk for later use."*

### 1. Introducing THE SPANISH TUTOR

The Spanish Tutor language learning-aid comprises a control program and a series of self-contained lessons. The control program is recorded as the first item on side 1 of the cassette. The remainder of the cassette contains 16 sequentially recorded lessons. Each lesson covers a different subject, a full list of which appears in section 12 of the operating instructions. Individual lessons consist of lists of words or phrases up to a maximum of 250 entries per lesson. Each entry consists of the English text, Spanish text and gender if appropriate. The English and Spanish texts for each entry can be just a single word or a three-line phrase up to 59 characters long.

On successful loading, a colourful display results showing the program title and a list of available facilities. This is known as the COMMAND MENU. At the bottom of the screen the flashing message LESSON STORE EMPTY will be seen. The LESSON STORE is actually the part of the computer's memory in which the Spanish Tutor stores a lesson. A pre-recorded lesson can be loaded into the lesson store using the method described in section 3, or a new lesson created as described in section 5. The Spanish Tutor will only allow one lesson to occupy the lesson store at any time, this is referred to as "the current lesson".

### 2. Program Facilities

The facilities listed in sections 3 to 11 are available whenever the screen shows the command menu. Individual program facilities are requested simply by keying the appropriate letter. The command menu will then be replaced by a request for further information.

The program will ignore any invalid or illegal commands. For example it is not possible to Run a lesson without having first Loaded the lesson from cassette/disk.

### 3. Loading A Lesson (Key L)

Enter the cassette filename of the required lesson, followed by the RETURN key. If RETURN is pressed without first entering a filename, the next sequential lesson recorded on the cassette will be loaded into the lesson store. A list of lesson filenames is given in section 12.

When the required lesson has been loaded into the lesson store, the screen indicates the lesson title and the number of entries contained in that lesson.

#### **4. Running A Lesson (Key R)**

Initially the screen shows a questionnaire requesting four items of information. End each answer with the RETURN key.

Display times for the Spanish and English texts need to be separately specified in seconds. Values may be 0.1 seconds upwards. For the first lesson tried, it is suggested that two seconds is specified for both the Spanish and English display times. Other values can be tried later. If a value of 0 seconds is entered, this will suppress display in that language altogether. This is particularly useful for self-testing.

Key S or E to specify which of the Spanish or English texts should appear first on the screen. The final question asks if the lesson is to be automatically repeated or not. If Y for Yes is keyed, the lesson will cycle repeatedly until terminated by pressing the space bar and keying X.

For lessons containing verb conjugations, it is recommended that the display times are entered as Spanish = 0.1 seconds, English = 5 seconds. Display Spanish or English first = S.

Once the questions have been answered, the lesson will automatically start. At any time during the lesson the current display can be "frozen" by pressing the space bar; the lesson may be optionally be re-continued (by keying space) or terminated (by keying X).

#### **5. Creating A New Lesson (Key C)**

Enter Spanish text on the dotted lines. Specify gender - when asked (the program automatically allocates gender when "el, la, los, las, un or una" is detected at the start of the Spanish text). Enter English text on the dotted lines. The Spanish text, gender and English text combine to form one "entry" in the lesson store. It is permissible to enter Spanish words in both the Spanish and English text positions; this is particularly useful for entering verb conjugations.

When entering Spanish and English texts, the down cursor key moves the cursor to the next line, the RETURN key terminates the text. Spanish accents are entered immediately after (and on the same line as) the character to which they apply using the keys listed in section 13. For example "¿Por que?" is entered as "@Por que/?" This will appear correctly during lesson displays.

Lesson entries can be repeatedly keyed into the lesson store up to a maximum of 250. Lesson creation can be ended at any time before this however, simply by keying END (RETURN) at the start of line 1 of the Spanish text.

Having created a new lesson the command menu will prompt the Saving of this lesson by flashing the Save command (see section 6).

#### **6. Saving A Lesson On Cassette/Disk**

This facility is only used when a permanent copy is required of a newly created lesson or of a previous lesson which has been modified.

Enter a filename for the lesson (up to 8 characters)

Enter a title for the lesson (up to 24 characters)

Switch the cassette player to the record mode when the program issues the message RECORD THEN RETURN. On completion of the recording the tape should be rewound and the Verify facility requested (See section 7).

Alternatively, insert a blank formatted DFS disk in drive 0.

The Save facility does not affect the lesson held in the lesson store in any way.

### **7. Verify A Saved Lesson (Key V)**

This facility should ALWAYS be used to check that a newly saved lesson has been successfully recorded. The Verify command will flash in the command menu until a newly saved lesson has been verified.

Enter the filename of the lesson to be verified before switching on the cassette player. If RETURN is pressed without first entering a filename, the next lesson recorded on the cassette will be verified. The program confirms that the verification is successful by printing "loading" then "OK". If verification fails, press the ESCAPE key and save the lesson again using the Save command (see section 6).

The Verify facility does not affect the lesson held in the lesson store in any way.

### **8. Add To Current Lesson (Key A)**

This facility enables further entries to be added onto a lesson which is already held in the lesson store. Instructions for using the Add facility are identical to those for the Create facility (see section 5).

### **9. Delete Entry From Lesson (Key D)**

This allows a single entry to be deleted from the lesson currently occupying the lesson store. It may be used to correct keying errors noticed in newly created lessons in conjunction with the Insert facility (see section 10).

Key in the entry number of the entry to be deleted. Entry numbers are displayed whilst running a lesson (see section 4) whenever the display is frozen by pressing the space bar.

### **10. Insert New Entry (Key I)**

This allows a single new entry to be inserted into the lesson currently occupying the lesson store.

First of all it is necessary to specify the point of insertion required, this results in a display of the entry currently occupying that position. If this is the correct place for the insertion, key "Y" (RETURN) then enter the Spanish, gender and English for the new entry.

### **11. Test Lesson (Key T)**

The test facility may be used with any lesson which has been loaded from cassette/disk or newly created in the lesson store. In operation, the program displays a word or phrase in one language only; the translation must then be keyed in, this will appear on the screen one character at a time. Each time a wrong key is pressed the computer emits a "beep", and the character is displayed. At any time during the test help is available by pressing the COPY key. Each time COPY is pressed, the next character of the translation appears on the screen. At the end of the test, a performance summary is displayed.

### **12. Accents And Special Characters**

The following keys are used for entering Spanish accents and special characters.

Accents should be entered immediately after (and on the same line as) the character to which they apply.

<b><u>Spanish Character</u></b>	<b><u>Keyboard Character</u></b>
'	/
~	^
"	<
ç	@
ï	\

# THE STOLEN LAMP

*Professional, Originally Released On Cassette Only*

Game Type : Text Adventure With Basic Graphics  
Author :  
Standalone Release(s) : 1984: THE STOLEN LAMP, Lothlorien, £7.99  
Compilation Release(s) : 1988: THE WAR PACK, Lothlorien/Paxman, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : M.C. LOTHLORIEN, 56A Park Lane, Poynton, STOCKPORT SK12 1RE  
Disc compatibility : CDFS E00, DFS E00

## Instructions

The primary objective of the game is to retrieve the Emperor's Stolen Lamp. This is an heirloom handed down since the days of Alaa Eldeen. In order to do this, you must survive many dangers and solve many problems. As a secondary objective, you must return with as much treasure as you can, and this will require as much cunning as the main quest.

## Save And Restore

The current state of the game may be saved at any point. You should place a blank tape in the cassette recorder and type SAVE. Then switch the recorder into record mode and follow the instructions on the screen. To restore a previously saved game situation, type RESTORE at any point in the game and position the tape to the start of the saved data. Follow the instructions on the screen to restore the previous position. The saved game is stored in a file called LAMPSAV.

## Game Play

The game is set in a magic kingdom in the Middle East which you must explore carefully in order to find the Stolen Lamp and all the treasure.

The computer will ask you "What now?" and you must reply with a simple one or two word command.

One word commands may be directions eg. NORTH, SOUTH, etc (this is your way of moving about inside the kingdom) or simple requests eg. HELP, SCORE, QUIT etc.

Two word commands always consist of a verb followed by an object eg. GET CARPET or KILL PICKPOCKET. The computer will tell you if it cannot understand your command, or if it is incapable of carrying it out. One of the puzzles in the Adventure is to work out what can be done with the various objects.

Finally, bear in mind that not all objects are there to aid your quest. Some may hinder you and more than one is a red herring. Some objects must be made to kill two birds with one stone.

## Review (Electron User)

The year is 1910 and you're on a cruise of the tropics when there is an accident and the ship sinks. The result is that you find yourself swimming in a shark-infested sea. Can you survive and find your way back to civilisation, or alternatively find happiness on a tropical island?

There are very few actual puzzles to solve in this adventure. Almost everything is accomplished by choosing between two alternatives - HIDE or STAND, EAT or STARVE, ACCEPT or REFUSE. The results of these choices can be hilarious. For instance, on entering a village you have to bribe the tribal chief. If you have what he wants, he then offers you his daughter's hand in marriage.

If you accept, you are given your own hut. You are then given a further choice - STAY or ESCAPE. If you STAY, the game ends and presumably you live happily ever after. If you REFUSE, the chief gets angry and swaps you with another village for a pig. Here you are offered some food and again, you have a choice - EAT or REFUSE. If you REFUSE, you become lunch for the tribe. If you EAT, you are imprisoned in a hut and have to steal the witchdoctor's clothes to escape.

You'll also meet Robinson Crusoe who asks you to stay and be his friend. If you accept...end of game again. There is also a secret civilisation in the depths of the island. If you find them, guess what? Yes, end of game yet again.

I'm not sure I'd call this an adventure as such and I'm sure I didn't manage to find all the endings - how do you get past the rhino?

Overall, a departure from the usual MP style of adventure but there are so many alternatives in the course of the game for you to choose from that I'm sure, like me, you'll spend your time discovering the results of all of them. It's an unusual and highly entertaining adventure.

Merlin, ELECTRON USER 2. 4

# THE TARODA SCHEME

*Professional, Originally Released On Cassette Only*

**Instructions' Source** : 3

## **Review (Electron User) - "Challenging Adventure"**

THE TARODA SCHEME is the fourth of Heyley's adventures originally released for the BBC Micro to be converted to run on the Electron with standard disc systems.

It comes on disc in plain packaging with an extremely useful leaflet which gives background information and provides an atmospheric and amusing introduction to the adventure. Comprehensive Help sheets are also available.

THE TARODA SCHEME is set in the year 10340 AD, long after the destruction of Earth. Taroda was one of many planets colonised by humans centuries previously. It is now an important source of methane gas and an ore known as strykalite, which is exported as barbeque lighting fuel to the planet Sartravaag.

Your fairly mundane mission is to make the five-yearly check on the system of Taroda to ensure that all is well. As you can probably guess, it isn't going to be!

You begin your adventure on the bridge of your spacecraft on its journey to Taroda. A quick glance at the vide-screen shows that something large and ominous is on a collision course with your ship.

This beginning is something akin to Robico's ENTHAR SEVEN or THE HUNT, as you scramble together belongings and find a safe way to leave your doomed craft. I suggest you thoroughly SEARCH the desk in your quarters, take the shower operating unit from the bathroom and gain some sustenance before escaping.

On the planet you will soon discover the first of many corridors which could pose a really suffocating problem. In order to continue, you must find a plan and read it carefully. This is a variation of the Snark tunnel problem in Acornsoft's KINGDOM OF HAMIL.

Room descriptions and messages are lengthy and well written, and you only have to examine the items which are presented in magenta text.

Everything about this adventure contains a refreshing smattering of wry comedy. The only time this sank to the depths of lavatorial humour was when I discovered a suction toilet in the bathroom, "to avoid those low gravity accidents".

However, the following is a prime example of good response to correct input: "As the soup touches your tongue it liquefies and trickles down your throat. Suddenly something hard and angular sticks in your mouth and you spit it out, choking violently. A wave of deja-vu hits you, with an image of a cold stone room".

I must admit that I loved the idea of the MentOp system which allows for ESP thought processes to operate equipment. I also chuckled at the kickerboots for which an intergalactic soccer thug would give his one remaining tooth. It is sobering to later find a compact disc as an item of antiquity.

THE TARODA SCHEME has more than 230 locations, nearly 100 objects and 200 messages, and should provide a real challenge to any discerning adventurer.

Problem construction is excellent although the parser seems rather limited, especially regarding synonyms for the nouns, and I did discover a few spelling mistakes.

However, with a little more polish and development, Heyley could soon challenge Robico, Level 9 and Infocom as serious producers of micro adventures.

# THE TIMES CROSSWORDS JUBILEE PUZZLES

*Professional, Originally Released On Cassette Only*

Instructions' Source : 3

## **Review (Electron User - Triple Review Of THE TIMES CROSSWORDS JUBILEE PUZZLES, 1 and 2) - "Brain-teasing Software"**

During the past 58 years The Times Crossword has become part of the great British tradition in cerebral eccentricity. Indeed, for many people, it has become part of their way of life. I know at least one friend who feels his day has not really begun until he has completed that morning's Times crossword.

I suppose it was only a matter of time before these magnificent word puzzles found their way on to the micro. They have now arrived in all their glory with 60 crossword puzzles on each of volumes one and two, and 56 puzzles on the Jubilee edition.

In fact, the Jubilee Puzzles should become a valuable collector's item, as they feature one superb crossword taken each year from 1932 to 1987 inclusive. The effort involved to bring all these crosswords to your computer is quite a feat in itself.

I remember stolidly typing in a crossword compiler from the October 1986 issue of ELECTRON USER and being astounded at the clever programming used by its author. However, that was child's play compared to the labours of David Akenhead who is the creator of this fine collection.

This software is not just for the expert crossword solver, thanks to comprehensive instruction booklets and four graded levels of play. In fact you need not solve the crosswords at all, but simply investigate, clue by clue, the construction of each puzzle.

The Times Computer Crosswords could also have an educational application within the sphere of vocabulary extension at GCSE level English.

Reading the instructions is an essential prerequisite to play, as the programs operate some clever options. The booklets contain a glossary of convention indicators and abbreviations used within the puzzles, as well as an introduction to the devices used in cryptic crosswords.

Upon loading the disc or cassette you are presented with an introductory page and then asked to insert the puzzle number of your choice. With over 170 crosswords to choose from, in these three packages, you are rather spoilt for choice!

I suggest that all players attempt puzzle number one to begin with, as a blow by blow analysis is contained within the instruction booklet. This also gives an insight for novices into the construction and convention indicators used within such a puzzle.

Upon choosing your crossword the grid is assembled in stunning clarity, a score line is set to zero and an invisible clock begins timing your progress.

The instruction "Insert clue number" appears, with the accompanying option of down or across. You are now operating at level one and the clue appears together with the words "Help? Y/N".

If you enter N you may then go ahead and attempt to solve the clue, for which you will be awarded 50 points for a correct solution or a time penalty if incorrect.

If you answer Y, you proceed to level two of the program and a marker option is presented. If this is accepted you may enter any letters you know and fill any spaces in that answer with chevrons.

You may of course, return to that clue later in the game. If however, you solve it at this level, 40 points are awarded.

Should you decline the marker option the program assumes you require more help. Now at level three you may ask for a convention indicator and may solve the clue for 30 points or mark as before.

However, if you are still stuck, you are offered the solution to that clue, which, if accepted, is printed in the grid and 30 points deducted from your score.

Conversely, you may continue to level four where the first letter of the answer is printed in the grid. This gives you the opportunity to solve the clue for 10 points.

You may leave the game at any level, in which case the screen clears to reveal an analysis of your performance. This appears in terms of time taken, the number of clues solved by both yourself and the computer, the score and an assessment of your expertise in the categories: Beginner, average, good, very good and expert.

You are also offered the option of viewing the entire solution before progressing to another puzzle or leaving the program. The graphic representation in these puzzles is attractive and precise and computer response time is extremely fast.

This must be the crossword equivalent to WHITE KNIGHT or COLOSSUS BRIDGE. To be compared to those two masterpieces in serious games programming is a true testament to the quality of THE TIMES COMPUTER CROSSWORDS.

Whether you are of championship status in the art of solving cryptic crosswords or a novice to this genre, these packages represent excellent purchases.

## Review (Electron User) - "Adventure With Errors"

"The first age of Aalinor saw the rising of Gorgoroth, Lord of the Underworld. In that time great evil was done to the fair works of Aalinor and its people." The noble and wise Lord Geremot tried to harness the power of two magic orbs to defeat the evil, but he was defeated and sucked into a time vortex and the twin orbs were lost. You must recover both orbs and fuse them to set free Lord Geremot and to ensure that the evil of Gorgoroth does not rise again.

The opening scenes of this adventure are strikingly similar to the Magus masterpiece VILLAGE OF THE LOST SOULS. Unfortunately ORBS isn't quite in the same league. Despite marvellous room descriptions and wise setting of puzzles, the game is littered with spelling mistakes and simple grammatical errors: "The Carpenter works busilly" is a prime example.

I wish more software companies would employ proof readers for their products, as Potter aren't alone with this particular problem!

However, most of the location descriptions are atmospherically set and make the bones tingle: "A rotting corpse, writhing with maggots and covered in festering boils lies on the floor." My mistake was in examining the corpse, for I soon discovered black boils developing all over my skin and felt decidedly poorly. The computer informed me I had died of the dreaded lurgy and was now an ex-adventurer!

It's funny, the symptoms were pretty similar to the Black Death. I had always thought that the lurgy was dreamed up by the Goons - we learn something every day.

I later found myself "hanging on the clapper of a huge bell, which is crusted with the sulphurous deposits from the smokes that rise from below."

I was surprised that I couldn't Take and Search and the failure to condense SOUTH to S was most annoying - these are surely things which Potter could put right. I also feel that being told you are of "Neanderthal Intellect" may insult some adventurers.

Nevertheless this is an adventure which I would happily slot into my Top Ten, though Potter has some way to go before it seriously challenges the quality of Robico, Shards or Epic.

# THE ULTIMATE PRIZE

*Professional, Originally Released On Cassette Only*

Instructions' Source : 3

# THE VALLEY

***Professional, Originally Released On Cassette Only***

Game Type : Arcade  
Author :  
Standalone Release(s) : 1983: THE VALLEY, Argus Software Press, £6.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ARGUS PRESS, 1 Golden Square, LONDON W1R 3AB  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

THE VALLEY is *the* original text/graphics real-time adventure. Can you enter the deadly depths of Vounim's Lair or climb the horrible heights of the Black Tower? To find out, you'll have to cross The Vallet itself - and that isn't going to be easy!

You can use your character, from barbarian to wizard, from warrior to thiker, and dare the death dealing monsters to come and get you! Each time you fihgt and win you gain experience, each time you lose...

All combat is real-time and you have to make decisions rapidly and quickly - sword or spell, attack or retreat?

It takes skill, cunning and an adventurous mind to succeed in THE VALLEY and recover the helm. Master of Destiny awaits you if you make it, a long wooden box if you but stumble on the way.

Characters can be saved onto tape (from the safe castles) for when you need a rest. Have you got what it takes to tackle this classic epic of adventure?

## Playing The Game

The first question you will be asked if whether you wish to load a character from tape. If you are playing the game for the first time, or if you wish to create a new character, the reply to this is NO. If you have already generated a character and saved it on tape then reply will be YES and this will enable you to load your character.

Having selected your character type the screen will clear and THE VALLEY will be drawn. A safe path passes through the Valley and there are safe castles at either end. Symbols representing the other scenarios will also be displayed.

There are three basic types of scenario: The Swamps, The Woods and The Tower. The Swamps and The Woods both contain a secondary scenario located on an island in the centre of a lake; in The Swamps this will be the Temple of Y'Nagioth and in The Woods it will be Vounim's Lair. Displayed below the scenario is your character's current status: treasure, experience, number of turns, combat strength, psi power and stamina.

Each of the five character types has a different maximum for the last three; Wizards can have more psi power, Barbarians get more combat strength, etc. Instructions for movement are given in the first program and are continuously displayed under the map.

## Ground Rules for playing THE VALLEY

If you move your character onto either of the safe castles you will be offered the option of leaving THE VALLEY and saving your character on tape or reentering with your combat strength and psi power restored to a base level if they have become too low.

To enter one of the scenarios you simply move your character onto the appropriate symbol and the screen will clear and the new scenario will be drawn. To prevent scene-jumping you will have to stay in any chosen scenario for a number of turns; the number varies but is usually around five. Leaving the Woods and Swamps is easy, simply step onto any part of the border and you will be instantly transported back into THE VALLEY scenario. To leave one of the Castle-type scenarios you must step onto the gateway character which will only appear on the ground floor of the Black Tower. The Black Tower has several floors and these may be accessed by using the stairs which appear in the bottom left and top right corners. Note, however, that once used the stairs disappear so you will have to cross the entire floor to reach the next set! To enter the two secondary scenarios in the Woods and Swamps you will have to cross the Lake; they can only be entered from the land and not from the water. Crossing the Lake also reduces your stamina as well as making you prey to two special monsters.

### **Fighting**

As you move around within any scenario you will encounter various monsters. You may be given the option to Attack or Retreat, in which case you should key either A or R depending on your mood, or the monster may simply attack you. If the beast manages to hit you, you may suffer damage points as a result; these are subtracted from your stamina and, if the level of damage inflicted exceeds 10, your combat strength will also be reduced. When you are offered the opportunity to attack, 'Strike Quickly', you must choose to attack its head (Key H), its body (B), or its limbs (L). If you make contact then you may cause the monster damage in which case its strength will be reduced. Combat is in real time so if you hesitate you may miss your opportunity.

One further option exists, casting a spell. This is selected by keying S followed by the number of the spell you wish to cast. There are three spells available: Sleepit (1) which is available to anyone and only costs 5 stamina points to use; Psi-Lance (2) which requires a minimum of 49 psi power and 1000 experience, and can only be used against monsters with magical ability; and Crispit (3) which requires a minimum of 49 psi power and 5000 experience. If you are fighting a monster with no physical strength, the first number displayed after the monster name is zero, you MUST use a spell. The amount of damage that you can do to a monster is related to both your strength and experience: the greater these are the more likely you are to survive a fight.

### **Seeking**

Within certain scenarios, according to the Legend of THE VALLEY, a number of special treasures are to be found and the gaining of these, together with increasing your character's rating, is the main aim of the game. They are represented by a special symbol and have different values according to their location. In the Temple of Y'Nagioth you may find the Amulet of Alarian which has six settings to be filled with stones found in the correct order and you must already have the Amulet. Note also that the position of the stone in the Amulet relates to the floor on which it is found! Once you have found all the stones you can try to find the Helm of Evanna which is located in Vounim's Lair, but which will only appear when your rating is more than 25. Finding and filing the Amulet allows you to be reincarnated, should you be killed in combat.

Your Rating is determined by the amount of experience you have gained together with your treasure, and is measured on a scale of 0 to 28. See table for details. The value is also affected by the number of turns you have taken: boldness will get you a higher rating but recklessness will probably kill you! Your current rating can be inspected at the movement stage by pressing E and this will show you what special treasures, if any, you have collected. The experience gained from killing a monster is halved if you put it to sleep with the Sleepit spell or if you let the monster exhaust itself. The amount of experience gained is also directly related to the level you are on at the time. Finally remember that this is a real time game and should be played at the speed set by this program. BUT if you find you do not have time to read the messages then increase the value of TM in line 130.

Rating	Classification	Rating	Classification
--------	----------------	--------	----------------

1	Monster Food	15	Necromancer
2	Peasant	16	Loremaster
3	Cadet	17	Paladin
4	Cannon Fodder	18	Superhero
5	Path Walker	19	Dragon Slayer
6	Novice Adventurer	20	Knight of The Valley
7	Survivor	21	Master of Combat
8	Adventurer	22	Dominator
9	Assassin	23	Prince of The Valley
10	Apprentice Hero	24	Guardian
11	Giant Killer	25	War Lord
12	Hero	26	Demon Killer
13	Master of The Sword	27	Lord of The Valley
14	Champion	28	Master of Destiny

## Review (ELBUG)

A similar format of coloured text and split screen as MP's SADIM CASTLE, this game found me crawling around in decaying corpses beneath the pyramid of old King Tut. The place is so hot and smelly that you'd better ensure you bring lots to drink and something to keep the deadly stink out of your nostrils. I found a laundry basket which hissed and a pit in which something nasty was slithering!

A real time element coupled to your endless thirst and flickering torch has been added to the game. You have no time to stand and stare but must hurry ever forward towards that light at the end of the tunnel, which knowing my luck will be a train coming the other way!

This game has all the usual ingredients, but in that is its weakness. I couldn't find that magic something which is needed to keep me battling forward so I folded my tent, mounted my camel and stole off home. Rating: \*\*

## Instructions

*"Become a master of this mysterious ancient art: progress from novice to Tenth Dan and test your strength and discipline."*

*You can control your character with either joystick or keyboard - 18 different manoeuvres including blocks, flying kicks, leg sweeps, round house and even somersaults!*

*Challenge the computer, facing opponents of progressively greater skill, or complete with a friend."*

*'I can't tear myself away from this hit game.' - Daily Express*

*'Quite Simply The Best Program' - Popular Computing Weekly (C64 version)*

THE WAY OF THE EXPLODING FIST is a karate simulation game, and is controlled entirely from the keyboard or joystick.

Although it may take a while to become completely familiar with the various moves, you should be able to start playing almost immediately without learning any of the moves. Play without reading all the instructions by pressing 0 to start.

**Moving your character:** Left and right control the left/right movement of your character.

**Using the kicks:** All kicks are controlled by pressing the fire button and pushing the joystick in the appropriate direction.

**Crouching:** Pressing the joystick up will allow your character to leap up; while pressing it down makes the player crouch.

**Blocks:** The joystick also allows you to block your opponent's move. This is obtained by backing off your character while your opponent is performing some aggressive move.

You may occasionally find that when you are naturally backing off, your character goes into a blocking stance. This is fortunate for you, as the "block" is only activated if you are in danger of getting hit by your opponent.

To release the block, move the joystick to the neutral or to any other position other than moving backwards.

**"Holding your moves":** Most of the moves in the Way of the Exploding Fist can be withdrawn shortly after beginning to execute them so that you are able to change your mind and start another move. This also means that if you do want to continue

with a move you must ensure that you hold the joystick in the correct position long enough for the move to be executed.

**Practising your moves:** The easiest way to practice your moves is to go into 2-player mode and test your skills. Your opponent will not be able to make any moves against you, so you should be able to get all the moves perfected.

This should be enough to get you started playing THE WAY OF THE EXPLODING FIST. The following instructions give you more detail on the subtleties of this exciting game.

### **One-Player And Two-Player Modes**

THE WAY OF THE EXPLODING FIST can be played in either one-player or two-player mode. Whilst playing in one-player mode, you will always control the blue character.

Various options can be selected before each game:

1. Switch between joystick and keyboard for player 1.
2. Switch between joystick and keyboard for player 2.
3. Switch between 1 player and 2 player options.

Playing one-player mode: The object is to move up through Dan levels by defeating successive opponents, each one slightly better than the previous ones. You start at novice level; your task being to reach 10th Dan.

In each bout, the aim is to score a full two points over your opponent. The first player to obtain two full points wins the bout. In the event that neither player obtains two points within the time period specified, the judge will determine which player performed better and award the victory accordingly.

The match finishes when one of your opponents scores two points in any one bout.

Playing two-player mode: In this situation, the match does not terminate as above, but the winner is determined by whoever scores the most after a set of four bouts. After the time limit has been reached in each bout, the judge stops the bout and a new bout is started.

### **The Scoring System**

Points are scored not on which action has been taken but on how well each move was executed. If your aggressive move fails to make contact, obviously no points will be awarded. If your move is perfectly executed, you will obtain one full point.

In some instances your move will strike your opponent, but the hit will not be perfect. In these instances, you will only obtain a half-point.

Your current point total is represented on the screen by the yin/yang symbols. The blue player's points are shown on the left, while the black player's points are shown on the right. (A half-symbol represents a half-point.)

As well as the points for each strike, you will get a score value for each move successfully executed. The score will depend on the move chosen, so that a difficult move, such as a roundhouse kick, will score more than an easy move, such as a jab kick. The score value added will be twice as much if the move was executed perfectly (i.e. a "full-point" execution) than if it was less than perfect (i.e. a "half-point" execution).

### **Details On The Various Kicks**

As mentioned above, all kicks are controlled by pressing the fire button, and pushing the joystick in the appropriate direction.

The following instructions assume that the character is facing right. You will find that the descriptions refer to "left" and "right". When your character faces the other way, all controls are mirrored - in other words, if you need to press right to get the midkick when facing right, then when you are facing left, your need to press the joystick to the left to obtain the midkick.

The same applies to the punches and somersaults described in the following sections.

Eight kicks are available to you - one each for the eight positions of the joystick.

**Flying kick:** This is obtained by pressing the fire button and pressing the joystick up. This is an extremely powerful kick, and can be successful against a standing opponent who is not blocking against the move. Other ways to block this kick are to crouch, or if you are fast enough to respond with a counter flying kick.

**High kick:** Press fire button and press joystick in the diagonal upper right direction.

**Mid kick:** Press fire button and joystick right.

**Short jab kick:** This is obtained by pressing the fire button and pressing the joystick in the diagonal lower right direction. The main benefit of this kick is that it is very fast to execute and can be used in closer combat.

**Sweep (f'ward):** Press fire button and joystick down. This low sweep places your character in a crouching position, the sweeps forward. This can be effective against many aggressive actions, as it combines offence with defence.

**Sweep (b'ward):** Press fire button and press joystick in a lower left diagonal direction. This move is identical to the forward sweep but the effect is to sweep behind you. This can therefore be used if your opponent is behind you.

**Roundhouse:** Press fire button and joystick left. This move is the traditional roundhouse kick of karate, but also has the advantage that it allows you to turn about face. This kick has two distinct operations: in the first instance (by keeping the fire button pressed throughout the kick) you can execute the full roundhouse kick. The second mode of operation is a fast about-face. This is achieved by starting the roundhouse kick as described above, but releasing the fire button before the kick is completed.

You will find the full roundhouse kick is a time-consuming manoeuvre. It can be especially effective in many situations. Note also that as the roundhouse kick moves you out of the direct line of your opponent's attack, some of your opponent's aggressive moves may not be effective against you while you are performing the action.

**High back kick:** Press fire button and press joystick in an upper left diagonal position. This move is the reverse of the forward high kick and enables you to attack opponents that may have slipped past you.

You can, of course, also turn around to attack opponents that are behind you (see notes on the roundhouse kick above).

## **Punches**

As well as kicks, the Way of the Exploding Fist requires devotees to be adept at close fighting, using punches. Three punches are available from joystick control. Note that the fire button should not be pressed to execute punches.

**High punch:** This is obtained by pressing the joystick in the upper right diagonal direction. (Do not press the fire button.) This is effective against an opponent that is reasonably close to you.

**Jab punch:** This is obtained by pressing the joystick in the lower right diagonal direction. (Do not press the fire button.) This is the fastest action you can take, and is extremely effective in very close fighting. At times, your opponent may use this move, and because it is such a fast jab, you may not even be aware of what hit you!

**Low punch:** This is obtained by going into the crouch position first, then pressing the joystick to the right. Because of the variety of moves that can be accomplished from the crouching position, the low punch can often be a surprise move.

### Somersaults

Somersaults are a very fast way to move out of the reach of your opponent. There are two somersaults - one forward and one backward. Note that if you get too close to the edge of the screen in either direction, your somersaults may not be as effective.

**Forward somersault:** This is obtained by pressing the joystick in the upper left diagonal. (Do not press the fire button.)

**Backward somersault:** This is obtained by pressing the joystick in the lower left diagonal direction. (Do not press the fire button.)

### Advanced Players' Tips

**Blocks:** Note that blocks are not the perfect answer to aggressive moves from your opponent. There are two blocks the computer can choose from; a high block and a low block, depending on the action that is being taken by your opponent.

Holding the joystick in block move means that you will be holding the block, and it is actually possible for your opponent to start a different aggressive move that is not countered by your current block.

Note also that the two low sweeps cannot be blocked. If you are within striking range of the sweeps, the only appropriate actions are a jump (joystick up) or one of the somersaults.

**Crouch:** The crouch is a move that can be "held" by keeping the joystick held down. This allows you to execute either a low punch, or the two sweep actions. If one of the two sweeps is selected from a crouching position, the time taken for this action is greatly reduced, and the move is therefore much more effective.

### Summary Of Joystick Positions

The following joystick positions will result in the appropriate moves. Each move is explained in more detail further on.

#### Directions Of Joystick With Fire Button Not Pressed

#### Directions Of Joystick With Fire Button Pressed

### Using The Keyboard

The keyboard option has been included for players wishing to play this game without the joystick.

The following keys are used in keyboard mode

Player 1	Player 2
Q W E	I O P
A S D	K L ;
Z X C	< > ?
Fire buttons: ESCAPE	LEFT ARROW

The operation of these keys is identical to the joystick controls. To switch between joystick and keyboard mode, press the 1 or 2 keys.

### Review (Electron User)

Karate may be old news to the box office, but with all the new games coming on to the computer market, one has to be the winner - THE WAY OF THE EXPLODING FIST.

The scenario, two men locked in combat presided over by a Buddha and a monk, is simple, but it demands great skill and concentration to reach the goal of 10th Dan by fighting and defeating your opponents. One or two player modes are available, each with a very different challenge to offer. In a one player game it is best to defeat the computer with the utmost speed and precision within the time of 30 seconds. For each two fights won you progress one Dan.

The point system showing how you are faring is made up of the Yin Yang symbol, awarded in full or half sections. Two full Yin Yang symbols are needed to defeat each opponent. In two player mode, four 30 second bouts must be fought out, the winner being the player with most points.

The keys are well placed at different ends of the keyboard though there are eighteen moves and ten keys to cope with. The variety of moves seem endless, with kicks, jabs, blocks, punches and somersaults. This game is definitely the best of the karate simulations.

The backdrop on the proceedings gives one a feeling that the programmer put as much effort into it as with the detail on the two characters.

### Review (Electron User) - "Bargain Challenge"

WAY OF THE EXPLODING FIST is a re-issue of a piece of software which was so well received when it first came out that it won a number of awards.

It is a karate simulation game in which your aim is to work your way through the various skill levels until you reach 10th Dan.

Unlike other similar programs, the setting is very definitely sporting. The rules of karate are adhered to in a fairly strict manner - no weapons are used except the hands and feet. As is usual with these karate simulations, the main problem is getting to grips with the mindboggling number of actions.

There are some sixteen different functions, controlled either from the keyboard or from a joystick. These give you a full range of punches, kicks, somersaults and other movements. This impressive array of actions can be used against a computer-controlled opponent or another person.

The best way to practise moves is to select the two-player option, but not have a second player. Having mastered the keys required, you will be ready to tackle the computer opposition.

Your first adversary is remarkably unskilled and it should not take you long to score a victory. The next competitor is much more adept at dodging your moves and then felling you with a quick round-house kick.

With a lot of practice you will be able to beat a whole series of opponents, each a little more skilled than the previous one.

The graphics are good with fast, flicker-free movement and the sound is adequate.

If you missed WAY OF THE EXPLODING FIST first time round and haven't found it on a compilation then this re-release is a real snip.

## Instructions

The Evil Sorcerer lay in the depths of his despair, waves of spiritual agony tortured his Soul. To be defeated twice by the efforts of a mere mortal was almost too much to bear. Only an inherent force of Evil prevented the Wizard from complete vanquishment. Eons seemed to pass as the Wizard slowly rebuilt himself from within, feeding on malice as maggots feed on rotten meat. A plan was forming in his demented mind, a plan that would ensure victory over the mortal enemy.

The plan that grew would learn from the errors of the previous two plans - In the first of these plans, the Wizard had stolen the Golden Baton, an artifact that brought power and prosperity to mortals. The plan failed when a mortal triumphed over incredible odds and recovered the Golden Baton, restoring it to the Royal Palace. In retaliation, the Wizard employed his evil ally XERDON to cast a spell on the Baton itself that would render it impotent. Again this plan failed when the same mortal vanquished XERDON with the aid of a Magical Arrow.

The Wizard took heart as his new plan was now fully formed. His plan was to utterly destroy the mortal who had been instrumental in his earlier downfall. The Evil Wizard Akyrz himself would take on an earthly form and then he would lay a trap which would inevitably lure the mortal into an Evil snare from which there would be no escape.

## Instructions

*"How does your knowledge of Theatre rate against a Grandmaster of the genre? This rewarding and compelling program for your BBC Model B or Acorn Electron computer has been specially adapted from the Weidenfeld Quiz book and will provide hours of edification and amusement for family and friends.*

*Ranging from Shakespeare and Shaw to Stoppard and Pinter by way of Ibsen and Noel Coward, this quiz will entertain, inform and occasionally infuriate people who go to the theatre once a year or once a night.*

*Theatre is one of a series of six Grandmaster Quizzes, in which you can pit your knowledge against a Grandmaster of the subject. The writer's specialised skill and expert knowledge makes the quiz both challenging and exciting. Each program has thirty sections of ten questions - a massive 300 questions in all - and you can take the quiz alone, in competition with a friend, or in teams. You can choose a timed option too - and if you're getting too many of the answers right, your computer can reduce the time you have to answer!*

*This pack contains one program cassette, one quiz data cassette and an instruction booklet.*

*Sheridan Morley is the drama critic and arts editor of "Punch" and his Theatre Quiz for Weidenfeld & Nicolson is the fifteenth book that he has either written or edited on a theatrical subject."*

Based on the Weidenfeld Quiz Books published by Weidenfeld & Nicolson

## Introduction By Sheridan Mosley

The editor of a theatre quiz shares with his readers certain problems unknown to the settlers or answerers of other quiz books. First of all, the theatre is not like history, or music, or detective fiction, in that it cannot be stored on bookshelves or in record cases and then retrieved for easy reference. The theatre disappears every time a show closes, only to reappear on the next first night. A few dog-eared posters may be all that is left of what was only a couple of weeks ago the most lavish show in town, while video tape and even the film camera have come too recently to preserve many of the major theatrical happenings of the past.

But that of course is precisely where the magic of the theatre lies, in its refusal to be pinned down forever; I am therefore relying here on memories, and also on the hope that most of you have at some time or other done your theatre-going in London, since that seemed to be the one city where I could assume common ground among playgoers.

So much for geography; as to timing, I have assumed a theatre memory going back somewhere between ten and forty years. Before that, I have only raised questions about what can now be taken as reasonably widely-known theatre history. I have tried

most of these questions out on my own (admittedly somewhat theatrical) family and on my publishers; half said they were far too simple, while the other half maintained that they were vastly too obscure. That would seem also to be the experience of other writers in this series, and to suggest that we have perhaps got the general level about right.

- Sheridan Morley

### **Beginning A Quiz**

When the program is loaded, there is a short bleep and the program title appears. Press the SPACE bar as requested and you will be asked:

Do you want to do the quiz:

1. On your own
2. As two competing individuals
3. As two competing teams

Enter choice : ?

Answer the questions as prompted by typing in your response. Press <RETURN> when you have completed each entry.

The main menu will now appear and the thirty quiz titles are displayed on two screens. To move from one screen to another, type 0 and press <RETURN>. Select the quiz you require, type its number and press <RETURN> then remove the program cassette from the deck and insert the data cassette when prompted. Make sure that the correct side of the cassette is uppermost: quizzes 1-16 are recorded on side 1 and 17-30 on side 2. Press SPACE BAR as requested. When your quiz has finished loading, there is a short bleep. You are now ready to begin the quiz.

### **How To Answer The Quizzes**

Most of the quizzes start with a section introduction written by the author. To move on to the second paragraph, or to see the first question press <SPACE>.

If you request a time limit, a clock counts down in seconds in the top right-hand corner of your screen. If you do not enter an answer before it reaches zero, you receive no marks: if two teams are playing, the question is offered to the opposition. However, you are allowed to complete an answer which you started to enter within the allotted time.

To pass a question, press <RETURN>. A passed question will be offered to the opposition, if you are playing in teams.

Some questions may require you to refer back to the section introduction. Do this before you enter your answer by pressing the <ESCAPE> key. Pressing the <SPACE> bar will return you to the Quiz menu and your answers so far will be lost.

Some questions require several separate answers. When a) appears on screen, you enter your first answer, when b) appears, you enter your second answer, etc.

When you have given the answer and pressed <RETURN>, the author's answer is displayed. Compare the answers and decide how many points you should have. You can enter 0 if you are completely wrong, 1 if you are halfway there, and a maximum 2 points for a completely correct answer. Type in your score as requested. When you press <RETURN> the next question appears.

At the end of the quiz, the final scores and the total time taken to answer the questions is given. In the case of a draw, the contestant with the shortest time will win.

If you decide to try another quiz you will be returned to the Main Menu. You can run the same quiz again simply by re-selecting its number: it is still in the computer's memory. If you do not wish to try another quiz, the program will end.

LINCOLNSHIRE DN20 9AX  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

### The Mission

The Resistance is about to launch a major offensive against the Empire. In preparation for this, they have captured several starships, but they lack the essential power sources for these formidable craft, Klyston Pods.

You have been commissioned by the Resistance to steal these pods from the Empire's storage panels. To do so you must locate the pod, hover just above it, activate your starships's tractor beam and thrust away from the pod. Once the beam has locked onto the pod, you can deactivate the tractor beam. You must then carry the pod away from the planet. You receive a bonus at the end of each successful mission.

### Automatic Limpet Guns

These guns are the planets' defence system. Accurate shooting from your spaceship will destroy the limpet guns.

### Fuel Tanks

To collect fuel, hover just above a fuel tank and activate the tractor beam.

### The Planet's Reactor

Each planet has a reactor providing power for the limpet guns. Shooting the reactor will damage it, and the guns will cease firing until power can be restored. The more damage done, the longer this will take. If you shoot the reactor repeatedly, it will become critically damaged. You will then have a limited amount of time to escape before the reactor explodes and the planet is destroyed. If this happens, and you have not collected the pod, then the mission has failed. If you retrieve the pod, send the reactor into its critical phase and leave the planet safely, you receive an extra bonus of 2000 points.

### Scoring

Destroying a limpet gun .....	750 points
Destroying a fuel tank .....	150 points
Collecting a fuel tank .....	300 points

An extra spaceship is awarded for every 10,000 points scored.

## Game Controls

## Review (Electron User)

Remember the days when Space Invaders were king, and the buzz which went round the arcades when Galaxians appeared? If you do then you must buy yourself a copy of THRUST from Superior Software. Loading up THRUST was like discovering an old master in the attic.

Your spacecraft and all buildings and gun emplacements are displayed as high resolution line drawings. The game is played as a series of missions of increasing complexity. In the first one the drive unit is on the planet's surface, along with a fuel dump, gun emplacement and nuclear reactor. In subsequent missions, the drive will be located in underground caverns.

Fuel can be taken on board by hovering over the dump and activating the tractor beam. Hovering is achieved by pointing the ship away from the planet and using short bursts of thrust to counter the effects of gravity.

The gun emplacements are deadly accurate but can be taken out by a single shot. Firing at the nuclear reactor will halt the operation of the guns for a short while.

Having located the drive unit, the tractor beam can be used to tow it behind your ship, and this is where the fun really begins. The programmer must be either an ace physicist or an articulated lorry driver, because the drive unit hangs beneath the ship like a pendulum attached to a fixed point on the ship by a solid bar.

Each movement of your craft will cause a realistic movement of the pendulum. As a pilot you must fly as smoothly as possible, counteracting every swing of the drive unit. Should the swing become uncontrollable you will surely be dragged into a cavern wall.

The mission is completed by towing the drive unit into space and jumping into hyperspace. As with every good arcade game, there is an opportunity for the arcade aces among you to earn big bonus points. Having emerged from the cavern with drive unit in tow you can fire on the reactor until it goes critical, at which point you have five seconds to make your hyper-space jump. This feat of bravado will earn you an additional 2000 points.

THRUST is a classic game, a game at which the natural games player will excel. This is a definite contender for my game of 1986.

Disc compatibility : Unknown

## Instructions

You are SPRECO (the SPace REfuse COLlector) who has been transported by a space/time thunderstorm to an eerie castle. All you want to do is get back to Myrtle and the kids, but here you are trapped in these strange mediaeval surroundings with your Assisdroids. They dislike it as much as you do and, because they think it's your fault, are decidedly hostile. There are various objects littered around the castle that you can carry and use, but because of your bulky space suit you can only manage one at a time. The castle is inhabited by eight characters that you will meet in your search for the way out. If you help them by giving them something they need, they will give you something in return.

## Characters

The King	The Queen	The Wizard	The Craftsman
The Maiden	The Dog	The Guard	The Revolting Hag

## Giving, Taking And Using Objects

You can give and take objects simply by being on the same screen as the character. Likewise, with most objects you can use them by being on the same screen as the puzzle, although there are certain puzzles that will require you to be standing in a particular spot on the screen when you use the object.

## Energy

You start the game with 650 energy units, shown as the dotted line at the right hand side of the screen. You lose 1 for going in or out of the screen, 4 for hitting an alien, lift, candle, flame or any other animated background effect. You lose 64 units for hitting a homing alien, a valve shape or a flapping bird. You gain 32 units for using an object correctly, and energy is restored to 650 after using food.

## Game Controls

Z - Left, X - Right, <RETURN> - Jump, : - Use Object, ? - Pick Up/Drop  
G - Give object to character, T - Take object from character  
Cursor Up/Down (In Lift Only) - Lift Up/Down  
<ESCAPE> - Quit Game

**Instructions' Source** : FIVE STAR GAMES III (Beau Jolly) Inner Inlay

## Review (Electron User) - "Struck, By Thunder!"

While doing your rounds as a cosmic dustbin man you are struck by a space/time thunder storm. As a result of this you find yourself trapped in an eerie medieval castle. All you want to do is get back to Myrtle and the kids before your dinner gets cold.

The castle has eight floors which can be accessed in any order once you have located the castle's lift room. Using the cursor keys, you can select a floor then set the

mechanism in motion and ascend or descend to a new level. You will discover many objects, most of which have a specific function. If you are to escape from the castle you must use each object correctly, but due to the restraints of your bulky spacesuit you can only carry one object at a time.

One of the easier puzzles can be found in the basement. When trying to access this level you find that the screen goes blank. Wishing to throw a little light on the problem you collect the candle which you saw on a higher level, but you are informed that it is not lit. I spent a long time burning my fingers on the flaming torches trying to light the candle until I explored the other levels and found a suitable match. Returning to the basement I was greeted by a whole new floor.

One of the bigger puzzles involves lowering the drawbridge. On your travels you will see several large letters, and when you pick them up you are told that they operate the drawbridge. The letters D, O and N are easily located, but I have yet to find a W to complete the sequence.

You have only one life, which you lose when your energy reserve is reduced to zero. This energy is lost through contact with flames and the castle's inhabitants, the most deadly being your own droids. They blame you for their incarceration and are fatal to the touch.

The game's graphics are big and brightly coloured. The puzzles vary in their levels of difficulty and provide you with early success and an incentive to continue playing the game, THUNDERSTRUCK is one of the best arcade adventures that I have played on the Electron.

# THUNDERSTRUCK II - THE MINDMASTER

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Adventure Platform Style  
Author : Peter Scott  
Standalone Release(s) : 1987: THUNDERSTRUCK II - THE MINDMASTER, £7.95  
Compilation Release(s) : 1989: FAB FOUR VOLUME 1, Audiogenic, £9.95  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : AUDIOGENIC, Winchester House, Canning Road, HARROW HA3 7SJ  
Disc compatibility : Unknown

## Instructions

*"Our hero, SPRECO, the SPace REfuse Collector, has finally made it back to Home Base 5 after escaping from the strange medieval castle in which he was marooned in Thunderstruck 1. But things have changed - Home Base 5 is totally devoid of all human life! While searching the Droidcorp factory complex, a friendly Droid informs him that the humans have been enslaved and the complex taken over by an intergalactic villain who calls himself the MindMaster. However, Deacti-Unit [that the MindMaster thought he had destroyed] is actually scattered around the complex. If SPRECO can find the four pieces, take them to the correct location and assemble and activate the unit, there might a chance of destroying the MindMaster and setting the people free! Thunderstruck 2 is the ultimate arcade adventure with high-tech theme, comprising over 130 locations full of large-scale graphic detail and brilliant animated backgrounds. There are loads of objects to find, Droids to interact with, Computer Consoles to use, lift tubes, different gravity areas, obstacles and puzzles that will have you tearing your hair out!"*

Our hero, SPRECO, the SPace REfuse Collector, has finally made it back to Home Base 5 after escaping from the strange medieval castle in which he was marooned after a freak space/time thunderstorm (see THUNDERSTRUCK 1). But things have changed back there - no one is there to greet him - in fact, Home Base 5 is totally devoid of all human life!

While searching the factory complex of his employers, the Droidcorp, he discovers a friendly Droid who informs him that the humans have been enslaved and the complex taken over by an intergalactic villain who calls himself the MindMaster. However, this nasty MindMaster has made one mistake - a Deacti-unit that he thought he had destroyed is actually scattered around the 130 rooms of the complex. If SPRECO can find the four pieces, take them to the correct location and assemble and activate the unit, there might be a chance of destroying the MindMaster and setting the people free!

## Using Objects

You can use Objects that you find on the way, but you only carry one at a time. In order to use an Object you must first have picked it up. You can also drop an Object providing you are not standing in front of any background feature.

## ComCons

There are a number of computer consoles (ComCons) scattered around the complex. These can be used to give a status report on where you are and what you are carrying. Also, there are various friendly Droids and Machines with whom you can communicate via the ComCons for the purpose of giving them an appropriate Object in exchange for one that you need. (A ComCon looks like a tall computer with an eye-level screen and waist-level keyboard, viewed from the side.) To use a ComCon you must stand directly in front of it (i.e. the SPRECO sprite on top of the ComCon sprite), and press SPACE. You can then give one of the ComCon commands.

### **ComCon Commands (followed by <RETURN>)**

E = Examine - Tells you what object you are carrying.  
L = Location - Gives X, Y co-ordinates of your location.  
G = Give - Give your Object to any Droid, Machine or Alien that is on that screen.  
T = Take - Take Object from same Droid, Machine or Alien.

### **Droids And Machines Featured**

Sander-old, Tailor-old, Miser-old, Blank-old, Secur-old, Bank Terminal, Laser Point plus - The Alien!

### **Energy**

You start the game with a full energy supply, but you lose energy by hitting spikes or anything animated. Energy is added every time you solve a puzzle. Food pellets can be used to restore energy to full.

### **Status Display - Top Part Of Screen**

At the top left of the screen, the display gives your current score in terms of percentage of game completed. Directly below this is the energy meter - a yellow that turns red as you lose energy! In the middle is a small box that contains an icon representing the Object (if any) you are carrying. And on the right is a long box giving a general description of the location you are in. This box is also used for communicating via ComCons.

### **If In Trouble**

If you are on the verge of committing suicide or serious crime because you cannot finish THUNDERSTRUCK 2 then write to use enclosing as SAE and we might send you a hint sheet!

### **Control Keys**

Z - Left, X - Right, : - Up Ladder, / - Down Ladder, RETURN - Jump  
SPACE - Use ComCon (if in front of one)  
P - Pick up/Drop, U - Use, Q - Quiet, S - Sound, CTRL and R = Restart Game

**Instructions' Source** : THUNDERSTRUCK II (Audiogenic) Back And Inner Inlay

### **Review (Electron User) - "Nasties In The Cavern"**

As THUNDERSTRUCK II loads, you are left watching quite a well drawn title screen. Which is rather a blessing as it takes around seven minutes. However, your patience will be rewarded as the game is well worth waiting for.

In this arcade adventure, you start complete with spacesuit and helmet in an underground cavern. You are immediately required to dodge the advances of something that bears a close resemblance to a berserk helicopter. You then make your way through the various screens which present you with a whole host of evil nasties, all intent on reducing your life expectancy.

Your current state of health is shown on screen. If it falls to zero, you will be whisked right back to the underground cavern as you only have one life.

As you pass through the various rooms, you will discover a number of items which can be picked up and used elsewhere on your travels. The problem that you have to work out is where, how and when each of the items should be used. And to add to your problems, you are only allowed to carry one item at a time.

A score is shown on screen which represents your percentage achievement to date - mine remained depressingly low.

Approximately two thirds of the screen is used as the game area - the remainder is used for memory storage. This area does remain blank so you are not distracted by rippling colours.

The graphics are excellent with big chunky sprites and very smooth movement. The sound effects are adequate but they could have been a little more imaginative. However, there is a facility to turn them off if they become too annoying.

My only reservation is whether the game may pall a little once all the problems are solved, but in my case that could take forever anyway. The game does use rather a lot of memory so Plus 1 and Plus 3 owners should ensure that these are disabled before this program is loaded.

I found the game extremely addictive and, while it comes from the same software house that brought us BUG EYES II which has a similar style of graphics, I found this to be the more entertaining of the two.

*"Making Numbers Make Sense!"*

These programs by the Institute of Education are part of an exciting new series developed at the University of London, combining the skills of experts in primary education and computing. They are designed to bring entertainment to early learning.

Colourful, original and fun to use, they take a modern approach to maths to help children make sense of numbers. TILES looks at numbers in terms of area (How large?) and FENCE in terms of perimeter (How far around?). Using them, children come to understand how numbers really work.

Supplier : SHELL. No further information available.  
Disc compatibility : CDFS E00, DFS E00

### Instructions

TIME is an education program for children 3 - 10. Three detailed sections lead the child step-by-step through the essential parts of telling the time.

Each section begins with a few examples, and then asks questions to ensure the child has understood the subject.

Large letters and a large, clear clock face are used throughout, to make this program easy to use for even the youngest child.

### Section 1 - Learning the Hours

- PART 1 - Two examples are shown, with the time above the clock. The child is then asked to stop the clock at a given time (use any key to stop the clock). Correct answers are rewarded with a mouse. When ten mice have been scored, the computer will play 'Hickory Dickory Dock' and a mouse will run up the clock. The program will then move on to the next section.
- PART 2 - The child is asked to type in the time shown on the clock. Press RETURN after each answer. If a typing error is made then press '0' and re-enter.
- PART 3 - A time is shown, and then the time one hour later is shown. This is then repeated. The child must then stop the clock one hour after the time shown.

### Section 2 - Learning the Minutes

- PART 1 - The minute hand ticks through the half hour. A beep is heard every 5 minutes, and every 15 minutes that quarter is shaded. The child is then asked to type in the minutes past shown on the clock.
- PART 2 - Part 1 is repeated, but for minutes TO.
- PART 3 - The child is asked to stop the clock at the times shown.

### Section 3 - Digital Time

- PART 1 - Six examples of times are shown and their digital equivalents explained. The clock then ticks through an hour.
- PART 2 - The child is asked to stop the clock at the time shown. This is then repeated, but the child must stop the digital clock.

When each section is completed, a grandfather clock is drawn, and a mouse will run up and down while 'Hickory Dickory Dock' plays.

# TIME TRUCKER

***Professional, Originally Released On Cassette Only***

Game Type : Educational; Time Skills; Ages 8-14  
Author : Don Walton  
Standalone Release(s) : 1984: TIME TRUCKER, Acornsoft/ASK, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : A.S.K., London House, 68 Upper Richmond Road, LONDON SW15  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Jump into your truck and get moving! Are you a top trucker? Can you fulfil your orders with slick route planning and sharp timekeeping? Can you fit in extra work and earn more money through smart organisation or quick decision-making?"*

*With three maps and three levels of difficulty, TIME TRUCKER helps you to tell the time fluently, to calculate intervals of time accurately, to read timetables correctly and to plan how to use time effectively.*

*It doesn't matter whether you're using a 12 hour or a 24 hour clock, TIME TRUCKER is exciting to play. It takes a lot of skill and it makes telling the time fun."*

## Introduction

TIME TRUCKER turns time telling into a challenging and rewarding game. While driving your truck around a map, you have to watch the clock and work out how many collections and deliveries of fresh produce you can make in eight hours.

You can choose from three levels of difficulty and from three different maps, which give you many combinations to explore. At the lower level, you use the analogue clock (round) clock with a 12 hour digital clock and at the higher levels the 24 hours digital clock is introduced.

TIME TRUCKER will help you to develop the skills you need to make the most efficient use of your time by encouraging careful planning and quick decision-making.

## In all A.S.K. programs

<RETURN> Remember: once you have typed in your response a program will  
< icon > deal with it until you press the <RETURN> key.

<ESCAPE> You can always return to the beginning of a program by pressing  
< icon > the <ESCAPE> key.

<DELETE> You can rub out anything typed in, before the <RETURN> key is  
< icon > pressed, by using the <DELETE> key.

<\_Hand\_> Means : Please press the space bar to carry on with the program  
< icon >

< ? > Means : the program did not expect the response it has just received. Perhaps there was a typing error? In any case, to carry on, just press the space bar and try again.

<CTRL> All of our programs incorporate sound. There are various volume levels - holding down the <CTRL> key and pressing the <S> will  
<S> change the level - keep pressing the keys until you are happy with the volume.

Note: The program will not run on computers that have 0.1 operating systems.

### **How to use the program**

You can use either the keyboard or the joystick. Press <RETURN> or fire button to choose.

**Keyboard:** Z - Left, X - Right, \* - Up, ? - Down, and <RETURN>

**Joystick:** Normal joystick controls apply.

### **TIME TRUCKER Game**

First, choose your trucker by using the Z and X keys or the joystick. Then press <RETURN> or fire. Next, enter the name of your trucker (12 letter maximum) and then press <RETURN>.

Now you have to choose a job. Use the \* and ? keys or the joystick and then press the <RETURN> key or fire button. Each job has its own truck and level of difficulty. If this is the first time you are playing TIME TRUCKER, try the job for the Trainee Trucker.

The signpost marked 'Map' will give you the map. The other two signposts marked 'Secret Map' and 'Road Repairs' will give you others, allowing you to explore different roads and get to know them as you play the game. Watch out for dead ends in 'Road Repairs'!

### **How To Play**

#### **Trainee Trucker Game**

A small part of the map that you have chosen now appears on the left of the screen. You will see a little truck on it, waiting in the depot. On the right of the screen is the first order of fresh produce that you have to collect by driving the little truck around the map to the various farms. Just below this order you will see £00. The money that you are going to earn will be indicated there.

Your aim is to collect and deliver as many orders as possible in eight hours. Each item on the order earns £100 and each completed order earns a bonus of £1,000 on delivery to the depot. When you have delivered a complete order, a shutter comes down and the money that you earned will be displayed. The bonus is then added to your total earnings.

Now use the Z, X, \* or ? keys or the joystick to drive the truck around the map. When you come to a farm that's on your order, drive your truck into its loading bay and then press the <RETURN> key or the fire button.

Then you have to read the time on the analogue (round) clock and enter it into the digital clock. Use the Z key or left joystick to light up the hours and the X key or right joystick to light up the minutes on the digital clock. To change the numbers to the ones you want, use the \* and ? keys or the forward and backward joystick. Press <RETURN> or the fire button to enter the time.

If you enter the time correctly, the farm gate closes and a crate appears on the empty truck below the map. Loading always takes five minutes so your clock will move accordingly. Then you can go on to collect another item on your order.

If the time is wrong, you must try again. An extra five minutes is added to your loading time for each mistake. After three attempts the correct time will be filled in for you but you do not lose your item. The crate will appear on the truck and you can then go on to collect another item.

### **Remember**

You can collect the items in any order and unload the crates at the depot at any time.

Six crates will fill the truck and you'll have to unload them at the depot before you can collect any more items.

Unloading takes place immediately and your earnings for those items are displayed at the same time. You are free to drive off as soon as this has happened.

The clock stops when you are in a loading bay or at the depot. You can take this opportunity to make calculations or decisions about where to go next or which item to load.

Your truck always goes back to the depot after the shutter comes down.

### **To Escape**

If you would like to go back to the beginning of the program, at any time, press <BREAK>.

### **Self Demonstration**

If you don't respond to the first menu within 30 seconds, the program will go into a self demonstration. Press <ESCAPE> to go back to the beginning of the program.

### **Trucker Game**

The aim in this game is to collect and deliver as many orders as possible in four 2 hour periods and to earn extra money by picking up items that aren't on the order along the way.

Careful planning is essential here because farms are only open at certain times during the 2 hour periods, and they close once you have collected an item. You can see the opening and closing times of each farm on the order, displayed in 24 hour digital form like this:

08:35	or like this	14:55
08:55		15:10

Each order item earns £200 and each non-order item earns £100 on delivery to the depot. Deliver one complete order in the two hours and you'll earn a bonus of £1,000.

At the end of each 2 hour period, the depot closes and the shutter comes down. When that happens you can't unload or get paid for any undelivered items. A new order appears and you can carry on.

### **Super Trucker Game**

In this game, farms are only open for 15 minutes over a period of 8 hours. The display shows the items, the opening times of the farms in 24 hour digital form and the amount you'll earn when you deliver each item.

You don't have to complete any orders because the aim is to earn as much money as possible from individual items. Only six farms display information at any one time. As you collect each item, another one replaces it on the display.

Each item is worth a different amount of money and each non-display item earns £100 on delivery to the depot.

At the end of eight hours, the shutter comes down. After that you can't unload or get paid for any undelivered items.

### **Educational Notes**

TIME TRUCKER has been carefully structured around the use of the 12 hour analogue clock and the 24 hour digital clock and it encourages the interpretation of both of these forms throughout the program.

The Trainee Trucker game gives practice in telling the time from the analogue clock and then recording that time in digital form. The Trucker game encourages the player

to make calculations from digital forms while keeping an eye on the analogue clock. The Super Trucker game encourages a quick assessment of how both forms relate to each other and to the current task, at any given moment.

Although TIME TRUCKER is designed with fun and fantasy in mind, the skills which the players are required to exercise are those which they need, and will always need, in everyday life.

The importance of being able to tell the time fluently, to calculate intervals of time accurately, read time-tables correctly or plan the use of time effectively, can never be over-estimated.

The relationship between time and distance is another aspect to this program that requires constant attention and consideration. If the best route is planned in the given time, the rewards are varied and plentiful.

Players could be encouraged to think of areas in their own lives which might benefit from watching the time or estimating accurately. How long does it take to do something or how long does it take to go somewhere? How much planning is required? What's the most effective way to organise it? What adjustments need to be made if circumstances suddenly change? What's to be gained from doing all this?

TIME TRUCKER gives practice in these life skills and reinforces their use in an interactive, exciting and enjoyable way.

# TOMCAT

***Professional, Originally Released On Cassette Only***

Game Alias : F-14 TOMCAT  
Game Type : Vertically-scrolling Monochrome Shoot-'em-up  
Authors : Adam Polanski, David Pyta, Richard Paul Jones and Margaret Polanski  
Standalone Release(s) : 1989: TOMCAT, Players, £2.99  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : PLAYERS, Mercury House, Calleva Park, Aldermaston, BERKS RG7 4QW  
Disc compatibility : Unknown

## Instructions

*"F14 TOMCAT : LET'S GET DOWN TO SOME SERIOUS DESTRUCTION! Climb into the cockpit of the devastating F14 TOMCAT fighter. Take to the skies in this explosive combat simulation. F14 TOMCAT features progressive weaponry, breathtaking graphics and compulsive gameplay."*

In the later part of the 20th centry, Grumman's F14 TOMCAT represented the US Navy's most potent fighter. F14 TOMCAT from PLAYERS places you in the cockpit of a specially adapted version of this devastating aircraft.

## The Mission

In the first half of the 21st century, it became possible through advances in material technology to construct permanent artificial islands very cheaply. Due to the spiralling cost of real-estate, many of these islands were built. It is one of these artificial islands that is presently a cause for concern.

The island, locally known as ARTROCK 6, is a local defence installation and is completely automated. A freak storm damaged the controlling software and as a result, the island has turned rogue.

Despite the substantial dollar value attached to the installation, a few regrettable incidents involving local shipping have forced us to destroy the island.

This task has fallen to you, the best low-level pilot in the free world. Using a specially adapted F14 TOMCAT fighter with advanced terrain following radar and a special complement of weaponry, you must destroy the island.

## Game Controls

Z - Left, X - Right, : - Up, / - Down, <RETURN> - Fire

**Instructions' Source** : TOMCAT (Players) Back and Inner Inlay

## Review (Electron User) - "Flying High"

TOMCAT, Players' second title released this month, takes place in the first half of the 21st century. Land has become scarce and expensive so large artificial islands were created at sea. One, Artrock 6, is used as a defence installation and is completely automated.

Unfortunately, a freak storm has damaged the controlling software causing the automatic defences to go berserk and anything approaching the island is destroyed. You as the pilot of an American F14 Tomcat fighter are sent in to destroy the base.

The fine loading screen depicting an F14 Tomcat fighter is followed by an even better Mode 4 graphic display. Overlaid on this picture is the small playing window in which you get a bird's eye view of the plane flying low over the island.

These graphics are quite detailed, but the green colouring caused unpleasant stripes on my colour TV. I found it better if I switched off the colour. The display on a monitor is excellent with no colour problems.

You can fly your plane forwards, backwards, left and right, the playing window scrolling smoothly in the appropriate direction to reveal more of the landscape.

Gun emplacements pop up from the ground, swivel round and fire cannons at you while aircraft attack from the front. These can all easily be shot with your own cannon, but their sheer numbers can be overwhelming and it is easy to lose a couple of lives very quickly.

The speed of animation is sluggish, slowing even more when several objects are on screen at the same time. Switch on your SLOGGER Turbo Board, however, and the game speeds up to quite an acceptable rate.

I find it impossible to play for more than a few minutes as the frustration factor is far too high. A friend of mine has seen level two, which is much the same as level one apart from the background. The cassette files indicate that there are four levels.

While we should all be pleased that Players are sticking with the Electron market, perhaps future offerings could be more playable than this one.

Rog Frost

### **\*\*\* Second Opinion \*\*\* (Electron User)**

Graphically, TOMCAT is brilliant. The loading screens are superbly drawn and the game graphics are among the best seen on the Electron. In parts, TOMCAT features parallax scrolling where one section of the background scrolls at a different rate to another section - this is the first time this has been attempted on the Electron.

Unfortunately, the poor Electron hasn't got the brute processing power to implement this type of format. Players is to be recommended for attempting it and Turbo owners will find it a graphic delight. Don't bother if you have an ordinary, slow Electron.

## Review (Electron User)

Do you know who won the battle of Trafalgar? The British? Wrong, it was the French. Or at least it was when I chose to play against the computer in Squirrel Software's smashing little game Trafalgar.

It opens with an overhead view of the British and French fleets facing each other, ready for battle. You can either play an opponent (which allows you to choose your side) or the Electron (when you are the British). Then, as a pointer runs up and down the side of the screen, you pick out which pair of ships are to come alongside each other and let loose a storm of broadsides.

As soon as a pair of warships has been selected, the scene changes. You see the two ships locked in mortal combat while a text window at the bottom of the screen gives the name of the combatants. You control the elevation and firing of the guns (keep an eye on the wind speed) and the aim is to hit the enemy ships before they hit you. Lose all your gun decks and you have to strike your flag and endure the ignominy of being boarded. Lose all your ships and you've lost the battle.

It's an interesting and amusing little game. The controls are easy to use and well explained and the graphics more than adequate. I particularly liked the way the ships show the damage incurred. I also liked the boarding parties - or, rather, my boarding parties.

Combining a war game and an action game - you have to be quick on the trigger - it makes a pleasant change from arcade games which strain your fingers and adventure games that strain your brain. So if you're looking for something different which will appeal to all the family, Trafalgar fits the bill. And what other game gives you the chance to rewrite history?

Trevor Roberts, ELECTRON USER 2. 1

## Instructions

*"Quick wits and skill are the essential requirements in this simple yet addictive game. Six levels of play, time limits, increasing numbers of "Nasties" and limited lives will make your task difficult to say the least. Take up the challenge and wipe the smile off their faces!"*

Your aim is to move the bricks around in order to trap and squash the Nasties. Any number of bricks can be pushed at the same time. The number of Nasties increases on each new level, but there will only be a maximum of four Nasties on the screen at any one time.

Each screen must be cleared within a certain time. The time limit and counter is displayed in the top right hand corner of the screen. There are six levels of difficulty and an extra life is received after 4,000 points have been scored.

## Game Controls

Z - Left, X - Right, : - Up, / - Down  
S/Q - Sound On/Off, <COPY>/<DELETE> - Pause/Continue Game, <ESCAPE> - Quit

**Instructions' Source** : TRAPPER (Blue Ribbon) Inner Inlay

## Review (Electron User) - "Another Brick In The Wall"

The aim of this budget arcade game is to trap monsters by pushing brick walls around to box them in and finally to squash them.

The title screen is typical of Blue Ribbon - simple and quick to load. There isn't a demonstration mode, so the game flicks between a list of control keys and a high score table.

On starting you are asked to input the difficulty level from one to six. This controls the monster's speed. One is slow and six is fast. I found the slowest speed quite fast enough for me.

The screen consists of a pile of bricks enclosed in a large box. Inside the box are you and a monster, which obviously considers you to be a rather tasty tit-bit. Fortunately, you are a strong chap and can push the bricks around quite easily. The monster can't push the bricks, nor can it pass through them.

So by pushing them round and piling them up you can eventually trap it (if you're lucky and can avoid it for long enough). Having done this, you then push a brick into it and squash it flat.

Screen two is pretty much the same as screen one, except that you now have two monsters to contend with - double trouble. The game now starts to get a bit hectic

as you try to trap both. While you're concentrating on one, the other is sneaking up behind you.

Screen three brings three monsters and four brings four. The final two rooms only have four monsters, but another is born immediately you trap and squash one.

On top of all this, there is also a time limit. A clock in the top-right corner of the screen slowly ticks away. If it reaches zero before you've trapped and squashed all the monsters you die and lose a life.

Although the game has a very simple theme, it is difficult, frustrating and challenging enough to make it highly addictive. The devilish grin on the faces of the monsters is a nice touch and it all adds up to a fun game that doesn't cost the earth. This is recommended.

SA31 1PQ  
Disc compatibility : Unknown

## Instructions

Instructions currently unavailable.

## Review (Electron User) - "Over From Channel 4"

MACSEN is a past master at converting successful TV programs for computers and in this case the target is the popular Channel 4 game show TREASURE HUNT. The game comes with four sets of data covering South Devon, London, Anglesey and East Scotland.

The basic idea is simple. You are given a cryptic clue of the sort you might find in a crossword. This gives you the name of your next location and you must fly your helicopter there and collect another clue. This continues until you have solved all the problems.

For example, your first clue might be "Fly to an occidental bad actor or pig meat", which means a location in East London renowned for its bubbly football team. When you arrive there you have to walk to 'The beheaded Queen's field where Alf Garnet likes to go". Some of the clues have a third section to make them even harder.

You are not on your own in this treasure hunt. Macsen has supplied you with a guide book for the three areas away from London and a map of the metropolis. You'll need the guide book because a detailed knowledge of the local geography is required. The London map is nearly useless and I used one with a larger scale and much more information.

The only section I have completed is the one covering the London area and this required a quick peek into the computer memory to solve one clue which had me beaten.

In all there are ten clues to find and to win you must find them in 30 minutes. Most of the time you will spend flying the helicopter, which takes an age to fly from place to place. You will need to be pretty slick with your typing to complete the task in the set time.

If you can't solve a clue, you've had it. There is no help so all you can do is fly aimlessly around until your time is up. If you can solve all ten clues you get a final screen which is hardly worth looking at.

You can choose to have a tune playing during the game but I would hardly describe the collection of discordant squeaks as musical.

I actually quite enjoyed the game. The map of the area you are working on is neatly drawn, and the puzzles were difficult to solve but not impossible. The program is

crammed with geographical data and you can end up with a crowded map, full of places which you don't need to complete the task but which do add interest.

Without this extra geography, the clues could be written on a small piece of paper and I feel this is one of those occasions where the computer adds little to the idea.

However, if you get hooked, Macsen offers extra data tapes, with new treasures to hunt, for £5.95.

# TREE OF KNOWLEDGE

*Professional, Originally Released On Cassette And ROM Cartridge*

Game Type : Utility; Educational Quiz  
Author :  
Standalone Release(s) : 1984: TREE OF KNOWLEDGE, Acornsoft, £9.20 (Tape) £16.95 (ROM Cartridge)  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ACORNSOFT, Betjeman House, 104 Hills Road, CAMBRIDGE CB2 1LQ

## Instructions

*"The TREE OF KNOWLEDGE is an interactive program which teaches categorisation. The student first educates the computer about a particular group of objects - for example, plants or birds. The database, or 'tree' created in this way is then used to play guessing games in which the student thinks of an object and the computer works out what it is. Databases are saved and loaded from within the program and two sample databases are supplied on the ROM Cartridge.*

*Suitable for teaching individuals or groups.*

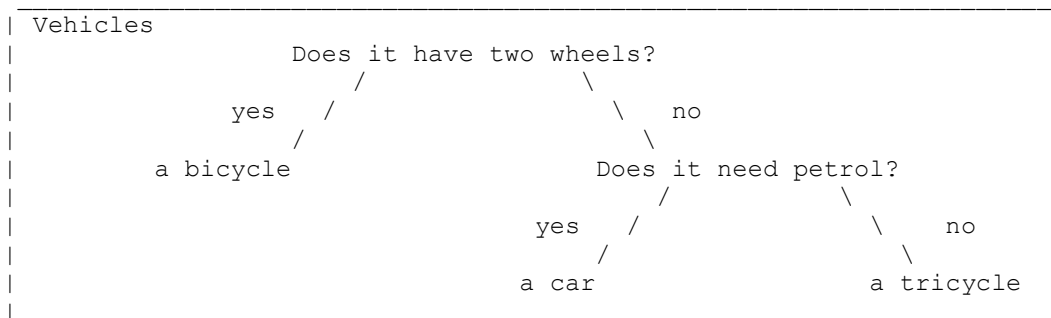

*This program has been designed to support a printer.*

*[This ROM Cartridge is designed for use with the Electron Plus 1.]"*

## Introduction

The TREE OF KNOWLEDGE is designed to introduce children to using computers for the storage of information and its retrieval. For simplicity the program is restricted to simple objects within a specified subject. For example, if the subject were 'plants' the objects could be 'a dandelion' and 'an apple tree'.

New objects are introduced to the program by means of a simple guessing game, using questions which can be answered with 'yes' or 'no'. With each new object the user supplies a question which will distinguish that object from those already known about. Because at every stage the answer to a question can be 'yes' or 'no' the database can be represented as a 'tree'. The question at every node has two branches, one for a 'yes' answer and one for a 'no' answer, and the objects are at the tips of the branches:

A feature of the program is that the tree can be printed out, or displayed on the screen so that the structure can be seen very simply.

There are two files provided on the ROM Cartridge - with the help of a teacher, young children of primary school age can play guessing games with the computer using the tree called FRUIT. The more serious application, CLASS, is suitable for 'A' Level Biology students.

## The Start-Up Menu

The start-up menu gives these options:

### 1 Load a tree from cassette

This loads a tree saved previously on cassette, or one of the demonstration trees supplied on this ROM Cartridge.

### 2 Start a new tree

This option is chosen to create a tree on a new subject.

Type 1 or 2 to select the option, followed by RETURN.

### 1 Load a tree from cassette

You will be prompted with:

Which tree would you like loaded?

(Please type in the filename)

If the tree is one of the demonstration trees supplied on this ROM Cartridge then type in the filename, for example:

FRUIT

and press <RETURN>. The file will load in a few seconds.

If the tree is saved on cassette, make sure the appropriate cassette is in the cassette recorder, and, if you know the whereabouts of the file in question, that it is wound to the right place.

Type in the filename, for example

VEHICLES

and press <RETURN>. The usual 'Searching' message is displayed on the screen, and you should press PLAY on the recorder and then wait for the file to load.

Once the file had been loaded, the main menu is displayed.

### 2 Starting a new tree

If you select this option the program will prompt:

What do you wish to call this tree?

The title that you choose can be up to 20 letters long, and describes the subject that the computer is to learn about. For example, PLANTS, ROCKS, APES, DRINKS, FURNITURE, COUNTRIES, VEHICLES.

Type in the title and press <RETURN>. As our example, we will choose VEHICLES so we type:

VEHICLES

The computer then checks:

VEHICLES

Are you happy with this title?

Reply with Y or Yes, N or No. If you reply Yes, it will then ask:

What is the singular of vehicles?

A

and we type:

VEHICLE

The singular can be up to 20 letters long (counting spaces). This question overcomes the problem of irregular singulars; for example, if the subject is FURNITURE, the singular could be given as A PIECE OF FURNITURE.

The computer now needs to know two objects to start the tree, so it will ask:

Please enter a VEHICLE

and we could type:  
BICYCLE

and to:  
Please enter another VEHICLE

we could type:  
CAR

Then the computer will print:  
Please give me a question to tell the  
difference between a BICYCLE and a CAR.

The question should be one that needs a yes/no answer. Suitable questions in this case could be:

DOES IT HAVE TWO WHEELS?  
DOES IT NEED PETROL?  
CAN IT BE LIFTED BY A MAN?

Assuming we gave the first question, the computer asks:  
DOES A BICYCLE HAVE TWO WHEELS?

to which the answer is obviously Y (or YES).

Now the computer is ready to try and guess objects that the user is thinking of.

### **The Main Menu**

For the examples which follow, we have used the FRUIT tree supplied on this ROM Cartridge.

What would you like to do :  
1 Think of a fruit  
2 Guess a fruit  
3 Edit the tree  
4 Print out the tree  
5 Save the tree  
6 Load another tree  
7 Start a new tree  
?

#### **1 Think of a fruit**

In this game the computer first checks you have thought of a fruit, saying:  
Are you thinking of a fruit?

and then (assuming your answer to be YES) tried to guess which fruit you are thinking of. It does this by asking the questions it has in memory in a logical order.

The first question might be:  
Does it have a stone?

If you answer yes, the next question might be:  
Does it have a smooth skin (not furry)?

Eventually, the computer will have a guess; if it guesses correctly, the game starts again and the computer asks you to think of another fruit.

If it does not guess what you were thinking of, it says:  
What fruit were you thinking of?

Type in the name of the fruit you had in mind. If the fruit you were thinking of is already on the tree, the computer may appear unwilling to accept defeat! It will probably say:

That fruit is already on the tree

and ask you to try again. You can ESCAPE at this point if needed. The other possibility is that the fruit is not on the tree: suppose, for example, the computer didn't know about greengages, and its last guess was:

Is it a gooseberry?

to which you replied NO (because you were thinking about a greengage. The computer says:

What fruit were you thinking of?

To which you reply GREENGAGE. The computer then asks:

Please give me a question to tell the  
difference between a greengage and a  
gooseberry.

Once you have provided a question, the game can then proceed with the computer again guessing the fruit.

## **2 Guess a fruit**

In this game it is you who has to do the guessing! The computer randomly chooses one of the objects in the tree and then finds all questions leading up to it. This takes a few seconds. Then it chooses the questions at random (without repetition), displaying a question and telling you the answer as it should be for the fruit it is thinking of; for example,

The answer to the question  
Is it furry?  
is YES

Your guess is?

If you guess correctly, it says CORRECT before returning to the main menu. If you guess wrongly, it displays the next question and answer, and this continues until it runs out of questions. Finally, it tells you what it was thinking of.

## **3 Edit the tree**

Do you wish to:  
1 Edit questions  
2 Edit answers  
3 Delete a node  
( USE 1 / 2 / 3 / N )

### **Editing Questions And Answers**

Editing questions and answers is very simple. If you select 1 or 2 from the menus shown above, the computer displays all the questions and answers in batches of four at a time, and gives you the option of changing the question or answer that is wrong.

After each correction, press RETURN and the program will take you back to the editing menu.

### **Deleting A Node**

If you select option 3 the computer displays four 'nodes' of the tree at a time. A node in this case is a question, and is so-called because it is a point from which two branches stem. When you delete a node, one of its branches must go, and so when you have chosen a node to delete, the computer shows you the branches stemming from it, and says:

Do you want to delete the Y or the N branch  
(use Y or N)?

NOTE: It is not possible to delete the first question in the tree (called the Root) and so you are not given the option.

Selecting N takes you back to the main menu.

## **4 Print out/display the tree**

If you choose this option, you are first asked:  
Do you wish to list the whole tree?

If you answer YES, the computer then asks:  
Shall I print to printer?

The answer NO will simply list the tree on the screen distinguishing between questions and objects. If you wish to print out the tree, answer YES. You are then asked:  
How many columns is the printer?

(Consult your printer manual if you do not know the answer to this question.) Type in the number of columns, press <RETURN> and the printer will leap into action. If you just press <RETURN>, 80 columns will be assumed.

If you choose to display or print out only part of the tree, the questions are shown on the screen and you select the question from which you wish to start printing.

Press the <SHIFT> key to move on to the next page.

If output is to the screen only, you have to press <ESCAPE> to return to the main menu.

## **5 Save the tree**

If you ask to save the tree, the computer will ask you:  
What name shall I give to the file?

Type in the filename and press <RETURN>. The usual "RECORD then RETURN" cassette operating message is displayed.

WARNING: Do not save the tree using the filenames FRUIT or CLASS as you will not be able to load it again.

When the file has been saved, you are returned to the main menu.

## **6 Load another tree**

If you choose this option you will be returned safely to the operations of the start-up menu.

## **7 Start a new tree**

See the section under START-UP MENU.

## **Acknowledgement**

This program was inspired by an idea from ESM, Educational Software for Microcomputers.

**Instructions' Source** : TREE OF KNOWLEDGE (Acornsoft) Back Inlay and Booklet

## **Review (Electron User)**

Saying that TREE OF KNOWLEDGE, the new program from Acornsoft, is an educational game could be the kiss of death. I mean, who wants to buy something that's educational? It sounds like an impossibility - a contradiction in terms! However, TREE OF KNOWLEDGE is both.

It's a program that shows how computers can organise facts, which must be educational. But it makes it all so interesting that you don't realise that you're involved in learning.

Taken at its simplest level it's just a question-and-answer guessing game. Either you decide to "be" an object and the Electron must guess what it is or the micro is "it" and you must ask the questions until you can guess. Of course, there has to be a list of objects to pick from, and the game supplies you with two.

On another level, you're learning how to set up lists of facts, or databases, and then using them to get the information that you want. At first, no doubt, you'll use the databases the game gives you but soon you'll want to create your own.

The program allows you to do this, simply and easily. It also lets you adjust the ones you already have, so you can throw in the odd unexpected object to catch out a know-it-all.

It's fascinating to use and can be anything from an intriguing game to an educational tool. The range is enormous. The Acornsoft cassette gives a database that can be used for A-Level Biology students. I'm working on one using words from my daughter's school books. You're only limited by your imagination.

The instructions you get are complete and easy to follow and the whole package professionally produced. If you're looking for a program that's both different and enjoyable then this is worth considering. Even if it's educational!

Eileen Young, ELECTRON USER 1. 3

# TREK II

## *Professional, Originally Released On Cassette Only*

Game Alias : WARP ONE  
Game Type : Strategical Space Adventure  
Author : Dave Crofts  
Standalone Release(s) : 1986: TREK II, Tynesoft, £6.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : TYNESOFT, Unit 3 Addison Industrial Estate, Blaydon, TYNE & WEAR NE21 4TE. Tel: 091 414 4611  
Disc compatibility : CDFS E00, DFS E00

### Instructions

As commander of a federation starship, your mission is to travel through the six galaxies in search of a long lost Starship Captain.

Your scanners display all the sectors in the current galaxy and an 'X' indicates a possible position of a space portal used to warp to a new galaxy when all the Klingons have been destroyed. A '\*' indicates the location of a Starbase which you dock with using the Ion drive. The number following indicates the number of Klingons on that Sector (0-3).

When entering a sector containing Klingons, activate your shields (if you fail to do this, damage will increase dramatically). After you've activated your shields, you have a limited time to destroy the Klingons before they return fire to destroy an enemy ship. Position the target over the light coloured dot on the ship's bridge then press COPY to fire.

You can warp up to three sectors in each direction at any one time. When all the Klingons are destroyed in a galaxy, you have a limited time to find the space portal and proceed to the next galaxy.

### Game Controls

Use the cursor control keys and <COPY> to fire

The Number keys work as follows:

1	.....	Shields On/Off
2	.....	Navigate (<RETURN> Aborts)
3	.....	Ion Drive
4	.....	Phasers
5	.....	Sector Update

**Instructions' Source** : TREK II (Tynesoft) Inner Inlay

**Special Information** : TREK II is a re-release of WARP 1 by Icon. The alternative instructions are far superior.

# TRIPLE DECKER 1

*Professional, Originally Released On Cassette Only*

Game Types : Arcade  
Standalone Release(s) : 1988: TRIPLE DECKER 1, Alternative, £1.99  
Compilation Comprises : 1. GRAND PRIX, Alternative  
2. MANIC MOLE, Alternative  
3. DAY AT THE RACES, Alternative  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ALTERNATIVE, Units 3-6 Baileygate Industrial Estate,  
Pontefract, WEST YORKSHIRE WF8 2LN. Tel: 07977 79777  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## GRAND PRIX

You are a formula 6 racing driver striving to become a formula 1 driver. On the grid, you are car number 3. Watch out for car 4 as he is usually the ace driver in the race. If you win a race you get promotion. On losing a race, you are returned to formula 6. Crashing into other cars causes you to wait for a short spell to have your car repaired. This is a highly addictive arcade style grand prix game.

### Game Controls

< - Steer Clockwise, > - Steer Anticlockwise

## MANIC MOLE

Mavis Mole, your girlfriend, has been wrongly arrested for leaking documents to a newspaper. Help Martin, the manic mole collect all eleven jewels for her ball. If you have a jewel, go through the door on the right of the screen, and you will enter the next room. There are twelve screens to complete.

### Game Controls

Z - Left, X - Right, <SHIFT> - Jump

## DAY AT THE RACES

You are given £150 for your birthday and decide to spend a day at the races. You decide how much to bet, and on which horse, but the bookies here don't accept credit, so you can't spend more than you have.

All Instructions On Screen.

**Instructions' Source** : TRIPLE DECKER 1 (Blue Ribbon) Inner Inlay

## Review (Electron User - Triple Review Of TRIPLE DECKERS 1, 2 and 3) - "Nine Of The Best"

TRIPLE DECKERS 1, 2 and 3 consist of three games on each budget priced cassette which sounds as though it must be a bargain not to be missed.

The three on the first tape are GRAND PRIX, MANIC MOLE and DAY AT THE RACES. It will come as no surprise to hear that GRAND PRIX is a motor racing game.

You see a plan view of a track with four midget-sized cars. One of these lethal machines is yours and it is locked in gear. Not only that, the accelerator is full on as well. All you can go is steer round the track, avoiding the other cars, getting knocked sideways by collisions while the three computer-controlled racers seem hardly affected.

After five frenetic laps, the race is over and a result sheet gives your position. This is a simple game and not of outstanding quality, but fun all the same.

MANIC MOLE is a platform game which has been written in pure Basic. The aim is to collect a jewel from each room so your girlfriend can be released. The only moving object on the screen is the mole - driven by you - which means the speed is quite good.

The first couple of rooms are easy, but then slides and dissolving platforms rear their ugly heads. MANIC MOLE is hardly eye-catching, but it is quite a neat bit of programming.

DAY AT THE RACES is a game for addicted gamblers. Choose your computer horse, bet your pretend money, watch a random race and collect your imaginary winnings. I don't understand why anyone would want to do this, but for those who do, at least there is the satisfaction of a near guaranteed win. The bookies in this simulation offer incredibly generous odds.

Collection two in this series gives you INVASION FORCE, HAUNTED and PARACHUTE. INVASION FORCE is a simple, if fairly fast, space invaders. The Mode 4 graphics (just two colours) are rather dull and the whole process seems a little too easy. I'm not usually very good at shoot-'em-up games, but I soon got bored with my own success here.

HAUNTED by Peter Scott is in a vastly better league. This machine code game has you rushing around a room collecting keys and other goodies while avoiding or shooting the meanies. Success in a room leads you to a new and more challenging one with more problems to overcome. To keep you on your toes, there is a time limit as well. The graphics and sound make this game a pleasure to play.

In PARACHUTE a helicopter is releasing its huge cargo of lunatic parachute jumpers. These idiots are jumping into a river which is well stocked with man-eating sharks. You can save these unfortunate half-wits if you manoeuvre your raft to catch them and then transfer them to the jetty.

You can only carry one parachutist at a time and they arrive thick and fast, so speed and care are required. This isn't a brilliant game.

TRIPLE DECKER 3 brings us LUNAR INVASION, JAM BUTTY and LUNAR LANDER. LUNAR INVASION is set on the surface of the moon. Armed with a buggy and an anti-aircraft gun, you have volunteered to fight off the invaders.

Wave after wave of aliens stream on to the screen - some are harmless, mere target practice, but others produce showers of missiles. A hit reduces your shield and the game is over when you have none left. Good sound and smooth, fast graphics make this game a winner.

JAM BUTTY is a platform game. Your aim is to pinch all the sandwiches from a building site while the workers are holding a meeting. The sprites are smooth, but control of your rather plump man is difficult and I have not yet completed the first room. The game is well laid out, with good title pages and pleasing sound which can be turned off.

The final program is LUNAR LANDER, which is very much a make-weight. The landing craft has the usual left, right and up controls and must be landed at a very low speed. You must also use the minimum quantity of fuel.

Unfortunately, the graphics are far too jerky and the sound is poor. There are plenty of better lander programs around.

Overall, these three packages do represent reasonably good value for money. HAUNTED and LUNAR INVASION could easily stand as budget games in their own right. The extra ones can then be regarded as something of a bonus.

The games are actually ELECTRON USER's own TEN OF THE BEST re-packaged. There are now three games on each tape (THREE OF THE BEST?). If you buy the lot it works out more expensive than TEN OF THE BEST, but if you only want three particular favourites then go for TRIPLE DECKERS.

Sound .....	7
Graphics .....	5
Playability .....	7
Value for money .....	8

Pontefract, WEST YORKSHIRE WF8 2LN. Tel: 07977 79777  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## INVASION FORCE

They came out of the blue. They are known only as the Invaders. Their mission: To claim Earth as their own. Of course, the fact that man was here first didn't stop them. Destroying the major Cities around the globe, then mercilessly mopping up the pockets of resistance.

You don't know how many of your comrades are fighting back, or even how many survived as communications were the first thing to go. As far as you are concerned, you are the last.

Only you, three ion cannons and lady luck stand between absolute victory, or total defeat.

### Game Controls

Z - Left, X - Right, <SHIFT> - Fire  
P - Pause On/Off, S/Q - Sound/Quiet

## HAUNTED HOUSE

You control Albert, who is trapped inside a haunted house. In every room there are various articles you must avoid, such as the red cans, the aliens or the ghosts.

To exit a room, collect all the keys and shoot all the aliens. For extra points, collect the swords and the diamonds. You get an extra life if you complete room four.

### Game Controls

Z - Left, X - Right, \* - Up, ? - Down, <SHIFT> - Fire (if facing sideways)

## PARACHUTE

Try to save as many of the parachutists which are jumping from the helicopter as possible.

You have five lives with which to do this, and you lose a life every time a parachutist drowns. Once you have a parachutist in your boat, you must return him to the shore.

### Game Controls

Z - Left, X - Right

3. LUNAR LANDER, Alternative  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ALTERNATIVE, Units 3-6 Baileygate Industrial Estate,  
Pontefract, WEST YORKSHIRE WF8 2LN. Tel: 07977 79777  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## LUNAR INVASION

It has been six months since 'they' invaded. No one knows where they came from, or even what 'they' look like but one thing is for certain. 'They' ARE NOT FRIENDLY.

They have conquered Earth's Lunar outposts, and only a few personnel survived. They are now scattered behind enemy lines, and you, Commander Jon Arbuckle, have volunteered for the mission.

Your only transport is an old O.D.I.E. (Overland Destroyer Integral Environment) brought out of storage and fitted with Anti Aircraft Missiles and Ion Force shields. The shields will only hold out for so long...

Good Luck, and Good Bye!

### Game Controls

< - Brake, > - Accelerate, <CTRL> - Fire

## JAM BUTTIE

Run around the building site, pinching the workmen's lunch pack while 'they' are in a meeting. Avoid the machinery, seagulls and spiders which get in your way, but you'd better get a move on. It sounds as though the meeting's nearly finished.

### Game Controls

< - Left, > - Right, <SPACE> - Jump

## LUNAR LANDER

You are one of NASA's (Nutley Aero and Space Association...?) chief test pilots, testing a new Emergency Lunar Escape Capsule. You have to land the capsule on any level area using as few litres of fuel as possible. Do not land at too great a speed as this will destroy the lander.

### Game Controls

< - Thrust left, > - Thrust right, Z - Vertical thrust

**Instructions' Source** : TRIPLE DECKER 3 (Blue Ribbon) Inner Inlay

### Review (Electron User - Triple Review Of TRIPLE DECKERS 1, 2 and 3) - "Nine Of The Best"

Please see TRIPLE DECKER 1 for this review.

# TRIPLE DECKER 4

*Professional, Originally Released On Cassette Only*

Game Types : Arcade  
Standalone Release(s) : 1988: TRIPLE DECKER 4, Alternative, £1.99  
Compilation Comprises : 1. HOWZAT, Alternative  
2. GOLF, Alternative  
3. FISHING, Alternative  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ALTERNATIVE, Units 3-6 Baileygate Industrial Estate,  
Pontefract, WEST YORKSHIRE WF8 2LN. Tel: 07977 79777  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## HOWZAT

You take over as the captain of an international Cricket squad. You have to decide on who would be the best bowlers, whether to run out or whether to stay put.

All the great names, Botham, Gattling, to name but a few, are ready to play. Or if you wish you can name your own teams and players.

Can you steer your team towards winning the Ashes?

Instructions on screen.

## GOLF

GOLF can be played by up to five players. Go round the nine hole course using as few strokes as possible. Avoid the bunkers and the rough, they can be hard to get out of. Also watch out for the lakes, as it can be difficult to play golf with wet socks!

Instructions on screen.

## FISHING

You have entered the UK Angling Contest. Use your skill to determine the best bait, hook size, fishing depth and weight of lead free shot to use. Now sit back, relax and wait for a bite.

## Game Controls

A - Far Cast, Z - Near Cast, <SPACE> - Cast In, : - Reel In

**Instructions' Source** : TRIPLE DECKER 4 (Blue Ribbon) Inner Inlay

## Review (Electron User - Double Review Of TRIPLE DECKERS 4 and 5)

### - "Budget Sports And Arcade Action"

Not too long ago it was considered to be good value if you could pick up an arcade game for £1.99 - nowadays Alternative Software is churning out three-game compilations at the same price.

A sporting theme is in evidence on TRIPLE DECKER VOLUME FOUR, with cricket, golf and fishing as the pastimes on offer.

HOWZAT represents the next step up from the old fashioned, pencil, paper and dice game that was popular when I was a lad - everything is still reliant upon random numbers, but the game is acted out of the screen to add extra interest. Players'

names for the two teams involved may be typed in, or you may choose to use the pre-programmed English and Australian teams.

A rapidly drawn aerial view of the pitch and players is displayed for your entertainment - the grass is green and the stick-men are black: Hardly state of the art, but adequate for this game.

From this point onwards life becomes very straightforward: The bowler bowls, the batsman bats, and you are asked whether you wish to run. HOWZAT is a very simple game - yet enjoyable to play.

Game number two of the compilation is GOLF - for up to five players. The aim of the game is to complete the nine hole course in the least number of shots, although I doubt whether many people will have the stamina to complete a single incredibly long round.

Using any of the eight compass directions you guide a white dot along a map of the hole, eventually reaching the large black dot at the far end. All of this excitement was far too much for me, so I loaded up game number three - FISHING.

"How on earth do you translate the sport of fishing into a computer game?" I hear you ask - "Very successfully," says Alternative Software.

You are provided with such vital information as weather conditions, water speed and depth, from which you must make the correct choice of hook, bait, and weights. Out on the well-drawn river bank you decide whether to cast near or far and at what depth.

With your bait in the water you can settle back and wait. Within seconds your float will begin to twitch. Hand hovering about the Spacebar you pose, ready to strike: The float goes under completely and bang - you're into your first fish. For the ridiculous sum of 67 pence you couldn't find a better game.

VOLUME FIVE comprises two space games and a karate program. Offering number one is STARFIGHT and represents shoot-'em-ups at their most basic.

The screen displays the view from your cockpit as you orbit the planet M101/3. A small blip appears and begins to increase in size as it approaches - using four poorly chosen keys your job is to blast the blip.

An on-screen range finder counts down as the alien ship homes in on your position - the further away the target, the more points you score if you hit it. When the range finder reaches zero, you lose your one and only life. STARFIGHT is an ordinary game that is made worse by a terrible choice of control keys.

SKRAMBLE, as you might expect, is a horizontal scrolling zap-and-blast game. A continuous stream of alien ships and missiles fly smoothly from right to left across the screen - all you have to do is shoot them. Blasting the aliens is actually quite easy - they fly in perfectly straight lines and don't fire back.

The alien plan is to defeat you through sheer strength of numbers - after a couple of minutes flying time you will find yourself struggling to clear a path through the alien swarm. Shooting them doesn't help as this merely converts the alien into a fireball that continues on its original course. Good use of colour and smooth animation make SKRAMBLE a worthy addition to this collection.

Game number three brings you back down to earth with a bump, a kick, and a nasty looking punch. KARATE WARRIOR is a fine looking game that has one major failing - it can only be played by two players. As with all martial arts games your success is dependent upon your ability to string together a winning combination of kicks and punches. The usual selection of 16 moves has been reduced slightly, to a grand total of four.

The two single-colour warriors perform their ritualised combat with flicker-free ease, it is such a pity that the computer is unable to defend itself - KARATE WARRIOR could have easily been a good game.

It's worth noting that this budget collection consists of some of the best games from the pages of ELECTRON USER. In spite of the varied quality of some of them, you will have to search far and wide to find better products at this price.

Jon Revis

**\*\*\* Second Opinion \*\*\* (Electron User)**

There's something for everyone here, with three excellent sports simulations and as many exciting arcade games. The golf can become tedious as it takes so long to play, but Fishing is quite fast-paced. I enjoyed SKRAMBLE and KARATE WARRIOR, though the latter would be better if it also had a single player option. STARFIGHT is probably the simplest of all the games, but is nevertheless enjoyable.

# TRIPLE DECKER 5

*Professional, Originally Released On Cassette Only*

Game Types : Arcade  
Standalone Release(s) : 1989: TRIPLE DECKER 4, Alternative, £1.99  
Compilation Comprises : 1. STARFIGHT, Alternative  
2. SKRAMBLE, Alternative  
3. KARATE WARRIOR, Alternative  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ALTERNATIVE, Units 3-6 Baileygate Industrial Estate,  
Pontefract, WEST YORKSHIRE WF8 2LN. Tel: 07977 79777  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## STARFIGHT

Bandits have been raiding the planet M101/3, which must be protected at all costs. You are on your last mission. A one way trip to fame and glory. Shoot down as many raiders as you can before your ship runs out of energy.

The further away a ship is when you hit it, the more points you get. Your laser uses up large amounts of power so try not to miss. If they get too close, they will fire proton torpedos which further drain your energy.

## Game Controls

<CAPS LK> - Up, <CTRL> - Down, L - Left, : - Right, <RETURN> - Fire

## SKRAMBLE

You are on a dangerous mission flying deep into enemy territory. Your task is to destroy as many enemy fighters and missiles as possible. Your aircraft is fitted with Mk 7 missiles which are capable of turning enemy aircraft into fireballs on contact.

Be careful though, as one touch from any alien object and your ship will be destroyed!

## Game Controls

A - Up, Z - Down, <RETURN> - Fire

## KARATE WARRIOR

A two player karate combat game. You have four separate moves: Flying Kick, Floor Sweep, High Kick and Backwards Leap. Use these moves to attack your opponent and knock him to the floor.

Two players only.

## Game Controls

### Player 1:

<CTRL> - Backwards Leap, A - Flying Leap, S - High Kick, X - Floor Sweep

### Player 2:

<RETURN> - Backwards Leap, C - Flying Leap, : - High Kick, / - Floor Sweep

Please see TRIPLE DECKER 4 for this review.

# TRIPLE DECKER 6

*Professional, Originally Released On Cassette Only*

Game Types : Arcade  
Standalone Release(s) : 1988: TRIPLE DECKER 6, Alternative, £1.99  
Compilation Comprises : 1. CAVERN CAPERS, Alternative  
2. SNAP DRAGON, Alternative  
3. CASTLE OF SAND, Alternative  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ALTERNATIVE, Units 3-6 Baileygate Industrial Estate,  
Pontefract, WEST YORKSHIRE WF8 2LN. Tel: 07977 79777  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## CAVERN CAPERS

You have been given command of a spaceship. Your mission is to escape from heavily defended underground caverns. Your ship is a short range craft, so in order to stay aloft you must explode fuel tanks with your powerful lasers. To add to your problems, the caverns become more treacherous to pass through as you continue.

### Game Controls

: - Up, / - Down, <SHIFT> - Thrust, <CTRL> - Fire

## SNAP DRAGON

King Fred (The Thick!) has decreed that jousting and other similar fighting be outlawed.

Instead, Knights must settle their disputes by playing Snap. But this is no ordinary game of Snap. Every time a Knight wins, the door of his dragon's cage is opened a little. When the door is completely open, then that dragon's owner is the winner, and everyone celebrates with a feast of barbecued dragon!

### Game Controls

Player 1 - Z, Player 2 - /

## CASTLE OF SAND

The object of the game is to fill in the sand castle with sand from the beach. The sand is advancing slowly towards the bottom of the screen and any sand it meets is slowly washed away. But don't worry, the sea cannot wash away your castle.

You must position your man above or below the sand you wish to dig then pick it up in your bucket. When you drop the sand it fills in the space directly above you. You score 25 points for each block placed in the castle.

### Game Controls

Z - Left, X - Right, \* - Up, ? - Down  
<SPACE> - Dig Down, <RETURN> - Dig Up, <SHIFT> - Fill Up

Instructions' Source : TRIPLE DECKER 6 (Blue Ribbon) Inner Inlay

# TRIPLE DECKER 7

*Professional, Originally Released On Cassette Only*

Game Types : Arcade  
Standalone Release(s) : 1988: TRIPLE DECKER 1, Alternative, £6.95  
Compilation Comprises : 1. ATOMSMASH, Alternative  
2. KNOCKOUT, Alternative  
3. REACTION TESTER, Alternative  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ALTERNATIVE, Units 3-6 Baileygate Industrial Estate,  
Pontefract, WEST YORKSHIRE WF8 2LN. Tel: 07977 79777  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## ATOMSMASH

The nuclei of all elements with less than 17 electrons have become unstable.

In an effort to save the universe, you and your ship have been reduced to sub-atomic size.

Five 'gluons' have been provided for each element. Collect each one from the bottom of the screen and take it to the nucleus. To leave a gluon in the nucleus, stop between the dotted lines.

Be careful not to touch anything and hurry, there isn't much time left!

## KNOCKOUT

Try to stop the wall advancing up by knocking the bricks out with a cannon ball.

The cannon ball moves back and forth along the top of the screen until <SPACE> is pressed. It then drops down and crashes into the wall. There are three speeds: 1 is the slowest and each brick is worth 10 pts, one bonus point is given on level 2 and 2 bonus points are given on level 3.

## REACTION TESTER

The white bar which will appear on the left of the screen will change colour following the sequence of traffic lights (RED, YELLOW, GREEN).

Press <SPACE> as soon as the colour changes to green. Your reaction time and rating will then be given.

# TRIPLE DECKER 8

*Professional, Originally Released On Cassette Only*

Game Types : Arcade  
Standalone Release(s) : 1988: TRIPLE DECKER 1, Alternative, £6.95  
Compilation Comprises : 1. GREBIT, Alternative  
2. MR FREEZE, Alternative  
3. FRUIT WORM, Alternative  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ALTERNATIVE, Units 3-6 Baileygate Industrial Estate,  
Pontefract, WEST YORKSHIRE WF8 2LN. Tel: 07977 79777  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## GREBIT

Guide the frogs across the road, avoiding cars, buses and lorries. Then hop from logs to turtles, making sure you do not fall in the water as you cannot swim!

Ten points are awarded for every forward jump and 100 points for every frog home. As the game progresses the road becomes very crowded and the number of logs and turtles decreases.

## Game Controls

Z - Left, X - Right, : - Up, / - Down

## MR FREEZE

Mr Freeze's frozen food factory has been sabotaged by one of his rivals. Electric fires have been placed amongst the ice blocks to melt them.

The fires switch on one at a time. You must switch each one off before the timer reaches 0.

You can jump from block to block and slide left and right.

## Game Controls

< - Left, > - Right, S - Up, X - Down, A - Slide Left, D - Slide Right

## FRUIT WORM

Guide the worm around the screen collecting and eating fruit, avoiding the rocks, the outer fence, and your own tail. A bonus is awarded at the end of each frame. Extra worms are awarded for every 50,000 points scored.

## Game Controls

< - Left, > - Right, A - Up, Z - Down

**Instructions' Source** : TRIPLE DECKER 8 (Blue Ribbon) Inner Inlay

# TRIPLE DECKER 9

*Professional, Originally Released On Cassette Only*

Game Types : Arcade  
Standalone Release(s) : 1988: TRIPLE DECKER 9, Alternative, £6.95  
Compilation Comprises : 1. BREAK FREE, Alternative  
2. MISSILE JAMMER, Alternative  
3. CODE BREAKER, Alternative  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ALTERNATIVE, Units 3-6 Baileygate Industrial Estate,  
Pontefract, WEST YORKSHIRE WF8 2LN. Tel: 07977 79777  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## BREAK FREE

You must deflect the ball against the multi-coloured wall with the aid of your bat.

When a wall has been cleared, the speed will increase and the wall will be moved further down the screen.

## Game Controls

Z - Left, X - Right

## MISSILE JAMMER

You must use all your skill to destroy incoming missiles with your ship before they reach your home planet.

Armed only with your rammer craft 'Xenon', you must ram the missiles with the top of your craft.

Beware, if three missiles get past your defence, the planet will be destroyed. Fuel must be kept up at all times and to refuel, you simply move your ship to the refuelling vessel at the right of the screen.

Will you survive the first wave of missiles? If so, the second are even more deadly. You have been warned!

## Game Controls

Z - Left, X - Right

## CODE BREAKER

This is a game in which you have to crack a secret code. The code consists of different colours and you have twelve attempts at it.

Pressing one of the number keys will place a colour and <DELETE> will erase it.

A white peg means that one of the colours is the right colour in the right place and a black peg means that one of the colours is the right colour but on the wrong place.

**Instructions' Source** : TRIPLE DECKER 9 (Blue Ribbon) Inner Inlay

# TRIPLE DECKER 10

*Professional, Originally Released On Cassette Only*

Game Types : Arcade  
Standalone Release(s) : 1988: TRIPLE DECKER 10, Alternative, £1.99  
Compilation Comprises : 1. ROCKFALL, Alternative  
2. MONEY MAZE, Alternative  
3. BUNNY BLITZ, Alternative  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ALTERNATIVE, Units 3-6 Baileygate Industrial Estate,  
Pontefract, WEST YORKSHIRE WF8 2LN. Tel: 07977 79777  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## ROCKFALL

After travelling for many months you've finally reached Gamma-4, a small asteroid rich in crystals. Now you must guide your mining droid through the soft earth to the crystals, watch out for the large rocks though. If you dig underneath these they will fall and crush you!

When you hve collected all the crystals you move onto the next asteroid.

### Game Controls

< - Left, > - Right, A - Up, Z - Down  
<CTRL> - Scroll Left, ? - Scroll Right  
Hold down <ESCAPE> to exit the game.

When the game has loaded, press <ESCAPE> to toggle the editor men. The editor enables you to design your own screens and save them to disc or tape.

### Editor Controls

The cursor shows the currently selected character and the cursor keys move it around the screen. To change the current character press <SPACE> and to print it press <COPY>. <DELETE> will clear the whole screen so you can start afresh - take care!

There must be at least one crystal and one droid on the screen. Press <ESCAPE> when you have finished. The screens can be saved from the Editor screen menu.

## MONEY MAZE

Run around the maze picking up as many coings as you can, but watch out for the three ghosts who will try to eat you! If you manage to collect all the coins then the maze is filled again and the ghosts move faster.

### Game Controls

< - Left, > - Right, A - Up, Z - Down  
Press <SPACE> to start. Make sure <CAPS LOCK> is on.

## BUNNY BLITZ

Welcome to Bunny Blitz. Try to collect as many eggs as you can to score points. However if you go over the rabbits then some points will be deducted from your score. Two is the hardest level, forty is the easiest.

### Game Controls

< - Left, > - Right, A - Up, Z - Down

# TURBO COMPILER

***Professional, Originally Released On Cassette Only***

Game Type : BASIC To Machine Code Compiler  
Author :  
Standalone Release(s) : 1984: TURBO COMPILER, Salamander, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SALAMANDER, 17 Norfolk Road, Brighton, SUSSEX BN1 3AA.  
Tel: 01273 771942  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"TURBO is a highly compact machine-coded BASIC compiler for use with both the BBC Microcomputer (Models A and B) and the Acorn Electron microcomputer.*

*Its small size allows TURBO to compile programs instantaneously within the micro, without the need for immediate use of tape or disk.*

*Supplied with detailed documentation, TURBO is ideal for constructing fast hybrid programs, or writing 100% machine code programs.*

## Features:

- \* *Highly compact machine-coded compiler (2K)*
- \* *Fast compilations in under one second*
- \* *Disk based version also supplied on same cassette*
- \* *Supports sub-set of BASIC commands directly*
- \* *Comprehensive documentation details how to implement a total of 65 BASIC keywords*
- \* *Compiled code can be used without the compiler being resident*
- \* *Provides an ideal immediate stage for users who wish to move from BASIC programming to the use of machine code and the Acorn operating system*
- \* *TURBO requires a Series 1 Operating System on the BBC Micro"*

## Introduction

TURBO is a basic compiler for the BBC and Acorn Electron microcomputers (in order to run TURBO on the BBC Micro, a 1.0 or later Operating System is required).

Two versions of the program are supplied, one for BBC or Electron users with a normal cassette tape system, the other for BBC users with a disk drive, or using a cassette tape on a machine with a DFS installed.

The compiler occupies only 2K of memory, and will therefore run on both the BBC Model A and the BBC Model B; on the Model B and Electron, TURBO will allow all eight screen modes to be used. As this is such a compact compiler, not all of the BASIC keywords have been implemented. However, Appendix 1 lists all of the BASIC keywords and explains how to achieve, where possible, the same effect if that keyword is not directly supported by TURBO.

The TURBO Compiler is ideal for the user who wishes to write machine code subroutines for games. Indeed, entire games can be written with TURBO, but the user may find that she/he has to divide the program into several sections if it is a long game.

The machine code produced by TURBO is completely independent of the compiler, and so can be used without the compiler itself being resident.

Once the dialect used in TURBO has been picked up, you will find that you can easily write very fast programs. For example, the following program takes about 14.5

seconds to run in BASIC on the BBC Micro, but if you compile it with TURBO, it will take under one second to execute.

```
10LETB%=&00
20LETB%=B%+&01
30FORA%=00TO&FF
40NEXTA%
50IFB%>&FETHEN20
```

The same savings in time will not be experienced with all programs (depending on complexity) but you will find that your programs will run considerably faster.

### Loading The Compiler

The following instructions are for loading the TUBRO compiler from tape. If you have a disk system, read the section TRANSFERRING TURBO TO DISK before continuing.

1. Ensure that the computer is free of any other programs, either by pressing <CTRL> and <BREAK> at the same time, or by turning the computer off and on again.
2. Position the tape at the beginning of side 1.
3. Type CHAIN"" and press <RETURN>.
4. Press the PLAY button on your cassette recorder.
5. When the first program has loaded, a title page will be displayed and the computer will begin to load the second program. Leave the cassette recorder playing until this second program has finished loading. Ignore any messages the computer may print after both programs have loaded.
6. Stop the cassette player if you do not have the remote control facility connected. If you wish to load the demonstration program, do not rewind the tape.
7. Press <BREAK>. The screen should appear as below (or similar, depending on computer type):  
TURBO BASIC  
BBC Computer 32K
8. Set PAGE to wherever your BASIC program is going to be stored. The minimum setting is &1500. To do this, type PAGE = &1500 <RETURN>.

If you wish to set PAGE higher than the minimum, you will also need to alter memory locations &D20 and &D21.

For example, if you wanted to set PAGE to &3000, you would also have to poke the low byte of the address to &D20 and the high byte of the address to &D21:

```
e.g. Type: PAGE = &3000      and press <RETURN>
          ?&D20 = &00        and press <RETURN>
          ?&D21 = &30        and press <RETURN>
```

9. The compiler normally stores the compiled code from the address &2200 upwards. If you wish to change this, memory locations &D1E and &D1F must be altered to contain the low and high bytes of this new address. For example, to change the start position of the code to &3200, type the following:  
?&D1E = &00 and press <RETURN>  
?&D1F = &32 and press <RETURN>
10. Type NEW and press <RETURN> to let BASIC get its pointers sorted out.
11. If you are using a BBC Model A, you will need to enter the following:  
?&DE4=&3E:?&DE9=&3F:?&FCB=&3F:?&FD5=&3E <RETURN>

The computer is now ready for you to either load or write a program. There is a demonstration program on the cassette immediately after the compiler.

Note: The demonstration program for use with disk has had all REM statements removed. Disk users who wish to list and study the demonstration program are recommended to do so using the tape demonstration on side one of the cassette.

### Transferring TURBO To Disk

SIDE two of the cassette contains a version of TURBO for use from disk.

To transfer the two programs to disk, proceed as follows:

1. Type \*TAPE and press <RETURN>.
2. Position the tape at the beginning of side 2.
3. Type LOAD"" and press <RETURN>.
4. Press the PLAY button on your cassette recorder.
5. When the first program has loaded, type \*DISC and press <RETURN>.
6. Type SAVE"DTURBO" and press <RETURN>.
7. Type \*TAPE and press <RETURN>. Then type \*LOAD"" and press <RETURN>.
8. When the second program has loaded, type \*DISC and press <RETURN>.
9. Type \*SAVE DTURBO2 1900 20FA and press <RETURN>.
10. Type \*TAPE and press <RETURN>. Then type LOAD"" and press <RETURN>.
11. When the demonstration program has loaded, type \*DISC and <RETURN>.
12. Type SAVE"DDEMO" and press <RETURN>.

This completes the transfer process.

### **Loading The Compiler From Disk**

If you want to load the program, use the same loading instructions as for the tape system, but with the following changes:

- Step 2. If you have a DFS fitted, but want to run the program from tape, turn the tape over to side two and rewind it to the beginning. Then type \*TAPE and press <RETURN>.
- Step 3. If you are running TURBO from disk, type CHAIN"DTURBO" and press <RETURN>.
- Step 8. The minimum PAGE setting for disk users is &2100. The memory locations to change if you want another PAGE location, are &1920 and &1921.
- Step 9. The default location for storing compiled code is at &2800. If you want to alter this, the memory locations to change are &191E and &191F.

### **Running the Demonstration Program**

It is recommended that you load and run the demonstration program provided, then have a look at the program to see how it works, before attempting to write programs of your own. There are two versions of the demonstration program provided, one for the tape version and one for the disk version. These are on the cassette tape, immediately following the appropriate version of the compiler. The only difference is that the disk version has had all the REM statements removed, due to memory limitations.

To load the demo program, first load TURBO as described earlier. As the demo program uses the preset compile addresses, step 7 simply consists of setting PAGE to 1500 (&2100 for disk users) and step 8 may be ignored. Load the demonstration program by typing LOAD"" (LOAD"DDEMO" if you have saved your demo program onto disk).

You can then compile the program by typing \*TURBO and pressing <RETURN>. The screen will be cleared, some "garbage" characters will appear in the bottom half of the screen, and "OK" will be printed at the top of the screen.

The machine code program can be executed by typing CALL &2200 (CALL &2800 for disk users).

At the end of the first section, the computer will wait for a key to be pressed, and will then draw a pattern of triangles, as well as a set of space invaders.

Pressing another key will cause the space invaders to move across the screen.

Pressing another key will end the demo program.

The first part of the program will also run in normal BASIC so that you can compare speeds, but later sections will not, as they depend on the fact that TURBO only uses numbers from 0 to 255, which is not true in normal BASIC.

### **Writing Your Own Program**

By now you will probably be wanting to write and compile your own programs. It is assumed that the user has a knowledge of BBC BASIC. If there are commands that you do not understand, refer to your User Guide for more information.

It is best to start off by doing some fairly simple programs to get the feel of the compiler before trying to write any games or other programs. Note that if you write a program, compile and execute it, and then wish to stop its execution before it finishes, you must press <BREAK>. If you do this, step 7 from the loading instructions must be repeated. The source program can be recovered by typing OLD and pressing <RETURN>. The compiled version will still be in place if you wish to execute it again.

Once you have a program in mind, you can start to write it using the commands recognised by the compiler. These are listed in the next section. If you find that there is a command you wish to use which is not in the list, or if you want more information about one that is, refer to Appendix 1 which lists all the BASIC keywords, and how to use them (or achieve the same effect) with TURBO. See in particular the sections in Appendix 1 on SAVE and LOAD for details of how to save and load compiled code.

When deciding how to allocate the memory, make sure that your compile address (loading step 8) is set above the top of your BASIC program or you will lose your source code when you compile.

### Summary of TURBO Commands

PRINT	LETvar%=GET
PRINT;	LETvar%=INKEY(&hhhh)
PRINTCHR\$(&hh)	LETvar%=var%?&hhhh
PRINT"hello"	LETvar%=car%?dvar%
PRINTCHR\$(var%)	var%?&hhhh=&hh
PRINT\$(var%)	var%?&hhhh=var%
GOTOdec	var%?dvar%=&hh
GOSUBdec	var%?dvar%=var%
RETURN	CLS
FORvar%=&hhTO&hh	CLG
FORvar%=var%TO&hh	MODEdec
FORvar%=&hhTOvar%	CALL&hhhh
FORvar%=var%TOvar%	VDY&hh
NEXTvar%	VDUvar%
LETvar%=&hh	REM
LETvar%=var%	SOUND&hhhh,&hhhh,&hhhh,&hhhh
LETvar%=var%+&hh	\$&hhhh="hello"
LETvar%=var%+var%	\$&hhhh=MID\$(\$&hhhh,var%,var%)
LETvar%=var%-&hh	IFvar% > &hh THEN dec
LETvar%=var%-var%	IFvar% > var% THEN dec
LETvar%=var%EOR&hh	IFvar% < &hh THEN dec ] These two test
LETvar%=var%EORvar%	IFvar% < var% THEN dec ] less than or equal
LETvar%=var%AND&hh	IFvar% = &hh THEN dec
LETvar%=var%ANDvar%	IFvar% = var% THEN dec
LETvar%=var%OR&hh	IFvar% <> &hh THEN dec
LETvar%=var%ORvar%	IFvar% <> var% THEN dec

#### Notes:

1. var% is a variable in the range A% to Z%. It is an eight bit number with a range of 0-255.
2. dvar% is a double variable in the range A% to Y%. It is a sixteen bit number with the range 0-65535.
3. &hh is an eight bit number from 0-255 written as two hexadecimal numbers.
4. &hhhh is a sixteen bit number from 0-65535 written as four hexadecimal numbers.
5. \$&hhhh is a string with a maximum length of 254 characters.
6. dec is a decimal number.

### TURBO Grammar

There are various restrictions on the grammar you can use with TURBO and with numbers and strings. These are listed below.

1. All line numbers MUST be in the range 0 to 255. If your program needs more than 255 lines, you will have to split it into more than one section.
2. Each line may contain only ONE BASIC statement.
3. Line numbers, references, and MODEs are all referred to using DECIMAL numbers. All other numbers are in hexadecimal.
4. When writing hexadecimal numbers, all digits are significant. Thus hex A must be written &0A.
5. All hexadecimal numbers must be preceded by an ampersand (&).
6. Spaces should not be left in the program.

The following points should be noted concerning numbers and variables:

1. All numbers in TURBO are positive hexadecimal numbers.
2. There are 26 variables which are named A% to Z%. These are integer variables with a range of 0-255.
3. Note that because these integers are 8 bit hexadecimal, adding &01 to &FF will produce a result of &00.
4. If you wish to use negative numbers, you must take the complement (subtract the number from &FF and add 1).
5. Certain instructions use double precision variables. These are sixteen bit numbers with a range of 0-65535. These are referred to by the names A% to Y%. The double precision variable A% is made up of two normal variables, in this case A% and B%. A% contains the low order byte of the number and B% contains the high order byte. To change the double precision variable, you must change both of the normal variables that make it up.

Strings are stored in areas of memory allocated by the user. These are referred to by their address in hexadecimal preceded by a \$. For example, a string stored at &3500 would be referenced as \$&3500. Strings can be any length between 1 and 254 characters, and are terminated by a carriage return character (&0D).

### Compiling Your Program

When you have written your program you will want to compile it into machine code. To do this, simply issue the command

\*TURBO and press <RETURN>.

This will compile your program. The screen will clear and some "garbage" characters will appear on the screen. This is normal. In order to save memory, the compiler uses some of the screen area as work space during the compilation process. If the message OK appears at the top of the screen, your compilation has finished successfully. If a message ERROR &hh appears, the compiler has detected an error. "&hh" is the hexadecimal number in which the error was detected.

To execute your compiled code, type:

CALL &hhhh and press <RETURN>

where "hhhh" is the address you specified for saving the compiled code (step 8 in loading).

### BASIC and TURBO

You will find many references in Appendix 1 to putting certain functions into a BASIC program then CALLing your compiled code. If you want to transfer information between the BASIC program and compiled code, there are two ways of doing this.

The first is to poke the information into some set area of memory which can then be accessed by your compiled code.

The other way is to change the variables A% to Z%. These variables are stored at memory locations &75 to &8F in alphabetical order. So to change C% you would poke location &78.

To combine BASIC and machine code sections, you must first load the source code for the machine code, then compile it as normal. Then type NEW and load the BASIC program into the computer. To save a combination BASIC and machine code program, you can simply use the \*SAVE command using the start address of your BASIC program and the end address of your completed code. (See the SAVE command in Appendix 1 for more information). You may find however, as your programs get larger and more complex, that you wish to save the program in parts to be combined later.

In Appendix 3 you will find an example of this sort of program.

## APPENDIX 1 BASIC Keywords

This appendix lists all the BASIC keywords, explaining how the same effect may be achieved using the TURBO Compiler.

ABS All numbers used in TURBO must be positive, so this command serves no purpose.

ACS All numbers used in TURBO must be integers, so this function will not work. If you find it necessary to use trigonometric functions in your program, this should be done in a BASIC program with compiled BASIC to do the rest.

ADVAL This function is not accessible by using the BASIC keyword but may be achieved as follows:

The variables A%, X% and Y% must be used. A% contains the number of the OSBYTE call, X% must contain the channel number's low byte, and Y% must contain the channel number's high byte.

```
10LETX%=&01
20LETY%=&00
30LETA%=&80
40CALL&FFF4
```

The high byte of the resulting value is stored by X% and the low byte in Y%.

ADVAL(-x) can be achieved by setting Y% to &FF and X% to &FF-x+1. Further information can be obtained from the User Guide.

AND Two 8 bit numbers may be ANDed together as normal, e.g.

```
10LETA%=B%AND&13
```

Use of AND in an IF/THEN statement can only be achieved by splitting the statement, e.g.

```
10IFA%=2ANDB%=4THEN40
```

would have to become:

```
10IFA%<>&02THEN30
20IFB%=&04THEN40
```

ASC This may be done by first creating a string containing the character whose ASCII code is wanted, then PEEKing the first location of the string to obtain the value. The following program would obtain the ASCII value of "B". The string location used is &2F00, but any convenient location could be used.

```
10$&2F00="B"
20LETB%=&00
30LETA%=B%?&2F00
```

ASN See ACS

ATN See ACS

AUTO May be used as normal

BGET# May be used as follows. The variable Y% must be set up to contain the channel number. The character read will be put into A%. If end of file has been reached, A% will contain &FE. The file must be opened first (see OPENIN).

```
10LETY%=&01
20CALL&FFD7
```

BPUT# May be used as follows. The variable Y% must be set up to contain the channel number and A% must contain the byte to be written to the file. The file must be opened first (see OPENOUT)

```

10LETY%=&01
20LETA%=&41
30CALL&FFD4

```

CALL This can be used as is followed by the hexadecimal location of the routine to be CALLED. A% is passed to the accumulator, X% to the X register and Y% to the Y register. One exiting the call the accumulator is stored in A%, the X register in X% and the Y register in Y%. This is a feature not included in BBC BASIC.

CHAIN The compiled version cannot be CHAINED unless it forms part of an ordinary BASIC program. Use \*RUN instead. \*RUN and CHAIN may not be used as part of a compiled program.

CHR\$ May be used in a PRINT statement as follows. The brackets are required.

```

10PRINTCHR$(&20)
20PRINTCHR$(A%)
30PRINTCHR$(B%)CHR$(&40)CHR$(E%)

```

To do the equivalent of B\$=CHR\$(A%), the following could be used. Don't forget to put a carriage return (&0D) at the end of the string.

```

10LETC%=&00
20C%?2F00=A%
30C%?2F01=&0D

```

This sets up a string starting at &2F00.

CLEAR There is no CLEAR command. Variables and strings must be cleared individually.

CLOSE#0 May be achieved as follows. A% must be set to &00 and Y% should be set to the channel number, or to &00 to close all files.

```

10LETA%=&00
20LETY%=&00
30CALL&FFCE

```

CLG Use as normal.

CLS Use as normal.

COLOUR This may be done with the following VDU command (&03 is the colour).

```

10VDU&11,&03

```

COS See ACS.

COUNT Not supported by TURBO.

DATA Not supported by TURBO. Data can be stored in an area of memory by a BASIC program, which can then be accessed by the compiled program.

DEF Procedures and functions are not supported by TURBO. Use GOSUB instead.

DEG See ACS.

DELETE May be used as normal for editing source.

DIM Since arrays are not supported by TURBO, this statement is not used. An array could be set up in memory by storing strings with a set gap between them, and then calculating the address of any element within the program.

DIV To divide numbers, a form of repeated subtraction must be used. The following example divides A% by B%, stores the answer in C% and stores the remainder in A%.

```

10LETC%=&00
20LETD%=A%
30LETD%=D%-B%
40IFD%>A% THEN80
50LETA%=D%
60LETC%=C%+&01
70GOTO30
80END

```

DRAW This may be done using the VDU command. To do DRAW650,970 you must first convert the values to hexadecimal. 650=&028A and 970=&03CA. So to do the command in TURBO BASIC, use:

```

10VDU&19,&05,&8A,&02,&CA,&03

```

ELSE This cannot be used. Split any IF/THEN statements into several lines instead.

END            Use as normal.

ENDPROC       See DEF.

ENVELOPE      The easiest way to use this command is to use it in a normal BASIC program before the compiled section is called. To use it directly from compiled code, you must first set aside an area of memory which is 14 bytes long. The first location contains the envelope number, and the next 13 locations contain the other parameters. Once the data has been stored, the following CALL must be done: A% must contain &08, X% the low byte of the address of the parameters, and Y% the high byte of the parameters' address. For example, if the 14 bytes started at address &2F54,

```

10LETA%=&08
20LETX%=&54
30LETY%=&2F
40CALL&FFF1

```

EOF#           See BGET#.

EOR            Two 8 bit numbers may be Exclusive ORed together and stored in a variable. You can use this function to get negative numbers by Exclusive ORing the number with &FF and then adding 1.

```

10LETF%=G%EORH%

```

ERL            Cannot be used as part of a compiled program.

ERR            See ERL.

EVAL           Not supported by TURBO.

EXP            Not supported by TURBO. Could be done by BASIC program prior to calling compiled code.

EXT#           Not supported by TURBO.

FALSE          The number 0 should be substituted for FALSE.

FN             See DEF.

FOR            FOR/NEXT loops may not be nested in TURBO. If you're require nested loops, subsequent loops should be done using IF/THEN statements. Step size is always +1. Note that if the first number is larger than the second, the loop will increase to &FF then zero, one, etc. You can use any one of the following forms of the FOR statement:

```

10FORA%=&01TO&09
20FORA%=B%TO&09
30FORA%=&01TOC%
40FORA%=B%TOC%

```

GCOL           This can be done with the VDU command, e.g. GCOL 0,5 would be:

```

10VDU&12,&00,&05

```

GET            May be used as follows:

```

10LETA%=GET

```

GET\$           Use GET instead.

GOSUB          This may be used as normal except that calculated line numbers are not allowed.

GOTO           This may be used as normal except that calculated line numbers are not allowed.

HIMEM          May not be used in a compiled program, but can be used as a direct command.

IF             This may be used in the listed forms. Note that only line numbers may follow the THEN. ELSE is not supported.

```

10IF A%>&0D THEN 90
20IF B%>C% THEN 100
30IF D%<&38 THEN 200
40IF E%<F% THEN 170
50IF G%=&5A THEN 180
60IF H%=I% THEN 221
70IF J%<>&21 THEN 222
80IF K%<>L% THEN 196

```

Also note that unlike the normal BBC BASIC the less than test (<) actually tests for less than or equal to (<=).

INKEY          Use the format below. If a negative number is required then subtract the number from &FFFF and add 1.

```

10LETA%=INKEY(&0005)

```

INKEY\$        Use INKEY instead.

INPUT This command is not supported by the compiler, but using the following method a string may be entered. First, allocate a page of memory into which the input will go (e.g. &7000 to &70FF). Also set aside five bytes as a control block (eg &7100 to &7104). The first byte of the control block is the low byte of the input area address, the second byte is the high byte of the input area address. The third byte is the maximum allowed length and the fourth byte is the maximum acceptable ASCII value. The fifth byte contains the maximum acceptable ASCII value.

```

10LETA%=&00
20A%?&7100=&00
30A%?&7101=&70
40A%?&7102=&FF
50A%?&7103=&20
60A%?&7104=&FF
70LETA%=00
80LETX%=&00
90LETY%=&71
100CALL&FFF1

```

Note that before the CALL is issued, A% should be set to &00, X% should be set to the low byte of the control block's address, and Y% should be set to the high byte of the same address.

INPUT# This cannot be used in a program. If necessary, input from files can be done, but it is quite complicated. It is recommended that BGET# be used instead. More information on files can be found in the User Guide.

INSTR This function is not supported by TURBO. To perform this function a byte by byte comparison of strings would have to be done. The best way is to find the length of the string being searched for and then, using MID\$, take out sections of the larger string of the same length and compare this with the string being searched for.

INT All numbers used by TURBO are integers anyway.

LEFT\$ Not recognised by the compiler. To do A\$=LEFT\$(B,5), use:

```

10LETA%=&01
20LETB%=&05
30$&4000=MID$($&3F00,A%,B%)

```

LEN Not recognised by the compiler. To find the length of a string at &3000, use the following routine. A% contains the length of the string on exit.

```

10LETA%=&00
20LETB%=A%?&3000
30IFB%=&0DTHEN60
40LETA%=A%+&01
50GOTO20

```

LET The use of LET is obligatory for the types of commands listed below:

```

10LETA%&06
20LETB%=C%
30LETD%=E%+&37
40LETD%=F%+D%
50LETE%=E%-&02
60LETH%=I%-J%
70LETK%=D%EOR&FA
80LETL%=H%EORI%
90LETM%=K%AND&AE
100LETN%=M%ANDX%
110LETO%=Q%OR&14
120LETP%=P%ORT%
130LETQ%=GET
140LETR%=INKEY(&FFFF)
150LETS%=T%?&3000
160LETT%=A%?D%

```

LIST May be used normally to list the source program.

LISTO See LIST.

LN See EXP.

LOAD May be used normally to load the source program. See SAVE for further details.

LOCAL Cannot be used. See DEF.

LOG See EXP.

LOMEM See HIMEM.

MID\$ To use this command you must first set two variables and use them in the command. Note that unlike normal BBC BASIC the statement must be given in full.

```

10LETA%=&04
20LETB%=&07
30$&6000=MID$($&3500,A%,B%)

```

MOD See DIV.

MODE Use as normal.

MOVE This command may be achieved using the VDU command (see DRAW). Thus MOVE 300,400 would become:

```

10VDU&19,&04,&2C,&01,&90,&01

```

(decimal 300 = &012C, decimal 400 = &0190)

NEW Use as normal.

NEXT Use as normal.

NOT This may not be used. Alter test conditions instead.

OLD Use as normal. If <BREAK> has been pressed, don't forget to reset PAGE first.

ON Cannot be used. Use IF/THEN instead.

OPENIN This may be used as follows: A% must be set to &40. X% and Y% must be set to the low and high bytes of the address of the name of the file. For example, suppose the name of the file was TEST and this was stored at &2FF4. The channel number allocated will be returned in A%.

```

10LETA%=&40
20LETX%=&F4
30LETY%=&2F
40CALL&FFCE

```

OPENOUT This is the same as OPENIN except that A% must be set to &80.

OPT This may not be used as assembly code cannot be inserted in BASIC code to be compiled.

OR Two 8 bit numbers may be ORed together as normal,

```

e.g. 10LET5%=T%OR&52

```

To use OR in an IF/THEN statement, the statement should be split,

```

e.g. 10IFD%=W%ORD%=V%THEN100

```

would become

```

10IFD%=W%THEN100
20IFD%=V%THEN100

```

PAGE This may be used as a direct command, but not in compiled code.

PI This constant may not be used. Any calculations involving PI would have to be done in a BASIC program prior to calling the compiled code.

PLOT This can be achieved using the VDU command. See DRAW for further details. PLOT85,1280,670 would become:

```

10VDU&19,&55,&00,&05,&9E,&02

```

POINT This command is not recognised by the compiler. To achieve the same effect, (e.g. A%=POINT(500,600) first convert the co-ordinates to the hexadecimal (500=&01F4, 600=&0258). Then set aside a five byte control block as follows:

```

Byte 1: low byte of X co-ordinate
Byte 2: high byte of X co-ordinate
Byte 3: low byte of Y co-ordinate
Byte 4: high byte of Y co-ordinate
Byte 5: the logical colour will be returned here

```

In our example the control block is at &2FF0-&2FF4. Then you must set A% to &09, X% and Y% to the low and high bytes of the control block's address, and make the appropriate call. R% will contain the logical colour of the point, or &FF if it is off the screen.

```

10LETV%=&00
20V%?&2FF0=&F4
30V%?&2FF1=&01
40V%?&2FF2=&58
50V%?&2FF3=&02

```

```

        60LETA%=&09
        70LETX%=&F0
        80LETY%=&2F
        90CALL&FFF1
        100LETR%=V%?&2FF4
POS      Both POS and VPOS can be used as follows. Note that A%=&86 and that on exit
        from the call X% is set to the co-ordinate and Y% is set to the Y co-
        ordinate.
        10LETA%=&86
        20CALL&FFF4
PRINT    The following forms of the PRINT statement may be used. The basic elements
        may be combined in any order up to a maximum line length of 255 characters.

        The only exceptions are that CHR$ may not follow &hhhh directly, and the
        semi-colon (;) may only be used at the end of a statement.
        10PRINT
        20PRINT;
        30PRINTCHR$(&45)
        40PRINT"hello"
        50PRINT$&2E80
PRINT#    It is recommended that BPUT# is used instead. See INPUT# for further
        information.
PROC      See DEF.
PTR#      This may not be used.
RAD       See ACS.
READ      See DATA.
REM       Use as normal.
RENUMBER  Use as normal.
REPEAT    This function is not allowed. Use IF/THEN instead.
REPORT    See ERL.
RESTORE   The user must keep track of his own data pointers. (See DATA)
RETURN    Use as normal.
RIGHT$    MID$ should be used instead. See LEFT$.
RND       This function cannot be used in a program to be compiled. There are however
        several ways to obtain random numbers in your programs. The first is to
        store a series of random numbers in a reserved area of memory from a BASIC
        program before calling the compiled code. For example:
        FORa=&2F00TO&2FFF:?a=RND(6):NEXT

        would store random numbers from 1 to 6 between address &2F00 to &2FFF.

        The second method is to construct some form of random number algorithm. In
        the following example A% and B% must be seeded first; the new random number
        is stored in B%. The cycle length for generating random numbers using this
        example is quite short so use with caution.
        10FORE%=&00TOA%
        20LETf%=C%+B%
        30IFF%>C%THEN60
        40IFF%>B%THEN60
        50LETD%=D%+&01
        60LETC%=F%
        70NEXTE%
        80LETA%=B%
        90LETB%=C%AND&F0
        100LETC%=D%AND&0F
        110LETB%=B%+C%

        The third method is to CALL the random number generator in BASIC then PEEK
        the locations where the numbers are stored, but this method is not
        recommended as the two versions of the BBC BASIC use different locations
        and the program would not run on all other machines.
RUN       The compiled form of the program cannot be RUN, it must be CALLED instead.
SAVE      Your source program may be saved as normal. Saving the compiled code is
        slightly more complex. You must first find the end of the compiled code.

```

This can be done by peeking locations &70 and &71. If &70 contained &E7 and location &71 contained &2E, the end of your program would be at &2EE7. To find the contents of &70 and &71 in hexadecimal, type:

```
PRINT ~?&70,~?&71
```

At the start, you told the computer where to store the compiled code. This was probably &2200 (for the tape version) but you may have changed it. This is the start address of your program. You can now save it as follows:

```
*SAVE programname 2000 2EE7 2200
```

To reload the compiled code, simply type \*LOAD programme. If the program consists entirely of compiled code, you can use the \*RUN command. Once the source code is compiled it is completely independent of the compiler.

SGN This may not be used.

SIN See ACS.

SOUND This may be used as normal, except that all the parameters must be written as hexadecimal numbers (four digits). Thus SOUND 1,-13,42,10 will become:

```
10SOUND&0001,&FFF3,&002A,&000A
```

If variable parameters are required, then a call with A% set to &07 and CALL &FFF1 would have to be made. A parameter block similar to that used for the ENVELOPE command would have to be set up first. See User Guide for more information.

SPC Either make up a string of spaces and use MID\$ to print a part of it or use aloop to print CHR\$(20).

SQR See EXP.

STEP Cannot be used. All steps are +1. If another step is required, use LET in conjunction with IF/THEN statements.

STOP Use END instead.

STR This function is not provided. To store a number as a string the number must first be converted into 3 decimal digits. To do this, first subtract as many hundreds as possible and then tens and finally units, and store each of these three numbers separately. Then add 48 to each of the three to convert them to the ASCII codes for the numbers. The numbers can then be stored in a convenient area of memory, followed by a &0D (carriage return). This is now a string.

STRING\$ This function cannot be used, instead you should repeatedly use the string as required.

TAB To print the following:

```
PRINTTAB(A%,20)"Hello"
```

use the following statement:

```
10PRINTCHR$(&1F)CHR$(A%)CHR$(&14)"hello"
```

TAN See ACS.

THEN Use as normal but must be followed by a line number. See IF.

TIME The value of TIME may be written to, or read from. First allocate an area of five bytes (e.g. &2F00). These bytes will contain the new value when being written. X% and Y% must be set to the low and high bytes of the address of the control block, and A% must be set to &01 to read, or &02 to write. The time is stored from least significant byte to most significant byte.

```
10LETX%=&00
```

```
20LETY%=&2F
```

```
30LETA%=&01
```

```
40CALL&FFF1
```

TO Use as normal.

TOP May not be used in a program which is going to be compiled.

TRACE This cannot be used.

TRUE This cannot be used.

UNTIL See REPEAT.

USR Use CALL instead.

VAL This function is not provided. To convert a string to a number, use the reverse of the procedure described for STR\$.

VDU Use as normal, except that numbers must be in hexadecimal and double byte numbers are not allowed. Some examples are:

```

10VDUA%,B%,C%,D%,&20
20VDU&11,&03
30VDU&17,&34,&53,&F2,&8A,&23,&00,&05,&91

```

## PEEK and POKE

As normal in BBC BASIC, the commands PEEK and POKE are represented by a "?". The contents of a memory location may be read by using one of the two forms provided:

```

10LETV%=A%?&3000
20LETV%=A%?C%

```

The first looks at location A%+&3000 and stores the contents in V%. The second stores the contents of location A%+C% in V%. In this second form, the third variable is special in that it is a double sized variable and can thus have a range of 0-65535. This means that by altering this variable, the user can look at any location; it also makes movement of large areas of memory easier. To alter C% in the second example, both C% and D% must be altered. (See double sized variables for more information.)

Storing values in memory locations can be done in one of the following four ways:

```

10A%?&555E=&26
20A%?&432C=F%
30B%?T%=&75
40F%?Q%=E%

```

The first two examples are the same as normal BBC BASIC. The third and fourth examples use double sized variables (in this case T% and Q%) as described above.

## APPENDIX 2 TURBO Memory Locations

	TAPE	DISK
Minimum setting of PAGE:	&1500	&1500
Default code position:	&2200	&2800
Address to change if PAGE not &1500:	&D20 low byte	&1920 low byte
	&D21 high byte	&1921 high byte
Address to change code position:	&D1E low byte	&191E low byte
	&D1F high byte	&191F high byte
Location of TURBO compiler:	&D00-&1500	&1900-&2100
Location of A% to Z%:	&76-&8F	&76-&8F

## APPENDIX 3 Sample BASIC/machine code hybrid

Problem: Write a program to print out the word "hello" a random number of times.

Solution: Use the default values for the compile address and set PAGE to &1500 (&2100 for disk users).

Type in the following program which will print "hello" the number of times which A% will be set to.

```

10FORB%=&01TOA%
20PRINT"hello"
30NEXTB%
40END

```

Compile the program in the normal way, then type NEW to remove the source program and type in the BASIC program that follows:

```

10?&76=RND(255)    set A% to a random number from 1-255
20CALL&2200        call compiled code to print
30END

```

Disk users note that line 20 should read 20CALL&2800

# TURF FORM

## *Professional, Originally Released On Cassette Only*

Game Type : Utility; Text-based 'Learn To Beat The Bookie' (Yeah right)  
Author :  
Standalone Release(s) : 1988: TURF FORM, Blue Ribbon, £1.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : BLUE RIBBON, CDS House, Beckett Road, DONCASTER DN2 4AD  
Tel: 01322 21134  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Do you follow the Horses? Do you want to win more than you lose? Do you want to have a superb Form Guide at your fingertips?"*

*"TURF FORM will accept data on each horse and, using a highly developed and accurate prediction routine, suggest which horses have the best chance of winning the race. By careful use of this program, you too can 'Beat the Bookie'!"*

TURF FORM is a horse racing forecaster that can predict form for both Flat and National Hunt races on UK racecourses.

All the information required to use TURF FORM can be found in most popular daily papers. There is no need to buy any expensive form books or other prediction aids.

By entering the detailed information required by the program when prompted on screen, the program will calculate a speed rating and a fitness rating for each horse.

From this information, you can calculate the chances of each horse in the race concerned.

The user should use TURF FORM as a guide only and should be used for predicting form only at good class races. Blue Ribbon does not warrant this product in any way and will not accept claims for losses made by using the information output by this program.

## Controls

TURF FORM uses easy to read input screens and prompts the user whenever information is required. The options available and the keys concerned are displayed in the lower part of each screen.

Selecting the meeting - use the cursor keys to select the location of today's races.

Select the number of horses you wish to predict for and enter their names next.

Then enter the form details from the paper, for each horse selected following the on-screen prompts.

If the horse ran last at a foreign course, enter 'The last course' as 'Newbury'. If the horse fell or was pulled up at its last race, enter the previous race's information as if it were the last race.

TURF FORM gives every course a speed rating, i.e. the speed that a horse should attain to stand a chance of winning. For example, Ascot's rating is 85 which must be equalled or exceeded by the horse to be considered in with a chance of winning.

Each horse for whom details are entered will also be given a fitness rating, ranging from poor to excellent. A horse should have a 'Very Good' or 'Excellent' rating to be considered capable of winning.

With TURF FORM's information as a guide you should then be able to make your bets!

**Instructions' Source** : TURF FORM (Blue Ribbon) Back and Inner Inlay

# TV DIRECTOR

***Professional, Originally Released On Cassette Only***

Game Type : Simulation of TV Studio; Cutting And Editing  
Author :  
Standalone Release(s) : 1986: TV DIRECTOR, Squirrel, £12.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SQUIRREL, 4 Bindloss Avenue, Eccles, MANCHESTER  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## **Instructions**

*"Use this suite of three programs to enable you to put together a sequence of up to 250 images in TV fashion to any sound track of your choice, complete with titles and credits.*

*By incorporating a VHS or Beta videorecorder into the setup, you should be able to put your efforts onto videocassette.*

*PICTURE MAKER - Although sample blocks of pictures are provided to get you started, you should find that this program enables you, after a little practice, to create your own images quickly and easily.*

*TV STUDIO (Gallery) - converts the keyboard into a twin bank vision mixer panel with fader (joystick preferable but not essential), eight preview monitors and output monitor.*

*PROGRAMME REVIEW - enables you to sit back and view the last 'take', possibly recording it on videocassette at the same time.*

*Full instructions are provided - and every effort is made to ensure that a fairly accurate atmosphere of the TV gallery does start the adrenelin running..."*

## **Introduction**

The purpose of the program is to enable budding vision mixers, directors, producers, etc to compile a set of basic pictures on a theme and, using the keyboard as a vision mixer panel, produce a sequence of images to fit their selected soundtrack. This can be recorded on to a suitably equipped domestic videorecorder.

The program comprises suite of three prorams, PICTURE MAKER, TV STUDIO and PROGRAMME REVIEW. Each program has its own menu which forms the main hub of the program - pressing <ESCAPE> or <RETURN>, depending on which area you happen to be in, will return you to it.

This manual describes the function of each program in order of use and explains one by one every Menu Option.

## **Getting Started**

The programs on the cassette are recorded in the following order - it is advisable to PLAY the cassette using \*CAT and note the counter numbers beside each of the titles listed in the RH column:-

TV-DIR  
TV0  
TV1A  
TV2  
TVSTDO  
PMAKER  
BLOCKAB

## CAMS-A1

To load, type in CHAIN"TV-DIR", play tape and press <RETURN>. The first screen that will appear is the TV-STUDIO Menu - stop the cassette at this point.

You will see from the screened list of options that you could now load any or all of two datafiles (BLOCKAB or CAMS-A1) or PMAKER. It is important to appreciate that both BLOCK and CAMS- datafiles once loaded do not need to be reloaded each time you switch from TV Studio to Picture Maker (or vice-versa). However as the TV Studio and Picture Maker programs have to share the same area of memory they have to be reloaded each time you 'switch':-

When 'switching', spool the cassette player to the beginning of PMAKER (or TVSTDO) - preferably using the tape counter numbers (or selecting the \*COMMANDS option and hunting for the title with \*CAT), and press the desired Menu option no.

Note - you cannot SAVE datafiles on this main cassette - you must use a separate blank cassette to store the picture BLOCK(s) you will have created using the PICTURE MAKER program or the Camera Sequences (CAMS-) you may wish to keep after a session in the Gallery.

Note - if you are having loading problems there is a duplicate set of programs recorded on the reverse of the cassette.

### PICTURE MAKER - Introduction

The bank of sixteen pictures required for the TV STUDIO have to be made with up of 32x24 tiny squares giving a picture with the correct TV 4x3 aspect ratio. This 'chunky' type of picture is fitted into a mere 384 bytes and quite a number of them can therefore be held in computer memory altogether. The pictures can therefore be accessed and screened instantly - so that curring between pictures appears to be as fast as it is on TV. Four colours and twelve striped variations are available, and by using the flashing colours in a thoughtful way, a certain degree of animation can be achieved.

### PICTURE MAKER - Menu Options

1. WORKSPACE - presents you with a picture frame below a caption "Pic No W". This is the Workspace and, if it is filled with 'garbage', pressing <DELETE> will clear it. Below the frame is 'S/BAR - Options' - pressing the Space bar displays a list of key options for workspace use. (Note - this is not a menu, just a list. You must return, using the Space bar again, to Workspace to use them).

### WORKSPACE - Options

COPY - to consign the image in workspace to Picture Block in memory, NOT to tape as for that you will need Menu Option 5 - Save Single Picture).

'PIC NO ?' will appear asking for the number/letter you wish to allocate (Single Keypress System - 1-9/A-G equals 1 to 16). As you keypress, the image will be transferred to its appropriate slot in the Picture Storage area.

T - the reverse of COPY. This time you are asked for the number/letter of the picture you wish to transfer to Workspace for modification, etc.

W - to Wash out the Workspace with an alternative to black (DELETE). When pressed, the W above frame will go - then pressing a colour key (1-9/A-G - equals 0 to 15) will replace every pixel with the selected colour.

C or J - takes you into 'paint' mode. Hold down a colour key and use the cursor keys or joystick to move the flashing dot around the 'canvas' to 'paint'. All other options are now cancelled until the Space bar produces the sup-caption 'S/BAR - Options' again.

CURSOR KEYS - to move image up, down or sideways a little in the frame, press the appropriate cursor key. This is called framing by TV cameramen. (Some unwanted colour may appear along one edge - just recolour this small area later.)

I, O, M, U, R, L, Q - represent IN, OUT, Mirror, Upside Down, Right Half Mirrored, Left Half Mirrored, and Quarters. All are self explanatory

and their convenience will be appreciated after a little experimentation.

PALETTE - the default colours are 1. Black (Background), 2. Red, 3. Yellow, 4. White. To change or modify these, just follow the screen instructions.

RETURN TO MENU - press <RETURN>. As the <ESCAPE> key is adjacent to operational keys, it is disabled whilst this Main Option is in use.

You will be able to produce images very quickly and thus build up a block of sixteen pictures with a common theme to suit the soundtrack you have in mind. Remember that modifications to any of the pictures is a quick and easy job and loading and saving blocks of pictures (or single pictures) to tape is made quite easy if you follow the instructions contained in the rest of the Picture Maker Menu Options:-

2. LOAD SINGLE PICTURE - simply type in the name and press <RETURN>, starting the tape as usual. It will load directly into Workspace.
3. LOAD PICTURE BLOCK - the word 'BLOCK' is already anticipated - just enter the first two letter/digit code and hit <RETURN>, starting the tape as usual. This Picture Block is loaded automatically into slots 1-16.
4. SAVE PICTURE BLOCK - you decide the code (one or two characters only) and we recommend that a separate cassette is used for storing Picture Blocks.
5. SAVE SINGLE PICTURE - saves the image currently showing in Workspace. You decide the name (up to seven letters or digits). Again it is recommended that a separate cassette is used. Useful for storing extra images or moving pictures around the Picture Blocks.
6. TV STUDIO MENU - occupies the same area of memory as PICTURE MAKER. See GETTING STARTED section.
8. \* COMMANDS - to enable you to use star commands such as \*CAT, \*RENAME and \*DELETE without having to leave the PICTURE MAKER program. The star is already anticipated, just enter the rest of the command press <RETURN> as instructed, starting tape as necessary.

#### **TV STUDIO - Menu Options**

1. GALLERY (Sub-menu) - see GALLERY section.
2. SAVE CAMERA SEQUENCE - a record is held in memory of each picture used, whether it was a special variation, whether it was faded up or down, mixed or cut - in short a complete list of everything that was selected in the gallery, how it was treated, and for how long. The limits are approx 250 cuts OR 125 mixes per 'run'. Thus a combination of, say, 50 mixes and 150 cuts could be expected each session. The word 'CAMS-' is already anticipated - just enter a suitable letter/digit code (up to two characters) and hit <RETURN>, starting the tape as usual.
3. PROGRAMME REVIEW (Sub-menu) - see PROGRAMME REVIEW section.
4. LOAD CAMERA SEQUENCE - enter the 1 or 2 character code when requested and press <RETURN>. If you have just been using the gallery in 'live' mode then the sequence will be in memory already.
5. LOAD PICTURE MAKER - position tape, press <RETURN>, etc.
6. LOAD PICTURE BLOCK - load in Picture Block as described in PICTURE MAKER Option 3. If you have just been using these pictures then re-loading them won't be necessary.
7. \* COMMANDS - as described in PICTURE MAKER section.

## **GALLERY**

The purpose of this program is to cut and mix together a sequence of images that have been carefully designed to match the soundtrack you will have already selected. These will, together with title and credit sequences, fit together in the accompanying PROGRAMME REVIEW section to produce a complete sound and vision output that could, if desired, be recorded onto a domestic videocassette.

### **GALLERY - Sub-Menu Options**

1. VISION MIXER (<RETURN> to get back to menu) - The scene in the Gallery is dominated by two banks of four preview monitors (1-8) topped by a Transmission output monitor (TX). Below these is a vision mixer panel with two rows of identical numbers :-

```
TTT
1 2 3 4 5 6 7 8 0 T
1 2 3 4 5 6 7 8 0 T
```

This represents a twin bank vision mixer panel with its fader control in the upper position, activating the top row of numbered buttons. By adapting the computer keyboard (with or without joystick) we can perform the same functions. The numbers light up, and the screen fader is animated, to correspond with the action.

### **THE CUT**

If a 'camera' number is pressed, not only will the picture from the selected 'camera' appear on the TX monitor but also the respective P/V monitor and vision mixer panel numbers will light up.

### **THE MIX**

In order to change the TX picture by dissolving to another 'camera', you first press <CTRL>-A followed by the number of the next 'camera'. Both this number and the fader handle will light up. Nothing should then happen until the mix is started (using either joystick or the vertical cursor). The mixer fader on the screen will move down to the bottom bank and then go dark. The previous 'camera' number on the top bank will also go dark.

The action now remains on the bottom bank (row of numbers) until the next mix...

Recovery - If, having pressed <CTRL>-A with/without 'camera' number, you decide not to mix then just hit <CTRL>-A again. The lights on fader and next camera should go out and you will have recovered to the previous position.

### **THE FADE (UP or OUT)**

This is merely a mix from or to 'nothing' - i.e. A black picture - found on Camera No.0

### **PICTURE BLOCKS (A & B)**

In an actual TV studio gallery there might be only five or six preview sources, each of which would offer a large selection of different pictures - in this simulation, you can call on each of your eight 'cameramen' to give you one other stock picture - by bringing Block B in to replace Block A - or vice-versa (Space Bar toggle). The indicator letter is shown on the left of the TX output monitor and also duplicated on the left side of the vision mixer panel. In addition to the second block of pictures you can ask for four variations of each picture.....

### **SPECIAL EFFECTS**

This selection of sixteen pictures can be extended to eighty by using some of the instant modifications to the basic picture that you may have met already in the PICTURE MAKER program. i.e. I - IN (Close up), O - OUT (Wide shot), R - Reverse Angle and Q - Quartering.

Now you have, in theory, another 4x16 (64) different images to call on whilst you are directing from your Gallery - making eighty in all.

These extra demands on your 'cameramen' are achieved by the vision mixer first pressing the appropriate 'effect' letter - nothing will happen until the camera number is pressed - then the variation will instantly appear on the TX monitor.

Any camera can be used.

Recovery - If, having pressed one of these four letters, you change your mind, you can instantly recover to your previous position by pressing any key (other than keys 0-80) such as Space Bar.

Although mixing through TO one of these four 'effects' is never possible, you can always 'mix' away FROM an 'effect' through to any standard preview 'camera' image.

### **THE START**

Opening titles are ignored at this point - just start the soundtrack(s) rolling and either fade up from black, or cut, to the first camera at the appropriate moment as decided at rehearsal.

Shown on the first of the TX output monitor and also duplicated on the left side of the vision mixer panel is an oblong shape coloured BLUE - this is your 'Rehearsal' light. Until this is changed to RED (COPY key toggle) no recording of the Camera Sequence will take place. This blue light can be used to cancel a 'recording' of the Camera Sequence at any point, allowing you to re-set and begin again. When you do go into this "On-Air" situation and the rehearsal light turns red, the computer waits for the first operation, whether a cut or a fade-up from black, before starting to note the sequence.

### **THE FINISH**

The closing credits are not seen in this TV Studio program either but are added, as are the opening titles, automatically during Programme Review. The credits will be triggered by a <RETURN> at the end of the recording session in the Gallery. This means that when you would be ready to roll the credits to be superimposed on the final picture, be it a colour scene or black, you press <RETURN>. As this is the key that takes you back to the Menu you will, therefore, be returned there promptly. When you've got your breath back and are ready to review your work then select Programme Review...

2. ALLOCATE DOUBLE FLASH RATE - In the Picture Make section it was mentioned that with careful creative use of the flashing colours some animation effects can be produced. If the soundtrack contains music then the flash rate can be adjusted to synchronise to it.

It is the job of this option not to reset that rate (that will be done during Programme Review) but to allocate to selected pictures a Double Flash Rate. (The basic flash rate having been allocated as part of the selected palette.)

3. SET FADE TIME or JOYSTICK - The program assumes no joystick is available. However, if you have one of the standard analogue resistive joysticks supplied by Acorn or similar (e.g. the Voltmace Delta 3B - with the Acorn Plus 1 of course) then it can be used by selecting this option and pressing <Y> when asked "Joystick?". If one is not available then a mix of 2.5 seconds duration can be triggered by pressing one of the vertical cursor keys at the appropriate moment.

If you wish to change this fade time then answer <N> to the above question. When you are asked "Pic No?" - enter a number for a test picture.

Using the left and right cursors, adjust the 2.5 second default figure of 250 (100ths of a second) displayed above the frame to your requirement. Press a vertical cursor to initiate the test fade to black. If you need to repeat the test, answer <N> to the question "Exit?" else press <Y>.

4. EXIT TO MAIN MENU

### **THE PRODUCTION ASSISTANT**

To help all studio personnel (including the cameramen, director, floor manager, sound and vision crews) keep track of events, there is a clear headed person, usually female, who calls the shots on talkback, thus - "...on 4 coming to 3...on 3 coming to 2...on 2 coming to 6..." etc, etc.

When you are directing this show, whether you have someone vision mixing for you or not, you will find the services of a Production Assistant almost essential.

If a real P.S. is not around then a pre-recorded version, made on a second tape recorder whilst listening to the selected soundtrack on headphones, will be almost as good (as long as it is replayed on the same machine). Although it might mean that you have another machine to start at the beginning of each 'RUN', the bonus of this extra effort is that the more accurate atmosphere of the TV gallery does start the adrenalin running...

### **COLOURS**

Although the Picture Maker and Programme Review programs work within the colour range of the selected palette the necessity for the gallery program to be restricted to a permanent four colour palette (black background, red, yellow and blue) means that some of the chosen colours will, therefore, have been modified temporarily.

### **PROGRAMME REVIEW - Menu Options**

The purpose of this program is to 'run' the finished TV programme complete with opening titles, closing credits and soundtrack to check that it 'works' both technically and artistically.

The Menu is the hub of the program - pressing <ESCAPE> should always return you here.

#### 1. REVIEW PROGRAMME

Before you 'RUN' the MAIN SEQUENCE described below you should go through this checklist:-

- 1 - 16 Picture Block loaded
- 2 - Camera sequence loaded (If you have just come from directing a session in the Gallery then 1 and 2 above will already be in position)
- 3 - Main Soundtrack (presumably on tape) set up at the start (together with the talkback tape)
- 4 - Titles & Credits have been set up
- 5 - Flash rate correct
- 6 - Synchronisation Factor correct
- 7 - Fade time for title and credit sequences correct (The joystick is non-operable during the review)

MAIN SEQUENCE to RUN the Programme:-

As you press the <1> key, the screen will clear. If you are recording, you can now start your video recorder...

Now cue your soundtrack...

<SPACE> now fades up the opening caption...

<SPACE> again fades out the caption...

<SPACE> again starts the picture sequence... (Possibly in sync with the first bar of music?)

NOW SIT BACK and WATCH

The closing credit will appear automatically at the end of the camera sequence...

<SPACE> fades it out...

<SPACE> again takes out Company credit at foot of screen leaving the screen blank...

Stop soundtrack...

If recording, stop video recorder.

Probably the most difficult thing to arrange is the start of the tape soundtrack to match your opening picture sequence. Little advice can be given as the solution depends on the soundtrack chosen, the playing machine and the point at which you want the sound to start - you will have to arrange a system to suit your own circumstances.

Now, having got the sound to begin just where you want it, each time you 'run' you may find that the picture sequence ends too early or too late - this can be adjusted - See Synchronisation Option - P4.

#### **FADE TIME**

Fading up and down is done smoothly by the computer. The time is set by the 'Set Fade Time or Joystick' Option (in the Gallery Menu).

2. SET TITLES AND CREDITS - Simply answer each question asking for a name by entering the characters and pressing <RETURN>. A colour number also needs to be entered on the right of the screen.

3. SET BASIC FLASH RATE - Use the left and right cursors to modify displayed rate to match music track. The default rate is 25.

4. SYNCHRONISATION - This essential harmonious union between vision and sound, is achieved on the basis that the selected piece of recorded soundtrack takes exactly the same time to replay on each occasion (using the same equipment). This time is recorded by the program but an adjustment has to be made for the time taken by the computer to process this information on playback. The built-in adjustment factor is .990 - this may need to be changed if you find your pictures run slightly faster or slower when reviewed. Modification is done on a trial and error basis. Make a note of the new factor and use it on future occasions.

5. EXIT TO MAIN MENU

#### **SAMPLE PICTURE AND CAMERA DATA**

The filename of the sample Picture Block provided is BLOCKAB - only the 'AB' need be entered - see Picture Maker Menu.

The filename of the sample Camera Sequence is CAMS-A1 - only the A1 need be entered - see TV Studio Menu.

#### **THE VIDEO RECORDER**

The vision connection to a video recorder can be made by using the modulated video output from the computer as an aerial - plugging it in the back of the video recorder (instead of the back of a TV) as explained in its instruction book. If you get some patterning on your screen as a result of doing this then your video recorder output channel frequency may need slight re-adjustment.

The sound connection will depend upon the tape or record player used - as explained in the video recorder instruction book. If you are not technically minded or have any doubts about any of these points, see your video dealer.

#### **COPYRIGHT WARNING**

If the soundtrack used is subject to copyright then the user of these programs is not excused any legal responsibilities inherent in that copyright.

**Instructions' Source** : TV DIRECTOR (Squirrel) Back Inlay & Manual

#### **Review (Electron User) - "Video Maker"**

The tension mounts as you sit at your director's console. You switch the recording light to red and cue the soundtrack.

Before you is a choice of sixteen camera shots. Which one should you select for transmission? One moment of indecision and you'll have to call "Cut!" and start again.

That's the excitement offered to you by Squirrel Software with its latest release, TV DIRECTOR. In fact, you get the chance to design, produce and release your own videos using nothing more than your trusty computer.

There are, inevitably, a number of limitations so you won't get a top class animated video, but you will experience the thrill and pressure of video work. The possible uses, as the cliché goes, are only limited by your imagination.

The first stage in the video making process is to set the computer aside and plan on paper what you want to do. You can have up to sixteen camera shots which you must then create.

A picture making routine is included within the program for this purpose. At first sight, the graphics will be disappointing. The screen is divided up into a grid of 32 by 24 blocks and one of these blocks is the smallest area that can be defined.

This results in pictures being rather chunky. The reason for this is that the data for an entire picture is stored in just 384 bytes. It is thus possible to store sixteen pictures in memory and swap them around with great speed.

A bonus is that pictures can be created quickly. You move a cursor around with keys or joystick and hit the required colour number to set a block. If you can't remember colour numbers, hitting the spacebar will bring up a help page.

This gives details of special effects such as zoom, mirror images, inverting or quartering. All of these can be achieved by single key presses.

The program operates in Mode 5 which allows only four colours. The choice of four includes the full range of flashing colours (which can help with simple animation such as a winking eye) and a range of assorted stripes.

Director works with blocks of frames and normally you would save a block of up to sixteen pictures. This makes it possible for a team of people to work on separate machines, then merge their work into one block.

With the artwork completed, you are ready to move to the studio and produce the video. A display of eight monitors is shown and the other eight pictures are toggled with the spacebar. A central transmission monitor shows the currently selected camera shot.

It's as well to practice first, with the recording light still on blue. When you are ready switch to red, cue the sound and you're away. You cut to different cameras by hitting the appropriate camera number. With joysticks or cursor keys it is possible to mix or fade shots.

At this stage you can still use zoom facilities, mirror imagery or quartered shots, giving you a grand total of 64 possible shots to use.

When your sequence is complete, you can save it for future use and move to the preview session. Here you create your credit page and then you can see your video in full screen size.

The main problem is synchronising pictures with sound track. The program assumes a separate sound source and no use is made of the computer's noises.

It requires a bit of trial and error to know when to start your sequence to match the sound track, but practice makes perfect.

If you can send a signal to a video recorder you'll only need to achieve perfection once since you can replay it all from the video machine.

This can be done from the computer video output (which only gives monochrome) or from the poorer quality UHF socket. The sound system can be connected to the video recorder audio-in socket. Just what leads you will need will depend on the sockets on your video.

The programs are all driven by good clear menus. A sensible choice at each stage is the \*command option which allows you to catalogue your cassette.

You can create graphics in picture maker and practice with them in the studio, flit back to picture maker to modify or create new pictures and so on.

A much more rigorous discipline is needed with cassettes. First create all the graphics, then do all studio work and finally preview and output to video.

One irritating little bug can cause the program to crash if you use too many letters in a filename. Otherwise, the whole system is coherently put together.

The instruction book is thorough but still makes for easy reading. Squirrel has put together a challenging and enjoyable package which could prove useful to many people.

In particular, schools who have pupils studying Information Technology should look seriously at TV DIRECTOR, perhaps as an alternative to teletext emulation packages.

Rog Frost, ELECTRON USER 5. 2

# TWELFTH NIGHT

***Professional, Originally Released On Cassette Only***

Game Type : Utility Package; Investigate Shakespeare's TWELFTH NIGHT  
Authors : John Mahoney, Stewart Martin & Jim Wynn  
Standalone Release(s) : 1985: TWELFTH NIGHT, Penguin Study Software, £5.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : PENGUIN STUDY SOFTWARE. No further information given.  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Written by practising teachers who have had many years' experience of successfully preparing students for literature examinations. Penguin Study Software gives you the ability to study an 'O' level or CSE text by means previously impossible. You can:*

- a) investigate major characters, themes and images and the subtle relationships between them,*
- b) research specific essay titles or examination questions,*
- c) thoroughly revise a particular character, theme or image of your choosing - at your own pace,*
- d) work through the entire play or concentrate your study on a particular act or acts.*

*If you are studying for an examination as a full time or part-time student, or are reading purely for interest and pleasure, Penguin Study Software will increase your knowledge of the text and help you to enjoy and profit from the study of literature."*

Once you have loaded the program you will be able to select, under a number of headings, those areas of interest you wish to explore.

In addition, you may restrict your search to particular parts of the play if you so wish - otherwise it will be assumed that you would like to search it in its entirety.

## Getting Started

Start with a simple search for just one item, for example a theme you find interesting.

As the computer comments on what it has found, you will gain a maximum benefit by looking in your copy of the text for the reference given - carefully consider its context by reading a number of lines either side of the exact place indicated.

With experience, you will be able to undertake very sophisticated studies of the text by carefully selecting combinations of characters, themes and images. This type of questioning is likely to reveal important relationships within the play and lead to greater understanding - although highly structured enquiries of this kind require some thought on your part to begin with.

For example, in Shakespeare's 'Macbeth', it is well known that Macbeth is involved in the murdering of several people - it might therefore be tempting to assume that Macbeth and the theme of blood would be a fruitful combination to explore. In fact, a far more revealing insight might be gained if blood, as a theme, were to be considered in its relationship to water, for example.

As appropriate, the computer will suggest other profitable lines of enquiry which you might like to follow up, either on their own or in the combinations it suggests.

To help you get the best out of the program you are limited to choosing a maximum of three items at any one time - this is completely independent of any decisions you may wish to make about concentrating your search on particular parts of the text.

**Have your copy of the text handy**

Act, Scene and Line numbers are referenced to 'The New Penguin Shakespeare' as used and recommended by the Royal Shakespeare Company. If you are using other editions of the play you may find that some of these numbers vary slightly, and you should bear this in mind when looking at your text.

# TWIN KINGDOM VALLEY

***Professional, Originally Released On Cassette Only***

Game Type : Text Adventure With Graphics  
Author : Trevor Hall  
Standalone Release(s) : 1984: TWIN KINGDOM VALLEY, Bug Byte, £9.95  
1987: TWIN KINGDOM VALLEY, Bug Byte, £2.99  
Compilation Release(s) : 1987: FIVE STAR GAMES, Beau Jolly, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : BUG-BYTE, Liberty House, 222 Regent Street, LONDON W1R 7DB  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Over 175 full screen high-res locations in the treasure trove Valley of the Twin Kingdoms. Keep your wits about you and a shard sword handy. A classic complex adventure."*

Collect as much treasure as you can without being killed. Your score increases as your success rate increases. The maximum score possible is 1024 points. The game begins with you standing on a road running from East to West. Nearby is a cabin which you have rented from the innkeeper of the 'Sword Inn'. Where you go and what you do is up to you. The best of luck...

Enter your commands using the keyboard and the <RETURN> key. You can delete commands by pressing "CTRL" and "U" together. You may use <DELETE> and <COPY> to make corrections and copy words off the screen. The computer will follow commands such as compass directions and: DRINK, SWIM, WAVE, WAIT, ASK, EMPTY, POUR, FILL, GIVE, OFF, ON, LIGHT, UNLOCK, OPEN, CLOSE, SHUT, LOCK, GET, TAKE, DROP, THROW, CUT, HIT. For example "HIT THE GUARD WITH A HAMMER" will let you hit the guard, presuming you have met one and you have a hammer!

Use the HELP command to list available commands. Other commands to help play the game include: SCORE, INVENTORY, OPTION, QUIT, END, LOOK, VIEW, PICTURE, DRAW. These are all self-explanatory. LOOK lets you look at the description, and so on. A dotted line will appear after commands which take up time. The pictures of the Valley sites will contain clues and help you draw a map. The picture will normally vanish after 10 seconds, or when you type your command or if you press <DELETE>. Remember to always press <RETURN> to action your command. If you are in a maze, remember each place in the game has a name; you will find that more than useful. If you are set upon by meanies keep on the move until you can recover your strength or find weapons.

FOUR SPECIAL COMMANDS must start with an asterisk. i.e. \*.

\*SAVE to save the current state of a game,  
\*LOAD to load a previously saved game,  
\*MODE for Electron only, this changes 25 lines by 40 characters to 32 by 40. Typing \*MODE again will revert to 25 by 40. Type LOOK after a \*MODE command.  
\*TEXT alters the speed of printing on the screen to suit yourself from 0 to 9.

**Instructions' Source** : TWIN KINGDOM VALLEY (Bug Byte) Back and Inner Inlay

## Review (Electron User)

This graphical adventure combines some of the better elements of monster-bashing with the puzzles usually associated with text-only adventures. There are 175

"pictures" in the adventure and since you can "look" at some of the objects within the locations this leads me to assume that there are about 160 actual locations.

You play the typical greedy adventurer and the object of your quest is to collect all the treasure you can find and deposit it safely. When you've scored the maximum points of 1024 you will find that you have a further problem. What to do next.

The program loads in several parts and full loading instructions are given during loading. When the adventure starts you're asked to choose one of six options. These determine whether you have the graphics displayed or not and the type of messages you want about your location. You can alter these during the course of the game by typing OPTION. As soon as you have made your choice the adventure proper begins.

You find yourself on a road outside the cabin. Inside the cabin are three objects that will come in handy. At this point I would suggest that you save the game as should you die the program simply ends. If you have a game saved you can restart by using \*LOAD otherwise you have to load the game back in from the start.

I think it is quite inexcusable for Bug-Byte not to have given you the option of playing another game. On saving the game, using SAVE, you will see that you're in fact saving three programs, one of which is 24 blocks long.

Anyway, back to the game. You'll find that over 100 locations are readily accessible and are generally logical.

For example, moving North and then South brings you back to the location you started from. However, this isn't always the case, especially when underground, so making a map is a must.

You will meet various characters most of whom, if armed, will attack you on sight. An elf will carry things for you, but is sometimes reluctant to let you have them back. This same elf is also a positive nuisance when mapping underground - he kept picking up the objects I was dropping in order to make my map!

It is possible to frighten off or kill the characters you meet but you need to be at maximum strength (190 points) and armed with a better weapon than them.

This is also a good way of obtaining any treasure they may be carrying since they quite often drop them if you are winning. Watch out for your strength points after doing battle, they will be very low and any further combat will probably finish you off.

A good tip if your strength is low is to WAIT for a bit since every command you give builds up your strength. If you are near Watersmeet, a quick dip will work wonders.

On the subject of strength points, don't drink too much ale in the local inn - it's definitely not good for you.

The graphics are excellent and quickly drawn but tend to slow the game down a lot, so doubtless you'll do the same as me and use the Option command to turn them off. I've mapped about 140 locations and collected a few treasures but frankly, I don't think I'm nearer to finishing than when I started.

I've tried giving the crystal ball to the castle witch but keep getting killed. I've tried throwing water, oil and everything else at the dragon but still can't get the master key. I'm afraid that the adventure doesn't generate enough atmosphere for me to want to persevere with it. Having said that, if anyone has completed it and would like to send me a map of it I will mention them in my bedtime prayers.

Overall, TWIN KINGDOM VALLEY is impressive. It is extremely well-programmed and packaged. However, the save game facility and the abrupt ending, along with the characters in the program, who are more of an impediment than a problem, tend to make me reluctant to recommend it.

Yet the mail I've received about it tends to indicate that a lot of people do like it. My advice therefore is to go to your friendly computer dealer, grovel and try before you buy!

Merlin, ELECTRON USER 2. 9

### **Review (Electron User)**

This is a graphics adventure with 175 locations each portrayed in full colour. The program is by no means new, in fact it has been around for years, but the novelty lies in the price - just £2.99!

In traditional adventure style, you play a treasure seeker, in this case aiming to score 1024 points. Your journey takes you through forests, over and under mountains braving deserts and ravines. You will encounter elves and dwarves, dragons and witches, and droves of rather nasty guards and gorillas.

TWIN KINGDOM VALLEY is not one of those adventures where you must spend three weeks pondering how to escape from the first location. In fact about 100 of the sites are easily accessible by the usual direction commands.

You'll have no problem finding the lamp which you will need for the tunnels, or a bag for carrying things. If you do get a bit stuck then typing HELP lists all the verbs you can use.

Some of the other travellers you meet are a nuisance, not only to your quest, but also to the smooth flow of the game. Some can be helpful, but if in doubt, check your own strength and indulge in a little violence. The best cures for weakness are waiting around or swimming in Watersmeet.

One technical feature of the game is seriously amiss. With a Plus 1 fitted, the save game feature doesn't work. The most annoying part is that without a saved position there is no re-start option, so you have re-load the entire game. Even when it does work, saving a game is a long, long process.

Despite its shortcomings, I like this game. It has an interesting atmosphere and it straightforward to map. TWIN KINGDOM VALLEY is a real bargain, and is one adventure I am determined to solve.

# UGGIE'S GARDEN

***Professional, Originally Released On DFS E00 Disc***

Game Type : Arcade; Split-screen REPTON-style Maze Game For 2 Players  
Authors : Ian Webster and Frazer Middleton  
Standalone Release(s) : 1997: UGGIE'S GARDEN, Superior/Acornsoft, £6.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"UGGIE'S GARDEN - a two-player only, split-screen adventure in the style of the Repton series of games featuring large, detailed sprites.*

*Use items, monsters and friends to assist you in completing all twenty levels - then design your own, with the sophisticated sprite and screen editors!*

*Compatible with the BBC B, B+, Master 128 and Electron computers."*

## Loading

From 3.5"/5.25" DFS disc, simply insert the disc and tap SHIFT-BREAK. From cassette, rewind and type CH."" then press RETURN.

You must select either the game or editor from the first loading screen with keys 1 or 2.

Note that each screen for UGGIE'S GARDEN loads in separately. Therefore, if playing from cassette, note the reading on the cassette's counter for the beginning of each screen file.

## How To Play The Game

Uggie lives in a garden where he picks apples from his orchard. Helping Uggie is his friend Bill, but beware, a monster lives in the garden who will try to eat them up!

Also, beware of your friend... He may try to kill you and pinch all the apples for himself!

You must make your way around the garden collecting the apples while avoiding the poisonous mushrooms and Uggie-eating plants. Dangerous boulders litter the garden and may fall and crush you! Doors bar your way and you must find keys to open them.

You must also make sure your 'friend' does not wake up the monster and set it upon you!

And don't forget to chop down the trees to get more apples!

## Game Controls

PLAYER ONE		PLAYER TWO	
Z	..... Left	.....	<
X	..... Right	.....	>
F	..... Up	.....	*
C	..... Down	.....	?
1	..... Suicide	.....	0
COPY/DELETE		..... Pause/Resume	
Q/S		..... Sound Off/On	

From the high-score table:

L	..... Load Master File
P	..... Enter Password
SPACE BAR	..... Play game

Game Character Descriptions:

Uggie	..... Player One
Bill	..... Player Two
Boulders	..... Fall and crush you if unsupported
Walls	..... Block your path
Invisible Exits	..... Walls you can walk through
Door	..... Only opens if you have a key
Key	..... Collect and use to open a door
Monster	..... Deadly if touched
Monster-Pellet	
: Green	..... Causes monster to pursue Uggie
: Red	..... Causes monster to pursue Bill
Monster-neutralant Pill	..... Paralyzes monster
Apples	..... Collect these!
Plants	..... Kill you
Plant-spray	.... Kills all plants (when touched)
Earth	..... Supports boulders. Walk through this
Mushrooms	..... Kill you
Trees	..... Obstruct. Chop down for more apples
Axe	..... Chops down all trees (when touched)

Note that you require one key per door. Each key disappears after it has been used. Plan your strategy so that you are not prevented from continuing by a locked door. Any player alive when the last of the apples is collected will progress to the next screen.

Should you complete UGGIE'S GARDEN, we'll organise a signed congratulatory certificate for you. You'll also be sent a software reward in the same sae.

## How To Use The Editor

In common with most games of this sort, UGGIE'S GARDEN features a full editor package. This sophisticated utility allows you to redesign almost every aspect of the game. You can redefine the sprites, game colours, level maps and even the small map icons to create your own fiendishly puzzling suite of screens.

To load the editor, select 2 from the loading screen Menu. After the Editor has loaded, you will be presented with the following screen:

The Uggie's Garden  
Game Editor

- 1 Edit Sprites
- 2 Edit Screen
- 3 Edit Icons
- 4 Edit Colours
- 5 Edit Master File

- 6 Save Master File
- 7 Save Screen
- 8 Load Master File
- 9 Load Screen

Each number corresponds to the stated function and listed below are the specific instruction for each. Note that the default (familiar) sprites and map icons of UGGIE'S GARDEN are already present in memory. However, as with the game itself, you must load in a particular screen separately in order to edit it.

If you have used a similar editor, such as that of the REPTON series, you are likely to find the Menu self-explanatory. If not, you will find the following tutorial useful.

### Option 1 : Edit Sprites

Selecting this option allows you to either create a whole new series of game sprites or simply modify the original ones. The sprites are part of the "Master File", explained below. However, this does not concern us yet as the original UGGIE'S GARDEN sprites (with which you will be familiar through playing the game) are present in memory when the editor has loaded.

On pressing option 1, the Menu disappears and is replaced by the following screen:

o             Edit             Sprite             Window 	<---- Gives an enlarged image of a chosen sprite for pixel-perfect editing
<div style="border: 1px solid black; width: 100px; height: 15px; margin: 0 auto;"></div>   _Colour:R_	<---- Shows the actual size of the above sprite <---- Gives the currently selected colour
<div style="border: 1px solid black; width: 100px; height: 15px; margin: 0 auto;"></div>   Sprite       Store.	<---- The "Store" (Selectable)
<div style="border: 1px solid black; width: 100px; height: 15px; margin: 0 auto;"></div>   Function: _Get_	<---- Gives the action to be performed upon a sprite selected from the store

To operate the sprite editing facilities is simplicity itself. Notice that the "o" cursor can be navigated (within the Edit Sprite window) with Z, X, \* and ? and that pressing SPACE places a dot at the location of the cursor. The currently selected colour, shown in a horizontal bar in the centre of the screen, can be altered with the keys 0, 1, 2 and 3. (You may want to use different colours the default ones - changing these is done via option 4 of the Main Menu.)

As you make changes in the Edit Sprite window, you will notice that the equivalent pixels in the smaller window beneath it display the sprite actual size (as it will appear in the game). The beauty of the UGGIE'S GARDEN editor over some of those in other packages is that the activity in the Edit Sprite window does NOT affect any sprite which has already been created until you specifically "overwrite" the particular sprite.

To demonstrate this, use the keys < and >. The box between "Sprite" and "Store" will cycle all of the sprites which can be edited, or that you may choose to "overwrite" with a new sprite you have created in the Edit Sprite window. The first sprite is one of a blank space. Although you are free to experiment with this sprite, altering it from this state is not recommended as it is will cause strange effects when you come to test your finished screen.

Assuming you haven't yet created a masterpiece in the Edit Sprite window, you can "blow up" any of the sprites in this "store" (to edit their pixels) by pressing RETURN. This executes the currently selected "function" shown in the bar at the

bottom of the screen. For retrieving a sprite from the "store" the function is "Get".

The sprite will now appear enlarged in both the Edit Sprite window and the actual size window beneath it. You can make any changes you wish to it with the movement keys and SPACE without affecting in any way the "stored" version. You can also choose to subject it to other functions (described below) before you decide to store it again.

Note that you must understand the *properties* of each sprite and their position in the cycle as you cannot define the properties yourself. So to create a deadly, immobile, animated sprite, you must overwrite the two "plant" definitions with your own sprites. If you do not, you will end up with weird effects when selecting the Animate function and in the finished game itself.

### **Functions**

To scroll through the functions available, use the keys N and M. The following list gives the action each function performs.

Get	Gets whichever sprite is displayed in the "store" window, and transfers it to the Edit Sprite window. Throughout editing, the original sprite is untouched
Store	Stores the sprite in the Edit Sprite window 'over' whichever sprite is displayed in the "store" window. This is the <i>only</i> option that changes a "stored" sprite
Clear	Clears the Edit Sprite window
Mirror X	Flips the pixels in the Edit Sprite window vertically
Mirror Y	Flips the pixels in the Edit Sprite window horizontally
Inverse	This maps all colour 0 pixels to colour 3 and all colour 1 pixels to colour 2, but only on the Sprite to be Edited. You may use this function to make a sprite appear "highlighted" or "outlined". Selecting the option a second time naturally restores the colours to as they were
Change	Changes all of the colour <i>beneath</i> the cursor to the currently selected colour. So to change all the red pixels to green ones, select green, move to a red pixel and press RETURN
Merge	Merges the sprite displayed in the "store" window with that in the Edit Sprite window
Animate	This option, only applicable to the "character" sprites - Uggie, Bill, the plants and the monster - flips between the appropriate two sprites to show if the persistence of vision effect makes the characters appear to 'move'

### **Hint**

Especially when creating animated sprites, you can create one sprite and store it over the *two* appropriate positions in the "store". In that way, the minor modifications you make to the second sprite make it quicker to create.

To leave the Edit Sprites section, press ESCAPE. You will be returned to the Main Menu.

## **Option 2 : Edit Screen**

To edit an existing screen, it is first necessary to use option 9 to load it into memory. If this is not done, pressing this option will display a empty space 'map'

bordered by walls and mushrooms, allowing you to create your own screen from scratch.

As with the Sprites Designer, you control a small cursor 'o' which is situated in the top left hand corner of the map display area. Extreme bottom left is displayed the "currently selected sprite". The designing process is carried out by 'move and drop'. You move with the Z, X, \* and ? keys and drop with SPACE.

Also as with the Sprites Designer, you can use keys < and > to select which sprite you wish to place. As you do so you will notice that not only does the "currently selected sprite" box change but so too does the cursor; it becomes an smaller version of the sprite, known as an icon. By using such icons, it is far easier to design the map fully on screen.

You may place any character in any place within the area shown on screen and should aim to create small puzzling areas which need to be conquered to gain, for example, a key, before moving onto the next. Let your imagination run wild!

To alter a particular icon, simply move the cursor over it and press DELETE, or 'drop' an alternative icon on top to it.

Note that you can only place ONE monster, Bill or Uggie icon on each screen. Note also that the border should not be altered as it exists to prevent a player from running off the side of the screen!

When you have finished designing your screen, press ESCAPE to return to the Main Menu. Screens are saved individually with option 7.

### Option 3 : Edit Icons

Selecting this option allows you to either modify or create a whole new series of icons to complement any new sprites you have defined. These icons will form part of the "Master File", explained below. Note though that, unlike the sprites, the icons themselves are not displayed during the gameplay of UGGIE'S GARDEN. They are purely for your benefit in designing Screens via option 2.

On pressing option 3, the Menu disappears and is replaced by the following screen:

<pre> o    Edit       Icon      Window             </pre>	<pre> _  </pre>	<---- Gives an enlarged image of a chosen icon; smaller box shows it 'map size'
<pre>     _    _ Colour:R_  </pre>		<---- Shows the icon selected by the cursor 2 <---- Gives the currently selected colour
<pre> _     Oxxxxxxxxx         xxxxxxxxxxxx         xxxxxxxxxxxx  </pre>		<---- Left: The sprite the icon represents Right: The thirty icons selectable

Editing icons features two cursors, represented above by "o" and "O". The "o" cursor is navigated within the Edit Icon window with the Z, X, \* and ? keys while SPACE places a dot of the currently selected colour at its current location. As with the Edit Sprite option, the colour is shown in a horizontal bar in the centre of the screen and can be altered with the keys 0, 1, 2 and 3. (See option 4 for changing the default colours.)

The second cursor "O" is navigated within the icon store with the cursor keys. Using these, particular icons can be "got" or "stored" (replaced) over others in a similar way to the Edit Sprites option. For example, you may design the icon of a new main character to replace Uggie in the

Edit Icon window either by:

1. moving the "O" cursor to the Uggie icon, pressing G (to "Get" it and bring it into the Edit Sprite option), altering it to suit and then pressing S (to "Store" it over the old Uggie sprite), or:
2. simply designing the new icon in the Edit Sprite window, using the cursor keys to move the "O" cursor over the Uggie icon then pressing S.

Once again, the icon you are currently working on will not "overwrite" any of the stored icons until you specifically request that it does so.

#### **Option 4 : Colour Editor**

This option alters the default colours. As UGGIE'S GARDEN is a Mode 5 game, only four colours may be present on screen at once. However, you may like to change these colours to suit your new sprites and icons. To do so, press 4 from the Main Menu.

The screen will clear and display the sprites currently in memory to aid experimentation. Press keys 0 to 3 to advance the colour of that number through the sequence:

Black -> Red -> Green -> Yellow -> Blue -> Magenta -> Cyan -> White -> Black ->  
etc

Press ESCAPE to store the colours and return to the Main Menu.

#### **Option 5 : Edit Master File**

UGGIE'S GARDEN saves individual screens separately and holds all other information (Passwords, sprite and icon designs and number of screens) in a Master File. The Master File for the default screens of the game is built into both the Game and the Editor. However, you will need to change a few of its variables for optimum performance with your own saved screens and sprites.

Select option 5 and you will be presented with the following information, plus the defined sprites and icons which will form the Master File:

Filename: Scr	<---- Press key 1 to edit this
No of screens: 30	<---- Press key 2 to edit this
Password No. 1: SCR1	<---- Press key 3 to edit this

#### **Filename**

This is actually the prefix to the name of each screen and it, and the number of the screen you have currently reached when playing the game, form the filename for the screen it searches for. So, for example, when you first play the original UGGIE'S GARDEN, "Scr"+"1" is searched for ("Scr1"). Each successive screen completed adds 1 to the screen number until the value in "No. of screens" is reached whereupon you are given a congratulatory message and the game ends.

If you create a set of sprites based on ALICE IN WONDERLAND you may like to type 1 and alter "Scr" to "Alice" and save screens (using option 7) as Alicel, Alice2, etc.

#### **No of screens**

The Master File must specify the number of screens to be completed before the player has won. It may be any value. If you simply want to test the screen you have created, press 2 and set it to 1.

#### **Password**

Each screen requires a password. All passwords for all screens are stored in the Master File, so the Game Menu can detect if any given password is valid, and then detect which screen that password is for and load it.

To view the passwords for each screen, use the \* and ? keys. The password will flick either up or down. When you have detected the screen for which you wish to enter or change the password, press 3.

### **Option 6 : Save Master File**

This simply saves the information created by option 5 to disc or tape. You will be asked for a filename and whether or not you wish to "Lock" the file. Only type Y if you are sure you will not need to alter the Master File at a later date.

At first glance, this process may appear awkward as it results in two separate files (the Master File followed by the Screen the player has reached) needing to be loaded into the UGGIE'S GARDEN Game. However, as the Master File does only need to be loaded once it soon feels natural.

### **Important Note**

A Master File does *not* hold the data for the Screen you have designed. Use option 7 to save the screen.

### **Option 7 : Save Screen**

This will save the current screen in memory (each one you have loaded or designed) to tape or disc. You will be asked to enter a filename and should ensure that it begins with the prefix stated in the Master File followed by the appropriate number. (eg. Scrl)

### **Option 8 : Load Master File**

This option allows you to load in a previous Master File (or that of the original UGGIE'S GARDEN game itself). Enter the filename and make changes to it with option 5.

### **Option 9 : Load Screen**

This will allow you to load in any screen from disc or tape to make changes to it. Type in its filename (eg. Scrl) and, after loading, alter it with option 2.

### **Testing A Screen**

The steps you must go through to test your own masterpieces are:

1. Load the UGGIE'S GARDEN Editor
2. Create a screen (using option 2)
3. Design alternative sprites if necessary (option 1)
4. Design alternative icons if necessary (option 3)
5. Alter the default colours if necessary (option 4)
6. Create a new Master File (using option 5), specifying the "prefix" of the filename, the number of screens (1) and the password for that 1 screen
7. Save the Master File (using option 8)
8. Save the screen (using option 7)
9. Press BREAK
10. Load the UGGIE'S GARDEN Game
11. Press F to load the Master File (after inserting your own tape/disc with the saved files on)
12. Press SPACE to commence playing, or 'P' followed by the password for the test screen
13. Wait for that screen to load
14. Ensure the screen can be completed

To develop a set of screens is then just the simple matter of increasing the number of screens and passwords in the Master File by 1 and using option 7 to save further screens with the suffixes 2, 3, 4, etc.

Finally, if playing from disc, always use a blank formatted disc for experimentation of this kind and never use the original.

**Instructions' Source** : UGGIE'S GARDEN (Superior/Acornsoft) Back Inlay (*Italicised text*). Further instructions by The Acorn Electron Haven.

### Review (EUG)

In a two-dimensional maze-like orchard of apples, plants and trees, it's finally time to meet Uggie and Bill, the two stars of UGGIE'S GARDEN. It's been a long time coming for all - including author Ian Webster. Originally a Superior/Acornsoft release, the game's been passed to and from ProAction, appeared on the Stairway to Hell website under the "unreleased" category and spent nearly eight years in 8bit limbo! Surprising for a game which may claim it succeeds the REPTON series.

Fans of the little green reptile may not be paying attention yet as numerous clones have claimed such succession (CLOGGER, SURVIVORS and MINER being just three!) but imagine this: *two* players both with their own windows, *each* with their own "Repton" sprite but *both* situated in the *same* playing area!

The idea is certainly unique and intriguing. All sorts of possibilities occur. How much more difficult would clearing a map of diamonds be when, not only are many of them supporting rocks (rather precariously) but you must also reckon on the unpredictable keypresses of your friend? Imagine your friend turns nasty and clears earth from beneath a number of rocks *above* you, sending them hurtling down onto your head! And if you yourself are puzzling over how to navigate through a maze of them but know your friend is underneath you, do you risk killing him by taking the last diamond?

UGGIE'S GARDEN says, providing we can get hold of one Electron/BBC and one friend, we can stop dreaming and try it! In this two player only game, players control cute little creatures with big heads and eyes who must clear bizarre and, at times, extremely deadly, screens of apples (the substitute for the diamonds, natch!). The two sprites are each very different and distinguished quite easily: apart from the different design, Uggie is green and Bill is red.

The main game screen is divided horizontally into two windows, each showing a small percentage of the game maze-like area. As each player moves left, right, up or down, the window scrolls by a block in the chosen direction, keeping the wily character centre-screen. Each window scrolls completely independently of the other and not uncommonly, Uggie will see Bill moving around in his own (Uggie's) window while, at the same time, Uggie appears briefly in Bill's.

The idea of UGGIE'S GARDEN, as with the REPTON series, is not to get crushed by falling rocks, not to collide with the monsters (or monster, there is only one in UGGIE'S GARDEN) and to free hidden treasures (more apples!) from safes. There are some stark differences between the game formats though. For example, the monster does not hatch from an egg but lives in the orchard with the two players, usually pretty quietly. That is, unless Uggie or Bill eat a pill of the opposite colour to themselves whereupon it dashes off after the player of that colour! He similarly is invincible and cannot be crushed with boulders.

The safes/key idea, where a key is collected and all safes then open, is implemented through trees/axe. But there are also keys lying around the maze that a player may use to open doors. One key vanishes for each door the player walks through; brainstraining is mandatory on many higher screens where numbers of doors outnumber the keys fitting them!

Yet another feature is the invisible exit. Or rather, the piece of wall that can actually be passed through horizontally to get out of a seemingly impossible situation. Green shaking plants (that disappear if the spray is collected) and deadly mushrooms also litter the map so tread carefully!

The literature with the ProAction UGGIE'S GARDEN release assumes the player will work all this out by either trial and error or by remembering it from the disk version's on-screen instructions, and both make a big play of warning "beware of

your friend" re the kind of situations envisaged at the beginning of this review. Yet players will find quickly that many of the game's puzzle elements *require* two players, so getting rid of Uggie/Bill to "pinch all the apples" is not in the best interests of either! Ignore their advice and progress via *teamwork*.

The game does play reasonably well. The tape version is multi-load, loading in one screen at a time (probably because of the extra memory required for the two windows' machine code routines) and a password facility is incorporated so screens completed can be skipped. Although each screen only takes a few seconds to load in, an annoyance is that the present screen is not preserved in memory when you die. So if you are playing Screen 1, quit and then press SPACE to begin it again, you have to rewind the tape a bit and reload it.

Also the monster, mentioned earlier, is very unpredictable; sometimes remaining completely dormant (even after you've 'set it' on the other character) for hours and then, just as you've decided it's dead, going on a murderous rampage at the speed of light! When it impacts, and the character dies with a zzzziipppp, it returns to its dormant state and frequently then sits unmoving again, barring the way to a vital passageway - even when live bait is paraded under its nose!

The game contains twenty screens of increasing difficulty but where it really delights is through its editor. Why, oh why, didn't ProAction see fit to document how to use this Editor package?! My request for the User Guide (which should've been sent as part of the package) was met with a PDF file containing gems like "our master instructions do not describe how to return to the menu from here. We'd be very interested to find out."

Fortunately, after a few weeks' fiddling and note-taking, we have figured out every last function and can supply a much-needed Guide of our own. With such, the editor becomes a sinch to use and allows almost every element of the game to be redefined. You can draw your own sprites and screens - and even your own editor screen icons! - and create whatever scenarios take your fancy! You can go even further, defining how many screens are contained within your new game (before the congrats message), their passwords and the default colours. All this is done from one utility called from the equally superb Loading Screen.

Despite the few faults highlighted, UGGIE'S GARDEN has much to recommend it, not least of which being Superior's seal of approval. It takes a very clever twist on the REPTON theme and injects it with some new ideas and an incredible suite of editing facilities. And did I mention the cute characters who wave "Game Over"...?

Dave Edwards, EUG #57

## Instructions

*"The year is 2673 AD and the galaxy is under seige by aliens from the planet Gorfia. Your mission is to blast your way through wave upon wave of oncoming aliens, surviving long enough to take on and destroy the nerve centre of the alien attack - the Mothership! To do this, you have been given command of the most advanced space fighter in the Universe - the Ultron! But you'll still need lightning reflexes to rise in the ranks from Cadet up to Space Master!"*

The year is 2673 AD and the galaxy is once more under seige from aliens of the planet Gorfia. Your mission is to destroy the oncoming convoys with speed, skill and dexterity. This time the invaders are more sophisticated and much more determined to eradicate you. But you have the most powerful craft in the universe - the ULTRON.

You begin your mission as a Cadet, but may rise through the ranks and become the ultimate Space Master. There are eight ranks to go through and then it gets even harder. Four screens go together to make up one wave. The screens are...

Space Swarmers - Swarming mutants who release hordes of homing missiles. Worth 30 points.  
Galactic Imps - Approaching infantry whose sole aim is to infiltrate your defences. 50 points.  
Space Warp - Aliens that loom out in 3D distracting you with the aim of disintegrating your craft. 100 points.  
Mothership - Blast the aliens' supreme commander, situated in the nerve centre of the Mothership. 200 points.

Occasionally, a reconnaissance ship will fly past over the scene, dropping missiles. The points for hitting the ship are randomly either 250 or 500 points.

## Review (Electron User)

ULTRON is another game of the Space Invaders school. Although highly colourful and with a certain variety in that the aliens sometimes move across the screen instead of down, sadly there isn't a lot of originality in it.

There are four stages in the game, each one slightly harder than the previous one. Your laser base moves along the bottom, knocking off the aliens and avoiding the bombs. The third screen has a 3D effect in that the Space Invaders seem to appear

out of the distance in ones and twos, and the fourth has one huge alien with a smaller alien inside. You have to chip your way through the thick outer skin to get at the points inside. If you manage to do this, you are given an opportunity to earn a bonus.

While the average arcade game fan has long since left this sort of thing behind, I feel that ULTRON may appeal to the younger user. Certainly the keys are easily manageable and the screen layouts simple, with explicit instructions on an accompanying leaflet.

## *Public Domain, Originally Released On ADFS 1D00 Disc*

Game Type : Card Game  
Author : Gareth Boden  
Standalone Release(s) : 1991: UNO, Headfirst PD, PD  
Compilation Release(s) : None  
Stated compatibility : Electron Side A/BBC Side B  
Actual compatibility : As stated  
Supplier : HEADFIRST PD. No further information.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### **Instructions**

The object of the game is to score 500 points before the computer. Points are scored by ridding yourself of all your cards before the computer.

### **Summary Of Play**

The computer will deal seven cards to each player, the remaining cards are kept as a drawpile by the computer. The top card of this pile is shown face up, as the top card of a new discard pile.

The first player chooses a card from his/her hand by matching colour or type of the top card of the discard pile. This then is placed as the top card of the discard pile for the next player to match. A Wild card will always fit. If at any time a player cannot play any of his cards, he must draw one from the drawpile, which he may then play, and then turn passes to the next player.

Special cards add interest and depth to the game by causing the other player to draw extra cards, or to miss a go.

The cards are marked very clearly and are instantly understandable. For this reason it takes only a few games to become almost an expert player. As you learn to play and to use the strategies possible, you will find the game very stimulating and exciting.

The pack contains 108 cards as follows:

- 2 of each number 1-9 in each of four colours (red,green,yellow,blue)
- 1 of number 0 in each of four colours
- 2 Draw Two cards in each of four colours
- 4 Skip cards in each of four colours
- 4 Wild cards
- 4 Wild Draw Four cards

### **Deal**

The computer begins play by shuffling the pack and dealing seven cards to the player and seven to itself. The remaining cards are kept by the computer for use as a drawpile, with the exception of the top card which is shown on the screen and forms the discard pile.

The computer randomly decides who will start the first hand of the game, subsequent hands are started in alternate order. The starting player must choose a card from their hand that matches either the colour or number of the top card of the discard pile.

If for example a green six is turned up after the deal, the starting player may play any green card he/she has, or any number six card of another colour.

If the first card turned up is a "special" card, play begins as follows:

Wild card - the starting player chooses colour and then plays.

Draw Two card        - the starting player gets two extra cards and the other player begins play.

Skip card            - the other person starts play.

### **Play**

Play continues with each player either matching colour or type of the top card of the discard pile or by following directions of a special card. If you are unable to match a card or play a wild card, you must draw a card from the drawpile. If the drawn card is playable, you may play it immediately otherwise play passes to the computer.

When it is your turn, the computer will sound a short pip. To choose the card to play, move the flashing white arrow around using the arrow keys on the computer. Press RETURN to select a card. If you must pick up a card, press P. Now you may again press RETURN to play that card or P to pass the turn to the computer. NB The computer will check that your choice is playable before playing it; it will not allow you to play incorrect moves (with the exception of Wild Draw Four cards, see Penalties).

The computer will take care of its own turn, and also of any cards given to you due to it playing Draw Two or Wild Draw Four cards. It will also keep a track of how many cards each player has in their hand and display this at the top of screen on either side of the discard pile. When it chooses colour it will inform you of the colour it has chosen using the message bar at the bottom of the screen.

### **Special Cards**

Draw Two            - When a Draw Two is played, the next player is given two extra cards and play passes back to the person who placed the Draw Two.

Skip                 - The next player misses his/her turn and play passes back to the person who placed the Skip card.

In this way a player can put down many cards in succession without the other player having a turn, by carefully playing their special cards by matching type or colour.

### **Wild Cards**

Wild cards may be played on any colour or type of card. The player playing a Wild card has the advantage of choosing the colour in which play will continue. This colour can be the same as the colour already in play. The playing of a Wild card has no effect on the next player other than altering colour and it may be played even when the player holds other playable cards in their hand. There is no restriction on the playing of Wild cards. NB You choose colour by typing the first letter of the colour (R, G, Y or B).

### **Wild Draw Four Cards**

The playing of this card not only allows the player to choose colour as in the Wild card, but also causes the next player to take four more cards and play returns to the player of the Wild Draw Four card. This card may only be used when a player does not have a card in his hand matching the colour currently in use. A player may have a card matching type of the current card and still play his Wild Draw Four card. For example, if the top card of the discard pile is a Blue Two, and the player has a Green Two and a Wild Draw Four card, he may play the Wild Draw Four card. If, however, he has a Blue Six as well, he may not. The computer will not prevent you trying to play a Wild Draw Four incorrectly, but you will incur a penalty for doing so (see Penalties).

### **Going Out**

When a player plays their last card, thus ridding their hand of all cards, the hand is over. Points are scored, the cards are collected, reshuffled and a new hand is dealt with the other player starting. The computer will add up the scores and display them on the screen; if you won, it will show you the cards left in its hand.

If the last card played is a Draw Two or Wild Draw Four card, these cards are added to the losing player's hand before the points are counted.

### **Counting And Scoring**

The values of the cards are as follows:

All cards 0-9	Face Value
Draw Two Cards	20
Skip Cards	20
Wild Cards	50
Wild Draw Four Cards	50

The amount of points scored by the winner of each hand is equal to the value of cards in the losing player's hand. These points are added to the winning player's score. The first player to reach 500 points is the winner.

### **Penalties**

If a player plays a Wild Draw Four card when he/she has a playable colour in his hand, they are penalised and must draw four cards. They also must keep their Wild Draw Four card and lose their turn.

### **Reneging**

On any turn you may choose not to play a card. If so, you must draw a card just the same as if you had no play to make (by pressing P). If the card drawn is playable, you may play that card but may not play a card already in your hand. Only the card drawn may be played.

### **The Strategy of Reneging**

E.g. The computer has played its second to last card. It was a Wild card and it chose red. Most likely its last card is red. You have a red card in your hand but you want to change the colour so the computer can not go out. You choose to draw a card by pressing P hoping that you will get a Wild card to prevent it from going out.

### **Rules To Remember**

1. Wild cards can be played at any time during the game.
2. Wild Draw Four cards can only be played if you do not have a playable colour in your hand.
3. Draw Two, Draw Four, or Skip cards cannot be cancelled out by the playing of a matching card by the other player. The special cards' directions are always followed even if a draw card is the last card played in a game.
4. You can match colour on colour or type on type.
5. When a Wild card or Wild Draw Four card is played you may call any colour you wish. This may be the colour already being played or a colour you do not have in your hand.
6. When reneging you may play the card drawn from the drawpile but you may not play a card from your hand after a draw.

**Instructions' Source** : UNO (Headfirst PD) Text File

### **Review (EUG)**

Those who were behind HEADFIRST PD were a bit of an enigma to me. They were two friends called James Treadwell and Gareth Boden who were adept at throwing together superb-looking utilities and demos - it now seems that in 1992, Gareth Boden produced this professional little simulation of Waddingtons' board game UNO.

I say the two were an enigma as when their PD library was given the thumbs up by Electron User Group way back in issue seven, I immediately despatched a stamped addressed envelope to them but didn't get any response. I then went through the same procedure again with the same result. Hence I concluded that their attempt to set up a Public Domain library had failed within a few months - which is a shame as everything I've seen which has been produced by them on the Elk has been amazing.

UNO is a simple card game where you play against the computer. You are given a selection of cards of four different colours and must try to get rid of all of them before the computer. Most cards have a number between zero and 9 and, after the first card is laid, the players can only lay a card of the same colour or the same number. There are also special cards which force the opposing player to draw another two or four cards from the pack (Wild cards) or change the colour of cards to be laid.

The game uses a very colourful Mode 2 screen and comes complete with a professionally designed loading screen and full instructions in VIEW text file format. It's a PD package at its best where the disk contains slightly different versions for the Electron, BBC B and Master series - each carefully optimised for the particular machine - but where the correct version is automatically chosen by the loader program. Elk owners whose disk-systems set PAGE to either 1900 are catered for and so too are persons with a Master RAM Board operating. Although the program is exactly the same across all formats, certain sections of code differ so that there are no problems with memory or graphic clashes across the machines.

Were it not unofficial [And produced about seven years too late! - Ed], this would've been one of the most professional conversions of a card game available. Selling it unlicensed for profit however wouldn't please Waddingtons who own the copyright but as a PD demonstration of Gareth Boden's programming talents, as mentioned, it's yet another superb piece of software. Recommended.

## Review (Electron User) - "Budget Shoot-'em-up"

Last month found me loudly singing the praises of Bug Byte after I had seen PLAN B, a fabulous game that has joined my personal all-time favourites.

This month sees another release, URANIANS, and this is right at the other end of the scale. One feature I find annoying is that for part of the loading time the counter is not displayed on screen, so you can only hope that loading is taking place.

The title screen graphics are comparable with those seen in a magazine listing, but this could have been forgiven if the quality of the game had made up for it. Unfortunately, after waiting nearly six minutes while the game loads, its arrival is hardly anything to cause celebration.

You have a laser base which moves horizontally across the bottom of the screen, while the alien mothership disgorges her attack ships as she moves across the top.

The first wave of aliens weaves slowly from left to right, and although later waves become a little more belligerent I hardly think that Earth has anything to fear.

Variety is provided by the mothership periodically dropping a fire-bomb which either engulfs you in a wall of flame - the best graphic effect in the game - or if you manage to avoid it, remains on screen to restrict your movement for a few seconds.

It is a sad reflection on any game when the most enjoyable part is when you get crisped. URANIANS is a cross between Space Invaders and Galaxians, but does not have the polish of either. Nowadays we tend to expect better, even from budget games.

Sorry Bug Byte, after PLAN B this is going from the sublime to the ridiculous. The only point I found in its favour was if you have a Plus 1 and Plus 3 fitted, it's not necessary to disable them to load the game.

WEAR NE21 4TE. Tel: 091 414 4611  
Disc compatibility : CDFS E00, DFS E00

## Instructions

The Race Marshall will walk onto the track and flag the "All Clear" at the beginning of each three round heat. The cars will then be pushed into position on the Grid. After a short delay the "Start Your Engines" message will appear. Rev your engine until the desired engine speed is reached. After a few seconds the three pit indicators at the top of the screen will turn from yellow to green.

You can now select a gear. Hold the SPACE BAR down until the gear position indication (POS) changes up (N = Neutral, S = Stall). Build up your revs again before selecting the next gear. If your revs drop too much you will stall your engine. You will see your Distance to Travel indicator (and your opponent) decrease from 0.25 miles to zero. At the end of three rounds your fastest time and your opponent's time will be displayed. If your time is faster, you will encounter the next driver and his more powerful drag car.

Your car's parachute will be automatically ejected at the end of each quarter mile run.

## Game Controls

< - Increase Revs/Engine Speed, > - Decrease Revs/Engine Speed  
SPACE - Gear Change/Start Game

## Review (Electron User)

The scene is the Clifton Center, Arizona. Your dragster is ready on the track and so is that of your opponent Pete Piston. Out comes the track marshall who waves you forward. Your support team of mechanics gives you the required push and Pete's crew does the same for him. Then comes the instruction to start engines. You build up the revs, slip her into gear and you're off, hurtling down the track in hot pursuit of Pete.

Your aim is to beat Pete to the winning post one quarter of a mile down the track. Success will up your rating from novice to rookie and you can then try your skill against Tex Turbo. Beat him and you become a pro and face Clint Clutch, and then on to Sam Servo who is demonically fast. If you get past him, you're a faster driver than me.

Your accelerator pedal consists of the greater than and less than keys. These must be hit alternately as fast as you can. The Spacebar serves as the gear change and so far as I can discover you can only change up through the gears.

If you go into top gear too early, the car's lack of torque will mean a loss of acceleration and certain defeat. It all means that you need not only two really nifty fingers, but also a good sense of timing.

As is so often the case in this type of game, both cars stay still and together in the centre of the screen while the background, in this case white lines, scrolls past. The display gives no indication of who is winning, which means it is essential to read the distance indicators as well as your rev counter and speedometer.

It's a game that will keep your eyes and fingers busy. Sadly, winning a single race may not be enough. You take part in three races against each opponent and you only win if your fastest time is better than his. I developed a policy of really going for it in the first race and sauntering through the other two to give my fingers a rest.

The graphics are neat and tidy, as they should be with so little on-screen movement. My favourite feature is the parachute that slows you down at the end of the race. The sound gives you a good idea of the speed you're travelling, but is rather unimaginative.

My main concern is that this type of game is bad for keyboards. My Plus 1 joystick interface didn't work with it, so it is almost impossible to avoid hammering the poor keys. If you are prepared to risk it, U.S. DRAG RACING will get the adrenaline pumping as you desperately try to beat the opposition.

# VERTIGO

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade Adventure  
Authors : Ian Grimstead & James Wilkes  
Standalone Release(s) : None  
Compilation Release(s) : 1991: PLAY IT AGAIN SAM 16, Superior/Acornsoft, £12.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SUPERIOR/ACORNSOFT, 3 Manor Drive, Scawby, Brigg, NORTH  
LINCOLNSHIRE DN20 9AX  
Disc compatibility : CDFS E00, DFS E00

### Instructions

VERTIGO has five levels, each consisting of ten different weird and wonderful screens. To complete a screen you need to guide your bouncy ball (the perfect octahedron) until it captures the diamond, or other valuable, which may be itself moving around. You must avoid contact with any roaming black demon balls. A fixed number of points is given for each screen you complete (which increases with level), plus time bonus points. You start with three lives, but extra lives can be gained as you progress, up to a maximum of five lives.

To practise difficult screens you can use the passwords, or by pressing <SPACE> (or FIRE if using joystick), you can restart on the last screen attempted. To start at screen 1 of level 1, press the 1 key.

The overall objective is to complete all fifty screens in sequence, without using passwords or the restart facility. If you succeed, write to Superior Software describing what happens after you complete the final screen, and you will be sent a signed congratulatory certificate.

### Game Controls

A - Up/Left, \* - Up/Right, ? - Down/Left, Z - Down/Right  
P - Enter Password, <SPACE> - Start Game  
<COPY>/<DELETE> - Pause On/Off, <ESCAPE> - Quit Level  
<CTRL>-<ESCAPE> - Quit Game

## Instructions

*"Amazing value in this 3 in 1 package from Blue Ribbon. Play Poker Royal, Pontoon or High Low and hope Lady Luck is on your side! Another great deal from Blue Ribbon."*

## The Game

- 1) Poker Royal - A choice of holding any one of the five cards to deal a winning hand.
- 2) 21/Pontoon - After seeing the computer's cards, you have to decide whether to stick or twist. Over 21 and you're bust.
- 3) High/Low - Try and complete a successful run by picking whether or not the next card is higher or lower. You can change any card if you wish.

## Playing The Game

1) Poker Royal  
Keys: 1 - 5 - Hold/Keep Respective Cards  
RETURN - Deal Cards  
SPACE - Cancel Last Choice

2) 21/Pontoon  
Keys: T - Twist  
S - Stick

3) High/Low  
Keys: H - Higher  
L - Lower  
C - Cancel Card

# VIDEO CLASSICS

## *Professional, Originally Released On Cassette Only*

Game Type : Arcade Tennis Upgrade  
Author : "Pagoda"  
Standalone Release(s) : 1988: VIDEO CLASSICS, Silverbird, £1.99  
Compilation Release(s) : None  
Stated compatibility : Electron Side A, BBC Side B  
Actual compatibility : As stated  
Supplier : SILVERBIRD, 64/76 New Oxford Street, LONDON WC1A 1PS  
Disc compatibility : Incompatible. Customised Loading Sequences

### Instructions

Many years ago, when home computers had no keyboards, black and white displays and went "Blip!" there was a game. One or two players were known to sit in front of their tellies for hours on end: meals sat uneaten and beds lay unslept in. Well, now it's 1988 and you can enjoy those days once more, revitalised with new graphics, sound and colour, and a couple of games you've never seen - Four-Bat Blip and Astrobliperoids...

### Game Controls

Each player controls his or her bat using a joystick or the following keys:

**Player 1** : Up - A, Down - Z, Left - C, Right - V  
**Player 2** : Up - ], Down - +, Left - <, Right - >

Both players use <SPACE> to fire the ball.

On the title page, numeric keys select the game, TAB toggles between one and two players. J - Joystick, K - Keyboard.

**Instructions' Source** : VIDEO CLASSICS (Silverbird) Inner Inlay

### Review (EUG)

VIDEO CLASSICS is a compendium of bat and ball games: updates of the incredibly dated "Tennis" game that appeared on retro consoles - often the size of small houses. On this, you controlled an elongated 'bar', moveable up and down horizontally only at your extreme left or right of the screen. Player two, or the computer, did likewise. Almost the entire rest of the screen consisted of empty space over which a ball (the "o" character) bounced back and forth, ricocheting each time it made contact with the top or bottom of the screen or any player's bar. Objective: to get said "o" to make contact with the outer edge behind the bar of the opposite player.

The inlay of VIDEO CLASSICS tells us people used to love this game, which it affectionately refers to as 'Blip' (after the one sound that was made on contact). "Players would sit in front of it for hours on end" apparently and, if you don't believe this, you probably also won't believe "it's now 1988 and time to enjoy those days once more". But is this title a catalyst anyway? Will it send us back to those glory days?

Well, not quite. As you might expect, although this Acorn Electron title was released on a budget label, it didn't have the gall to recreate 'Blip' as a mishmash of "o" and CHR\$255 bar definitions. What it's done instead is remake the game, giving it nice colourful graphics and a range of options for different game-types. The bars have become rounded at the ends (allowing for the ball to spin off at more fitting angles), the animation of the ball (which now looks less like an "o") has

become smooth, the backgrounds have become less, um, black and white and the players have been given more control over their bats. Depending upon the type of game they choose to play, they're given more *bats* too!

After loading and a quickish display of the word BLIP!, whether to opt for standard 'Tennis' or one of the other options can be chosen from a Mode 5 multi-coloured menu. A single player can also choose to play the machine. So, if the format was half as popular as Silverbird suggest, you might think they'd got a real winner here: all the elements of the original maintained and improved plus a bucketful of new ideas: Squash, Four Bat Blip and Astrobliperoids being just three of them.

Yet, though there's no quibbling with this, or with the presentation (although what all those European flag logos are doing on the inlay is anyone's guess!), the game shares a huge flaw with its original counterpart: the real player always wins when playing against the computer!

The 'blip' bore works like this. Select one player, and select a game to play. The computer will serve and you will move into a position where you can deflect the ball to avoid the computer gaining a point. Back the ball will bounce. The computer will mirror the ball's movements, often in perfect synchronisation with it so it always manages to get it squarely in the centre of its bat. There'll be a blip and the ball will head back your way. Because it always hits the computer's bat in the same place (squarely in the centre), it will always come toward you at the same angle, making it unbelievably easy to see in advance where your bat needs to be to deflect it!

Theoretically, if the 'game' carried on like this, it would go on forever and a day - and your computer would be quite happy if this were the case. In an attempt to liven things up however, the real player is likely to try and hit the ball with the edge of his bat, hopefully to send it spiraling off near an angle close to 90 degrees at a speed that the computer cannot match. Whereupon, the real player 'wins'. If this sounds boring via text, then you don't know the half of it if you're actually at the keyboard! Knowing that, provided you hit the ball in a certain way, you're assured of success fair destroys any playability!

Of course, the solution to this is simple. Forget about the one player option and drag your friend to the keyboard! The game then *does* become just as addictive and playable as Silverbird imply and, with the added key movements of left and right (within a small area on 'your' side of the screen) you can broach the ball in many different ways in order to take your opponent off-guard, whilst he, of course, will be trying the same TACTICS on you! This is what the one-player program code *should* take account of - emulating a living, thinking and scheming player, not contenting itself to mirror the ball's horizontal movement!

Which of the extra games (all are loaded at the same time and stored in RAM becoming active when you select them) do it for you will differ. The much publicised Astrobliperoids is actually much more frustrating than playable: here the area between the two bats is filled with numerous floating spheres, rising and falling horizontally from the top to the bottom of the screen. Contact sends the ball off at all sorts of mad angles, frequently resulting in cries of (your) disbelief!

Squash is quite a playable alternative: the ball must be bounced off three walls between being touched by each bat in turn (they can pass through one another which is helpful here!). Four Bat Blip and many of the others only really work if you're prepared to acquire the skills associated with their unique gameplay.

The actual format of the VIDEO CLASSICS tape is, like other Silverbird releases, a fully protected one with a customised loader and baud rate hence the game cannot be transferred to disk (tape-to-disk utilities can't recognise the continuous data stream). This is a minor niggle - only really pertinent to those who don't have a tape recorder permanently connected to their BBC or Electron.

The conclusion is that, notwithstanding the futility of the one player option, VIDEO CLASSICS is a good gaming experience for two. The only new title which appeared on the Silverbird budget range for the BBC machines, [The other three

titles were re-releases - Ed] apart from including realistic computer intelligence, even a modern release would be hard-pushed to better the variations of this old favourite it presents.

Dave Edwards, EUG #57

# VIDEO PINBALL

***Professional, Originally Released On Cassette Only***

Game Alias : PINBALL  
Game Type : Arcade; Pinball Simulation  
Author :  
Standalone Release(s) : 1984: PINBALL, Microbyte, £6.95

## Instructions

Do you fancy yourself as the "Pinball Wizard"?

Are you able to pass an arcade without indulging in a quick game?

Well, now you can enjoy the Pinball thrills in the comfort of your own home, with this all action, frantic, game of VIDEO PINBALL.

**Instructions' Source** : VIDEO PINBALL (Alternative) Inner Inlay

## Review (Electron User) - "Pinball Wizard"

It is good to see more firms getting involved in budget priced software and Alternative Software have now joined this growth industry with a pin-table simulation.

Just as on a real pin-table, the controls are simple. The spacebar is used for the plunger which pushes the ball onto the table. The speed of the ball can be varied by adjusting the time you hold down the spacebar. Once in play, the ball bounces off the various obstacles.

These obstructions not only decide your score, but make rapid changes to the speed and direction of the ball. When it falls to the bottom of the table, you can push it back using Z and ? keys that control the left and right flippers.

With subtle use of the flippers, you can aim the ball to the bonus channel at the left of the screen. Success will cause mayhem to break out as numbers and colours flash everywhere and a bonanza of sound occurs. You should also aim to get the ball to pass through each of the channels at the top of the table so that the letters B, O, N, U and S all change colour and give your score a healthy boost.

Inevitably, the ball will either fall down one of the drains at the side - you can do nothing about this - or you'll miss a ball with your flippers. In either case you can now move on to your next ball.

Altogether you get five balls, and the game is for up to four players. Each competitor uses one ball in turn and all aim to reach the high score table.

The nature of a pin-table does not make for exciting animated graphics. VIDEO PINBALL has a tidy screen and the simplicity of the action makes for smooth but

rapid movement. You can slow the game if you wish by selecting the BBC Micro option.

The choice of colour - white ball on a yellow background - is poor, both in colour and black and white. Sound effects are rather good. The bleeps and buzzes have an authentic flavour, but there should be an option to turn them off. No method exists within this software, although \*FX210,1 before loading will kill all sound.

I have one criticism of the pin-table - it is not possible to catch a ball on the flippers to get real control over direction. That apart, VIDEO PINBALL is a good simulation and quite addictive. The style of the software is somewhat dated, but at £1.99 represents good value for money.

## Instructions

You have to blast the invading aliens as they form in wave attacks and clear them in the allotted time before they turn into superbreeds and become even faster and more dangerous. Successive waves attack even faster in more ferocious and menacing formations.

## Special Features

There are some special features to help you. If you have enough energy units. Smart Bombs will blast all aliens from the screen. If you have enough energy units, Inviso-flight can give you temporary invisibility and hence indestructibility. If you blast the alien energy balloon 12 times and catch the alien energy pack, then your firepower multiplies threefold.

## Score

Hit everything that moves. A bonus ship will be awarded at 20,000 points and additionally there are time bonuses.

## Game Controls

<CTRL> - Left, A - Right, \* - Up, ? - Down  
<RETURN> - Fire, <SPACE> - Smart Bomb, <SHIFT> - Inviso-flight  
<DELETE>/<COPY> - Pause On/Off, <ESCAPE> - Quit Game

# VIEW

## *Professional, Originally Released On ROM Cartridge*

### **Review (Electron User)**

If you spend a lot of time at a typewriter, and if your typing is anything like mine, you'd be better off with a word processor. Basically, this enables you to type your letter or document directly into your Electron. The text can then be altered, corrected and manipulated very easily and then, when it's finished, it can be printed out.

Acornsoft have converted the BBC's word processor, VIEW, for the Electron to take advantage of the Plus 1. It's a ROM cartridge which means that all of the Electron's RAM is available for storing the text.

VIEW is selected in preference to Basic on powerup or after a hard break. A \* command such as \*BASIC can be used to leave VIEW. Peculiarly though \*WORD is used to select VIEW. Initially you are in command mode and there are twenty five commands available. NEW, LOAD, SAVE and MODE are fairly obvious. LOAD won't work with cassette, however - you have to READ it in instead.

Other straightforward commands are PRINT which prints the text using the printer, SCREEN which prints the text on the screen, and COUNT counts the number of words. The maximum amount of RAM available for text is about 16k if you have a Plus 3 disc drive and about 20k with tape or a Cumana system. This is in Mode 6.

If you like working in Mode 0 though, there can be as little as 4k of memory left to hold your masterpiece.

The amount of memory free isn't really a problem. Files that are too large to fit in the memory can easily be worked on using the EDIT command. This reads in a more manageable chunk of the text. When you've finished editing the section, typing MORE will save it and load in the next chunk of text. When you have completely finished, just type FINISH. It's really quite simple.

<ESCAPE> toggles between text mode and command mode. On entering text mode, you find yourself faced with a rather bewildering array of commands. There are 44 immediate commands and 23 other commands that can be stored in the text. Virtually every key on the keyboard does something. At first I was afraid to touch the keyboard for fear of destroying any text I had typed in.

Even after using it for several months, I still have to consult the function key strip supplied with VIEW.

One of the advantages of VIEW over some other word processors is that what appears on the screen is what appears on the paper. It's very easy to lay out the text exactly how you want it to be printed and see what it looks like. Another plus is that the text stays where it is - whenever possible - and it's the cursor that moves.

This is more natural than having the cursor fixed on a line and the text continuously scrolling up and down, as with some word processors. VIEW works in any mode and as printers generally print in 80 columns it's convenient to work in Mode 3 if you have a monitor.

Any string of characters can be CHANGED to any other string of characters or searched for. Non printable characters and wild cards can be included. Any string of characters can also be selectively REPLACEd by any other string. Either Y or N must be pressed to indicate whether each match found is to be replaced or not.

All the stored commands affect the way text is printed out. The text can be placed anywhere on the page. Left and right margins can be set and headers and footers

defined. The two letter commands to do this are placed in the margin - they won't be printed out of course.

The immediate commands act, as the name suggests, immediately on the text. They are accessed by holding the CAPS LK/FUNC key down and pressing one of the other keys. The cursor can be moved anywhere on the screen and the text scrolled forwards and backwards and text can be entered in insert or overwrite mode.

In insert mode, the text is pushed along and the text inserted. In overwrite mode, text is written over what is currently at the cursor. Blank lines can be inserted and lines can be deleted with a single keypress. Lines can also be split to form new paragraphs and concatenated to join them again.

There are several commands which act on a block. To define a section of text as a block, markers are placed at the start and end. The block can then be deleted, moved to a different part of the text, copied, formatted, saved, counted, searched, changed and loaded.

VIEW has a macro facility. This means that any section of text can be given a two-letter name. Whenever this text is needed, there's no need to type it in - just enter the name in the margin instead. This is very useful for standard letters which may have the same address and text.

My only criticisms are that it is sometimes slow in Modes 0 to 3. This isn't serious though, and is partly the Electron's fault anyway. What is serious is the total lack of any means of inserting printer control codes.

The printer must be set up before entering VIEW. If you've entered VIEW and loaded your text file, then there isn't any way of altering the printer settings.

It is often necessary to swap between the different styles of print within a document. The title may be in bold, the points needing emphasising in italics, and other important bits may need underlining. This is impossible with VIEW.

There is a printer driver program available, though, but you shouldn't need a program to patch up what should've been included anyway.

Apart from these grumbles, I like VIEW. It's easy to use, very powerful and flexible. For a straight printout it is excellent, but if you need to swap print styles within the text it isn't so good. Still, it's probably my most used ROM. Recommended.

Roland Waddilove, ELECTRON USER 3. 2

# VIEWSHEET

*Professional, Originally Released On ROM Cartridge*

## Review (Electron User)

Electronic spreadsheets have always had a reputation of being difficult to use, and I'm sure that this reputation, not entirely unjustified, has largely been acquired through unfamiliarity.

At first glance VIEWSHEET looks to be incredibly complex, coming as it does with a 143 page manual and a huge range of facilities. In fact it is straightforward to use, though the complexities may take a considerable time to master.

The manual guides you into the subject gently, showing that it is very easy to set up simple sheets such as the Magic Square, and gradually builds up to the more powerful commands.

On my first encounter with VIEWSHEET I was astonished by just how powerful these were, and could soon see why spreadsheets are considered the best way of manipulating data, numbers and calculations.

The program was designed and written by Protechnic, the company responsible for VIEW, with which it is compatible. Coming on a 16k ROM it is switched in instead of Basic (by \*SHEET) and so uses little of your precious RAM. In common with VIEW it is key rather than menu driven, the ESCAPE key toggling between command and sheet modes.

The sheet has a nominal 255 by 255 size, and is best used in Mode 3. At the top of the screen is a permanent display of command information - your current position within the sheet, and the contents of that slot.

The current slot itself is in reverse video - the sheet cursor. This can be moved around at will by using CAPS LK/FUNC and another key for the appropriate direction. Each slot can contain a label, formula or reference. For example, if in slot A1 you enter PI, you see 3.14159 appear. Move to B1 and type 2 \* A1, and this is calculated and stored in B1 as 6.28319. B1 thus refers to A1, so go back to A1 and alter the contents to another number. In B1 that number multiplied by 2 appears automatically.

This is the essential power of the spreadsheet. Any slot referring to A1 will be updated, and likewise any referring to B1 and so on, propagating any change across the whole sheet. Slots can also be accessed by naming the columns and rows, for example "JUNE" Week1" \* 0.15. They can be filled by auto-entry (across or down), replication (across, down or both, and Absolute or Relative) and by editing existing contents.

As for calculations, a large range of functions are available including summing, conditional operators (including IF), pseudo-list functions such as MAX, MIN, AVERAGE, CHOOSE and LOOKUP (taking lists of slots as one of their arguments), and most of the Basic maths functions with the usual operator precedence.

Up to ten windows can be defined to display information from all over the spreadsheet simultaneously. Printing is also by means by windows and drivers, and save/load windows commands mean that one large spreadsheet can be used with several sets of windows.

Other facilities include protection, insertion and deletion of rows and columns, forced recalculation, editing slot formats - decimal places, ranging right or left and altering the column width. In addition, Plus 3 owners can transfer data between sheets using specially created files, and two or more spreadsheets can be linked, so overcoming memory limitations.

In short, this ROM is sufficiently powerful to provide almost any conceivable planning, modelling and forecasting that anyone could want from an Electron. Many people don't realise the capabilities of spreadsheets. I'd advise them to go on and try it!

My only reservations are the rather poor bar charts (using rows of asterisks), the lack of an index in the otherwise excellent manual, and the speed of the response times - none serious enough to prevent me from warmly recommending it. At £29.95 it is now well priced, but beware: some shops are still selling it at double that.

Nick Rhodes, ELECTRON USER 3. 4

# VILLAGE OF SECRETS

*Public Domain, Released On DFS E00 Disc*

Game Type : Text Adventure  
Author : Jonathan Temple  
Standalone Release(s) : 1991: VILLAGE OF SECRETS, Templesoft, PD  
Compilation Release(s) : None  
Stated compatibility : BBC  
Actual compatibility : Electron With MRB, BBC B, B+ and Master 128  
Supplier : www.8bs.com  
Disc compatibility : CDFS E00, DFS E00

## Instructions

To load, press SHIFT-BREAK. When asked for a filename, type INIT and press <RETURN>.

You will find yourself standing in the centre of a quiet, tranquil village, but not everything is as it seems. Before you know it, you are caught up in a long and dangerous quest to find seven treasures with only your wits to help you...

## The Adventure

The computer will become your eyes, ears and hands, describing your immediate surroundings and what is going on around you. In return, you must give the computer commands of one of two words - it will prompt you with a colon. The computer will only look at the first four letters of each word you type, so abbreviations can be used.

## General Advice And Useful Words

Read all the location descriptions carefully, as there are often clues hidden within them. Making a map is also probably essential if you wish to complete the game.

The program "understands" over 200 words, and so should understand most commands you type in. One omission is MONEY, although the reason for this should become apparent as you play the game.

Commands should be in the form of verbs followed by nouns, or just a single verb. For example, TAKE SANDWICH and DROP SANDWICH will pick up and drop a sandwich as requested. GET, TAKE and DROP used in conjunction with ALL or EVERYTHING will pick up all the objects at a current location, or drop all the ones you are carrying.

To move in a given direction, use commands like WALK EAST, GO NORTH, CLIMB UP or even just W. Entering buildings can be done using GO IN, ENTER CHURCH, IN or just I.

LOOK will give you a full description of your present location, along with a list of directions you can move in. Another useful command is INV or INVENTORY which will give you a list of all the objects you are carrying. SCORE will give you your current score out of 200. This depends on how many treasures you have collected and how many different locations you have reached: so don't be too dismayed if your score stays at zero for a while!

To stop the game altogether, use Q, QUIT or STOP. At the end of each game, you will be asked if you want another. Trying N followed by <RETURN> will simply end the program, whilst Y will re-run the program, requiring you to re-load the INIT file or another (see below).

## Saving The Game

At some point, you may wish to save your current position, so that you can re-load it at the start of your next go. Use the command SAVE and then enter a suitable filename to do this. Later, at the beginning of a new game, you can choose to load this file in rather than the standard INITIAL game position.

**Final Hints**

Use of the words ON and OFF is important. THROW, READ, WAVE, FILL, EMPTY, FEED and JUMP will also prove useful. Giving characters objects may bring rewards: use GIVE or DROP to do this.

The seven treasures must all be deposited at the correct place; look out for a clue as to where. Once this is done, you will have to make the village aware of your success...if you really get stuck on this, why not wait until something rings a bell?

## Review (Electron User)

How on earth can you make a game out of a curry? The clue lies in the last three letters of the title, and your aim is to become "flushed" with success. The storyline concerns Raj, who runs an Indian take-away, but has eaten one curry too many and is now in urgent need of relief. The vital facility he requires is deep in the cellar under the shop and your job is to guide him to it.

Finding the route is not too difficult. You start at the top of each screen and work your way to the bottom. Your controls are just left and right - you fall from one floor to the next. To make the journey, you have to cross bridges which vanish quickly and, in some cases, unpredictably. You also have to cope with lifts. You can fall on to them while they are moving downwards, but you will lose a life if you fall on to a lift which is rising to meet you.

Apart from having to judge the moving platforms, you have to steer Raj through collections of animals that bounce up and down on elastic threads. Fortunately, they move in a well-ordered manner and you soon learn how to avoid them.

If you load the game but don't start playing it straight away you'll get a display of the twenty rooms in turn. It is well worth the time looking through all of the screens so that you can learn the hazards before you are plunged into them.

You will also be able to enjoy the good quality scenery, the pleasing plinky-plonk sounds and the humour in the room names.

VINDALOO is a nice idea and most of the programming is good, but playing it proved something of a disappointment. It could be that Raj, who looks like an Egyptian mummy with a rucksack, flickers horribly, or it could be that the dissolving pathways just have me beat. Or perhaps it is that the whole game is too slow - Raj moves at the right speed, but you have to spend too long waiting for the bridges, lifts or elasticated animals to be in the correct places. Whatever it is, Tynesoft's VINDALOO is not for me.

## Instructions

*"...there was no escape, he had to enter the Vortex and bet on his skills! He grabbed the manual controls and with determination fired both upper deck guns..."*

A 3D voyage into unknown space, encountering aliens, and asteroids, and the vortex.

**Instructions' Source** : VORTEX (Software Invasion) Inner Inlay

## Review (Electron User)

One of the good things about being a reviewer for Electron User is that you get to see and play a lot of the latest games. The bad thing is that you have to take time off playing them in order to write the review! It is particularly galling when the game is as good as VORTEX, the new 3D space game from Software Invasion.

The program gives you command of five starfighters armed with the almost obligatory laser torpedoes. Your mission is to enter the black void and hunt down the opposing aliens you find there. At the same time, you're trying to survive and the trouble is that aliens aren't all you find in the void.

As you enter the vortex you are pulled forward faster and faster. The enemy craft come at you making you dodge and weave to avoid them. When they're in range you can have a go at destroying them but return the compliment, every hit lowering the strength of your shields. Not that my shields ever ran out. By then I'd usually crashed into one of my attackers! And when you've run that gauntlet you meet the real guardians of the vortex, the asteroids that hurtle towards you.

Your weapons are no use in these asteroid storms - your only chance is to dodge. The longer you survive, the further into the void you go and the faster the asteroids come at you. And if you manage to survive them there are more aliens waiting to take you on at the other side.

The speed has to be seen, or rather experienced, to be believed. You really do feel as though you are being drawn into the vortex, fighting for survival. The graphics are excellent - though the sound could be better - and the instructions and keyboard use adequate.

A fast, captivating and amusing program, thoroughly recommended for lovers of action games.

# WALK THE PLANK

***Professional, Originally Released On Cassette Only***

Game Type : Strategy; Dive Players Into CONNECT 4 Arena  
Author :  
Standalone Release(s) : 1985: WALK THE PLANK, Mastertronic, £1.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : MASTERTRONIC, 8-10 Paul Street, LONDON EC2A 4JH  
Tel: 01 377 6880  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"You have been sent along with Mister Tronic on a mission of mercy to rescue the Purple People Eaters and Martians from the planet Grebus. Use skill and strategy to outwit the computer and teleport the aliens to a safer planet."*

Mistertronic has been sent on a mission of mercy to the planet Grebus. The planet is devastated and the inhabitants - the Purple People Eaters and the Martians - are in suspended animation and must be teleported to the nearest suitable planet. However, the computer controlling the teleport has decided to make it difficult for you. You must help Mistertronic 'Walk the Plank' against the computer and to teleport the aliens, you need to get four Purple People Eaters in a row, whether it be vertically, horizontally or diagonally.

Skill and strategy are needed in this addictive game for people of all ages.

# WAREHOUSE

***Professional, Originally Released On Cassette Only***

Game Type : Arcade; Overhead Maze Game  
Authors : Philip Watts & Tim Bateman  
Standalone Release(s) : 1988: WAREHOUSE, MIL Top Ten, £2.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : MIL, 12 Chiltern Enterprise Centre, Station Road, Theale,  
BERKS RG7 4AA  
Disc compatibility : Unknown

## Instructions

*"400 screens of arcade adventure and mindless zapping! Search the rooms of the warehouse, full of Aliens and booby traps - like blowing fans, sucking vacuums, crushers, spikes, locked doors and laser. Zap Aliens as they emerge from their Portals; use objects that you find to open doors or disable booby traps. Your job - sort out the backlog of orders and eliminate a notorious intergalactic villain!"*  
*"'EXCELLENT VALUE' A & Computing."*

THE STORY - Big Alf, the Interstellar Trader, has moved his stock into an abandoned warehouse on the planet Tymorg. But because of delays caused by the move, there are now six irate customers waiting for the goods they ordered. You, the hapless Fred, are his stores' keeper, and you have been sent out there to sort things out. All you know is that each customer ordered two items, and the items were things that they needed for their particular jobs.

Unknown to you and Alf, the warehouse used to be the headquarters of Zorg, the most wanted man in the universe! Zorg protected the warehouse by leaving behind a horde of nasty aliens. These emerge from Portals whenever anyone approaches. The place is also littered with booby traps such as fans, that blow you in a certain direction; vacuums, that suck you in; locked doors; crushers that fly out of the wall and deadly lasers and spikes.

YOUR JOB - is to fulfil each customer's order in turn. Searching the 400 rooms of the warehouse, you must find each item, take it back to the Office and place it onto the conveyor belt. When you have delivered both items, the Customer will, as a gesture of thanks, give you an Object which may prove useful to you! Your secondary task to eliminate Zorg!

OBJECTS - There are various types of Objects lying around the place. Apart from the goods for the customers, there's extra ammunition for your laser; scrolls containing messages; keys; Objects left behind by Zorg for disabling booby traps; teleport pads; etc.

PICK UP / DROP OBJECTS - You can carry only three Objects at a time, indicated by the display near the top of the screen (displaying ? NOTHING three times at start of play). At the left of this display is a Pointer by which you can point to whichever Object you want to Swap (or Use). In order to pick up an Object, you must stand near it and press the S key. This will pick up the new Object and drop whichever one the Pointer was next to.

USE / EXAMINE OBJECTS - In order to Use an Object, such as a key to open a door, point to it with the Pointer and press RETURN. Scrolls can be examined in the same way - press SPACE to continue afterwards.

CONTROLS - Use the following keyboard controls...

Z - Left    X - Right    : - Up    / - Down    SPACE - Fire

CURSOR DOWN - Move Object Pointer    S - Swap  
RETURN - Use/Examine    T - Sound Toggle    ESCAPE - Abort Life

PLAYING - Mapping the warehouse will be essential - the 400 rooms are arranged in a 20 x 20 matrix. The first thing to do is find The Office as this will be your base of operations. Blast or avoid all aliens, and blast the Portals to stop more aliens emerging. If you manage to get as far as completing the final order, finish by exiting out of the room at the top right.

SCORING - Shooting Alien: 1 point, Shooting Portal: 100 points, Completing Order: 1,000 points, Shooting Zorg: 2,500 points, Finishing Game: 5,000 points.

**Instructions' Source** : WAREHOUSE (Top Ten) Back And Inner Inlay

### **Review (Electron User) - "Trouble In Store"**

Arcade adventures show no signs of losing their popularity and I have managed to sneak a look at a pre-production version of WAREHOUSE, a new game by Pillar Graphics.

You are Fred the storekeeper to Alf, an interstellar trader. The stores have recently been moved to Tymorg, but this has left a backlog of irate customers.

Keeping alive the belief that the customer is always right - whoever said that did not work in the retail trade - your task is hampered by the fact that the warehouse is crawling with lots of nasties and littered with tricks and traps. Added to this, you don't know what you are looking for.

Like other games of this ilk you have to search a maze for certain items. The screen doesn't scroll, but instead flicks quickly from one part to the next.

Controls are left, right, up, down and fire - yes, your thoughtful employers haven't left you completely defenceless. You can carry three items at once, and apart from the goods there are other items you will need to complete your task.

Your first challenge, sorry, customer, is a writer, and for him you must find a notebook and ink. When you find them, take them to the office and put them on the conveyor belt.

Monsters appear on every screen from a portal but a quick blast will close it for good if you can't get to it. Help is provided by portal blasters, extra ammo, transporter keys, alien freeze devices and other handy bits and pieces you collect on your travels.

You get five lives, which is considerably better than two verbal warnings and one written one. But when you're reincarnated - Oh, no! Not another warehouse assistant - you're in a different part of the warehouse too.

There are four different starting points, which gives you a better picture of the maze than if you were plonked back at the start each time.

The sprites are big and chunky and the movement is smooth, though you do seem to get zapped by the baddies before they actually touch you, which I resented.

Also, it was rather frustrating to find that you can't move and fire at the same time. So to attack a portal with all guns blazing to knock out emerging aliens requires some dextrous key manipulation.

Your other customers include a priest, a lockmaker, a mechanic and an assassin. A word of warning - the warehouse is also the headquarters of Zorg, the most wanted man in the universe.

Warehouse is not going to do the reputation of the MSC, YTS or JTS any good at all. You don't even get any money, just a place in the hall of fame - when you're dead. But it's fun while you're alive.

# WARP ONE

***Professional, Originally Released On Cassette Only***

Game Alias : TREK II  
Game Type : Arcade; Strategical Space Adventure  
Authors : D. Crofts and I. Elliott  
Standalone Release(s) : 1984: WARP ONE, Icon, £7.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ICON, 65 High Street, Gosforth, TYNE & WEAR  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Space...the final frontier. As commander of a federation starship, your mission is to seek out a fellow captain who is lost in space. You must explore strange new galaxies, fight and destroy the enemy, search through six quadrants and 48 sectors with endless confrontations and exciting on-board simulations. Take command and boldly go where no man has gone before."*

Initially you will be prompted for SOUND and DIFFICULTY LEVEL (1 - Easy, 6 - Hard). Your starship will then come into sight on the viewing screen.

The Quadrant display shows 48 sectors.

The first character in each sector can be "O", "X" - which indicates a possible position for the WARP ZONE (mentioned later) - or "\*" indicating the position of the star base.

The second character indicates the number of klingons in the sector.

You have five main command controls:

### COMMAND 1:

SHIELDS - When activated, your shield will reduce the amount of damage incurred when you are hit by a klingon phaser blast.

Note: You cannot initiate warp drive when your shields are up.

### COMMAND 2:

WARP DRIVE - Once the warp drive is activated, you will be asked to NAVIGATE. This is achieved by the use of the cursor control (arrow) keys. You will notice that as these are depressed, the position indicator will move to other sectors. You may move up to three sectors in any direction from your point of origin. When the indicator is at the desired sector, hitting the RETURN key will send the starship into hyper-space.

### COMMAND 3:

ION DRIVE - When entering the sector where the starbase is located, command 3 will activate the Ion Drive.

After a few seconds, a tone will sound and you can navigate your ship using the cursor keys into the docking bay indicated by the rectangle below the starbase.

You have a limited time to do this and if you fail, the docking will be aborted. You must then leave the sector and return to it for another attempt.

When successful, your Energy levels will be restored.

Note: Your Shield, Ion and Damage levels will only be restored when all the klingon in the current Quadrant have been destroyed.

**COMMAND 4:**

PHASER - When activated the phaser sights appear in the lower section of the Viewing Screen. You manoeuvre your sights again by use of the cursor keys. Position the sights over the bridge of the klingon ship (indicated by the yellow dot on the front of the vessel) and hit the COPY key to fire. Your time is limited and when exhausted, the remaining klingons will return fire.

Your Damage indicator will increase each time you are hit and if this reaches maximum, your ship will be destroyed.

Watch your Phaser Energy Levels!!

**COMMAND 5:**

QUADRANT UPDATE - This will revise the number of klingons in each sector during the course of a game.

When you have destroyed all the klingons in a Quadrant, you have to find the WARP ZONE which will be located in one of the sectors showing and "X" on the Quadrant Display. When this sector is entered, you will automatically warp to the next Quadrant. Your mission is over when the klingons have been destroyed in all six Quadrants and you have found the Warp Zone in the sixth Quadrant, in which the lost Space Captain is hidden.

COMMANDS [Quick Reference]

1. SHIELDS
2. WARP DRIVE  
NAVIAGATE : Cursor keys, RETURN
3. ION DRIVE  
Use to dock in space station
4. PHASERS  
COPY to FIRE
5. QUADRANT UPDATE

**Instructions' Source** : WARP ONE (Icon) Back and Inner Inlay

**Review (Electron User)**

The cassette insert describes WARP ONE as "a strategical space adventure", which is handy as I can't think of any other way of describing it. It's like no other game I've played, a cross between Battleships, Space Invaders, an adventure and Lunar Lander.

You're commander of a Federation Starship, your mission to seek out a fellow captain who is lost in space. As you work your way through the six quadrants and 48 sectors of deep space, the Klingons attack.

When you engage your phasers, the Klingons appear on the starship's viewing screen. As you fight them off inevitably you incur damage and use precious energy, necessitating a risky docking manoeuvre with the nearest starbase.

If it sounds complicated that's because it is. Despite three full pages of excellent instructions in the cassette inlay, it took three games before I understood WARP 1 fully. Having said that, the controls are easy to use and the screen layout is excellent - once you get used to the amount of information coming at you.

It's very easy to forget that you're running low on energy, and docking can be tricky. So if you are tired of space action but don't want a game that's too hard on your brain, then you have to look at WARP ONE. It's different.

# WEETABIX VERSUS THE TITCHIES

*Professional, Originally Released On Cassette Only*

Game Type : Arcade Shoot-'em-up  
Author : Steve Clark  
Standalone Release(s) : 1984: WEETABIX VS THE TITCHIES, Romik, Free With WEETABIX  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : As stated  
Supplier : ROMIK, 272 Argyll Avenue, Slough, BERKS  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

The Weetabix are being attacked by The Titchies. Your job is to help them eat off these attacks.

Fortunately, the rest of The Weetabix have found a supply of Weeta-rockets below the screen, so with your help Dunk can throw these up the screen to defeat the evil Titchy threat.

The Titchies are trying to hit Dunk by dropping dangerous lightning bolts, so you should try to make him dodge the bolts if you can. If a bolt gets too close, you can neutralise it with your *Neet Weet Force Shield*. Be sure to use it in time, otherwise it will activate automatically to destroy the bolt, but will also drain away some of Dunk's precious *Neet Weet Energy*.

The amount of energy Dunk has left is shown by the level indicator on the screen - the shorter the coloured block, the less energy Dunk has left...so be careful!

(Running about throwing missiles, and using your force shield also uses up energy so don't overdo it.)

Dunk's only chance is to defeat The Titchies with the missiles. These will be passed up from the bottom of the screen by Bixie, Crunch, Brains and Brian. Dunk will pick up any missile he finds on the ground, but you must direct him to it, and tell him when to throw it.

The *Neet Weet Energy* the missile contains is more than enough to overcome the first Titchy it hits, but if it misses all The Titchies it will explode harmlessly at the top of the screen.

In an attempt to make Dunk's task even more difficult, the Titchies move in an odd formation - they wind their way slowly up the screen, but once at the top they speed down again towards the ground and across the screen, just above Dunk's head. This is when they are at their most dangerous, *so be careful...*

If you and Dunk can wipe out the whole Titchy formation before running out of energy, a new wave of faster, meaner, more vicious Titchies will appear. To deal with the new attack, Dunk will be topped up with more *Neet Weet Energy* just before the battle starts. Don't waste it.

Dunk gets points for each Titchy he hits. At first he gets 10 pts per Titchy, but this increases to 20, 30, 40, etc as he wipes out successive waves of Titchies. Dunk's score and the number of Titchies remaining on the screen are shown on the top of the screen.

Dunk needs your help so good luck. OK!

You'll enjoy many hours of fun playing this unique computer game especially produced for Weetabix by Romik.

### Game Controls

You can play WEETABIX VERSUS THE TITCHIES using either your computer keyboard or a joystick. If you wish to play using the keyboard the control keys are:

Z - Left, X - Right, M - Fire

The shield is activated with <SPACE> (or by pushing the joystick forward).

**Instructions' Source** : WEETABIX VERSUS THE TITCHIES (Romik) Inner Inlay

### Review (EUG)

So is this a 'neet' game? [Groan! - Ed] Bet your brekkies it is, "OK!" Thanks to Romik software, one of the characters from the cereal Weetabix is invading your Electron to protect us from 'The Titchies', an inferior brand of morning wheat-diet. Naturally enough, these are embodied as a pack of wiggly green space invaders up above your character Dunk who moves back and forth over the bottom of the screen picking up and firing rockets at them.

Probably the most ironic thing about this title is that it is the best thing Romik ever produced and the only one that the public got free (by collecting cereal box tokens)! That said, it's a pleasant variation on the Invaders theme; the Titchies are unfriendly and drop lightning bolts, Dunk must avoid and ultimately destroy them.

The game is more forgiving than many and rather than killing if hit by a bolt, Dunk will be 'shielded' from it by a kind of incomplete halo automatically appearing over his head. Energy ('Neet Weet Energy'!) is deducted if this has to be done by the computer and the observant player can operate the shield himself to avoid such a penalty.

The action takes place on a Mode 2 screen so everything is colourful and bright; Dunk is of various colours, the rockets are white, the score is purple and there's no rubbish on screen. As more and more Titchies are despatched, the game speeds up - arguably to increase difficulty but, as many a programmer knows, because less memory is needed to move the fewer characters.

The missiles to fight with are passed through the yellow floor at a distance easily reachable by Dunk. He must first collect one and then try and judge the best moment to throw it up. The titchies, not endowed with any intelligence, have a lucky habit of sidestepping them, particularly when flying high up the screen - the rocket takes longer to reach them there and they have more time to move! A new rocket appears when the other one strikes home or disappears above screen.

As the game progresses, the energy ticks down with each few seconds and each hit Dunk takes from overhead. Unfortunately, the player doesn't require a lot of skill to operate the shield, generally keeping the energy at a level causing no concern and this tragically makes the game unchallenging. Another small niggle is players are expected to know they must press <M> to begin a new game without any intelligent message to inform them.

The code is short and the game itself loads in just over a minute from cassette. It is a simple and fun machine-code game that was developed to appeal to children and adults of a different time - being the only game I know offered free by a cereal manufacturer! Although not masquerading as a masterpiece, WEETABIX VERSUS THE TITCHIES is a straightforward retro game which, through this uniqueness, achieves the status of 'classic'.

## Instructions

E-Lanes are the most despicable excuse of a life-form in the universe. They are nearing their goal of invading the mother planet - Earth.

You are the pilot of the last remaining space interceptor. With luck and skill you must destroy wave after wave of the attacking alien hordes. You are armed with your powerful dual plasma bolts.

The E-Lanes have probed your mind which enables their ships to appear as illusions. Their images are based on the aquatic forms from your childhood on Graemsay.

There are twelve alien illusions:

- 1) Submarines
- 2) Water Beetles
- 3) Air Sea Rescue
- 4) Umbrellas
- 5) Sea Eagles
- 6) Snow Flakes
- 7) Icicles
- 8) Diving Dumbells
- 9) Fish
- 10) Tadpoles
- 11) Jellyfish
- 12) Flaps

GOOD LUCK!

Disc compatibility : Unknown

## Instructions

Instructions currently unavailable.

## Review (Electron User)

Probably the most fascinating person I know is me! I can speak for hours and hours on the subject and still not get bored. Or run out of things to talk about!

And now WHAT MAKES YOU TICK?, a new piece of software from Third Program, has helped me find out even more about myself. Won't my friends be fascinated when I tell them?

Trying to be scientific about the human personality is a difficult business, as many a psychiatrist and clinical psychologist will tell you. Even so there are two measures that help to provide a rough and ready guide, and the program uses both of them.

The first is the scale of introversion as opposed to extroversion. Put simply, this means whether you're shy or outgoing. The second scale measures whether you are emotionally stable (placid) or neurotic (anxious, easily agitated). This may sound a bit dry and academic but it's not at all. In fact it's fascinating!

You run the program and your micro asks you fifty questions on seemingly unrelated subjects, one after another. You're supposed to answer them as quickly as you can. This is probably because if you think too much about the answer you'll tend to give one that may be an improvement on the truth!

At the end your answers are analysed and you're shown where you appear on the two scales. While the program makes no claim to completeness it is amazing how accurately it assessed people I've tried it on out. Not only that but they all enjoyed using it. Maybe I'm not the only one to find himself fascinating.

Dare I say that it could be used to break the ice at parties? Certainly it tells you a lot about people, even if it's only their reaction to the program. In fact I was the only person it was wrong about. I'm much more calm, collected and emotionally stable than it says I am. And if it doesn't change its opinion of me I'll start sulking!

## Review (Electron User)

Eeyore's tail has gone missing again and his mournful looks are making everyone miserable. In desperation, King Golly is offering the hand of his daughter in marriage to the toy that can re-unite Eeyore with his tail. As Joe, one of the GIs (Golly's Infantry) at the palace you decide to try your luck.

If you think this scenario means that the game is for kids, think again, for this is the most ingenious and original adventure that I have seen for a long time.

You begin outside Golly's Palace, near the town of Robard's Sun (get the pun). A quick exploration of your initial surroundings will reveal that most of the locations you visit are made of one or another kind of sweet. I did try to eat my way through, but without much success. It won't take you long to realise that the problems you find aren't going to be solved by using lateral thinking - as Magus themselves say: "You have to think illogically to get anywhere".

The solution to one obstacle is fairly obvious. To get on to the motorway you will need a car. You'll discover one in Noddy's garage - but you won't find it easy to use.

While the program offers no help other than a list of verbs recognised, there are clues to be found within the game. Waking King Golly will get the response "Golly stirs and mutters...the giant's notebook". A clue? I'll leave you to find that out for yourself.

The soldier in the Pretty Maid's house will offer to help you if you do and find his musket, fife and drum. I'm still looking.

I have to admit that I am struggling with this adventure. The scenario is so innovative that I am still trying to adjust to it. The adventure is also wickedly funny. Virtually every object, and most of the locations, form the basis for some kind of fun.

An exceptionally good adventure that is ingenious, imaginative and funny. An absolute must.

Sound ..... 5

## Review (Electron User)

This is one of a series of early-learning tapes previously available for the Spectrum, but which have now been brought to the Electron. The packaging verges on the ridiculous, being about 11in x 9in - to contain one cassette. There is actually a work book included as well which presumably is meant to excuse the size but some manufacturers are really going to extremes.

Four programs actually comprise the package, dealing with hours, half-hours, quarters and minutes. Together they cover an extensive age range and also quite a wide band of ability. The trouble I found with most of them was that the unDRAWing and DRAWing of the clock hands seemed to be rather a slow and laborious process.

Hours introduces a little figure called Microman who works through his day to illustrate the passing of hours. There follows a fairly standard kind of test on hours, with appropriate responses from the computer.

Half-hours extends this idea, and follows a similar format which again means rather tedious drawing. Quarters starts in the same vein, but then asks the child to move the hands of the clock using the H and M keys.

Although this was much more meaningful to the youngsters I tried this on, even they showed signs of frustration at the slow rate of action. Minutes was altogether better, attempting to explain the difference between the numbers on the clock face and those curious expressions we use with minutes to or minutes past an hour.

The final part of Minutes asks the child to enter the time, by pressing the hours followed by the minutes.

If only the screen display could be made a little speedier on occasions, this would be a good piece of software for the parent to use at home.

Phil Tayler, ELECTRON USER 2. 4

# WHEEL OF FORTUNE

*Professional, Originally Released On Cassette Only*

Game Alias : EPIC ADVENTURES #4  
Game Type : Text Adventure  
Author : Melvyn E. Wright & Dave M. Johnson  
Standalone Release(s) : 1984: WHEEL OF FORTUNE, Epic, £3.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : EPIC, 10 Gladstone Street, Kibworth Beauchamp, LEICESTER  
LE8 0HL  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

EPIC adventures are full-scale machine code adventure games. Sophisticated compression techniques have been used to provide a large number of locations and puzzles in each game. The adventures take place in a fantasy world which you must explore in order to find the solution to each game. You will require a combination of cunning, logic and magic, not only to complete your task but even to remain alive.

Each game is played by typing ordinary English sentences into the computer, which responds by describing your surroundings and telling you what is happening. Full playing instructions are included in each game.

Each adventure has the following features:-

Approximately 230 fully described locations, ultra-fast response, fast save of partially completed game on tape, scoring, disk compatible.

You are about to set out on a full-scale adventure through a fantasy world of magic and mystery.

You will meet a number of characters during your journey. These characters are capable of independent action and you will be able to talk to the more intelligent ones.

Can you unlock the secrets of THE WHEEL OF FORTUNE and return to civilisation with enormous riches?

Walking through a lonely country lane one day, you notice a strange object lying by the side of the road.

On picking it up, you find that it consists of a number of silver discs pivoted together through the centre. A circle of brightly coloured jewels is set around the circumference of the outer disc.

The inner disc bears the legend: 'Spin me and I'll tell you true/What the future holds for you.'

As you spin the wheel, you start to feel dizzy and collapse to the ground.

When you regain your senses you find yourself amidst strange surroundings in a magical world. The Wheel of Fortune is gone and you can see an old beggar running away in the distance.

Your adventure starts here. You must find the Wheel of Fortune and use it to escape back to civilisation.

Any treasures that you find along the way are yours to keep.

### Playing Instructions

The program is equipped with advanced language and speech interpreters, which enable you to type single or multiple sentences into the computer up to 254 characters in length.

Any number of different instructions may be included within the same command which should be phrased just as you would speak it.

In addition, it is possible to have one verb operating on a number of objects, and vice versa, eg:-

```
PICK UP THE SAW, HAMMER, AXE, CHISEL AND SPADE THEN TAKE THE LAMP AND LIGHT IT
```

Here IT refers to the last object in the list, i.e.: LAMP.

The program remembers the direction in which the player last moved, so it would be able to make sense of a command similar to the following:

```
GO NORTH INTO THE GARDEN, TAKE THE FORK AND SPADE, UNTIE THE HOSE THEN COME BACK AND CONNECT IT TO THE TAP AND TURN THE WATER ON. RETURN TO THE GARDEN AND FILL THE BOTTLE WITH WATER, DROP IT THEN WATER THE FLOWERS
```

Here are some further examples of valid commands. (These situations may not appear in this particular game.)

```
PICK UP EVERYTHING ON THE GROUND EXCEPT THE BOTTLE
DROP ALL OBJECTS HERE EXCEPT THE LAMP BUT SIT DOWN AND LIGHT THAT
UNLOCK THE DOOR AND OPEN IT THEN ENTER THE BUILDING AND TELL ME WHAT I HAVE SCORED SO FAR
GO NORTH AND GET THE BOTTLE THEN COME BACK AND FILL IT FROM THE TAP. I DON'T WANT A DRINK YET BUT I WILL HAVE A BITE TO EAT, THEN CONTINUE ALONG THIS ROAD
```

In general then, the program will understand most commands as long as you phrase them and spell them correctly. You can even tell it what NOT to do!

Some words have a special purpose, these are listed below.

### Directional Commands

NORTH, SOUTH, EAST, WEST, UP, DOWN, IN, OUT

These may be strung together, i.e. N,S,S,E,D,W,W,U,E

TAKE - To pick up an object

DROP - To drop an object

INVENTORY - To list your possessions

LOOK - To describe your surroundings

SCORE - To obtain your score

QUIT - To end the current game

SAVE - To save the current game on tape using your own filename

LOAD - To load back a SAVED game

STORE - To store any sentence on one of the function keys. Ten sentences may be stored altogether, then recalled as required by simply pressing FUNC and the appropriate number key.

CONTINUE (or C) - This command will automatically move you in the direction in which you are travelling, until you can go no further in that direction. SHIFT/CTRL may be used to prevent the messages scrolling off the screen.

## **The Other Characters**

The other characters in the adventure are programmed to act in an intelligent manner and their reactions towards you will depend upon the way in which you have previously treated them.

Each character is allocated an area in the game which he normally patrols, until something causes him to stop or leave that area. The areas for the characters may overlap, or even change at different stages of the game.

In addition, the characters may walk at varying speeds or they may leave their areas if they are ordered to by the player, or by another character.

To speak to a character, enclose the speech in quotation marks: i.e.-

"FOLLOW ME"

"WHERE IS THE WHEEL OF FORTUNE?"

"WHAT TIME IS THE NEXT BUS AND WHERE DOES IT STOP?"

You will sometimes be told what the other characters are doing even though they may not be with you. Do not be confused by this, it is to help you understand what is happening.

Also, they are programmed not to walk away from you, in case you wish to talk to them.

## **Helpsheet To WHEEL OF FORTUNE**

This is an alphabetical list of all the locations, objects, characters and items referred to in WHEEL OF FORTUNE. The location and purpose of each item is given, and the information provided in one entry will usually lead you to other items in the list. If you cannot find the word you are looking for, it probably plays no significant part in the game.

It is up to you how you use these clues. You may want to read through them as you play the adventure, or you may prefer to use them only if you get stuck. In this case, a fair amount of will-power will be required to avoid reading entries that you do not wish to see!

Due to our policy of continually improving our products, there may be minor differences in detail between these clues and your version of the game.

## **Hints On Playing The Game**

During your travels you will occasionally come to a stage of the game where you appear to have solved all of the available puzzles, yet still cannot progress forward in the adventure. When this happens, take the Wheel of Fortune into the hut and spin it. You may also be able to buy more objects from the vending machine at this point.

## **Character Behaviour And Movement**

THE WHEEL OF FORTUNE contains characters which are programmed to interact with you, and each other, in an intelligent manner. Their actions depend upon the circumstances and moods prevailing at the time. Because of this, it is impossible to list every situation that may arise during the game. However, we have covered all the situations you are likely to encounter, and you should have no difficulty in completing the game if you follow these clues carefully.

As explained in the instructions, there is no random element involved in the movements of the other characters in the game. They each have their own predefined areas which they patrol, although these areas may change depending upon the circumstances. It is quite easy to plot the movements of a particular character. The simplest way is to walk alongside them until they disappear. This means that they

have come to the end of their patrol area, and have reversed direction. Whenever you meet a character, that character will remain in position until you move away. This is deliberate, and allows you to interact with the characters without them ignorantly walking away from you. Therefore, if you want to get rid of someone, you will have to step sideways and back again. They should have walked on by then. This will also tell you in which direction they have gone (which is often useful). As an example, you must give the penny to the beggar when he has just passed the vending machine, and is walking away from it along Beggar's Walk. For why, see Matches. If you want someone to help you at a certain location, lead them there after getting them to follow you.

**ANTIQUE PAINTING:** See Painting.

**AUTOMATIC VENDING MACHINE:** See Vending Machine.

**BANKNOTE:** In the field. See Treasures.

**BANKS:** See Canal.

**BAR:** See Gold Bar.

**BASKET:** One of the main characters in the game. He starts the game at the crossroads, and regularly patrols the area from the north end of Beggar's Walk to the obelisk. You can talk to him, and get him to follow you. He will not help you in any way until you have given him a penny, whereupon he will stop begging. He will also stop begging if the policeman catches him and warns him. If this happens he will no longer accept the penny and you will not be able to complete the game. As soon as he has a penny, he will place it in the vending machine at his next visit. See Character Behaviour.

**BEGGARS WALK:** To the east of the crossroads.

**BELL:** In the china shop. Ring it. See Bull.

**BIRD:** On the road to the north of the field. See Music Box.

**BOOT:** Inside the vending machine. You do not need this, and should let the beggar buy it with his penny.

**BOX: OF MATCHES:** See Matches.

**MUSIC:** See Music Box.

**BRACELET:** In front of the farmhouse. See Treasures.

**BRASS: FARTHING:** Worthless.

**KEY:** See Key.

**BRIDGE:** Over the canal. This is a single-span lifting bridge pivoted on the north bank. To lower the bridge you must get into the machinery housing on the north bank, oil the machinery, and pull the lever. You cannot operate the bridge, nor cross the river from the south bank. See Oil, Hairpin.

**BROOCH:** At the end of the south bank of the canal. See Treasures.

**BUCKET:** On top of the obelisk. You will need the ladder to reach this. Tie the bucket to the well rope and climb into it. See Handle, Well. The bucket is used again in the later stages of the game to carry water. See Underground Pool.

**BULL:** In the china shop, (ring the bell). You must find the farmer, tell him about the bull and lead him back to the shop. The shopkeeper will then give you another penny. See Farmer.

**BULLET:** To the south of the field. See Gun.

**CANAL:** To the west of the large cave. It runs due east-west, and there are north and south banks. The only means of crossing it is by the bridge near the east end. See Bridge.

**CAVERN:** See Troll's Cave.

**CAVES: DARK:** These are to the north and south of the valley.

**FLY'S:** To the south of the large cave.

**LARGE:** Near the bottom of the well shaft. Winding tunnels lead in all directions.

**SPIDER'S:** To the south of the large cave.

**TROLL'S:** Enter it. Once you have reached here you can prevent the troll from returning by placing the basket and snake outside the entrance.

**CHARACTER BEHAVIOUR:** See Notes above.

**CHARM:** See Lucky Charm.

**CHINA SHOP:** To the north of the field. Enter it. See Bell.

**CORONET:** At the south end of the valley. See Treasures.

**CROSSROADS:** To the south of the well path.

**CUP OF TEA:** This is given to you by the beggar when you give him a penny. It contains another penny, but get it by pouring the tea out rather than drinking it, as it is poisonous. You will need the cup again to carry the oil.

**DARK CAVES:** See Caves.

**DEEP PIT:** See Pits.

**DIAMOND BROOCH:** See Brooch.

**DOORS:** **FARMHOUSE:** You cannot open this. See Farmhouse.

**HUT:** At the west end of the hut. Unlock this with the key and open it.

**MACHINERY HOUSING:** On the north bank of the canal. See Hairpin.

**TRAP:** In the hut. This is bolted from underneath and you cannot open it from inside the hut. Nor can you prevent it from closing again. From the top of the stone steps, unbolt then open it.

**DRAGON:** In the caves to the south of the valley. Throw water over it from the underground pool.

**EMPTY BASKET:** See Basket.

**ENTRANCE:** See Roads, Tunnels, Paths.

**EXTENDING LADDER:** See Ladder.

**FARMER:** He initially stands guard at the southern fence of the field. You cannot get past him at this point and if you are persistent you may regret it when you meet him again! Later on, he patrols the field until you tell him about his bull. (You must have actually seen the bull before doing this.) See Character Behaviour, Bull.

**FARMHOUSE:** To the west of the china shop. You cannot get into here, and it plays no part in the adventure, except to inform where the farmer may be found.

**FARTHING:** See Brass Farthing.

**FENCE, WOODEN:** See Wooden Fence.

**FIELD:** This is a square piece of land to the east of the large cave and to the south of the china shop. It is initially guarded by the farmer. You can get into it after spinning the Wheel of Fortune for the first time. See Farmer.

**FIGURINE:** In the dark caves to the north of the valley. See Treasures.

**FINE SWORD:** See Sword.

**FLY:** In the fly's cave. When you encounter it you must keep moving, otherwise it will get you. Lead it to the spider.

**FLY'S CAVE:** See Caves.

**GEMSTONE:** In the dark caves to the south of the valley. See Treasures.

**GIANT:** **FLY:** See Fly.

**SPIDER:** See Spider.

**GILDED TRUNCHEON:** See Truncheon.

**GOLD:** **BAR:** On the south bank of the canal.

**PURSE:** See Purse.

**GUN:** Inside the vending machine. Load this with the silver bullet and use it to shoot the werewolf.

**HAIRPIN:** In the troll's cave. Use it to pick the lock of the machinery housing door. This will need several attempts so watch out for policeman 2. See Character Behaviour, Bridge.

**HANDLE:** On the well windlass. Winding it will raise or lower the bucket.

**HOUSE:** See Farmhouse.

**HUT:** To the west of the crossroads. If you leave the ladder, watch, or truncheon lying about when you go down the well, they may be stolen so leave them here for safe keeping. See Doors, Wheel Drawing.

**INDIAN PIPE:** Inside the vending machine. Play it to charm the snake into the basket.

**JAIL:** You may get put in here by either of the policemen. See Policemen for the reasons why, and also for their patrol areas. If this happens you cannot escape, so type Load or Quit.

**JEWELLED BRACELET:** See Bracelet.

**JUNCTION:** See Roads, Tunnels, Paths.

**KEY:** On Beggars Walk. Use it to unlock the hut door. The beggar may pick this up if he sees it first. If this happens you will not get it back unless you kill him, but then he won't be able to help you! Therefore, you are advised to get the key as soon as possible. See Treasures.

**LADDER:** In the hut. You must extend it before using it. You will need to prop it up the obelisk in order to reach the bucket. It is also used to bridge the deep pit. It is automatically retracted whenever you pick it up. See Obelisk, Hut.

**LAMP:** In the hut. You need the matches to light this. You cannot refill it if it runs out. Remember that the lamp burns in real-time, even while you are thinking, so switch it off or save your position. See Small Pit.

**LARGE CAVE:** See Caves.

**LEVER:** In the machinery housing. Pull it, but see Oil.

**LIFTING BRIDGE:** See Bridge.

**LONG SCREWDRIVER:** See Screwdriver.

**LUCKY CHARM:** To the north of the canal. See Treasures.

**LUMP OF ORE:** See Ore.

**MACHINE:** See Vending Machine.

**MACHINERY HOUSING:** On the north bank of the canal. See Bridge.

**MATCHES:** Inside the vending machine. You will need these to light the lamp. The beggar may get these first if you mis-time the moment when you give him the penny. If this happens you will not be able to get them back. See Character Behaviour.

**MEDAL:** To the north of the large cave. See Treasures.

**MUSIC BOX:** At the end of the road, south of the field. Play this to get rid of the bird. See Treasures.

**NARROW PATH:** See Roads, Tunnels, Paths.

**NECKLACE:** On the south bank of the canal. See Treasures.

**OBELISK:** On the path to the south of the crossroads. You can climb this with the ladder, but if the beggar sees you he may knock you off if you have not given him a penny.

**OIL:** On the south bank of the canal. Carry it in the cup. You will need the oil to lubricate the bridge mechanism. See Cup of Tea.

**OIL LAMP:** See Lamp.

**OLD: BANKNOTE:** See Banknote.

**BOOT:** See Boot.

**OIL LAMP:** See Lamp.

**OPENING:** See Roads, Tunnels, Paths.

**ORE:** In the field. See Treasures.

**ORNAMENTAL FIGURINE:** See Figurine.

**PAINTING:** To the west of the large cave. See Treasures.

**PASSAGE:** See Roads, Tunnels, Paths.

**PATH:** See Roads, Tunnels, Paths.

**PEARL NECKLACE:** See Necklace.

**PENDANT:** In the large cave. See Treasures.

**PENNIES:** There are four pennies in the game altogether. You cannot get any pennies back off the beggar; he will spend them at the machine at his next visit. See also Vending Machine.

- 1) Obtained by kicking the vending machine. You must give it to the beggar but make sure you time this correctly. See Character Behaviour.
- 2) Inside the cup of tea. Put it in the vending machine to get matches.
- 3) Inside the fly's cave. Put it in the vending machine to get indian pipe.
- 4) Given to you by the shopkeeper. Put it in the vending machine to get the gun.

**PIPE:** See Indian Pipe.

**PITS: DEEP:** In the dark caves to the north of the valley. See Ladder.

**SMALL:** In the large cave. You will fall down here if your lamp is not lit.

**POCKET WATCH:** See Watch.

**POLICEMAN:** 1) He initially patrols the area around the hut. When you enter the hut he changes his beat to Beggars Walk. This will usually give rise to some interaction with the beggar. He will put you in jail if he catches you with the truncheon or the sword, or if you try to bribe him! See Jail, Character Behaviour.

2) He patrols the north bank of the canal. He will put you in jail if he sees you with the truncheon or sword, or if you try to bribe him, or if he catches you picking the lock on the machinery housing door. See Jail, Character Behaviour.

**POOL:** See Underground Pool.

**POOL OF OIL:** See Oil.

**PORTRAIT:** In the field. See Treasures.

**PRICELESS PORTRAIT:** See Portrait.

**PURSE:** Next to the underground pool. See Treasures.

**RARE GEMSTONE:** See Gemstone.

**ROADS, TUNNELS, PATHS, ETC:** These are not individually described. See the entry for the nearest landmark.

**ROPE:** Coiled around the windlass. Attempting to climb down the rope will eventually snap it. See Well for how to get down.

**RUBY PENDANT:** See Pendant.

**SAPPHIRE:** Just off the well shaft. See Treasures.

**SCORING:** You will score points for solving the various puzzles, and also for putting the treasures in the troll's cave. You will need to have scored at least 8500 points before spinning the Wheel for the last time. See Treasures.

**SCREWDRIVER:** To the south of the crossroads. See also Bull.

**SHOP:** See China Shop.

**SHOPKEEPER:** In the china shop, (ring the bell). See also Bull.

**SILVER: BULLET:** See Bullet.

**MEDAL:** See Medal.

**TRAY:** See Tray.

**SMALL: CORONET:** See Coronet.

**GUN:** See Gun.

**PIT:** See Pits

**STATUETTE:** See Statuette.

**SNAKE:** On the road to the west of the china shop. See Basket.

**SPIDER:** In the spider's cave. You cannot obtain the Wheel until you have got rid of the spider. See Fly.

**SPIDER'S CAVE:** See Caves.

**STATUETTE:** On the north bank of the canal. See Treasures.

**STEEP VALLEY:** See Valley.

**STEPS:** Underneath the trap door, to the south of the large cave. Climb them.

**STONE STEPS:** See Steps.

**STREAM:** Alongside the road to the north of the canal. For atmosphere only.

**SWORD:** In the troll's cave. Not used. See Policeman.

**TEA:** See Cup of Tea.

**TIARA:** In the field. See Treasures.

**TRANSPORT MECHANISM:** See Wheel of Fortune.

**TRAP DOOR:** See Doors.

**TRAY:** To the east of the large cave. See Treasures.

**TREASURES:** The following objects are treasures: Gold bar, pearl necklace, diamond brooch, key, watch, painting, medal, tray, bracelet, truncheon, gemstone, trinket, music box, sapphire, pendant, banknote, portrait, ore, purse, tiara, coronet, figurine, lucky charm, statuette. See Scoring.

**TRINKET:** On the road adjoining the north bank of the canal. See treasures.

**TROLL:** On the south bank of the river. Frighten him away by charming the snake in front of him. See Troll's Cave.

**TROLL'S CAVE:** See Caves.

**TRUNCHEON:** On Beggars Walk. The beggar or policeman may pick this up if either sees it on the ground. The game can be completed without it, although it is a treasure. It can be used for hitting people on the head, including you! If either policeman catches you with it, you will be put in jail. See Treasures, Hut.

**TUNNEL:** See Roads, Tunnels, Paths.

**UNDERGROUND POOL:** In the dark caves to the south of the valley. Use the bucket to carry water from here. (You will have to untie it from the well.)

**VALLEY:** Cut into the rocks around the dark caves.

**VALUABLE: TRINKET:** See Trinket.

**ORE:** See Ore.

**VENDING MACHINE:** At the south end of Beggars Walk. You can buy objects from this machine by placing a penny in the slot. The objects are always offered in the following sequence: A penny (when kicked), a box of matches, an old boot, an indian pipe, a small gun. You require all of these except the boot, which you must allow the beggar to buy. See Pennies.

**WATCH:** On the well path. Not used. See Treasures, Hut.

**WEB:** In the spider's cave. For atmosphere only.

**WELL:** At the north end of the well path. To get down it, climb into the bucket and ask the beggar to lower you down. Warning: The beggar may let you down badly if you have not given him a penny! See Character Behaviour, Rope, Bucket, Beggar. There is no need to type anything during your descent into the well, until you see the recess to the west. Then type West.

**WEREWOLF:** On the road leading to the north canal bank. See Gun.

**WHEEL DRAWING:** In the hut. This is where to spin the Wheel of Fortune.

**WHEEL OF FORTUNE:** The beggar throws this down the well at the start of the game but the spider takes it to its cave. This is where you will find it. As well as being the subject of the game, it also provides a transport mechanism. In accordance with the legend inscribed on it, it actually transports you forward through the game. You must spin it three times altogether, to take you to the following locations: 1) North of the field, 2) Into the dark caves, 3) To the end of the game. See Wheel Drawing, Scoring.

**WINDLASS:** The part of the well on which the rope is coiled.

**WOODEN: BUCKET:** See Bucket.

**BUILDING:** See Hut.

**FENCE:** Surrounding the field.

**YE OLDE CHINA SHOPPE:** See China Shop.

### Review (Electron User)

This is yet another superb adventure from Epic but one with a difference. For it includes multiple statement commands and characters you can talk to!

One day you find a wheel with the words "Spin me and I'll tell you true, what the future holds for you" written on the hub. When you spin the wheel, you lose consciousness and, on awakening, glimpse a beggar disappearing into the distance with the wheel clutched under his arm.

You soon realise you are in a new and mysterious world. Your task is to recover the wheel and use it to return to your own world. Of course, on the way you collect as much treasure as you can carry.

You start your quest above ground where you discover some of the novel features of this adventure. The characters you meet move completely - well almost completely - independently of you or your actions. You find that you can talk to them and sometimes even get a helpful reply!

A useful keyword not usually found in adventures in CONTINUE, abbreviated to C. This moves you as far as possible in a given direction or repeats a given action. For instance, E, C means East, Continue. I considered the adventure to be harder than the previous ones from Epic, though this could be because of the added difficulty brought in by having to talk to the characters and to time your moves to coincide with theirs (hint!).

I shan't give away too much away though making peace with the beggar is an absolute must if you want to progress.

I must confess I haven't managed to get very far myself. So if you get a fair way through, or even finish it, please send me some clues!

This is an exciting new adventure with some novel features. It's not for the novice but is excellent value for money for anyone else. The definitive Electron adventure. Highly recommended.

# WHERE?

## ***Professional, Originally Released On Cassette Only***

Game Type : Quiz  
Author :  
Standalone Release(s) : 1984: WHERE?, Micro Power, £6.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : MICRO POWER, 8/8A Regent Street, Chapel Allerton, LEEDS  
LS7 4PE. Tel: 01532 683186.  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### **Instructions**

*"Towns, cities, rivers and peaks are pinpointed on the map of Great Britain. The budding geographer is requested to choose the correct answer from a selection of four possibilities. Score is based on correctness and time taken. Excellent use of colour, graphics and sound."*

When the program starts, enter your name and press <RETURN>.

Each question is multiple-choice, i.e. you are given four alternatives and asked to select the correct one, which you do by pressing the corresponding number (RETURN is not necessary). If your answer is wrong you will be told the correct one. You then move on to the next question until you have completed ten.

After ten questions you are given a score which depends on both the speed and accuracy of your replies, and the next player is invited to enter his/her name.

**Instructions' Source** : WHERE? (Micro Power) Back and Inner Inlay

### **Review (Electron User)**

This is an excellent little program for testing general knowledge of places, rivers, cities, hills etc in Britain. The format is simple. A place is indicated on the map and a choice of four answers is given. The user presses the number key corresponding to the answer chosen.

If the answer is wrong the correct answer is given. After ten questions, the score is displayed. It is based on the number of correct answers plus the speed of response. It is not stimulating enough to teach on its own, but it is a good program for revision.

# WHICH SALT?

*Professional, Originally Released On Cassette Only*

Game Type : Chemistry Made Simple Program  
Author :  
Standalone Release(s) : 1984: WHICH SALT?, Micro Power, £6.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : MICRO POWER, Northwood House, North Street, LEEDS LS7 2AA  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

The program is in the form of a game, which is intended to help familiarise 4th and 5th year pupils with the reactions met in chemical analysis. A compound is randomly selected from twenty-four possibilities and the results of a series of chemical tests are displayed, some of them graphically. Additional tests are available, but using them reduces the student's possible score. He/she then attempts to deduce the identity of the compound and is awarded a score based on the tests used and number of attempts required. An explanations follows.

The program is suitable both for class and individual use, and a specimen worksheet is provided to allow easy recording of results for later anaylsis. Permission is given for this worksheet to be copied for later use.

**Instructions' Source** : WHICH SALT? (Micro Power) Back Inlay

## Review (Electron User)

This program is designed to be used to help students revising for O level or CSE exams in Chemistry. It provides practice in that well-known bane of chemists known as qualitative analysis.

After loading - a long process, but with no hitches - you are shown a picture of a reagent bottle containing a salt, together with some information on colour and solubility in water.

You are given 100 points to start with as you begin a series of tests. First comes the flame test, which, like all the rest is shown graphically, but with a sentence of explanation of well - vital for those with monochrome monitors.

Then you are shown the effect of heat on your salt, with further tests offered if any gas is evolved. Ten points are lost if any of these tests are needed.

Next you find the effect of adding alkali and ammonia. The final set of tests are for anions (the non-metal part of your salt). Again points are lost for using these. It is now assumed that you will know your salt and you check your result by picking one of the nine cations and one of the seven anions used in the program. Entering these is done by pressing Space at the correct time, so there is no chance of poor spelling being a stumbling block.

When you have selected the salt correctly, a summary sheet gives details of the chemistry of the tests used. You also get a score and a message such as "Seek help", "Boffin" and "Einstein". A quibble on these messages is that scoring 100 per cent earns you "Cheat".

My other two criticisms are that the prompt "Press Space to continue" is forgotten

at times, and more seriously that it is not possible to repeat a test, which can reduce you to wild guessing.

That apart, this is an excellent program. The graphics are tidy and fast, good use is made of the computer's colour and, thankfully, the program is silent.

It is packaged with details of the chemical knowledge required for the program and also a single copy of a worksheet which may be photocopied. At £6.95 this is a very cheap educational program and definitely worth getting for home revision.

## Review (Electron User) - "High Adventure"

WHITE MAGIC is the latest release from the new software house The Fourth Dimension, and it's excellent. It takes the best features from several arcade adventures blending them into one blockbuster of a game. In many ways it's reminiscent of the arcade game THE GAUNTLET.

In it you must survive and progress through 32 game levels, each with its own theme. There are aggressive guards, trolls, ghosts and spectres to destroy, objects to find and use - and some to avoid, too. Transporters whizz you to different parts of the screen and have to be used correctly in order to complete the level.

You have a choice of four characters, each with its own special powers, strengths and weaknesses, and can swap between them at any point in the game by pressing the keys 1 to 4 to deal with each danger and puzzle.

Kaldor the leprechaun can run very quickly - sometimes the best defence is to beat a hasty retreat - and can climb over tree trunks that block your route. Chysel the titan is a powerful axe-wielding barbarian who slays all in his path. He can also push objects aside.

Moriana the warrior lacks Chesul's great strength but makes up for it with body armour, a shield and razor sharp sword. Mandrake the enchanter is endowed with magical powers and is able to use potions to weaken and dispose of his assailants.

Each character has its own armour rating, weapon strength, magical power and health, attributes which are constantly displayed on screen to the left and right of the central playing area.

As you explore each level you'll come across objects that can be put to good use in your quest. Some increase a character's strength, others add to Mandrake's supply of potions, shields build up your armour, swords aid your combat ability and so on.

The game closely resembles Superior's RAVENSKULL, but unlike that brilliant arcade adventure, here the action comes thick and fast and the emphasis is on battling adversaries and solving puzzles.

The action takes place in a window occupying about half the screen. You can only see a small portion of the total playing area. As you move to the edge of the screen it flicks rapidly to the next - not scrolling like RAVENSKULL. This means you can't see what objects or assailants lie just off screen, waiting for you to step into their trap.

The graphics are superb, but the sound effects are minimal. However, this doesn't detract too much from the otherwise excellent gameplay. If you are on the lookout for a new arcade adventure challenge, WHITE MAGIC fits the bill nicely.

Janice Murray

**\*\*\* Second Opinion \*\*\* (Electron User)**

Arcade adventures are being released thick and fast, and all are top quality offerings. WHITE MAGIC is no exception and soon had me hooked.

With its unusual feature of multiple characters, puzzles, variety of foes and action-packed gameplay it will take quite some time to master. An absolute winner.

## Review (Electron User) - "D.I.Y. Magic"

Hard on the heels of WHITE MAGIC comes the sequel. The new game hardly differs from the original apart from a slightly modified title screen and the addition of a screen designer.

You get 32 new levels to play and pretty tough they are too. After a full day's play I only got to the fourth one. Still they are not so difficult that they discourage you from playing on.

The sound and graphics are all exactly the same as the previous version which means they're top quality backgrounds and characters and the sprites still resemble and move like the ones in RAVENSKULL.

However, the screen designer is what WHITE MAGIC 2 is really all about. It is loaded separately and is stored after the game but before the first level on the tape. You are presented with the majority of the screen blank, a scrollable window containing the available icons, two areas showing the piece of scenery under the pointer and the other containing the currently selected one.

To create a level you just paint over the blank area. The Z, X, : and / keys move the cursor, while A, S, P and L are used to choose an icon. <RETURN> places an icon on the screen and <DELETE> erases it. The manual I used was only the draft version, but I did take heed of the warning that the border must contain solid characters. You needn't worry however, as the editor has fairly extensive error checks which include examining the border, ensuring there is a trapdoor and master key.

Of course, what it can't do is check that the level can be completed - the overall design is up to you. It's very simple to just sit down and start creating, but the size of the screen is huge and designing puzzles requires a little forethought.

My first screen was a lovely symmetrical affair with the start in the bottom left and the end in the top right. However, when I came to play test it I had my first introduction to the less friendly aspects of this software.

The start position must be within a small area in the top left of the screen. So much for my clever design - and no, there isn't a rotate option. Then there's a whole series of questions about what to call the level, the time limit, where the teleports transport to and, finally, you're told what the edit code is - essential if you want to re-edit at a later date.

What's really annoying is that this happens every time you want to try out your creation. Why there couldn't have been another menu option to enter these details

just once I really don't know - after all, the rest of the editor is so well designed.

Anyway I went back to the drawing board and designed a whole new level which worked exceedingly well, if I do say so myself. There are a great number of factors which control how to design a screen but you learn these through experience. A devious mind also helps.

Lazarus

### **\*\*\* Second Opinion \*\*\* (Electron User)**

Unless Superior can produce a new blockbuster pretty quick the Repton fan club will soon be turning its attentions to The Fourth Dimension's WHITE MAGIC I and II. The sequel to the original arcade adventure includes 32 new levels plus a screen designer.

The editor is well equipped and easy to use, so when you've mastered the 32 levels supplied you can try your hand at designing your own and swap them with friends. Recommended.

# WHIZZ GAMES PACK 2

*Professional, Originally Released On Cassette Only*

Game Type : Educational Games  
Author :  
Standalone Release(s) : 1984: WHIZZ GAMES PACK 2, CRL, £5.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : CRL GROUP PLC, CRL House, 9 Kings Yard, Carpenters Road,  
LONDON E15 2HD  
Disc compatibility : Unknown

## Instructions

COSMIC CONTAINERS and CRAZY COWS are two games that WHIZZ plays at the "Space-Place".

This is a galactic playground for droids run by 'Voice', the caretaker computer. Droids like Whizz know about computers from going to cosmic classes at Home-base control. So she's 'Whizzard' at computer games!

How many megapoints can you score? Find out and "Do the 'Biz with Whizz".

## Cosmic Containers

You control a Droid collecting objects falling from space. Catch them in your 'Cosmic Container', a box that can catch objects on any of its surfaces. You will be told which objects to catch at the start of the game. Catch these objects and you will gain pointer - 50 per object. If you catch the wrong objects then 100 points per object will be deducted from your score.

If you beat the high score in the given time limit then you will win an extended play.

There are three levels in this game and each has to be loaded separately. When level one has loaded, turn off the tape but do not rewind it.

Level one: Catch the objects requested and avoid all others.  
Level two: As level one, but with more objects.  
Level three: Catch the objects as before, but alternatively.

## Game Controls

Z - Left, X - Right

## Crazy Cows

A fun question and answer game of observation and concentration. The game will ask you how many animals you want to see. The most you can have is twenty. You now will see a short animated sequence showing SPACE COWS, SPACE SHEEP and SPACE PIGS bouncing about in a strange alien landscape.

The computer will now ask you questions about what you have just seen.

## Instructions

*"An entertaining and amusing arcade game with nine levels. Baby wants to play with his toys but Mummy wants him in bed. Baby has other ideas, and is very resourceful..."*

BABY wants to play with his toys but Mummy wants him in bed. Baby must try to collect as many toys as possible before Mummy catches him. He distracts her with his whoopsies, though he must beware the patrolling potties!

You are Baby. Every toy you collect gains 200 points. You have three whoopsies on each level, plus any left over from the last level. When you run out of them you're sure to get caught. You have three lives.

BONUSES at 50,000 and 100,000 points.

BEWARE the patrolling potties. You lose a whoopsy every time you touch one.

IMPORTANT: NOTHING can affect you while a whoopsy is on the screen.

Please note that it has come to our notice that, on some Electrons, the game freezes after level 1, if all your lives were lost. In these cases until you are more proficient at the game, keep the music option turned on and the game will play normally.

## Game Controls

Z - Left, X - Right, : - Up, / - Down, <SPACE> - Whoopsy  
S - Music On/Off, J - Joystick On/Off, C - Change Keys, 1-9 - Level Change

**Instructions' Source** : WHOOPSY (Shards) Back & Inner Inlay

## Review (EUG)

Almost two decades before the likes of dot-comedy's internet gaming invited us to push pies into Posh Spice and see how many homosexuals we could pick up on Clapham Common, Shards came along with its politically incorrect baby arcade game WHOOPSY! As our shock thresholds have stiffened in the meantime, it's nigh on impossible to believe that this title was originally considered 'too rude' to be on sale in the high street stores, delicate as its subject matter may be.

For those who didn't read about how 'controversial' it was at the time [in the pages of ELECTRON USER - Ed] of its 1985 release, think euphemistically about the title for a while. Still don't understand? Well, it's one of the polite ways of saying Poo (as in Mr Hanky The and not Winnie The!) and this is a game where sh\*t really does happen in the literal sense: you, as the baby, deposit your graphically-represented dumps about an arena to distract your mummy from "homing-in" on you.

Although ELECTRON USER milked the WHOOPSY! controversy, it never reviewed it in full and, as it was only available via mail order, the suspicion is that most Elk owners

knew only what is stated above. This ignorance was certainly shared by this reviewer, who prejudged it almost infinitely more than most games. The idea, while original, seemed puerile and unamusing - the opposite of what its author intended, in fact - and the uninspiring cover of a hand-drawn title and big-headed baby coupled with instructions blatantly added with a Stone Age typewriter, all photocopied and cut out with scissors, did little to fuel any remaining enthusiasm.

Pleasantly surprising it is, then, when after a minutes' loading, you are presented with an opening screen displaying huge baby, mummy and whoopsy sprites (the latter cunningly labelled as "Shhh"); all Mode 2 multi-coloured numbers - that are very nicely animated when the actual game begins. The game is almost pure machine code, reacting quickly to your keypresses and running at a brisk pace on a BBC and Turbo Electron. Sadly, while it still runs on a standard Elk, the 'lacking in processing power machine' can't match such speed and your crawling baby tends to plod around in slow motion.

As all the greats agree, the best game ideas are simple. This is the case here. You select which level to begin on, and appear bottom right of a blank screen with three whoopsies (displayed top right) stored up in your bowels, ready to soil your mum's carpet. She, doubled up in a perfect 'scrubbing the scullery steps' pose waits patiently top left.

Randomly dotted about the screen are a number of toys. The object is to play with each toy - you do this by touching them; they then vanish! - without Mummy Dear touching you. On pressing <SPACE> to begin the game, the first whoopsy falls and your mum comes charging towards it.

While any whoopsy is on screen, mummy is not deadly to touch and you can run through, around and (most likely) away from her. Unfortunately, you also cannot pick up any toys until the whoopsy has been cleaned up. The idea therefore is to go, to go to the toy farthest away, to get it and as many of them as you can in the time between the clean up job and mummy's refreshed charge toward you and then drop another thought for the day and repeat the exercise until you've collected all the toys.

With the brisk flow of action, you need at least average reflexes to be able to attempt this and even then it's not easy. Especially not when the patrolling potties enter the arena; contact with these results in a 'contained' crap which is bad news indeed if it's your last and there's still a screenful of toys to snatch!

On-screen presentation of this game is good and the code seems to be spotless, although the inlay refers to a bug in the code which may crash some Electrons IF you lose your three lives on level one AND have the music turned on. Oddly you choose either sound effects (default) or the hushed tones of "Rock-a-bye-baby" music but cannot play the game devoid of sound. The music grates after a while.

Effects are adequate with jingles and suitable dull notes to mark the pressing of the whoopsy key. (That DIXONS found them to be repugnant toilet noises beggars belief!) The animation is also of a high standard; mummy lumbers about and scrubs up while baby waddles around on all fours and the potties seamlessly glide back and forth in not-altogether-fixed patterns. All cleverly flip vertically too.

All characters and objects (such as the toys) are viewed in profile which works well even though the only way gravity and layout would be realistic would be if the action was viewed from a Birds' Eye position.

Scores and bonuses are regularly awarded and it's not hard (at first!) to get yourself honoured in "The Naughty Nine" high score table, even though you will first be sharing it bizarrely with the cast of Last Of The Summer Wine. A little nark here is that, if you make a mistake with your name, <DELETE> doesn't function.

All in all, WHOOPSY! is not a shocking game and it is neither offensive nor really comical. What it is is simply one of those addictive arcade numbers you keep coming back to time and again because it just "has something other games don't". Take away yesteryear's pathetic paper presentation (and that it was released before the Turbo

Elk came into existence!) and you're left with an underexposed gem that's suitable for all ages.

Dave Edwards, EUG #55

# WINTER OLYMPIAD '88

*Professional, Originally Released On Cassette Only*

Game Type : Multi-loading Arcade Sport Extravaganza  
Author : Dave Croft  
Standalone Release(s) : 1988: WINTER OLYMPIAD '88, Tynesoft, £9.95  
Compilation Release(s) : 1989: PLAY IT AGAIN SAM 8, Superior/Acornsoft, £9.95  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : TYNESOFT, Unit 3 Addison Industrial Estate, Blaydon, TYNE &  
WEAR NE21 4TE. Tel: 091 414 4611  
Disc compatibility : CDFS E00, DFS E00

## Instructions

On loading the game, you are presented with the Player Table. Enter the number of players (1 - 4), then press <RETURN>. Enter the initials of each player (3 letters must be input) followed by <RETURN>. After a brief time of further loading, you will enter the first event.

There are six events in Winter Olympiad 88. Each event has three heats per player. At the end of each heat, the current score position is displayed. After Heat Three the medals are awarded and the Medal Table is displayed.

On all events, DELETE pauses the game, COPY restarts the game.  
While paused, the Q key turns the sound off, the S key restores the sound.

## Game Replay When Using The Cassette Version

When loading the cassette version, reset the tape counter to zero when the file "BEGIN" appears on your screen. At the end of the game, if you wish to replay the game with your scores and records intact, rewind the cassette to zero on your tape counter (this is not the beginning of the tape) and reload the cassette from the start of the "BEGIN" file.

## Bob Sled

Z ..... Brake Left                      X ..... Brake Right

Keep the bob on the track, but as high as possible on the bends for maximum speed. The scrolling map shows your position. (This event cannot be aborted.)

## Speed Skating

Hit the Z and X keys alternately for speed.  
Remember that rhythm is important in this event.

## Ski Jump

Hit the Z and X keys alternately for speed.  
Use the C and F keys to align the skis.  
Gain speed using the Z and X keys prior to your jump. When in flight, use the C and F keys to align your skis and hopefully make a successful landing which will increase your style bonus. (This event cannot be aborted.)

## Giant Slalom

Z ..... Move Left                      X ..... Move Right

You should try to keep to the right of the black flags and to the left of the red flags.

## Ski Slalom

Z ..... Move Left                      X ..... Move Right

You should try to pass through all the gates of the slalom course, being careful not to miss any flags or incur any time penalties.

### **Biathlon**

Hit the Z and X keys alternately for speed.

Press the SPACE key to fire.

Speed and accuracy are all important in this event. Battle your way across the snowy terrain, stopping at each of the targets. Then with five shots, attempt to hit all the targets and avoid heavy time penalties.

**Instructions' Source** : WINTER OLYMPIAD '88 (Tynesoft) Back and Inner Inlay

### **Review (Electron User) - "Winter Warmer"**

Not so long ago the market was seemed to be swamped with sports games of every description. But all of them had one thing in common - joystick or keyboard bashing to the point of destruction.

My first thought when I saw the cassette inlay for WINTER OLYMPIAD 88 was "Not again..." but the sheer addictiveness of this game soon changed my mind.

The scene is set as soon as you open the box, with a four page introduction to the forthcoming Canadian winter olympics by TV presenter David Vine. It conjures up pictures of crisp, snow-covered and mist-shrouded mountains dotted with pine trees that rustle in the wind.

However, as the manual itself is only six pages long, all instructions, hints and tips for the six different events are squashed onto the last two pages in small, eye-straining print.

That aside, the first part of the game to load is the core, so called because it is the section of the program which controls each event. This takes rather a long time, but eventually a rotating scoreboard appears, which stops turning and asks for the number of participants and their names. A nice touch this, and the revolving scoreboard crops up again later after each event.

The first event - Bob Sled - is quite hard. Using only the Z and X keys to apply left and right braking, you guide the bob-sled around each bend and curve of the icy channel, trying to squeeze as much as possible from the fragile-looking craft. Banking too hard causes a heartrending squeal of metal on ice, followed by the sled overturning, with the occupants falling out and ending up trapped underneath. It looks and sounds quite painful.

The scenery is animated quite well for an Electron game, with pine trees rushing - or creeping as some irreverent souls muttered - past to either side of your speeding toboggan.

Speed Skating is the next event and visually this is perhaps the best of all six. You are presented with two views of your player, one from the side and one from in front. These are synchronised quite well, with bobbing together, and both sets of arms and legs pumping steadfastly away!

Your controls for this event are the same as before, but this time an element of familiarity creeps in - you have to pump the keys alternately to gain speed and momentum. There is an element of skill to this, however. Pressing the keys too quickly causes the skates to slip and you lose speed: Slow down and the speed needle starts to climb again.

The only niggle with this event - and with some of the later ones - is your inability to abandon the game if you are fed up and want to move on to the next one.

Each event has three heats, and if there are four players participating with each heat lasting 1-2 minutes, it can take fifteen minutes to move on to the next event.

Moving on to the Ski Jump, event three, you are greeted with a spectacular view of your player poised at the top of the jump. After the three beeps you are again pumping the Z and X keys for all you are worth. This time, finger speed is vital if you are to gain enough momentum for a good jump.

As the man reaches the end of the slide, the scene switches to a side-on view of your player being catapulted into the air. Now the Z and X keys become alignment controls for the skis. The skis tend to drift apart in flight, so you must keep them in line until landing. Otherwise not only could you lose points for bad style, but also you might end up unceremoniously sliding face-down in the snow.

I quickly tired of this event, as after a while the game turns into a frantic key bash, followed by a quick bit of ski-alignment. There isn't really enough skill in this one.

Event number four is the Giant Slalom, in which you rush downhill, guiding your skis between gates made of black and red poles. This event was a lot more satisfying than the previous one, requiring lightning-fast reflexes to swing your player left and right through the gates.

These must be entered with the red pole to the player's left - your right - and in a panic this can easily be forgotten, resulting in doleful bongs from the computer's speaker as you accumulate penalties. At the end of each heat, any penalties add seconds to your score, and I can tell you that as a consequence mine was consistently worse than the other contestants.

The graphics for this event are very good indeed, accompanied by exhilarating whooshing noises as your skis cut swathes of snow at each turn. The pole detection seemed very accurate, allowing some very tight squeezes to be intercepted. But as soon as a pole is touched, it bends at an angle and you hear a warning tone - a highly addictive section of the game.

The Ski Slalom, event five, is next on the tape. This was quite good fun, and my favourite of the six events. Your viewpoint is from just behind and above your player's head as he plunges through the snow. Gates appear to the left and right of you, leaving barely enough time to react and slam to one side or the other to clear the poles.

You really do need a lot of skill for this one, as the poles leave little margin for error. Sometimes the gates are so far to one side of you they can't be seen and a large blue arrow suddenly appears, suspended in mid air, which points to either left or right. It's quite a feeling when you actually manage to respond to one of these warnings in time and shoot straight between the poles at an incredibly tight angle.

Again, good graphics. A mountain range scrolls from side to side in the distance as you manoeuvre. The warning arrows are a nice touch, but I challenge anyone to respond to all of them in time.

Moving on to event six you join the Biathlon. This is the final event on the tape, and as such it is quite a good finale for a very entertaining package. It is really two events in one. You first have to speed-ski up to a row of five targets as a rifle-range with five bullseyes to hit. Your rifle is then cocked - another nice touch achieved by clicking the cassette relay on and off - and a black cross-hair moves down the target.

Pressing the spacebar fires your gun, and if the cross-hair is exactly over the bull at the time, you are rewarded with a satisfying smacking sound and the bull is coloured black. If you miss, you hear an offkey ding, and your miss is marked with a red cross.

This exercise is repeated for all five paper targets before you must again shoulder your rifle and speed off into the snow to find the next cluster of targets.

Overall, WINTER OLYMPIAD 88 is an entertaining package, marred only by the slight monotony of some events, and the inability to fast-forward to the section of your choice. The sound effects are by nature limited, but there is a nice jingle at the end of each event which you may recognise from previous televised WINTER OLYMPICS.

As an Electron game, it holds up against even the BBC Micro - I ran the programs on both machines, with no noticeable change in speed. At £9.95, WINTER OLYMPIAD 88 has got to be good value, as you are effectively getting six games for your money, and there is going to be something for everyone in each.

## Instructions

*"This superb sports simulation with incredible graphics allows you to compete against the computer and the clock in six challenging winter sports events:*

<i>* Speed Skating</i>	<i>* Ski Jump</i>
<i>* Ski Slalom</i>	<i>* Curling</i>
<i>* Cresta Run</i>	<i>* Down Hill Skiing"</i>

Each event has a Practice and Play mode. Practice mode is entered by pressing "0" and in this mode, the score is not incremented and no Olympic record can be gained.

In Play mode, entered by pressing "1", you have three attempts to beat the Olympic Record. If you succeed, 1000 points will be added to your score.

The computer record for each event is shown in the right hand box with your score in the left hand box.

A high score table will be displayed after the completion of Event 6.

### **Event 1 - SPEED SKATING**

Controls: Z and X control the competitor's skates. Start off slowly gaining speed as you go, quick movement of the keys will cause him to slip on the ice and lose speed. Your computer pacer is there to help you gain that fastest time of the day.

### **Event 2 - SKI JUMP**

Controls: Z and X. Space Bar = Jump. Pressing Z and X keys quickly will propel your skier down the slope. As he nears the end of the slope, press the Space Bar for a safe successful jump. To score maximum points gauge your take off position carefully. Too early will shorten your jump but too late will spell disaster.

### **Event 3 - SKI SLALOM**

Controls: Z moves Skier left. X moves Skier right. Press Space Bar to start your run, then guide your skier through the gates. A ten second penalty is incurred if you fail to ski between the flags or if one is hit. Hitting a tree will end your run.

### **Event 4 - SKI DOWNHILL**

Controls: Same as Event 3. The downhill course has no gates but watch those trees!

### **Event 5 - CRESTA RUN**

Controls: Space Bar will start your descent down the Cresta Run. As you ride through the corners, your speed will pick up considerably. Z and X (left or right) compensates your body learning, helping to keep your sledge within the ski banking.

Too much correction will slow your speed down while too little correction will allow you to go into a corner too quickly then it's away off into the tree for you!

## **Event 6 - CURLING**

Controls: Z moves player left. X moves player right. Holding down the <RETURN> key will increase the speed of the throw enabling you to position your stone as close as possible to the centre pin. Release the <RETURN> key to throw the stone. Between 1 and 6 points are awarded depending on the position of the Curling Stone, each round is termed an 'End'.

**Instructions' Source** : WINTER OLYMPICS (Tynesoft) Back and Inner Inlay

## **Review (Electron User)**

WINTER OLYMPICS is another of the several-games-in-one variety. Six winter sports are covered and the aim is to beat your best score in a snow-bound hexathlon.

The first event to flash up on the screen is speed skating. In this you take your competitor along a 200 metre course as quickly as possible, while the computer operates a pace-making opponent above you. You move your player by rapidly hammering the Z and X keys, while a clock ticks away at the base of the screen.

The second event is the ski jump which works like the first event in that the faster you hammer the further you jump.

Event three is the ski slalom. You have to guide your skier down a slope, zig-zagging through the gates as quickly as possible.

Then comes downhill skiing. No gates this time, just a full pelt down the slope, trying to avoid the fir trees that are scattered about. This is extremely tough and I still haven't completed the course.

Event five is the bobsled, and the formidable Cresta Run. The course is mapped out on the right of the screen and in a box on the left is your view from the sled. Gravity provides the acceleration here, and the Z and X keys are used as brakes.

Lastly comes the Curling, which is probably the most disappointing event. The aim is to get your four stones as close as possible to the centre pin, while your opponent does the same.

Unfortunately, there is no allowance for colliding. This it is impossible to knock a stone out of your way - you just stop short of it.

Overall this is a nice little package and fun to play. The graphics are quite good, sound is used well and the Electron's clock has never been so useful.

## Instructions

Wizzy, the incompetent wizard, has a problem - a nasty monster has taken over the room at the top of his mansion. In order to get rid of the monster, Wizzy must cast a spell, but he can't remember the right one. The pages of his book of spells are scattered throughout the different rooms so he must search the rooms picking up all the pages he finds. Unfortunately, his blundering spells have made all sorts of objects come to life and turn nasty! You must guide him through the mansion, picking up the pages and avoiding the nasty objects. Falling too far is also deadly.

You start with 8 lives and get a bonus Wizzy for every ten pages found.

Disc compatibility : CDFS E00, DFS E00

### Instructions

Many years ago the tyrant emperor, Who Dun Pong, decided his subjects were getting too fat. To defeat the flabby uprising he told his guards to go throughout the land and confiscate everyone's WOK and stop people from eating unhealthy, fattening, greasy food.

Emperor Pong hid all the WOKS in the palace strong rooms, and placed members of his elite forces to guard them. You as the people's champion have been chosen to get their WOKS back.

There are nine rooms containing the WOKS, unfortunately some rooms have more guards than others; the first three have only one guard in each, the next three have two in each, the last three rooms have three guards in each. The only advantage you have is that the guards are highly disciplined and never change the route of their patrol. You must learn the routes if you are to have any chance of defeating them.

The WOKS have been evenly distributed about the rooms, eight in each. Once you have collected all the WOKS you then must get the key to open the exit door to the next room.

You have a limited time in each room indicated by the counting down bonus score. If the bonus reaches zero you lose a life. Remember that you only have four lives - you can't afford to waste any.

If by some miracle you manage to clear all nine rooms, you are returned to the first one to begin your quest. Only this time the action of the guards is a lot faster.

### Game Controls

Use the following keys to control the game:

## Instructions

*"It's early evening in the mysterious orient. The Great Wall of China is badly in need of repair and, to make matters worse, factions opposing the Emperor have just invented gunpowder and have left bombs at various points along the wall. You are Wongo, the bomb disposal expert, and your job is to travel along the wall by pogo stick, defusing the bombs. But you will be under attack from the opposition who hurl arrows and rocks at you, and also the crumbling wall has numerous holes that you will have to negotiate. And if you don't defuse a bomb within the time limit, it will explode!"*

It's early evening in China. The birds have gone to roost and everyone has gone home - except you! You are Wongo, the bomb disposal expert. It's a busy time for you as factions opposing the Emperor have been planting bombs along that most ancient of monuments - the Great Wall.

It's your job to go and defuse these bombs by travelling along the Great Wall on your official form of transport - a pogo stick! But the Wall is in need of repair, and gaping holes have appeared over the years, some containing deadly creatures. You'll have to get past these to defuse the bombs.

There are twelve bombs to defuse altogether, and if you manage all these you get another twelve that require a higher skill level. Every time you defuse five bombs in succession without losing a life, a 25,000 point bonus is awarded. Plus an extra life is awarded every 20,000 points (but you can have no more than seven lives at any one time). There are three skill levels that can be set during the high score sheet.

## Game Controls

## Review (Electron User)

If you want a game with superb colour graphics and reasonable sound effects with an almost irritating addictive quality thrown in, then WONGO is the game for you.

Some grovelling nasties have planted bombs along the length of the Great Wall of China and it's up to bouncing little Wongo the Chinaman to defuse them. However, it's not as simple as all that, as poor dutiful Wongo also has to avoid a constant barrage of rocks, arrows and a particularly nasty kind of creature, the jumping gremlin.

Not only does he have to face all this, but the Great Wall itself, being a little older than most of use here (except possibly the editor) is in a sorry state. Parts of it have crumbled away. This leaves a gaping gap which can only be crossed by a

rather bloody-minded flying ferry which simply doesn't want to wait for you. Timing is of the essence.

It's a fast-moving game with three levels of difficulty and a pause facility should you develop finger cramp. The keys are easy to use, the instructions clear and you have the option of having the sound on or off.

If you defuse five bombs without losing a life (you have three) you get a bonus score. There's also an extra life after every 20,000 points. A Hall of Fame is available for good scores.

# WOODBURY END

***Professional, Originally Released On Cassette Only***

Game Type : Text Adventure With Wire Frame Graphics  
Author :  
Standalone Release(s) : 1985: WOODBURY END, Shards, £8.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : SHARDS, 189 Eton Road, Ilford, ESSEX IG1 2UG  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"An illustrated adventure set in a quiet English village. You have 20 days to unravel the sinister secrets of Woodbury End. In real time with interactive characters. 100% machine code."*

It was on a cold winter's night back in the early 50's, when they came. Silently and unnoticed they drifted down through the clouds to shelter in the woods, to the north-east of Woodbury End. All night long they lay in their alien craft, wary of intruders, but certainly not unprepared: they had come this far ... the rest was going to be easy!

In the days that followed, life in the village carried on as normal, unaware of the lurking menace in the woods. people followed their routines: church, school, pub nights, market days, these were the days of excitement for the village folk: the coronation, the new Queen, patriotism was never higher in Woodbury End. In fact, such was the hustle and bustle that the first newcomer, a young man with an easy-going manner arrived almost unnoticed. Such was his friendliness and manner, coupled with the festivities that the normally diffident villagers quickly accepted him into their fold and very soon people looked on him not as a stranger, but as an honest, trusted citizen of Woodbury End.

Things did not go quite so smoothly, at first, for the next stranger, who arrived later that year. This was due to his 'rather alien' appearance, as he was an albino, and was never seen without dark glasses. He also seemed to have an unhealthy attraction for the younger citizens, a weakness which almost resulted in total disaster for the project when, in late January, the Potter boy went missing. He was later found murdered on a rubbish tip north of the town and a lynch mob, fuelled by hatred and xenophobia, marched to the stranger's home. They kicked the door down and, spades, shovels and picks raised, they entered the cottage...to find the albino facing them, a twsited grin on his face and...his glasses in his hand. What happened next was unclear but the outcome of it all was that the murder eventually remained unsolved and was forgotten by most. The albino was never again treated suspiciously but rather with a new respect. Though mainly from a distance.

Over the next few months, more strangers arrived in Woodbury End, the greatest influx for 200 years, yet all, though treated with suspicion at first, were strangely and inevitably accepted into the fold.

Then, for 20 years, things settled down. No more strangers, no unusual activities. Then the fair came to town. Paradisa as it was called, appeared on a hot summer's day in the late 70's, using a small site close to the woods rented from Farmer Wilbert. Nobody really knew why the fair came, or who the organisers were, but it was all free-of-charge and the kids loved it. They came in their droves and adored this new entertainment, particularly the Funhouse, the indoor playground barred to adults...

Soon things started to change in Woodbury End. People became reticent and introspective, a new atmosphere shrouded the village. Villagers started to keep themselves to themselves, troubles were not shared, life long friendships began to crack. But most worrying of all, the children began acting strangely; more withdrawn and introverted. This did not affect all children at once, but slowly and surely this attitude seemed to be spreading through the village. Some children even disappeared...and the strangest thing was that people didn't seem to care. Either that or they were too afraid to speak up. Afraid? Afraid of what?...

You wake up in a darkened room, tied with a rope and your memory a blank.

### Playing The Game

This a real time adventure, the time (days hours) being displayed at the top of the screen. Your score is also shown as a percentage; the aim of the game is to attain a 100% score.

The adventure understands a vocabulary of over 150 words. For simplicity, the common actions can be invoked by single letter inputs. S (Go South), N (Go North), E (Go East), W (Go West), I (Inventory), H (Help), L (Look), F (Fire Weapon), T (Talk), X (Load), Z (Save), Q (Quit). Otherwise, two word inputs are used: i.e. ACTION OBJECT <RETURN>, e.g. TAKE CARD <RETURN>.

For abbreviations, only the first three letters of each word need be used.

### Points To Note

1. As the game is in real time, certain events are planned to happen at certain times. This is particularly true in the case of the 14 characters who appear in the plot.
2. Most objects are illustrated and often give visual clues.
3. The game may be saved at any point and restarted at a later date. When restarting, remember to have the data type containing the previously saved game handy. To save, type 'Z'. To load, type 'X'.

If you complete the adventure, you will be in possession of a sealed confession and you will be given a title. Write to us giving this title and we will send you a copy of the confession which will explain all. You will also be entered in the monthly draw for a free print of the original painting, "WOODBURY END".

### Solution (EUG)

Twenty years previously, 'they' came. Aliens. Intermingling with the villagers on some hidden agenda. From then until now, the villagers' children have been disappearing. Terror has stricken the residents of this once idyllic town and you're one of them. Earlier you asked some awkward questions of the wrong people. Now you awake at midnight of day nil of this *real time* adventure, trussed up and at 'their' mercy. So begins a story of heroism and, yes, gun-toting violence in which you will rescue the children and destroy the aliens' secret base!

This adventure is clever and very cryptic. If you've spent any time playing it, you'll note the HELP command gives very strange responses. As these are very much a part of its atmosphere, what these sentences mean will also be explained within the solution. However, always keep an eye on the *time* in the top right hand corner; there is no facility to *wait* in this adventure and, although key events happen at certain times each *day*, try and avoid missing being in the right location at the right time. Otherwise you will find yourself having to wait patiently at the keyboard for long periods. The clock reads dd days hh hours (ddhh).

*Remember* that to LOOK around in this adventure, you simply type L. (LOOK alone is not recognised!) So press L to discover a glass by your side and GET GLASS. Quickly CUT the ROPES, DROP the GLASS and DROP the BLINDFOLD and - hooray! - you're free to

move around! Now look at that clock; if you've been quick it should still be on 0000. The blighters that tied you up meet up in the room south of you at 0001 and you'll be "caught and killed" if you bump into them. If you're there and you hear them coming you can hide behind the curtain (EARLY ONE MORN THE CURTAINS WERE TORN) to escape this end but to cut down how long you need to spend waiting around, you really should complete the above moves before 0001. You can then skip S, S to get through the room to safety.

Now, if you L(ook) around this small room you'll see a mirror. LOOK MIRROR and you will see a raincoat behind you. GET RAINCOAT and LOOK RAINCOAT. If you have an eagle-eye you'll see it's got pockets! EXAMINE these POCKETS and GET the SPECS. Now all the signs around the town will read in English and not look like gobbledegook (BE WISE WITH WISE EYES). Ingenious, eh? DROP the RAINCOAT and rush S, S, E, E, E and N to a disused well. L, but don't hang about, then TURN the HANDLE to pull up a beacon (WELL CAN YOU HANDLE THAT). GET the BEACON.

Run N, E and E into a rather bare shop. BUY a box of MATCHES. Now go W, S, S, S, S and W into the auditorium. If you've been quick enough, it won't be anywhere near 0003 yet. Now, just take your fingers off the keyboard and wait until you hear people approaching. Type in GO SCAFFOLD (TWILIGHT HOURS OR DITTO RUM - Don't ask!) fast and you'll be hidden from the possessed children. Again, wait until the text informs you of "a man's voice" then SWITCH ON BEACON (BRIGHT LIGHT CHILD'S DELIGHT). This will break the hold the aliens have over them.

Now it's time to go investigating. Plod E, N, N, N, N, N, N, N, N, W, W, N from the auditorium to a farm, pressing T to talk to any characters you meet on the way. Talking to each character increases your percentage score, although it's unnecessary to meet most of the people. GET the PRINT on the wall and EXAMINE PRINT. You'll find the numbers 8732 on its rear (PICK A SO REAR GIVE CHEER). DROP the PRINT (Don't forget or you'll be nicked by the old bill!) before going N into a shed. The code is, of course, 8732 and L(ook)ing now will reveal a cube (DIGITAL DOITALL).

GET the CUBE and go S, S, E, E, S, S, S, S, S, S, S and S again to stand beside the closed door to the Mayor's office. Hopefully, it'll be 0007 or thereabouts now. If not, hang around until it is (OFFICE HOURS SUFFICE) then go E. The office will be empty but the Mayor comes in at 8 each day so don't let him catch you or you'll be thrown into jail and will have to trudge back and try again! GET the KEY from his desk and READ the MEMO. What's written certainly makes the Mayor a suspect!

Head W, S and S through the locked door into the records office (OPEN SESAKE). READ the REPORT then go N, N, N, N, N, N, N, N, N and E into the library. GET the BOOK then go back W. Continue N, N, N, E, E, E, E, N, E and you will be in a clearing in the woods. DROP the CUBE here then stroll E, N and N around the woods. READ the ETCHING. Go E, E, S, E and S and L(ook) to see a bat. GET the BAT then head toward the oak tree: N, W, N, W, W, S, S, W, W, S, W, W and W.

The tree is a puzzle in itself and will deny you entry to the fairground unless you run N, E, S, W, N and N around it (CIRCULAR LOGIC RULES). Now go N and EXAMINE the DOOR. Although "only the blind may enter" the sign overhead reads SIMILE backwards. No, you don't have to wear the blindfold or take off your specs again. Rather you must have that bat you found in the forest! "As blind as a bat", see? (PAL IN DROME - NOT QUITE (?)). Go E holding it and, in the next room, DROP BAT; MATCHES; SPECS; KEY and BEACON so you're left with only the BOOK (COLOUR BAR FOR BARS) and go E again into a cell with a beast.

Leave the beast but L(ook) (LEAVE THE BEAST BUT LOOK AT LEAST) and GET the BLOCK. Go W and GET the SPECS; BAT and MATCHES again (the rest of the stuff is useless now) then jog W, S, S, S, E, E, E, E, N and E to the clearing where you left the cube. DROP the BLOCK and they will create a powerful emitter (COMPASS POINTS ZERO - BUT CAN MAKE A DIN).

GET the EMITTOR and now hike all the way back to your house: W, S, W, W, W, W, S, S, S, S, S, S, W, W, W, N, N and N. L(ook) and then SPILL the CAN so petrol runs over the floor. LIGHT the PETROL with the matches and you will be able to go N and E

into a yard (CAN CAN CLEAR THE VIEW). READ the WALL for a clue and GET the PEN. EXAMINE the PEN.

Go W, S, S, S, S, E, E, E and E. It should be nearing the end of day 0 by now and the time should be nearing 0100. If you've been very quick on the keys, you will have to wait around for quite a while! At 0100, the children (who've been following you all this time, apparently) will cheer (THE BELL CAN END THE HELL) and you'll be told to deal with the human-disguised aliens.

This next bit is quite tricky as you need to run from place to place blasting various characters by pressing F. As you will have discovered, characters only appear at certain times and in certain places. A fair bit of rushing around is required (and a fair bit of waiting too) but with a bit of practice, you'll manage it OK. The clues DAILY ROUTINE CAN MAKE LIFE PREDICTABLE, WHO TO BELIEVE - TRUST YOUR MIND NOT YOUR HEART, SUSPICIOUS MINDS - SHORT TEMPER, TRUTH MAY BE FALSE IF HONESTY LIES and MURDER IS SIN - BE CARELESS OR WIN point to the Woodbury Five. Save the game (Key Z) at this point.

Okay then. Go N, N, N, N, N, N, N, E and E. At 0107, Mrs Ackroyd will appear. DON'T talk to her, just blast her - she's one of 'them'. Hit F and <RETURN> to do the business then leg it W, W, S, S, S, S, S, S, S, S, S, S, E into the Mayor's office again. Open F(ire) on him too (at 0108) and then bustle W, N, N, N, E, E and E and blast George Roberts when he shows up in the street at 0109!

With those three down, you can take it a little easier. Go E, E, S, S and W to a cute thatched cottage. READ the PLACARD. Then nurse your suspicions until 0116 when Fred Bates arrives home. With a name like Bates and that sign, what more evidence do you need? F(ire) the emitter at his ass and now sprint E, N, N, W, W, W and S into the police station. At 0117, PC Armstrong will take up his post for the last time. If you're really getting into the adventure by now, you can yell "Always hated the pigs!" as you F(ire) the last bullet home.

All the real time elements have now passed. Go back to the fairground with N, W, W, N, N, N, N, N, N, N, N, N, E, S, W, N, N, N, E and E and L(ook) again in the cell. GET the CONFESSION and READ it (INITIALLY THE BALL IS THE POINT - because you don't get the confession if you don't have the pen). The reading is tricky as the text wants to remind you of a strange ticking sound. You now need to blow up the alien spacecraft. It's in the school (SOUTH FOR THE VESSEL EMBLEM WILL TELL). Run W, W, S, S, S, S, S, S, S, S, S, S, E, E, E, E, E, E, E and N. Finish the job by DROPing the EMITTOR, destroying the aliens, demolishing their craft and rescuing the kids. You are a true 'liberator'; the title SHARDS required for you to enter its original competition. But just what did that confession actually say...?

## Review (Electron User)

This is the sequel to FIRIENWOOD, MP's first adventure, which took its name from the forest in which much of the action took place. MP claim that no prior knowledge of FIRIENWOOD is required and since I haven't as yet seen it and I've managed to finish this adventure, I have to agree.

In rescuing the golden bird of paradise in the previous game you inadvertently released an evil genie. Now, a few years later, you set out to kill the genie and restore peace to the land. Hopefully, you'll get it right this time!

You start your quest close to the castle, scene of your previous triumph, and after a couple of TURNS (hint!), you manage to reach the castle and obtain some of the equipment. This includes a password which will see you through to the main part of the adventure.

After a few more moves the PRESSURE begins to tell (yet another hint!), and you find yourself in Firienwood itself.

From this point on the tension mounts and you are presented with numerous puzzles to solve and red herrings to ignore. Also, for any Dungeons and Dragons fans who might be playing, you are frequently given the opportunity to fight goblins and thereby increase your score. Since I managed to complete the adventure without killing a single goblin I can only assume that this option is merely to pad out the adventure a bit.

Perhaps the idea is that having completed the game, you can go through it again to try to achieve a high score. First time I ever heard of an adventure having a top ten!

Anyway, after a lot more red herrings, a trip underground and a visit to the diamond mines, you manage to complete the adventure. At this point I felt it was all a bit of an anti-climax. In retrospect I can say that it is perfectly possible to solve this adventure without even meaning to. Only about 20 per cent of the puzzles and locations have any bearing on what happens.

It's a large program, completely written in machine code, very fast and has an excellent save-game routine. The layout on-screen - using different colours for text, messages and so on - is very impressive.

The thing lacking is a feeling of cohesion between the puzzles and the purpose of the adventure. In view of this I feel that the experienced adventurer would be disappointed if he bought this program. For the novice, however, I think it is ideal. Many of the puzzles that have a direct bearing on the adventure are fairly

easy to solve and there are plenty of locations to explore once the initial problems are overcome.

All in all, a competent piece of programming but for the complete novice only.

## Instructions

Instructions currently unavailable.

## Review (Electron User)

This follows in the same promising steps as the earlier Mr Men programs from Mirrorsoft. Now the number of little characters is reduced to four, but the graphics execution is greatly improved. Mr Noisy's Word Game features Mr Funny and Mr Silly as well as Mr Noisy, and the intention of the series of activities is to practise opposites and comparatives.

Any of the nine activities can be selected from the menu, and these include options in which the child can conjure up on the screen any of the characters in any given dimensions, so a tall Mr Noisy can stand beside a wide Mr Silly.

The young children I tried this with obviously enjoyed these activities, yet a great amount of vocabulary was being used, orally and in reading and typing at the keyboard. There is a screen dump facility included. My favourite program, and that of many of my fellow players, was Read with Mr Bounce. Again there is a menu with just five choices and this time the intention is to encourage practice in reading through the repetition of a number of phrases.

All in all, a fine program with a very real educational purpose, yet an equally high enjoyment factor. I highly recommend it.

Phil Tayler, ELECTRON USER 3. 5

# WORD HUNT

*Professional, Originally Released On Cassette Only*

Game Type : Educational  
Authors : Ann and Russel Wills  
Standalone Release(s) : 1984: WORD HUNT, Acornsoft/ESM, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ACORNSOFT, Betjeman House, 104 Hills Road, CAMBRIDGE CB2 1LQ  
Disc compatibility : CDFS E00, DFS E00

## Instructions

This pack contains four Word Hunt programs on cassette. Select the number of the program you wish to load and press <RETURN>. All instructions are contained in the programs and are shown on the screen.

Each Word Hunt program contains a list of nine words. The object of the exercise is to select one word and then try to create as many smaller words as possible from the selected word. The control over the selection of the word and the amount of time allowed for the exercise is given to the user in the "Teachers' Notes" section. Once these selections have been made the program can be used by up to 20 players and their results stored for later recall.

## About The Authors

Russel Wills began his career in computing in 1965 when he joined IBM as a lecturer. He then worked in Africa for five years as a systems analyst returning to the UK in 1972 to take up his present post as lecturer in computer education in Dundee. Ann Wills is head teacher of a primary school. Russel and Ann Wills share a common interest in the development of software for the microcomputer, and the integration of this material into the school curriculum.

### Inserting New Words Into WORD HUNT

You may wish to add words to the lists of 'allowed' words for any master word. For example, you may wish to allow the word 'la' in the master word 'General'. The procedure for adding to the words already supplied for a particular master word is given below.

1. Select and load the Word Hunt program you wish to change.
2. Press BREAK.
3. Type OLD and press <RETURN>.
4. Hold down CTRL and press N (this turns page mode on for listing, although nothing appears on the screen).
5. Type LIST 5000, and press <RETURN>.

The screen will display a page of word lists called data statements.

6. Find the data statement which contains the list of all words which can be created from the master word in question.

Note that the words are displayed in alphabetical order. Search through the data statement for the position where the new word should be inserted - IT MUST BE PLACED ALPHABETICALLY. (If the required data statement is not on this page, press <SHIFT> to move on to the next page.)

7. Press <ESCAPE> to end the listing of the program.
8. Move the cursor using the arrow keys to the beginning of the appropriate data statement.
9. Press <COPY> to copy the data statement up to the position where the new word is to be inserted. This should include the comma which follows the previous word.
10. Ensure that the <CAPS LK> light is off.
11. Type in your new word, which can be two, three, four or five letters in length, and put a comma after it.
12. Continue to copy up to and including the end of the data statement and then press <RETURN>.  
  
You must stop copying immediately after the ZZZ terminator which marks the end of each data statement.
13. Press <SHIFT> and <CAPS LK> to turn the CAPS LK light on.
14. Type RUN and press <RETURN>. Check that your new word has been entered into the list.
15. When you have verified this, press <BREAK> to leave the program.
16. Type OLD and press <RETURN>.
17. Save this version on to cassette by typing SAVE "filename" and press <RETURN>.

NOTE: We recommend that you can use your own filename so that the original program remains intact. In this case, your new version of the program cannot be loaded via the INDEX, but you should use the CHAIN or LOAD command, for example: CHAIN "filename" <RETURN>

## Instructions

This pack contains three Word Sequence programs on cassette (PROVERBS, NURSERY RHYMES and SENTENCE SENSE). Loading instructions appear on the inside front cover of this pack. All other instructions are contained in the programs and are shown on the screen.

Each program presents a series of jumbled words which must be arranged to form either a proverb, nursery rhyme title or a sensible sentence. Words to be moved are first located and selected using the cursor right and cursor left keys. The words are then moved using the number 2 and 3 keys.

The "Teachers' Notes" give the user control over the length of time that a child works. Once the time is selected, up to 20 children can use the programs and their results will be stored for later recall.

## About the authors

Russel Wills began his career in computing in 1965 when he joined IBM as a lecturer. He then worked in Africa for five years as a systems analyst returning to the UK in 1972 to take up his present post as lecturer in computer education in Dundee.

Ann Wills is head teacher of a primary school. Russel and Ann Wills share a common interest in the development of software for the microcomputer, and the integration of this material into the school curriculum.

## Inserting New Words Into WORD SEQUENCING

Once your students have become familiar with the phrases supplied on the WORD SEQUENCING program, you may like to replace them with phrases of your own choice. The procedure for replacing existing phrases and then saving the amending program is given below.

1. Select and load the program you wish to change.
2. Press <BREAK>.
3. Type OLD and press <RETURN>.
4. Hold down CTRL and press N (this turns page mode on for listing, although nothing appears on the screen).
5. Type LIST 6000, and press <RETURN>.

The screen will display a page of word lists called data statements. Each data statement has a number at the beginning of it and contains the sentence which will then be jumbled up in the program.

Search for the data statement you wish to replace. If the required data statement is not on this page press SHIFT to move on to the next page.

6. Press ESCAPE to end the listing of the program.
7. Move the cursor using the arrow keys to the beginning of the appropriate data statement.
8. Press COPY to copy the data statement up to the position where the new sentence is to be typed. This should be after the double quote which follows the word DATA.
9. Ensure that the CAPS LK light is off.
10. Type in your new sentence and put a double quote after it.
11. Press <RETURN>.

This procedure can be repeated to replace all of the original sentences.

12. Press <SHIFT> and CAPS LK to turn the CAPS LK light on.
13. Type RUN and press <RETURN>. Check that your new sentence has been entered into the list.
14. When you have verified this, press <BREAK> to leave the program.
15. Type OLD and press <RETURN>.
16. Save this version on to cassette by typing SAVE "filename" and press <RETURN>.

NOTE: We recommend that you can use your own filename so that the original program remains intact. In this case, your new version of the program cannot be loaded via the INDEX, but you should use the CHAIN or LOAD command, for example: CHAIN "filename" <RETURN>

# WORDPLAY

## *Professional, Originally Released On Cassette Only*

Game Type : Utility; Introduces Word Processing Skills  
Author : Unknown  
Standalone Release(s) : 1986: WORDPLAY, <unknown>, £6.95  
Compilation Release(s) : None  
Stated compatibility : Unknown  
Actual compatibility : Unknown  
Supplier : Unknown  
Disc compatibility : Unknown

### **Instructions**

Instructions currently unavailable.

### **Review (Electron User)**

WORDPLAY is an original and innovative idea, attempting to introduce the complex ideas of word processing to young children through the use of animated icons.

These animal icons, rejoicing in delightful names like Selina Seagull and Petronius Pelican, show the child in an amusing and educationally valid manner the various options available in a word processing program.

The icons are permanently displayed at the bottom of the screen below the text window which can display at any time nine of the 33 lines of text possible in the file.

However there are a couple of areas where I feel the program is less than user-friendly and where children may be easily confused.

My chief criticism is reserved for the left and right justification, made by Eve the Elephant and Boris Bear.

Boris tidies by pushing the left margin, but only from column two or greater, and leaves a ragged right result. The elephant, however, then right justifies back to the first column by tugging, often leaving very large gaps in the text, large enough for words to be included from the line below.

I am not convinced that children will really appreciate how useful word processing can be from this program, although the excellent booklet will prove an effective tutor.

# WORDS WORDS WORDS

*Professional, Originally Released On Cassette Only*

Game Type : Educational; Ages 5-12  
Author : Tom Stonier  
Standalone Release(s) : 1984: WORDS WORDS WORDS, Acornsoft/ASK, £9.95  
Compilation Release(s) : 1985: BEST FOUR - LANGUAGE, ASK, £9.95  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : APPLIED SYSTEMS KNOWLEDGE, 68 Upper Richmond Road, LONDON  
SW15. Tel: 01-874 6046  
Disc compatibility : CDFS E00, DFS E00

## Instructions

WORDS WORDS WORDS is a stimulating game to help young children with their reading and spelling. Pictures are shown on the screen and the child has to type in the name of the object shown. If the answer is correct the object takes its place in a scene. Once all the pictures in a scene have been identified correctly then the scene comes to life!

Over 85 words are introduced, children can link the eight scenes together in almost any order they choose, and they can then build up their own action packed stories!

## In all A.S.K. programs

<RETURN> Remember: once you have typed in your response a program will  
< icon > deal with it until you press the <RETURN> key.

<ESCAPE> You can always return to the beginning of a program by pressing  
< icon > the <ESCAPE> key.

<DELETE> You can rub out anything typed in, before the <RETURN> key is  
< icon > pressed, by using the <DELETE> key.

<\_Hand\_> Means : Please press the space bar to carry on with the program  
< icon >

< ? > Means : the program did not expect the response it has just re-  
< face > ceived. Perhaps there was a typing error? In any case, to carry  
on, just press the space bar and try again.

<CTRL> All of our programs incorporate sound. There are various volume  
levels - holding down the <CTRL> key and pressing the <S> will  
<S> change the level - keep pressing the keys until you are happy  
with the volume.

Note: The program will not run on computers that have 0.1 operating systems.

## Introduction

WORDS, WORDS, WORDS is a game for young children who are learning to read. Using the program, a child can build up scenes by accurately spelling the names of objects. Once a scene has been correctly completed, things begin to happen; perhaps smoke comes out of the chimney, or a lorry drives off, or the lion may roar, or...

There is more to Words, Words, Words though than just learning to spell. A new story can be created each time the program is used, since the scenes can be linked together by the child in any order. After the last scene children may enjoy drawing a picture to describe what they think might happen next.

A wordlist of the eighty plus objects presented in the program is given at the end of the "How To Use It" section in this booklet.

A NOTE ABOUT BIG AND SMALL LETTERS. At school, and in most learning to read books, the lower case letters a, b, c...are introduced before the upper case letters A, B, C...etc. Because of this it may be advisable to stick labels with lower case letters on your keyboard. Otherwise young children may be confused by the difference between A and a, B and b and so on.

### **How to use it**

The program itself will remind you what to do at each stage.

When the program has loaded, the screen display will be:

```
Where does your
story begin?
  In the city
        street
        house
        park
        zoo
        orchard
        farm
  or      castle.
My story begins in the ...
```

It is then up to the child to decide which scene to visit. One of the eight choices should be typed in. Don't forget that the <RETURN> key must always be pressed to let the computer know that the child has finished typing the word.

Once work has begun on a particular scene - the street, the city, the farm etc. - the name of each object in that scene has to be inserted in a sentence like

```
I see a ____
```

as it appears. Once the name of the object is spelled correctly, that object then takes its place in the main scene.

If the name of the object is mis-spelled, the ? symbol appears. This means that the computer did not understand. Just press the space bar and try again.

If a word is mis-spelled twice, the correct spelling will be displayed, followed by the hand icon which means: please press the spacebar when you are ready to continue. The next object will then appear. If there is difficulty in recognising a particular object, look it up in the wordlist at the end of this section of the booklet.

If all the names of all the objects in a particular scene are spelt correctly, there is an extra reward: things begin to happen. Watch out for them!

At the end of each scene, except "the castle", the program asks for another scene to be chosen by a question like:

```
Where do you want the bus to go? To the ____
```

Type in the name of the scene you want to go to, and press the <RETURN> key. If you try to go to a scene that the computer doesn't know, then the ? symbol will appear. Press the spacebar, and try again. If the computer still doesn't understand, then you will be taken automatically to another scene.

The castle scene always finishes a session provided all the objects are spelt correctly. Press <ESCAPE> to restart the program.

### **Wordlist**

In the English language there are often several names to describe the same object. For this reason, we have sometimes included in the wordlist several choices of name for an object e.g. pillar box, mail box and post box.

city	CITY	street	STREET
~~~~	~~~~	~~~~~	~~~~~
bank	BANK	bus	BUS
shop	SHOP	(coach)	(COACH)
(toy shop)	(TOY SHOP)	church	CHURCH

lorry	LORRY	ghost	GHOST
(truck)	(TRUCK)		
sheep	SHEEP		
(lamb)	(LAMB)		
rabbit	RABBIT		
(hare)	(HARE)		

**Educational notes**

This program is desgined to encourage children to recognise and spell a set of over eighty five words. The words and associated scenes have been specially chosen to complement the sort of pictures which appear in children's first illustrated word books. The computer gives these "picture pages" the added dimensions of physical and visual interaction between the children, keyboard and screen. This kind of interaction is a very powerful aid to memory and the child will soon learn how to use the program and experiment with it to succeed.

The value of the program could be increased by allowing children access to paper, pencils and crayons to copy and label each scene or to make their own labelled pictures afterwards. The program may well stimulate the child to create much richer and more detailed pictures than those possible on this computer. Labelling each object in the child's picture is most important.

# WORKSHOP

*Professional, Originally Released On Cassette Only*

Game Type : Utility; Educational Art Package  
Author : Richard de Grandis-Harrison  
Standalone Release(s) : 1984: WORKSHOP, Acornsoft, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ACORNSOFT, Betjeman House, 104 Hills Road, CAMBRIDGE CB2 1LQ  
Tel: (0223) 316039  
Disc compatibility : CDFS E00, DFS E00

## Instructions

WORKSHOP provides a microworld in which to discover what each of the program's amazing 'machines' can do with simple shapes. Users will set their own aims, developing their plans and experimenting as they explore alternative methods of working. In exploring the functions of these strange machines, creative thinking can be as effective as a logical approach, though users who wish to review their strategies will enjoy the lively replay sequences. In the microworld of Workshop there will always be new shapes and new things to try - and finding out is fun.

The program uses a small number of words and symbols that can easily be found on the computer keyboard. Additionally the function keys have picture-labels and each machine generates its own particular sounds, so Workshop will serve as an amusing and imaginative introduction to the computer for young learners from the age of three upwards.

## Introduction

WORKSHOP provides a microworld in which to discover what each of the program's amazing 'machines' can do with simple shapes. Users will set their own aims, developing their plans and experimenting as they explore alternative methods of working. Strategies can be examined during the lively replay sequences on the LOOK page. Experiments can be immediately reversed by simply pressing the DELETE key, so trying things out is recommended. In the microworld of Workshop, there will always be new shapes and new things to try - and finding out is fun.

The program uses a small number of words and symbols that can be easily found on the computer keyboard. Additionally the function keys have picture-labels and each machine generates its own particular sounds, so Workshop will serve as an amusing and imaginative introduction to the computer for young learners from the age of three upwards.

## Sound

The program begins on the SHELF page with the sound option on. Pressing Q will switch the sound off; S will restore it. Sound may be switched on or off whenever you return to the SHELF page.

## Function Key Card

This is placed at the top of the computer keyboard. If you lose your function key card you can make a new one. Simply ensure that the name and symbol for each machine lines up above the following keys:

1 = DRILL	2 = PAINT	3 = NOT	4 = SCALE	5 = CUT
6 = SQUASH	7 = GLUE	8 = ROTATE	9 = LOOK	0 = SHELF

## In The Workshop

Workshop is designed for experimentation. There is no right or wrong way of working and surprising effects can be achieved. This section gives details of a planned

method of approach that you may wish to follow. Others will prefer the challenge of exploring the workshop on their own.

There are four main 'pages' or operating areas: SHELF, PLAN, MACHINES and LOOK.

### **Shelf Page**

The SHELF is in front of you when you enter the workshop.

You may select a shape (circle, square or triangle) from one of three boxes that contain shapes, by pressing number key 2, 3 or 4. The shape chosen will then be placed in the main box:

DELETE - cancels your choice  
RETURN - confirms your choice

If you confirm your choice, you are given further options before you leave the SHELF page:

Number key 1 moves the chosen shape from the main box into box 1  
Number key 0 empties the main box  
Number key 2, 3 or 4 will now place another shape in the main box

If number key 1 is pressed when both 1 and the main box are full, the shapes will be exchanged

COPY - enables a shape in box 1 to be copied into the main box. This option becomes available immediately after number key 1 has been pressed  
DELETE - allows you to undo the last action  
ESCAPE - takes your chosen shape from the main box to the PLAN page

### **Plan Page**

The chosen shape remains in the main box. Symbols corresponding to those on the function key card surround the area and show the machine options.

At this point it is possible for you to ROTATE the shape in the main box (by pressing the labelled function key) and move it UP, DOWN, LEFT and RIGHT with the arrow keys. The shape can then be taken to a machine by pressing a labelled key.

You can return to the SHELF at any time from the PLAN page or select the LOOK page.

### **Machine Pages**

Each machine page shows the chosen shape in the main box and the machine's symbol in the top-left hand corner. Operating options are shown at the bottom of the screen:

RETURN - sets the machine in motion  
DELETE - undoes the machine's operation  
ESCAPE - transfers the shape (in its current state of working) to the PLAN page where further options may be taken

### **The machines:**

The DRILL bores a hole at the centre of the main box. The positioning of shapes will have taken place on the PLAN page. The size of the drilled hole is increased with each press of the <RETURN> key.

The PAINTING MACHINE paints the entire shapes in one of seven colours: red, green, yellow, blue, purple, light blue and white (R, G, Y, B, P, L and W). A colour change may adjust the colours of other pages too.

The NOT machine acts like a mould which surrounds the chosen shape. The mould will be the new shape.

The UP and DOWN arrow keys are used to enlarge or reduce shapes. There may be some simplification of shapes during this process.

The CUTTING machine positions a blade over the shape and cuts down in a straight line. The blade may be moved to the left and right using the arrow keys. The section to the right of the blade is discarded.

The SQUASH machine can squash or stretch. The DOWN and UP arrow keys are used to show whether the shape is to be squashed or stretched. All parts of the shape are affected.

The GLUE machine is used to glue any shape in box 1 to any shape in the main box. The shape from box 1 will be on the right and the shape from the main box will be on the left. Both shapes are scaled down.

### **Look Page**

A record of the sequences of operations is kept automatically. It may be referred to from the PLAN page whenever required. A series of symbols shows the pages which have been visited so far. The processes which occurred on each page have been stored as a sort of 'program':

RETURN - enables you to run this 'program'  
DELETE - will clear the LOOK page  
ESCAPE - takes you to the PLAN page

You will hear a warning tone if the computer does not have enough memory left to record further processes. A flashing LOOK symbol will also appear on the right-hand side of the screen. The LOOK page may not appear to be full when this warning is given if some of the symbols shown represent more than one process. Normal working conditions can continue when the LOOK page is full but further processes will not be stored until the LOOK page has been cleared with <DELETE>.

Designed by Daniel Chandler with David Butler  
Programmed by Stephen Butler and Bob Di. Giuseppe.

**Instructions' Source** : WORKSHOP (Acornsoft) Back and Inner Inlay

### **Review (Electron User)**

WORKSHOP, from Acornsoft, as you might expect, provides the user with a workshop environment in which to build things. The main fun comes from being able to take objects or shapes such as triangles, squares and circles, then chop bits off them, drill holes and glue them to each other.

Educationally, the idea is that users set their own aims, develop their own plans and experiment as they explore alternative methods of working. Experiments are encouraged as their effects can be immediately reversed by pressing the Delete key thus ensuring no damage is done. There are four main pages or operating areas: Shelf, Plan, Machines and Look.

At the start you are presented with the Shelf page from which you can select an object to work on - either a circle, square or triangle. Once you've made your selection you move on to Plan by pressing <ESCAPE>.

Here your object is shown in a large box in the centre of the screen. Surrounding the box is a set of icons representing the various machines you can use.

You can position your object around inside the box by using the cursor keys and then select a machine from the following:

\*Drill bores a hole at the centre of the main box, the position of the object being drilled having been selected by the cursor keys. The size of the drilled hole increases with each press of <RETURN>.

\*Paint paints your object in any of seven colours.

\*Not acts like a mould which surrounds the chosen shape. The mould then becomes the new shape.

\*Scale allows you to enlarge or reduce your object.

\*Cut has a blade which can be moved left or right. When <RETURN> is pressed the blade cuts down through your object.

\*Squash squashes or stretches your object.

\*Glue will glue your present object to one you have previously made and stored.

\*Rotate turns your object through 90 degrees so that you can work on all sides.

These machines are very versatile and the graphical effects quite clever. One very good feature is the Look option. As you build your object, each key press you make is stored.

On selecting Look every process you have taken your object through is impressively replayed in graphic detail.

This is a very useful feature for the teacher or parent who does not have the time to work through the program with the user but wishes to review the work later.

The environment provided by Acornsoft's WORKSHOP is definitely conducive to logical thinking and closely simulates that of a real workshop.

Robin Nixon, ELECTRON USER 3. 5

# WORLD GEOGRAPHY

## *Professional, Originally Released On Cassette Only*

Game Type : Geography Quiz; Capitals And Populations  
Author : Richard Hanson  
Standalone Release(s) : 1984: WORLD GEOGRAPHY, Superior, £7.95  
1989: PRES GAMES DISC 6, PRES, £9.95

Supplier : SUPERIOR, Department C, Ground Floor, Regent House, Skinner  
Lane, LEEDS 7  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

Instructions currently unavailable.

## Review (Electron User)

Geography - not the most exciting subject, is it? That's what I thought before I began reviewing one of Superior Software's latest releases. You are first presented with an accurate hi-resolution map of the world, filling the top two thirds of the screen. This is followed by the test at the bottom.

You begin by deciding what you want to be tested on - capitals, populations, or both. You then choose one of the eight levels, which, when put together, cover a massive 166 countries. On the hardest level you get asked about small countries such as Djibouti, which I had certainly never heard of.

You will probably have wondered how the test on population works - how accurate answers need to be? Well this program overcomes many problems by saying that any answer within a reasonable percentage is correct. So it will be accurate for many years to come.

While progressing through your test, the country in question is highlighted on the map with a small flashing circle, enabling you to identify its position.

After being pelted with questions on about 20 countries, your ordeal ends and your percentage of correct answers is given. It was here that I unearthed a definite bug in my copy of the program. Once you have been given your results, you are asked: "Do you want to try this again?". If your answer is Yes, the program just ends. This means you have to type RUN to carry on.

But overall, I believe this is a well written program. I found it both interesting and absorbing and think it has potential use in both school and home.

Richard Tacagni, ELECTRON USER 2. 1

# WYCHWOOD

## *Professional, Originally Released On Cassette Only*

Game Type : Text Adventure (Adventure No. 3 In THE LARSOFT COLLECTION)  
Author : Geoff Larsen  
Standalone Release(s) : 1987: WYCHWOOD, Larsoft, £3.95  
Compilation Release(s) : 2002: THE LARSOFT COLLECTION, Larsoft, PD (Disc)  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : LARSOFT, 4 Chantry Road, Clifton, BRISTOL BS8 2QD  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### Instructions

You have served your six months' sentence for burglary and now you hope to benefit from what you have learned.

Old Jones was a good mate to you. Mind you, Jonesy doesn't realise how much information was given away whilst asleep. Sleep talking is a fairly common occurrence I suppose.

The sly old devil. Pulled off a bank robbery three years ago did old Jonesy. The money was never recovered, of course. Jonesy saw to that. One and a half grand stashed away where nobody would find it. Nobody except you, that is. Poor old Jones was arrested in the village of Lower Ashley SANS LOOT. The robbery had been from one of the banks in Greater Manchester, ten miles south.

Lying between the two, of course, is Wychwood. Good old Jonesy, Wychwood.

From what you have heard while the old codger was giving it zeds the money is stashed away in the vicinity of Wychwood Manor. It could still take some finding of course but you know how old Jonesy thinks, don't you? When you get to Wychwood your instinct should help you. Six months isn't long enough to dull your senses.

This car was easy enough to nick, huh? Don't care much for the colour but that is the least of your concerns.

Can't be much further now. Ah, there's the turning for Wychwood. I'll park the car here. This road is quite off the beaten track and anyway nobody should be snooping around at this time of the morning. Not even seven yet.

Right, here goes...

### To Load Game:

Type \*RUN <RETURN>

### To Redescribe Current Location:

Type L

### Movement:

Movement through the game is usually effected by N, S, E, W, U and D

### Inventory:

An inventory of your current possessions can be found by typing I

### Commands:

Commands are entered in the usual verb-noun or verb format

### To Save Game Position:

Type SAVE. The current state of play can then be resumed by typing LOAD

### Official Hintsheet

- If you are in the dark it may be because you do not yet have the feel for the game.
- The key to Wychwood Manor lies partly in the unlocked cabin and partly underground.
- If you manage to enter the locked cabin you could emerge with credit.
- When you hear a strange noise above you look up.
- You will need to be a bright spark to get past the dog. The water supply to Wychwood Manor has been cut off. Find an alternative source.
- There is a secret room concealed on the ground floor of the manor.
- Listen to the vicar's advice. If the bull does not make your spirits flag you could discover an interesting angle.
- Autumn leaves conceal something useful.
- Do not spend valuable time messing with the supernatural. It is better left alone.

**Instructions' Source** : WYCHWOOD (Larsoft) Inner Inlay

### Review (Electron User) - "Sinister Adventure"

When this adventure landed on my desk for review I was absolutely knocked out by the package's sinister graphics. I carefully read the well-written informative notes and loaded the program with anticipation. After only 20 minutes of exploration and head scratching, I was hooked.

You play the role of an ex-convict who shared a cell with a character called Jonesey. He talked in his sleep and gave you a good idea of where he hid the loot from a bank robbery.

Obviously your task is to recover the swag, stashed away near Wychwood Manor, for yourself. As you leave your car in a quiet country lane which leads east, "the sound of birds fills the crisp air of an early autumn morning". This introductory location gives an indication of the atmospherics of the whole adventure.

You are free to move through the first few locations without encountering any real obstacles, though the pond may at first baffle you.

I was particularly taken by the various doors which require different techniques to open them. I expect you'll open the cabin door easily but the front door is rather more difficult - the trick involves a loose key, a paper clip and a newspaper. Try and work that one out! I'll also leave you to discover the secret passage for yourself.

WYCHWOOD isn't a particularly large adventure, but each location will provide interest and material to solve the various puzzles. Try listening to the sermon in church - the reward is quite earthly.

The adventure is littered with objects which require careful examination, thought and manipulation. For instance, in the cabin I discovered a mannequin and clapperboard which had me foxed for hours.

Larsoft boasts that its games are free of bugs, non-violent, and can be solved by pure logic. If this is an indication of things to come I will have no hesitation in buying all of their future releases.

**Solution (Acorn Electron Haven)**

From the car go E, E and N. EXAMINE the POND and GET the PIPING you find in it. Go W, W, N, N and W to one of the two cabins that border the manor. OPEN the DOOR of this one and ENTER CABIN. EXAMINE the DRAWER and GET the paper CLIP you find there. Now LEAVE and go E, N and W. PUSH the SLAB to be able to journey underground.

Go D and OPEN the DOOR leading to the tunnel. GO TUNNEL and continue N and D. LIFT the TRAPDOOR, go D and FEEL around in the dark. PULL the CORD to turn the lights on. EXAMINE the BED, EXAMINE the TABLE and then EXAMINE the SHELF. GET NEWSPAPER and GET LIGHTER. Retrace your movements U, U and S. GO DOOR to get back into the tunnel. Now go U, E, N and N back to the front door of the manor.

EXAMINE the KEYHOLE and SLIDE the NEWSPAPER under the door. BEND the paper CLIP and USE the resulting thin WIRE to poke out the key. PULL the NEWSPAPER back. GET the BRASS key to avoid locking yourself out later!

OPEN the DOOR, GO through the DOOR and then CLIMB STAIRS. Go N and into the bathroom. GET the CHAIR in here and go S. LOOK UP and you will see a panel. DROP the CHAIR and STAND on CHAIR. Now OPEN the PANEL. GO PANEL. GET the BUCKET in the attic before going back D and W.

In the west bedroom, EXAMINE BED and GET the CREDITCARD. Return E, D, S, S, S, S and E to the second cabin (which is locked). USE the CREDITCARD to gain access and, once inside, DROP the CREDITCARD to free up space. ENTER the CABIN and, inside, EXAMINE the CRATE to discover a squib. GET the SQUIB and LEAVE.

Go W, S, S, E and E to where the pond's water is deepest. FILL the BUCKET here and return W, W, N, N, N, N, N back to the manor. OPEN the DOOR again, GO DOOR and go E. EXAMINE the CANDELABRUM. It is loose. PULL the CANDELABRUM to reveal a secret opening.

GO into the OPENING and inside, GET the Russian FLAG. Now LEAVE and go W and W. GET the ROD and line and go N and E. OPEN the back DOOR. Outside, you will be faced by a dog. LIGHT the SQUIB and THROW the SQUIB. A spark will ignite the shed so EMPTY the BUCKET of water over the flames quickly! Then GO SHED and find a step-ladder. GET the LADDER and LEAVE.

DROP the LADDER, CLIMB the WALL and JUMP DOWN. The gate in the field is not high so merely CLIMB GATE to get over it. Wander N, E, N, N and N through fields (past a scarecrow). EXAMINE the TRACTOR to find a flask of tea. GET FLASK and go E and S. GO into the CHURCH and LISTEN to the vicar's advice. Take heed!

LEAVE and go W, W and S to the stream south of the bridlepath. GIVE the FLASK to the fisherman and GET the HOOK he offers you in return. TIE the HOOK to the rod and line. Now go N and N to enter the bull's field. WAVE the FLAG, move S and THROW the FLAG. The bull will chase after it.

Return N to the bull's field, CLIMB the TREE, EXAMINE the HOLLOW and USE the ROD, line and hook to fish the metal box out from the hollow tree. The key will fall out - back into the tree. GET the BOX, climb D and CLEAR away the fallen LEAVES from the base. EXAMINE the second HOLLOW. GET the SMALL key inside it. Now you can OPEN the BOX and EXAMINE BOX to find a wad of notes. EXAMINE NOTES to complete the adventure!

# XANAGRAMS

***Professional, Originally Released On Cassette Only***

Game Type : Strategy; Anagrams-type Puzzles  
Author :  
Standalone Release(s) : 1984: XANAGRAMS, Postern, £6.99  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : POSTERN, PO Box 2, Andoversford, Cheltenham, CHELTENHAM  
GL45 5SW  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

## Instructions

*"XANAGRAMS combines the fun of hangman with the mental stimulation of anagrams and crosswords. XANAGRAMS contains over 500 different words, the number of permutations is therefore incalculable!"*

## Playing XANAGRAMS

1. When the words have been loaded, you will be asked which level of play you require. There are 3 levels:-  
  
Level 1 is set for junior school children;  
Level 2 is for the senior school child;  
Level 3 is for adults and brighter children.
2. Select the level of play by pressing 1, 2 or 3.
3. Having chosen the level of play the program will ask you how many words you require (1 to 5). If more than one word is chosen, the words will be linked like a crossword. Obviously the more words you choose, the more challenging the game! Select the number by pressing the relevant key.
4. The XANAGRAMS screen will then be displayed. The words will be laid out as a series of boxes. You have to guess which letter goes in each box. This is done by simply pressing the relevant alphabetic key.
5. On the right of the screen are all the letters that go to make up the words.
6. When a correct letter is chosen it will appear in the appropriate box, disappear from the list on the right and you will score 30 points. If you make an incorrect choice you will lose 5 points and the letter in the table on the right will change from upper case to lower case.
7. You can move the cursor about by using the cursor keys on the right of the keyboard. If you move the cursor before finding the correct letter, the letter table is restored to upper case.
8. If you are stuck then by pressing 'f1' that letter is revealed but you will lose 50 points, or 100 points if it is the first letter of a word.
9. If you are totally defeated and wish to end the game, press 'f3' followed by letter 'Y' and the remaining letters will be displayed.
10. If you wish to avoid disturbing other people then you can turn the sound off by pressing function key 'f5'. The sound can be restored by pressing key 'f5' again.

**Scoring**

700 Stay in after school  
800 Extra homework please  
900 Are you paying attention?  
1000 Not bad  
1100 Improving  
1200 Excellent

Over 1200 You may go to the top of the class and give out the pencils at playtime!

# XOR

## ***Professional, Originally Released On Cassette Only***

Game Type : Strategical Overhead Maze Game; Great Graphics  
Author :  
Standalone Release(s) : 1985: XOR, Logotron, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron only  
Supplier : LOGOTRON, Dales Brewery, Gwydir Street, CAMBRIDGE CB1 2LJ  
Disc compatibility : Unknown

### **Instructions**

*There are no random events in XOR's labyrinthine palace, and there is no premium on hand-eye co-ordination. You have all the time in the world to work out the precise nature of the hazards you encounter. Logical thinking, strategy and tactical problem solving are all part of XOR experience. And XOR is not simply about finding solutions. If you can solve the entire puzzle (15 levels plus an encrypted anagram), you qualify to be a member of the Order of XOR. With a certificate and a badge to prove it.*

"...this is one of the most compulsive, cunning and attractive programs I've seen for some time! ... the game is superb - a very classy original twist on the basic maze theme."

- A & B COMPUTING

### **XOR's Features**

- \* 15 graded mindbending mazes; each maze approximately 16 screens
- \* super smooth high speed scrolling
- \* high resolution quality graphics
- \* high speed or step by step replay feature
- \* intriguing logical problems
- \* interactive dynamic puzzles

### **Game Elements**

Magus, Questor, Forcefield, Fish, Fat dolls, Chicken, Transporter, H'Bomb, V'Bomb, Door, Map, Mask, Switch

### **Playing Instructions**

The introductory screen will load, then press space bar to continue onto the menu screen.

P - Piano (softer) F - Forte (louder)

L - Level (cycles through levels)

The music is optional. You can reduce the volume or turn it off by pressing P, or increase the volume by pressing F. The levels of play run from 0-15 although 11, 13 and 15 are not accessible until you have discovered how to reveal them! Once you have selected a maze, press the SPACE BAR to start to the maze.

### **Become A Member Of The Order Of XOR**

If you solve all fifteen levels you qualify to become a Member of the Order of XOR, with a Certificate and Badge to prove it. We plan further competitions with major prizes for Members of the Order of XOR. A and B Computing will be running a regular XOR Club spot with hints and tips for desperate puzzlers.

### **XOR Maze Generator**

The XOR Maze Generator is a truly professional utility, in fact it's the very generator we used to create the first collection of XOR puzzles found in this package. The package is fully menu driven and simple to use, the user simply places

any of the selection of predefined icons onto the maze screen. Walls can be created simply by selecting the wall icon and driving it around the maze as required. Included in the package is an ICON DESIGNER so that you can change the appearance of the game characters to baffle and delight your friends. All purchasers of the maze generator are invited to submit mazes for inclusion in XOR II.

### **Game Controls**

Z - Left, X - Right, : - Up, / - Down, E - End Game  
Y/N - Action Replay/Restart, P - Stepper (Replay), H - Hold (Replay)

There are two heroes on the screen represented by two shields (MAGUS and QUESTOR). These shields can be moved around the maze, picking up masks - by moving over them - and endeavouring to solve the puzzles with precise combinations of moves, sometimes involving both heroes.

### **The Objective of the Game**

Complete all 15 levels! As you go through the door of each level you will be given a letter, note down the 15 letters. These letters will make up an encrypted clue to XOR's true nature. By the way you cannot pass through the door until you have collected all of the masks at each level.

Note that you cannot enter maze 11, 13 and 15 until you have completed levels 10, 12 and 14 respectively.

In your exploration of the mazes, you will encounter: falling fish, two kinds of forcefield, spring loaded chickens, fizzer bombs and pressure bombs, BMUS (Beam Me Up Scottie), dolls, doors, maps and masks which aren't quite what they seem.

We won't tell you any more - because half the game consists of discovering the properties of these different features. Needless to say, you often need both your shields. The games are graded, and the bottom levels are suicidal!

There are three windows on the right of the game screen.

The top window is the MAP window. In each level you will find four Map Quartiles. As you collect them you will discover the layout of the maze, where the MASKS are laced and the position of the DOOR. However, the map does not show up any obstacles or force fields, so beware!

The middle window is the MOVE and HERO window. There are two heraldic shields, MAGUS and QUESTOR. Each shield is placed in a different part of the maze. To switch from one shield to another, use the <RETURN> key. The shield in use at any one time is denoted by the shield displayed in this window.

The number next to the shield is the number of moves you have made - you have a maximum of 2000 moves on any level.

The bottom window is the MASK window. The figure on the right tells you how many MASKS you have to collect on that particular level, the number on the right tells you how many you have already collected.

**Instructions' Source** : XOR (Logotron) Inner Inlay

### **Review (Electron User) - "A Range With Mysteries"**

XOR is a maze game that is played over fifteen levels with the option of beginning on any - though I suggest you cut your teeth on the first. Each maze has a name which often has a connection with its contents or construction. The aim is to collect all the masks held within the maze. The number of masks varies from maze to maze, but the total present and the total collected are always displayed on the screen.

Also shown is the number of steps you have taken while exploring the maze - you are allowed up to 1,999. This system is used instead of a time limit.

The maze walls are constructed of brick and cannot be walked through, and some of the passageways are filled with two other types of material, known as Dots and Waves. Dots can only be passed through when travelling in the horizontal plane and Waves in the vertical: In this way parts of the maze can be cordoned off until approached from the correct direction.

The maze also contains four special characters - as each of these is found a quarter of the maze map is drawn to the right of the screen. This shows the position of all masks, but not the dots, waves or yourself.

The first maze should pose few problems - the fun really begins on level two. The dots and waves are still there, but they have been joined by fish and chickens. The fish act in a similar way to the boulders in Repton, falling when unsupported. The chickens are a different kettle of fish - they "fall" horizontally from right to left.

A blow on the head from either of these characters is fatal, so a path through a pile of both types must be planned carefully. Maze number four, entitled Explosive Mixture, sees the appearance of bombs and nitro glycerine. The starting point for this level is inside a completely sealed cell - you soon learn that dropping fish or chickens onto bombs causes them to explode, blowing a hole in the nearest wall.

A few words of warning at this point: Don't stand too close to a bomb when detonating it, and always try to clear away any masks that may be near the bomb. You have to collect every mask to proceed to the next maze, which is pretty difficult when you've atomised half of them.

The Dolls House, maze six, introduces the dolls - harmless characters which continue to move in the direction in which you push them.

Unfortunately they don't detonate bombs, but I found them to be most useful when I wanted to manoeuvre a fish directly above a bomb before dropping it. This is done by lining them up to create a makeshift bridge across which the fish is pushed.

Some of the maze's nastier characters are the frowning masks, which render the maze walls invisible when collected, though all other characters are still displayed. The situation remains this way until you collect another frowning mask.

Very soon you begin to think twice about moving any character at all. The game's designers have quite ruthless and some of the most harmless looking moves have dire consequences. There have been dozens of occasions when I have just sat there, staring at the screen, trying to convince myself that there has to be a logical explanation for every puzzle.

Thoughtfully, Logotron has provided an abort key, especially for those occasions when you muck it up. One very clever feature of the game is the Replay mode which comes into operation when you've lost your second - and final - life, and retraces at high speed every move that you made on the current maze. It can be used to determine at which point you made a wrong move.

What at first appeared to be a very ordinary game is an absolute gem. The number and complexity of the puzzles is overwhelming. Every Electron owner who wants more than zap and blast should buy this game.

# YIE AR KUNG FU

*Professional, Originally Released On Cassette Only*

Game Type : Arcade; Beat-'Em-Up  
Authors : D. C. Ward & Peter Johnson  
Standalone Release(s) : 1984: YIE AR KUNG FU, Imagine, £9.95  
1989: YIE AR KUNG FU, The Hit Squad, £2.99  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : IMAGINE,  
Disc compatibility : Unknown

## Instructions

YIE AR KUNG FU is a test of skill development in the traditional Martial Arts. It features Oolong in his attempt to become a Grand-master in the ancient skills in honour of his father, a kung-fu master before him.

Your ultimate goal is to become a grand-master but to achieve this you must defeat a variety of opponents each more deadly than the last. They are armed with differing skills and weapons and must be overcome with a combination of 14 different moves.

The game takes place in two locations, the first beside a waterfall and the second in front of the Bamboo Pagoda that houses the Martial Arts Academy.

The fun and excitement of Kung Fu is about to begin as you face your foe. Your honourable opponents are...

**BUCHU** - A huge kung-fu fighter who can attack by flying through the air.  
**STAR** - A beautiful girl warrior who is an expert at throwing deadly stars or SHURIKEN.  
**NUNCHA** - Master of the NUNCHAKU - beware his reach.  
**POLE** - Attacks with the ancient rod or BO.  
**FEEDLE** - Throws different objects all of which must be avoided (Lanterns, Woks, Knives, Bricks and Yin/Yang symbols).  
**FAN** - Another female adversary, this time an exponent of the NINJAFAN.  
**SWORD** - Sword-carrying opponent, a firesome and deadly foe.  
**CHAIN** - This fighter is armed with a deadly chain.  
**CLONE** - The Kung Fu master himself, who changes his form to yours to confuse you, and possesses all the skills and moves of Oolong, but faster.  
**FEEDLE (2)** - More objects to catch you off guard. If you can survive this final test, you will truly become a grand-master.

The action continues however as your teachers pit you against odds to prove yourself further!

## Game Controls

### Oolong is controlled as follows:

The diagonal directions are obtained by holding down two of the direction keys simultaneously. The moves, showing their relevant keys, are as follows:

```

* and X  Jump Right      *  Up      * and X  Jump Right
                        \  /|\  /
                          \  |  /
Z  Left <---+--+---> X  Right
                          |
                          \||/
                          ?  Duck

```

RETURN ..... Kick

ESCAPE ..... Return to hi-score table  
DELETE ..... Pause  
SHIFT ..... Punch  
COPY ..... Restart  
While in pause mode, Q and S will turn the sound off and on.

### **Attack Moves**

\* and RETURN ..... High Kick  
Z or X and RETURN ..... Round House Kick  
? and RETURN ..... Ankle Kick  
RETURN whilst in Mid-Jump ..... Flying Kick  
\* and SHIFT ..... Hook Punch  
Z or X and SHIFT ..... Lunge Punch  
? and SHIFT ..... Ankle Punch  
SHIFT whilst in Mid-Jump ..... Flying Punch

Oolong automatically attacks in the direction of his foe, except on the FEEDLE screens when he can face in either direction.

When the KO meter reaches 0 the player is knocked out.

You have three lives to begin your task. Good luck!

### **Status And Scoring**

On-screen scoring indicates your current score, the highest score and the number of lives you have remaining. Bonus lives are awarded at 30,000 points and at every 80,000 thereafter. The score for each successful move is as follows:

Flying Punch .....	600	Lunge Punch .....	400
Flying Kick .....	500	Round House Kick .....	300
Hook Punch .....	500	Ankle Punch .....	300
High Kick .....	400	Ankle Kick .....	200

Points are also awarded for your number of KO hits remaining. If you get a "perfect" score then you are awarded 10,000 times the wave number.

### **Hints & Tips**

- \* Seek and attract each opponent's weak point
- \* Remember Oolong can jump over his foes and put them offguard
- \* Try hit and run tactics and keep your distance from armed opponents

# YIE AR KUNG FU 2

*Professional, Originally Released On Cassette Only*

Game Type : Arcade; Beat-'Em-Up  
Authors : D. C. Ward & Peter Johnson  
Standalone Release(s) : 1984: YIE AR KUNG FU 2, Imagine, £9.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : IMAGINE,  
Disc compatibility : Unknown

## Instructions

It was just twenty years ago that LEE, the Kung Fu master, wiped out the dastardly Chop Suey Gang. But...one member of the gang managed to survive - YEN PEI.

YEN PEI now calls himself the Yie Gah Emperor, and with his seven warlords and their retainers, he has extended his evil influence throughout China. LEE's son, LEE YOUNG, has come forth to meet this evil emperor.

To the deadly killing arts of Kung Fu which he learned from his father, he has added his own special techniques, based on OO-LONG TEA POWER and CHOW MEIN NOODLE POWER!! Help LEE YOUNG to use his Kung Fu against the Yie Gah Emperor!!

## How To Play

You begin the game with three "LEEs". If you score 20,000 points then you get an additional "LEE". After 50,000 points you get one more "LEE".

If one of your techniques connects with your opponent, in addition to you scoring points, his energy level, or Ki, will diminish. When your opponent's Ki is all gone, you have defeated him!

If an opponent's technique is effective on your LEE, LEE loses part of his own energy or Ki.

When one LEE loses all his energy, he is OUT.

The game begins with an attack of a squadron of midget fighters. Try to move to the left of your screen while defeating them. Eight scenes await you, each with its own evil warlord ready to finish LEE off.

## Improve your fighting techniques:

OO-LONG TEA POWER. If you knock out a complete formation of three midget attackers, you get one tea leaf. In you can give tea leaves, this is enough for a cup of Oo-Long tea. Once you have enough, if you press the T key while the game is in progress, you will get a new supply of energy. You can have up to three cups of Oo-Long tea in any one game.

CHOW MEIN NOODLE POWER. Somewhere in the background of each scene is a bowl of Chow Mein which you can get after making an attack. If you can find the Chow Mein noodles, this will make you invincible for a few valuable seconds. After eating the Chow Mein noodles, immunity to attack is indicated by a sound.

## Game Controls

Z - Left, X - Right, \* - Up, ? - Duck  
\* and Z - Diagonal Jump Left, \* and X - Diagonal Jump Right  
RETURN and <direction> - Kick, <SHIFT> - Punch  
S/Q - Sound/Quiet, <COPY>/<DELETE> - Pause/Resume, <ESCAPE> - Quit Game

## Scoring

Effective technique .....	300 points
Fan, poison gas, Boomerang, short sword, hand grenade ...	100 points
Mask .....	1,000 points
Midget attackers .....	100 points
Winning without being injured .....	5,000 points
Energy remaining at end .....	Bonus points

LINCOLNSHIRE DN20 9AX  
Disc compatibility : ADFS 1D00, CDFS 1D00, DFS 1D00

### Instructions

Aardvark's Orlando has brought the award winning ZALAGA - made famous on the BBC Micro - over to the Acorn Electron. And it's even faster than ever. Zalaga - a computer game classic which brings home probably the closest feel to true arcade 'shoot 'em up' action devised to this day.

Aardvark Software is dedicated to providing programs of unsurpassed excellence - each a classic of its type. When you feel you have the mastery of Zalaga, 'phone this number to check the best score nationwide: Hornchurch: (04024) 53131. If you can do better, issue your challenge in writing and send it with your name, address, highest score and code to:-

Zalaga Electron Title Challenge, Aardvark Software, 100 Ardleigh Green Road, Hornchurch, Essex RM11 2LG.

**Instructions' Source** : ZALAGA (Aardvark) Back Inlay

### Review (Electron User)

My first reaction to this excellent game was "I'm not sure what's happening but it's fast". And that's my considered opinion as well. The reason I'm not sure what's happening is that neither the cassette insert nor the program instructions give you any idea of the scenario.

Having said that, it doesn't take a lot of K to realise that the amazingly animated, ferociously fast objects swirling and swooping down from the top of the screen are nasties. And any arcade novice should be able to realise that the laser base at the bottom of the screen can be moved from side to side, avoiding bombs and replying in kind with lasers.

No, there's no problem with the game itself, a really fast example of ultimate Electron arcade action. It's just that the instructions are a bit of a puzzle.

You can have the sound on or off, decide whether you want the one or two player game, keyboard or joystick. You can pick the start screen, whether you want automatic fire or not or even set the reload speed. But you have to discover for yourself what such things as automatic fire and the reload speed actually mean.

Not that you have much time to spend trying to find out, the game is too good for that.

It's entrancing. The graphics are superb, fast and effective. The control keys are easy to use and (remarkably) well explained and the game concept simple but appealing. The idea of aliens dropping from the sky may be old fashioned but in ZALAGA it reaches the state of the art.

It's a superb action game, flawed only by the lack of explanation. Even so, it's thoroughly recommended.

Keith Young, ELECTRON USER 2. 7

# ZANY KONG JUNIOR

*Professional, Originally Released On Cassette Only*

Game Type : Arcade; Platform Style  
Author : Christopher Hyde  
Standalone Release(s) : 1984: ZANY KONG JUNIOR, Superior, £7.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron  
Supplier : SUPERIOR, Department C, Ground Floor, Regent House, Skinner Lane, LEEDS 7  
Disc compatibility : Incompatible. Writes to locations &400-&C00.

## Instructions

The evil Morris has kidnapped Zany Kong. Your objective is to collect the keys to release him from the steel cage in which Morris has him imprisoned. You must collect the keys before your bonus reaches zero. Avoid the Snappers, the Aardvark Birds and the electric spikes, or try and squash them by dislodging the apples and pineapples.

## Game Controls

Z - Left, X - Right, \* - Up, ? - Down, <SPACE> - Jump  
S/Q - Sound On/Off, <SHIFT>/<COPY> - Pause On/Off

Joysticks may also be used. FIRE uses joystick control.  
<SPACE> starts with introduction.

**Instructions' Source** : ZANY KONG JUNIOR (Superior) Inner Inlay

# ZENON

## *Professional, Originally Released On Cassette Only*

Game Type : Sideways Scrolling Shoot-'Em-Up With Large Sprites  
Author : Ian Collinson  
Standalone Release(s) : 1989: ZENON, Impact, £4.95  
Compilation Release(s) : None  
Stated compatibility : Electron/BBC Dual Version  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : IMPACT, Neepsend House, 1 Percy Street, Sheffield, S3 8AU.  
Tel: 0742 769950  
Disc compatibility : CDFS E00, DFS E00

### Instructions

Imagine a land so dangerous that only the most heroic of space explorers would dare to tread. A land filled with more evil foes than can possibly be overcome.

Imagine Zenon...

Zenon is total arcade action for one or two players. Playing alone is fantastic. Playing simultaneously with a friend is unbelievable.

Beaming down to the surface of Zenon from your intergalactic cruiser immediately puts you in the action amongst a host of deadly androids, meteorites, fireballs, missiles and other unforeseen perils. Set against a background of scrolling stars, you must run for your life or boost into the air using your automatically-powered jetpack.

Initially you are armed with only a simple Repeat Laser which you will quickly find inadequate to deal with the sheer volume of enemies. Watch out for the opportunity to grab more powerful weaponry including the Twin-Shot Laser, Atomic Blaster and not forgetting the ultimate weapon - the lethal Machine Laser.

No space explorer has yet reached the heart of Zenon. There are 250 levels to be completed and new inconceivable monstrous androids will try to thwart you as you advance.

No one knows all of the aliens that await you, but many will undoubtedly require several hits to destroy them. Documented proof exists of only a few: the massive Terrapedes (snake-like androids), Orbitoids (giant steel eyes), Roamodrons (walking machines) and various types of Shapeoids; plus Rods, Zebbadoids, Packoids, Duckadrons and Rambodroids.

Don't go alone...

### Objective Of The Game

Your task is to penetrate the 250 levels of Zenon, a feat which has never been achieved before. You have 4 lives to complete each of the levels which are approximately 10 times the length of the screen. Each one gets progressively more difficult and menacing new aliens will periodically be encountered.

To complete a level, you must generally keep moving to the right whilst avoiding and shooting such aliens, fireballs and meteorites.

The game can be played by one player or two players together.

### Getting Started

At the start of each level, you will be beamed down to the surface of Zenon. If two players are selected then both players will be beamed down together. You cannot harm another player by shooting at him.

For a short period after beaming down you will be immune to hostile attacks. This is signified by the energy indicator flashing on and off on your status panel.

You can run along the surface or fly using your everlasting atomic jetpack. Various "nasties" will attack you and you must either shoot or avoid them. Contact with "nasties" or their laser shots will reduce your energy and when you lose all energy you will lose one of your 4 lives. (Note - after losing a life you will once again be immune to hostile attacks for a short period).

### Energy Cells

If you can avoid hits by nasties for a while your energy will gradually increase. However, it is also possible to obtain extra energy by collecting energy cells that appear from time to time. These are flashing diamonds with a letter 'E' inside them.

### Weaponry

Your current weapon is shown on your status panel but you can select different types by collecting the weapon canisters as they pass. The canister displays a symbol for the type of weapon it contains. The following range can be obtained:

- |                 |   |  |
|-----------------|---|--|
| Repeat Laser    | - | This is the weapon you start each level with. It fires repeated single laser fire shots.   |
| Twin-Shot Laser | - | This fires two shots at the same time although the rate of fire is less than the Repeat Laser.                                     |
| Atomic Blaster  | - | Fires super atomic blasts which kill almost anything. Unfortunately, the rate of fire is quite poor.                               |
| Machine Laser   | - | This literally spits out laser shots at a tremendous rate. If two players both have these weapons then amazing damage can be done. |

If you lose a life, you restart the game with a Repeat Laser.

### Game Controls

Controls are selected on the Options Screen. You can go to the Options Screen before starting a game or at the end of a game.

The following options can then be selected:

MAIN CONTROLS	LEFT	RIGHT	FIRE	THRUST
1 PLAYER MODE	Z	X	RETURN	SHIFT
2 PLAYER MODE				
Player 1	Z	X	W	S
Player 2	<	>	*	/

JOYSTICKS - these can be selected for one or two players by pressing C.

SOUND - Toggled ON/OFF by pressing S.

### Other Controls

During the game, the following options are available:

P - Pause Game, O - Restart Game, <ESCAPE> - Abort mission

**Instructions' Source** : ZENON (Impact) Back And Inner Inlay

**Review (Electron User) - "Zap 'Em!"**

During the next few months, Impact is planning to release a number of top quality games at reduced prices, though not quite budget level. The first is ZENON, a one or two player arcade style action game with 250 levels.

Reading the packaging sleeve I soon discovered the game has no real plot. All you are told is that you have to penetrate all 250 levels of the game, a feat I am sure will require an extraordinary amount of stamina and concentration. Little wonder that the company has claimed it has yet to be achieved.

You are beamed down to the surface of the planet Zenon armed with a laser pistol and jetpack and the screen begins scrolling from right to left bringing a steady stream of alien creatures, missiles and other objects directly toward you.

You must either destroy them with your laser or avoid them by flying over and ducking under. Contact with any alien drains your energy. Fortunately, for the first few seconds after arriving on the surface you are immune to the hostilities' damaging effects. This gives you time to make yourself comfortable and find the keys you need to play the game.

The two player option allows you and a friend to battle against the creatures simultaneously. Luckily, your weapons don't harm each other, and I found that you tend to stay alive a lot longer with a friend to back you up.

As always, the activity around the keyboard during a two player game can be quite frenetic, but, being a veteran at playing DUNJUNZ with four players hitting keys at the same time, playing with one other player is a piece of cake.

You lose a life once your energy is depleted and losing four lives signals the end of the game. You will occasionally encounter a weapon canister which, if it touches you, exchanges your current weapon with one contained in it. This can sometimes increase your damage-causing capability, but it can work the other way too.

It is possible to restore lost energy by either avoiding damage - thus allowing your spacesuit to recharge slowly - or by collecting energy cells which occasionally float by. To complete a level you must negotiate a distance of about ten screen widths. This allows you to progress to the next, which is slightly more difficult and contains new creatures to zap.

ZENON has all the usual sounds associated with this type of game, but if you like a bit of peace and quiet you can turn them off. There is a high score table and a pause facility - nice to see them in such a reasonably priced piece of software.

Verdict? I found the game a bit too repetitive after a while. It failed to hold my attention for very long and I soon began to lose interest in running - or flying along - zapping the steady stream of creatures barring my path to the next level.

The designers must have spent a great deal of time on the sprites for the many different levels. There are aliens, androids, fireballs and missiles, but I'll probably never play this long enough to meet half of them.

If Impact can produce more games at the same price with the same excellent quality graphics as ZENON, but with more to them than just zapping aliens, the result might be nice little earners.

Desmond

### \*\*\* Second Opinion \*\*\* (Electron User)

I quite enjoyed this mindless zap'em arcade game. Don your spacesuit, pick up your trusty laser and go for a scroll on the moon blasting all and sundry to kingdom come. The only bad points are that it does become a bit repetitive, and it's very similar to RAMPAGE. There are a number of differences, but basically the idea is the same. Definitely worth a look.

# ZIGGY

***Professional, Originally Released On Cassette Only***

Game Type : Arcade  
Author : Dean Lester  
Standalone Release(s) : 1988: ZIGGY, Audiogenic, £4.95  
Compilation Release(s) : None  
Stated compatibility : Electron Side A/BBC Side B  
Actual compatibility : As stated  
Supplier : AUDIOGENIC, Winchester House, Canning Road, HARROW HA3 7SJ  
Disc compatibility : Unknown.

## Instructions

Ziggy was a normal happy young boy - until the day he strayed too close to an experimental matter transporter. Suddenly he became half boy, half spring - like a human pogo stick - and found himself trapped in a multi-dimensional board game played on platforms that float in space and time.

To survive he must collect all the pyramids that he can find, avoiding the deadly Sliding Cubes, Bouncing Balls, Poison Squares and Glue Puddles. Can you help ZIGGY reach th final platform, where the girl of his dreams awaits?

## Game Objects

Pyramids - collect them, each and every one  
Sliding Cubes - very deadly  
Bouncing Balls - extremely deadly

## Special Squares

Skull & Crossbones - hideously deadly  
Glue Puddles - sap Ziggy's energy. Get off quick!  
Crossed Wands - give temporary immunity  
Light Bulbs - replenish energy  
Arrows - push Ziggy in that direction. Used to move from one platform to another  
Up - allows Ziggy to go up to the next level, provided he has collected *all* the pyramids on the current level  
Down - takes Ziggy down to the level below

## Meters And Counters

Bounce Meter - displays which length bounce you are using. Bigger bounces use more energy  
Energy Meter - how much energy Ziggy has left; you lose a life when it runs out  
Level Counter - tells which level you are on  
Completed Counter - shows the percentage of the game completed  
Lives Counter - how many lives are left. You start with six, and get an extra life for every 10% of the game completed - you'll need them!

The game has fifty levels, containing 200 platforms. Complete all fifty levels and Ziggy can get together with the girl of his dreams on the final platform. It's springtime!

## Game Controls

Define your own control keys. The following keys are also used:  
RETURN - increase bounce                      SPACE - decrease bounce  
COPY - pause game                              DELETE - restart paused game  
ESCAPE - abort game

On the title screen only, you can press Q to turn the music off, S to turn it on.

### **Loading**

During the loading sequence you have the opportunity to choose the main directional control keys. When the game has loaded the title screen will be displayed; press 1 at this stage to play ZIGGY using the built-in screens, or 2 to load a set of screens you have designed yourself.

### **The Screen Designer**

To load the screen designer type CHAIN"SCDES" and press <RETURN>. (If you have tape you will find the designer immediately after the main program). Make sure you have a blank tape or formatted disk available to store your customised screens.

### **Cursor Movement Keys**

Use Z and X to move left or right, \* or ? to go up or down.

### **Command Keys**

Press N when you want to go to another level. Enter the level number, from 0 to n+1 when n is the highest numbered level designed so far. When you are ready to save your custom screens, press S (Keep a note of the filename you choose). Press L to load screens you have previously saved.

### **How To Design Your Own Screens**

Each level consists of four screens, and you can have up to fifty levels. Use the movement keys to get around, placing the special types of square in position by pressing the keys shown in the menu on the right side of the screen.

Each screen must have one and only one pyramid. It must also be accessible - use the arrow squares. You can have up to four Cubes and Balls per screen, in any combination. Finally, each level must be accessible - use the up and down squares.

**Instructions' Source** : ZIGGY (Audiogenic) Back And Inner Inlay

### **Review (Electron User) - "Spritely Character"**

ZIGGY is the unlikely new star from Audiogenic, being a rather strange thing on a spring bouncing its way round the screen. The game is, I suspect, the first in a run of 3D arcade adventures, which up until now have never been seen on the Electron.

The screen display is laid out in a style known as oblique projection where horizontal lines are rotated 45 degrees to the horizontal. You can see a flat board with squares marked out and your viewpoint is from above and slightly behind, looking down at an angle.

Once you've got used to the unusual perspective you can start to guide Ziggy round the board. It all starts off in fine style, with the thing on a spring bouncing merrily around level zero collecting assorted crystals left lying around, one in each of the four rooms. At this early stage it takes little thought to collect all four jewels.

Now you bounce on to a special square which takes you up to the next level. Complete this and move to the next. Up to level four the game is straightforward enough, but after that things start to get hectic.

Patches of sticky glue and deadly skulls start to get in the way of the little guy and he has to increase his bounce speed and distance to leap over them.

All of this excess effort drains his life force at an alarming rate and if he keeps it up for too long, it's curtains.

ZIGGY is not very spectacular graphically. Although the characters are nice and chunky, the playing area is in two colour Mode 4, and even though these vary from level to level, the effect is rather drab.

The animation is a bit jerky at times and the key response can be sluggish. This is a pity, because it detracts from what essentially is a very enjoyable game - and original too.

One feature I was pleased to see was a screen designer, so even if you can't complete the 200 rooms supplied you can at least define your own. And just for a change, there's a natty little tune that won't drive the bend because you can turn it off.

ZIGGY is the type of game that you'll either love or hate and has got to qualify as one of the trickiest yet. So I strongly recommend that you try it before you buy it.

# ZORAKK THE CONQUEROR

*Professional, Originally Released On Cassette Only*

Game Alias : BOZO THE BRAVE  
Game Type : Arcade; Graphical Strategy Game  
Authors : D. Crofts and I. Elliott  
Standalone Release(s) : 1985: ZORAKK THE CONQUEROR, Icon, £7.95  
Compilation Release(s) : None  
Stated compatibility : Electron  
Actual compatibility : Electron, BBC B, B+ and Master 128  
Supplier : ICON, 65 High Street, Gosforth, TYNE & WEAR  
Disc compatibility : CDFS E00, DFS E00

## Instructions

*"Journey through the medieval lands of Ramagora in search of the three pieces of the long lost crown of Ultimate Darkness. Battle with vicious brigands, avoid the greed of the great dragon, suffer the plagues and famine in pursuit of your ultimate goal.*

*This is a graphical adventure in which you play the part of Zorakk and take control of his loyal warriors."*

Your quest is to obtain the three parts to the crown of Ultimate Darkness. Each part of the crown is located in each of the three lands of Ramagold; Lannia - a greenland, Durnin - a desertland and Zarthynia - an iceland. In each land are four buildings; a Bazaar, a Sanctuary, a Tomb and a Ruin.

BAZAAR: This is where you can use any gold you have to purchase more warriors or more food. A number between 4 and 6 will be displayed under the Warrior heading. This number corresponds to the number of bags of gold which is being asked for each warrior. You can accept this by replying "Y" to the "OK?" prompt or you can haggle by pressing the "H" key. This will re-assess the amount of gold being asked (either up or down). This can only be used once. Repeat entering "Y" for each Warrior you wish to purchase. You will notice your gold decreasing each time you do this. When you have enough, reply "N" to the "OK?" prompt. This will then repeat the procedure for the purchase of food.

SANCTUARY: If during the course of a game, your Warrior, Gold or Food levels fall below an acceptable level, you may enter the sanctuary.

TOMB and RUIN: (Warning: Do not enter either of these unless you consider you have sufficient warriors to do battle). These two locations will be described together as their role in the adventure is the same except only one contains the part of the crown. When entering either the Tomb or the Ruin, you may hear the bottle horn. If this happens, the Gold and Food headings will be replaced with the heading "BRIG". The number underneath this will indicate how many Brigands you will have to fight during the battle. The battle will start automatically. Each clash will be followed by updated Warrior and Brigand values. If you seem to be losing the battle, you can retreat by hitting any key. The battle will then end. If however, you continue to fight and the number of Warriors falls to zero, you will have lost not only the battle but also the game. If however, the number of Brigands falls to zero, the battle has been won and you will be rewarded.

REWARDS : Rewards are only obtained after defeating a number of Brigands in a battle. Any one of the following can be given as a reward:

- |                  |                       |
|------------------|-----------------------|
| 1. More Warriors | 5. A Dragon Sword     |
| 2. More Gold     | 6. Magic Potion       |
| 3. More Food     | 7. Piece of the Crown |
| 4. A Map         |                       |

Each move you make during a game is controlled by the N, S, E and W keys corresponding to the points on a compass; "N" for up, "W" for left, etc. Each move you make will use up one unit of food. If your food level has reached zero, one of your Warriors will die for each move. During the course of a game, certain things can happen to help or hinder your progress. You could get lost, in which case you will still use up food (or a Warrior) but not actually get anywhere. You may be hit by the plague; this will immediately infect a quarter of your Warriors or the Dragon may strike and steal a quarter of your gold. However you can protect yourself from these mishaps by obtaining rewards 4 to 6 above. The Map once obtained will be kept throughout the game and insure you won't get lost. The potion will cure the symptoms of the plague and initiate the recovery of one quarter of your Warriors each time the plague strikes. Again, this will be kept throughout the game.

The Dragon Sword will not only protect you from the dragon but will reinstate you with any gold previously stolen by the dragon when he strikes. Unfortunately the sword can only be used once and has to be regained in battle after it has been used.

THE CROWN: Once you have won a part of the crown you may leave the land you are in and enter the next land on your journey. You do this by travelling West until you reach the edge of the current land. The screen will then begin to change colour and the new land entered. You will not be able to leave a land until you have obtained the part of the crown. Once in the new land each building will be assigned a new role for example what was a tomb in the first land may now be a sanctuary.
